So wichtig es aber für den Wert ist, in irgendeinem Gebrauchswert zu existieren, so gleichgültig ist es, in welchem er existiert, wie die Metamorphose der Waren zeigt.

↑ In production, therefore, the value is transferred from the means of production to the end product. ↓ However, (and this can be considered the negation of the negation), a condition for this transfer of value to the product is that the means of production lose their values.

Hence it follows that in the labor-process the means of production transfer their value to the product only so far as along with their use-value they lose also their exchange-value. They give up to the product that value alone which they themselves lose as means of production.

Es folgt hieraus, daß im Arbeitsprozeß Wert vom Produktionsmittel auf das Produkt nur übergeht, soweit das Produktionsmittel mit seinem selbständigen Gebrauchswert auch seinen Tauschwert verliert. Es gibt nur den Wert an das Produkt ab, den es als Produktionsmittel verliert.

Question 788 *If something does not lose use-value through its use (maybe a computer program), does this mean it does not add value to the product?*

↓ The following big issue must be discussed now in more detail: the value loss of the raw materials and auxiliary materials is different than that of the instruments of labor.

But in this respect the material factors of the labor process do not all behave alike.

Die gegenständlichen Faktoren des Arbeitsprozesses verhalten sich aber in dieser Hinsicht verschieden.

Question 789 *Why does a machine which lasts 5 years of production lose 1/5 of its value in the first year? What happens if the machine stands idle?*

↓ In order to develop these differences Marx first traces the transfer of the *use-values* in the production process before discussion the transfer of *values*:

213:1/o The coal burnt under the boiler vanishes without leaving a trace; so, too, the tallow with which the axles of wheels are greased. Dye stuffs and other auxiliary substances also vanish but manifest themselves as properties of the product. Raw material constitutes the substance of the product, but it has changed its form.

217:3/o Die Kohle, womit die Maschine geheizt wird, verschwindet spurlos, ebenso das Öl, womit man die Achse des Rades schmirt usw. Farbe und andre Hilfsstoffe verschwinden, zeigen sich aber in den Eigenschaften des Produkts. Das Rohmaterial bildet die Substanz des Produkts, hat aber seine Form verändert.

↑ Marx is wrong to say that the coal “disappears without a trace.” It leaves more CO₂ behind than its own weight, but this CO₂ cannot be seen. And the sulfur and mercury pollutants are coming back to haunt us: in the long run, they are not dispersed but they bioaccumulate. ↓ Already regarding use-values there is an important difference. The object of

labor loses its characteristic form in the production process, while the instruments preserve their form.

Hence raw material and auxiliary substances lose the characteristic form with which they are clothed on entering the labor-process. It is otherwise with the instruments of labor. Tools, machines, workshops, and vessels, are of use in the labor-process, only so long as they retain their original shape, and are ready each morning to renew the process with their shape unchanged. And just as during their lifetime, that is to say, during the continued labor-process in which they serve, they retain their shape independent of the product, so, too, they do after their death. The corpses of machines, tools, workshops, etc., are always separate and distinct from the product they helped to turn out.

Rohmaterial und Hilfsstoffe verlieren also die selbständige Gestalt, womit sie in den Arbeitsprozeß als Gebrauchswerte eintreten. Anders mit den eigentlichen Arbeitsmitteln. Ein Instrument, eine Maschine, ein Fabrikgebäude, ein Gefäß usw. dienen im Arbeitsprozeß nur, solange sie ihre ursprüngliche Gestalt bewahren und morgen wieder in ebenderselben Form in den Arbeitsprozeß eingehn wie gestern. Wie sie während ihres Lebens, des Arbeitsprozesses, ihre selbständige Gestalt dem Produkt gegenüber bewahren, so auch nach ihrem Tode. Die Leichen von Maschinen, Werkzeugen, Arbeitsgebäuden usw. existieren immer noch getrennt von den Produkten, die sie bilden halfen.

↓ The period of time in which the instruments of labor lose their entire use-values is also that in which they transfer their entire exchange-values to the end product.

If we now consider the case of any instrument of labor during the whole period of its service, from the day of its entry into the workshop, till the day of its banishment into the lumber room, we find that during this period its use-value has been completely consumed, and therefore its exchange-value completely transferred to the product. For instance, if a spinning machine lasts for 10 years, it is plain that during that working period its total value is gradually transferred to the product of the 10 years.

Betrachten wir nun die ganze Periode, während deren ein solches Arbeitsmittel dient, von dem Tag seines Eintritts in die Werkstätte bis zum Tage seiner Verbannung in die Rumpelkammer, so ist während dieser Periode sein Gebrauchswert von der Arbeit vollständig verzehrt worden und sein Tauschwert daher vollständig auf das Produkt übergegangen. Hat eine Spinnmaschine z.B. in 10 Jahren ausgelebt, so ist während des zehnjährigen Arbeitsprozesses ihr Gesamtwert auf das zehnjährige Produkt übergegangen.

↓ The problem is now that this value transfer is spread out over many production periods, and one does not know how much value is transferred in an individual day. For this, an average calculation is necessary.

The lifetime of an instrument of labor, therefore, is spent in the repetition of a greater or less number of similar operations. Its life may be compared with that of a human being. Every day brings a man 24 hours nearer to his grave: but how many days he has still to travel on that road, no man can tell accurately by merely looking at him. This difficulty, however, does not prevent life insurance offices from drawing, by means of the

Die Lebensperiode eines Arbeitsmittels umfaßt also eine größere oder kleinere Anzahl stets von neuem mit ihm wiederholter Arbeitsprozesse. Und es geht dem Arbeitsmittel wie dem Menschen. Jeder Mensch stirbt täglich um 24 Stunden ab. Man sieht aber keinem Menschen genau an, wieviel Tage er bereits verstorben ist. Dies verhindert Lebensversicherungsgesellschaften jedoch nicht, aus dem Durchschnittsleben der

8. Constant Capital and Variable Capital

theory of averages, very accurate, and at the same time very profitable conclusions. So it is with the instruments of labor. It is known by experience how long on the average a machine of a particular kind will last.

Menschen sehr sichere, und was noch viel mehr ist, sehr profitliche Schlüsse zu ziehn. So mit dem Arbeitsmittel. Man weiß aus der Erfahrung, wie lang ein Arbeitsmittel, z.B. eine Maschine von gewisser Art, durchschnittlich vorhält.

↓ The paragraph concludes with a numerical example.

Suppose its use-value in the labor-process to last only six days. Then, on the average, it loses each day one-sixth of its use-value, and therefore parts with one-sixth of its value to the daily product. The wear and tear of all instruments, their daily loss of use-value, and the corresponding quantity of value they part with to the product, are accordingly calculated upon this basis.

Gesetzt, sein Gebrauchswert im Arbeitsprozeß daure nur 6 Tage. So verliert es im Durchschnitt jeden Arbeitstag $\frac{1}{6}$ seines Gebrauchswerts und gibt daher $\frac{1}{6}$ seines Werts an das tägliche Produkt ab. In dieser Art wird der Verschleiß aller Arbeitsmittel berechnet, also z.B. ihr täglicher Verlust an Gebrauchswert und ihr entsprechende tägliche Wertabgabe an das Produkt.

Question 790 *Do the means of production lose value because they transfer it to the end product, or do they transfer value to the end product because they lose value in the production process?*

Question 791 *Show how the value of a product, e.g. of 10 lbs of yarn, can be calculated. (I should give a list with what is needed to produce it.)*

After having established how this value transfer is achieved, Marx discusses several implications of this:

↓ Since value transfer comes from value loss, it follows that no means of production can transfer more value than it contains. Applied to means of production which do not cost labor this means: they do not transfer any value.

214:1 It is thus strikingly clear, that means of production never transfer more value to the product than they themselves lose during the labor-process by the destruction of their own use-value. If such an instrument has no value to lose, if, in other words, it is not the product of human labor, it transfers no value to the product. It helps to create use-value without contributing to the formation of exchange-value. In this class are included all means of production supplied by Nature without human assistance, such as land, wind, water, metals in situ, and timber in virgin forests.

218:1 Es zeigt sich so schlagend, daß ein Produktionsmittel nie mehr Wert an das Produkt abgibt, als es im Arbeitsprozeß durch Vernichtung seines eignen Gebrauchswerts verliert. Hätte es keinen Wert zu verlieren, d.h. wäre es nicht selbst Produkt menschlicher Arbeit, so würde es keinen Wert an das Produkt abgeben. Es diene als Bildner von Gebrauchswert, ohne als Bildner von Tauschwert zu dienen. Dies ist daher der Fall mit allen Produktionsmitteln, die von Natur, ohne menschliches Zutun, vorhanden sind, mit Erde, Wind, Wasser, dem Eisen in der Erzader, dem Holze des Urwaldes usw.

Machines and tools enter the labor process in their entirety, but they enter the process of creating value and surplus-value only in small increments:

214:2 Yet another interesting phenomenon here presents itself. Suppose a machine to be worth £1,000, and to wear out in 1,000

219:1 Ein andres interessantes Phänomen tritt uns hier entgegen. Eine Maschine sei z.B. 1000 Pfd.St. wert und schlei-

days. Then one thousandth part of the value of the machine is daily transferred to the day's product. At the same time, though with diminishing vitality, the machine as a whole continues to take part in the labor-process. Thus it appears, that one factor of the labor-process, a means of production, continually enters as a whole into that process, while it enters into the process of the formation of value by fractions only. The difference between the two processes is here reflected in their material factors, by the same instrument of production taking part as a whole in the labor-process, while at the same time as an element in the formation of value, it enters only by fractions.²¹

Footnote 21 makes two unrelated remarks. (a) First it talks about repair labor:

²¹ The subject of repairs of the implements of labor does not concern us here. A machine that is undergoing repair, no longer plays the part of an instrument, but that of a object of labor. Work is no longer done with it, but upon it. It is quite permissible for our purpose to assume, that the labor expended on the repairs of instruments is included in the labor necessary for their original production. But in the text we deal with that wear and tear, which no doctor can cure, and which little by little brings about death, with "that kind of wear which cannot be repaired from time to time, and which, in the case of a knife, would ultimately reduce it to a state in which the cutler would say of it, it is not worth a new blade."

ße sich in 1000 Tagen ab. In diesem Fall geht täglich 1/1000 des Werts der Maschine von ihr selbst auf ihr tägliches Produkt über. Zugleich, wenn auch mit abnehmender Lebenskraft, wirkt stets die Gesamtmaschine im Arbeitsprozeß. Es zeigt sich also, daß ein Faktor des Arbeitsprozesses, ein Produktionsmittel, ganz in den Arbeitsprozeß, aber nur zum Teil in den Verwertungsprozeß eingeht. Der Unterschied von Arbeitsprozeß und Verwertungsprozeß reflektiert sich hier an ihren gegenständlichen Faktoren, indem dasselbe Produktionsmittel als Element des Arbeitsprozesses ganz und als Element der Wertbildung nur stückweis in demselben Produktionsprozeß zählt.²¹

²¹ Es handelt sich hier nicht um Reparaturen der Arbeitsmittel, Maschinen, Baulichkeiten usw. Eine Maschine, die repariert wird, funktioniert nicht als Arbeitsmittel sondern als Arbeitsmaterial. Es wird nicht mit ihr gearbeitet, sondern sie selbst wird bearbeitet, um ihren Gebrauchswert zu flicken. Solche Reparaturarbeiten kann man für unsren Zweck immer eingeschlossen denken in die zur Produktion des Arbeitsmittels erheischte Arbeit. Im Text handelt es sich um den Verschleiß, den kein Doktor kurieren kann und der allmählich den Tod herbeiführt, um „jene Art der Abnutzung, die nicht von Zeit zu Zeit ersetzt werden kann und die beispielsweise ein Messer schließlich in einen solchen Zustand versetzt, daß der Messerschmied sagt, es sei keine neue Klinge mehr wert“.

The second half of the footnote criticizes the lack of distinction in the literature between the labor process and the process of creating value.

^{21 ctd} We have shewn in the text, that a machine takes part in every labor-process as an integral machine, but that into the simultaneous process of creating value it enters only bit by bit. How great then is the confusion of ideas exhibited in the following extract! "Mr. Ricardo says a portion of the labor of the engineer in making [stocking] machines" is contained for example in the value of a pair of stockings. "Yet the total labor, that produced each single pair of stockings ... includes the whole labor of the engineer, not a portion; for one machine makes many pairs, and none of those pairs could have been done without any part of the machine." ("Obs. on Cer-

^{21 ctd} Man hat im Text gesehn, daß eine Maschine z.B. ganz in jeden einzelnen Arbeitsprozeß, aber nur stückweis in den gleichzeitigen Verwertungsprozeß eingeht. Danach zu beurteilen die folgende Begriffsverwechslung: „Ricardo spricht von dem Anteil der beim Bau einer Strumpfwirkmaschine verausgabten Arbeitsmenge eines Maschinenbauers“ als z.B. enthalten in dem Wert von ein paar Strümpfen. „Jedoch die ganze Arbeit, die jedes einzelne Paar Strümpfe hergestellt hat ... schließt die ganze Arbeit des Maschinenbauers ein und nicht nur einen Teil; denn eine Maschine macht zwar viele Paare, aber keines dieser Paare hätte unter Verzicht auf ir-

8. Constant Capital and Variable Capital

tain Verbal Disputes in Pol. Econ., Particularly Relating to Value,” p. 54.) The author, an uncommonly self-satisfied wiseacre, is right in his confusion and therefore in his contention, to this extent only, that neither Ricardo nor any other economist, before or since him, has accurately distinguished the two aspects of labor, and still less, therefore, the part played by it under each of these aspects in the formation of value.

gendeinen Teil der Maschine angefertigt werden können.“ („Observations on certain verbal disputes in Pol. Econ., particularly relating to Value, and to Demand and Supply“, London 1821, p. 54.) Der Verfasser, ein ungemein selbstgefälliger „wiseacre“, hat mit seiner Konfusion und daher mit seiner Polemik nur so weit recht, als weder Ricardo noch irgendein anderer Ökonom, vor oder nach ihm, die beiden Seiten der Arbeit genau geschieden, daher noch weniger ihre verschiedene Rolle in der Wertbildung analysiert hat.

The text of the footnote in the German MEW 23 edition is subject to a translation error, als passages which were in the original 4th edition in English were translated into German. The sentence in MEW is, wrongly: „Ricardo spricht von der beim Bau einer Strumpfwirkmaschine

verausgabten Arbeitsmenge eines Maschinenbauers“, als z.B. enthalten in dem Wert von ein paar Strümpfen. The original formulation in footnote 21 to [megaII/10]185:1 is: „Mr. Ricardo speaks of the portion of the labour of the engineer in making stocking machines“ als z.B. enthalten in

dem Wert von ein paar Strümpfen. Note that there is no comma in this sentence. The above-given German version tries to translate the English portion of this sentence more accurately than MEW.

⇓ The discrepancy can also go the other way: some means of production enter the labor process only in part but the valorization process in their entirety.

219:1 On the other hand, a means of production may take part as a whole in the formation of value, while into the labor-process it enters only bit by bit. Suppose that in spinning cotton, the waste for every 115 lbs. used amounts to 15 lbs., which is converted, not into yarn, but into “devil’s dust.” Now, although this 15 lbs. of cotton never becomes a constituent element of the yarn, yet assuming this amount of waste to be normal and inevitable under average conditions of spinning, its value is just as surely transferred to the value of the yarn, as is the value of the 100 lbs. that form the substance of the yarn. The use-value of 15 lbs. of cotton must vanish into dust, before 100 lbs. of yarn can be made. The destruction of this cotton is therefore a necessary condition in the production of the yarn. And because it is a necessary condition, and for no other reason, the value of that cotton is transferred to the product. The same holds good for every kind of refuse resulting from a labor-process, so far at least as such refuse cannot be further employed as a means in the production of new and independent use-values.

219:2/o Andererseits kann umgekehrt ein Produktionsmittel ganz in den Verwertungsprozeß eingehn, obgleich nur stückweis in den Arbeitsprozeß. Nimm an, beim Verspinnen der Baumwolle fielen täglich auf 115 Pfund 15 Pfund ab, die kein Garn, sondern nur devil’s dust bilden. Dennoch, wenn dieser Abfall von 15 Pfund normal, von der Durchschnittsverarbeitung der Baumwolle unzertrennlich ist, geht der Wert der 15 Pfund Baumwolle, die kein Element des Garns, ganz ebensosehr in den Garnwert ein, wie der Wert der 100 Pfund, die seine Substanz bilden. Der Gebrauchswert von 15 Pfund Baumwolle muß verstauben, um 100 Pfund Garn zu machen. Der Untergang dieser Baumwolle ist also eine Produktionsbedingung des Garns. Ebendeswegen gibt sie ihren Wert an das Garn ab. Dies gilt von allen Exkrementen des Arbeitsprozesses, in dem Grad wenigstens, worin diese Exkremente nicht wieder neue Produktionsmittel und daher neue selbständige Gebrauchswerte bilden. So sieht man in den großen Maschinenfabriken zu Manchester Berge von Eisenabfällen, durch zyklische Ma-

Such an employment of refuse may be seen in the large machine works at Manchester, where mountains of iron turnings are carted away to the foundry in the evening, in order the next morning to re-appear in the workshops as solid masses of iron.

↓ A brief mention of joint production, without answering the question how the value of the end products is determined in this case.

215:2/o We have seen that the means of production transfer value to the new product, so far only as during the labor-process they lose value in the shape of their old use-value. The maximum loss of value that they can suffer in the process, is plainly limited by the amount of the original value with which they came into the process, or in other words, by the labor-time necessary for their production. Therefore, the means of production can never add more value to the product than they themselves possess independently of the process in which they assist. However useful a given kind of raw material, or a machine, or other means of production may be, though it may cost £150, or, say, 500 days' labor, yet it cannot, under any circumstances, add to the value of the product more than £150. Its value is determined not by the labor-process into which it enters as a means of production, but by that out of which it has issued as a product. In the labor-process it only serves as a mere use-value, a thing with useful properties, and could not, therefore, transfer any value to the product, unless it possessed such value previously.²²

²² From this we may judge of the absurdity of J. B. Say, who pretends to account for surplus-value (Interest, Profit, Rent), by the "services productifs" which the means of production, soil, instruments, and raw material, render in the labor-process by means of their use-values. Mr. Wm. Roscher who seldom loses an occasion of registering, in black and white, ingenious apologetic fancies, records the following specimen:—"J. B. Say (Traité, t. 1, ch. 4) very truly remarks: the value produced by an oil mill, after deduction of all costs, is something new, something quite different from the labor by

schinen gleich Hobelspänen abgeschält, am Abend auf großen Wagen aus der Fabrik in die Eisengießerei wandern, um den andren Tag wieder als massives Eisen aus der Eisengießerei in die Fabrik zurückzuwandern.

220:1 Nur soweit Produktionsmittel während des Arbeitsprozesses Wert in der Gestalt ihrer alten Gebrauchswerte verlieren, übertragen sie Wert auf die neue Gestalt des Produkts. Das Maximum des Wertverlustes, den sie im Arbeitsprozeß erleiden können, ist offenbar beschränkt durch die ursprüngliche Wertgröße, womit sie in den Arbeitsprozeß eintreten, oder durch die zu ihrer eigenen Produktion erheischte Arbeitszeit. Produktionsmittel können dem Produkt daher nie mehr Wert zusetzen, als sie unabhängig vom Arbeitsprozeß, dem sie dienen, besitzen. Wie nützlich auch ein Arbeitsmaterial, eine Maschine, ein Produktionsmittel: wenn es 150 Pfd.St., sage 500 Arbeitstage, kostet, setzt es dem Gesamtprodukt, zu dessen Bildung es dient, nie mehr als 150 Pfd.St. zu. Sein Wert ist bestimmt nicht durch den Arbeitsprozeß, worin es als Produktionsmittel eingeht, sondern durch den Arbeitsprozeß, woraus es als Produkt herauskommt. In dem Arbeitsprozeß dient es nur als Gebrauchswert, als Ding mit nützlichen Eigenschaften, und gäbe daher keinen Wert an das Produkt ab, hätte es nicht Wert besessen vor seinem Eintritt in den Prozeß.²²

²² Man begreift daher die Abgeschmacktheit des faden J. B. Say, der den Mehrwert (Zins, Profit, Rente) aus den „services productifs“ ableiten will, welche die Produktionsmittel, Erde, Instrumente, Leder usw., durch ihre Gebrauchswerte im Arbeitsprozesse leisten. Herr Wilhelm Roscher, der es nicht leicht läßt, artige apologetische Einfälle schwarz auf weiß zu registrieren, ruft aus: „Sehr richtig bemerkt J. B. Say, „Traité“, t. I, ch. 4: der durch eine Ölmühle nach Abzug aller Kosten hervorgebrachte Wert sei doch etwas Neues, von der Arbeit, wodurch die Ölmühle selbst geschaffen worden, wesentlich Verschied-

8. Constant Capital and Variable Capital

which the oil mill itself was erected.” (l.c., p. 82, note.) Very true, Mr. Professor! the oil produced by the oil mill is indeed something very different from the labor expended in constructing the mill! By value, Mr. Roscher understands such stuff as “oil,” because oil has value, notwithstanding that “Nature” produces petroleum, though relatively “in small quantities,” a fact to which he seems to refer in his further observation: “It (Nature) produces scarcely any exchange-value.” Mr. Roscher’s “Nature” and the exchange-value it produces are rather like the foolish virgin who admitted indeed that she had had a child, but “it was such a little one.” This “savant sérieux” in continuation remarks: “Ricardo’s school is in the habit of including capital as accumulated labor under the head of labor. This is unskilful work (!), because (!), indeed (!), the owner of capital (!), after all (!), had done something more (!) than the mere (!) creation (?) and (??) preservation of the same (which same?): namely (!?), the abstention from the enjoyment of it, for which he demands, e.g. (!!!), interest.” (l.c.)

nes.“ (l.c. p. 82, Note.) Sehr richtig! Das von der Ölmühle hervorgebrachte „Öl“ ist etwas sehr Verschiedenes von der Arbeit, welche der Bau der Mühle kostet. Und unter „Wert“ versteht Herr Roscher solches Zeug wie „Öl“, da „Öl“ Wert hat, „in der Natur“ aber sich Steinöl vorfindet, wenn auch relativ nicht „sehr viel“, worauf wohl seine andre Bemerkung abzielt: „Tauschwerte bringt sie“ (die Natur!) „fast gar nicht hervor.“ [l.c. p. 79.] Es geht der Roscherschen Natur mit dem Tauschwert wie der törichten Jungfrau mit dem Kind, das nur „ganz klein war“. Derselbe „Gelehrte“ („savant sérieux“) bemerkt noch bei oben erwähnter Gelegenheit: „Die Schule Ricardos pflegt auch das Kapital unter den Begriff Arbeit zu subsumieren als ‚aufgesparte Arbeit‘. Dies ist ungeschickt (!), weil (!) ja (!) der Kapitalbesitzer (!) doch (!) mehr (!) getan hat als die bloße (?) Hervorbringung (?) und (??) Erhaltung desselben (wesselbigen?): eben (!?) die Enthaltung vom eignen Genuß, wofür er z.B. (!!!) Zinsen verlangt.“ (l.c. [p. 82.]

Question 792 Explain each of the question marks and exclamation points inserted by Marx into the Say quote.

How very “skilful” is this “anatomico-physiological method” of Political Economy, which, “indeed,” converts a mere desire “after all” into a source of value.

Wie „geschickt“! diese „anatomisch-physiologische Methode“ der politischen Ökonomie, die aus bloßem „Verlangen“ ja doch eben „Wert“ entwickelt.

↑ This last sentence of the footnote is a critique of the utility theory of value.

8.2. [Creation of Surplus-Value]

Marx begins his discussion of the creation of surplus-value with the transfer of value from the means of production, stressing that it happens behind the worker’s back, i.e., the worker does not have to work extra to transfer the value but it is part of the process creating the product.

216:1/o While productive labor is changing the means of production into constituent elements of a new product, their value undergoes a transmigration of souls. It deserts the consumed body, to occupy the newly created one. But this transmigration takes place, as it were, behind the back of the laborer. He is unable to add new labor, to create new value, without at the same time preserving old values, and this, because the la-

221:1 Indem die produktive Arbeit Produktionsmittel in Bildungselemente eines neuen Produkts verwandelt, geht mit deren Wert eine Seelenwandlung vor. Er geht aus dem verzehrten Leib in den neu gestalteten Leib über. Aber diese Seelenwandlung ereignet sich gleichsam hinter dem Rücken der wirklichen Arbeit. Der Arbeiter kann neue Arbeit nicht zusetzen, also nicht neuen Wert schaffen, ohne alte Werte zu erhalten,

bor he adds must be of a specific useful kind; and he cannot do work of a useful kind, without employing products as the means of production of a new product, and thereby transferring their value to the new product. The property therefore which labor-power in action, living labor, possesses of preserving value, at the same time that it adds it, is a gift of nature which costs the laborer nothing, but which is very advantageous to the capitalist inasmuch as it preserves the existing value of his capital.^{22a}

↑ Now Marx also mentions the capitalist, who was absent in the first half of the chapter when Marx only talked about the creation of value, not surplus-value.

Question 793 *Does this mean creation of value comes only from the laborer and creation of surplus-value comes only from the capitalist?*

Question 794 *Why does Marx call the preservation of value an effect of labor which takes place “behind its back”?*

^{22a} “Of all the instruments of the farmers’ trade, the labor of man ... is that on which he is most to rely for the repayment of his capital. The other two ... the working stock of the cattle and the ... carts, ploughs, spades, and so forth, without a given portion of the first, are nothing at all.” (Edmund Burke: “Thoughts and Details on Scarcity, originally presented to the Right Hon. W. Pitt, in the month of November 1795,” Edit. London, 1800, p. 10.)

↓ These benefits are only visible when they are interrupted:

Solange das Geschäft flott geht, ist der Kapitalist zu sehr in die Plusmacherei vertieft, um diese Gratisgabe der Arbeit zu sehn. Gewaltsame Unterbrechungen des Arbeitsprozesses, Krisen, machen sie ihm empfindlich bemerkbar.²³

²³ In *The Times* of 26th November, 1862, a manufacturer, whose mill employed 800 hands, and consumed, on the average, 150 bales of East Indian, or 130 bales of American cotton, complains, in doleful manner, of the standing expenses of his factory when not working. He estimates them at £6,000 a year. Among them are a number of items that do not concern us here, such as rent, rates, and taxes, insurance, salaries of the manager, book-keeper, engineer, and others. Then he reckons £150 for coal used to heat the mill occasionally, and run the engine now

denn er muß die Arbeit immer in bestimmter nützlicher Form zusetzen, und er kann sie nicht in nützlicher Form zusetzen, ohne Produkte zu Produktionsmitteln eines neuen Produkts zu machen und dadurch ihren Wert auf das neue Produkt zu übertragen. Es ist also eine Naturgabe der sich betätigenden Arbeitskraft, der lebendigen Arbeit, Wert zu erhalten, indem sie Wert zusetzt, eine Naturgabe, die dem Arbeiter nichts kostet, aber dem Kapitalisten viel einbringt, die Erhaltung des vorhandenen Kapitalwerts.^{22a}

^{22a} „Von allen Hilfsmitteln in der Landwirtschaft ist die Arbeit des Menschen ... dasjenige, auf das der Farmer am meisten zum Ersatz seines Kapitals angewiesen ist. Die beiden anderen—der Bestand an Arbeitsvieh und die ... Karren, Pflüge, Spaten usw.—sind gar nichts ohne eine gewisse Menge des ersten.“ (Edmund Burke, „Thoughts and Details on Scarcity, originally presented to the Rt. Hon. W. Pitt in the Month of November 1795“, edit. London 1800, p. 10.)

Solange das Geschäft flott geht, ist der Kapitalist zu sehr in die Plusmacherei vertieft, um diese Gratisgabe der Arbeit zu sehn. Gewaltsame Unterbrechungen des Arbeitsprozesses, Krisen, machen sie ihm empfindlich bemerkbar.²³

²³ In der „Times“ vom 26. Nov. 1862 jamert ein Fabrikant, dessen Spinnerei 800 Arbeiter beschäftigt und wöchentlich im Durchschnitt 150 Ballen ostindischer oder ungefähr 130 Ballen amerikanischer Baumwolle verzehrt, dem Publikum die jährlichen Stillstandskosten seiner Fabrik vor. Er schlägt sie auf 6000 Pfd.St. an. Unter diesen Unkosten befinden sich viele Posten, die uns hier nichts angehn, wie Grundrente, Steuern, Versicherungsprämien, Salaire für jährlich engagierte Arbeiter, Manager, Buchhalter, Ingenieur usw. Dann aber berechnet er für

8. Constant Capital and Variable Capital

and then. Besides this, he includes the wages of the people employed at odd times to keep the machinery in working order. Lastly, he puts down £1,200 for depreciation of machinery, because “the weather and the natural principle of decay do not suspend their operations because the steam-engine ceases to revolve.” He says, emphatically, he does not estimate his depreciation at more than the small sum of £1,200, because his machinery is already nearly worn out.

150 Pfd.St. Kohlen, um die Fabrik von Zeit zu Zeit zu wärmen und die Dampfmaschine gelegentlich in Gang zu setzen, außerdem Löhne für Arbeiter, die durch gelegentliche Arbeit die Maschinerie „flüssig“ erhalten. Endlich 1200 Pfd. St. für Verschlechterung der Maschinerie, da „das Wetter und die natürlichen Ursachen des Verfalls ihr Wirken nicht deshalb einstellen, weil die Dampfmaschine aufhört, sich zu drehen“. Er bemerkt ausdrücklich, diese Summe von 1200 Pfd. St. sei so gering angeschlagen, weil sich die Maschinerie bereits in sehr abgenutztem Zustande befinde.

The value of the means of production is not destroyed and then reproduced, but it is preserved. (Marx stresses this here because this is not true for the value labor-power.)

217:1/o As regards the means of production, what is really consumed is their use-value, and the consumption of this use-value by labor results in the product. There is no consumption of their value,²⁴ and it would therefore be inaccurate to say that it is reproduced. It is rather preserved; not by reason of any operation it undergoes itself in the process; but because the article in which it originally exists, vanishes, it is true, but vanishes into some other article. Hence, in the value of the product, there is a reappearance of the value of the means of production, but there is, strictly speaking, no reproduction of that value. That which is produced is a new use-value in which the old exchange-value reappears.²⁵

²⁴ “Productive consumption . . . where the consumption of a commodity is a part of the process of production . . . In these instances there is no consumption of value.” (S. P. Newman, l.c., p. 296.)

222:1 Was überhaupt an den Produktionsmitteln verzehrt wird, ist ihr Gebrauchswert, durch dessen Konsumtion die Arbeit Produkte bildet. Ihr Wert wird in der Tat nicht konsumiert,²⁴ kann also auch nicht reproduziert werden. Er wird erhalten, aber nicht weil eine Operation mit ihm selbst im Arbeitsprozeß vorgeht, sondern weil der Gebrauchswert, worin er ursprünglich existiert, zwar verschwindet, aber nur in einem andren Gebrauchswert verschwindet. Der Wert der Produktionsmittel erscheint daher wieder im Wert des Produkts, aber er wird, genau gesprochen, nicht reproduziert. Was produziert wird, ist der neue Gebrauchswert, worin der alte Tauschwert wieder erscheint.²⁵

²⁴ „Produktive Konsumtion: wo die Konsumtion einer Ware Teil des Produktionsprozesses ist . . . In diesen Fällen findet keine Konsumtion von Wert statt.“ (S. P. Newman, l.c. p. 296.)

Footnote 25 already makes the transition to the next topic, what happens to the value of labor-power:

²⁵ In an American compendium that has gone through, perhaps, 20 editions, this passage occurs: “It matters not in what form capital reappears;” then after a lengthy enumeration of all the possible ingredients of production whose value re-appears in the product, the passage concludes thus: “The various kinds of food, clothing, and shelter, necessary for the existence and comfort of the human being, are also changed. They are consumed from time to time, and their

²⁵ In einem nordamerikanischen Kompendium, das vielleicht 20 Auflagen erlebt hat, liest man: „Es ist nicht von Bedeutung, in welcher Form das Kapital wiedererscheint.“ Nach einer redseligen Aufzählung aller möglichen Produktionsingredienzien, deren Wert im Produkt wiedererscheint, heißt’s schließlich: „Die verschiedenen Arten von Nahrung, Kleidung und Obdach, die für die Existenz und die Bequemlichkeit des Menschen erforderlich sind, werden

value re-appears in that new vigour imparted to his body and mind, forming fresh capital, to be employed again in the work of production.” (F. Wayland, l.c., pp. 31, 32.) Without noticing any other oddities, it suffices to observe, that what re-appears in the fresh vigour, is not the bread’s price, but its bloodforming substances. What, on the other hand, re-appears in the value of that vigour, is not the means of subsistence, but their value. The same necessities of life, at half the price, would form just as much muscle and bone, just as much vigour, but not vigour of the same value. This confusion of “value” and “vigour” coupled with our author’s pharisaical indefiniteness, mark an attempt, futile for all that, to thrash out an explanation of surplus-value from a mere re-appearance of pre-existing values.

ebenfalls verändert. Sie werden von Zeit zu Zeit aufgebraucht, und ihr Wert erscheint wieder in der neuen Kraft, die sie seinem Körper und Geist verleihen, und bildet so neues Kapital, das wieder im Produktionsprozeß angewandt wird.“ (F. Wayland, l.c. p. 31, 32.) Von allen andren Wunderlichkeiten abgesehen, ist es z.B. nicht der Preis des Brotes, der in der erneuten Kraft wiedererscheint, sondern seine blutbildenden Substanzen. Was dagegen als Wert der Kraft wiedererscheint, sind nicht die Lebensmittel, sondern ihr Wert. Dieselben Lebensmittel, wenn sie nur die Hälfte kosten, produzieren ganz ebensoviel Muskel, Knochen usw., kurz dieselbe Kraft, aber nicht Kraft vom selben Wert. Dies Umsetzen von „Wert“ in „Kraft“ und die ganze pharisäische Unbestimmtheit verstecken den allerdings vergeblichen Versuch, aus bloßem Wiedererscheinen vorgeschobner Werte einen Mehrwert herauszudreheln.

⇓ The opposite is true for labor-power; its value is *not* transferred to the product, but it creates new value, part of which replaces the capitalist’s advance of the value of labor-power.

218:1 It is otherwise with the subjective factor of the labor-process, with labor-power in action. While the laborer, by virtue of his labor being of a specialised kind that has a special object, preserves and transfers to the product the value of the means of production, he at the same time, by the mere act of working, creates each instant an additional or new value. Suppose the process of production to be stopped just when the workman has produced an equivalent for the value of his own, labor-power, when, for example, by six hours’ labor, he has added a value of 72 cents. This value is the surplus of the total value of the product over the portion of its value that is due to the means of production. It is the only original bit of value formed during this process, the only portion of the value of the product created by this process. It is true, this new value only replaces the money advanced by the capitalist in the purchase of the labor-power, and spent by the laborer on the necessities of life. From the point of view of the 72 cents spent, the new value of 72 cents merely appears as its reproduction. But these 72 cents are really reproduced,

223:1 Anders mit dem subjektiven Faktor des Arbeitsprozesses, der sich betätigenden Arbeitskraft. Während die Arbeit durch ihre zweckmäßige Form den Wert der Produktionsmittel auf das Produkt überträgt und erhält, bildet jedes Moment ihrer Bewegung zusätzlichen Wert, Neuwert. Gesetzt, der Produktionsprozeß breche ab beim Punkt, wo der Arbeiter ein Äquivalent für den Wert seiner eignen Arbeitskraft produziert, durch sechsstündige Arbeit z.B. einen Wert von 3 sh. zugesetzt hat. Dieser Wert bildet den Überschuß des Produktenwerts über seine dem Wert der Produktionsmittel geschuldeten Bestandteile. Er ist der einzige Originalwert, der innerhalb dieses Prozesses entstand, der einzige Wertteil des Produkts, der durch den Prozeß selbst produziert ist. Allerdings ersetzt er nur das vom Kapitalisten beim Kauf der Arbeitskraft vorgeschobne, vom Arbeiter selbst in Lebensmitteln verausgabte Geld. Mit Bezug auf die verausgabten 3 sh. erscheint der Neuwert von 3 sh. nur als Reproduktion. Aber er ist wirklich reproduziert, nicht nur scheinbar, wie der Wert der Produktionsmittel. Der Ersatz eines Werts durch den andren ist hier ver-

8. Constant Capital and Variable Capital

unlike the value of the means of production, which only seems reproduced. The replacement of one value by another is here mediated by the creation of new value.

mittelt durch neue Wertschöpfung.

Question 795 *Is the value of the labor-power also transferred to the end product? Does a change in the value of labor-power affect the value of the product?*

↓ Obviously, the surplus-value is new value as well:

218:2/o We know, however, from what has gone before, that the labor-process may continue beyond the time necessary to reproduce and incorporate in the product a mere equivalent for the value of the labor-power. Instead of the six hours that are sufficient for the latter purpose, the process may continue for twelve hours. The action of labor-power, therefore, not only reproduces its own value, but produces value over and above it. This surplus-value is the difference between the value of the product and the value of the elements consumed in the formation of that product, in other words, of the means of production and the labor-power.

223:2 Wir wissen jedoch bereits, daß der Arbeitsprozeß über den Punkt hinaus fort-dauert, wo ein bloßes Äquivalent für den Wert der Arbeitskraft reproduziert und dem Arbeitsgegenstand zugesetzt wäre. Statt der 6 Stunden, die hierzu genügen, währt der Prozeß z.B. 12 Stunden. Durch die Betätigung der Arbeitskraft wird also nicht nur ihr eigener Wert reproduziert, sondern ein überschüssiger Wert produziert. Dieser Mehrwert bildet den Überschuß des Produktenwerts über den Wert der verzehrten Produktbildner, d.h. der Produktionsmittel und der Arbeitskraft.

8.3. [Constant and Variable Capital]

Now from the roles of the factors of the labor-process in the transfer and creation of value to the functions of capital. If one understands the flow of value through the production process, one also understands the self-expansion of value in the production process.

219:1a By our representation of the different parts played by the various factors of the labor-process in the formation of the product's value, we have, in fact, characterized the different functions allotted to the different elements of capital in the process of expanding its own value. The surplus of the total value of the product, over the sum of the values of its constituent factors, is the surplus of the expanded capital over the capital originally advanced. The means of production on the one hand, labor-power on the other, are merely the different modes of existence which the value of the original capital assumed when from being money it was transformed into the various factors of the

223:3 Indem wir die verschiedenen Rollen dargestellt, welche die verschiedenen Faktoren des Arbeitsprozesses in der Bildung des Produktenwerts spielen, haben wir in der Tat die Funktionen der verschiedenen Bestandteile des Kapitals in seinem eignen Verwertungsprozeß charakterisiert. Der Überschuß des Gesamtwerts des Produkts über die Wertsumme seiner Bildungselemente ist der Überschuß des verwerteten Kapitals über den ursprünglich vorgeschossenen Kapitalwert. Produktionsmittel auf der einen Seite, Arbeitskraft auf der andren sind nur die verschiedenen Existenzformen, die der ursprüngliche Kapitalwert annahm bei Abstreifung seiner Geldform und seiner Ver-

labor-process.

wandlung in die Faktoren des Arbeitsprozesses.

⇓ Introduction of the concepts constant and variable capital:

219:1b That part of capital then, which is represented by the means of production, by the raw material, auxiliary material and the instruments of labor does not, in the process of production, undergo any quantitative alteration of value. I therefore call it the constant part of capital, or, more shortly, *constant capital*.

223:4 Der Teil des Kapitals also, der sich in Produktionsmittel, d.h. in Rohmaterial, Hilfsstoffe und Arbeitsmittel umsetzt, verändert seine Wertgröße nicht im Produktionsprozeß. Ich nenne ihn daher konstanten Kapitalteil, oder kürzer: konstantes Kapital.

219:2 On the other hand, that part of capital, represented by labor-power, does, in the process of production, undergo an alteration of value. It both reproduces the equivalent of its own value, and also produces an excess, a surplus-value, which may itself vary, may be more or less according to circumstances. This part of capital is continually being transformed from a constant into a variable magnitude. I therefore call it the variable part of capital, or, shortly, *variable capital*.

224:1 Der in Arbeitskraft umgesetzte Teil des Kapitals verändert dagegen seinen Wert im Produktionsprozeß. Er reproduziert sein eignes Äquivalent und einen Überschuß darüber, Mehrwert, der selbst wechseln, größer oder kleiner sein kann. Aus einer konstanten Größe verwandelt sich dieser Teil des Kapitals fortwährend in eine variable. Ich nenne ihn daher variablen Kapitalteil, oder kürzer: variables Kapital.

⇓ The dividing line between constant and variable capital in the process of creating value and surplus-value is the same as that between objective and subjective factors of the labor process:

The same elements of capital which, from the point of view of the labor-process, present themselves respectively as the objective and subjective factors, as means of production and labor-power, present themselves, from the point of view of the process of creating surplus-value, as constant and variable capital.

Dieselben Kapitalbestandteile, die sich vom Standpunkt des Arbeitsprozesses als objektive und subjektive Faktoren, als Produktionsmittel und Arbeitskraft unterscheiden, unterscheiden sich vom Standpunkt des Verwertungsprozesses als konstantes Kapital und variables Kapital.

In the last three paragraphs of the chapter, Marx says that this coincidence (that only the subjective factors of the labor process fall under the concept of variable capital) is not disturbed even if the value of the objective factors of the labor process varies. This variation can be taken in two meanings: (1) a variation over time in the value of the objective factors, and (2) a variation in the proportion between objective and subjective factors of the labor process.

⇓ (1) A change in the values of object of labor and instruments of labor does not alter the fact that they are constant capital. Why not? This change does not originate in the labor process where they function as means of labor but in the labor process where they are produced.

219:3/o The definition of constant capital given above by no means excludes the possibility of a change of value in its elements.

224:2/o Der Begriff des konstanten Kapitals schließt eine Wertrevolution seiner Bestandteile in keiner Weise aus. Nimm an,

8. *Constant Capital and Variable Capital*

Suppose the price of cotton to be one day sixpence a pound, and the next day, in consequence of a failure of the cotton crop, a shilling a pound. Each pound of the cotton bought at sixpence, and worked up after the rise in value, transfers to the product a value of one shilling; and the cotton already spun before the rise, and perhaps circulating in the market as yarn, likewise transfers to the product twice its, original value. It is plain, however, that these changes of value are independent of the increment or surplus-value added to the value of the cotton by the spinning itself. If the old cotton had never been spun, it could, after the rise, be resold at a shilling a pound instead of at sixpence. Further, the fewer the processes the cotton has gone through, the more certain is this result. We therefore find that speculators make it a rule when such sudden changes in value occur, to speculate in that material on which the least possible quantity of labor has been spent: to speculate, therefore, in yarn rather than in cloth, in cotton itself, rather than in yarn. The change of value in the case we have been considering, originates, not in the process in which the cotton plays the part of a means of production, and in which it therefore functions as constant capital, but in the process in which the cotton itself is produced. The value of a commodity, it is true, is determined by the quantity of labor contained in it, but this quantity is itself limited by social conditions. If the time socially necessary for the production of any commodity alters—and a given weight of cotton represents, after a bad harvest, more labor than after a good one—all previously existing commodities of the same class are affected, because they are, as it were, only individuals of the species,²⁶ and their value at any given time is measured by the labor socially necessary, *i.e.*, by the labor necessary for their production under the then existing social conditions.

²⁶ „Toutes les productions d'un même genre ne forment proprement qu'une masse, dont le

das Pfund Baumwolle koste heute 6 d. und steige morgen, infolge eines Ausfalls der Baumwollernte, auf 1 sh. Die alte Baumwolle, die fortfährt, verarbeitet zu werden, ist zum Wert von 6 d. gekauft, fügt aber jetzt dem Produkt einen Wertteil von 1 sh. zu. Und die bereits versponnene, vielleicht schon als Garn auf dem Markt zirkulierende Baumwolle fügt dem Produkt ebenfalls das Doppelte ihres ursprünglichen Werts zu. Man sieht jedoch, daß diese Wertwechsel unabhängig sind von der Verwertung der Baumwolle im Spinnprozeß selbst. Wäre die alte Baumwolle noch gar nicht in den Arbeitsprozeß eingegangen, so könnte sie jetzt zu 1 sh. statt zu 6 d. wieder verkauft werden. Umgekehrt: Je weniger Arbeitsprozesse sie noch durchlaufen hat, desto sicherer ist dies Resultat. Es ist daher Gesetz der Spekulation, bei solchen Wertrevolutionen auf das Rohmaterial in seiner mindest verarbeiteten Form zu spekulieren, also eher auf Garn als auf Gewebe und eher auf die Baumwolle selbst als auf das Garn. Die Wertänderung entspringt hier in dem Prozeß, der Baumwolle produziert, nicht in dem Prozeß, worin sie als Produktionsmittel und daher als konstantes Kapital funktioniert. Der Wert einer Ware ist zwar bestimmt durch das Quantum der in ihr enthaltenen Arbeit, aber dies Quantum selbst ist gesellschaftlich bestimmt. Hat sich die gesellschaftlich zu ihrer Produktion erheischte Arbeitszeit verändert—und dasselbe Quantum Baumwolle z.B. stellt in ungünstigen Ernten größeres Quantum Arbeit dar, als in günstigen—, so findet eine Rückwirkung auf die alte Ware statt, die immer nur als einzelnes Exemplar ihrer Gattung gilt,²⁶ deren Wert stets durch gesellschaftlich notwendige, also auch stets unter gegenwärtigen gesellschaftlichen Bedingungen notwendige Arbeit gemessen wird.

²⁶ „Alle Erzeugnisse der gleichen Art bilden eigentlich nur eine Masse, deren Preis allgemein

8.3. [Constant and Variable Capital]

prix se détermine en général et sans égard aux circonstances particulières.” (Le Trosne, l.c., p. 893.)

und ohne Rücksicht auf die besonderen Umstände bestimmt wird.“ (Le Trosne, l.c. p. 893.)

↓ Now the same argument for the instruments rather than the objects of labor:

220:1 As the value of the raw material may change, so, too, may that of the instruments of labor, of the machinery, etc., employed in the process; and consequently that portion of the value of the product transferred to it from them, may also change. If in consequence of a new invention, machinery of a particular kind can be produced by a diminished expenditure of labor, the old machinery becomes depreciated more or less, and consequently transfers so much less value to the product. But here again, the change in value originates outside the process in which the machine is acting as a means of production. Once engaged in this process, the machine cannot transfer more value than it possesses apart from the process.

225:1 Wie der Wert des Rohmaterials, mag der Wert bereits im Produktionsprozeß dienender Arbeitsmittel, der Maschinerie usw., wechseln, also auch der Wertteil, den sie dem Produkt abgeben. Wird z.B. infolge einer neuen Erfindung Maschinerie derselben Art mit verminderter Ausgabe von Arbeit reproduziert, so entwertet die alte Maschinerie mehr oder minder und überträgt daher auch verhältnismäßig weniger Wert auf das Produkt. Aber auch hier entspringt der Wertwechsel außerhalb des Produktionsprozesses, worin die Maschine als Produktionsmittel funktioniert. In diesem Prozeß gibt sie nie mehr Wert ab, als sie unabhängig von diesem Prozeß besitzt.

↓ (2) Changing proportions between the objective and subjective factors of the labor process, e.g., an increase of the objective as relatively to the subjective factors, does not alter the fact that the one represents constant capital and the other variable capital.

220:2/o Just as a change in the value of the means of production, even after they have commenced to take a part in the labor-process, does not alter their character as constant capital, so, too, a change in the proportion of constant to variable capital does not affect the respective functions of these two kinds of capital. The technical conditions of the labor-process may be revolutionised to such an extent, that where formerly ten men using ten implements of small value worked up a relatively small quantity of raw material, one man may now, with the aid of one expensive machine, work up one hundred times as much raw material. In the latter case we have an enormous increase in the constant capital, that is represented by the total value of the means of production used, and at the same time a great reduction in the variable capital, invested in labor-power. Such a revolution, however, alters only the quantitative relation between the constant and the variable capi-

225:2 Wie ein Wechsel im Wert der Produktionsmittel, ob auch rückwirkend nach ihrem bereits erfolgten Eintritt in den Prozeß, ihren Charakter als konstantes Kapital nicht verändert, ebensowenig berührt ein Wechsel in der Proportion zwischen konstantem und variablem Kapital ihren funktionellen Unterschied. Die technischen Bedingungen des Arbeitsprozesses mögen z.B. so umgestaltet werden, daß, wo früher 10 Arbeiter mit 10 Werkzeugen von geringem Wert eine verhältnismäßig kleine Masse von Rohmaterial verarbeiteten, jetzt 1 Arbeiter mit einer teuren Maschine das hundertfache Rohmaterial verarbeitet. In diesem Fall wäre das konstante Kapital, d.h. die Wertmasse der angewandten Produktionsmittel, sehr gewachsen und der variable Teil des Kapitals, der in Arbeitskraft vorgeschoben, sehr gefallen. Dieser Wechsel ändert jedoch nur das Größenverhältnis zwischen konstantem und variablem Kapital oder die Proportion, worin das Gesamtkapital in konstan-

8. Constant Capital and Variable Capital

tal, or the proportions in which the total capital is split up into its constant and variable constituents; it has not in the least degree affected the essential difference between the two.

te und variable Bestandteile zerfällt, berührt dagegen nicht den Unterschied von konstant und variabel.

Question 796 *Why do materials and supplies already go as prices (instead of values) into the end product?*

Multiple Choice Question 797 *Check those cost items whose values are transferred to the end product.*

- (a) Advertising costs
- (b) Lighting and heating the factory buildings
- (c) Cleaning the factory buildings
- (d) Value of Labor-Power of productive workers
- (e) Selling and billing expenses
- (f) Expenses of the workers' lunch room

Question 798 *Why is one part of the capital called constant capital and the other variable capital? Into which factor of the production process is the constant capital transformed, and into which the variable capital?*

Question 799 *What is fixed and circulating capital and what is their relation to constant and variable capital? Why do bourgeois economists always confuse these two concepts?*

Question 800 *Which contradictions of capitalist production are connected with the fact that technical progress increases the constant capital in relation to the variable capital?*

Question 801 *Why is the value of a given commodity not determined by the amount of labor actually contained in it but by the labor necessary for its reproduction?*

Question 802 *Why do the means of production remain constant capital even if their value changes over time?*

9. The Rate of Surplus-Value

9.1. The Degree of Exploitation of Labor-Power

In chapter Four, 160:5/o, surplus-value is defined as the “increment in capital.” In the circuit of capital $M-C-M'$, surplus-value is the excess of the value of the capital flowing back over the value of the capital advanced. This definition is agnostic about the mechanism generating this increment. In section 9.1 of chapter Nine, Marx assumes that this mechanism is capitalist production as introduced in chapter Six, and massages the above definition in order to get a description of surplus-value which tells us in as much detail as possible how this increment came about.

9.1.a. [Rate of Surplus-Value]

The first step in this massaging of the definition is the observation that in the case of productive capital surplus-value is the excess of the value of the product over the value of the elements of production. He is setting the stage for an inquiry which aspect of the production process generates this excess.

221:1 The surplus-value generated in the production process by C , the capital advanced, i.e., the valorization of the value of the capital C , represents itself at first as the amount by which the value of the product exceeds the value of the elements entering its production.

226:1 Der Mehrwert, den das vorgeschossne Kapital C im Produktionsprozeß erzeugt hat, oder die Verwertung des vorgeschossnen Kapitalwerts C stellt sich zunächst dar als der Überschuß des Werts des Produkts über die Wertsumme seiner Produktionselemente.

↑ This definition clearly points to the production process as the source of surplus-value. Therefore a closer look at the production process is in order.

↓ The capital advanced in the circuit of productive capital is heterogeneous. Marx looks now at the components separately to see which component is generating the surplus-value. Therefore Marx looks at the elements entering the production of the finished product, and at their values:

The capital C splits into two components, one, the sum of money c laid out upon the means of production, and the other, the sum of money v expended upon the labor-power; c represents the portion that has become constant capital, and v the portion that has become variable capital. At first then, $C = c + v$: for example, if £500 is the capital advanced, its components may be such that the £500 = £410 const. + £90 var.

226:2 Das Kapital C zerfällt in zwei Teile, eine Geldsumme c , die für Produktionsmittel, und eine andre Geldsumme v , die für Arbeitskraft verausgabt wird; c stellt den in konstantes, v den in variables Kapital verwandelten Wertteil vor. Ursprünglich ist also $C = c + v$, z.B. das vorgeschossne Kapital von 500 Pfd.St. = 410 Pfd.St. + 90 Pfd.St.

9. The Rate of Surplus-Value

These components enter the production process. For now, Marx treats the production process itself as a black box. Instead, he looks at what comes out of the production process. When the process of production is finished, we get a commodity whose value = $c + v + s$, where s is the surplus-value; or taking our former figures, the value of this commodity may be (£410 const. + £90 var.) + £90 surpl. The original capital has now changed from C to C' , from £500 to £590. The difference is s or a surplus-value of £90.

Am Ende des Produktionsprozesses kommt Ware heraus, deren Wert = $c + v + m$, wo m der Mehrwert, z.B. 410 Pfd.St. + 90 Pfd.St. + 90 Pfd.St. Das ursprüngliche Kapital C hat sich in C' verwandelt, aus 500 Pfd.St. in 590 Pfd.St. Die Differenz zwischen beiden ist = m , einem Mehrwert von 90.

↓ In order to understand the next passage, the reader should bear in mind that Marx distinguishes between depth categories and surface categories. The surface category from which Marx started is the valorization of the advanced capital: the capitalist advances C at the beginning and gets back the bigger C' at the end. The capitalist receives the bigger C' on the market, but we know that the market cannot create value. Which underlying process allows C to become C' ? Marx does not answer this yet, but since he is looking at productive capital he can make the following simple calculation: As long as the time elapsed between $M-C$ and $C'-M'$ is exactly the production period, and as long as the capital advanced is equal to the value of the elements of production, i.e., of the cost of the product, this valorization is equal to the difference between the value of the product and the cost of the product.

Since the value of the constituent elements of the product is equal to the value of the advanced capital, it is indeed a tautology to say, that the excess of the value of the product over the value of its constituent elements, is equal to the expansion of the capital advanced or to the surplus-value produced.

Da der Wert der Produktionselemente gleich dem Wert des vorgeschossenen Kapitals, so ist es in der Tat eine Tautologie, daß der Überschuß des Produktenwerts über den Wert seiner Produktionselemente gleich der Verwertung des vorgeschossenen Kapitals oder gleich dem produzierten Mehrwert.

This is not really a calculation but it simply looks at the same numbers from a different angle, from the side of the production process instead from the side of the market. It is such a small step that Marx even calls it a tautology. This is an overstatement. Mathematically it is a tautology, it is still the same data, but now we are looking at these data from a different direction, from the perspective of the production process instead of the market. And Marx is of course conscious of the importance of this perspectival switch. While writing the above he is conscious of the fact that the surplus-value originates in a different sphere (the production process) than where it first becomes visible (the circulation process).

[Abstraction from Undepreciated Part of Fixed Capital]

↓ However already this simple change in perspective is not as straightforward as it may seem: if *fixed capital* is present, then the surface will only then yield an accurate representation of the hidden processes mediating this increase in value, if one compares the value of the finished product not with the entire capital advanced, but only counts the depreciation of the fixed capital instead of the entire value of the fixed capital.

Nevertheless, we must examine this tautology a little more closely. The two things compared are, the value of the product and the value of its constituents consumed in

226:3/o Indes erfordert diese Tautologie eine nähere Bestimmung. Was mit dem Produktenwert verglichen wird, ist der Wert der in seiner Bildung aufgezehrten Produk-

9.1. The Degree of Exploitation of Labor-Power

the process of production. Now we have seen how that portion of the constant capital which consists of the instruments of labor, transfers to the production only a fraction of its value, while the remainder of that value continues to reside in those instruments. Since this remainder plays no part in the formation of value, we may at present abstract from it.

↑ The transition from the entire fixed capital advanced to that portion of the fixed capital which is depreciated is an abstraction, i.e., it amounts to disregarding an irrelevant factor. ↓ Such an abstraction is only then legitimate if the omission of the irrelevant factor does not make a difference. Marx double-checks therefore what the calculation must look like if one does *not* make this abstraction: in this case C' must be the value of the finished products *plus* the not yet depreciated part of the value of the fixed capital. In his numerical example, the not yet depreciated part is the round number £1000, to make it easy for the reader to separate it from the other amounts:

To introduce it into the calculation would make no difference. For instance, taking our former example, $c = £410$: suppose this sum to consist of £312 value of raw material, £44 value of auxiliary material, and £54 value of the machinery worn away in the process; and suppose that the total value of the machinery employed is £1,054. Out of this latter sum, then, we reckon as advanced for the purpose of turning out the product, the sum of £54 alone, which the machinery loses by wear and tear in the process; for this is all it parts with to the product. Now if we also reckon the remaining £1,000, which still continues in the machinery, as transferred to the product, we ought also to reckon it as part of the value advanced, and thus make it appear on both sides of our calculation.^{26a} We should, in this way, get £1,500 on one side and £1,590 on the other.

↓ The footnote documents Malthus making the same calculation:

^{26a} "If we reckon the value of the fixed capital employed as a part of the advances, we must reckon the remaining value of such capital at the end of the year as a part of the annual returns." (Malthus, "Princ. of Pol. Econ." 2nd. ed., Lond., 1836, p. 269.)

Marx did not live long enough to see that an entire branch of the modern mathematical input-output literature treats the nondepreciated fixed capital in exactly this way, as a joint product.

The difference of these two sums, or the

tionselemente. Nun haben wir aber gesehen, daß der aus Arbeitsmitteln bestehende Teil des angewandten konstanten Kapitals nur ein Stück seines Werts an das Produkt abgibt, während ein andres Stück in seiner alten Existenzform fort dauert. Da das letztere keine Rolle in der Wertbildung spielt, ist hier davon zu abstrahieren.

Sein Hineinziehen in die Rechnung würde nichts ändern. Nimm an, $c = 410$ Pfd. St. bestehe aus Rohmaterial zu 312 Pfd.St., Hilfsstoffen zu 44 Pfd.St. und im Prozeß verschleißender Maschinerie von 54 Pfd. St., der Wert der wirklich angewandten Maschinerie betrage aber 1054 Pfd.St. Als vorgeschossen zur Erzeugung des Produktenwerts berechnen wir nur den Wert von 54 Pfd.St., den die Maschinerie durch ihre Funktion verliert und daher dem Produkt abgibt. Rechneten wir die 1000 Pfd. St. mit, die in ihrer alten Form fortexistieren als Dampfmaschine usw., so müßten wir sie auf beiden Seiten mitrechnen, auf Seite des vorgeschossenen Werts und auf Seite des Produktenwerts,^{26a} und erhielten so resp. 1500 Pfd.St. und 1590 Pfd.St.

^{26a} „Wenn wir den Wert des angewandten fixen Kapitals als Teil des vorgeschossenen Kapitals rechnen, müssen wir am Ende des Jahres den verbliebenen Wert dieses Kapitals als einen Teil der Jahreseinnahme rechnen.“ (Malthus, „Princ. of Pol. Econ.“, 2nd ed., London 1836, p. 269.)

Die Differenz oder der Mehrwert wäre nach

9. The Rate of Surplus-Value

surplus-value, would still be £90.

wie vor 90 Pfd.St.

↑ The main result of this exercise is that the magnitude of surplus-value is the same in both calculations. This confirms that the abstraction of including only the depreciation of the fixed capital into the constant capital does not make a difference for what is essential. ↓ But this abstraction is to be preferred, because the undepreciated value of the fixed capital does not play a role for the value of the finished product:

Throughout this book therefore, by constant capital advanced for the production of value, we always mean, unless the opposite is clear from the context, the value of the means of production actually consumed in the process, and that value alone.

Unter dem zur Wertproduktion vorgeschossen konstanten Kapital verstehn wir daher, wo das Gegenteil nicht aus dem Zusammenhang erhellt, stets nur den Wert der in der Produktion verzehrten Produktionsmittel.

[Abstraction from Constant Capital]

↓ Now Marx goes one step further. He argues that, in order to get the mechanisms which are really responsible for the expansion of the value advanced, one must abstract not only from the fixed capital but furthermore from the entire constant capital.

213:1/o This being so, let us return to the formula $C = c + v$, which we saw was transformed into $C' = (c + v) + s$, C becoming C' . We know that the value of the constant capital is transferred to, and merely re-appears in the product.

227:1/o Dies vorausgesetzt, kehren wir zurück zur Formel $C = c + v$, die sich in $C' = c + v + m$ und eben dadurch C in C' verwandelt. Man weiß, daß der Wert des konstanten Kapitals im Produkt nur wieder erscheint.

↑ The formulation “merely” in this last sentence confirms that Marx is looking for the source of surplus-value. This source cannot lie in c . In the preceding chapter Eight, Marx has shown that only v grows while c remains constant. ↓ Although c reappears in the final product, it is not part of the value created in the process.

The new value actually created in the process, the value produced, or value-product, is therefore not the same as the value of the product; it is not, as it would at first sight appear $(c + v) + s$ or £410 const. + £90 var. + £90 surpl.; but $v + s$ or £90 var. + £90 surpl., not £590 but £180.

Das im Prozeß wirklich neu erzeugte Wertprodukt ist also verschieden von dem aus dem Prozeß erhaltenen Produktenwert, daher nicht, wie es auf den ersten Blick scheint, $c + v + m$ oder 410 Pfd.St. + 90 Pfd.St. + 90, sondern $v + m$ oder 90 Pfd.St. + 90 Pfd.St., nicht 590 Pfd.St., sondern 180 Pfd.St.

↓ In a similar reasoning to that applied to the fixed capital, Marx looks at the counterfactual case that $c = 0$, and comes to the conclusion that the valorization process is not affected.

If $c = 0$, or in other words, if there were branches of industry in which the capitalist could dispense with all means of production made by previous labor, whether they be raw material, auxiliary material, or instruments of labor, employing only labor-power and materials supplied by nature, in that case, there would be no constant capital to transfer to the product. This component of the value of the product, *i.e.*, the £410 in our example, would be eliminated, but the

Wäre c , das konstante Kapital, = 0, in andren Worten, gäbe es Industriezweige, worin der Kapitalist keine produzierten Produktionsmittel, weder Rohmaterial noch Hilfsstoffe, noch Arbeitsinstrumente, sondern nur von Natur vorhandne Stoffe und Arbeitskraft aufzuwenden hätte, so wäre kein konstanter Wertteil auf das Produkt zu übertragen. Dies Element des Produktenwerts, in unsrem Beispiel 410 Pfd.St., fiel fort, aber das Wertprodukt von 180 Pfd.St., wel-

9.1. The Degree of Exploitation of Labor-Power

sum of £180, the amount of new value created, or the value produced, which contains £90 of surplus-value, would remain just as great as if c represented the highest value imaginable. We should have $C = (0 + v) = v$ or C' the expanded capital $= v + s$ and therefore $C' - C = s$ as before.

↓ After showing that the assumption $c = 0$ does not change the value of s , Marx says now “conversely.” This does not mean that he is going to discuss $v = 0$, but he is discussing the assumption that v does not grow, i.e., he discusses the case $s = 0$. If $s = 0$, the observed valorization would not have occurred even with a nonzero c .

Conversely, if $s = 0$ or, in other words, if the labor-power, whose value is advanced in the form of variable capital, were to produce only its equivalent, we should have $C = c + v$ or C' the value of the product $= (c + v) + 0$ or $C = C'$. The capital advanced would, in this case, not have expanded its value.

↑ This is additional proof that only the variable capital and not the constant capital is responsible for the surplus-value. ↓ But we know that already anyway from chapter Eight:

214:1 From what has gone before, we know that surplus-value is purely the result of a variation in the value of v , of that portion of the capital which is transformed into labor-power; consequently, $v + s = v + \Delta v$, or v plus an increment of v .

↓ Since only v grows and c remains constant, the analysis of the process in its pure form requires that we set $c = 0$.

But the true change in value, and the rate of that variation, are obscured by the circumstance that in consequence of the increase in the variable component of the capital, there is also an increase in the sum total of the advanced capital. It was originally £500 and becomes £590. Therefore in order to conduct a pure investigation, we must make abstraction from that portion of the value of the product, in which constant capital alone appears, and consequently must equate the constant capital to zero or make $c = 0$. This is merely an application of a mathematical rule, employed whenever we operate with constant and variable magnitudes, related to each other by the symbols of addition and subtraction only.

↑ The mathematical law referred to here by Marx is: if one adds a constant to a variable magnitude, one gets something which looks like a variable magnitude, even though not ev-

ches 90 Pfd.St. Mehrwert enthält, bliebe ganz ebenso groß, als ob c die größte Wertsomme darstellte. Wir hätten $C = 0 + v = v$, und C' , das verwertete Kapital, $= v + m$, $C' - C$ nach wie vor $= m$.

Wäre umgekehrt $m = 0$, in andren Worten, hätte die Arbeitskraft, deren Wert im variablen Kapital vorgeschossen wird, nur ein Äquivalent produziert, so $C = c + v$, und C' (der Produktenwert) $= c + v + 0$, daher $C = C'$. Das vorgeschossne Kapital hätte sich nicht verwertet.

228:1 Wir wissen in der Tat bereits, daß der Mehrwert bloß Folge der Wertveränderung ist, die mit v , dem in Arbeitskraft umgesetzten Kapitalteil vorgeht, daß also $v + m = v + \Delta v$ (v plus Inkrement von v) ist.

Aber die wirkliche Wertveränderung und das Verhältnis, worin sich der Wert ändert, werden dadurch verdunkelt, daß infolge des Wachstums seines variierenden Bestandteils auch das vorgeschossne Gesamtkapital wächst. Es war 500, und es wird 590. Die reine Analyse des Prozesses erheischt also von dem Teil des Produktenwerts, worin nur konstanter Kapitalwert wieder erscheint, ganz zu abstrahieren, also das konstante Kapital $c = 0$ zu setzen, und damit ein Gesetz der Mathematik anzuwenden, wo sie mit variablen und konstanten Größen operiert und die konstante Größe nur durch Addition oder Subtraktion mit der variablen verbunden ist.

9. The Rate of Surplus-Value

every part of it is variable. It should be noted that in modern mathematics, any constant whose value is not known is called a “variable,” while Marx distinguishes between constant magnitudes, i.e. magnitudes which do not vary over time, and variable magnitudes, which vary over time. Modern mathematics is static in the sense that it has no concept of magnitudes in motion, while Marx’s intuition took it for granted that some mathematical quantities are static and others are in motion.

[Three Remarks Regarding Variable Capital]

↓ Now that we have zeroed in on the variable capital as the true agent of change in the overall capital value, the next step is to define the *rate* at which this v expands its value. Marx will give this definition in , but first he makes three additional remarks.

Question 803 *What is the name for the value difference by which the value of the product exceeds the value of the elements of production? From the point of view of the capitalist it looks like his value begets more value. Explain where this difference really comes from.*

(1) There is the contradiction that this variable capital is a fixed amount of money, i.e., it is not variable.

223:2/o A different difficulty is caused by the original form of the variable capital. In our example, $C' = £410$ constant capital + £90 variable capital + £90 surplus-value. But £90 is a given and therefore a constant quantity; hence it seems absurd to treat it as variable.

228:2 Eine andre Schwierigkeit entspringt aus der ursprünglichen Form des variablen Kapitals. So im obigen Beispiel ist $C' = 410$ Pfd.St. konstantes Kapital + 90 Pfd.St. variables Kapital + 90 Pfd.St. Mehrwert. Neunzig Pfd.St. sind aber eine gegebne, also konstante Größe, und es scheint daher ungerneimt, sie als variable Größe zu behandeln.

↓ Solution of this contradiction:

But in fact, the term £90 variable capital is here merely a symbol to show that this value undergoes a process. The portion of the capital invested in the purchase of labor-power is a definite quantity of materialised labor, a constant value like the value of the labor-power purchased. But in the process of production the place of the £90 is taken by the labor-power in action, dead labor is replaced by living labor, something stagnant by something flowing, a constant by a variable. The result is the reproduction of v plus an increment of v . From the standpoint then of capitalist production, the whole process is the self-motion of the value that is transformed into labor-power, and which was originally constant. Both the process and its result are therefore assigned to this value. If, therefore, the formula “£90 variable capital,” or “so much self-expanding value”, ap-

Aber 90 Pfd.St. oder 90 Pfd.St. variables Kapital ist hier in der Tat nur Symbol für den Prozeß, den dieser Wert durchläuft. Der im Ankauf der Arbeitskraft vorgeschossne Kapitalteil ist ein bestimmtes Quantum vergegenständlichter Arbeit, also konstante Wertgröße, wie der Wert der gekauften Arbeitskraft. Im Produktionsprozeß selbst aber tritt an die Stelle der vorgeschossnen 90 Pfd.St. die sich betätigende Arbeitskraft, an die Stelle toter, lebendige Arbeit, an die Stelle einer ruhenden eine fließende Größe, an die Stelle einer konstanten eine variable. Das Resultat ist die Reproduktion von v plus Inkrement von v . Vom Standpunkt der kapitalistischen Produktion ist dieser ganze Verlauf Selbstbewegung des in Arbeitskraft umgesetzten, ursprünglich konstanten Werts. Ihm wird der Prozeß und sein Resultat zugut geschrieben. Erscheint die For-

9.1. The Degree of Exploitation of Labor-Power

appears contradictory, this is only because they bring to the surface a contradiction immanent in capitalist production.

mel 90 Pfd.St. variables Kapital oder sich verwertender Wert daher widerspruchsvoll, so drückt sie nur einen der kapitalistischen Produktion immanenten Widerspruch aus.

↑ Marx digs out here yet another non-obvious contradiction of the daily practical activity in capitalism. It is contradictory to consider the advanced £90, which is a constant magnitude, as variable capital. But this is a contradiction inherent to capitalist production: capital, i.e., dead labor, a constant amount of value, claims the value created by living labor as its own product. Although the surplus-value does not come from the *value* of labor-power, it is credited to the capitalist who paid this value.

Question 804 Why does Marx write in 322:2/o “the formula appears contradictory” instead “the formula seems contradictory” or “the formula is contradictory”?

↓ (2) Second remark: Setting $c = 0$ is an everyday procedure whenever someone subtracts the costs of materials in order to find out the net value production in a certain industry.

At first sight it appears a strange proceeding, to equate the constant capital to zero. Yet it is what we do every day. If, for example, we wish to calculate the amount of England’s profits from the cotton industry, we first of all deduct the sums paid for cotton to the United States, India, Egypt and other countries; in other words, the value of the capital that merely re-appears in the value of the product, is put = 0.

229:1 Die Gleichsetzung des konstanten Kapitals mit 0 befremdet auf den ersten Blick. Indes vollzieht man sie beständig im Alltagsleben. Will jemand z.B. Englands Gewinn an der Baumwollindustrie berechnen, so zieht er vor allem den an die Vereinigten Staaten, Indien, Ägypten usw. gezahlten Baumwollpreis ab; d.h., er setzt im Produktenwert nur wiedererscheinenden Kapitalwert = 0.

↓ (3) Ratio of profits to total advanced capital has important economic meaning as well. This is discussed in book 3, but will be abstracted away here.

215:2 Of course the ratio of the surplus-value not only to that portion of the capital from which it immediately springs, and whose change of value it represents, but also to the sum total of the capital advanced is economically of very great importance. We shall, therefore, in the third book, treat of this ratio exhaustively. In order to enable one portion of a capital to expand its value by being converted into labor-power, it is necessary that another portion be converted into means of production. In order that variable capital may perform its function, constant capital must be advanced in proper proportion, a proportion given by the special technical conditions of each labor-process.

229:2 Allerdings hat das Verhältnis des Mehrwerts nicht nur zum Kapitalteil, woraus er unmittelbar entspringt und dessen Wertveränderung er darstellt, sondern auch zum vorgeschossenen Gesamtkapital seine große ökonomische Bedeutung. Wir behandeln dies Verhältnis daher ausführlich im dritten Buch. Um einen Teil des Kapitals durch seinen Umsatz in Arbeitskraft zu verwerten, muß ein anderer Teil des Kapitals in Produktionsmittel verwandelt werden. Damit das variable Kapital funktioniere, muß konstantes Kapital in entsprechenden Proportionen, je nach dem bestimmten technischen Charakter des Arbeitsprozesses, vorgeschossen werden.

↓ Marx compares the constant capital to the test tube in which a chemical reaction takes place; right now we are interested in the reaction itself.

The circumstance, however, that retorts and other vessels, are necessary to a chemical

Der Umstand jedoch, daß man zu einem chemischen Prozeß Retorten und andre

9. The Rate of Surplus-Value

process, does not compel the chemist to notice them in the result of his analysis. If we look at the means of production, in their relation to the creation of value, and to the variation in the quantity of value, apart from anything else, they appear simply as the material in which labor-power, the value-creator, incorporates itself. Neither the nature, nor the value of this material is of any importance. The only requisite is that there be a sufficient supply to absorb the labor expended in the process of production. That supply once given, the material may rise or fall in value, or even be, as land and the sea, without any value in itself; but this will have no influence on the creation of value or on the variation in the quantity of value.²⁷

Gefäße braucht, verhindert nicht, bei der Analyse von der Retorte selbst zu abstrahieren. Sofern Wertschöpfung und Wertveränderung für sich selbst, d.h. rein betrachtet werden, liefern die Produktionsmittel, diese stofflichen Gestalten des konstanten Kapitals, nur den Stoff, worin sich die flüssige, wertbildende Kraft fixieren soll. Die Natur dieses Stoffes ist daher auch gleichgültig, ob Baumwolle oder Eisen. Auch der Wert dieses Stoffes ist gleichgültig. Er muß nur in hinreichender Masse vorhanden sein, um das während des Produktionsprozesses zu verausgabende Arbeitsquantum einsaugen zu können. Diese Masse gegeben, mag ihr Wert steigen oder fallen, oder sie mag wertlos sein, wie Erde und Meer, der Prozeß der Wertschöpfung und Wertveränderung wird nicht davon berührt.²⁷

⇓ The footnote clarifies that the word “value creation” does not refer to a creation out of nothing.

²⁷ What Lucretius says is self-evident; “nil posse creari de nihilo,” out of nothing, nothing can be created. Creation of value is transformation of labor-power into labor. Labor-power itself is energy transferred to a human organism by means of nourishing matter.

²⁷ Note zur 2. Ausg. Es versteht sich von selbst mit Lucretius „nil posse creari de nihilo“. Aus nichts wird nichts. „Wertschöpfung“ ist Umsatz von Arbeitskraft in Arbeit. Ihrerseits ist die Arbeitskraft vor allem in menschlichen Organismus umgesetzter Naturstoff.

Question 806 *The value of the constant capital reappears in the product. A change in the value of the constant capital has no effect on the surplus-value. Is the same true for the value of the variable capital and its changes?*

[Correct Quantitative Measure for Creation of Surplus-Value]

⇓ After these three side remarks Marx continues in the main current of the argument. Setting $c = 0$ one gets the rate at which that part of the capital expands that is responsible for the expansion of the entire capital. Marx calls this the rate of surplus-value.

In the first place then we equate the constant capital to zero. The capital advanced is consequently reduced from $c + v$ to v , and instead of the value of the product $c + v + s$ we have now the value produced $v + s$. Given the new value produced = £180, which sum consequently represents the whole labor expended during the process, then subtracting from it £90 the value of the variable capital, we have remaining £90, the amount of the surplus-value. This sum of £90 or s expresses the absolute quan-

229:3/o Wir setzen also zunächst den konstanten Kapitalteil gleich Null. Das vorgeschobne Kapital reduziert sich daher von $c + v$ auf v , und der Produktenwert $c + v + m$ auf das Wertprodukt $v + m$. Gegeben das Wertprodukt = 180 Pfd.St., worin sich die während der ganzen Dauer des Produktionsprozesses fließende Arbeit darstellt, so haben wir den Wert des variablen Kapitals = 90 Pfd.St. abzuziehn, um den Mehrwert = 90 Pfd.St. zu erhalten. Die Zahl 90 Pfd.St. = m drückt hier die absolute Größe des produ-

tity of surplus-value produced. The relative quantity produced, or the increase per cent of the variable capital, is determined, it is plain, by the ratio of the surplus-value to the variable capital, or is expressed by s/v . In our example this ratio is $90/90$, which gives an increase of 100%. This relative increase in the value of the variable capital, or the relative magnitude of the surplus-value, I call, “The rate of surplus-value.”²⁸

²⁸ In the same way that the English use the terms “rate of profit,” “rate of interest.” We shall see, in Book III, that the rate of profit is no mystery, so soon as we know the laws of surplus-value. If the order is reversed, neither the one nor the other is comprehensible.

↑ The footnote makes a strong epistemological statement: if approached in the wrong order, things become incomprehensible.

All this looks like hairsplitting. But we will see that Marx’s conscientious (“conscientious” (*gewissenhaft*) is Marx’s own formulation, see *Contribution* p. 265:1 and footnote 30 to in *Capital*.) analysis of the surface pays off: the rate of surplus-value defined in this way gives a direct look at an important category in the underlying process of production, namely, at the rate of exploitation.

zierten Mehrwerts aus. Seine proportionelle Größe aber, also das Verhältnis, worin das variable Kapital sich verwertet hat, ist offenbar bestimmt durch das Verhältnis des Mehrwerts zum variablen Kapital oder ist ausgedrückt in m/v . Im obigen Beispiel also in $90/90 = 100\%$. Diese verhältnismäßige Verwertung des variablen Kapitals oder die verhältnismäßige Größe des Mehrwerts nenne ich Rate des Mehrwerts.²⁸

²⁸ In derselben Weise, wie der Engländer „rate of profits“, „rate of interest“, usw. braucht. Man wird aus Buch III sehen, daß die Profitrate leicht zu begreifen, sobald man die Gesetze des Mehrwerts kennt. Auf dem umgekehrten Weg begreift man ni l’un, ni l’autre.

9.1.b. [Rate of Exploitation]

So far Marx was concerned about how the *surface* appearance of surplus-value as the excess of sales price over cost should be read. The important quantitative relationship is that between v and s . In the next two paragraphs he discusses an equally important quantitative relationship in the *production* process. Now we are no longer on the level of surface appearances, but we are analyzing a process that is taking place behind closed doors.

↓ Marx begins with the introduction of the concept “necessary labor” as distinct from “surplus labor.” Although the word “necessary labor” was used previously, this is a new and different meaning of the same word.

We have seen that the laborer, during one portion of the labor-process, produces only the value of his labor-power, that is, the value of his means of subsistence. Now since his work forms part of a system, based on the social division of labor, he does not directly produce the actual necessities which he himself consumes; he produces instead a particular commodity, yarn for example, whose value is equal to the value of those necessities or of the money with which they can be bought.

230:1/o Wir haben gesehen, daß der Arbeiter während eines Abschnitts des Arbeitsprozesses nur den Wert seiner Arbeitskraft produziert, d.h. den Wert seiner notwendigen Lebensmittel. Da er in einem auf gesellschaftlicher Teilung der Arbeit beruhenden Zustand produziert, produziert er seine Lebensmittel nicht direkt, sondern in Form einer besonderen Ware, des Garns z.B., einen Wert gleich dem Wert seiner Lebensmittel oder dem Geld, womit er sie kauft.

Marx does not write “a value equal to the value of the money” but “a value equal to the money.”

9. The Rate of Surplus-Value

The portion of his day's labor devoted to this purpose, will be greater or less, in proportion to the value of the necessaries that he daily requires on an average, or, what amounts to the same thing, in proportion to the labor-time required on an average to produce them. If the value of those necessaries represent on an average the expenditure of six hours' labor, the workman must on an average work for six hours to produce that value.

The concept of necessary labor can be defined whenever there is commodity production, even if labor-power is not sold as a commodity.

If instead of working for the capitalist, he worked independently on his own account, he would, other things being equal, still be obliged to labor for the same number of hours, in order to produce the value of his labor-power, and thereby to gain the means of subsistence necessary for his conservation or continued reproduction.

But under capitalism, this necessary labor obtains a specific form; it takes the form of reproduction rather than that of a new production of value:

But as we have seen, during that portion of his day's labor in which he produces the value of his labor-power, say three shillings, he produces only an equivalent for the value of his labor-power already advanced^{28a} by the capitalist; the new value created only replaces the variable capital advanced. It is owing to this fact, that the production of the new value of three shillings appears as mere reproduction.

Der Teil seines Arbeitstags, den er hierzu verbraucht, ist größer oder kleiner, je nach dem Wert seiner durchschnittlichen täglichen Lebensmittel, also je nach der zu ihrer Produktion erheischten durchschnittlichen täglichen Arbeitszeit. Wenn der Wert seiner täglichen Lebensmittel im Durchschnitt 6 vergegenständlichte Arbeitsstunden darstellt, so muß der Arbeiter im Durchschnitt täglich 6 Stunden arbeiten, um ihn zu produzieren.

Arbeitete er nicht für den Kapitalisten, sondern für sich selbst, unabhängig, so müßte er, unter sonst gleichbleibenden Umständen, nach wie vor im Durchschnitt denselben aliquoten Teil des Tags arbeiten, um den Wert seiner Arbeitskraft zu produzieren, und dadurch die zu seiner eignen Erhaltung oder beständigen Reproduktion nötigen Lebensmittel zu gewinnen.

Da er in dem Teil des Arbeitstags, worin er den Tageswert der Arbeitskraft, sage 3 sh., produziert, nur ein Äquivalent für ihren vom Kapitalisten bereits gezahlten^{28a} Wert produziert, also durch den neu geschaffnen Wert nur den vorgeschossenen variablen Kapitalwert ersetzt, erscheint diese Produktion von Wert als bloße Reproduktion.

The Moore-Aveling translation says: "It is owing to this fact, that the production of the new value of three shillings takes the semblance of a mere reproduction." This translation is wrong. It not only

seems so, but in the bookkeeping of the capitalist and also the tax laws there is no difference between the value of the raw materials etc. which reappears in the product, and the value of the wages which

is replaced by new value and *not* transferred to the end product. On the level of the surface, the production of necessary means of subsistence has indeed the form of reproduction.

↑ Note that Marx uses the word "reproduction" although for the capitalist it seems to be a "transfer" of value: The period of the day during which the worker produces an equivalent of his wage takes for the capitalist the form of a mere *transfer* to the product of the value expended for the wage. This is a false interpretation of the actual process. The worker's wage is not transferred to the product, it is consumed by the worker, and the worker creates new value during the work-day which replaces it.

9.1. The Degree of Exploitation of Labor-Power

^{28a} {Note added in the 3rd German edition. The author resorts here to the economic language in current use. It will be remembered that on p. 182 (present edition, p. 174) it was shown that in reality the laborer “advances” to the capitalist and not the capitalist to the laborer. F. E. }

^{28a} {Note zur 3. Aufl. Der Verfasser gebraucht hier die landläufige ökonomische Sprache. Man erinnert sich, daß auf S. 137 nachgewiesen, wie in Wirklichkeit nicht der Kapitalist dem Arbeiter, sondern der Arbeiter dem Kapitalisten „vorschießt“.—F.E. }

Next Marx introduces the terminology “necessary labor” for this. A long footnote justifies his re-use of the same word for a different concept.

That portion of the working-day, then, during which this reproduction takes place, I call “*necessary*” labor-time, and the labor expended during that time I call “*necessary*” labor²⁹.

Den Teil des Arbeitstags also, worin diese Reproduktion vorgeht, nenne ich notwendige Arbeitszeit, die während derselben verausgabte Arbeit notwendige Arbeit.²⁹

The footnote clarifies that this is a different meaning of the word “necessary labor” than that used earlier in the book. The word “necessary” is very fitting. The labor is necessary in two respects.

²⁹ In this work, we have, up to now, employed the term “necessary labor-time,” to designate the time necessary under given social conditions for the production of any commodity. Henceforward we use it to designate also the time necessary for the production of the particular commodity labor-power. The use of one and the same technical term in different senses is inconvenient, but in no science can it be altogether avoided. Compare, for instance, the higher with the lower branches of mathematics.

²⁹ Wir haben bisher in dieser Schrift das Wort „notwendige Arbeitszeit“ angewandt für die zur Produktion einer Ware überhaupt gesellschaftlich notwendige Arbeitszeit. Wir brauchen es von jetzt ab auch für die zur Produktion der spezifischen Ware Arbeitskraft notwendige Arbeitszeit. Der Gebrauch derselben termini technici in verschiedenem Sinn ist mißlich, aber in keiner Wissenschaft ganz zu vermeiden. Man vergleiche z.B. die höheren und niedren Teile der Mathematik.

Necessary, as regards the laborer, because independent of the particular social form of his labor; necessary, as regards capital, and the world of capitalists, because on the continued existence of the laborer depends their existence also.

Notwendig für den Arbeiter, weil unabhängig von der gesellschaftlichen Form seiner Arbeit. Notwendig für das Kapital und seine Welt, weil das beständige Dasein des Arbeiters ihre Basis.

↑ Interestingly, Marx uses here a system-transcending criterion: “Necessary for the worker, because independent of the particular social form of his labor.”

Question 807 Compare the concept of necessary labor introduced in chapter Nine with the socially necessary labor introduced in chapter One. Is it the same word used for two completely different concepts or are these concepts related somehow, and if so how?

Question 808 What is necessary labor and why is it called necessary? (Don’t confuse with the “socially necessary labor-time.”) Discuss the terms “paid” and “unpaid labor.”

↓ The next paragraph stresses that surplus-value is objectified surplus labor, i.e., it originates in labor performed in excess of that necessary for the maintenance of the worker.

During the second period of the labor-process, that in which his labor is no longer necessary labor, the workman, it is true, labors, expends labor-power; but his labor, being no longer necessary labor, he creates

231:1 Die zweite Periode des Arbeitsprozesses, die der Arbeiter über die Grenzen der notwendigen Arbeit hinaus schantz, kostet ihm zwar Arbeit, Verausgabung von Arbeitskraft, bildet aber keinen Wert für ihn.

9. The Rate of Surplus-Value

no value for himself. He creates surplus-value which, for the capitalist, has all the charms of a creation out of nothing. This portion of the working-day, I name surplus-labor-time, and to the labor expended during that time, I give the name of surplus-labor.

From the labor theory of value to a surplus-labor theory of surplus-value.

It is every bit as important, for a correct understanding of surplus-value, to conceive it as a mere congelation of surplus-labor-time, as nothing but materialised surplus-labor, as it is, for a proper comprehension of value, to conceive it as a mere congelation of so many hours of labor, as nothing but materialised labor.

↓ Surplus-labor exists in all class societies:

The essential difference between the various economic forms of society, between, for instance, a society based on slave-labor, and one based on wage-labor, lies only in the mode in which this surplus-labor is in each case extracted from the actual producer, the laborer.³⁰

³⁰ Herr Wilhelm Thucydides Roscher has found a mare's nest. He has made the important discovery that if, on the one hand, the formation of surplus-value, or surplus-produce, and the consequent accumulation of capital, is now-a-days due to the thrift of the capitalist, on the other hand, in the lowest stages of civilisation it is the strong who compel the weak to economise. (l.c., p. 78.) To economise what? Labor? Or superfluous wealth that does not exist? What is it that makes such men as Roscher account for the origin of surplus-value, by a mere rechauffé of the more or less plausible excuses by the capitalist, for his appropriation of surplus-value? It is, besides their real ignorance, their apologetic dread of a scientific analysis of value and surplus-value, and of obtaining a result, possibly not altogether palatable to the powers that be.

Sie bildet Mehrwert, der den Kapitalisten mit allem Reiz einer Schöpfung aus Nichts anlacht. Diesen Teil des Arbeitstags nenne ich Surplusarbeitszeit, und die in ihr verausgabte Arbeit: Mehrarbeit (suplus labour).

So entscheidend es für die Erkenntnis des Werts überhaupt, ihn als bloße Gerinnung von Arbeitszeit, als bloß vergegenständlichte Arbeit, so entscheidend ist es für die Erkenntnis des Mehrwerts, ihn als bloße Gerinnung von Surplusarbeitszeit, als bloß vergegenständlichte Mehrarbeit zu begreifen.

Nur die Form, worin diese Mehrarbeit dem unmittelbaren Produzenten, dem Arbeiter, abgepreßt wird, unterscheidet die ökonomischen Gesellschaftsformationen, z.B. die Gesellschaft der Sklaverei von der der Lohnarbeit.³⁰

³⁰ Mit wahrhaft Gottschedscher Genialität entdeckt Herr Wilhelm Thucydides Roscher, daß, wenn die Bildung von Mehrwert oder Mehrprodukt, und die damit verbundene Akkumulation, heurigen Tags der „Sparsamkeit“ des Kapitalisten geschuldet, der dafür „z.B. Zins verlangt“, dagegen „auf den niedrigsten Kulturstufen ... die Schwächeren von den Stärkeren zur Sparsamkeit gezwungen werden“. (l.c. p. 82, 78.) Zur Ersparung von Arbeit? oder nicht vorhandener überschüssiger Produkte? Neben wirklicher Ignoranz ist es apologetische Scheu vor gewissenhafter Analyse des Werts und Mehrwerts, und etwas verfänglich-polizeiwidrigem Resultat, die einen Roscher und Kons. zwingt, die mehr oder minder plausiblen Rechtfertigungsgründe des Kapitalisten für seine Aneignung vorhandener Mehrwerte in Entstehungsgründe des Mehrwerts zu verdrehen.

Question 809 Which justifications?

9.1.c. [Rate of Surplus-Value Expresses Rate of Exploitation]

Now the bridge between the surface and the underlying phenomena. Perhaps a better metaphor in the present case would be: the *opening* in the surface through which one can see an im-

9.1. The Degree of Exploitation of Labor-Power

portant aspect of the underlying process. The rate of surplus-value, easily computed from empirical phenomena, is equal to the proportional division of the labor day into necessary and surplus labor (although there is no visible division of the labor process itself).

217:2/o Since, on the one hand, the values of the variable capital and of the labor-power purchased by that capital are equal, and the value of this labor-power determines the necessary portion of the working-day; and since, on the other hand, the surplus-value is determined by the surplus portion of the working-day, it follows that surplus-value bears the same ratio to variable capital, that surplus-labor does to necessary labor, or in other words, the rate of surplus-value (s/v) = (surplus-labor / necessary labor). Both ratios, s/v and surplus-labor/necessary-labor, express the same thing in different ways; in the one case by reference to materialised, incorporated labor, in the other by reference to living, fluent labor.

Two equations for the rate of surplus-value: s/v and surplus labor/necessary labor.

227:2 The rate of surplus-value is therefore an exact expression for the degree of exploitation of labor by capital, or of the laborer by the capitalist.^{30a}

s/v it is an empirically measurable phenomenon, which expresses what is going on underneath the surface, the exploitation of labor-power. By making the mathematical division one penetrates through the surface. ↓ However other aspects of exploitation are not as clearly visible on the surface.

^{30a} Although the rate of surplus-value is an exact expression for the degree of exploitation of labor-power, it is, in no sense, an expression for the absolute amount of exploitation. For example, if the necessary labor 5 hours and the surplus-labor = 5 hours, the degree of exploitation is 100%. The amount of exploitation is here measured by 5 hours. If, on the other hand, the necessary labor = 6 hours and the surplus-labor = 6 hours, the degree of exploitation remains, as before, 100%, while the actual amount of exploitation has increased 20%, namely from five hours to six.

↓ Rate of exploitation higher than profit rate.

We assumed in our example, that the value of the product £410 const. + £90 var. + £90 surpl., and that the capital advanced = £500. Since the surplus-value = £90, and the advanced capital = £500, we should, accord-

231:2/o Da der Wert des variablen Kapitals = Wert der von ihm gekauften Arbeitskraft, da der Wert dieser Arbeitskraft den notwendigen Teil des Arbeitstags bestimmt, der Mehrwert seinerseits aber bestimmt ist durch den überschüssigen Teil des Arbeitstags, so folgt: Der Mehrwert verhält sich zum variablen Kapital, wie die Mehrarbeit zur notwendigen, oder die Rate des Mehrwerts $m/v = (\text{Mehrarbeit}) / (\text{Notwendige Arbeit})$. Beide Proportionen drücken dasselbe Verhältnis in verschiedner Form aus, das eine Mal in der Form vergegenständlichter, das andre Mal in der Form flüssiger Arbeit.

232:1 Die Rate des Mehrwerts ist daher der exakte Ausdruck für den Exploitationsgrad der Arbeitskraft durch das Kapital oder des Arbeiters durch den Kapitalisten.^{30a}

^{30a} Note zur 2. Ausg. Obgleich exakter Ausdruck für den Exploitationsgrad der Arbeitskraft, ist die Rate des Mehrwerts kein Ausdruck für die absolute Größe der Exploitation. Z.B. wenn die notwendige Arbeit = 5 Stunden und die Mehrarbeit = 5 Stunden, ist der Exploitationsgrad = 100%. Die Größe der Exploitation ist hier gemessen durch 5 Stunden. Ist dagegen die notwendige Arbeit = 6 Stunden und die Mehrarbeit = 6 Stunden, so bleibt der Exploitationsgrad von 100% unverändert, während die Größe der Exploitation um 20% wächst, von 5 auf 6 Stunden.

232:2 Nach unsrer Annahme war der Wert des Produkts = 410 Pfd.St. + 90 Pfd. St. + 90, das vorgeschobne Kapital = 500 Pfd.St. Da der Mehrwert = 90 und das vorgeschobne Kapital = 500, würde man nach

9. The Rate of Surplus-Value

ing to the usual way of reckoning, get as the rate of surplus-value (generally confounded with rate of profits) 18%, a rate so low as possibly to cause a pleasant surprise to Mr. Carey and other harmonisers. But in truth, the rate of surplus-value is not equal to s/C or $s/(c+v)$: thus it is not 90/500 but 90/90 or 100%, which is more than five times the apparent degree of exploitation.

der gewöhnlichen Art der Berechnung herausbekommen, daß die Rate des Mehrwerts (die man mit der Profitrate verwechselt) = 18%, eine Verhältniszahl, deren Niedrigkeit Herrn Carey und andre Harmoniker rühren möchte. In der Tat aber ist die Rate des Mehrwerts nicht $= m/C$ oder $m/(c+m)$, sondern $= m/v$, also nicht 90/500, sondern 90/90 = 100%, mehr als das Fünffache des scheinbaren Exploitationsgrads.

Question 810 *What is the rate of profits? Which other factors besides the exploitation of the workers determine the rate of profits? (This question goes somewhat beyond the scope of the reading assignments.)*

Question 811 *In what sense is the rate of surplus-value “generally confounded with the rate of profits” as Marx says in 218:2?*

↓ In the second half of the paragraph Marx emphasizes how extraordinary this “peek” below the surface is.

Although, in the case we have supposed, we are ignorant of the actual length of the working-day, and of the duration in days or weeks of the labor-process, as also of the number of laborers employed, yet the rate of surplus-value s/v accurately discloses to us, by means of its equivalent expression, surplus-labor/necessary labor, the relation between the two parts of the working-day. This relation is here one of equality, the rate being 100%. Hence, it is plain, the laborer, in our example, works one half of the day for himself, the other half for the capitalist.

Obgleich wir nun im gegebenen Fall die absolute Größe des Arbeitstags nicht kennen, auch nicht die Periode des Arbeitsprozesses (Tag, Woche usw.), endlich nicht die Anzahl der Arbeiter, die das variable Kapital von 90 Pfd.St. gleichzeitig in Bewegung setzt, zeigt uns die Rate des Mehrwerts m/v durch ihre Konvertibilität in (Mehrarbeit) / (Notwendige Arbeit) genau das Verhältnis der zwei Bestandteile des Arbeitstags zueinander. Es ist 100%. Also arbeitete der Arbeiter die eine Hälfte des Tags für sich und die andre für den Kapitalisten.

↑ Although many details about the working day are unknown to us, the empirically accessible s/v reveals exactly the relative magnitude of the two portions of the working day.

Question 812 *What is the rate of surplus-value? In which respect can it be seen as an indicator of the exploitation of the worker?*

9.1.d. [Example: Manchester Cotton Spinning Mill]

To conclude this first section, Marx gives a cookbook recipe how to calculate the rate of surplus-value, and then two detailed examples.

The method of calculating the rate of surplus-value is therefore, shortly, as follows. We take the total value of the product and put the constant capital which merely re-appears in it, equal to zero. What remains, is the only value that has, in the pro-

232:3 Die Methode zur Berechnung der Rate des Mehrwerts ist also kurzgefaßt diese: Wir nehmen den ganzen Produktenwert und setzen den darin nur wiedererscheinen-den konstanten Kapitalwert gleich Null. Die übrigbleibende Wertsumme ist das einzige

9.1. The Degree of Exploitation of Labor-Power

cess of producing the commodity, been actually created. If the amount of surplus-value be given, we have only to deduct it from this remainder, to find the variable capital. And *vice versa*, if the latter be given, and we require to find the surplus-value. If both be given, we have only to perform the concluding operation, viz., to calculate s/v , the ratio of the surplus-value to the variable capital.

Since an important aspect of exploitation is clearly visible on the surface, Marx considered it important that people should be able to make this calculation.

Though the method is so simple, yet it may not be amiss, by means of a few examples, to exercise the reader in the application of the novel principles underlying it.

Example of a spinning mill.

First we will take the case of a spinning mill containing 10,000 mule spindles, spinning No. 32 yarn from American cotton, and producing 1 lb. of yarn weekly per spindle. We assume the waste to be 6%: under these circumstances 10,600 lbs. of cotton are consumed weekly, of which 600 lbs. go to waste. The price of the cotton in April, 1871, was 7 3/4 d. per lb.; the raw material therefore costs in round numbers £342. The 10,000 spindles, including preparation-machinery, and motive power, cost, we will assume, £1 per spindle, amounting to a total of £10,000. The wear and tear we put at 10%, or £1,000 yearly = £20 weekly. The rent of the building we suppose to be £300 a year, or £6 a week. Coal consumed (for 100 horse-power indicated, at 4 lbs. of coal per horse-power per hour during 60 hours, and inclusive of that consumed in heating the mill), 11 tons a week at 8s. 6 d. a ton, amounts to about £4 1/2 a week: gas, £1 a week, oil, etc., £4 1/2 a week. Total cost of the above auxiliary materials, £10 weekly. Therefore the constant portion of the value of the week's product is £378. Wages amount to £52 a week. The price of the yarn is 12 1/4 d. per lb. which gives for the value of 10,000 lbs. the sum of £510.

im Bildungsprozeß der Ware wirklich erzeugte Wertprodukt. Ist der Mehrwert gegeben, so ziehn wir ihn von diesem Wertprodukt ab, um das variable Kapital zu finden. Umgekehrt, wenn letzteres gegeben und wir den Mehrwert suchen. Sind beide gegeben, so ist nur noch die Schlußoperation zu verrichten, das Verhältnis des Mehrwerts zum variablen Kapital, m/v , zu berechnen.

233:1 So einfach die Methode, scheint es doch passend, den Leser in die ihr zu Grunde liegende und ihm ungewohnte Anschauungsweise durch einige Beispiele einzuexercieren.

233:2 Zunächst das Beispiel einer Spinnerei von 10 000 Mulespindeln, die Nr. 32 Garn aus amerikanischer Baumwolle spinnend und 1 Pfund Garn wöchentlich per Spindel produziert. Der Abfall ist 6%. Also werden 10 600 Pfund Baumwolle wöchentlich in 10 000 Pfund Garn und 600 Pfund Abfall verarbeitet. Im April 1871 kostet diese Baumwolle 7 3/4 d. per Pfund, also für 10 600 Pfund rund 342 Pfd.St. Die 10 000 Spindeln, inklusive Vorspinnmaschine und Dampfmaschine, kosten 1 Pfd.St. per Spindel, also 10 000 Pfd.St. Ihr Verschleiß beträgt 10% = 1000 Pfd.St. oder wöchentlich 20 Pfd.St. Die Miete des Fabrikgebäudes ist 300 Pfd.St. oder 6 Pfd.St. per Woche. Kohlen (4 Pfund per Stunde und Pferdekraft, auf 100 Pferdekraft (Indikator), und 60 Stunden per Woche inklusive Heizung des Gebäudes) 11 tons per Woche, zu 8 sh. 6 d. die Tonne, kosten rund 4 1/2 Pfd. St. per Woche; Gas 1 Pfd.St. per Woche, Öl 4 1/2 Pfd.St. per Woche, also alle Hilfsstoffe 10 Pfd.St. per Woche. Also ist der konstante Wertteil 378 Pfd.St. per Woche. Der Arbeitslohn beträgt 52 Pfd.St. per Woche. Der Garnpreis ist 12 1/4 d. per Pfund oder 10 000 Pfd. = 510 Pfd.St., der Mehrwert also $510 - 430 = 80$ Pfd.St. Wir setzen den

9. The Rate of Surplus-Value

The surplus-value is therefore in this case £510 - £430 = £80. We put the constant part of the value of the product = 0, as it plays no part in the creation of value. There remains £132 as the weekly value created, which = £52 var. + £80 surpl. The rate of surplus-value is therefore $80/52 = 153\frac{11}{13}\%$. In a working-day of 10 hours with average labor the result is: necessary labor = $3\frac{31}{33}$ hours, and surplus-labor = $6\frac{2}{33}$.³¹

³¹ The above data, which may be relied upon, were given me by a Manchester spinner. In England the horse-power of an engine was formerly calculated from the diameter of its cylinder, now the actual horse-power shown by the indicator is taken.

konstanten Wertteil von 378 Pfd.St. = 0, da er in der wöchentlichen Wertbildung nicht mitspielt. Bleibt das wöchentliche Wertprodukt von 132 = 52 + 80 Pfd.St. Die Rate des Mehrwerts also = $80/52 = 153\frac{11}{13}\%$. Bei zehnstündigem durchschnittlichem Arbeitstag ergibt dies: Notwendige Arbeit = $3\frac{31}{33}$ Stunden und Mehrarbeit = $6\frac{2}{33}$ Stunden.³¹

³¹ Note zur 2. Ausg. Das in der ersten Ausgabe gegebne Beispiel einer Spinnerei für das Jahr 1860 enthielt einige faktische Irrtümer. Die im Text gegebenen durchaus genauen Daten sind mir von einem Manchester Fabrikanten geliefert.— Es ist zu bemerken, daß in England die alte Pferdekraft nach dem Durchschnitt des Zylinders berechnet wurde, die neue nach der wirklichen Kraft zählt, die der Indikator anzeigt.

To follow these calculations note that each £ has 20 shillings, and each shilling 12 d. (pence). The costs of producing 10,000 lbs. of yarn split up into the following components:

- Constant capital:
 - Raw material cotton: 10,600 lbs of cotton at 7 3/4 d. per lb, whose total cost is £ 342 plus 5 shillings plus 10 d., Marx takes the round number £ 342.
 - Depreciation of the spindles: The 10,000 spindles cost £ 1 each. They last 10 years, and Marx assumes 50 weeks per year. This gives a depreciation of altogether £ 20 each week.
 - Rent of the building: £300 each year, gives £ 6 each week.
 - Coal: 4 lbs for every hour and horse power: 60 hours each week, 100 horse powers, gives 24,000 lbs. Marx says this is 11 tons, how many lbs are in a ton? This depends on whether it is a long ton or a short ton. A long ton is 2240 lbs. A short ton is 2000 lbs. 24,00 lbs = 10.714286 long tons or 12 short tons. Presumably Marx meant long tons and the number 11 is rounded, the exact number would be 10.714286.
 - Price of coal is 8 sh 6 d the ton (which is 102 d the ton); for 11 tons it would be 1122 d, or £ 4 plus 13 sh plus 6 d. If we take the exact number of 10.714286 tons it would be 1093 d, or £ 4 plus 11 sh plus 1 d. Marx takes the round number of £ 4 1/2, or £ 4 plus 10 sh plus 0 d.
 - Gas: £ 1 each week.
 - Oil: £ 4 1/2 each week.

All these constant cost elements together give £ 342 + 20 + 6 + 10 = 378.

- Variable capital: Direct labor cost is £ 52 per week.
- The sales price of the yarn is 12 1/4 d., therefore the total sales amount is £ 510 plus 8 shillings plus 4 d., Marx rounds it to £ 510.

9.1. The Degree of Exploitation of Labor-Power

Therefore we have $\pounds 378c + \pounds 52v + \pounds 80s = \pounds 510$. Rate of surplus-value is $\frac{s}{v} = \frac{80}{52} = \frac{20}{13}$. Therefore 13/33 of the day is necessary labor and 20/33 of the day is surplus labor. If the day is 10 hours long, this gives 3 hours and 56 4/11 minutes of necessary labor and 6 hours and 3 7/11 minutes surplus labor.

↓ Is there an error in the wheat example? What is the relationship between a bushel and a quarter? Arithmetic gives: if 22 bushels cost £ 11, then 1 bushel costs 10 shillings. Since Marx says the price is 80 sh. per quarter, this could only be true if 1 quarter is 8 bushels. This is true according to the Winchester measures.

One more example. Jacob gives the following calculation for the year 1815. Owing to the previous adjustment of several items it is very imperfect; nevertheless for our purpose it is sufficient. In it he assumes the price of wheat to be 80 s. a quarter, and the average yield per acre to be 22 bushels.

234:1 Jacob gibt für das Jahr 1815, bei Annahme eines Weizenpreises von 80 sh. per Quarter und eines Durchschnittsertrags von 22 Buschels per acre, so daß der acre 11 Pfd.St. einbringt, folgende durch vorherige Kompensation verschiedener Posten sehr mangelhafte, aber für unsren Zweck genügende Rechnung.

Value Produced Per Acre		
Seed (wheat)	1 Pfd.St.	9 sh.
Manure	2 Pfd.St.	10 sh.
Wages	3 Pfd.St.	10 sh.
Summa:	7 Pfd.St.	9 sh.
Tithes, Rates, Taxes	1 Pfd.St.	1 sh.
Rent	1 Pfd.St.	8 sh.
Farmer's Profit and Interest	1 Pfd.St.	2 sh.
Summa:	3 Pfd.St.	11 sh.

Wertproduktion per acre		
Samen (Weizen)	1 Pfd.St.	9 sh.
Dünger	2 Pfd.St.	10 sh.
Arbeitslohn	3 Pfd.St.	10 sh.
Summa:	7 Pfd.St.	9 sh.
Zehnten, Rates, Taxes	1 Pfd.St.	1 sh.
Rente	1 Pfd.St.	8 sh.
Pächters Profit u. Zins	1 Pfd.St.	2 sh.
Summa:	3 Pfd.St.	11 sh.

The Moore-Aveling translation says 8 s. per acre, but Alan Sievers says it should be 80 s. per acre as in the German.

The surplus-value (always under the assumption that the price of the product equals its value) is here distributed under the various captions of profit, interest, rent, etc. We have nothing to do with these in detail; we simply add them together, and the sum is a surplus-value of £3 11s. 0d. The sum of £3 19s. 0d., paid for seed and manure, is con-

234:2 Der Mehrwert, stets unter der Voraussetzung, daß Preis des Produkts = seinem Wert, wird hier unter die verschiedenen Rubriken, Profit, Zins, Zehnten usw. verteilt. Diese Rubriken sind uns gleichgültig. Wir addieren sie zusammen und erhalten einen Mehrwert von 3 Pfd.St. 11 sh. Die 3 Pfd. St. 19 sh. für Samen und Dünger setzen

9. The Rate of Surplus-Value

stant capital, and we put it equal to zero. There is left the sum of £3 10s. 0d., which is the variable capital advanced: and we see that a new value of £3 10s. 0d + £3 11s. 0d. has been produced in its place. Therefore $s/v = £3\ 11s.\ 0d. / £3\ 10s.\ 0d.$, giving a rate of surplus-value of more than 100%. The laborer employs more than one half of his working-day in producing the surplus-value, which different persons, under different pretexts, share amongst themselves.^{31a}

^{31a} The calculations given in the text are intended merely as illustrations. We have in fact assumed that prices = values. We shall, however, see, in Book III., that even average prices cannot be equated to values in this very simple manner.

↑ Marx refers here to the equalization of profit rates.

Question 813 *Where in Capital I does Marx refer to the equalization of profit rates, and where does he refer to the tendency of the profit rates to fall?*

Question 814 *Why is it incorrect to express the rate of exploitation by the proportion surplus-labor/working-day?*

wir als konstanten Kapitalteil gleich Null. Bleibt vorgeschossenes variables Kapital von 3 Pfd.St. 10 sh., an dessen Stelle ein Neuwert von 3 Pfd.St. 10 sh. + 3 Pfd.St. 11 sh. produziert worden ist. Also beträgt $m/v = (3\ \text{Pfd.St. } 11\ \text{sh.}) / (3\ \text{Pfd.St. } 10\ \text{sh.})$, mehr als 100%. Der Arbeiter verwendet mehr als die Hälfte seines Arbeitstags zur Produktion eines Mehrwerts, den verschiedene Personen auf verschiedene Verwände hin unter sich verteilen.^{31a}

^{31a} Die gegebenen Rechnungen gelten nur als Illustration. Es wird nämlich unterstellt, daß die Preise = den Werten. Man wird in Buch III sehn, daß diese Gleichsetzung, selbst für die Durchschnittspreise, sich nicht in dieser einfachen Weise macht.

9.2. Representation of the Components Parts of the Value of the Product by Proportional Parts of the Product

↓ Marx uses here the same numerical example as in chapter Seven, 204:1/o.

Let us now return to the example by which we were shown how the capitalist converts money into capital. The necessary labor of his spinner was 6 hours, ditto the surplus-labor, the degree of exploitation of labor-power was therefore 100%.

The product of a working-day of 12 hours is 20 lbs. of yarn, having a value of 30s. No less than 8/10ths of this value, or 24s., is due to mere re-appearance in it, of the value of the means of production (20 lbs. of cotton, value 20s., and spindle worn away, 4s.): it is therefore constant capital. The remaining 2/10ths or 6s. is the new value created during the spinning process: of this one half replaces the value of the day's labor-power, or the variable capital,

234:3 Kehren wir nun zum Beispiel zurück, das uns zeigte, wie der Kapitalist aus Geld Kapital macht. Die notwendige Arbeit seines Spinners betrug 6 Stunden, die Mehrarbeit desgleichen, der Exploitationsgrad der Arbeitskraft daher 100%.

234:4/o Das Produkt des zwölfstündigen Arbeitstags sind 20 Pfd. Garn zum Wert von 30 sh. Nicht weniger als 8/10 dieses Garnwerts (24 sh.) sind gebildet durch den nur wieder erscheinenden Wert der verzehrten Produktionsmittel (20 Pfd. Baumwolle zu 20 sh., Spindel usw. zu 4 sh.) oder bestehn aus konstantem Kapital. Die übrigen 2/10 sind der während des Spinnprozesses entstandne Neuwert von 6 sh., wovon eine Hälfte den vorgeschossenen Tageswert der

9.2. Representation of Value of Product

the remaining half constitutes a surplus-value of 3s. The total value then of the 20 lbs. of yarn is made up as follows:

30s. value of yarn = 24s. const. + 3s. var. + 3s. surpl.

Arbeitskraft ersetzt oder das variable Kapital, und die andre Hälfte eine Mehrwert von 3 sh. bildet. Der Gesamtwert der 20 Pfd. Garn ist also folgendermaßen zusammengesetzt:

Garnwert von 30 sh. = 24 sh. + 3 sh. + 3 sh.

The comma after "oder das variable Kapital" is in the 2nd

edition MEGA, but not in MEW.
TODO Check the 4th edition

MEGA.

↓ This division of the value can be represented by a division of the product:

Since the whole of this value is contained in the 20 lbs. of yarn produced, it follows that the various component parts of this value can be represented as being contained respectively in corresponding parts of the product.

If the value of 30s. is contained in 20 lbs. of yarn, then 8/10ths of this value, or the 24s. that form its constant part, is contained in 8/10ths of the product or in 16 lbs. of yarn. Of the latter, 13 1/3 lbs. represent the value of the raw material, the 20s. worth of cotton spun, and 2 2/3 lbs. represent the 4s. worth of spindle, etc., worn away in the process.

Hence the whole of the cotton used up in spinning the 20 lbs. of yarn, is represented by 13 1/3 lbs. of yarn. This latter weight of yarn contains, it is true, by weight, no more than 13 1/3 lbs. of cotton, worth 13 1/3 shillings; but the 6 2/3 shillings additional value contained in it are the equivalent for the cotton consumed in spinning the remaining 6 2/3 lbs. of yarn. The effect is the same as if these 6 2/3 lbs. of yarn contained no cotton at all, and the whole 20 lbs. of cotton were concentrated in the 13 1/3 lbs. of yarn. The latter weight, on the other hand, does not contain an atom either of the value of the auxiliary materials and implements, or of the value newly created in the process.

In the same way, the 2 2/3 lbs. of yarn, in which the 4s., the remainder of the constant capital, is embodied, represents nothing but the value of the auxiliary materials and in-

235:1 Da dieser Gesamtwert sich in dem Gesamtprodukt von 20 Pfd. Garn darstellt, müssen auch die verschiedenen Wertelemente in proportionellen Teilen des Produkts darstellbar sein.

235:2 Existiert ein Garnwert von 30 sh. in 20 Pfd. Garn, so 8/10 dieses Werts, oder sein konstanter Teil von 24 sh., in 8/10 des Produkts, oder in 16 Pfd. Garn. Davon stellen 13 1/3 Pfd. den Wert des Rohmaterials dar, der versponnenen Baumwolle zu 20 sh., und 2 2/3 Pfd. den Wert der verzehrten Hilfsstoffe und Arbeitsmittel, Spindel usw. zu 4 sh.

235:3 13 1/3 Pfund Garn stellen also alle im Gesamtprodukt vom 20 Pfd. Garn versponnene Baumwolle vor, das Rohmaterial des Gesamtprodukts, aber auch weiter nichts. In ihnen stecken zwar nur 13 1/3 Pfd. Baumwolle zum Wert von 13 1/3 sh., aber ihr zusätzlicher Wert von 6 2/3 sh. bildet ein Äquivalent für die in den andren 6 2/3 Pfd. Garn versponnene Baumwolle. Es ist, als ob letzteren die Wolle ausgerupft und alle Wolle des Gesamtprodukts in 13 1/3 Pfd. Garn zusammengestopft wäre. Sie enthalten dagegen jetzt kein Atom des Werts der verbrauchten Hilfsstoffe und Arbeitsmittel noch des im Spinnprozeß geschaffnen Neuwerts.

235:4 Ebenso stellen weitere 2 2/3 Pfd. Garn, worin der Rest des konstanten Kapitals (= 4 sh.) steckt, nichts dar außer dem Wert der im Gesamtprodukt von 20 Pfd.

9. The Rate of Surplus-Value

struments of labor consumed in producing the 20 lbs. of yarn.

We have, therefore, arrived at this result: although eight-tenths of the product, or 16 lbs. of yarn, is, in its character of an article of utility, just as much the fabric of the spinner's labor, as the remainder of the same product, yet when viewed in this connexion, it does not contain, and has not absorbed any labor expended during the process of spinning. It is just as if the cotton had converted itself into yarn, without help; as if the shape it had assumed was mere trickery and deceit: for so soon as our capitalist sells it for 24s., and with the money replaces his means of production, it becomes evident that this 16 lbs. of yarn is nothing more than so much cotton and spindle-waste in disguise.

On the other hand, the remaining 2/10ths of the product, or 4 lbs. of yarn, represent nothing but the new value of 6s., created during the 12 hours' spinning process. All the value transferred to those 4 lbs. from the raw material and instruments of labor consumed, was, so to say, intercepted in order to be incorporated in the 16 lbs. first spun. In this case, it is as if the spinner had spun 4 lbs. of yarn out of air, or, as if he had spun them with the aid of cotton and spindles, that, being the spontaneous gift of Nature, transferred no value to the product.

Of this 4 lbs. of yarn, in which the whole of the value newly created during the process, is condensed, one half represents the equivalent for the value of the labor consumed, or the 3s. variable capital, the other half represents the 3s. surplus-value.

Since 12 working-hours of the spinner are embodied in 6s., it follows that in yarn of the value of 30s. there must be embodied 60 working-hours. And this quantity of labor-time does in fact exist in the 20 lbs. of yarn; for in 8/10ths or 16 lbs. there are materialised the 48 hours of labor expended, before the commencement of the spinning process, on the means of production; and in the remaining 2/10ths or 4 lbs. there are

Garn vernutzten Hilfsstoffe und Arbeitsmittel.

235:5 Acht Zehntel des Produkts, oder 16 Pfd. Garn, obgleich leiblich, als Gebrauchs-wert betrachtet, als Garn, ebensosehr Gebilde der Spinnarbeit wie die restierenden Produktteile, enthalten daher in diesem Zusammenhang keine Spinnarbeit, keine während des Spinnprozesses selbst eingesaugte Arbeit. Es ist, als ob sie sich ohne Spinnen in Garn verwandelt hätten und als wäre ihre Garngestalt reiner Lug und Trug. In der Tat, wenn der Kapitalist sie verkauft zu 24 sh. und damit seine Produktionsmittel zurückkauft, zeigt sich, daß 16 Pfd. Garn—nur verkleidete Baumwolle, Spindel, Kohle usw. sind.

236:1 Umgekehrt stellen die übrigbleibenden 8/10 des Produkts oder 4 Pfd. Garn jetzt nichts dar außer dem im zwölfstündigen Spinnprozeß produzierten Neuwert von 6 sh. Was vom Wert der vernutzten Rohmaterialien und Arbeitsmittel in ihnen steckte, ward bereits ausgeweidet und den ersten 16 Pfd. Garn einverleibt. Die in 20 Pfd. Garn in der Luft gewirkt oder in Baumwolle und mit Spindeln, die ohne Zutat menschlicher Arbeit, von Natur vorhanden, dem Produkt keinen Wert zusetzen.

236:2 Von den 4 Pfd. Garn, worin so das ganze Wertprodukt des täglichen Spinnprozesses existiert, stellt die eine Hälfte nur den Ersatzwert der vernutzten Arbeitskraft dar, also das variable Kapital von 3 sh., die anderen 2 Pfd. Garn nur den Mehrwert von 3 sh.

236:3 Da 12 Arbeitsstunden des Spinners sich in 6 sh. vergegenständlichen, sind im Garnwert von 30 sh. 60 Arbeitsstunden vergegenständlicht. Sie existieren in 20 Pfd. Garn, wovon 8/10 oder 16 Pfd. die Materiatur von 48 vor dem Spinnprozeß vergangenen Arbeitsstunden sind, nämlich der in den Produktionsmitteln des Garns vergegenständlichten Arbeit, 2/10 oder 4 Pfd. dagegen die Materiatur der im Spinnprozeß

9.2. Representation of Value of Product

materialised the 12 hours' work done during the process itself.

On a former page we saw that the value of the yarn is equal to the sum of the new value created during the production of that yarn plus the value previously existing in the means of production. It has now been shown how the various component parts of the value of the product, parts that differ functionally from each other, may be represented by corresponding proportional parts of the product itself.

To split up in this manner the product into different parts, of which one represents only the labor previously spent on the means of production, or the constant capital, another, only the necessary labor spent during the process of production, or the variable capital, and another and last part, only the surplus-labor expended during the same process, or the surplus-value; to do this, is, as will be seen later on from its application to complicated and hitherto unsolved problems, no less important than it is simple.

↓ This division of the value of the product can not only be represented by parts of the finished product, but also by parts of the work week.

In the preceding investigation we have treated the total product as the final result, ready for use, of a working-day of 12 hours. We can however follow this total product through all the stages of its production; and in this way we shall arrive at the same result as before, if we represent the partial products, given off at the different stages, as functionally different parts of the final or total product.

↑ Note that there is more text in the English than the German!

The spinner produces in 12 hours 20 lbs. of yarn, or in 1 hour $1\frac{2}{3}$ lbs.; consequently he produces in 8 hours $13\frac{2}{3}$ lbs., or a partial product equal in value to all the cotton that is spun in a whole day. In like manner the partial product of the next period of 1 hour and 36 minutes, is $2\frac{2}{3}$ lbs. of yarn: this represents the value of the instruments of labor that are consumed in 12 hours. In

selbst verausgabten 12 Arbeitsstunden.

236:4 Früher sahen wir, daß der Garnwert gleich der Summe des in seiner Produktion erzeugten Neuwerts plus der bereits in seinen Produktionsmitteln präexistierenden Werte ist. Jetzt hat sich gezeigt, wie die funktionell oder begrifflich verschiedenen Bestandteile des Produktenwerts in proportionellen Teilen des Produkts selbst darstellbar sind.

236:5 Diese Zerfällung des Produkts—des Resultats des Produktionsprozesses—in ein Quantum Produkt, das nur die in den Produktionsmitteln enthaltne Arbeit oder den konstanten Kapitalteil, ein andres Quantum, das nur die im Produktionsprozeß zugesetzte notwendige Arbeit oder den variablen Kapitalteil, und ein letztes Quantum Produkt, das nur die im selben Prozeß zugesetzte Mehrarbeit oder den Mehrwert darstellt, ist ebenso einfach als wichtig, wie ihre spätre Anwendung auf verwickelte und noch ungelöste Probleme zeigen wird.

236:6 Wir betrachteten eben das Gesamtprodukt als fertiges Resultat des zwölfstündigen Arbeitstags. Wir können es aber auch in seinem Entstehungsprozeß begleiten, und dennoch die Teilprodukte als funktionell unterschiedne Produktenteile darstellen.

236:7/o Der Spinner produziert in 12 Stunden 20 Pfd. Garn, daher in einer Stunde $1\frac{2}{3}$ und in 8 Stunden $13\frac{1}{3}$ Pfd., also ein Teilprodukt vom Gesamtwert der Baumwolle, die während des ganzen Arbeitstags versponnen wird. In derselben Art und Weise ist das Teilprodukt der folgenden Stunde und 36 Minuten = $2\frac{2}{3}$ Pfd. Garn und stellt daher den Wert der während der 12 Arbeits-

9. The Rate of Surplus-Value

the following hour and 12 minutes, the spinner produces 2 lbs. of yarn worth 3 shillings, a value equal to the whole value he creates in his 6 hours' necessary labor. Finally, in the last hour and 12 minutes he produces another 2 lbs. of yarn, whose value is equal to the surplus-value, created by his surplus-labor during half a day. This method of calculation serves the English manufacturer for every-day use; it shows, he will say, that in the first 8 hours, or $\frac{2}{3}$ of the working-day, he gets back the value of his cotton; and so on for the remaining hours. It is also a perfectly correct method: being in fact the first method given above with this difference, that instead of being applied to space, in which the different parts of the completed product lie side by side, it deals with time, in which those parts are successively produced.

stunden vernutzten Arbeitsmittel dar. Ebenso produziert der Spinner in der folgenden Stunde und 12 Minuten 2 Pfd. Garn = 3 sh., ein Produktenwert gleich dem ganzen Wertprodukt, das er in 6 Stunden notwendiger Arbeit schafft. Endlich produziert er in den letzten $\frac{6}{5}$ Stunden ebenfalls 2 Pfd. Garn, deren Wert gleich dem durch seine halbtägige Mehrarbeit erzeugten Mehrwert. Diese Art Berechnung dient dem englischen Fabrikanten zum Hausgebrauch, und er wird z.B. sagen, daß er in den ersten 8 Stunden oder $\frac{2}{3}$ des Arbeitstags seine Baumwolle herauschlägt usw. Man sieht, die Formel ist richtig, in der Tat nur die erste Formel, übersetzt aus dem Raum, wo die Teile des Produkts fertig nebeneinander liegen, in die Zeit, wo sie aufeinander folgen.

↓ But this division of the workday can be maliciously misinterpreted (and the next section gives an example of such a mis-interpretation).

But it can also be accompanied by very barbarian notions, more especially in the heads of those who are as much interested, practically, in the process of making value beget value, as they are in misunderstanding that process theoretically. Such people may get the notion into their heads, that our spinner, for example, produces or replaces in the first 8 hours of his working-day the *value* of the cotton; in the following hour and 36 minutes the *value* of the instruments of labor worn away; in the next hour and 12 minutes the *value* of the wages; and that he devotes to the production of surplus-value for the manufacturer, only that well known "last hour." In this way the poor spinner is made to perform the two-fold miracle not only of producing cotton, spindles, steam-engine, coal, oil, etc., at the same time that he spins with them, but also of turning one working-day into five; for, in the example we are considering, the production of the raw material and instruments of labor demands four working-days of twelve hours each, and their conversion into yarn requires another such day.

Die Formel kann aber auch von sehr barbarischen Vorstellungen begleitet sein, namentlich in Köpfen, die ebenso praktisch im Verwertungsprozeß interessiert sind, als sie ein Interesse haben, ihn theoretisch mißzuverstehn. So kann sich eingebildet werden, daß unser Spinner z.B. in den ersten 8 Stunden seines Arbeitstags den Wert der Baumwolle, in der folgenden Stunde und 36 Minuten den Wert der verzehrten Arbeitsmittel, in der folgenden Stunde und 12 Minuten den Wert des Arbeitslohns produziert oder ersetzt, und nur die vielberühmte „letzte Stunde“ dem Fabrikherrn, der Produktion von Mehrwert widmet. Dem Spinner wird so das doppelte Wunder aufgebürdet, Baumwolle, Spindel, Dampfmaschine, Kohle, Öl usw. in demselben Augenblick zu produzieren, wo er mit ihnen spinnt, und aus einem Arbeitstag von gegebenem Intensitätsgrad fünf solcher Tage zu machen. In unsrem Fall nämlich erfordert die Produktion des Rohmaterials und der Arbeitsmittel $\frac{24}{6} = 4$ zwölfstündige Arbeitstage und ihre Verwandlung in Garn einen andren zwölfstün-

That the love of lucre induces an easy belief in such miracles, and that sycophant doctrinaires are never wanting to prove them, is vouched for by the following incident of historical celebrity.

digen Arbeitstag. Daß die Raubgier solche Wunder glaubt und nie den doktrinären Sykophanten mißt, der sie beweist, zeige nun ein Beispiel von historischer Berühmtheit.

9.3. Senior's 'Last Hour'

Section 9.3 illustrates how thoroughly Marx analyses even such a blatantly false statement as Senior's. Marx is not satisfied with counterposing a correct statement to it, but he follows Senior's logic on its own terms, shows that it leads to a contradiction, and the resolution of this contradiction is the correction of Senior's logic. Marx tells it in a style similar to a fairy tale or an Aesopian fable:

One fine morning, in the year 1836, Nassau W. Senior, who may be called the bel esprit of English economists, well known, alike for his economic "science," and for his beautiful style, was summoned from Oxford to Manchester, to learn in the latter place, the Political Economy that he taught in the former. The manufacturers elected him as their champion, not only against the newly passed Factory Act, but against the still more menacing Ten-hours' agitation. With their usual practical acuteness, they had found out that the learned Professor "wanted a good deal of finishing;" it was this discovery that caused them to write for him. On his side the Professor has embodied the lecture he received from the Manchester manufacturers, in a pamphlet, entitled: "Letters on the Factory Act, as it affects the cotton manufacture." London, 1837. Here we find, amongst others, the following edifying passage:

237:1 An einem schönen Morgen des Jahres 1836 wurde der wegen seiner ökonomischen Wissenschaft und seines schönen Stils berufene Nassau W. Senior, gewissermaßen der Clauren unter den englischen Ökonomen, von Oxford nach Manchester zitiert, um hier politische Ökonomie zu lernen, statt sie in Oxford zu lehren. Die Fabrikanten erkoren ihn zum Preisfechter gegen den neulich erlassenen Factory Act und die darüber noch hinausstrebende Zehnstundenagitation. Mit gewohntem praktischen Scharfsinn hatten sie erkannt, daß der Herr Professor „wanted a good deal of finishing“. Sie verschrieben ihn daher nach Manchester. Der Herr Professor seinerseits hat die zu Manchester von den Fabrikanten erhaltene Lektion stilisiert in dem Pamphlet: „Letters on the Factory Act, as it affects the cotton manufacture“, London 1837. Hier kann man u.a. folgendes Erbauliche lesen:

Under the present law, no mill in which persons under 18 years of age are employed, ... can be worked more than 11 1/2 hours a day, that is 12 hours for 5 days in the week, and nine on Saturday. Now the following analysis (!) will show that in a mill so worked, the whole net profit is derived *from the last hour*. I will suppose a manufacturer to invest £100,000:—£80,000 in his mill and machinery, and £20,000 in raw material and wages. The annual return of that mill, supposing the capital to be turned once a year, and gross profits to be 15 per cent., ought to be goods

238:1 „Unter dem gegenwärtigen Gesetz kann keine Fabrik, die Personen unter 18 Jahren beschäftigt, länger als 11 1/2 Stunden täglich arbeiten, d.h. 12 Stunden während der ersten 5 Tage und 9 Stunden am Sonnabend. Die folgende Analyse (!) zeigt nun, daß in einer solchen Fabrik der ganze Reingewinn von der letzten Stunde abgeleitet ist. Ein Fabrikant legt 100 000 Pfd.St. aus—80 000 Pfd.St. in Fabrikgebäude und Maschinen, 20 000 in Rohmaterial und Arbeitslohn. Der jährliche Umsatz der Fabrik, vorausgesetzt, das Kapital schlage jährlich einmal um und der Bruttoge-

9. The Rate of Surplus-Value

worth £15,000. . . Of this £115,000, each of the twenty-three half-hours of work produces 5–115ths or one twenty-third. Of these 23–23rds (constituting the whole £115,000), twenty, that is to say £100,000 out of the £115,000, simply replace the capital;—one twenty-third (or £5,000 out of the £115,000) makes up for the deterioration of the mill and machinery. The remaining 2–23rds, that is, the last two of the twenty-three half-hours of every day, produce the net profit of 10 per cent. If, therefore (prices remaining the same), the factory could be kept at work thirteen hours instead of eleven and a half, with an addition of about £2,600 to the circulating capital, the net profit would be more than doubled. On the other hand, if the hours of working were reduced by one hour per day (prices remaining the same), the *net* profit would be destroyed—if they were reduced by one hour and a half, even the *gross* profit would be destroyed.”³²

winn betrage 15%, muß sich auf Waren zum Wert von 115 000 Pfd.St. belaufen . . . Von diesen 115 000 Pfd.St. produziert jede der 23 halben Arbeitsstunden täglich 5/115 oder 1/23. von diesen 23/23, die das Ganze der 115 000 Pfd.St. bilden (constituting the whole 115 000 Pfd.St.), ersetzen 20/23, d.h. 100 000 von den 115 000, nur das Kapital; 1/23 oder 5000 Pfd. St. von den 15 000 Brutto-Gewinn (!) ersetzen die Abnutzung der Fabrik und Maschinerie. Die übrigbleibenden 2/23, d.h. die beiden letzten halben Stunden jedes Tages produzieren den Reingewinn von 10%. Wenn daher bei gleichbleibenden Preisen die Fabrik 13 Stunden statt 11 1/2 arbeiten dürfte, so würde, mit einer Zulage von ungefähr 2600 Pfd.St. zum zirkulierenden Kapital, der Reingewinn mehr als verdoppelt werden. Andererseits, wenn die Arbeitsstunden täglich um 1 Stunde reduziert würden, würde der Reingewinn verschwinden, wenn um 1 1/2 Stunden, auch der Bruttogewinn.“³²

³² Senior, l.c., pp. 12, 13. We let pass such extraordinary notions as are of no importance for our purpose; for instance, the assertion, that manufacturers reckon as part of their profit, gross or net, the amount required to make good wear and tear of machinery, or in other words, to replace a part of the capital. So, too, we pass over any question as to the accuracy of his figures. Leonard Horner has shown in “A Letter to Mr. Senior,” etc., London, 1837, that they are worth no more than so-called “Analysis.” Leonard Horner was one of the Factory Inquiry Commissioners in 1833, and Inspector, or rather Censor of Factories till 1859. He rendered undying service to the English working-class. He carried on a life-long contest, not only with the embittered manufacturers, but also with the Cabinet, to whom the number of votes given by the masters in the Lower House, was a matter of far greater importance than the number of hours worked by the “hands” in the mills.

³² Senior, l.c. p. 12, 13. Wir gehn auf die für unsren Zweck gleichgültigen Kuriosa nicht ein, z.B. die Behauptung, daß die Fabrikanten den Ersatz der verschliffnen Maschinerie usw., also eines Kapitalbestandteils, zum Gewinn, Brutto oder Netto, schmutzig oder rein, rechnen. Auch nicht auf die Richtigkeit oder Falschheit der Zahlenangaben. Daß sie nicht mehr wert sind als die sogenannte „Analyse“, bewies Leonard Horner in „A Letter to Mr. Senior etc“, London 1837. Leonard Horner, einer der Factory Inquiry Commissioners von 1833 und Fabrikinspektor, in der Tat Fabrikzensor, bis 1859, hat unsterbliche Verdienste um die englische Arbeiterklasse gewonnen. Außer mit den erbitterten Fabrikanten führte er einen lebenslangen Kampf mit den Ministern, für die es ungleich wichtiger war, die „Stimmen“ der Fabrikherrn im Unterhaus als die Arbeitsstunden der „Hände“ in der Fabrik zu zählen.

The remainder of the footnote gives a cleaner formulation of Senior’s mistaken calculation. Marx does not correct the conceptual mistakes, but he reformulates them to make them clearer, in order to better be able to refute them:

^{32 ctd} Senior’s representation is confused, apart from the wrongness of its content. What he really intended to say was this: The manufacturer employs the workman for 11 1/2 hours or for 23 half-hours daily. As the working-day, so, too,

^{32 ctd} Zusatz zur Note 32. Seniors Darstellung ist konfus, ganz abgesehen von der Falschheit ihres Inhalts. Was er eigentlich sagen wollte, war dies: Der Fabrikant beschäftigt die Arbeiter täglich 11 1/2 oder 23/2 Stunden. Wie der ein-

the working year, may be conceived to consist of 11 1/2 hours or 23 half-hours, but each multiplied by the number of working-days in the year. On this supposition, the 23 half-hours yield an annual product of £115,000; one half-hour yields $1/23 \times £115,000$; 20 half-hours yield $20/23 \times £115,000 = £100,000$, *i.e.*, they replace no more than the capital advanced. There remain 3 half-hours, which yield $3/23 \times £115,000 = £5,000$ or the gross profit. Of these 3 half-hours, one yields $1/23 \times £115,000 = £5,000$; *i.e.*, it makes up for the wear and tear of the machinery; the remaining 2 half-hours, *i.e.*, the last hour, yield $2/23 \times £115,000 = £10,000$ or the net profit. In the text Senior converts the last 2/23 of the product into portions of the working-day itself.

And the Professor calls this an "analysis!"

It is amazing how many errors this calculation contains. First Marx remarks that even if one adopts Senior's faulty framework one will not get to the same result as Senior:

If, giving credence to the out-cries of the manufacturers, he believed that the workmen spend the best part of the day in the production, *i.e.*, the reproduction or replacement of the value of the buildings, machinery, cotton, coal, etc., then his analysis was superfluous. His answer would simply have been:—Gentlemen! if you work your mills for 10 hours instead of 11 1/2, then, other things being equal, the daily consumption of cotton, machinery, etc., will decrease in proportion. You gain just as much as you lose. Your work-people will in future spend one hour and a half less time in reproducing or replacing the capital that has been advanced.

But if Senior wanted to apply economic principles that make sense, he would first of all have to introduce the distinction between constant and variable capital:

—If, on the other hand, he did not believe them without further inquiry, but, as being an expert in such matters, deemed an analysis necessary, then he ought, in a question that is concerned exclusively with the relations of net profit to the length of the working-day, before all things to have asked

zelne Arbeitstag, so besteht die Jahresarbeit aus 11 1/2 oder 23/2 Stunden (multipliziert mit der Anzahl der Arbeitstage während des Jahrs). Dies vorausgesetzt, produzieren die 23/2 Arbeitsstunden das Jahresprodukt von 115 000 Pfd.St.; 1/2 Arbeitsstunde produziert $1/23 \times 115\,000$ Pfd. St.; 20/2 Arbeitsstunden produzieren $20/23 \times 115\,000$ Pfd.St. = 100 000 Pfd.St., d.h. sie ersetzen nur das vorgeschobne Kapital. Bleiben 3/2 Arbeitsstunden, die $3/23 \times 115\,000$ Pfd.St. = 15 000 produzieren, d.h. den Bruttogewinn. Von diesen 3/2 Arbeitsstunden produziert 1/2 Arbeitsstunde $1/23 \times 115\,000$ Pfd.St. = 5000 Pfd. St., d.h. sie produziert nur den Ersatz für den Verschleiß der Fabrik und der Maschinerie. Die letzten zwei halben Arbeitsstunden, d.h. die letzte Arbeitsstunde, produziert $2/23 \times 115\,000$ Pfd. St. = 10 000 Pfd.St., d.h. den Nettoprofit. Im Text verwandelt Senior die letzten 2/23 des Produkts in Teile des Arbeitstags selbst.

239:1 Und das nennt der Herr Professor eine „Analyse“!

Glaubte er den Fabrikantenjammer, daß die Arbeiter die beste Zeit des Tags in der Produktion, daher der Reproduktion oder dem Ersatz des Werts von Baulichkeiten, Maschinen, Baumwolle, Kohle usw. vergeuden, so war jede Analyse überflüssig. Er hatte einfach zu antworten: Meine Herren! Wenn ihr 10 Stunden arbeiten laßt statt 11 1/2, wird, unter sonst gleichbleibenden Umständen, der tägliche Verzehr von Baumwolle, Maschinerie usw. um 1 1/2 Stunden abnehmen. Ihr gewinnt also grade so viel, als ihr verliert. Eure Arbeiter werden in Zukunft 1 1/2 Stunden weniger für Reproduktion oder Ersatz des vorgeschobnen Kapitalwerts vergeuden.

Glaubte er ihnen nicht aufs Wort, sondern hielt als Sachverständiger eine Analyse für nötig, so mußte er vor allem, in einer Frage, die sich ausschließlich um das Verhältnis des Reingewinns zur Größe des Arbeitstags dreht, die Herren Fabrikanten ersuchen, Maschinerie und Fabrikgebäude, Rohma-

9. The Rate of Surplus-Value

the manufacturers, to be careful not to lump together machinery, workshops, raw material, and labor, but to be good enough to place the constant capital, invested in buildings, machinery, raw material, etc., on one side of the account, and the capital advanced in wages on the other side.

The data furnished by the capitalists say that £ 100,000 were advanced as “capital,” i.e., labor and materials, corresponding to the product of 10 hours. Assuming that £ 10,000 of this were spent for labor and £ 90,000 for materials, this assumption would give a ratio of 1:1 between wages and surplus-value. Senior, talking as an economist, would be able to say that half of the day was spent to reproduce the wages, and the other half for profits:

If the Professor then found, that in accordance with the calculation of the manufacturers, the workman reproduced or replaced his wages in 2 half-hours, in that case, he should have continued his analysis thus:

According to your figures, the workman in the last hour but one produces his wages, and in the last hour your surplus-value or net profit. Now, since in equal periods he produces equal values, the produce of the last hour but one, must have the same value as that of the last hour. Further, it is only while he labors that he produces any value at all, and the amount of his labor is measured by his labor-time. This you say, amounts to 11 1/2 hours a day. He employs one portion of these 11 1/2 hours, in producing or replacing his wages, and the remaining portion in producing your net profit. Beyond this he does absolutely nothing. But since, on your assumption, his wages, and the surplus-value he yields, are of equal value, it is clear that he produces his wages in 5 3/4 hours, and your net profit in the other 5 3/4 hours. Again, since the value of the yarn produced in 2 hours, is equal to the sum of the values of his wages and of your net profit, the measure of the value of this yarn must be 11 1/2 working-hours, of which 5 3/4 hours measure the value of the yarn produced in the last hour but one, and 5 3/4, the value of the yarn produced in the last hour.

So far Marx has not yet addressed the error committed by the capitalists of ignoring the value transferred from the raw materials but pretending that the labor has to reproduce this value. This error manifests itself now as a contradiction.

terial und Arbeit nicht kunterbunt durcheinanderzuwirren, sondern gefälligst das in Fabrikgebäude, Maschinerie, Rohmaterial usw. enthaltne konstante Kapital auf die eine, das in Arbeitslohn vorgeschobne Kapital auf die andre Seite zu stellen.

Ergab sich dann etwa, daß nach der Fabrikantenrechnung der Arbeiter in 2/2 Arbeitsstunden, oder in einer Stunde, den Arbeitslohn reproduziert oder ersetzt, so hatte der Analytiker fortzufahren:

239:2/oo Nach eurer Angabe produziert der Arbeiter in der vorletzten Stunde seinen Arbeitslohn und in der letzten euren Mehrwert oder den Reingewinn. Da er in gleichen Zeiträumen gleiche Werte produziert, hat das Produkt der vorletzten Stunde denselben Wert wie das der letzten. Er produziert ferner nur Wert, soweit er Arbeit verausgabt, und das Quantum seiner Arbeit ist gemessen durch seine Arbeitszeit. Diese beträgt nach eurer Angabe 11 1/2 Stunden per Tag. Einen Teil dieser 11 1/2 Stunden verbraucht er zur Produktion oder zum Ersatz seines Arbeitslohns, den andren zur Produktion eures Reingewinns. Weiter tut er nichts während des Arbeitstags. Da aber, nach Angabe, sein Lohn und der von ihm gelieferte Mehrwert gleich große Werte sind, produziert er offenbar seinen Arbeitslohn in 5 3/4 Stunden und euren Reingewinn in andren 5 3/4 Stunden. Da ferner der Wert des zweistündigen Garnprodukts gleich der Wertsumme seines Arbeitslohns plus eures Reingewinns ist, muß dieser Garnwert durch 11 1/2 Arbeitsstunden gemessen sein, das Produkt der vorletzten Stunde durch 5 3/4 Arbeitsstunden, das der letzten ditto.

We now come to a ticklish point; therefore, attention! The last working-hour but one is, like the first, an ordinary working-hour, neither more nor less. How then can the spinner produce in one hour, in the shape of yarn, a value that embodies $5\frac{3}{4}$ hours' labor? The truth is that he performs no such miracle. The use-value produced by him in one hour, is a definite quantity of yarn. The value of this yarn is measured by $5\frac{3}{4}$ working-hours, of which $4\frac{3}{4}$ were, without any assistance from him, previously embodied in the means of production, in the cotton, the machinery, and so on; the remaining one hour alone is added by him. Therefore since his wages are produced in $5\frac{3}{4}$ hours, and the yarn produced in one hour also contains $5\frac{3}{4}$ hours' work, there is no witchcraft in the result, that the value created by his $5\frac{3}{4}$ hours' spinning, is equal to the value of the product spun in one hour. You are altogether on the wrong track, if you think that he loses a single moment of his working-day, in reproducing or replacing the values of the cotton, the machinery, and so on. On the contrary, it is because his labor converts the cotton and spindles into yarn, because he spins, that the values of the cotton and spindles go over to the yarn of their own accord. This result is owing to the quality of his labor, not to its quantity. It is true, he will in one hour transfer to the yarn more value, in the shape of cotton, than he will in half an hour; but that is only because in one hour he spins up more cotton than in half an hour.

Here is the resolution of this contradiction:

You see then, your assertion, that the workman produces, in the last hour but one, the value of his wages, and in the last hour your net profit, amounts to no more than this, that in the yarn produced by him in 2 working-hours, whether they are the 2 first or the 2 last hours of the working-day, in that yarn, there are incorporated $11\frac{1}{2}$ working-hours, or just a whole day's work, *i.e.*, two hours of his own work and $9\frac{1}{2}$ hours of other people's. And my assertion that, in

Wir kommen jetzt zu einem häklichen Punkt. Also aufgepaßt! Die vorletzte Arbeitsstunde ist eine gewöhnliche Arbeitsstunde wie die erste. Ni plus, ni moins. Wie kann der Spinner daher in einer Arbeitsstunde einen Garnwert produzieren, der $5\frac{3}{4}$ Arbeitsstunden darstellt? Er verrichtet in der Tat kein solches Wunder. Was er in einer Arbeitsstunde an Gebrauchswert produziert, ist ein bestimmtes Quantum Garn. Der Wert dieses Garns ist gemessen durch $5\frac{3}{4}$ Arbeitsstunden, wovon $4\frac{3}{4}$ ohne sein Zutun in den stündlich verzehrten Produktionsmitteln stecken, in Baumwolle, Maschinerie usw., $\frac{4}{4}$ oder eine Stunde von ihm selbst zugesetzt ist. Da also sein Arbeitslohn in $5\frac{3}{4}$ Stunden produziert wird und das Garnprodukt einer Spinnstunde ebenfalls $5\frac{3}{4}$ Arbeitsstunden enthält, ist es durchaus keine Hexerei, daß das Wertprodukt seiner $5\frac{3}{4}$ Spinnstunden gleich dem Produktenwert einer Spinnstunde. Ihr seid aber durchaus auf dem Holzweg, wenn ihr meint, er verliere ein einziges Zeitatom seines Arbeitstags mit der Reproduktion oder dem „Ersatz“ der Werte von Baumwolle, Maschinerie usw. Dadurch, daß seine Arbeit aus Baumwolle und Spindel Garn macht, dadurch, daß er spinnt, geht der Wert von Baumwolle und Spindel von selbst auf das Garn über. Es ist dies der Qualität seiner Arbeit geschuldet, nicht ihrer Quantität. Allerdings wird er in einer Stunden mehr Baumwollwert usw. auf Garn übertragen als in $\frac{1}{2}$ Stunde, aber nur weil er in 1 Stunde mehr Baumwolle verspinnt als in $\frac{1}{2}$.

Ihr begreift also: Euer Ausdruck, der Arbeiter produziert in der vorletzten Stunde den Wert seines Arbeitslohns und in der letzten den Reingewinn, heißt weiter nichts, als daß in dem Garnprodukt von zwei Stunden seines Arbeitstags, ob sie vorn oder hinten stehen, $11\frac{1}{2}$ Arbeitsstunden verkörpert sind, grade so viel Stunden, als sein ganzer Arbeitstag zählt. Und der Ausdruck, daß er in den ersten $5\frac{3}{4}$ Stunden seinen Arbeitslohn und in den letzten $5\frac{3}{4}$ Stunden euren Rein-

9. The Rate of Surplus-Value

the first $5\frac{3}{4}$ hours, he produces his wages, and in the last $5\frac{3}{4}$ hours your net profit, amounts only to this, that you pay him for the former, but not for the latter. In speaking of payment of labor, instead of payment of labor-power, I only talk your own slang.

↓ Now the results of this calculation: the rate of surplus-value of 100% is nothing to complain about. But the expectation that an extension of the labor day by 90 minutes will double profits is too optimistic, just as the expectation that a shortening by 90 minutes will wipe out profits is too pessimistic.

Now, gentlemen, if you compare the working-time you pay for, with that which you do not pay for, you will find that they are to one another, as half a day is to half a day; this gives a rate of 100%, and a very pretty percentage it is. Further, there is not the least doubt, that if you make you “hands” toil for 13 hours, instead of $11\frac{1}{2}$, and, as may be expected from you, treat the work done in that extra one hour and a half, as pure surplus-labor, then the latter will be increased from $5\frac{3}{4}$ hours’ labor to $7\frac{1}{4}$ hours’ labor, and the rate of surplus-value from 100% to $126\frac{2}{23}\%$. So that you are altogether too sanguine, in expecting that by such an addition of $1\frac{1}{2}$ hours to the working-day, the rate will rise from 100% to 200% and more, in other words that it will be “more than doubled.” On the other hand—man’s heart is a wonderful thing, especially when carried in the purse—you take too pessimist a view, when you fear, that with a reduction of the hours of labor from $11\frac{1}{2}$ to 10, the whole of your net profit will go to the dogs. Not at all. All other conditions remaining the same, the surplus-labor will fall from $5\frac{3}{4}$ hours to $4\frac{3}{4}$ hours, a period that still gives a very profitable rate of surplus-value, namely $82\frac{14}{23}\%$. But this dreadful “last hour,” about which you have invented more stories than have the millenarians about the day of judgment, is “all bosh.” If it goes, it will cost neither you, your net profit, nor the boys and girls whom you employ, their “purity of mind.”^{32a}

^{32a} If, on the one hand, Senior proved that the

gewinn produziert, heißt wieder nichts, als daß ihr die ersten $5\frac{3}{4}$ Stunden zahlt und die letzten $5\frac{3}{4}$ Stunden nicht zahlt. Ich spreche von Zahlung der Arbeit, statt der Arbeitskraft, um euren slang zu reden.

Vergleicht ihr Herren nun das Verhältnis der Arbeitszeit, die ihr zahlt, zur Arbeitszeit, die ihr nicht zahlt, so werdet ihr finden, daß es halber Tag zu halbem Tag ist, also 100%, was allerdings ein artiger Prozentsatz. Es unterliegt auch nicht dem geringsten Zweifel, daß, wenn ihr eure „Hände“ statt $11\frac{1}{2}$ Stunden 13 abschant und, was euch so ähnlich sieht wie ein Ei dem anderen, die überschüssigen $1\frac{1}{2}$ Stunden zur bloßen Mehrarbeit schlägt, letztere von $5\frac{3}{4}$ Stunden auf $7\frac{1}{4}$ Stunden wachsen wird, die Rate des Mehrwerts daher von 100% auf $126\frac{2}{23}\%$. Dagegen seid ihr gar zu tolle Sanguiniker, wenn ihr hofft, sie werde durch den Zusatz von $1\frac{1}{2}$ Stunden von 100 auf 200% und gar mehr als 200% steigen, d.h. sich „mehr als verdoppeln“. Andererseits—des Menschen Herz ist ein wunderlich Ding, namentlich wenn der Mensch sein Herz im Beutel trägt—seid ihr gar zu verrückte Pessimisten, wenn ihr fürchtet, mit der Reduktion des Arbeitstags von $11\frac{1}{2}$ auf $10\frac{1}{2}$ Stunden werde euer ganzer Reingewinn in die Brüche gehn. Beileibe nicht. Alle anderen Umstände als gleichbleibend vorausgesetzt, wird die Mehrarbeit von $5\frac{3}{4}$ auf $4\frac{3}{4}$ Stunden fallen, was immer noch eine ganz erkleckliche Rate des Mehrwerts gibt, nämlich $82\frac{14}{23}\%$. Die verhängnisvolle „letzte Stunde“ aber, von der ihr mehr gefabelt habt als die Chiliasten vom Weltuntergang, ist „all bosh“. Ihr Verlust wird weder euch den „Reingewinn“ noch den von euch verarbeiteten Kindern beiderlei Geschlechts die „Seelenreinheit“ kosten.^{32a}

^{32a} Wenn Senior bewies, daß an „der letzten

net profit of the manufacturer, the existence of the English cotton industry, and England's command of the markets of the world, depend on "the last working-hour," on the other hand, Dr. Andrew Ure showed, that if children and young persons under 18 years of age, instead of being kept the full 12 hours in the warm and pure moral atmosphere of the factory, are turned out an hour sooner into the heartless and frivolous outer world, they will be deprived, by idleness and vice, of all hope of salvation for their souls. Since 1848, the factory inspectors have never tired of twitting the masters with this "last," this "fatal hour." Thus Mr. Hovell in his report of the 21st May, 1855: "Had the following ingenious calculation (he quotes Senior) been correct, every cotton factory in the United Kingdom would have been working at a loss since the year 1850." (Reports of the Insp. of Fact., for the half-year, ending 30th April, 1855, pp. 19, 20.) In the year 1848, after the passing of the 10 hours' bill, the masters of some flax spinning mills, scattered, few and far between, over the country on the borders of Dorset and Somerset, foisted a petition against the bill on to the shoulders of a few of their work-people. One of the clauses of this petition is as follows: "Your petitioners, as parents, conceive that an additional hour of leisure will tend more to demoralise the children than otherwise, believing that idleness is the parent of vice." On this the factory report of 31st Oct., 1848, says: The atmosphere of the flax mills, in which the children of these virtuous and tender parents work, is so loaded with dust and fibre from the raw material, that it is exceptionally unpleasant to stand even 10 minutes in the spinning rooms: for you are unable to do so without the most painful sensation, owing to the eyes, the ears, the nostrils, and mouth, being immediately filled by the clouds of flax dust from which there is no escape. The labor itself, owing to the feverish haste of the machinery, demands unceasing application of skill and movement, under the control of a watchfulness that never tires, and it seems somewhat hard, to let parents apply the term "idling" to their own children, who, after allowing for meal-times, are fettered for 10 whole hours to such an occupation, in such an atmosphere... These children work longer than the laborers in the neighbouring villages... Such cruel talk about "idleness and vice" ought to be branded as the purest cant, and the most shame-

Arbeitsstunde" der Reingewinn der Fabrikanten, die Existenz der englischen Baumwollindustrie, Englands Weltmarktgröße hängen, bewies dahin wiederum Dr. Andrew Ure in den Kauf, daß Fabrikinder und junge Personen unter 18 Jahren, welche man nicht volle 12 Stunden in die warme und reine Moralluft der Fabrikstube bannt, sondern „eine Stunde“ früher in die gemütskalte und frivole Außenwelt verstößt, von Müßiggang und Laster um ihr Seelenheil geprellt werden. Seit 1848 werden die Fabrikinspektoren nicht müde, in ihren halbjährlichen „Reports“ die Fabrikanten mit „der letzten“, der „verhängnisvollen Stunde“ zu necken. So sagt Herr Howell in seinem Fabrikbericht vom 31. Mai 1855: „Wäre die folgende scharfsinnige Berechnung“ (er zitiert Senior) „richtig, so hätte jede Baumwollfabrik im Ver. Königreich seit 1850 mit Verlust gearbeitet.“ „Reports of the Insp. of Fact. for the half year ending 30th April 1855“, p. 19, 20.) Als im Jahr 1848 die Zehnstundenbill durchs Parlament ging, oktroyierten die Fabrikanten einigen Normalarbeitern in den ländlichen, zwischen den Grafschaften Dorset und Somerset zerstreut liegenden Flachsspinnereien eine Gegenpetition, worin es u.a. heißt: „Eure Bittsteller, Eltern, glauben, daß eine zusätzliche Mußestunde weiter keinen Erfolg haben kann als die Demoralisation ihrer Kinder, denn Müßiggang ist alles Lasters Anfang.“ Hierzu bemerkt der Fabrikbericht vom 31. Oktober 1848: „Die Atmosphäre der Flachsspinnereien, worin die Kinder dieser tugendhaft-zärtlichen Eltern arbeiten, ist geschwängert mit so unzähligen Staub- und Faserpartikelchen des Rohmaterials, daß es außerordentlich unangenehm ist, auch nur 10 Minuten in den Spinnstuben zuzubringen, denn ihr könnt das nicht ohne die peinlichste Empfindung, indem Auge, Ohr, Nasenlöcher und Mund sich sofort füllen mit Flachsstaubwolken, vor denen kein Entrinnen ist. Die Arbeit selbst erheischt, wegen der Fieberhast der Maschinerie, rastlosen Aufwand von Geschick und Bewegung, unter der Kontrolle nie ermüdender Aufmerksamkeit, und es scheint etwas hart, Eltern den Ausdruck 'Faulenzerei' auf die eignen Kinder anwenden zu lassen, die, nach Abzug der Essenszeit, 10 volle Stunden an solche Beschäftigung, in einer solchen Atmosphäre, geschmiedet sind ... Diese Kinder arbeiten länger als die Ackerknechte in den Nachbardörfern ... Solch liebloses Gekohl über „Müßiggang und Laster“ muß als der reinste Cant und die schamloseste Heu-

9. The Rate of Surplus-Value

less hypocrisy... That portion of the public, who, about 12 years ago, were struck by the assurance with which, under the sanction of high authority, it was publicly and most earnestly proclaimed, that the whole net profit of the manufacturer flows from the labor of the last hour, and that, therefore, the reduction of the working-day by one hour, would destroy his net profit, that portion of the public, we say, will hardly believe its own eyes, when it now finds, that the original discovery of the virtues of "the last hour" has since been so far improved, as to include morals as well as profit; so that, if the duration of the labor of children, is reduced to a full 10 hours, their morals, together with the net profits of their employers, will vanish, both being dependent on this last, this fatal hour. (See Repts., Insp. of Fact., for 31st Oct., 1848, p. 101.) The same report then gives some examples of the morality and virtue of these same pure-minded manufacturers, of the tricks, the artifices, the cajoling, the threats, and the falsifications, they made use of, in order, first, to compel a few defenceless workmen to sign petitions of such a kind, and then to impose them upon Parliament as the petitions of a whole branch of industry, or a whole country. It is highly characteristic of the present status of so-called economic science, that neither Senior himself, who, at a later period, to his honour be it said, energetically supported the factory legislation, nor his opponents, from first to last, have ever been able to explain the false conclusions of the "original discovery." They appeal to actual experience, but the why and wherefore remains a mystery.

Whenever your "last hour" strikes in earnest, think of the Oxford Professor. And now, gentlemen, "farewell, and may we meet again in yonder better world, but not before."

Unfortunately, Senior's argument did not go away. It was warmed over, 12 years later, by Wilson:

Senior invented the battle cry of the "last hour" in 1836.³³ In the *London Economist* of the 15th April, 1848, the same cry was again raised by James Wilson, an economic mandarin of high standing: this time in opposition to the 10 hours' bill.

³³ Nevertheless, the learned professor was not

chelei gebrandmarkt werden... Der Teil des Publikums, der vor ungefähr zwölf Jahren auffuhr über die Zuversicht, womit man öffentlich und ganz ernsthaft proklamierte, unter der Sanktion hoher Autorität, daß der ganze „Reingewinn“ des Fabrikanten aus „der letzten Stunde“ Arbeit fließt und daher die Reduktion des Arbeitstags um eine Stunde den Reingewinn vernichtet; dieser Teil des Publikums, sagen wir, wird kaum seinen Augen trauen, wenn er nun findet, daß die Original-Entdeckung über die Tugenden der „letzten Stunde“ seitdem so weit verbessert worden ist, „Moral“ und „Profit“ gleichmäßig einzuschließen; so daß, wenn die Dauer der Kinderarbeit auf volle 10 Stunden reduziert wird, die Moral der Kinder zugleich mit dem Nettogewinn ihrer Anwen-der flöten geht, beide abhängig von dieser letzten, dieser fatalen Stunde.“ „Repts. of Insp. of Fact. for 31st Oct. 1848“, p. 101.) Derselbe Fabrikbericht gibt dann Proben von der „Moral“ und „Tugend“ dieser Herrn Fabrikanten, von den Schlichen, Piffen, Lockungen, Drohmitteln, Fälschungen usw., die sie anwandten, um von wenigen ganz verwahrlosten Arbeitern dergleichen Petitionen unterzeichnen zu machen, um sie dann als Petitionen eines ganzen Industriezweigs, ganzer Grafschaften dem Parlament aufzubinden.—Höchst charakteristisch bleibt es für den heutigen Stand der sogenannten ökonomischen „Wissenschaft“, daß weder Senior selbst, der später zu seiner Ehre energisch für die Fabrikgesetzgebung auftrat, noch seine ursprünglichen und spätern Widersacher, die Trugschlüsse der „Originalentdeckung“ aufzulösen wußten. Sie appellierten an die tatsächliche Erfahrung. Das why und wherefore blieb Mysterium.

242:1/o Wenn einmal euer „letztes Stündlein“ wirklich schlägt, denkt an den Professor von Oxford. Und nun: In einer beßren Welt wünsch' ich mir mehr von eurem wer-ten Umgang. Addio!³³ ...

Das Signal der von Senior 1836 entdeckten „letzten Stunde“ ward am 15. April 1848, polemisch gegen das Zehnstundengesetz, von James Wilson, einem der ökonomischen Hauptmandarine, im „London Economist“ von neuem geblasen.

³³ Indes hatte der Herr Professor doch etwas

without some benefit from his journey to Manchester. In the "Letters on the Factory Act," he makes the whole net gains including "profit" and "interests" and even "something more," depend upon a single unpaid hour's work of the laborer. One year previously, in his "Outlines of Political Economy," written for the instruction of Oxford students and cultivated Philistines, he had also "discovered, in opposition to Ricardo's determination of value by labor, that profit is derived from the labor of the capitalist, and interest from his asceticism, in other words, from his abstinence." The dodge was an old one, but the word "abstinence" was new. Herr Roscher translates it rightly by "Enthaltung." Some of his countrymen, the Browns, Jones, and Robinsons, of Germany, not so well versed in Latin as he, have, monk-like, rendered it by "Entsagung" (renunciation).

bei seinem Manchester Ausflug profitiert! In den „Letters on the Factory Act“ hängt der ganze Reingewinn, „Profit“ und „Zins“ und sogar „something more“ an einer unbezahlten Arbeitsstunde des Arbeiters! Ein Jahr zuvor, in seinen zum Gemeinbesten Oxforder Studenten und gebildeter Philister verfaßten „Outlines of Political Economy“ hatte er noch gegenüber Ricardos Wertbestimmung durch die Arbeitszeit „entdeckt“, daß der Profit aus der Arbeit des Kapitalisten und der Zins aus seiner Asketik, seiner „Abstinenz“ herstammte. Die Flause selbst war alt, aber das Wort „Abstinenz“ neu. Herr Roscher verdeutscht es richtig durch „Enthaltung“. Seine minder mit Latein beschlagenen Kompatrioten, Wirte, Schulzen und andre Michels, haben es in „Entsagung“ vermöncht.

9.4. The Surplus Product

Without much comment, Marx argues here that the principle which causes us to set $c = 0$ in the computation of the rate of surplus-value of a firm, is also valid for national income accounting. The concept of net product only counts profit, even the wage incomes are not counted. Marx argues that this net product should be seen in relation to the wage incomes.

The portion of the product that represents the surplus-value, (one tenth of the 20 lbs., or 2 lbs. of yarn, in the example given in Sec. 2,) we call "surplus-produce." Just as the rate of surplus-value is determined by its relation, not to the sum total of the capital, but to its variable part; in like manner, the relative quantity of surplus-produce is determined by the ratio that this produce bears, not to the remaining part of the total product, but to that part of it in which is incorporated the necessary labor. Since the production of surplus-value is the chief end and aim of capitalist production, it is clear, that the extent of a man's or a nation's wealth should be measured, not by the absolute quantity produced, but by the relative magnitude of the surplus-produce.³⁴

³⁴ "To an individual with a capital of £20,000, whose profits were £2,000 per annum, it would be a matter quite indifferent whether his capital would employ a 100 or 1,000 men, whether the commodity produced sold for £10,000 or

243:1 Den Teil des Produkts (1/10 von 20 Pfd. Garn oder 2 Pfd. Garn in dem Beispiel sub 2), worin sich der Mehrwert darstellt, nennen wir Mehrprodukt (surplus produce, produit net). Wie die Rate des Mehrwerts durch sein Verhältnis nicht zur Gesamtsumme, sondern zum variablen Bestandteil des Kapitals bestimmt wird, so die Höhe des Mehrprodukts durch sein Verhältnis nicht zum Rest des Gesamtprodukts, sondern zum Produktteil, worin sich die notwendige Arbeit darstellt. Wie die Produktion von Mehrwert der bestimmende Zweck der kapitalistischen Produktion, so mißt nicht die absolute Größe des Produkts, sondern die relative Größe des Mehrprodukts den Höhegrad des Reichtums.³⁴

³⁴ „Für ein Individuum mit einem Kapital von 20 000 Pfd.St., dessen Profite 2000 Pfd.St. jährlich betragen, wäre es ein durchaus gleichgültig Ding, ob sein Kapital 100 oder 1000 Arbeiter beschäftigt, ob die produzierten Waren sich zu

9. The Rate of Surplus-Value

£20,000, provided, in all cases, his profit were not diminished below £2,000. Is not the real interest of the nation similar? Provided its net real income, its rent and profits, be the same, it is of no importance whether the nation consists of 10 or of 12 millions of inhabitants.” (Ric. l.c., p. 416.) Long before Ricardo, Arthur Young, a fanatical upholder of surplus-produce, for the rest, a rambling, uncritical writer, whose reputation is in the inverse ratio of his merit, says, “Of what use, in a modern kingdom, would be a whole province thus divided [in the old Roman manner, by small independent peasants], however well cultivated, except for the mere purpose of breeding men, which taken singly is a most useless purpose?” (Arthur Young: “Political Arithmetic, etc.” London, 1774, p. 47.)

^{34 ctd} Very curious is “the strong inclination... to represent net wealth as beneficial to the laboring class... though it is evidently not on account of being net.” (Th. Hopkins, “On Rent of Land, etc.” London, 1828, p. 126.)

↓ Now transition to chapter 10:

The sum of the necessary labor and the surplus-labor, i.e., of the periods of time during which the workman replaces the value of his labor-power, and produces the surplus-value, this sum constitutes the actual time during which he works, i.e., the working-day.

10 000 oder 20 000 Pfd.St. verkaufen, immer vorausgesetzt, daß seine Profite in allen Fällen nicht unter 2000 Pfd.St. fallen. Ist das reale Interesse einer Nation nicht dasselbe? Vorausgesetzt, ihr reales Nettoeinkommen, ihre Renten und Profite bleiben dieselben, so ist es nicht von der geringsten Wichtigkeit, ob die Nation aus 10 oder 12 Millionen Einwohnern besteht.“ (Ricardo, l.c. p. 416.) Lange vor Ricardo sagte der Fanatiker des Mehrprodukts, Arthur Young, ein übrigens schwatzschweifiger, kritikloser Schriftsteller, dessen Ruf in umgekehrtem Verhältnis zu seinem Verdienst steht, u.a.: „von welchem Nutzen würde in einem modernen Königreich eine ganze Provinz sein, deren Boden in altrömischer Manier, von kleinen, unabhängigen Bauern, meinetwegen noch so gut bebaut würde? Von welchem Zwecke, außer dem einzigen, Menschen zu erzeugen (the mere purpose of breeding men), was an und für sich gar keinen Zweck hat (is a most useless purpose)“? (Arthur Young, „Political Arithmetic etc.“, London 1774, p. 47.)

^{34 ctd} Zusatz zu Note 34. Sonderbar ist „die starke Neigung, das Reineinkommen als vorteilhaft für die arbeitende Klasse hinzustellen, ... dabei ist aber offensichtlich, daß dieses nicht deshalb vorteilhaft ist, weil es rein ist“. (Th. Hopkins, „On Rent of Land etc.“, London 1828, p. 126.)

244:1 Die Summe der notwendigen Arbeit und der Mehrarbeit, der Zeitabschnitte, worin der Arbeiter den Ersatzwert seiner Arbeitskraft und den Mehrwert produziert, bildet die absolute Größe seiner Arbeitszeit—den Arbeitstag (working day).

10. The Working-Day

“The working-day is . . . determinable, but in and for itself indeterminate.” This last sentence of 240:1 can be considered a summary of Marx’s argument in chapter Ten.

- “The length of the working-day is in and for itself indeterminate” means that there are no economic laws prescribing how long the working-day must be. Within certain limits, the capitalist economy functions equally well with a longer or shorter working-day. If one tries to derive the length of the working-day from the laws of commodity exchange, someone looking at it from the point of view of the worker gets different results than someone looking at it from the point of view of the capitalist. This is discussed in section 10.1.
- But the length of the working-day is “determinable,” i.e., this length can be, and even must be, fixed by extra-economic forces. Since the length of the working-day is not determined by the market, the working-class is forced to take up political struggles as described in this chapter. The sections after section 10.1 give a “historical sketch” (sic in 302:1) of the struggles between capitalist class and working class in England, which led to a *legal* fixation of the working-day.

10.1. The Limits of the Working-Day

Marx’s starting point is the division of the working-day into two parts, necessary labor and surplus labor. “Necessary labor” is the length of time needed by the worker every day to produce an equivalent of his or her daily wage. “Surplus-labor” is the additional time during which the worker produces value appropriated without equivalent by the capitalist. This division of the working-day was already introduced in chapter Seven in a rather dramatic and entertaining fashion, see 201:2. The terminology “necessary labor-time” for that part of the working-day in which the worker produces an equivalent of his wages was formally defined in chapter Nine, . This concept should not be confused with that of “socially necessary labor-time” defined in chapter One, 49:1.

Question 815 *Why is the day taken as unit of labor-power, instead of hour or week?*
Answer, 2012fa, 2011fa, 2010fa, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa.

10.1.a. [Indeterminacy of the Working-Day]

239:2 We started with the assumption that labor-power is bought and sold at its value. The value of labor-power, like that of any other commodity, is determined by the labor-time necessary for its production. If the production of the average daily con-

245:1 Wir gingen von der Voraussetzung aus, daß die Arbeitskraft zu ihrem Werte gekauft und verkauft wird. Ihr Wert, wie der jeder andren Ware, wird bestimmt durch die zu ihrer Produktion nötige Arbeitszeit. Erheischt also die Produktion der durch-

10. The Working-Day

sumption of the laborer takes up 6 hours, he must work, on the average, 6 hours every day to produce his daily labor-power, or to reproduce the value he received when he sold it. The necessary part of his working-day amounts to 6 hours, and is, therefore, *caeteris paribus*, a given quantity. But with this, the length of the working-day itself is not yet given.

schnittlichen täglichen Lebensmittel des Arbeiters 6 Stunden, so muß er im Durchschnitt 6 Stunden per Tag arbeiten, um seine Arbeitskraft täglich zu produzieren oder den in ihrem Verkauf erhaltenen Wert zu reproduzieren. Der notwendige Teil seines Arbeitstags beträgt dann 6 Stunden und ist daher, unter sonst gleichbleibenden Umständen, eine gegebene Größe. Aber damit ist die Größe des Arbeitstags selbst noch nicht gegeben.

↑ Usually one thinks of the daily or weekly wage as a derived quantity: it is hourly wage times number of hours worked. The hourly wage is determined by economic laws, namely, the productivity of the labor performed. The number of hours worked depends on the agreement between worker and employer. In the background of this is the notion that the worker is selling his or her labor, therefore wages depend on the labor performed. In chapter Nineteen, Marx will discuss in detail the surface appearances giving rise to this illusory notion. The present chapter Ten ignores these surface appearances and uses the simple framework of chapter Six, according to which the worker is not selling labor but labor-power, with the wage being the reimbursement for the costs of reproducing the labor-power. For labor-power, the smallest unit of measurement is the day. The reproduction costs of labor-power can be computed as the daily costs for food, rent, clothing, utilities, transportation, etc. Therefore for Marx the daily wage is a basic quantity, and the hourly wage the derived quantity.

With the daily wage fixed by the laws of chapter Six, the next important question is: “how long is the working-day?” Marx asks this question explicitly in 241:1–4, but this is the main question discussed throughout chapter Ten.

Question 822 *According to Marx, the daily wage is determined by the value of the “average daily consumption of the worker.” How is then the biweekly salary of a salaried employee determined, and how is the hourly wage of a hourly worker determined?* 2013fa, 2011fa, 2008fa, 2007SP, 2004fa, 2003fa.

It is commonly thought that the length of the working-day is fixed by economic necessity. If the workers were to go home before the usual 8, 10, 12, 14 hours per day, then, it is believed, the economy would break down or the capitalists would have to close the factories. One can presently witness this kind of propaganda in the struggles for a shorter work week in Europe. Even the workers themselves cannot believe that it is economically possible that they work fewer hours each week and still get the same weekly wage. Mainstream economics perpetuates this myth: usually the length of the working-day is treated as a fixed magnitude. To add insult to injury, this length is said to be the result of free choice: you are stuck with such long hours because all other workers want it this way.

Marx, by contrast, says: the labor day consists of two parts, the necessary part and the surplus part. Only the necessary part is fixed by economic laws; the surplus part is “variable,” up for grabs so to say. Marx is using here the day as unit of measurement of labor-power, not the hour. The daily wage is determined by the value of the “average daily means of subsistence” of the laborer. If the work day is 8 hours long, then perhaps only 3 hours are needed to reproduce this daily wage. These 3 hours are given by economic necessity:

the working-day cannot be shorter than 3 hours. But the second part, consisting here of 5 hours, is variable. This part might be shorter or longer, according to the balance of forces between workers and capitalists. The factors determining this variable part are discussed in the remainder of section 10.1.

10.1.b. [The Inherent Limits of Surplus Labor]

239:2/o Let us assume that the line A—B represents the length of the necessary working time, say 6 hours. If the labor be prolonged 1, 3, or 6 hours beyond A—B, we have 3 different lines

working-day I A—B—C,
working-day II A—B—C,
working-day III A—B—C,

representing 3 different working-days of 7, 9, and 12 hours. The extension B—C of the line A—B represents the length of the surplus-labor. As the working-day is A—B + B—C or A—C, it varies with the variable quantity B—C.

This is a very simple relationship, and it might seem pedantic to go through it in such detail. However Marx's emphasis is justifiable because this simple relationship is *not* part of the common consciousness! The limits of necessary labor are not visible to the surface agents. No bell rings in the factories at 11 am to indicate that now the (unpaid) surplus labor begins. Also the fact that wages are paid per hour, not per day, is confusing here. The length of the necessary labor is part of the hidden social relations of production which chain us all together through invisible chains. Although it is not readily apparent in the surface interactions, it is real and its quantity is well-defined; Marx says in the next sentence that it is "given":

Since A—B is given, the ratio of B—C to A—B can always be calculated. In working-day I, it is 1/6, in working-day II, 3/6, in working-day III 6/6 of A—B.

The ratio $\frac{\text{surplus working time}}{\text{necessary working time}}$ is sometimes called the "rate of exploitation." This invisible rate of exploitation determines the rate of surplus-value, which is visible. Compare chapter Nine, 217:2/o.

Since further the ratio $\frac{\text{surplus working time}}{\text{necessary working time}}$ determines the rate of the surplus-value, the latter is given by the ratio of B—C to A—B. It amounts in the 3 different working-days respectively to 16 2/3, 50, and 100 per cent.

↓ This representation of the underlying relations of production on the surface however has holes: certain aspects of these relations are not visible.

On the other hand, the rate of surplus-value alone would not give us the extent of the working-day. If this rate, e.g., were

245:2/o Nehmen wir an, die Linie a—b stelle die Dauer oder Länge der notwendigen Arbeitszeit vor, sage 6 Stunden. Je nachdem die Arbeit über ab um 1, 3 oder 6 Stunden usw. verlängert wird, erhalten wir die 3 verschiedenen Linien:

Arbeitstag I a—b—c,
Arbeitstag II a—b—c,
Arbeitstag III a—b—c,

die drei verschiedene Arbeitstage von 7, 9 und 12 Stunden vorstellen. Die Verlängerungslinie bc stellt die Länge der Mehrarbeit vor. Da der Arbeitstag = ab + bc oder ac ist, variiert er mit der variablen Größe bc.

Da ab gegeben ist, kann das Verhältnis von bc zu ab stets gemessen werden. Es beträgt in Arbeitstag I 1/6, in Arbeitstag II 3/6 und im Arbeitstag III 6/6 von ab.

Da ferner die Proportion $\frac{\text{Mehrarbeitszeit}}{\text{notwendige Arbeitszeit}}$ die Rate des Mehrwerts bestimmt, ist letztere gegeben durch jenes Verhältnis. Sie beträgt in den drei verschiedenen Arbeitstagen respektive 16 2/3, 50 und 100%.

Umgekehrt würde die Rate des Mehrwerts allein uns nicht die Größe des Arbeitstags geben. Wäre sie z.B. gleich 100%, so könn-

10. The Working-Day

100 per cent, the working-day might be of 8, 10, 12, or more hours. It would indicate that the two constituent parts of the working-day, necessary-labor and surplus-labor-time, were equal in extent, but not how long each of these two constituent parts was.

Marx assumes that competition between workers and capitalists tends to equalize the rate of exploitation. ↑ In this light, the above simple observation shows that an equal rate of exploitation can accommodate different lengths of the working-day.

240:1 The working-day is thus not a constant, but a variable quantity.

↑ By “variable” Marx means that there is no economic law which would force the total working-day to be a certain length. The basic structure of capitalism does not make this length a function of productivity or such; rather, it is “up for grabs.”

Although one of its parts is determined by the working time required for the reproduction of the labor-power of the laborer himself, its total length varies with the duration of the surplus-labor. The working-day is, therefore, determinable, but in and for itself indeterminate.³⁵

³⁵ “A day’s labour is vague, it may be long or short.” (“An Essay on Trade and Commerce, Containing Observations on Taxes, etc.” London 1770, p. 73.)

↑ After all this emphasis that the working-day is *indeterminate*, Marx adds the remark at the end, without explanation at this point, that the working-day is *determinable*. But he will implicitly furnish an explanation in the next paragraph, 240:2/o, by giving an example of something which is *indeterminable*. To make Marx’s implicit elucidation explicit, “determinable” in the case of the length of the working-day means that

- It is practically possible to measure the length of the working day and to see whether an individual capitalist has overstepped whatever counts as the “normal” length for this society. This is not trivial. For instance, if one were to try to measure whether an individual capitalist were to overstep the ecological limits of the planet, this cannot be determined as easily.
- There are economic agents (the workers) for whom it is a survival issue to keep the working day within its limits. This again distinguishes the working-day crisis from today’s ecological crisis. Polar bears or phytoplankton do not have similar representation in society.
- Capitalism has extra-economic institutions with the authority to fix the length of the working-day; it can be fixed by law, or nowadays also by union contract.
- Such a fixation does not come in conflict with the economic laws of capitalism.
- On the contrary (and this is already the transition from the possibility to the necessity), this chapter shows that capitalism itself *needs* the working-day to be fixed.

te der Arbeitstag 8-, 10-, 12stündig usw. sein. Sie würde anzeigen, daß die zwei Bestandteile des Arbeitstags, notwendige Arbeit und Mehrarbeit, gleich groß sind, aber nicht, wie groß jeder dieser Teile.

246:1 Der Arbeitstag ist also keine konstante, sondern eine variable Größe.

Einer seiner Teile ist zwar bestimmt durch die zur beständigen Reproduktion des Arbeiters selbst erheischte Arbeitszeit, aber seine Gesamtgröße wechselt mit der Länge oder Dauer der Mehrarbeit. Der Arbeitstag ist daher bestimmbar, aber an und für sich unbestimmt.³⁵

³⁵ „Ein Arbeitstag ist eine unbestimmte Größe, er kann lang oder kurz sein.“ („An Essay on Trade and Commerce, containing Observations on Taxation etc.“, London 1770, p. 73.)

Question 824 Explain Marx's sentence: "The working-day is determinable but in and for itself indeterminate." *Answer*, 2013fa, 2012fa, 2011fa, 2010fa, 2009fa, 2008SP, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa.

Question 825 Would Marx agree that the minimum length of the working day is the time the worker needs to earn enough money to make a living? 2012fa.

The discussion of the variability of the working-day is not yet finished. Marx's next point is: the working-day can only vary *within certain bounds*. (These bounds might be considered the negation of the variability, i.e., the negation of the negation of the determination.)

240:2/o The working-day is therefore not a fixed, but a fluid quantity. On the other hand, it can only vary within certain bounds.

246:2/o Obgleich nun der Arbeitstag keine feste, sondern eine fließende Größe ist, kann er andererseits nur innerhalb gewisser Schranken variieren.

⇓ Now Marx makes an interesting remark. The minimum bound is elusive in the sense that it exists in theory but not in practice:

The minimum bound, however, is indeterminate. Of course, if we make the extension line B—C or the surplus-labor = 0, we have a minimum bound, i.e., the part of the day which the laborer must necessarily work for his own maintenance. On the basis of capitalist production, however, this necessary labor must always only form a part of the working-day; the working-day itself can never be reduced to this minimum.

Seine Minimalschranke ist jedoch unbestimmbar. Allerdings, setzen wir die Verlängerungslinie *bc*, oder die Mehrarbeit, = 0, so erhalten wir eine Minimalschranke, nämlich den Teil des Tags, den der Arbeiter notwendig zu seiner Selbsterhaltung arbeiten muß. Auf Grundlage der kapitalistischen Produktionsweise kann die notwendige Arbeit aber immer nur einen Teil seines Arbeitstages bilden, der Arbeitstag sich also nie auf dies Minimum verkürzen.

↑ Isn't this hairsplitting? Why does Marx make so much ado about the simple fact that the actual labor-time must always be longer than the minimum? Marx has already answered this question in the short sentence "the minimum bound is indeterminate." In other words, this simple fact prevents the minimum of the labor-day from being *determinable* in the sense explained above. There is no length of the work day which could be imposed on the capitalist economy *as a maximum* (in order to get a minimally exploitative capitalism). In *Value, Price and Profit*, [mecw20]145:5/o, Marx gives us another example of an indeterminate bound: he says that there is no minimum rate of profit because there is no maximum level of wages. Wages can never be fixed, there must and will always be struggles around wages.

Marx wrote "is indeterminate" (*ist unbestimmbar*) instead of "cannot be determined" (*kann nicht bestimmt werden*) because

this is an ontological and not an epistemological statement: it is not only impossible *for the observer* to find out what the lower bound

is, but this lower bound itself does not exist.

Perhaps Marx viewed this as another secret critique of Hegel, comparable to 52:1. If a minimum bound cannot be determined, although the working-day must be longer than necessary labor itself, then Hegel's pronouncement is incorrect that every negation is a determination. (Bhaskar [Bha93, p. 240:1] also criticizes this principle which, as he says, "is simply not true.")

Question 826 Give other secret critiques of Hegel in Marx's Capital.

10. The Working-Day

Question 827 *Could one not say that the minimum bound for the surplus-labor is enough surplus-labor that the capitalists can survive?* 2013fa, 2009fa, 2008SP, 2007SP.

The maximum bound, by contrast, *is* determinable. It is even *multiply* determined, i.e., different mechanisms kick in if the working-day is extended beyond certain threshold values: On the other hand, the working-day has a maximum bound. It cannot be prolonged beyond a certain point. This maximum bound is determined in two different ways. First, by the physiological bounds of labor-power. Within the 24 hours of the natural day a man can expend only a definite quantity of his vital force. Just as a horse can only work, from day to day, 8 hours. During part of the day this force must rest, sleep; during another part the man has to satisfy other physiological needs, to feed, wash, and clothe himself. Besides these purely physiological limits, the extension of the working-day encounters moral ones. The laborer needs time to satisfy his intellectual and social wants, the extent and number of which are conditioned by the general state of social advancement.

Dagegen besitzt der Arbeitstag eine Maximalschranke. Er ist über eine gewisse Grenze hinaus nicht verlängerbar. Diese Maximalschranke ist doppelt bestimmt. Einmal durch die physische Schranke der Arbeitskraft. Ein Mensch kann während des natürlichen Tags von 24 Stunden nur ein bestimmtes Quantum Lebenskraft verausgaben. So kann ein Pferd tagaus, tagein nur 8 Stunden arbeiten. Während eines Teils des Tags muß die Kraft ruhen, schlafen, während eines andren Teils hat der Mensch andre physische Bedürfnisse zu befriedigen, sich zu nähren, reinigen, kleiden usw. Außer dieser rein physischen Schranke stößt die Verlängerung des Arbeitstags auf moralische Schranken. Der Arbeiter braucht Zeit zur Befriedigung geistiger und sozialer Bedürfnisse, deren Umfang und Zahl durch den allgemeinen Kulturzustand bestimmt sind.

The two mechanisms enforcing a maximum bound of the working-day are located in different layers of reality:

- Physiological: the continuous functioning of the labor-power is compatible only with a certain number of hours daily.
- Cultural: the laborer needs time to satisfy intellectual and social needs.

One page later, in 242:1/o, Marx formulates the physiological limit differently: the length of the work day must be such that it does not rob the laborer of his health or shorten his life. I will call these two sides of the physiological bounds the physiological bounds I and II. In 283:1 Marx mentions a third mechanism which limited the working-day in pre-industrial times, namely, daylight.

Exam Question 829 *What are the minimal and maximal bounds for the length of the working-day, and how are they determined?* 2013fa, 2012fa, 2011fa, 2009fa, 2008SP, 2007fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa, 2000fa.

The variation of the working-day takes place, therefore, within physiological and social bounds. But both these bounds are of a very elastic nature, and allow the greatest latitude.

Die Variation des Arbeitstags bewegt sich daher innerhalb physischer und sozialer Schranken. Beide Schranken sind aber sehr elastischer Natur und erlauben den größten Spielraum.

↑ At the end, Marx adds yet another level of negation: the minimum and maximum bounds are not only far apart, but they themselves are also elastic. This would be the negation

of the negation of the negation. ↓ All this explains the great differences in the length of working-days that can be observed empirically.

So we find working-days of 8, 10, 12, 14, 16, 18 hours, i.e., of the most different lengths.

So finden wir Arbeitstage von 8, 10, 12, 14, 16, 18 Stunden, also von der verschiedensten Länge.

10.1.c. [Point of view of the Capitalist]

So far, Marx has discussed to what extent the length of the working-day is or is not determined by its inner anatomy. In other words, he identified the economic necessities affecting the number of hours workers have to work in a capitalist economy. Next he is asking whether and how the surface transactions between capitalist and laborer on the market *enforce* this inherent length of the working-day. The dialogue between capitalist and laborer which follows now must be taken metaphorically: the arguments given here verbally are acted out on the market place and in direct struggles (although the arguments themselves can also be found in the literature, as the footnotes demonstrate).

Throughout chapter Ten, Marx maintains the fiction that the daily wage is agreed upon first, and then afterwards capitalist and worker argue about it how long the worker has to work for this wage. Of course, the details of the transactions between worker and capitalist on the surface of the economy seem to be different: the wage is paid as hourly wage or piece wage, therefore it seems as if the daily wage was not fixed but that it was proportional to the amount of labor performed.

On the other hand, the employee usually cannot decide how many hours of labor he or she is to perform: the length of the work day is given, and therefore the daily wage is given once we know what the hourly wage is. In practice, today's procedure with a fixed hourly wage but no substantial choice regarding the number of hours worked has therefore the same outcome as Marx's daily-wage bargain. If one looks at the data one will also not find proportionality between labor-time and wages; on the contrary, there are many low wage jobs which "compensate" for their low wages by long hours (see).

Marx claims that this is not an accident. The connection between labor and wage is not that wages are proportional to labor performed, but wages are an amount determined by the worker's cost of living, and the length of the work day is, just as the precise definition of the worker's cost of living, the result of struggles between capitalists and the working class. The hourly wage can then be computed by dividing the daily wage by the daily work requirement resulting from these class struggles. This theory of wages will be developed in chapter Nineteen.

Marx's fiction that worker and capitalist first decide on a daily wage and then argue how long the worker has to work is therefore justified: although it contradicts the details of the surface transactions, it captures the structure of the underlying processes mediated by these surface transactions better than the actual surface transactions themselves.

241:1–4 The capitalist has bought the labor-power at its day-rate. To him its use-value belongs during one working-day. He has thus acquired the right to make the laborer work for him during one day. But, what is a working-day?³⁶

247:1 Der Kapitalist hat die Arbeitskraft zu ihrem Tageswert gekauft. Ihm gehört ihr Gebrauchswert während eines Arbeitstags. Er hat also das Recht erlangt, den Arbeiter während eines Tags für sich arbeiten zu lassen. Aber was ist ein Arbeitstag?³⁶

³⁶ This question is far more important than the celebrated question of Sir Robert Peel to the

³⁶ Diese Frage ist unendlich wichtiger als die berühmte Frage Sir Robert Peels an die Birming-

10. The Working-Day

Birmingham Chamber of Commerce: What is a pound? A question that could only have been proposed, because Peel was as much in the dark as to the nature of money as the “little shilling men” of Birmingham.

hamer Handelskammer „What is a pound?“ eine Frage, die nur gestellt werden konnte, weil Peel über die Natur des Geldes ebenso unklar war als die „little shilling men“ von Birmingham.

Marx answers this important question in several steps.

At all events, less than a natural day. By how much?

Jedenfalls weniger als ein natürlicher Lebenstag. Um wieviel?

If the working-day amounted to 24 hours this would be slavery. Capitalism is not slavery but it is based on commodity exchange, a transaction to which both parties voluntarily agree. Marx discusses therefore now the motivations of the two exchange partners, first those of the capitalist.

The capitalist has his own views of this *ultima Thule*, the necessary limit of the working-day.

Der Kapitalist hat seine eigene Ansicht über dies *ultima Thule*, die notwendige Schranke des Arbeitstags.

The capitalist’s reasons for the exchange are different than the worker’s. But before the reader can get the impression that Marx is giving a too sinister view of the inhumane goals of the capitalist, Marx interjects that the capitalist’s motivations do not stem from human motives but from the tendencies of the social entity he or she represents:

As capitalist, he is only capital personified. His soul is the soul of capital.

Als Kapitalist ist er nur personifiziertes Kapital. Seine Seele ist die Kapitalseele.

↑ This is reminiscent of 10:1. ↓ The driving force is capital, not the capitalist.

Capital, in turn, has one single-minded life impulse, the drive to create value and surplus-value, to make its constant portion, the means of production, absorb the greatest possible amount of surplus-labor.³⁷ Capital is dead labor, that, vampire-like, only lives by sucking living labor, and lives the more, the more labor it sucks.

Das Kapital hat aber einen einzigen Lebenstrieb, den Trieb, sich zu verwerthen, Mehrwert zu schaffen, mit seinem konstanten Teil, den Produktionsmitteln, die größtmögliche Masse Mehrarbeit einzusaugen.³⁷ Das Kapital ist verstorbene Arbeit, die sich nur vampyrmäßig belebt durch Einsaugung lebendiger Arbeit und um so mehr lebt, je mehr sie davon einsaugt.

³⁷ “It is the aim of the capitalist to obtain with his expended capital the greatest possible quantity of labor (d’obtenir du capital dépensé la plus forte somme de travail possible). J. G. Courcelle-Seneuil. “Traité théorique et pratique des entreprises industrielles.” 2nd ed., Paris, 1857, p. 63.

³⁷ „Es ist die Aufgabe des Kapitalisten, mit dem verausgabten Kapital die größtmögliche Summe Arbeit herauszuschlagen.“ („D’obtenir du capital dépensé la plus forte somme de travail possible.“) (J.-G. Courcelle-Seneuil, „Traité théorique et pratique des entreprises industrielles“, 2ème édit., Paris 1857, p. 62.)

Notice that the capitalist is not greedy; he represents the social force of value in motion, self-aggrandizing value. He does not say to the worker: “I have come to steal as much surplus labor as I can from you,” or “I am the vampire who needs your blood to come to life” or “I am stronger than you, you have to work for me.” On the contrary, he comes with the surprising claim that it is the *worker* who is robbing the capitalist and not the other way around—whenever the worker uses any of his disposable time for himself:

The time during which the laborer works is the time during which the capitalist consumes the labor-power he has purchased of him.³⁸ If the laborer consumes his

Die Zeit, während deren der Arbeiter arbeitet, ist die Zeit, während deren der Kapitalist die von ihm gekaufte Arbeitskraft konsumiert.³⁸ Konsumiert der Arbeiter sei-

disposable time for himself, he robs the capitalist.³⁹

ne disponible Zeit für sich selbst, so bestiehlt er den Kapitalisten.³⁹

Marx is not making this up. The footnotes show that it has actually been said that the worker is robbing the capitalist:

³⁸ “An hour’s labor lost in a day is a prodigious injury to a commercial State.” “There is a very great consumption of luxuries among the laboring poor of this kingdom: particularly among the manufacturing populace, by which they also consume their time, the most fatal of consumptions.” [Ano70, pp. 47, 153]

³⁸ „Der Verlust einer Arbeitsstunde pro Tag stellt einen außerordentlich großen Schaden für einen Handelsstaat dar.“ „Der Konsum von Luxusgütern unter den arbeitenden Armen dieses Königsreichs ist sehr groß; besonders unter dem Manufakturpöbel: dabei konsumieren sie aber auch ihre Zeit, ein Verbrauch, verhängnisvoller als jeder andre.“ [Ano70, p. 47 u. 153]

³⁹ If the free worker rests for an instant, the base and petty management which watches over him with wary eyes claims he is stealing from it. N. Linguet, “Théorie des Lois Civiles. etc.” London, 1767, t. II., p. 466.

³⁹ „Wenn sich der freie Tagelöhner einen Augenblick ausruht, behauptet die schmutzige Ökonomie, die ihn mit unruhigen Augen verfolgt, daß er sie bestehle.“ (N. Linguet, „Theorie des Loix Civiles etc.“, London 1767, t. II, p. 466.)

The capitalist is robbing the worker under such circumstances that he can find reasons to say and think that it is the worker who is robbing the capitalist. What are these circumstances? The supposedly free and equal exchange on the market:

241:5/o In other words, the capitalist appeals to the law of the exchange of commodities. He, like all other buyers, seeks to get the greatest possible benefit out of the use-value of his commodity.

247:2/o Der Kapitalist beruft sich also auf das Gesetz des Warenaustausches. Er, wie jeder andre Käufer, sucht den größtmöglichen Nutzen aus dem Gebrauchswert seiner Ware herauszuschlagen.

Of course, the capitalist’s intentions have weight only because he has the resources to back them with action. If he does not make profits, he has the option to close down the factory. He has the monopoly over the means of production.

Question 830 *What is the source of the paradox that on the surface, the worker robs the capitalist during every minute he rests, while in reality the capitalist robs the worker?* 2012fa, 2007fa, 2007SP, 2004fa, 2003fa, 2002fa.

Question 831 *How long is the working-day from the point of view of the capitalist?* 2012fa, 2011fa, 2010fa, 2007fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa, 2000fa.

10.1.d. [Point of view of the Worker]

The worker replies only after a delay:

Suddenly the voice of the laborer, which had been silenced in the storm and stress of the process of production, rises:

Plötzlich aber erhebt sich die Stimme des Arbeiters, die im Sturm und Drang des Produktionsprozesses verstummt war:

It often takes a sustained attack by the capitalist class before the working class, which is at first overwhelmed by the onslaught of capital, rallies and begins to fight back. Compare 283:2–284:1. The working class is also reactive on a deeper level: it uses the commodity form with much less enthusiasm than the capitalist class because this is not the form by which it can attain its goals. The market place is a battlefield which the workers would not choose, because there is no hope for a level playing field.

10. The Working-Day

As in the case of the capitalist, Marx first looks at the worker's goals before asking how the market transaction can be used to attain these goals. These goals are formulated most succinctly in *Value, Price, and Profit*, [mecw20]141:1:

He sells his laboring power in order to maintain it, apart from its natural wear and tear, not in order to destroy it.

Question 832 *Isn't it the motive of the worker, like that of the capitalist, to get as much money as possible?* 2013fa, 2010fa, 2009fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa.

In *Capital*, the worker does not state his goals at the beginning, but first describes how he is affected by the actions of the capitalists. Additional profits for the capitalist mean more labor for him:

242:1/o The commodity that I have sold you differs from the crowd of other commodities, in that its use creates value, and a value greater than its own. That is why you bought it.

248:1/o Die Ware, die ich dir verkauft habe, unterscheidet sich von dem andren Warenpöbel dadurch, daß ihr Gebrauch Wert schafft und größeren Wert, als sie selbst kostet. Dies war der Grund, warum du sie kauftest.

↑ Note that the worker does not criticize the capitalist for getting more value out of the use of his labor-power than what the worker was paid for this labor-power. On the contrary, he acknowledges that the capitalist has bought his labor-power exactly for that reason. The worker's entire argument is based on the laws of commodity exchange and, as Marx says in , the laws of commodity exchange are unable to reflect class relations. Instead of saying to the capitalist "you should not exploit me" the worker derives from the laws of commodity exchange themselves limits to the use of his labor-power by the capitalist. In general, the consumption of the use-value of a commodity is the commodity owner's sole prerogative, nobody can make prescriptions about this. But in this case, this is not an absolute because the seller of the commodity labor-power is still involved in and affected by the consumption by the capitalist of the commodity he has sold to him. ↓ This is the first thing the worker says:

That which on your side appears as the valorization of capital, is on mine extra expenditure of labor-power.

Was auf deiner Seite als Verwertung von Kapital erscheint, ist auf meiner Seite überschüssige Verausgabung von Arbeitskraft.

↑ This is a reference to chapter Seven, 205:3/o, that the valorization process is nothing but a labor process prolonged past a given point. ↓ As a counterpoint to this initial statement the worker concedes that exploitation does not violate the laws of the commodity exchange. The buyer of the labor-power has the right to use his commodity as he sees fit—but only, as we will see shortly, within limits.

You and I know on the market only one law, that of the exchange of commodities. And the consumption of the commodity belongs not to the seller who parts with it, but to the buyer, who acquires it. To you, therefore, belongs the use of my daily labor-power.

Du und ich kennen auf dem Marktplatz nur ein Gesetz, das des Warenaustausches. Und der Konsum er Ware gehört nicht dem Verkäufer, der sie veräußert, sondern dem Käufer, der sie erwirbt. Dir gehört daher der Gebrauch meiner täglichen Arbeitskraft.

The laws of commodity exchange forbid the worker to argue with the capitalist how to use his labor-power, since he sold it to him. ↓ Now comes the big "but" where the worker

derives, from the laws of commodity exchange themselves, a limit to the use of his labor-power by the capitalist.

But by means of the price that you pay for it each day, I must be able to reproduce it daily, and to sell it again. Apart from natural exhaustion through age, etc., I must be able on the morrow to work with the same normal amount of force, health and freshness as today.

Aber vermitteltst ihres täglichen Verkaufspreises muß ich sie täglich reproduzieren und daher von neuem verkaufen können. Abgesehen von dem natürlichen Verschleiß durch Alter usw., muß ich fähig sein, morgen mit demselben Normalzustand von Kraft, Gesundheit und Frische zu arbeiten, wie heute.

Here the worker defines the use-value he is selling: only as much use of his labor-power as can be reproduced fully so that he can sell an identical labor-power on the next day. To justify this, he uses to his advantage the capitalist's frequent admonitions of thrift:

You preach to me constantly the gospel of "saving" and "abstinence." Good! I will, like a sensible saving owner, husband my sole wealth, labor-power, and abstain from all foolish waste of it. I will each day spend, set in motion, put into action only as much of it as is compatible with its normal duration and healthy development.

Du predigst mir beständig das Evangelium der „Sparsamkeit“ und „Enthaltung“. Nun gut! Ich will wie ein vernünftiger, sparsamer Wirt mein einziges Vermögen, die Arbeitskraft, haushalten und mich jeder tollen Verschwendung derselben enthalten. Ich will täglich nur soviel von ihr flüssig machen, in Bewegung, in Arbeit umsetzen, als sich mit ihrer Normaldauer und gesunden Entwicklung verträgt.

“My sole wealth” is a brief allusion at the class difference.

By an unlimited extension of the working-day, you may in one day use up a quantity of labor-power greater than I can restore in three. What you gain in labor I lose in substance.

Durch maßlose Verlängerung des Arbeitstags kannst du in einem Tage ein größeres Quantum meiner Arbeitskraft flüssig machen, als ich in drei Tagen ersetzen kann. Was du so an Arbeit gewinnst, verliere ich an Arbeitssubstanz.

↑ So far, Marx has argued that this contract violates the law of value because the capitalist is taking something the worker has not agreed to give. The worker has agreed to sell the normal use of his labor-power but not his own “substance.” ↓ Next Marx asks the hypothetical question: what if the worker agreed to sell his or her own substance? In a pinch, many workers may think this is the only option they have. Here Marx makes another point: the sale of this substance without a drastic increase in the regular wage is “spoliation” because a regular wage is a much too low price for this substance:

The use of my labor-power and the spoliation of it are quite different things. If the average time that (doing a reasonable amount of work) an average laborer can live, is 30 years, the value of my labor-power, which you pay me from day to day, is $\frac{1}{365 \times 30}$ or 1/10950 of its total value. But if you consume it in 10 years, you pay me daily 1/10950 instead of 1/3650 of its total value, i.e., only 1/3 of its daily value, and you rob

Die Benutzung meiner Arbeitskraft und die Beraubung derselben sind ganz verschiedene Dinge. Wenn die Durchschnittsperiode, die ein Durchschnittsarbeiter bei vernünftigem Arbeitsmaß leben kann, 30 Jahre beträgt, ist der Wert meiner Arbeitskraft, den du mir einen Tag in den andren zahlst, $\frac{1}{365 \times 30}$ oder 1/10950 ihres Gesamtwerts. Konsumierst du sie aber in 10 Jahren, so zahlst du mir täglich 1/10950 statt 1/3650 ihres Gesamt-

10. The Working-Day

me, therefore, every day of $\frac{2}{3}$ of the value of my commodity. You pay me for one day's labor-power, whilst you use that of 3 days. That is against our contract and the law of exchanges.

werts, also nur $\frac{1}{3}$ ihres Tageswerts, und stiehlt mir daher täglich $\frac{2}{3}$ des Werts meiner Ware. Du zahlst mir eintägige Arbeitskraft, wo du dreitägige verbrauchst. Das ist wider unsren Vertrag und das Gesetz des Warenaustausches.

This additional argument comes to the same 1 for 3 ratio which appeared for the first time at the end of the previous paragraph. Marx does not say here that the capitalist would have the right to work the worker to death if he paid him enough, but on the contrary, the magnitude of the wage is an additional argument showing that the capitalist does not have the right to overwork the worker. This is a transition from quantity to quality: the quantity of wages has here qualitative implications.

Question 834 *How does the worker derive from the laws of commodity exchange a limit to the use of his labor-power by the capitalist?* 2004fa.

This concludes the worker's argument, which derives purely from the laws of commodity exchange, not from any other consideration, that capitalist is allowed to drive the worker to full exhaustion every day.

I demand, therefore, a working-day of normal length, and I demand it without any appeal to your heart, for in money matters sentiment is out of place.

Ich verlange also einen Arbeitstag von normaler Länge, und ich verlange ihn ohne Appell an dein Herz, denn in Geldsachen hört die Gemütlichkeit auf.

The worker ends his plea with an allusion to the "humanitarian" image in which the capitalist likes to see himself. But instead of saying: you picture yourself as good but are really cruel, he abstains from moralizing. He merely points out that the capitalist represents principles which have nothing to do with human considerations.

You may be a model citizen, perhaps a member of the Society for the Prevention of Cruelty to Animals, and in the odor of sanctity to boot; but the thing that you represent against me has no heart in its breast.

Du magst ein Musterbürger sein, vielleicht Mitglied des Vereins zur Abschaffung der Tierquälerei und obendrein im Geruch der Heiligkeit stehn, aber dem Ding, das du mir gegenüber repräsentierst, schlägt kein Herz in seiner Brust.

Despite the irony regarding the capitalist's saintness, the worker importantly distinguishes between the capitalist as person, about whose morality he is agnostic, and the capitalist as the character mask of capital.

That which seems to throb there is my own heart-beating.

Was darin zu pochen scheint, ist mein eigener Herzschlag.

Capital has so much vitality that it seems to have a heart throbbing in its chest: but it draws its energy not from its own heart, it is rather the worker's heart which gives life to capital.

I demand the normal working-day because I, like every other seller, demand the value of my commodity.⁴⁰

Ich verlange den Normalarbeitstag, weil ich den Wert meiner Ware verlange, wie jeder andre Verkäufer.⁴⁰

⁴⁰ During the great strike of the London builders, 1860–61, for the reduction of the working-day to 9 hours, their Committee published a manifesto that contained, to some extent, the plea of our worker. The manifesto alludes,

⁴⁰ Während des großen strike der London builders, 1860–1861, zur Reduktion des Arbeitstags auf 9 Stunden, veröffentlichte ihr Komitee eine Erklärung, die halb und halb auf das Plaidoyer unsres Arbeiters hinausläuft. Die Er-

not without irony, to the fact, that the greatest profit-monger amongst the building masters, a certain Sir M. Peto, was in the odour of sanctity (This same Peto, after 1867, came to an end a la Strousberg.)

klärung spielt nicht ohne Ironie darauf an, daß der Profitwütigste der „building masters“—ein gewisser Sir M. Peto—im „Geruch der Heiligkeit“ stehe. (Derselbe Peto kam nach 1867 zu einem Ende mit—Strousberg!)

Question 835 *Why did the worker in this whole argument never say to the capitalist “you are exploiting me”?* 2012fa, 2011fa, 2010fa, 2008fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2000fa.

Question 836 *According to mainstream economics, one of the most important factors influencing the worker’s choice how long he or she wants to work is the hourly wage. Which role does the hourly wage pay in Marx’s working-day chapter?* 2007SP.

10.1.e. [Conclusion: Right Against Right]

Although capitalist exploitation is squarely based on commodity exchange (it owes its effectiveness and resiliency to it), one important aspect of exploitation, the length of the working-day, is left indeterminate by the laws of commodity exchange:

243:1 We see, then: the nature of commodity exchange itself imposes no limits on the working-day, i.e., no limits on surplus labor, except for extremely elastic bounds.

249:1 Man sieht: Von ganz elastischen Schranken abgesehen, ergibt sich aus der Natur des Warenaustausches selbst keine Grenze des Arbeitstags, also keine Grenze der Mehrarbeit.

↑ Marx writes “nature of the commodity exchange *itself*” because he is talking about the surface of the economy, the sphere of exchange, as opposed to the core relations governing production. ↓ On the market, capital and labor interact as buyers and sellers of commodities. The capitalist maintains his rights as a purchaser when he tries to make the working-day as long as possible, and to make, whenever possible, two working-days out of one. On the other hand, the peculiar nature of the commodity sold implies a limit to its consumption by the purchaser, and the laborer maintains his right as seller when he wishes to reduce the working-day to one of definite normal duration. There is here, therefore, an antinomy, right against right, both equally bearing the seal of the law of exchanges.

Der Kapitalist behauptet sein Recht als Käufer, wenn er den Arbeitstag so lang als möglich und womöglich aus einem Arbeitstag zwei zu machen sucht. Andererseits schließt die spezifische Natur der verkauften Ware eine Schranke ihres Konsums durch den Käufer ein, und der Arbeiter behauptet sein Recht als Verkäufer, wenn er den Arbeitstag auf eine bestimmte Normalgröße beschränken will. Es findet hier also eine Antinomie statt, Recht wider Recht, beide gleichmäßig durch das Gesetz des Warenaustausches besiegelt.

Question 837 *Which “peculiarity” in the nature of labor-power implies a limit to its consumption by the capitalist?* 2007SP, 2005fa, 2003fa.

Question 838 *How can rights get into contradiction with each other?* 2013fa, 2007SP.

This vacuum is filled by class struggle (and institutionalized congelations of class struggle: trade unions and the state).

Between equal rights force decides. Hence is it that in the history of capitalist produc-

Zwischen gleichen Rechten entscheidet die Gewalt. Und so stellt sich in der Geschich-

10. The Working-Day

tion, the determination of what is a working-day, presents itself as a struggle, a struggle between collective capital, *i.e.*, the class of capitalists, and collective labor, *i.e.*, the working-class.

te der kapitalistischen Produktion die Normierung des Arbeitstags als Kampf um die Schranken des Arbeitstags dar—ein Kampf zwischen dem Gesamtkapitalisten, d.h. der Klasse der Kapitalisten, und dem Gesamtarbeiter, oder der Arbeiterklasse.

Question 839 *Discuss the points of view of capitalist and laborer in the dispute around the length of the working-day. Why can this dispute only be resolved by force?* 2007fa.

Question 840 *Why is a struggle of classes, not of competing individuals, necessary to define the working-day?* 2007SP.

10.2. The Thirst for Surplus Labor. Manufacturer and Boyard

243:2/o Capital has not invented surplus-labor. Wherever a part of society possesses the monopoly of the means of production, the laborer, free or not free, must add to the working time necessary for his own maintenance an extra working time in order to produce the means of subsistence for the owners of the means of production,⁴¹ whether this proprietor be the Athenian καλὸς κ'ἀγαθός, Etruscan theocrat, civis Romanus, Norman baron, American slave-owner, Wallachian Boyard, modern landlord or capitalist.⁴²

⁴¹ “Those who labor . . . in reality feed both the pensioners . . . [called the rich] and themselves.” Edmund Burke [Bur00, p. 2, 3]

249:2/o Das Kapital hat die Mehrarbeit nicht erfunden. Überall, wo ein Teil der Gesellschaft das Monopol der Produktionsmittel besitzt, muß der Arbeiter, frei oder unfrei, der zu seiner Selbsterhaltung notwendigen Arbeitszeit überschüssige Arbeitszeit zusetzen, um die Lebensmittel für den Eigener der Produktionsmittel zu produzieren,⁴¹ sei dieser Eigentümer nun atheniensischer καλὸς κ'ἀγαθός, etruskischer Theokrat, civis romanus, normännischer Baron, amerikanischer Sklavenhalter, walachischer Boyar, moderner Landlord oder Kapitalist.⁴²

⁴¹ „Diejenigen, die arbeiten . . ., ernähren in Wirklichkeit sowohl die Pensionäre, genannt die Reichen, als auch sich selbst.“ Edmund Burke [Bur00, p. 2, 3]

According to footnote 42, evidence of this exploitation are the “astounding” use-values produced by the surplus labor:

⁴² Niebuhr in his “Roman History” says very naively: “It is evident that works like the Etruscan, which in their ruins astound us, presuppose in little (!) states lords and vassals.” Sismondi says far more profoundly that “Brussels lace” pre-supposes wage-lords and wage-slaves.

⁴² Sehr naiv bemerkt Niebuhr in seiner „Römischen Geschichte“: „Man kann sich nicht verhehlen, daß Werke wie die etruskischen, die in ihren Trümmern erstaunen, in kleinen (!) Staaten Fronherrschaft und Knechte voraussetzen.“ Viel tiefer sagte Sismondi daß „Brüsseler Spitzen“ Lohnherrschaft und Lohndiener voraussetzen.

Surplus labor is not new in capitalism. But capitalism does bring something new:

It is, however, clear that in any given economic formation of society, where not the exchange-value but the use-value of the product predominates, surplus-labor will

Indes ist klar, daß, wenn in einer ökonomischen Gesellschaftsformation nicht der Tauschwert, sondern der Gebrauchswert des Produkts vorwiegt, die Mehrarbeit durch

be circumscribed by a given set of wants which may be greater or less, that therefore no boundless thirst for surplus-labor arises from the characteristic form of production itself.

einen engern oder weitem Kreis von Bedürfnissen beschränkt ist, aber kein schrankenloses Bedürfnis nach Mehrarbeit aus dem Charakter der Produktion selbst entspringt.

In the one situation where production in antiquity was motivated by exchange-value instead of use-value, the exploitation of slaves was much more barbaric and horrible than elsewhere:

Hence in antiquity over-work becomes horrible only when the object is to obtain exchange-value in its specific independent money-form; in the production of gold and silver. Compulsory working to death is here the recognised form of over-work. Just read Diodorus Siculus.⁴³

Entsetzlich zeigt sich daher im Altertum die Überarbeit, wo es gilt, den Tauschwert in seiner selbständigen Geldgestalt zu gewinnen, in der Produktion von Gold und Silber. Gewaltsames zu Tod arbeiten ist hier die offizielle Form der Überarbeit. Man lese nur den Diodorus Siculus.⁴³

⁴³ "One cannot see these unfortunates (in the gold mines between Egypt, Ethiopia, and Arabia) who cannot even have their bodies clean, or their nakedness clothed, without pitying their miserable lot. There is no indulgence, no forbearance for the sick, the feeble, the aged, for woman's weakness. All must, forced by blows, work on until death puts an end to their sufferings and their distress." ("Diod. Sic. Bibl. Hist.," lib. 2, c. 13, [p. 260].)

⁴³ „Man kann diese Unglücklichen“ (in den Goldbergwerken zwischen Ägypten, Äthiopien und Arabien), „die nicht einmal ihren Körper reinlich halten noch ihre Blöße decken können, nicht ansehen, ohne ihr jammervolles Schicksal zu beklagen. Denn da findet keine Nachsicht und keine Schonung statt für Kranke, für Gebrechliche, für Greise, für die weibliche Schwachheit. Alle müssen, durch Schläge gezwungen, fortarbeiten, bis der Tod ihren Qualen und ihrer Not ein Ende macht.“ (Diod. Sic. „Historische Bibliothek“, Buch 3, c. 13, [p. 260].)

↑ The gold mines are evidence that production for value rather than use-value leads to overwork. ↓ In antiquity, production for value was only an exception.

Yet these are exceptions in antiquity.

Doch sind dies Ausnahmen in der alten Welt.

↓ In more recent history, similar horrors became typical when traditional coercive relations of exploitation were drawn into the capitalist world market. Here a second difference between the old relations and capitalism comes into play: the old relations are based on direct coercion, while capitalism is based on free sale of labor-power.

But as soon as peoples, whose production still moves within the lower forms of slave-labor, corvée-labor, etc., are drawn into the whirlpool of an international market dominated by the capitalist mode of production, the sale of their products for export becoming their principal interest, then the civilized horrors of overwork are grafted on the barbaric horrors of slavery, serfdom, etc.

Sobald aber Völker, deren Produktion sich noch in den niedrigsten Formen der Sklavenarbeit, Fronarbeit usw. bewegt, hineingezogen werden in einen durch die kapitalistische Produktionsweise beherrschten Weltmarkt, der den Verkauf ihrer Produkte ins Ausland zum vorwiegenden Interesse entwickelt, wird den barbarischen Greueln der Sklaverei, Leibeigenschaft usw. der zivilisierte Greuel der Überarbeit aufgepfropft.

↓ Slavery in the USA is an important example of this:

Hence the negro labor in the Southern States of the American Union preserved something

Daher bewahrte die Negerarbeit in den südlichen Staaten der amerikanischen Uni-

10. The Working-Day

of a patriarchal character, so long as production was chiefly directed to immediate local consumption. But in proportion, as the export of cotton became of vital interest to these states, the over-working of the negro and sometimes the using up of his life in 7 years of labor became a factor in a calculated and calculating system. It was no longer a question of obtaining from him a certain quantity of useful products. It was now a question of production of surplus-value itself.

↓ Slavery is not the only example.

So was it also with the *corvée*, e.g., in the Danubian Principalities (now Romania).

on einen gemäßigt patriarchalischen Charakter, solange die Produktion hauptsächlich auf den unmittelbaren Selbstbedarf gerichtet war. In dem Grade aber, wie der Baumwoll-export zum Lebensinteresse jener Staaten, ward die Überarbeitung des Negers, hier und da die Konsumtion seines Lebens in sieben Arbeitsjahren, Faktor eines berechneten und berechnenden Systems. Es galt nicht mehr, eine gewisse Masse nützlicher Produkte aus ihm herauszuschlagen. Es galt nun der Produktion des Mehrwerts selbst.

Ähnlich mit der Fronarbeit, z.B. in den Donaufürstentümern.

Question 843 *What are the main differences distinguishing capitalism from earlier forms of exploitation?* 2013fa, 2010fa, 2007fa, 2005fa.

Question 844 *How did pre-capitalistic forms of exploitation change when they came into contact with capitalism (slave-labor, *corvée*-labor)?* 2013fa, 2007fa.

The remainder of this section is a detailed comparison between the *corvée* system and capitalism.

First Marx explains why such a comparison is interesting: (1) In both situations the state steps in in order to regulate exploitation.

244:1 The comparison of the greed for surplus-labor in the Danubian Principalities with the same greed in English factories has a special interest, because surplus-labor in the *corvée* has an independent and empirically ascertainable form.

250:1/o Die Vergleichung des Heißhunger nach Mehrarbeit in den Donaufürstentümern mit demselben Heißhunger in englischen Fabriken bietet ein besonderes Interesse, weil die Mehrarbeit in der Fronarbeit eine selbständige, sinnlich wahrnehmbare Form besitzt.

(2) In *corvée*, surplus-labor is clearly identifiable, while in capitalism it is not.

244:2/o Suppose the working-day consists of 6 hours of necessary labor, and 6 hours of surplus-labor.

251:1 Gesetz, der Arbeitstag zähle 6 Stunden notwendiger Arbeit und 6 Stunden Mehrarbeit.

↓ In capitalism, it is undecided when exactly the surplus-labor occurs:

Then the free laborer gives the capitalist every week 6×6 or 36 hours of surplus-labor. It is the same as if he worked 3 days in the week for himself, and 3 days in the week gratis for the capitalist. But this is not visible. Surplus-labor and necessary labor glide one into the other. I can, therefore, express the same relationship by saying, e.g., that the laborer in every minute works 30 seconds for himself, and 30 for the capitalist, etc.

So liefert der freie Arbeiter dem Kapitalisten wöchentlich 6×6 oder 36 Stunden Mehrarbeit. Es ist dasselbe, als arbeite er 3 Tage in der Woche für sich und 3 Tage in der Woche umsonst für den Kapitalisten. Aber dies ist nicht sichtbar. Mehrarbeit und notwendige Arbeit verschwimmen ineinander. Ich kann daher dasselbe Verhältnis z.B. auch so ausdrücken, daß der Arbeiter in jeder Minute 30 Sekunden für sich und 30 Sekunden für den Kapitalisten arbeitet usw.

↓ But in corée, necessary labor and surplus-labor are separated clearly.

It is otherwise with the corvée. The necessary labor which the Wallachian peasant performs for his own maintenance is distinctly marked off from his surplus-labor on behalf of the Boyard. The one he does on his own field, the other on the seignorial estate. Both parts of the labor-time exist, therefore, independently, side by side one with the other. In the corvée the surplus-labor is clearly marked off from the necessary labor.

Anders mit der Fronarbeit. Die notwendige Arbeit, die z.B. der walachische Bauer zu seiner Selbsterhaltung verrichtet, ist räumlich getrennt von seiner Mehrarbeit für den Bojaren. Die eine verrichtet er auf seinem eignen Felde, die andre auf dem herrschaftlichen Gut. Beide Teile der Arbeitszeit existieren daher selbständig nebeneinander. In der Form der Fronarbeit ist die Mehrarbeit genau abgeschieden von der notwendigen Arbeit.

↓ This formal difference does not affect the quantitative relation between necessary and surplus labor:

Question 846 Marx says that in capitalism, necessary labor and surplus-labor “glide” into each other; one might also give the translation that they are “intermixed” or “blurred” (verschwimmen ineinander). What does this mean? 2007SP.

This difference in the form of appearance, however, can obviously make no difference with regard to the quantitative relation of surplus-labor to necessary labor. Three days’ surplus-labor in the week remain three days that yield no equivalent to the laborer himself, whether it be called corvée or wage-labor.

An dem quantitativen Verhältnis von Mehrarbeit und notwendiger Arbeit ändert diese verschiedene Erscheinungsform offenbar nichts. Drei Tage Mehrarbeit in der Woche bleiben drei Tage Arbeit, die kein Äquivalent für den Arbeiter selbst bildet, ob sie Fronarbeit heiße oder Lohnarbeit.

↓ However this formal difference, that in capitalism surplus labor is intermixed with necessary labor, while in feudalism they are clearly separated, leads to a difference in the form of the “chase after surplus labor.”

But in the capitalist the greed for surplus-labor appears in the straining after an unlimited extension of the working-day, in the Boyard more simply in a direct hunting after days of corvée.⁴⁴

Bei dem Kapitalisten jedoch erscheint der Heißhunger nach Mehrarbeit im Drang zu maßloser Verlängerung des Arbeitstags, bei dem Bojaren einfacher in unmittelbarer Jagd auf Frontage.⁴⁴

⁴⁴ That which follows refers to the situation in the Romanian provinces before the change effected since the Crimean war.

⁴⁴ Das Nachfolgende bezieht sich auf die Zustände der rumänischen Provinzen, wie sie sich vor der Umwälzung seit dem Krimkrieg gestaltet hatten.

(3) Another reason why a comparison with Corvée will give us a better understanding of capitalism is that Corvée is based on open coercion, while the coercion in capitalism goes through the “dull compulsion of economic laws.” This is such an obvious point that Marx does not specifically say it.

↓ After this justification why Corvée labor should be discussed, this discussion itself begins.

245:1/o In the Danubian Principalities the corvée was accompanied by rents in kind and other appurtenances of serfdom,

251:2–253:1 Die Fronarbeit war in den Donaufürstentümern verknüpft mit Naturalrenten und sonstigem Zubehör von Leib-

10. The Working-Day

but *corvée* constituted the most important tribute paid to the ruling class. Whenever this was the case, the *corvée* rarely arose from serfdom; serfdom much more frequently on the other hand took origin from the *corvée*.^{44a}

In Romania, for instance, the sequence was: labor for the common land was turned into labor for the thieves of the common land, and bondage developed afterwards.

Footnote 44a by Engels shows that Romania was not the only place where serfdom has been re-introduced. Similar developments can also be found elsewhere:

^{44a} {This holds likewise for Germany, and especially for Prussia east of the Elbe. In the 15th century the German peasant was nearly everywhere a man, who, whilst subject to certain rents paid in produce and labor was otherwise at least practically free. The German colonists in Brandenburg, Pomerania, Silesia, and Eastern Prussia, were even legally acknowledged as free men. The victory of the nobility in the peasants' war put an end to that. Not only were the conquered South German peasants again enslaved. From the middle of the 16th century the peasants of Eastern Prussia, Brandenburg, Pomerania, and Silesia, and soon after the free peasants of Schleswig-Holstein were degraded to the condition of serfs. (Maurer, *Fronhöfe* iv. vol.,—Meitzen, "Der Boden des preussischen Staats"—Hanssen, "Leibeigenschaft in Schleswig-Holstein.")—F. E.)}

↓ Specific history of *corvée* (forced labor) in Romania:

This is what took place in the Romanian provinces. Their original mode of production was based on community of the soil, but not in the Slavonic or even Indian form. Part of the land was cultivated in severally as freehold by the members of the community, another part—*ager publicus*—was cultivated by them in common. The products of this common labor served partly as a reserve fund against bad harvests and other accidents, partly as a public store for providing the costs of war, religion, and other common expenses. In course of time military and clerical dignitaries usurped, along with the common land, the labor spent upon it. The labor of the free peasants on their common land was transformed into *corvée* for the thieves of the common land. This *corvée* soon developed into a servile relationship

eigenschaft, bildete aber den entscheidenden Tribut an die herrschende Klasse. Wo dies der Fall, entsprang die Fronarbeit selten aus der Leibeigenschaft, Leibeigenschaft vielmehr meist umgekehrt aus der Fronarbeit.^{44a}

^{44a} {Note zur 3. Aufl.—Dies gilt ebenfalls für Deutschland und speziell für das ostelbische Preußen. Im 15. Jahrhundert war der deutsche Bauer fast überall ein gewissen Leistungen in Produkt und Arbeit unterworfenen, aber sonst wenigstens faktisch freier Mann. Die deutschen Kolonisten in Brandenburg, Pommern, Schlesien und Ostpreußen waren sogar rechtlich als Freie anerkannt. Der Sieg des Adels im Bauernkrieg machte dem ein Ende. Nicht nur die besiegten süddeutschen Bauern wurden wieder leibeigen. Schon seit Mitte des 16. Jahrhunderts werden die ostpreußischen, brandenburgischen, pommerschen und schlesischen, und bald darauf auch die schleswig-holsteinischen freien Bauern zu Leibeignen erniedrigt. (Maurer, "Fronhöfe", IV. Bd.—Meitzen, "Der Boden des Pr. Staats"—Hanssen, "Leibeigenschaft in Schleswig-Holstein.")—F. E.}

So in den rumänischen Provinzen. Ihre ursprüngliche Produktionsweise war auf Gemeineigentum gegründet, aber nicht auf Gemeineigentum in slawischer oder gar indischer Form. Ein Teil der Ländereien wurde als freies Privateigentum von den Mitgliedern der Gemeinde selbständig bewirtschaftet, ein anderer Teil—der *ager publicus*—gemeinsam von ihnen bestellt. Die Produkte dieser gemeinsamen Arbeit dienten teils als Reservefonds für Mißernten und andre Zufälle, teils als Staatsschatz zur Deckung für die Kosten von Krieg, Religion und andre Gemeindeausgaben. Im Laufe der Zeit usurpierten kriegerische und kirchliche Würdenträger mit dem Gemeineigentum die Leistungen für dasselbe. Die Arbeit der freien Bauern auf ihrem Gemeindeland verwandelte sich in Fronarbeit für die Diebe

existing in point of fact, not in point of law, until Russia, the liberator of the world, made it legal under presence of abolishing serfdom. The code of the *corvée*, which the Russian General Kisseleff proclaimed in 1831, was of course dictated by the Boyards themselves. Thus Russia conquered with one blow the magnates of the Danubian provinces, and the applause of liberal cretins throughout Europe.

des Gemeindelandes. Damit entwickelten sich zugleich Leibeigenschafts-Verhältnisse, jedoch nur tatsächlich, nicht gesetzlich, bis das weltbefreiende Rußland unter dem Vorwand, die Leibeigenschaft abzuschaffen, sie zum Gesetz erhob. Der Kodex der Fronarbeit, den der russische General Kisselew 1831 proklamierte, war natürlich von den Bojaren selbst diktiert. Rußland eroberte so mit einem Schlag die Magnaten der Donaufürstentümer und den Beifallsklatsch der liberalen Kretins von ganz Europa.

↑ Although *corvée* was connected with other appurtenances of serfdom, in Romania it did not arise from serfdom, but from the usurpation of the common lands in a Germanic mode of production. However, under the influence of capitalism it *led to serfdom*, legalized by the *reglement organique*.

↓ Now a detailed description of these laws, which Marx is going to compare with the English Factory Acts.

246:1–247:1 According to the “*Règlement organique*,” as this code of the *corvée* is called, every Wallachian peasant owes to the so-called landlord, besides a mass of detailed payments in kind: (1), 12 days of general labor; (2), one day of field labor; (3), one day of wood carrying. In all, 14 days in the year. With deep insight into Political Economy, however, the working-day is not taken in its ordinary sense, but as the working-day necessary to the production of an average daily product; and that average daily product is determined in so crafty a way that no Cyclops would be done with it in 24 hours.

252:1 Nach dem „*Règlement organique*“, so heißt jener Kodex der Fronarbeit, schuldet jeder walachische Bauer, außer einer Masse detaillierter Naturalabgaben, dem sog. Grundeigentümer 1. zwölf Arbeitstage überhaupt, 2. einen Tag Feldarbeit und 3. einen Tag Holzfuhre. Summa summa-rum 14 Tage im Jahre. Mit tiefer Einsicht in die politische Ökonomie wird jedoch der Arbeitstag nicht in seinem ordinären Sinn genommen, sondern der zur Herstellung eines täglichen Durchschnittsprodukts notwendige Arbeitstag, aber das tägliche Durchschnittsprodukt ist pfiffigerweise so bestimmt, daß kein Zyklope in 24 Stunden damit fertig würde.

Question 850 Why does the *Règlement organique* reveal “deep insight into Political Economy”? And in which respect is it cunning?

↓ The nominally 12 days of *corvée* labor were actually 56 days:

In dry words, the *Règlement* itself declares with true Russian irony that by 12 working-days one must understand the product of the manual labor of 36 days, by 1 day of field labor 3 days, and by 1 day of wood carrying in like manner three times as much. In all, 42 *corvée* days. To this had to be added the so-called *jobagie*, service due to the lord for extraordinary occasions. In proportion

In den dürren Worten echt russischer Ironie erklärt daher das „*Règlement*“ selbst, unter 12 Arbeitstagen sei das Produkt einer Handarbeit von 36 Tagen zu verstehen, unter einem Tag Feldarbeit drei Tage, und unter einem Tag Holzfuhre ebenfalls das Dreifache. Summa: 42 Frontage. Es kommt aber hinzu die sog. *Jobagie*, Dienstleistungen, die dem Grundherrn für außerordentliche Pro-

10. The Working-Day

to the size of its population, every village has to furnish annually a definite contingent to the jobagie. This additional corvée is estimated at 14 days for each Wallachian peasant. Thus the prescribed corvée amounts to 56 working-days yearly. But the agricultural year in Wallachia numbers in consequence of the severe climate only 210 days, of which 40 for Sundays and holidays, 30 on an average for bad weather, together 70 days, do not count. 140 working-days remain.

duktionsbedürfnisse gebühren. Im Verhältnis zur Größe seiner Bevölkerung hat jedes Dorf jährlich ein bestimmtes Kontingent zur Jobagie zu stellen. Diese zusätzliche Fronarbeit wird für jeden walachischen Bauer auf 14 Tage geschätzt. So beträgt die vorgeschriebene Fronarbeit 56 Arbeitstage jährlich. Das Ackerbaujahr zählt aber in der Walachei wegen des schlechten Klimas nur 210 Tage, wovon 40 für Sonn- und Feiertage, 30 durchschnittlich für Unwetter, zusammen 70 Tage ausfallen. Bleiben 140 Arbeitstage.

↓ The rate of surplus labor to necessary labor is still not very great, therefore there are additional loopholes which allow the labor to be made longer:

The ratio of the corvée to the necessary labor 56/84, or 66 2/3 per cent, gives a much smaller rate of surplus-value than that which regulates the labor of the English agricultural or factory laborer. This is, however, only the legally prescribed corvée. And in a spirit yet more "liberal" than the English Factory Acts, the "Règlement organique" has known how to facilitate its own evasion. After it has made 56 days out of 12, the nominal day's work of each of the 56 corvée days is again so arranged that a portion of it must fall on the ensuing day. In one day, e.g., must be weeded an extent of land, which, for this work, especially in maize plantations, needs twice as much time. The legal day's work for some kinds of agricultural labor is interpretable in such a way that the day begins in May and ends in October. In Moldavia conditions are still harder.

Das Verhältnis der Fronarbeit zur notwendigen Arbeit, 56/84 oder 66 2/3 Prozent, drückt eine viel kleinere Rate des Mehrwerts aus als die, welche die Arbeit des englischen Agrikultur- oder Fabrikarbeiters reguliert. Dies ist jedoch nur die gesetzlich vorgeschriebene Fronarbeit. Und in noch „liberalerem“ Geist als die englische Fabrikgesetzgebung hat das „Règlement organique“ seine eigne Umgehung zu erleichtern gewußt. Nachdem es aus 12 Tagen 54 gemacht, wird das nominelle Tagwerk jedes der 54 Frontage wieder so bestimmt, daß eine Zubeße auf die folgenden Tage fallen muß. In einem Tag z.B. soll eine Landstrecke ausgejätet werden, die zu dieser Operation, namentlich auf den Maispflanzungen, doppelt soviel Zeit erheischt. Das gesetzliche Tagwerk für einzelne Agrikulturarbeiten ist so auslegbar, daß der Tag im Monat Mai anfängt und im Monat Oktober aufhört. Für die Moldau sind die Bestimmungen noch härter.

"The 12 corvée days of the 'Règlement organique' cried a Boyard drunk with victory, amount to 365 days in the year."⁴⁵

„Die zwölf Frontage des Règlement organique,“ rief ein siegtrunkner Bojar, „belaufen sich auf 365 Tage im Jahr!“⁴⁵

⁴⁵ Further details are to be found in E. Regnault's *Histoire politique et sociale des principautés danubiennes*, Paris, 1855 [pp. 304 ff.].

⁴⁵ Weitere Details findet man in É. Regnault, „*Histoire politique et sociale des Principautés Danubiennes*“, Paris 1855, [p. 304 sqq.].

Question 851 *How did the Règlement Organique facilitate its own circumvention? Compare the evasions of the Règlement Organique with those of the factory acts.*

After his description of the state legislation legalizing and extending bonded labor in the

Danubian provinces, Marx makes a comparison with the recent legislation in England, the “Factory Acts” of 1850, limiting the working-day to 10 hours (see 248:1).

247:2 While the *Règlement organique* of the Danubian Principalities was a positive expression of the appetite for surplus labor, which every paragraph legalized, the English Factory Acts are negative expressions of the same appetite.

253:2 War das *Règlement organique* der Donaufürstentümer ein positiver Ausdruck des Heißhungers nach Mehrarbeit, den jeder Paragraph legalisiert, so sind die englischen Factory-Acts negative Ausdrücke desselben Heißhungers.

Question 853 How were the “*Règlement organique*” in the Danubian Provinces and the “Factory Acts” in England, which were passed only 30 years apart in time from each other, both expressions of the greed for surplus-labor? Why did Marx call one a “positive” and one a “negative” expression?

↑ At first glance, the Factory Acts seem to be the opposite of the *Règlement Organique*: they limit the work days instead of extending them. But Marx calls them an expression of the same drive, even if this expression has the opposite sign.

These laws curb capital’s drive to suck as much as it can get out of labor-power, curbs it by forcibly limiting the working-day on the authority of the state, a state which is ruled by capitalist and landlord.

Diese Gesetze zügeln den Drang des Kapitals nach maßloser Aussaugung der Arbeitskraft durch gewaltsame Beschränkung des Arbeitstags von Staats wegen, und zwar von seiten eines Staats, den Kapitalist und Landlord beherrschen.

Why would a state controlled by the capitalists and landowners limit the exploitation of labor-power? ↓ Marx gives two kinds of reasons. On the one hand, the strength of the labor movement. On the other hand, the legislation was *necessary for society* (although it was against the interest of the capitalist class). The comparison with guano shows that the blind drive for profits needs corrective action also in other ways.

Apart from the daily more threatening advance of the working-class movement, the limiting of factory labor was dictated by the same necessity as forced the manuring of English fields with guano. The same blind desire for profit that in the one case exhausted the soil had in the other case seized hold of the vital force of the nation at its roots.

Von einer täglich bedrohlicher anschwellenden Arbeiterbewegung abgesehen, war die Beschränkung der Fabrikarbeit diktiert durch dieselbe Notwendigkeit, welche den Guano auf die englischen Felder ausgoß. Dieselbe blinde Raubgier, die in dem einen Fall die Erde erschöpft, hatte in dem andren die Lebenskraft der Nation an der Wurzel ergriffen.

↑ Marx gives here two very different reasons for the Factory Acts: pressure of the working class, and necessity to preserve the vital force of the nation, which is also addressed in 412:1. The deeper reason, the principle, as Marx says later in 300:1, is the general interest of society not to have the productivity of its workers undermined. This general and necessary social principle is enforced by the struggles of the working class for a limitation of the working-day. “Without the working man’s continuous pressure from without that (legislative) interference would have never taken place” (*Value, Price and Profit*, p. [mecw20]146:2. Here the working class struggles not only for its own class interest, but for the general social interest, which the ruling class, by itself, is unable to pursue.

The capitalists like to claim that they act in the interest of society as a whole, while the working class only has its own particular interest in mind which is an obstacle to general

10. The Working-Day

social progress. This claim becomes less and less justified. The capitalists don't even act in the long-term interest of their own class any more. Instead, the proletariat begins to be the class whose class interest coincides with the general interest of society. "Apart from higher motives, . . . their own most important interests dictate to the classes that are for the nonce the ruling ones, the removal of all legally removable hindrances to the free development of the working class" (9:40).

The state found itself in the contradictory situation of giving in to the demands of the working class in order to heed the long-term interests of capital. The state's failure to enforce its own legislation shows how contradictory this role is.

The last sentence of this paragraph and footnote 46 give evidence that there was indeed physiological encroachment, not only "moral" encroachment:

Periodical epidemics speak as clearly on this point as the diminishing military standard of height in France and Germany.⁴⁶

⁴⁶ "In general and within certain limits, evidence of the prosperity of organic beings is provided by their exceeding the medium size of their kind. As for man, his bodily height diminishes if his due growth is interfered with, either by physical or by social conditions. In all European countries in which the conscription holds, since its introduction, the medium height of adult men, and generally their fitness for military service, has diminished. Before the revolution (1789), the minimum for the infantry in France was 165 centimetres; in 1818 (law of March 10th), 157; by the law of March 21, 1832, 156 c.m.; on the average in France more than half are rejected on account of deficient height or bodily weakness. The military standard in Saxony was in 1780, 178 c.m. It is now 155. In Prussia it is 157. According to the statement of Dr. Meyer in the Bavarian Gazette, May 9th, 1862, the result of an average of 9 years is, that in Prussia out of 1,000 conscripts 716 were unfit for military service, 317 because of deficiency in height, and 399 because of bodily defects. . . Berlin in 1858 could not provide its contingent of recruits, it was 156 men short.' J. von Liebig: "Die Chemie in ihrer Anwendung auf Agrikultur und Physiologie. 1862," 7th Ed., vol. 1, pp. 117, 118.

Periodische Epidemien sprachen hier ebenso deutlich als das abnehmende Soldatenmaß in Deutschland und Frankreich.⁴⁶

⁴⁶ „Im allgemeinen spricht innerhalb gewisser Grenzen für das Gedeihen organischer Wesen das Überschreiten des Mittelmaßes ihrer Art. Für den Menschen verkleinert sich sein Körpermaß, wenn sein Gedeihen beeinträchtigt ist, sei es durch physische oder soziale Verhältnisse. In allen europäischen Ländern, wo Konskription besteht, hat seit Einführung derselben das mittlere Körpermaß der erwachsenen Männer und im ganzen ihre Tauglichkeit zum Kriegsdienst abgenommen. Vor der Revolution (1789) war das Minimum für den Infanteristen in Frankreich 165 Zentimeter; 1818 (Gesetz vom 10. März) 157, nach dem Gesetz vom 21. März 1832, 156 Zentimeter; durchschnittlich in Frankreich wegen mangelnder Größe und Gebrechen über die Hälfte ausgemustert. Das Militärmaß war in Sachsen 1780: 178 Zentimeter, jetzt 155. In Preußen ist es 157. Nach Angabe in der ‚Bayrischen Zeitung‘ vom 9. Mai 1862 von Dr. Meyer stellt sich nach einem 9jährigen Durchschnitt heraus, daß in Preußen von 1000 Konskribierten 716 untauglich zum Militärdienst: 317 wegen Mindermaß und 399 wegen Gebrechen . . . Berlin konnte 1858 sein Kontingent an Ersatzmannschaft nicht stellen, es fehlten 156 Mann.“ (J. v. Liebig, „Die Chemie in ihrer Anwendung auf Agrikultur und Physiologie,“ 1862. 7. Aufl. Band I, p. 117, 118.)

Question 855 *Would the capitalists have ended up introducing the factory acts themselves if the workers had not fought for them?* 2007SP, 2004fa.

↓ Brief summary of the Factory Acts in force when Marx was writing:

248:1 The Factory Act of 1850 now in force (1867) allows for the average

254:1 Der jetzt (1867) geltende Factory-Act von 1850 erlaubt für den durchschnitt-

working-day 10 hours, i.e., for the first 5 days 12 hours from 6 a.m. to 6 p.m., from which however 1/2 an hour for breakfast and an hour for dinner are subtracted by law, thus leaving 10 1/2 working-hours, and for Saturday 8 hours, from 6 a.m. to 2 p.m., of which 1/2 an hour is subtracted for breakfast. 60 working-hours are left, 10 1/2 for each of the first 5 days, 7 1/2 for the last.⁴⁷ Certain guardians of these laws are appointed, Factory Inspectors, directly under the Home Secretary, whose reports are published half-yearly, by order of Parliament. They give regular and official statistics of the capitalists' greed for surplus-labor.

lichen Wochentag 10 Stunden, nämlich für die ersten 5 Wochentage 12 Stunden, von 6 Uhr morgens bis 6 Uhr abends, wovon aber 1/2 Stunde für Frühstück und eine Stunde für Mittagessen gesetzlich abgehn, also 10 1/2 Arbeitsstunden bleiben, und 8 Stunden für den Samstag, von 6 Uhr morgens bis 2 Uhr nachmittags, wovon 1/2 Stunde für Frühstück abgeht. Bleiben 60 Arbeitsstunden, 10 1/2 für die ersten fünf Wochentage, 7 1/2 für den letzten Wochentag.⁴⁷ Es sind eigne Wächter des Gesetzes bestellt, die dem Ministerium des Innern direkt untergeordneten Fabrikinspektoren, deren Berichte halbjährlich von Parlaments wegen veröffentlicht werden. Sie liefern also eine fortlaufende und offizielle Statistik über den Kapitalistenheißhunger nach Mehrarbeit.

⁴⁷ The history of the Factory Act of 1850 will be found in the course of this chapter.

⁴⁷ Die Geschichte des Fabrikakts von 1850 folgt im Verlauf dieses Kapitels.

The events and developments leading up to these Factory Acts will be discussed later. Right now Marx says, in several different ways, that these Acts were a negative expression of the greed for surplus-labor.

(1) Even after the Acts, are the working hours are still very long, plus the legal norms are exceeded by many firms. The reports of the factory inspectors (instituted by these Acts) became the official documentation of capitalist greed.

248:2–249:2 Let us listen, for a moment, to the Factory Inspectors.⁴⁸

254:2 Hören wir einen Augenblick die Fabrikinspektoren.⁴⁸

“The fraudulent mill-owner begins work a quarter of an hour (sometimes more, sometimes less) before 6 a.m., and leaves off a quarter of an hour (sometimes more, sometimes less) after 6 p.m. He takes 5 minutes from the beginning and from the end of the half hour nominally allowed for breakfast, and 10 minutes at the beginning and end of the hour nominally allowed for dinner. He works for a quarter of an hour (sometimes more, sometimes less) after 2 p.m. on Saturday. Thus his gain is—

„Der betrügerische Fabrikant beginnt die Arbeit eine Viertelstunde, manchmal früher, manchmal später, vor 6 Uhr morgens und schließt sie eine Viertelstunde, manchmal früher, manchmal später, nach 6 Uhr nachmittags. Er nimmt 5 Minuten weg vom Anfang und Ende der nominell für das Frühstück anberaumten halben Stunde, und knappt 10 Minuten ab zu Anfang und Ende der für Mittagessen anberaumten Stunde. Samstag arbeitet er eine Viertelstunde, manchmal mehr, manchmal weniger, nach 2 Uhr nachmittags. So beträgt sein Gewinn:

10. The Working-Day

Before 6 a.m.	15 minutes	Vor 6 Uhr morgens	15 Minuten
After 6 p.m.	15 minutes	Nach 6 Uhr nachmittags	15 Minuten
At breakfast time	10 minutes	Für Frühstückszeit	10 Minuten
At dinner time	20 minutes	Beim Mittagessen	20 Minuten
	60 minutes		60 Minuten
<i>Sum in 5 days:</i>	300 minutes	<i>Summa in 5 Tagen:</i>	300 Minuten
On Saturdays		An Samstagen	
Before 6 a.m.	15 minutes	Vor 6 Uhr morgens	15 Minuten
At breakfast time	10 minutes	Für Frühstück	10 Minuten
Nach 2 p.m.	15 minutes	Nach 2 Uhr nachmittags	15 Minuten
<i>Total weekly:</i>	340 minutes	<i>Wöchentlicher Gesamtgewinn:</i>	340 Minuten

Or 5 hours and 40 minutes weekly, which multiplied by 50 working weeks in the year (allowing two for holidays and occasional stoppages) is equal to 27 working-days.”⁴⁹

“Five minutes a day’s increased work, multiplied by weeks, are equal to two and a half days of produce in the year.”⁵⁰ “An additional hour a day gained by small instalments before 6 a.m., after 6 p.m., and at the beginning and end of the times nominally fixed for meals, is nearly equivalent to working 13 months in the year.”⁵¹

⁴⁸ I only touch here and there on the period from the beginning of modern industry in England to 1845. For this period I refer the reader to “Die Lage der arbeitenden Klasse in England,” by Friedrich Engels, Leipzig, 1845. How profoundly Engels understood the nature of the capitalist mode of production is shown by the Factory Reports, Reports on Mines, etc., that have appeared since 1845, and how accurately he painted the circumstances in detail is seen on the most superficial comparison of his work with the official reports of the Children’s Employment Commission, published 18 to 20 years later (1863–1867). These deal especially with the branches of industry in which the Factory Acts had not, up to 1862, been introduced, in fact are not yet introduced. Here, then, little or no alteration had been enforced, by authority, in the conditions painted by Engels.

In this favorable review of Engels in footnote 48, Marx distinguishes between the depth of Engels’s understanding, corroborated by the factory reports (which contain interviews of the capitalists themselves), and the accuracy of his detailed knowledge, corroborated by the reports of the Children’s Employment Commission (which was focusing on what actually was done to the children in the factories).

The rest of footnote 48 is directed at Marx’s German readers.

^{48 ctd} I borrow my examples chiefly from the

Oder 5 Stunden 40 Minuten wöchentlich, was mit 50 Arbeitswochen multipliziert, nach Abzug von 2 Wochen für Feiertage oder gelegentliche Unterbrechungen, 27 Arbeitstage gibt.“⁴⁹

„Wird der Arbeitstag täglich 5 Minuten über die Normaldauer verlängert, so gibt das 2 1/2 Produktionstage im Jahr.“⁵⁰ „Eine zusätzliche Stunde täglich, dadurch gewonnen, daß bald hier ein Stückchen Zeit erhascht wird, bald dort ein andres Stückchen, macht aus den 12 Monaten des Jahres 13.“⁵¹

⁴⁸ Auf die Periode vom Beginn der großen Industrie in England bis 1845 gehe ich nur hier und da ein und verweise den Leser darüber auf „Die Lage der arbeitenden Klasse in England“ von Friedrich Engels, Leipzig 1845. Wie tief Engels den Geist der kapitalistischen Produktionsweise begriff, zeigen die Factory Reports, Reports on Mines usw., die seit 1845 erschienen sind, und wie bewundernswürdig er die Zustände im Detail malte, zeigt der oberflächlichste Vergleich seiner Schrift mit den 18 bis 20 Jahre später veröffentlichten offiziellen Reports der Children’s Employment Commission (1863–1867). Diese handeln nämlich von Industriezweigen, worin die Fabrikgesetzgebung bis 1862 noch nicht eingeführt war, zum Teil noch nicht eingeführt ist. Hier wurde also den von Engels geschilderten Zuständen mehr oder minder große Änderung nicht von außen aufgeherrscht.

^{48 ctd} Meine Beispiele entlehne ich hauptsächlich

free-trade period after 1848, that age of paradise, of which the commercial travellers for the great firm of free-trade, blatant as ignorant, tell such fabulous tales to the Germans.—By the way, England figures here in the foreground because she is the classic representative of capitalist production, and she alone has a continuous set of official statistics of the things we are considering.

lich der Freihandelsperiode nach 1848, jener paradisischen Zeit, wovon ebenso großmäulige als wissenschaftlich verwahrloste Freihandels- hausierburschen den Deutschen so fabelhaft viel vorfauchen.—Übrigens figuriert England hier nur im Vordergrund, weil es die kapitalistische Produktion klassisch repräsentiert und allein eine offiziell fortlaufende Statistik der behandelten Gegenstände besitzt.

↑ Marx did not mean to put down England. Other countries did similar things, but they did not document it.

⁵¹ „*Report etc. 30th April 1858*“, p. 9.

(2) Crises, during which production is interrupted, do not affect the drive to lengthen the working-day:

249:3–6 Crises during which production is interrupted and the factories work “short time,” i.e., for only a part of the week, naturally do not affect the tendency to extend the working-day.

255:4 Krisen, worin die Produktion unterbrochen und nur „kurze Zeit“, nur während einiger Tage in der Woche, gearbeitet wird, ändern natürlich nichts an dem Trieb nach Verlängerung des Arbeitstags.

↑ This is a contradiction. Business conditions force the capitalists to work shorter hours, but their drive is to extend the hours as much as possible. ↓ It is revealing how they deal with this contradiction: Even if the employees are working short hours, they are still expected to work during breaks and before and after their paid time.

The less business there is, the more profit has to be made on the business done. The less time spent in work, the more of that time has to be turned into surplus labor-time. Thus the Factory Inspector’s report on the period of the crisis from 1857 to 1858:

Je weniger Geschäfte gemacht werden, desto größer soll der Gewinn auf das gemachte Geschäft sein. Je weniger Zeit gearbeitet werden kann, desto mehr Surplusarbeitszeit soll gearbeitet werden. So berichten die Fabrikinspektoren über die Periode der Krise von 1857 bis 1858:

“It may seem inconsistent that there should be any overworking at a time when trade is so bad; but that very badness leads to the transgression by unscrupulous men, they get the extra profit of it . . . In the last half year, says Leonard Homer, 122 mills in my district have been given up; 143 were found standing,” yet, over-work is continued beyond the legal hours.⁵² “For a great part of the time,” says Mr. Howell, “owing to the depression of trade, many factories were altogether closed, and a still greater number were working short time. I continue, however, to receive about

„Man mag es für eine Inkonsequenz halten, daß irgendwelche Überarbeit zu einer Zeit stattfindet, wo der Handel so schlecht geht, aber sein schlechter Zustand spornet rücksichtslose Leute zu Überschreitungen; sie sichern sich so einen Extraprofit . . .“ „Zur selben Zeit“, sagt Leonard Horner, „wo 122 Fabriken in meinem Distrikt ganz aufgegeben sind, 143 stillstehn und alle andren kurze Zeit arbeiten, wird die Überarbeit über die gesetzlich bestimmte Zeit fortgesetzt.“⁵² „Obgleich“, sagt Herr Howell, „in den meisten Fabriken des schlechten Geschäftsstands wegen

10. The Working-Day

the usual number of complaints that half, or three-quarters of an hour in the day, are snatched from the workers by encroaching upon the times professedly allowed for rest and refreshment.”⁵³

⁵² Reports, etc., l.c., p. 10.

⁵³ Reports etc., l.c., p. 25.

249:7–250:2 The same phenomenon was reproduced on a smaller scale during the frightful cotton-crises from 1861 to 1865.⁵⁴

“It is sometimes advanced by way of excuse, when persons are found at work in a factory, either at a meal hour, or at some illegal time, that they will not leave the mill at the appointed hour, and that compulsion is necessary to force them to cease work [cleaning their machinery, etc.], especially on Saturday afternoons. But, if the hands remain in a factory after the machinery has ceased to revolve ... they would not have been so employed if sufficient time had been set apart specially for cleaning, etc., either before 6 a.m. [*sic.*] or before 2 p.m. on Saturday afternoons.”⁵⁵

“The profit to be gained by it (over-working in violation of the Act) appears to be, to many, a greater temptation than they can resist; they calculate upon the chance of not being found out; and when they see the small amount of penalty and costs, which those who have been convicted have had to pay, they find that if they should be detected there will still be a considerable balance of gain ...⁵⁶ In cases where the additional time is gained by a multiplication of small thefts in the course of the day, there are insuperable difficulties to the inspectors making out a case.”⁵⁷

These “small thefts” of capital from the laborer’s meal and recreation time, the factory inspectors also designate as “petty pilferings of minutes,”⁵⁸ “snatching a few minutes,”⁵⁹ or, as the laborers technically called them, “nibbling and cribbling at meal-times.”⁶⁰

⁵⁴ Reports etc., for the half year ending 30th April, 1861. See Appendix No. 2; Reports, etc.,

nur halbe Zeit gearbeitet wird, erhalte ich nach wie vor dieselbe Anzahl von Klagen, daß eine halbe Stunde oder 3/4 Stunden täglich den Arbeitern weggeschnappt (snatched) werden durch Eingriffe in die ihnen gesetzlich gesicherten Fristen für Mahlzeit und Erholung.⁵³

⁵² „Reports etc.“, l.c. p. 10.

⁵³ „Reports etc.“, l.c. p. 25.

256:1 Dasselbe Phänomen wiederholt sich auf kleinerer Stufenleiter während der furchtbaren Baumwollkrise von 1861 bis 1865.⁵⁴

„Es wird zuweilen vorgeschützt, wenn wir Arbeiter während der Speisestunden oder sonst zu ungesetzlicher Zeit am Werk ertappen, daß sie die Fabrik durchaus nicht verlassen wollen und daß es des Zwangs bedarf, um ihre Arbeit“ (Reinigen der Maschinen usw.) „zu unterbrechen, namentlich Samstag nachmittags. Aber wenn die ‚Hände‘ nach Stillsetzung der Maschinerie in der Fabrik bleiben, geschieht es nur, weil ihnen zwischen 6 Uhr morgens und 6 Uhr abends, in den gesetzlich bestimmten Arbeitsstunden, keine Frist zur Verrichtung solcher Geschäfte gestattet worden ist.“⁵⁵

„Der durch Überarbeit über die gesetzliche Zeit zu machende Extraprofit scheint für viele Fabrikanten eine zu große Versuchung, um ihr widerstehn zu können. Sie rechnen auf die Chance, nicht aufgefunden zu werden, und berechnen, daß selbst im Fall der Entdeckung die Geringfügigkeit der Geldstrafen und Gerichtskosten ihnen immer noch eine Gewinnbilanz sichert.“⁵⁶ Wo die zusätzliche Zeit durch Multiplikation kleiner Diebstähle (a multiplication of small thefts) im Laufe des Tages gewonnen wird, stehn den Inspektoren fast unüberwindliche Schwierigkeiten der Beweisführung im Weg.“⁵⁷

Diese „kleinen Diebstähle“ des Kapitals an der Mahlzeit und Erholungszeit der Arbeiter bezeichnen die Fabrikinspektoren auch als „petty pilferings of minutes“, Mauseereien von Minuten,⁵⁸ „snatching a few minutes“, Wegschnappen von Minuten,⁵⁹ oder wie die Arbeiter es technisch heißen, „nibbling and cribbling at meal times“.⁶⁰

⁵⁴ „Reports etc. for the half year ending 30th April 1861.“ Sieh Appendix Nr. 2; „Reports etc.

31st October, 1862, pp. 7, 52, 53. The violations of the Acts became more numerous during the last half year 1863. Cf. Reports, etc., ending 31st October, 1863, p. 7.

⁵⁵ Reports, etc., October 31st, 1860, p. 23. With what fanaticism, according to the evidence of manufacturers given in courts of law, their hands set themselves against every interruption in factory labor, the following curious circumstance shows. In the beginning of June, 1836, information reached the magistrates of Dewsbury (Yorkshire) that the owners of 8 large mills in the neighbourhood of Batley had violated the Factory Acts. Some of these gentlemen were accused of having kept at work 5 boys between 12 and 15 years of age, from 6 a.m. on Friday to 4 p.m. on the following Saturday, not allowing them any respite except for meals and one hour for sleep at midnight. And these children had to do this ceaseless labor of 30 hours in the "shoddyhole," as the hole is called, in which the woollen rags are pulled in pieces, and where a dense atmosphere of dust, shreds, etc., forces even the adult workman to cover his mouth continually with handkerchiefs for the protection of his lungs! The accused gentlemen affirm in lieu of taking an oath—as quakers they were too scrupulously religious to take an oath—that they had, in their great compassion for the unhappy children, allowed them four hours for sleep, but the obstinate children absolutely would not go to bed. The quaker gentlemen were fined £20. Dryden anticipated these gentry:

^{55 ctd} "Fox full fraught in seeming sanctity,
That feared an oath, but like the devil would lie,
That look'd like Lent, and had the holy leer,
And durst not sin! before he said his prayer!"

⁵⁶ Rep., 31st Oct., 1856, p. 34.

⁵⁷ l.c., p. 35.

⁵⁸ l.c., p. 48.

⁵⁹ l.c., p. 48.

⁶⁰ l.c., p. 48.

↓ Although Marx says that in general, capitalist exploitation is "hidden," in this situation capitalism reveals itself as being based on the expropriation of labor.

250:3–251:0 It is evident that in this atmosphere the formation of surplus-value by

31st Octob. 1862", p. 7, 52, 53. Die Überschreitungen werden wieder zahlreicher mit dem letzten Halbjahr 1863. Vgl. Reports etc. ending 31st Oct. 1863", p. 7.

⁵⁵ „Reports etc. 31st Oct. 1864, p. 23.“ Mit welchem Fanatismus, nach gerichtlichen Aussagen der Fabrikanten, ihre Fabrikhände sich jeder Unterbrechung der Fabrikarbeit widersetzen, zeige folgendes Kuriosum: Anfang Juni 1836 gingen den Magistrates von Dewsbury (Yorkshire) Denunziationen zu, wonach die Eigner von 8 großen Fabriken in der Nähe von Batley den Fabrikakt verletzt hätten. Ein Teil dieser Herren war angeklagt, 5 Knaben zwischen 12 und 15 Jahren von 6 Uhr morgens des Freitags bis 4 Uhr nachmittags des folgenden Samstags abgearbeitet zu haben, ohne irgendeine Erholung zu gestatten, außer für Mahlzeiten und eine Stunde Schlaf um Mitternacht. Und diese Kinder hatten die rastlose, 30stündige Arbeit zu verrichten in dem „shoddyhole“, wie die Höhle heißt, worin Wollenlumpen aufgerissen werden und wo ein Luftmeer von Staub, Abfällen usw. selbst den erwachsenen Arbeiter zwingt, den Mund beständig mit Schnupftüchern zu verbinden, zum Schutz seiner Lunge! Die Herren Angeklagten versicherten an Eides Statt—als Quäker waren sie zu skrupulös religiöse Männer, einen Eid zu leisten—, sie hätten in ihrer großen Barmherzigkeit den elenden Kindern 4 Stunden Schlaf erlaubt, aber die Starrköpfe von Kindern wollten durchaus nicht zu Bett gehn! Die Herrn Quäker wurden zu 20 Pfd.St. Geldbuße verurteilt. Dryden ahnte diese Quäker:

^{55 ctd} „Ein Fuchs voller Scheinheiligkeit,
der wie der Teufel lügt, doch fürchtet sich vor'm Eid,
der wie ein Büsser ausschaut, doch seitwärts gier'ge Blicke wirft,
doch nicht zu sünd'gen wagt, bevor er sein Gebet gesagt!“

⁵⁶ „Rep. etc. 31st Oct. 1856“, p. 34.

⁵⁷ l.c. p. 35.

⁵⁸ l.c. p. 48.

⁵⁹ l.c.

⁶⁰ l.c.

257:2 Man sieht, in dieser Atmosphäre ist die Bildung des Mehrwerts durch die Mehr-

10. The Working-Day

surplus-labor is no secret. “If you allow me”, said a highly respectable master to me, ‘to work only ten minutes in the day overtime, you put one thousand a year in my pocket.’”⁶¹ “Moments are the elements of profit.”⁶²

⁶¹ l.c., p. 48.

⁶² Report of the Insp. etc., 30th April 1860, p. 56.

251:1 Nothing is from this point of view more characteristic than the designation of the workers who work full time as “full-timers,” and the children under 13 who are only allowed to work 6 hours as “half-timers.” The worker is here nothing more than personified labor-time. All individual distinctions are merged in those of “full-timers” and “half-timers.”⁶³

⁶³ This is the official expression both in the factories and in the reports.

arbeit kein Geheimnis. „Wenn Sie mir erlauben“, sagte mir ein sehr respektabler Fabrikherr, „täglich nur 10 Minuten Überzeit arbeiten zu lassen, stecken Sie jährlich 1000 Pfd.St. in meine Tasche.“⁶¹ „Zeitatom sind die Elemente des Gewinns.“⁶²

⁶¹ l.c. p. 48.

⁶² „Moments are the elements of profit.“ (Rep. of the Insp. etc. 30th April 1860 p. 56.)

257:4 Nichts ist in dieser Hinsicht charakteristischer als die Bezeichnung der Arbeiter, die volle Zeit arbeiten, durch „full times“ und die der Kinder unter 13 Jahren, die nur 6 Stunden arbeiten dürfen, als „half times“⁶³. Der Arbeiter ist hier nichts mehr als personifizierte Arbeitszeit. Alle individuellen Unterschiede lösen sich auf in die von „Vollzeitle“ und „Halbzeitle“.

⁶³ Der Ausdruck hat offizielles Bürgerrecht, wie in der Fabrik, so in den Fabrikberichten.

10.3. Branches of English Industry With No Legal Bounds to Exploitation

The factory acts discussed so far were the “negative expression” 247:2 of capital’s were-wolf hunger for surplus-value. The present section discusses situations in which this hunger freely expressed itself because it had not yet received such a negative reaction. Marx concentrates on the time after 1845, see footnote 48 to paragraph 248:2–249:2, where the working-day was regulated in some but not in other industries. He shows that the same thirst for surplus-labor that is apparent in the regulated industries, can also be found in the unregulated ones. This proves that this thirst is not a reaction to regulation, and makes it clear to the reader that regulation is necessary everywhere, see 302:2/o. Besides excessive length of the working-day, also other transgressions are registered: child labor, unsafe or unhealthy working conditions, product adulteration.

251:2 We have hitherto considered the tendency to the extension of the working-day, the were-wolf’s hunger for surplus-labor, in a department where boundless excesses, not surpassed, says an English bourgeois economist, by the cruelties of the Spaniards to the American red-skins,⁶⁴ caused capital at last to be bound by the chains of legal regulations.

⁶⁴ “The cupidity of mill-owners whose cruelties in the pursuit of gain have hardly been exceeded by those perpetrated by the Spaniards on

258:1 Den Trieb nach Verlängerung des Arbeitstags, den Werwolfsheißhunger für Mehrarbeit, beobachteten wir bisher auf einem Gebiet, wo maßlose Ausschreitungen, nicht übergipfelt, so sagt ein bürgerlicher englischer Ökonom, von den Grausamkeiten der Spanier gegen die Rothäute Amerikas,⁶⁴ das Kapital endlich an die Kette gesetzlicher Regulation gelegt haben.

⁶⁴ „Die Habgier der Fabrikbesitzer, deren Grausamkeiten bei der Jagd nach Gewinn kaum von denjenigen übertroffen wurden, die die Spa-

10.3. Branches With No Legal Bounds to Exploitation

the conquest of America in the pursuit of gold.” John Wade, [Wad35, p. 114]. The theoretical part of this book, a kind of hand-book of Political Economy, is, considering the time of its publication, original in some parts, *e.g.*, on commercial crises. The historical part is, to a great extent, a shameless plagiarism of Sir F. M. Eden’s “The State of the Poor,” London, 1797.

nier bei der Eroberung Amerikas, bei der Jagd nach dem Golde verübten.“ John Wade [Wad35, p. 114] Der theoretische Teil dieses Buchs, eine Art Grundriß der politischen Ökonomie, enthält für seine Zeit einiges Originelle, z.B. über Handelskrisen. Der historische Teil leidet an schamlosem Plagiarismus aus Sir M. Edens, „The State of the Poor“, London 1797.

It is the boundless excesses of the werewolf’s hunger for surplus labor, not this hunger itself, that triggered the legal regulation. Now Marx looks at industries which were exempt from these laws, in which these excesses continued unabated. Marx brings examples from the production of laces in 251:3/o, pottery in 252:1, matches in 254:3–4, wallpaper in 254:4, bread in 256:1, and at the end, in 259:5/o, various other consumer products where excessive hours prevailed.

Now, let us cast a glance at certain branches of production in which the exploitation of labor is either free from fetters to this day, or was so yesterday.

Werfen wir jetzt den Blick auf einige Produktionszweige, wo die Ausausung der Arbeitskraft entweder noch heute fesselfrei ist oder es gestern noch war.

Laces: Discussion in a county magistrate about child labor in laces, 18 hours and more per day, amounts to slavery and manslaughter. Personal outrage of officials and priest, capitalists protest against the discussion.

251:3/o “Mr. Broughton Charlton, county magistrate, declared, as chairman of a meeting held at the Assembly Rooms, Nottingham, on the 14th January, 1860, that there was an amount of privation and suffering among that portion of the population connected with the lace trade, unknown in other parts of the kingdom, indeed, in the civilised world ... Children of nine or ten years are dragged from their squalid beds at two, three, or four o’clock in the morning and compelled to work for a bare subsistence until ten, eleven, or twelve at night, their limbs wearing away, their frames dwindling, their faces whitening, and their humanity absolutely sinking into a stone-like torpor, utterly horrible to contemplate ... We are not surprised that Mr. Mallett, or any other manufacturer, should stand forward and protest against discussion ... The system, as the Rev. Montagu Valpy describes it, is one of unmitigated slavery, socially, physically, morally, and spiritually ... What can be thought of a town which holds a public meeting to petition that the period of labor for men shall be diminished to eighteen hours a day? ... We declaim against the Virginian and Carolinian cotton-planters. Is their black-market, their lash, and their barter of human flesh more detestable than this slow sacrifice of humanity which takes place in order that veils and

258:2/o „Herr Broughton, ein County Magistrate, erklärte als Präsident eines Meetings, abgehalten in der Stadthalle von Nottingham, am 14. Januar 1860, daß in dem mit der Spitzenfabrikation beschäftigten Teile der städtischen Bevölkerung ein der übrigen zivilisierten Welt unbekannter Grad von Leid und Entbehrung vorherrscht ... Um 2, 3, 4 Uhr des Morgens werden Kinder von 9 bis 10 Jahren ihren schmutzigen Betten entrissen und gezwungen, für die nackte Subsistenz bis 10, 11, 12 Uhr nachts zu arbeiten, während ihre Glieder wegschwinden, ihre Gestalt zusammenschrumpft, ihre Gesichtszüge abstumpfen und ihr menschliches Wesen ganz und gar in einem steinähnlichen Torpor erstant, dessen bloßer Anblick schauderhaft ist. Wir sind nicht überrascht, daß Herr Mallett und andere Fabrikanten auftraten, um Protest gegen jede Diskussion einzulegen ... Das System, wie der Rev. Montagu Valpy es beschrieb, ist ein System unbeschränkter Sklaverei. Sklaverei in sozialer, physischer, moralischer und intellektueller Beziehung ... Was soll man denken von einer Stadt, die ein öffentliches Meeting abhält, um zu petitionieren, daß die Arbeitszeit für Männer täglich auf 18 Stunden beschränkt werden solle! ... Wir deklamieren gegen die virginischen und karolinischen Pflanzer. Ist jedoch ihr Negermarkt,

10. The Working-Day

collars may be fabricated for the benefit of capitalists?"⁶⁵

⁶⁵ *Daily Telegraph*, 17th January, 1860.

mit allen Schrecken der Peitsche und dem Schacher in Menschenfleisch, abscheulicher als diese langsame Menschenabschlachtung, die vor sich geht, damit Schleier und Kragen zum Vorteil von Kapitalisten fabriziert werden?"⁶⁵

⁶⁵ London „Daily Telegraph“ vom 17. Januar 1860.

Potteries: One and the same pottery was subject to 3 parliamentary investigations within 22 years. Quotes from these about the child labor there (leaving aside the conditions for adults). Long and irregular hours, whole nights of overtime without extra pay. Bad health of population is very obvious.

252:1 The potteries of Staffordshire have, during the last 22 years, been the subject of three parliamentary inquiries. The result is embodied in Mr. Scriven's Report of 1841 to the "Children's Employment Commissioners," in the report of Dr. Greenhow of 1860 published by order of the medical officer of the Privy Council (Public Health, 3rd Report, 112–113), lastly, in the report of Mr. Longe of 1862 in the "First Report of the Children's Employment Commission, of the 13th June, 1863." For my purpose it is enough to take, from the reports of 1860 and 1863, some depositions of the exploited children themselves. From the children we may form an opinion as to the adults, especially the girls and women, and that in a branch of industry by the side of which cotton-spinning appears an agreeable and healthful occupation.⁶⁶

⁶⁶ Cf. F. Engels "Lage, etc." pp. 249–51.

Testimony of children working in the potteries:

252:2–5 William Wood, 9 years old, was 7 years and 10 months when he began to work. He "ran moulds" (carried ready-moulded articles into the drying-room, afterwards bringing back the empty mould) from the beginning. He came to work every day in the week at 6 a.m., and left off about 9 p.m.

"I work till 9 o'clock at night six days in the week. I have done so seven or eight weeks."

259:1 Die Töpferei (Pottery) von Staffordshire hat während der letzten 22 Jahre den Gegenstand dreier parlamentarischen Untersuchungen gebildet. Die Resultate sind niedergelegt im Bericht des Herrn Scriven von 1841 an die „Children's Employment Commissioners“, im Bericht des Dr. Greenhow von 1860, veröffentlicht auf Befehl des ärztlichen Beamten des Privy Council („Public Health, 3rd Report“, 1, 102–113), endlich im Bericht des Herrn Longe von 1863, in „First Report of the Children's Employment Commission“ vom 13. Juni 1863. Für meine Aufgabe genügt es, den Berichten von 1860 und 1863 einige Zeugnisaussagen der exploitierten Kinder selbst zu entlehnen. Von den Kindern mag man auf die Erwachsenen schließen, namentlich Mädchen und Frauen, und zwar in einem Industriezweig, woneben Baumwollspinnerei u. dgl. als ein sehr angenehmes und gesundes Geschäft erscheint.⁶⁶

⁶⁶ Vgl. Engels, „Lage etc.“, p. [mecw]

259:2–5 Wilhelm Wood, neunjährig, "war 7 Jahre 10 Monate alt, als er zu arbeiten begann". Er „ran moulds“ (trug die fertig geformte Ware in die Trockenstube, um nachher die leere Form zurückzubringen) von Anfang an. Er kommt jeden Tag in der Woche um 6 Uhr morgens und hört auf ungefähr 9 Uhr abends.

„Ich arbeite bis 9 Uhr abends jeden Tag in der Woche. So z.B. während der letzten 7–8 Wochen.“

10.3. Branches With No Legal Bounds to Exploitation

Fifteen hours of labor for a child 7 years old!
J. Murray, 12 years of age, says:

“I turn jigger, and run moulds. I come at 6. Sometimes I come at 4. I worked all night last night, till 6 o’clock this morning. I have not been in bed since the night before last. There were eight or nine other boys working last night. All but one have come this morning. I get 3 shillings and sixpence. I do not get any more for working at night. I worked two nights last week.”

Also fünfzehnständige Arbeit für ein siebenjähriges Kind! J. Murray, ein zwölfjähriger Knabe, sagt aus:

„I run moulds and turn jigger (drehe das Rad). Ich komme um 6 Uhr, manchmal um 4 Uhr morgens. Ich habe während der ganzen letzten Nacht bis diesen Morgen 6 Uhr gearbeitet. Ich war nicht im Bett seit der letzten Nacht. Außer mir arbeiteten 8 oder 9 andre Knaben die letzte Nacht durch. Alle außer einem sind diesen Morgen wieder gekommen. Ich bekomme wöchentlich 3 sh. 6 d.“ (1 Taler 5 Groschen). Ich bekomme nicht mehr, wenn ich die ganze Nacht durcharbeite. Ich habe in der letzten Woche zwei Nächte durchgearbeitet.“

Fernyhough, a boy of ten:

“I have not always an hour (for dinner). I have only half an hour sometimes; on Thursday, Friday, and Saturday.⁶⁷

Fernyhough, ein zehnjähriger Knabe:

„Ich habe nicht immer eine ganze Stunde für das Mittagessen; oft nur eine halbe Stunde; jeden Donnerstag, Freitag und Samstag.“⁶⁷

⁶⁷ Children’s Employment Commission. First report., etc., 1863. Evidence. pp. 16, 19, 18.

⁶⁷ „Children’s Employment Commission, First Report etc. 1863“, Appendix, p. 16, 19, 18.

Testimony about the general state of health of the population:

253:1–5 Dr. Greenhow states that the average duration of life in the pottery districts of Stoke-on-Trent and Wolstanton is extraordinarily short. Although in the district of Stoke, only 36.6% and in Wolstanton only 30.4% of the adult male population above 20 are employed in the potteries, among the men of that age in the first district more than half, in the second, nearly 2/5 of the whole deaths are the result of pulmonary diseases among the potters. Dr. Boothroyd, a medical practitioner at Hanley, says:

“Each successive generation of potters is more dwarfed and less robust than the preceding one.”

260:1–5 Dr. Greenhow erklärt die Lebenszeit in den Töpferdistrikten von Stokeupon-Trent und Wolstanton für außerordentlich kurz. Obgleich im Distrikt Stoke nur 36,6% und in Wolstanton nur 30,4% der männlichen Bevölkerung über 20 Jahre in den Töpfereien beschäftigt sind, fällt unter Männern dieser Kategorie im ersten Distrikt mehr als die Hälfte, im zweiten ungefähr 2/5 der Todesfälle infolge von Brustkrankheiten auf die Töpfer. Dr. Boothroyd, praktischer Arzt zu Hanley, sagt aus:

„Jede sukzessive Generation der Töpfer ist zwerghafter und schwächer als die vorhergehende.“

In like manner another doctor, Mr. M’Bean:

“Since he began to practice among the potters 25 years ago, he had observed a marked degeneration especially shown in diminution of stature and breadth.”

Ebenso ein anderer Arzt, Herr McBean:

„Seit ich vor 25 Jahren meine Praxis unter den Töpfern begann, hat sich die auffallende Entartung dieser Klasse fortschreitend in Abnahme von Gestalt und Gewicht gezeigt.“

These statements are taken from the report of Dr. Greenhow in 1860.⁶⁸

Diese Aussagen sind dem Bericht des Dr. Greenhow von 1860 entnommen.⁶⁸

253:6–7 From the report of the Commissioners in 1863 the following: Dr. J.

260:6–7 Aus dem Bericht der Kommissäre von 1863 folgendes: Dr. J. T. Arled-

10. The Working-Day

T. Arledge, senior physician of the North Staffordshire Infirmary, says:

“The potters as a class, both men and women, represent a degenerated population, both physically and morally. They are, as a rule, stunted in growth, ill-shaped, and frequently ill-formed in the chest; they become prematurely old, and are certainly short-lived; they are phlegmatic and bloodless, and exhibit their debility of constitution by obstinate attacks of dyspepsia, and disorders of the liver and kidneys, and by rheumatism. But of all diseases they are especially prone to chest-disease, to pneumonia, phthisis, bronchitis, and asthma. One form would appear peculiar to them, and is known as potter’s asthma, or potter’s consumption. Scrofula attacking the glands, or bones, or other parts of the body, is a disease of two-thirds or more of the potters . . . That the ‘degenerescence’ of the population of this district is not even greater than it is, is due to the constant recruiting from the adjacent country, and intermarriages with more healthy races.”^{68a}

^{68a} Child. Empl. Comm. I. Report, p. 24.

253:8–254:2 Mr. Charles Parsons, late house surgeon of the same institution, writes in a letter to Commissioner Longe, amongst other things:

↓ This testimony speaks not only of the avarice of the employers but also the parents:

“I can only speak from personal observation and not from statistical data, but I do not hesitate to assert that my indignation has been aroused again and again at the sight of poor children whose health has been sacrificed to gratify the avarice of either parents or employers.”

He enumerates the causes of the diseases of the potters, and sums them up in the phrase, “long hours.” The report of the Commission trusts that

“a manufacture which has assumed so prominent a place in the whole world, will not long be subject to the remark that its great success is accompanied with the physical deterioration, widespread bodily suffering, and early death of the workpeople . . . by whose labor and skill such great results have been achieved.”⁶⁹

ge, Oberarzt des North Staffordshire Krankenhauses, sagt:

„Als eine Klasse repräsentieren die Töpfer, Männer und Frauen . . ., eine entartete Bevölkerung, physisch und moralisch. Sie sind in der Regel verzerrt, schlecht gebaut, und oft an der Brust verwachsen. Sie altern vorzeitig und sind kurzlebig; phlegmatisch und blutlos, verraten sie die Schwäche ihrer Konstitution durch hartnäckige Anfälle von Dyspepsie, Leber und Nierenstörungen und Rheumatismus. Vor allem aber sind sie Brustkrankheiten unterworfen, der Pneumonie, Phthisis, Bronchitis und dem Asthma. Eine Form des letzteren ist ihnen eigentümlich und bekannt unter dem Namen des Töpfer-Asthma oder der Töpfer-Schwindsucht. Skrophulose, die Mandeln, Knochen oder andre Körperteile angreift, ist eine Krankheit von mehr als zwei Dritteln der Töpfer. Daß die Entartung (degenerescence) der Bevölkerung dieses Distrikts nicht noch viel größer ist, verdankt sie ausschließlich der Rekrutierung aus den umliegenden Landdistrikten und den Zwischenheiraten mit gesunden Racen.“

260:8–261:3 Herr Charles Parsons, vor kurzem noch House Surgeon derselben Krankenanstalt, schreibt in einem Briefe an den Kommissär Longe u.a.:

„Ich kann nur aus persönlicher Beobachtung, nicht statistisch sprechen, aber ich stehe nicht an zu versichern, daß meine Empörung wieder und wieder aufkochte bei dem Anblick dieser armen Kinder, deren Gesundheit geopfert wurde, um der Habgier ihrer Eltern und Arbeitgeber zu frönen.“

Er zählt die Ursachen der Töpferkrankheiten auf und schließt sie kulminierend ab mit “long hours” („langen Arbeitsstunden“). Der Kommissionsbericht hofft, daß

„eine Manufaktur von so hervorragender Stellung in den Augen der Welt nicht lange mehr den Makel tragen wird, daß ihr großer Erfolg begleitet ist von physischer Entartung, vielverzweigten körperlichen Leiden und frühem Tode der Arbeiterbevölkerung, durch deren Arbeit und Geschick so große Resultate erzielt worden sind.“⁶⁹

10.3. Branches With No Legal Bounds to Exploitation

⁶⁹ Children's Employment Commission, p. 22, and xi.

And all that holds of the potteries in England is true of those in Scotland.⁷⁰

⁷⁰ l.c., p. xlvii.

Matches: Because of phosphorus extremely unhealthy conditions, long and irregular hours, meals for the most part taken in the phosphorus infested workrooms, lockjaw disease peculiar to matchmakers, half of the workers children under thirteen.

254:3–4 The manufacture of lucifer matches dates from 1833, from the discovery of the method of applying phosphorus to the match itself. Since 1845 this manufacture has rapidly developed in England, and has extended especially amongst the thickly populated parts of London as well as in Manchester, Birmingham, Liverpool, Bristol, Norwich, Newcastle and Glasgow. With it has spread the form of lockjaw, which a Vienna physician in 1845 discovered to be a disease peculiar to lucifer-matchmakers. Half the workers are children under thirteen, and young persons under eighteen.

Now some indirect reference to the custom by the working class to deliver their children as workers into the factories: Only the most miserable part of the working class delivers its children for the potteries.

The manufacture is on account of its unhealthiness and unpleasantness in such bad odour that only the most miserable part of the laboring class, half-starved widows and so forth, deliver up their children to it, "the ragged, half-starved, neglected, and untaught children."⁷¹ Of the witnesses that Commissioner White examined (1863), 270 were under 18, 50 under 10, 10 only 8, and 5 only 6 years old. A range of the working-day from 12 to 14 or 15 hours, night-labor, irregular meal-times, meals for the most part taken in the very workrooms that are pestilent with phosphorus. Dante would have found the worst horrors of his Inferno surpassed in this manufacture.

⁷¹ l.c., p. liv.

Paper hangings (wallpaper): Machinery operated by children, has to run continuously without meal breaks (apparently as a pretext it was claimed that paper and ink would be wasted). Season mainly in winter, therefore extremely long hours with overtime pay in winter, but overtime also in summer. Workers have to quit sick because of overwork.

254:4 In the manufacture of paper-hang-

⁶⁹ „Children's Employ. Commission, 1863“ p. 24, 22 u. XI.

Was von den Töpfereien in England, gilt von denen in Schottland.⁷⁰

⁷⁰ l.c. p. XLVII.

261:4 Die Manufaktur von Zündhölzern datiert von 1833, von der Erfindung, den Phosphor auf die Zündrute selbst anzubringen. Seit 1845 hat sie sich rasch in England entwickelt und von den dicht bevölkerten Teilen Londons namentlich auch nach Manchester, Birmingham, Liverpool, Bristol, Norwich, Newcastle, Glasgow verbreitet, mit ihr die Mundsperr, die ein Wiener Arzt schon 1845 als eigentümliche Krankheit der Zündholzmacher entdeckte. Die Hälfte der Arbeiter sind Kinder unter 13 und junge Personen unter 18 Jahren.

Die Manufaktur ist wegen ihrer Ungesundheit und Widerwärtigkeit so verrufen, daß nur der verkommenste Teil der Arbeiterklasse, halbverhungerte Witwen usw., Kinder für sie hergibt, "zerlumppte, halb verhungerte, ganz verwahrloste und unerzogene Kinder".⁷¹ Von den Zeugen, die Kommissär White (1863) verhörte, waren 270 unter 18 Jahren, 40 unter 10 Jahren, 10 nur 8 und 5 nur 6 Jahre alt. Wechsel des Arbeitstags von 12 auf 14 und 15 Stunden, Nacharbeit, unregelmäßige Mahlzeiten, meist in den Arbeitsräumen selbst, die vom Phosphor verpestet sind. Dante wird in dieser Manufaktur seine grausamsten Höllenphantasien übertroffen finden.

⁷¹ l.c. p. LIV.

261:5 In der Tapetenfabrik werden die

10. The Working-Day

ings the coarser sorts are printed by machine; the finer by hand (block-printing). The most active business months are from the beginning of October to the end of April. During this time the work goes on fast and furious without intermission from 6 a.m. to 10 p.m. or further into the night.

254:5–255:0 J. Leach deposes:

“Last winter six out of nineteen girls were away from ill-health at one time from over-work. I have to bawl at them to keep them awake.” W. Duffy: “I have seen when the children could none of them keep their eyes open for the work; indeed, none of us could.” J. Lightbourne: “Am 13 We worked last winter till 9 (evening), and the winter before till 10. I used to cry with sore feet every night last winter.” G. Apsden: “That boy of mine when he was 7 years old I used to carry him on my back to and fro through the snow, and he used to have 16 hours a day ... I have often knelt down to feed him as he stood by the machine, for he could not leave it or stop.” Smith, the managing partner of a Manchester factory: “We (he means his “hands” who work for “us”) work on with no stoppage for meals, so that day’s work of 10 1/2 hours is finished by 4.30 p.m., and all after that is over-time.”⁷² (Does this Mr. Smith take no meals himself during 10 1/2 hours?) “We (this same Smith) seldom leave off working before 6 p.m. (he means leave off the consumption of “our” labor-power machines), so that we (iterum Crispinus) are really working over-time the whole year round. For all these, children and adults alike (152 children and young persons and 140 adults), the average work for the last 18 months has been at the very least 7 days, 5 hours, or 78 1/2 hours a week. For the six weeks ending May 2nd this year (1862), the average was higher—8 days or 84 hours a week.”

⁷² This is not to be taken in the same sense as our surplus-labor-time. These gentlemen

gröberen Sorten mit Maschinen, die feineren mit der Hand (block printing) gedruckt. Die lebhaftesten Geschäftsmonate fallen zwischen Anfang Oktober und Ende April. Während dieser Periode dauert diese Arbeit häufig und fast ohne Unterbrechung von 6 Uhr vormittags bis 10 Uhr abends und tiefer in die Nacht.

261:6–262:0 J. Leach sagt aus:

“Letzten Winter“ (1862) „blieben von 19 Mädchen 6 weg infolge durch Überarbeitung zugezogener Krankheiten. Um sie wach zu halten, muß ich sie anschreien.“ W. Duffy: „Die Kinder konnten oft vor Müdigkeit die Augen nicht aufhalten, in der Tat, wir selbst können es oft kaum.“ J. Lightbourne: „Ich bin 13 Jahre alt ... Wir arbeiteten letzten Winter bis 9 Uhr abends und den Winter vorher bis 10 Uhr. Ich pflegte letzten Winter fast jeden Abend vom Schmerz wunder Füße zu schreien.“ G. Apsden: „Diesen meinen Jungen pflegte ich, als er 7 Jahre alt war, auf meinem Rücken hin und her über den Schnee zu tragen, und er pflegte 16 Stunden zu arbeiten; ... Ich habe oft niedergekniet, um ihn zu füttern, während er an der Maschine stand, denn er durfte sie nicht verlassen oder stillsetzen.“ Smith, der geschäftsführende Associé einer Manchester Fabrik: „Wir“ (er meint seine „Hände“, die für „uns“) „arbeiten ohne Unterbrechung für Mahlzeiten, so daß die Tagesarbeit von 10 1/2 Stunden um 4 1/2 Uhr nachmittags fertig ist, und alles spätere ist Überzeit.”⁷² (Ob dieser Herr Smith wohl keine Mahlzeit während 10 1/2 Stunden zu sich nimmt?) „Wir“ (derselbe Smith) „hören selten auf vor 6 Uhr abends“ (er meint mit der Konsumtion „unsrer“ Arbeitskraftmaschinen), „so daß wir“ (iterum Crispinus) „in der Tat das ganze Jahr durch Überzeit arbeiten ... Die Kinder und Erwachsen (152 Kinder und junge Personen unter 18 Jahren und 140 Erwachsene) „haben gleichmäßig während der letzten 18 Monate im Durchschnitt allermindestens 7 Tage und 5 Stunden in der Woche gearbeitet oder 78 1/2 Stunden wöchentlich. Für die 6 Wochen, endend am 2. Mai dieses Jahres“ (1863), „war der Durchschnitt höher—8 Tage oder 84 Stunden in der Woche!“

⁷² Dies ist nicht in unsrem Sinn der Surplus-arbeitszeit zu nehmen. Diese Herrn betrachten

10.3. Branches With No Legal Bounds to Exploitation

consider 10 1/2 hours of labor as the normal working-day, which includes of course the normal surplus-labor. After this begins "over-time" which is paid a little better.

die 10 1/2-stündige Arbeit als Normalarbeitstag, der also auch die normale Mehrarbeit einschließt. Dann beginnt „die Überzeit“, die etwas besser bezahlt wird.

Then a remark about overtime in general, which will be developed more systematically in

^{72 ctd} It will be seen later that the labor expended during the so-called normal day is paid below its value, so that the over-time is simply a capitalist trick in order to extort more surplus-labor, which it would still be, even if the labor-power expended during the normal working-day were properly paid.

^{72 ctd} Man wird bei einer späteren Gelegenheit sehen, daß die Verwendung der Arbeitskraft während des sogenannten Normaltages unter dem Werte bezahlt wird, so daß die „Überzeit“ ein bloßer Kapitalistenpfiß ist, um mehr „Mehrarbeit“ auszupressen, was es übrigens selbst dann bleibt, wenn die während des „Normaltages“ verwandte Arbeitskraft wirklich voll bezahlt wird.

255:1–2 Still this same Mr. Smith, who is so extremely devoted to the *pluralis majestatis*, adds with a smile, "Machine-work is not great." So the employers in the block-printing say: "Hand labor is more healthy than machine work." On the whole, manufacturers declare with indignation against the proposal "to stop the machines at least during meal-times."

262:1–2 Doch fügt derselbe Herr Smith, der dem *pluralis majestatis* so sehr ergeben ist, schmunzelnd hinzu: „Maschinenarbeit ist leicht.“ Und so sagen die Anwender des block printing: „Handarbeit ist gesünder als Maschinenarbeit.“ Im ganzen erklären sich die Herrn Fabrikanten mit Entrüstung gegen den Vorschlag, „die Maschinen wenigstens während der Mahlzeiten stillzusetzen“.

A clause, says Mr. Otley, manager of a wall-paper factory in the Borough, "which allowed work between, say 6 a.m. and 9 p.m. would suit us (!) very well, but the factory hours, 6 a.m. to 6 p.m., are not suitable. Our machine is always stopped for dinner. (What generosity!) There is no waste of paper and colour to speak of. But," he adds sympathetically, "I can understand the loss of time not being liked."

„Ein Gesetz“, sagt Herr Ottley, der Manager einer Tapetenfabrik im Borough (in London) ... das Arbeitsstunden von 6 Uhr morgens bis 9 Uhr abends erlaubte, würde uns (!) sehr wohl zusagen, aber die Stunden des Factory Act von 6 Uhr morgens bis 6 Uhr abends passen uns (!) nicht ... Unsre Maschine wird während des Mittagessens“ (welche Großmut) „stillgesetzt. Das Stillsetzen verursacht keinen nennenswerten Verlust an Papier und Farbe.“ „Aber“, fügt er sympathisch hinzu, „ich kann verstehen daß der damit verbundene Verlust nicht geliebt wird.“

255:3 The report of the Commission opines with naïvete that the fear of some "leading firms" of losing time, *i.e.*, the time for appropriating the labor of others, and thence losing profit is not a sufficient reason for allowing children under 13, and young persons under 18, working 12 to 16 hours per day, to lose their dinner, nor for giving it to them as coal and water are supplied to the steam-engine, soap to wool, oil to the wheel—as merely auxiliary material to the instruments of labor, during the process of production itself.⁷³

262:3/o Der Kommissionsbericht meint naiv, die Furcht einiger „leitenden Firmen“, Zeit, d.h. Aneignungszeit fremder Arbeit, und dadurch „Profit zu verlieren“, sei kein „hinreichender Grund“, um Kinder unter 13 und junge Personen unter 18 Jahren während 12–16 Stunden ihr Mittagmahl „verlieren zu lassen“ oder es ihnen zuzusetzen, wie man der Dampfmaschine Kohle und Wasser, der Wolle Seife, dem Rad Öl usw. zusetzt—während des Produktionsprozesses selbst, als bloßen Hilfsstoff des Arbeitsmittels.⁷³

10. The Working-Day

⁷³ I.c., Evidence, pp. 123, 124, 125, 140, and 54.

Baking was still a very antiquated branch of production, even at the time *Capital* was written.

256:1 No branch of industry in England (we do not take into account the making of bread by machinery recently introduced) has preserved up to the present day a method of production so archaic, so—as we see from the poets of the Roman Empire—pre-Christian, as baking. But capital, as was said earlier, is at first indifferent as to the technical character of the labor-process; at first it takes it just as it finds it.

⁷³ I.c., Appendix, p. 123, 124, 125, 140 u. LXIV.

263:1 Kein Industriezweig in England—(wir sehn von dem erst neuerdings sich Bahn brechenden Maschinenbrot ab)—hat so altertümliche, ja, wie man aus den Dichtern der römischen Kaiserzeit ersehn kann, vorchristliche Produktionsweise bis heute beibehalten als die Bäckerei. Aber das Kapital, wie früher bemerkt, ist zunächst gleichgültig gegen den technischen Charakter des Arbeitsprozesses, dessen es sich bemächtigt. Es nimmt ihn zunächst, wie es ihn vorfindet.

↑ The advent of capitalism by itself does not cause a change in the mode of production. Of course, after capitalism has been established, other mechanisms set in which eventually lead to a revolutionizing of this branch of production. This is why Marx writes here “at first.”

↓ State inspections were triggered not by overwork but by the adulterations of bread. Bread adulteration was already discussed in footnote 51 to paragraph 184:1/o of chapter Six.

256:2 The incredible adulteration of bread, especially in London, was first revealed by the House of Commons Committee “on the adulteration of articles of food” (1855–56), and Dr. Hassall’s work, “Adulterations detected.”⁷⁴ The consequence of these revelations was the Act of August 6th, 1860, “for preventing the adulteration of articles of food and drink,” an ineffective law, since it of course observes the tenderest consideration for every Free-trader who aims by the buying or selling of adulterated commodities “to turn an honest penny.”⁷⁵

263:2/o Die unglaubliche Brotverfälschung, namentlich in London, wurde zuerst enthüllt durch das Komitee des Unterhauses „über die Verfälschung von Nahrungsmitteln“ (1855–1856) und Dr. Hassalls Schrift „Adulterations detected“.⁷⁴ Die Folge dieser Enthüllungen war das Gesetz vom 6. August 1860: „for preventing the adulteration of articles of food and drink“, ein wirkungsloses Gesetz, da es natürlich die höchste Delikatesse gegen jeden freetrader beobachtet, der sich vornimmt, durch Kauf und Verkauf gefälschter Waren „to turn an honest penny“.⁷⁵

⁷⁴ Alum finely powdered, or mixed with salt, is a normal article of commerce bearing the significant name of “bakers’ stuff.”

⁷⁴ Alaun, fein gerieben oder mit Salz gemischt, ist ein normaler Handelsartikel, der den bezeichnenden Namen „Baker’s stuff“ führt.

↓ A brief more general digression about how free trade affects use-values begins with footnote 75.

⁷⁵ Soot is a well-known and very energetic form of carbon, and forms a manure that capitalistic chimney-sweeps sell to English farmers. Now in 1862 the British juryman had in a lawsuit to decide whether soot, with which, unknown to the buyer, 90% of dust and sand are mixed, is genuine soot in the commercial sense or adulter-

⁷⁵ Ruß ist bekanntlich eine sehr energische Form des Kohlenstoffs und bildet ein Düngemittel, das kapitalistische Schornsteinfeger an englische Pächter verkaufen. Es hatte nun 1862 der britische „Juryman“ in einem Prozeß zu entscheiden, ob Ruß, welchem ohne Wissen des Käufers 90% Staub und Sand beigemischt sind,

10.3. Branches With No Legal Bounds to Exploitation

ated soot in the legal sense. The “amis du commerce” decided it to be genuine commercial soot, and nonsuited the plaintiff farmer, who had in addition to pay the costs of the suit.

The Committee itself formulated more or less naïvely its conviction that Free-trade meant essentially trade with adulterated, or as the English ingeniously put it, “sophisticated” goods. In fact this kind of sophistry knows better than Protagoras how to make white black, and black white, and better than the Eleatics how to demonstrate *ad oculos* that everything real is merely an appearance.⁷⁶

„wirklicher“ Ruß im „kommerziellen“ Sinn oder „gefälschter“ Ruß im „gesetzlichen“ Sinn sei. Die „amis du commerce“ entschieden, es sei „wirklicher“ kommerzieller Ruß, und wiesen den klagenden Pächter ab, der noch obendrein die Prozeßkosten zu zahlen hatte.

Das Komitee selbst formulierte mehr oder minder naiv seine Überzeugung, daß Freihandel wesentlich den Handel mit gefälschten, oder wie der Engländer es witzig nennt, „sophistizierten Stoffen“ bedeute. In der Tat, diese Art „Sophistik“ versteht es besser als Protagoras, schwarz aus weiß und weiß aus schwarz zu machen, und besser als die Eleaten, den bloßen Schein alles Realen *ad oculos* zu demonstrieren.⁷⁶

Question 857 *Are adulterated products essential to free trade?*

⁷⁶ The French chemist, Chevallier, in his treatise on the “sophistications” of commodities, enumerates for many of the 600 or more articles which he passes in review, 10, 20, 30 different methods of adulteration. He adds that he does not know all the methods and does not mention all that he knows. He gives 6 kinds of adulteration of sugar, 9 of olive oil, 10 of butter, 12 of salt, 19 of milk, 20 of bread, 23 of brandy, 24 of meal, 28 of chocolate, 30 of wine, 32 of coffee, etc. Even God Almighty does not escape this fate. See Rouard de Card, “On the Falsifications of the Materials of the Sacrament.” (“De la falsification des substances sacramentelles,” Paris, 1856.)

⁷⁶ Der französische Chemiker Chevallier, in einer Abhandlung über die „sophistications“ der Waren, zählt unter 600 und einigen Artikeln, die er Revue passieren läßt, für viele derselben 10, 20, 30 verschiedene Methoden der Fälschung auf. Er fügt hinzu, er kenne nicht alle Methoden und erwähne nicht alle, die er kenne. Für den Zucker gibt er 6 Fälschungsarten, 9 für das Olivenöl, 10 für die Butter, 12 für das Salz, 19 für die Milch, 20 für das Brot, 23 für den Branntwein, 24 für Mehl, 28 für Schokolade, 30 für Wein, 32 für Kaffee etc. Selbst der liebe Herrgott entgeht diesem Schicksal nicht. Sieh Rouard de Card, „De la falsification des substances sacramentelles“, Paris 1856.

Question 858 *Is everything real only an appearance?*

256:3/o At all events the Committee had directed the attention of the public to its “daily bread,” and therefore to the baking trade. At the same time in public meetings and in petitions to Parliament rose the cry of the London journeymen bakers against their over-work, etc. The cry was so urgent that Mr. H. S. Tremeneheere, also a member of the Commission of 1863 several times mentioned, was appointed Royal Commissioner of Inquiry. His report,⁷⁷ together with the evidence given, roused not the heart of the public but its stomach.

264:1 Jedenfalls hatte das Komitee die Augen des Publikums auf sein „tägliches Brot“ und damit auf die Bäckerei gelenkt. Gleichzeitig erscholl in öffentlichen Meetings und Petitionen an das Parlament der Schrei der Londoner Bäckergesellen über Überarbeitung usw. Der Schrei wurde so dringend, daß Herr H. S. Tremeneheere, auch Mitglied der mehrerwähnten Kommission von 1863, zum königlichen Untersuchungskommissär bestellt wurde. Sein Bericht,⁷⁷ samt Zeugenaussagen, regte das Publikum auf, nicht sein Herz, sondern seinen Magen.

10. The Working-Day

The public was upset not so much about overwork but by the adulteration of their food.

⁷⁷ “Report, etc., relative to the grievances complained of by the journeymen bakers, etc., London, 1862,” and “Second Report, etc., London, 1863.”

Englishmen, always well up in the Bible, knew well enough that man, unless by elective grace a capitalist, or landlord, or sinecurist, is commanded to eat his bread in the sweat of his brow, but they did not know that he had to eat daily in his bread a certain quantity of human perspiration mixed with the discharge of abscesses, cobwebs, dead black-beetles, and putrid German yeast, without counting alum, sand, and other agreeable mineral ingredients.

⁷⁷ „Report etc. relating to the Grievances complained of by the Journeymen Bakers etc.“, London 1862, und „Second Report etc.“, London 1863.

Der bibelfeste Engländer wußte zwar, daß der Mensch, wenn nicht durch Gnadenwahl Kapitalist oder Landlord oder Sinekurist, dazu berufen ist, sein Brot im Schweiß seines Angesichts zu essen, aber er wußte nicht, daß er in seinem Brote täglich ein gewisses Quantum Menschenschweiß essen muß, getränkt mit Eiterbeulenausleerung, Spinnweb, Schaben-Leichnamen und fauler deutscher Hefe, abgesehn von Alaun, Sandstein und sonstigen angenehmen mineralischen Ingredienzien.

↑ The bible prepares the public for overwork but not for bread adulteration.

Question 859 *Why was the public more upset about the adulteration of bread than about the overwork in the bakeries?*

Without any regard to his holiness, Free-trade, the free baking-trade was therefore placed under the supervision of the State inspectors (Close of the Parliamentary session of 1863), and by the same Act of Parliament, work from 9 in the evening to 5 in the morning was forbidden for journeymen bakers under 18. The last clause speaks volumes about the over-work in this seemingly old-fashioned and homely line of business.

Ohne alle Rücksicht auf seine Heiligkeit, den „Freetrade“, wurde daher die anhero „freie“ Bäckerei der Aufsicht von Staatsinspektoren unterworfen (Ende der Parlamentssitzung 1863) und durch denselben Parlamentsakt die Arbeitszeit von 9 Uhr abends bis 5 Uhr morgens für Bäckerge-sellen unter 18 Jahren verboten. Die letzte Klausel spricht Bände über die Überarbeitung in diesem uns so altväterisch anheimelnden Geschäftszweig.

257:1/o “The work of a London journeyman baker begins, as a rule, at about eleven at night. At that hour he ‘makes the dough,’—a laborious process, which lasts from half an hour to three quarters of an hour, according to the size of the batch or the labor bestowed upon it. He then lies down upon the kneading-board, which is also the covering of the trough in which the dough is ‘made’; and with a sack under him, and another rolled up as a pillow, he sleeps for about a couple of hours. He is then engaged in a rapid and continuous labor for about five hours—throwing out the dough, ‘scaling it off,’ moulding it, putting it into the oven, preparing and baking rolls and fancy bread, taking the batch bread out of the oven, and up into the shop, etc., etc. The temper-

264:2/o „Die Arbeit eines Londoner Bäcker-gesellen beginnt in der Regel um 11 Uhr nachts. Zu dieser Stunde macht er den Teig, ein sehr mühsamer Prozeß, der 1/2 bis 3/4 Stunden währt, je nach der Größe des Gebäcks und seiner Feinheit. Er legt sich dann nieder auf das Knetbrett, das zugleich als Deckel des Trogs dient, worin der Teig gemacht wird, und schläft ein paar Stunden mit einem Mehlsack unter dem Kopf und einem andren Mehlsack auf dem Leib. Dann beginnt eine rasche und ununterbrochne Arbeit von 5 Stunden, Werfen, Wägen, Formen, in den Ofen schieben, aus dem Ofen holen usw. des Teiges. Die Temperatur eines Backhauses beträgt von 75 bis 90 Grad und in den kleinen Backhäusern eher mehr als weniger. Wenn das Geschäft,

10.3. Branches With No Legal Bounds to Exploitation

ature of a bakehouse ranges from about 75 to upwards of 90 degrees, and in the smaller bakehouses approximates usually to the higher rather than to the lower degree of heat. When the business of making the bread, rolls, etc., is over, that of its distribution begins, and a considerable proportion of the journeymen in the trade, after working hard in the manner described during the night, are upon their legs for many hours during the day, carrying baskets, or wheeling hand-carts, and sometimes again in the bakehouse, leaving off work at various hours between 1 and 6 p.m. according to the season of the year, or the amount and nature of their master's business; while others are again engaged in the bakehouse in 'bringing out' more batches until late in the afternoon.⁷⁸

⁷⁸ l.c., First Report, etc., p. vi.

"During what is called 'the London season', the operatives belonging to the 'full-priced' bakers at the West End of the town, generally begin work at 11 p.m., and are engaged in making the bread, with one or two short (sometimes very short) intervals of rest, up to 8 o'clock the next morning. They are then engaged all day long, up to 4, 5, 6, and as late as 7 o'clock in the evening carrying out bread, or sometimes in the afternoon in the bakehouse again, assisting in the biscuit-baking. They may have, after they have done their work, sometimes five or six, sometimes only four or five hours' sleep before they begin again. On Fridays they always begin sooner, some about ten o'clock, and continue in some cases, at work, either in making or delivering the bread up to 8 p.m. on Saturday night, but more generally up to 4 or 5 o'clock, Sunday morning. On Sundays the men must attend twice or three times during the day for an hour or two to make preparations for the next day's bread ... The men employed by the underselling masters (who sell their bread under the 'full price,' and who, as already pointed out, comprise three-fourths of the London bakers) have not only to work on the average longer hours, but their work is almost entirely confined to the bakehouse. The underselling masters generally sell their bread ... in the shop. If they send it out, which is not common, except as supplying chandlers' shops, they usu-

Brot, Wecken usw. zu machen, vollbracht ist, beginnt die Verteilung des Brots; und ein beträchtlicher Teil der Tagelöhner, nachdem er die beschriebne harte Nacharbeit vollbracht, trägt während des Tags das Brot in Körben, oder schiebt es in Karren von Haus zu Haus und operiert dazwischen auch manchmal im Backhaus. Je nach der Jahreszeit und dem Umfang des Geschäfts endet die Arbeit zwischen 1 und 6 Uhr nachmittags, während ein anderer Teil der Gesellen bis spät nachmittags im Backhaus beschäftigt ist."⁷⁸

⁷⁸ l.c. „First Report etc.“ p. VI/VII.

„Während der Londoner Saison beginnen die Gesellen der Bäcker zu ‚vollen‘ Brotpreisen im Westend regelmäßig um 11 Uhr nachts und sind mit dem Brotbacken, unterbrochen durch einen oder zwei oft sehr kurze Zwischenräume, bis 8 Uhr des nächsten Morgens beschäftigt. Sie werden dann bis 4, 5, 6, ja 7 Uhr zur Brotherumtragerei vernutzt oder manchmal mit Biskuitbacken im Backhaus. Nach vollbrachtem Werk genießen sie einen Schlaf von 6, oft nur von 5 und 4 Stunden. Freitags beginnt die Arbeit stets früher, sage abends 10 Uhr, und dauert ohne Unterlaß, sei es in der Zubereitung, sei es in der Kolportierung des Brots, bis den folgenden Samstag abend 8 Uhr, aber meist bis 4 oder 5 Uhr in Sonntag nacht hinein. Auch in den vornehmen Bäckereien, die das Brot zum ‚vollen Preise‘ verkaufen, muß wieder 4 bis 5 Stunden am Sonntag vorbereitende Arbeit für den nächsten Tag verrichtet werden ... Die Bäcker Gesellen der ‚underselling masters‘ (die das Brot unter dem vollen Preise verkaufen), „und diese betragen, wie früher bemerkt, über 3/4 der Londoner Bäcker, haben noch längere Arbeitsstunden, aber ihre Arbeit ist fast ganz auf das Backhaus beschränkt, da ihre Meister, die Lieferung an kleine Kramladen ausgenommen, nur in der eignen Boutique verkaufen. Gegen Ende der Woche ... d.h. am Donnerstag, beginnt hier die Arbeit um 10 Uhr in der Nacht und dauert mit nur geringer Unterbre-

10. The Working-Day

ally employ other hands for that purpose. It is not their practice to deliver bread from house to house. Towards the end of the week . . . the men begin on Thursday night at 10 o'clock, and continue on with only slight intermission until late on Saturday evening.”⁷⁹

⁷⁹ l.c., p. lxxi.

Competitors recognize that undersellers base their business on exploitation, even though they don't see that their own business is based on exploitation too.

258:1–2 Even the bourgeois intellect understands the position of the “underselling” masters. “The unpaid labor of the men was made the source whereby the competition was carried on.”⁸⁰ And the “full-priced” baker denounces his underselling competitors to the Commission of Inquiry as thieves of foreign labor and adulterators.

“They only exist now by first defrauding the public, and next getting 18 hours' work out of their men for 12 hours' wages.”⁸¹

⁸⁰ George Read, “The History of Baking,” London, 1848, p. 16.

⁸¹ *Report (First) etc. Evidence*. Testimony of the “full-priced” baker Cheeseman, p. 108.

258:3 The adulteration of bread and the formation of a class of bakers that sells the bread below the full price, date from the beginning of the 18th century, from the time when the corporate character of the trade was lost, and the capitalist in the form of the miller or flour-factor, rises behind the nominal master baker⁸². Thus was laid the foundation of capitalistic production in this trade, of the unlimited extension of the working-day and of night-labor, although the latter only since 1824 gained a serious footing, even in London.⁸³

⁸² George Read, l.c. At the end of the 17th and the beginning of the 18th centuries the factors (agents) that crowded into every possible trade were still denounced as “public nuisances.” Thus the Grand Jury at the quarter session of the Justices of the Peace for the County of Somerset, addressed a presentment to the Lower House which, among other things, states, “that these factors of Blackwell Hall are a Public Nuisance and Prejudice to the Clothing Trade, and ought to be put

chung bis tief in Sonntag nacht hinein.”⁷⁹

⁷⁹ l.c., p. LXXI.

265:1–2 Von den „underselling masters“ begreift selbst der bürgerliche Standpunkt: „die unbezahlte Arbeit der Gesellen (the unpaid labor of the men) bildet die Grundlage ihrer Konkurrenz.“⁸⁰ Und der „full priced baker“ denunziert seine „underselling“ Konkurrenten der Untersuchungskommission als Diebe fremder Arbeit und Fälscher.

„Sie reussieren nur durch den Betrug des Publikums und dadurch, daß sie 18 Stunden aus ihren Gesellen für einen Lohn von 12 Stunden herauschlagen.“⁸¹

⁸⁰ George Read, „The History of Baking“, London 1848, p. 16.

⁸¹ „Report (First) etc. Evidence.“ Aussage des „full priced baker“ Cheesman, p. 108.

266:1 Die Brotfälschung und die Bildung einer Bäckerklasse, die das Brot unter dem vollen Preis verkauft, entwickelten sich in England seit Anfang des 18. Jahrhunderts, sobald der Zunftcharakter des Gewerbs verfiel und der Kapitalist in der Gestalt von Müller oder Mehlfaktor hinter den nominalen Bäckermeister trat.⁸² Damit war die Grundlage zur kapitalistischen Produktion, zur maßlosen Verlängerung des Arbeitstages und Nachtarbeit gelegt, obgleich letztere selbst in London erst 1824 ernsthaft Fuß faßte.⁸³

⁸² George Read, l.c. Ende des 17. und anfangs des 18. Jahrhunderts wurden die in alle möglichen Gewerbe sich eindringenden Factors (Agenten) noch offiziell als „Public Nuisances“ denunziert. So erließ z.B. die Grand Jury bei der vierteljährigen Friedensrichtersitzung in der Grafschaft Somerset, ein „presentment“ an das Unterhaus, worin es u.a. heißt: „daß diese Agenten von Blackwell Hall ein öffentlicher Unfug sind und dem Tuchgewerbe Abbruch tun und als

10.3. Branches With No Legal Bounds to Exploitation

down as a Nuisance.” “The Case of our English Wool., etc.,” London, 1685, pp. 6, 7.

⁸³ First Report, etc., p. viii.

258:4/o After what has just been said, it will be understood that the Report of the Commission classes journeymen bakers among the short-lived laborers, who, having by good luck escaped the normal decimation of the children of the working-class, rarely reach the age of 42. Nevertheless, the baking trade is always overwhelmed with applicants. The sources of the supply of these labor-powers to London are Scotland, the western agricultural districts of England, and Germany.

259:1–2 In the years 1858–60, the journeymen bakers in Ireland organised at their own expense great meetings to agitate against night and Sunday work. The public—e.g., at the Dublin meeting in May, 1860—took their part with Irish warmth. As a result of this movement, day-labor alone was successfully established in Wexford, Kilkenny, Clonmel, Waterford, etc.

“In Limerick, where the grievances of the journeymen are demonstrated to be excessive, the movement has been defeated by the opposition of the master bakers, the miller bakers being the greatest opponents. The example of Limerick led to a retrogression in Ennis and Tipperary. In Cork, where the strongest possible demonstration of feeling took place, the masters, by exercising their power of turning the men out of employment, have defeated the movement. In Dublin, the master bakers have offered the most determined opposition to the movement, and by discountenancing as much as possible the journeymen promoting it, have succeeded in leading the men into acquiescence in Sunday work and night-work, contrary to the convictions of the men.”⁸⁴

⁸⁴ Report of Committee on the Baking Trade in Ireland for 1861.

↓ Tough words but no actions, although they could easily have acted:

259:3–4 The Committee of the English Government, which Government, in Ireland, is armed to the teeth, and generally knows

Schädlinge unterdrückt werden sollten“. („The Case of our English Wool etc.“, London 1685, p. 6, 7.)

⁸³ „First Report etc.“, p. VIII.

266:2 Man wird nach dem Vorhergehenden verstehen, daß der Kommissionsbericht die Bäcker gesellen zu den kurzlebigen Arbeitern zählt, die, nachdem sie der unter allen Teilen der Arbeiterklasse normalen Kinderdezimation glücklich entwischt sind, selten das 42. Lebensjahr erreichen. Nichtsdestoweniger ist das Bäcker gewerbe stets mit Kandidaten überfüllt. Die Zufuhrquellen dieser „Arbeitskräfte“ für London sind Schottland, die westlichen Agrikulturdistrikte Englands und—Deutschland.

266:3–4 In den Jahren 1858–1860 organisierten die Bäcker gesellen in Irland auf ihre eignen Kosten große Meetings zur Agitation gegen die Nacht- und Sonntagsarbeit. Das Publikum, z.B. auf dem Maimeeting zu Dublin, 1860, ergriff mit irischer Wärme Partei für sie. Ausschließliche Tagarbeit wurde durch diese Bewegung in der Tat erfolgreich durchgesetzt zu Wexford, Kilkenny, Clonmel, Waterford usw.

„Zu Limerick, wo die Qualen der Lohn gesellen bekanntermaßen alles Maß überstiegen, scheiterte diese Bewegung an der Opposition der Bäckermeister, namentlich der Bäcker-Müller. Das Beispiel Limericks führte zum Rückschritt in Ennis und Tipperary. Zu Cork, wo der öffentliche Unwille sich in der lebhaftesten Form kundgab, vereitelten die Meister die Bewegung durch den Gebrauch ihrer Macht, die Gesellen an die Luft zu setzen. Zu Dublin leisteten die Meister den entschiedensten Widerstand und zwangen durch Verfolgung der Gesellen, die an der Spitze der Agitation standen, den Rest zum Nachgeben, zur Fügung in die Nacht- und Sonntagsarbeit.“⁸⁴

⁸⁴ „Report of Committee on the Baking Trade in Ireland for 1861.“

267:1–2 Die Kommission der in Irland bis an die Zähne gewaffneten englischen Regierung remonstriert leichenbitterlich ge-

10. The Working-Day

how to show it, remonstrates in mild, though funereal, tones with the implacable master bakers of Dublin, Limerick, Cork, etc.: “The Committee believe that the hours of labor are limited by natural laws, which cannot be violated with impunity. That for master bakers to induce their workmen, by the fear of losing employment, to violate their religious convictions and their better feelings, to disobey the laws of the land, and to disregard public opinion (this all refers to Sunday labor), is calculated to provoke ill-feeling between workmen and masters, ... and affords an example dangerous to religion, morality, and social order ... The Committee believe that any constant work beyond 12 hours a-day encroaches on the domestic and private life of the workingman, and so leads to disastrous moral results, interfering with each man’s home, and the discharge of his family duties as a son, a brother, a husband, a father. That work beyond 12 hours has a tendency to undermine the health of the workingman, and so leads to premature old age and death, to the great injury of families of working-men, thus deprived of the care and support of the head of the family when most required.”⁸⁵

⁸⁵ l.c.

Agricultural laborers in Scotland (rough climate, Sunday work). *Railway operators* in England. Long hours lead to accidents, but juries do not seem to recognize the underlying reasons! The second time that Marx is critical of pro-capitalist public opinion.

259:5/o So far, we have dealt with Ireland. On the other side of the channel, in Scotland, the agricultural laborer, the ploughman, protests against his 13–14 hours’ work in the most inclement climate, with 4 hours’ additional work on Sunday (in this land of Sabbatarians!),⁸⁶ whilst, at the same time, three railway men are standing before a London coroner’s jury—a guard, an engine-driver, a signalman. A tremendous railway accident has hurried hundreds of passengers into another world. The negligence of the employee is the cause of the misfortune. They declare with one voice

gen die unerbittlichen Bäckermeister von Dublin, Limerick, Cork usw.: „Das Komitee glaubt, daß die Arbeitsstunden durch Naturgesetze beschränkt sind, die nicht ungestraft verletzt werden. Indem die Meister durch die Drohung, sie fortzujagen, ihre Arbeiter zur Verletzung ihrer religiösen Überzeugung, zum Ungehorsam gegen das Landesgesetz und die Verachtung der öffentlichen Meinung zwingen“ (dies letztre bezieht sich alles auf die Sonntagsarbeit), „setzen sie böses Blut zwischen Kapital und Arbeit und geben ein Beispiel, gefährlich für Religion, Moralität und öffentliche Ordnung ... Das Komitee glaubt, daß die Verlängerung des Arbeitstags über 12 Stunden ein usurpatorischer Eingriff in das häusliche und Privatleben des Arbeiters ist und zu unheilvollen moralischen Resultaten führt, durch Einmischung in die Häuslichkeit eines Mannes und die Erfüllung seiner Familienpflichten als Sohn, Bruder, Gatte und Vater. Arbeit über 12 Stunden hat die Tendenz, die Gesundheit des Arbeiters zu untergraben, führt zu vorzeitiger Alterung und frühem Tod und daher zum Unglück der Arbeiterfamilien, die der Vorsorge und der Stütze des Familienhaupts grade im notwendigsten Augenblick beraubt werden“ („are deprived“).⁸⁵

⁸⁵ l.c.

267:3/o Wir waren eben in Irland. Auf der andren Seite des Kanals, in Schottland, denunziert der Ackerbauarbeiter, der Mann des Pfluges, seine 13- bis 14stündige Arbeit, im rauhesten Klima, mit vierstündiger Zusatzarbeit für den Sonntag (in diesem Lande der Sabbat-Heiligen!),⁸⁶ während vor einer Londoner Grand Jury gleichzeitig drei Eisenbahnarbeiter stehn, ein Personenkondukteur, ein Lokomotivführer und ein Signalgeber. Ein großes Eisenbahnunglück hat Hunderte von Passagieren in die andre Welt expediert. Die Nachlässigkeit der Eisenbahnarbeiter ist die Ursache des Unglücks. Sie

before the jury that ten or twelve years before, their labor only lasted eight hours a day. During the last five or six years it had been screwed up to 14, 18, and 20 hours, and under a specially severe pressure of holiday-makers, at times of excursion trains, it often lasted for 40 or 50 hours without a break. They were ordinary men, not Cyclops. At a certain point their labor-power failed. Torpor seized them. Their brain ceased to think, their eyes to see. The thoroughly "respectable" British jurymen answered by a verdict that sent them to the next assizes on a charge of manslaughter, and, in a gentle "rider" to their verdict, expressed the pious hope that the capitalistic magnates of the railways would, in future, be more extravagant in the purchase of a sufficient quantity of labor-power, and more "abstemious", more "self-denying," more "thrifty," in the draining of paid labor-power.⁸⁷

⁸⁶ Public meeting of agricultural laborers at Lasswade, near Edinburgh, January 5th, 1866. (See *Workman's Advocate*, January 13th, 1866.) The formation since the close of 1865 of a Trades' Union among the agricultural laborers at first in Scotland is a historic event. In one of the most oppressed agricultural districts of England, Buckinghamshire, the laborers, in March, 1867, made a great strike for the raising of their weekly wage from 9–10 shillings to 12 shillings. (It will be seen from the preceding passage that the movement of the English agricultural proletariat, entirely crushed since the suppression of its violent manifestations after 1830, and especially since the introduction of the new Poor Laws, begins again in the sixties, until it becomes finally epoch-making in 1872. I return to this in the 2nd volume, as well as to the Blue books that have appeared since 1867 on the position of the English land laborers. Addendum to the 3rd ed.)

⁸⁷ *Reynolds' Newspaper*, January, 1866.—Every week this same paper has, under the sensational headings, "Fearful and fatal accidents," "Appalling tragedies," etc., a whole list of fresh railway catastrophes. On these an employe on

erklären vor den Geschwornen einstimmig, vor 10 bis 12 Jahren habe ihre Arbeit nur 8 Stunden täglich gedauert. Während der letzten 5–6 Jahre habe man sie auf 14, 18 und 20 Stunden aufgeschraubt und bei besonders lebhaftem Zudrang der Reiselustigen, wie in den Perioden der Exkursionszüge, währe sie oft ununterbrochen 40–50 Stunden. Sie seien gewöhnliche Menschen und keine Zyklopen. Auf einem gegebenen Punkt versage ihre Arbeitskraft. Torpor ergreife sie. Ihr Hirn höre auf zu denken und ihr Auge zu sehn. Der ganz und gar „respectable British Juryman“ antwortet durch ein Verdikt, das sie wegen „manslaughter“ (Totschlag) vor die Assisen schickt und in einem milden Anhang den frommen Wunsch äußert, die Herren Kapitalmagnaten der Eisenbahn möchten doch in Zukunft verschwenderischer im Ankauf der nötigen Anzahl von Arbeitskräften“ und „enthaltamer“ oder „entsagender“ oder „sparsamer“ in der Aussaugung der bezahlten Arbeitskraft sein.⁸⁷

⁸⁶ Öffentliches Meeting der Agrikulturarbeiter in Lasswade, bei Glasgow, vom 5. Jan. 1866. (Sieh „*Workman's Advocate*“ vom 13. Jan. 1866.) Die Bildung, seit Ende 1865, einer Trade's Union unter den Agrikulturarbeitern, zunächst in Schottland, ist ein historisches Ereignis. In einem der unterdrücktesten Agrikulturdistrikte Englands, in Buckinghamshire, machten die Lohnarbeiter März 1867 einen großen Strike zur Erhöhung des Wochenlohns von 9–10 sh. auf 12 sh.—(Man sieht aus Vorstehendem, daß die Bewegung des englischen Ackerbau-proletariats, seit Unterdrückung seiner gewaltsamen Demonstrationen nach 1830 und namentlich seit Einführung des neuen Armengesetzes ganz und gar gebrochen, in den sechziger Jahren wieder beginnt, bis sie endlich 1872 epochemachend wird. Ich komme hierauf im II. Band zurück, ebenso auf die seit 1867 erschienenen Blaubücher über die Lage des englischen Landarbeiters. Zusatz zur 3. Aufl.)

⁸⁷ „*Reynolds' Paper*“, [21.] Jan. 1866. Woche für Woche bringt dasselbe Wochenblatt gleich darauf, unter den „sensational headings“: „Fearful and fatal accidents“, „Appalling tragedies“ usw., eine ganze Liste neuer Eisenbahnkatastro-

10. The Working-Day

the North Staffordshire line comments: “Everyone knows the consequences that may occur if the driver and fireman of a locomotive engine are not continually on the look-out. How can that be expected from a man who has been at such work for 29 or 30 hours, exposed to the weather, and without rest. The following is an example which is of very frequent occurrence:— One fireman commenced work on the Monday morning at a very early hour. When he had finished what is called a day’s work, he had been on duty 14 hours 50 minutes. Before he had time to get his tea, he was again called on for duty. . . The next time he finished he had been on duty 14 hours 25 minutes, making a total of 29 hours 15 minutes without intermission. The rest of the week’s work was made up as follows: – Wednesday, 15 hours; Thursday, 15 hours 35 minutes; Friday, 14 1/2 hours; Saturday, 14 hours 10 minutes, making a total for the week of 88 hours 40 minutes. Now, sir, fancy his astonishment on being paid 6 1/4 days for the whole. Thinking it was a mistake, he applied to the time-keeper, . . . and inquired what they considered a day’s work, and was told 13 hours for a goods man (*i.e.*, 78 hours). . . He then asked for what he had made over and above the 78 hours per week, but was refused. However, he was at last told they would give him another quarter, *i.e.*, 10 d.” L.c., 4th February 1866.

phen. Darauf antwortet ein Arbeiter von der North Staordlinie: „Jedermann kennt die Folgen, wenn die Aufmerksamkeit von Lokomotivenführer und Heizer einen Augenblick erlahmt. Und wie ist es anders möglich bei maßloser Verlängerung der Arbeit, im rauhsten Wetter, ohne Pause und Erholung? Nehmt als ein Beispiel, wie es täglich vorkommt, folgenden Fall. Letzten Montag begann ein Heizer sehr früh morgens sein Tagewerk. Er endete es nach 14 Stunden 50 Minuten. Bevor er auch nur die Zeit hatte, seinen Tee zu nehmen, rief man ihn von neuem an die Arbeit. Er hatte also 29 Stunden 15 Minuten ununterbrochen durchzuschauen. Der Rest seines Wochenwerks aufgemacht wie folgt: Mittwoch 15 Stunden; Donnerstag 15 Stunden 35 Minuten; Freitag 14 1/2 Stunden; Sonnabend 14 Stunden 10 Minuten; zusammen für die Woche 88 Stunden 30 Minuten. Und nun denkt euch sein Erstaunen, als er nur Zahlung für 6 Arbeitstage erhielt. Der Mann war ein Neuling und fragte, was man unter einem Tagewerk verstehe. Antwort: 13 Stunden, also 78 Stunden per Woche. Aber wie mit der Zahlung für die überschüssigen 10 Stunden 30 Minuten? Nach langem Hader erhielt er eine Vergütung von 10 d.“ (noch nicht 10 Silbergroschen). (l.c., Nr. vom 4. Februar 1866.)

Question 860 *Why did the public not acknowledge that the overwork was the cause of the train accidents?*

Two more very diverse examples showing that “before capital all men are alike”: *Milliner* (Putzmacherin) long hours, overtime before the balls, overfull ateliers. *Blacksmith*: Hard labor and long hours surpassing human capacity.

261:1 From the motley crowd of laborers of all callings, ages, sexes, that press on us more busily than the souls of the slain on Ulysses, on whom—without referring to the Blue books under their arms—we see at a glance the mark of over-work, let us take two more figures whose striking contrast proves that before capital all men are alike—a milliner and a blacksmith.

261:2–262:3 In the last week of June, 1863, all the London daily papers published a paragraph with the “sensational” head-

268:1/o Aus dem buntscheckigen Haufen der Arbeiter von allen Professionen, Altern, Geschlechtern, die eifriger auf uns andrängen als die Seelen der Erschlagenen auf den Odysseus und denen man, ohne die Blaubücher unter ihren Armen, auf den ersten Blick die Überarbeit ansieht, greifen wir noch zwei Figuren heraus, deren frappanter Kontrast beweist, daß vor dem Kapital alle Menschen gleich sind—eine Putzmacherin und einen Grobschmied.

269:1–270:3 In den letzten Wochen vom Juni 1863 brachten alle Londoner Tagesblätter einen Paragraph mit dem „sensa-

10.3. Branches With No Legal Bounds to Exploitation

ing, “Death from simple over-work.” It dealt with the death of the milliner, Mary Anne Walkley, 20 years of age, employed in a highly-respectable dressmaking establishment, exploited by a lady with the pleasant name of Elise. The old, often-told story,⁸⁸ was once more recounted. This girl worked, on an average, 16 1/2 hours, during the season often 30 hours, without a break, whilst her failing labor-power was revived by occasional supplies of sherry, port, or coffee. It was just now the height of the season. It was necessary to conjure up in the twinkling of an eye the gorgeous dresses for the noble ladies bidden to the ball in honour of the newly-imported Princess of Wales. Mary Anne Walkley had worked without intermission for 26 1/2 hours, with 60 other girls, 30 in one room, that only afforded 3 of the cubic feet of air required for them. At night, they slept in pairs in one of the stifling holes into which the bedroom was divided by partitions of board.⁸⁹ And this was one of the best millinery establishments in London. Mary Anne Walkley fell ill on the Friday, died on Sunday, without, to the astonishment of Madame Elise, having previously completed the work in hand. The doctor, Mr. Keys, called too late to the deathbed, duly bore witness before the coroner’s jury that

“Mary Anne Walkley had died from long hours of work in an over-crowded work-room, and a too small and badly ventilated bedroom.”

In order to give the doctor a lesson in how to live well, the coroner’s jury thereupon brought in a verdict that

“the deceased had died of apoplexy, but there was reason to fear that her death had been accelerated by over-work in an over-crowded workroom, etc.”

⁸⁸ Cf F. Engels, l.c., pp. 253, 254.

⁸⁹ Dr. Letheby, Consulting Physician of the

tional“ Aushängeschild: „Death from simple Overwork“ (Tod von einfacher Überarbeit). Es handelte sich um den Tod der Putzmacherin Mary Anne Walkley, zwanzigjährig, beschäftigt in einer sehr respektablen Hofputzmanufaktur, exploitiert von einer Dame mit dem gemütlichen Namen Elise. Die alte oft erzählte Geschichte ward nun neu entdeckt,⁸⁸ daß diese Mädchen durchschnittlich 16 1/2 Stunden, während der Saison aber oft 30 Stunden ununterbrochen arbeiten, indem ihre versagende „Arbeitskraft“ durch gelegentliche Zufuhr von Sherry, Portwein oder Kaffee flüssig erhalten wird. Und es war grade die Höhe der Saison. Es galt, die Prachtkleider edler Ladies für den Huldigungsball bei der frisch importierten Prinzessin von Wales im Umsehn fertigzuzaubern. Mary Anne Walkley hatte 26 1/2 Stunden ohne Unterlaß gearbeitet zusammen mit 60 andren Mädchen, je 30 in einem Zimmer, das kaum 1/3 der nötigen Kubikzolle Luft gewährte, während sie nachts zwei zu zwei ein Bett teilten in einem der Sticklöcher, worin ein Schlafzimmer durch verschiedene Bretterwände abgepfercht ist.⁸⁹ Und dies war eine der besseren Putzmachereien Londons. Mary Anne Walkley erkrankte am Freitag und starb am Sonntag, ohne, zum Erstaunen von Frau Elise, auch nur vorher das letzte Putzstück fertigzumachen. Der zu spät ans Sterbebett gerufne Arzt, Herr Keys, bezeugte vor der „Coroner’s Jury“ in dünnen Worten:

„Mary Anne Walkley sei gestorben an langen Arbeitsstunden in einem überfüllten Arbeitszimmer und überengem, schlechtventiliertem Schlafgemach.“

Um dem Arzt eine Lektion in guter Lebensart zu geben, erklärte dagegen die „Coroner’s Jury“:

„Die Hingeschiedne sei gestorben an der Apoplexie, aber es sei Grund, zu fürchten, daß ihr Tod durch Überarbeit in einer überfüllten Werkstatt usw. beschleunigt worden sei.

⁸⁸ Vgl. F. Engels, l.c. p. 253, 254.

⁸⁹ Dr. Letheby, beim Board of Health funktio-

10. The Working-Day

Board of Health, declared: "The minimum of air for each adult ought to be in a sleeping room 300, and in a dwelling room 500 cubic feet." Dr. Richardson, Senior Physician to one of the London Hospitals: "With needlewomen of all kinds, including milliners, dressmakers, and ordinary sempstresses, there are three miseries—over-work, deficient air, and either deficient food or deficient digestion ... Needlework, in the main, ... is infinitely better adapted to women than to men. But the mischiefs of the trade, in the metropolis especially, are that it is monopolised by some twenty-six capitalists, who, under the advantages that spring from capital, can bring in capital to force economy out of labor. This power tells throughout the whole class. If a dressmaker can get a little circle of customers, such is the competition that, in her home, she must work to the death to hold together, and this same over-work she must of necessity inflict on any who may assist her. If she fail, or do not try independently, she must join an establishment, where her labor is not less, but where her money is safe. Placed thus, she becomes a mere slave, tossed about with the variations of society. Now at home, in one room, starving, or near to it, then engaged 15, 16, aye, even 18 hours out of the 24, in an air that is scarcely tolerable, and on food which, even if it be good, cannot be digested in the absence of pure air. On these victims, consumption, which is purely a disease of bad air, feeds." Dr. Richardson: "Work and Over-work," in "Social Science Review," 18th July, 1863.

262:4 "Our white slaves," cried the *Morning Star*, the organ of the Free-traders, Cobden and Bright, "our white slaves, who are toiled into the grave, for the most part silently pine and die."⁹⁰

⁹⁰ *Morning Star*, 23rd June, 1863.—*The Times* made use of the circumstance to defend the American slave-owners against Bright, etc. "Very many of us think," says a leader of July 2nd, 1863, "that, while we work our own young

nierender Arzt, erklärt damals: „Das Minimum für die Erwachsenen sollte in einem Schlafzimmer 300 Kubikfuß und in einem Wohnzimmer 500 Kubikfuß Luft sein.“ Dr. Richardson, Oberarzt eines Londoner Hospitals: „Näherinnen aller Art, Putzmacherinnen, Kleidermacherinnen und gewöhnliche Näherinnen leiden an dreifachem Elend—Überarbeit, Luftmangel und Mangel an Nahrung oder Mangel an Verdauung. Im ganzen paßt diese Art Arbeit unter allen Umständen besser für Weiber als für Männer. Aber es ist das Unheil des Geschäfts, daß es, namentlich in der Hauptstadt, von einigen 26 Kapitalisten monopolisiert wird, die durch Machtmittel, welche dem Kapital entspringen (that spring from capital), Ökonomie aus der Arbeit herauszwingen (force economy out of labor; er meint, Auslagen ökonomisieren durch Verschwendung der Arbeitskraft). Ihre Macht wird im Bereich dieser ganzen Klasse von Arbeiterinnen gefühlt. Kann eine Kleidermacherin einen kleinen Kreis von Kunden gewinnen, so zwingt die Konkurrenz sie, sich zu Hause totzuarbeiten, um ihn zu erhalten, und mit derselben Überarbeit muß sie notwendig ihre Gehilfinnen heimsuchen. Mißlingt ihr Geschäft oder kann sie sich nicht selbständig etablieren, so wendet sie sich an ein Etablissement, wo die Arbeit nicht geringer, aber die Zahlung sicher ist. So gestellt, wird sie eine reine Sklavin, hin und her geschleudert von jeder Flutung der Gesellschaft; bald zu Hause in einem kleinen Zimmer verhungern, oder nahe so; dann wieder von 24 Stunden 15, 16 ja 18 Stunden beschäftigt in kaum erträglicher Luft und mit einer Nahrung, die, selbst wenn gut, wegen Abwesenheit reiner Luft nicht verdaut werden kann. Von diesen Opfern lebt die Schwindsucht, welche nichts als eine Luftkrankheit ist.“ (Dr. Richardson, „Work and Overwork“ in „Social Science Review“, 18. Juli 1863.)

270:4 Unsre „weißen Sklaven“, rief der „Morning Star“, das Organ der Freihandelsheer Cobden und Bright, „unsere weißen Sklaven werden in das Grab hineingearbeitet und verderben und sterben ohne Sang und Klang“.⁹⁰

⁹⁰ „Morning Star“, 23. Juni 1863. Die „Times“ benutzte den Vorfall zur Verteidigung der amerikanischen Sklavenhalter gegen Bright usw. „Sehr viele von uns“, sagt sie, „meinen, daß, solange wir unsre eignen jungen Frauenzimmer zu Tode

10.3. Branches With No Legal Bounds to Exploitation

women to death, using the scourge of starvation, instead of the crack of the whip, as the instrument of compulsion, we have scarcely a right to hound on fire and slaughter against families who were born slave-owners, and who, at least, feed their slaves well, and work them lightly." In the same manner, the *Standard*, a Tory organ, fell foul of the Rev. Newman Hall: "He excommunicated the slave-owners, but prays with the fine folk who, without remorse, make the omnibus drivers and conductors of London, etc., work 16 hours a-day for the wages of a dog." Finally, spake the oracle, Thomas Carlyle, of whom I wrote, in 1850, "Zum Teufel ist der Genius, der Kultus ist geblieben." In a short parable, he reduces the one great event of contemporary history, the American Civil War, to this level, that the Peter of the North wants to break the head of the Paul of the South with all his might, because the Peter of the North hires his labor by the day, and the Paul of the South hires his by the life. ("Macmillan's Magazine." *Ilias Americana* in nuce. August, 1863.) Thus, the bubble of Tory sympathy for the urban workers—by no means for the rural—has burst at last. The sum of all is—slavery!

arbeiten mit der Geißel des Hungers statt dem Knall der Peitsche, wir kaum das Recht haben, Feuer und Schwert auf Familien zu hetzen, die als Sklavenhalter geboren waren und ihre Sklaven mindestens gut nähren und mäßig arbeiten lassen." („Times“, 2. Juli 1863.) In derselben Weise kanzelte der „Standard“, ein Toryblatt, den Rev. Newman Hall ab: „Er exkommuniziert die Sklavenhalter, bete aber mit den braven Leuten, die Kutscher und Omnibusführer von London usw. nur 16 Stunden täglich für einen Hundelohn arbeiten ließen.“ Endlich sprach das Orakel, Herr Thomas Carlyle, von dem ich schon 1850 drucken ließ: „Zum Teufel ist der Genius, der Kultus ist geblieben.“ In einer kurzen Parabel reduziert er das einzig großartige Ereignis der Zeitgeschichte, den Amerikanischen Bürgerkrieg, darauf, daß der Peter vom Norden dem Paul vom Süden mit aller Gewalt den Hirnschädel einschlagen will, weil der Peter vom Norden seinen Arbeiter „täglich“ und der Paul vom Süden ihn für „Lebzeit mietet“. „Macmillan's Magazine“. *Ilias Americana* in nuce. Augustheft 1863.) So ist endlich die Schaumblase der Torysympathie für den städtischen—beileibe nicht den ländlichen!—Lohnarbeiter geplatzt. Der Kern heißt—Sklaverei!

263:1 "It is not in dressmakers' rooms that working to death is the order of the day, but in a thousand other places; in every place I had almost said, where 'a thriving business' has to be done . . . We will take the blacksmith as a type. If the poets were true, there is no man so hearty, so merry, as the blacksmith; he rises early and strikes his sparks before the sun; he eats and drinks and sleeps as no other man. Working in moderation, he is, in fact, in one of the best of human positions, physically speaking. But we follow him into the city or town, and we see the stress of work on that strong man, and what then is his position in the death-rate of his country. In Marylebone, blacksmiths die at the rate of 31 per thousand per annum, or 11 above the mean of the male adults of the country in its entirety. The occupation, instinctive almost as a portion of human art, unobjectionable as a branch of human industry, is made by mere excess of work, the destroyer of the man. He can strike so many blows per day, walk so many steps, breathe so many breaths, produce so much work, and live an average, say of fifty years; he is made to

271:1 „Zu Tod arbeiten ist die Tagesordnung, nicht nur in der Werkstätte der Putzmacherinnen, sondern in tausend Plätzen, ja an jedem Platz, wo das Geschäft im Zug ist . . . Laßt uns den Grobschmied als Beispiel nehmen. Wenn man den Dichtern glauben darf, gibt es keinen so lebenskräftigen, lustigen Mann als den Grobschmied. Er erhebt sich früh und schlägt Funken vor der Sonne; er ißt und trinkt und schläft wie kein anderer Mensch. Rein physisch betrachtet, befindet er sich, bei mäßiger Arbeit, in der Tat in einer der besten menschlichen Stellungen. Aber wir folgen ihm in die Stadt und sehn die Arbeitslast, die auf den starken Mann gewälzt wird, und welchen Rang nimmt er ein in den Sterblichkeitslisten unsres Landes? In Marylebone“ (einem der größten Stadtviertel Londons) „sterben Grobschmiede in dem Verhältnis von 31 per 1000 jährlich, oder 11 über der Durchschnittssterblichkeit erwachsener Männer in England. Die Beschäftigung, eine fast instinktive Kunst der Menschheit, an und für sich tadellos, wird durch bloße Übertreibung der Arbeit der Zerstörer des Mannes. Er kann so

10. The Working-Day

strike so many more blows, to walk so many more steps, to breathe so many more breaths per day, and to increase altogether a fourth of his life. He meets the effort; the result is, that producing for a limited time a fourth more work, he dies at 37 for 50.”⁹¹

⁹¹ Dr. Richardson, l.c., pp. 476 ff.

viel Hammerschläge täglich schlagen, so viel Schritte gehn, so viel Atemzüge holen, so viel Werk verrichten, und durchschnittlich sage 50 Jahre leben. Man zwingt ihn, so viel mehr Schläge zu schlagen, so viel mehr Schritte zu gehn, so viel öfter des Tags zu atmen, und alles zusammen seine Lebensausgabe täglich um ein Viertel zu vermehren. Er macht den Versuch, und das Resultat ist, daß er für eine beschränkte Periode ein Viertel mehr Werk verrichtet und im 37. Jahre statt im 50. stirbt.“⁹¹

⁹¹ Dr. Richardson, l.c.

10.4. Day and Night Work. Relais System

The prolongation of the working-day is an inherent drive of capital even if there is no constant capital. However it gains special urgency when there is a considerable amount of constant capital: then the constant capital must be used day and night.

263:2-264:1 Constant capital, the means of production, considered from the standpoint of the creation of surplus-value, only exist to absorb labor, and with every drop of labor a proportional quantity of surplus-labor. While they fail to do this, their mere existence causes a relative loss to the capitalist, for they represent during the time they lie fallow, a useless advance of capital. And this loss becomes positive and absolute as soon as the intermission of their employment necessitates additional outlay at the recommencement of work. The prolongation of the working-day beyond the limits of the natural day, into the night, only acts as a palliative. It quenches only in a slight degree the vampire thirst for the living blood of labor.

These two reasons (constant capital cannot stand idle, and utmost prolongation of the working-day) are powerful enough that night shifts are introduced:

To appropriate labor during all the 24 hours of the day is, therefore, the inherent tendency of capitalist production. But as it is physically impossible to exploit the same individual labor-power constantly during the night as well as the day, to overcome this physical hindrance, an alternation becomes necessary between the workpeople whose powers are exhausted by day, and those who are used up by night. This alternation may

271:2/o Das konstante Kapital, die Produktionsmittel, sind, vom Standpunkt des Verwertungsprozesses betrachtet, nur da, um Arbeit und mit jedem Tropfen Arbeit ein proportionelles Quantum Mehrarbeit einzusaugen. Soweit sie das nicht tun, bildet ihre bloße Existenz einen negativen Verlust für den Kapitalisten, denn sie repräsentieren während der Zeit, wo sie brachliegen, nutzlosen Kapitalvorschuß, und dieser Verlust wird positiv, sobald die Unterbrechung zusätzliche Auslagen nötig macht für den Wiederbeginn des Werks. Die Verlängerung des Arbeitstags über die Grenzen des natürlichen Tags in die Nacht hinein wirkt nur als Palliativ, stillt nur annähernd den Vampyrthirst nach lebendigem Arbeitsblut.

Arbeit während aller 24 Stunden des Tags anzueignen ist daher der immanente Trieb der kapitalistischen Produktion. Da dies aber physisch unmöglich, würden dieselben Arbeitskräfte Tag und Nacht fortwährend ausgesaugt, so bedarf es, zur Überwindung des physischen Hindernisses, der Abwechslung zwischen den bei Tag und Nacht verspeisten Arbeitskräften, eine Abwechslung, die verschiedene Methoden zuläßt, z.B.

be effected in various ways; e.g., it may be so arranged that part of the workers are one week employed on day-work, the next week on night-work. It is well known that this relay system, this alternation of two sets of workers, held full sway in the full-blooded youth-time of the English cotton manufacture, and that at the present time it still flourishes, among others, in the cotton spinning of the Moscow district. This 24 hours' process of production exists today as a system in many of the branches of industry of Great Britain that are still "free," in the blast-furnaces, forges, plate-rolling mills, and other metallurgical establishments in England, Wales, and Scotland. The working time here includes, besides the 24 hours of the 6 working-days, a great part also of the 24 hours of Sunday. The workers consist of men and women, adults and children of both sexes. The ages of the children and young persons run through all intermediate grades, from 8 (in some cases from 6) to 18.⁹² In some branches of industry, the girls and women work through the night together with the males.⁹³

⁹² Children's Employment Commission. Third Report. London, 1864, pp. iv., v., vi.

⁹³ "Both in Staffordshire and in South Wales young girls and women are employed on the pit banks and on the coke heaps, not only by day but also by night. This practice has been often noticed in Reports presented to Parliament, as being attended with great and notorious evils. These females employed with the men, hardly distinguished from them in their dress, and begrimed with dirt and smoke, are exposed to the deterioration of character, arising from the loss of self-respect, which can hardly fail to follow from their unfeminine occupation." (l.c., 194, p. xxvi. Cf. Fourth Report (1865), 61, p. xiii.) It is the same in glass-works.

so geordnet sein kann, daß ein Teil des Arbeiterpersonals eine Woche Tagdienst, Nachtdienst die andre Woche versieht usw. Man weiß, daß dies Ablösungssystem, diese Wechselwirtschaft, in der vollblütigen Jugendperiode der englischen Baumwollindustrie usw. vorherrschte und u.a. gegenwärtig in den Baumwollspinnereien des Gouvernements Moskau blüht. Als System existiert dieser 24stündige Produktionsprozeß heute noch in vielen bis jetzt „freien“ Industriezweigen Großbritanniens, u.a. in den Hochöfen, Schmieden, Walzwerken und andren Metallmanufakturen von England, Wales und Schottland. Der Arbeitsprozeß umfaßt hier außer den 24 Stunden der 6 Werkeltage grobenteils auch die 24 Stunden des Sonntags. Die Arbeiter bestehen aus Männern und Weibern, Erwachsenen und Kindern beiderlei Geschlechts. Das Alter der Kinder und jungen Personen durchläuft alle Zwischenstufen vom 8. (in einigen Fällen vom 6.) bis zum 18. Jahr.⁹² In einigen Branchen arbeiten auch die Mädchen und Weiber des Nachts zusammen mit dem männlichen Personal.⁹³

⁹² „Children's Employment Commission. Third Report“, Lond. 1864, p. IV, V, VI.

⁹³ „In Staffordshire wie auch in Süd-Wales werden junge Mädchen und Frauen in Kohlengruben und auf Kokshalden beschäftigt, nicht nur bei Tag, sondern auch bei Nacht. In den dem Parlament erstatteten Berichten wurde dies oft erwähnt als eine Praxis, die mit großen und offenkundigen Übeln verbunden sei. Diese mit den Männern zusammenarbeitenden und sich von ihnen in der Kleidung kaum unterscheidenden, mit Schmutz und Rauch beschmierten Frauen sind der charakterlichen Entartung ausgesetzt, weil sie ihre Selbstachtung verlieren, was die fast unvermeidliche Folge ihrer unweiblichen Beschäftigung ist.“ (l.c. 194, p. XXVI. Vgl. „Fourth Report“ (1865) 61, p. XIII.) Ebenso in Glasfabriken.

Shift work not only detrimental to the health of the workers, but it also allows the capitalists to cheat on the restrictions of the working-day by forcing workers to work double shifts if the worker of the next shift does not come in.

264:2/o Placing on one side the generally

272:1/o Von den allgemeinen schädlichen

10. The Working-Day

injurious influence of night-labor,⁹⁴ the duration of the process of production, unbroken during the 24 hours, offers very welcome opportunities of exceeding the limits of the normal working-day.

↓ The general detrimental effects of night work are discussed in the footnote.

⁹⁴ A steel manufacturer who employs children in night-labor remarked: "It seems but natural that boys who work at night cannot sleep and get proper rest by day, but will be running about." (l.c., Fourth Report, 63, p. xiii.) On the importance of sunlight for the maintenance and growth of the body, a physician writes: "Light also acts upon the tissues of the body directly in hardening them and supporting their elasticity. The muscles of animals, when they are deprived of a proper amount of light, become soft and inelastic, the nervous power loses its tone from defective stimulation, and the elaboration of all growth seems to be perverted . . . In the case of children, constant access to plenty of light during the day, and to the direct rays of the sun for a part of it, is most essential to health. Light assists in the elaboration of good plastic blood, and hardens the fibre after it has been laid down. It also acts as a stimulus upon the organs of sense, and by this means brings about more activity in the various cerebral functions." Dr. W. Strange, Senior Physician of the Worcester General Hospital, from whose work on "Health" (1864) this passage is taken, writes in a letter to Mr. White, one of the commissioners: "I have had opportunities formerly, when in Lancashire, of observing the effects of nightwork upon children, and I have no hesitation in saying, contrary to what some employers were fond of asserting, those children who were subjected to it soon suffered in their health." (l.c., 284., p. 55.) That such a question should furnish the material of serious controversy, shows plainly how capitalist production acts on the brain-functions of capitalists and their retainers.

Wirkungen der Nachtarbeit abgesehen,⁹⁴ bietet die ununterbrochene, vierundzwanzigstündige Dauer des Produktionsprozesses höchst willkommene Gelegenheit, die Grenze des nominellen Arbeitstags zu überschreiten.

⁹⁴ „Es scheint natürlich“, bemerkte ein Stahlfabrikant, der Kinder zur Nachtarbeit verwendet, „daß die Jungen, die nachts arbeiten, bei Tag nicht schlafen und keine ordentliche Ruhe finden können, sondern rastlos am nächsten Tag herumlaufen.“ (l.c., „Fourth Rep.“, 63, p. XIII.) Über die Wichtigkeit des Sonnenlichts zur Erhaltung und Entwicklung des Körpers bemerkt ein Arzt u.a.: „Licht wirkt auch direkt auf die Gewebe des Leibes, denen es Härte und Elastizität gibt. Die Muskeln von Tieren, denen man das normale Quantum Licht vorenthält, werden schwammig und unelastisch, die Nervenkraft verliert ihren Ton durch Mangel an Stimulierung, und die Ausarbeitung von allem, was im Wachstum begriffen ist, wird verkümmert . . . Im Fall von Kindern ist beständiger Zutritt von reichlichem Tageslicht und der direkten Sonnenstrahlen während eines Teils des Tags durchaus wesentlich für die Gesundheit. Licht hilft die Speisen zu gutem plastischen Blut verarbeiten und härtet die Faser, nachdem sie gebildet ist. Es wirkt ebenso als Reizmittel auf die Sehorgane und ruft hierdurch größere Tätigkeit in verschiedenen Hirnfunktionen hervor.“ Herr W. Strange, Oberarzt des Worcester „General Hospital“, aus dessen Schrift über „Gesundheit“ (1864) diese Stelle entlehnt ist, schreibt in einem Brief an einen der Untersuchungskommissäre, Herrn White: „Ich habe früher in Lancashire Gelegenheit gehabt, die Wirkungen der Nachtarbeit auf Fabrikkinder zu beobachten, und im Widerspruch zu der beliebten Versicherung einiger Arbeitgeber erkläre ich mit Entschiedenheit, daß die Gesundheit der Kinder bald davon litt.“ „Children's Employment Commission. Fourth Report“, 284, p. 55.) Daß solche Dinge überhaupt den Gegenstand ernsthafter Kontroversen bilden, zeigt am besten, wie die kapitalistische Produktion auf die „Gehirnfunktionen“ der Kapitalisten und ihrer retainers wirkt.

↑ It should be self-understood that day-and-night work is bad for your health—this is presumably why Marx put this discussion into a footnote.

↓ But shift work also makes it easy for the capitalists to circumvent the regulations re-

garding work hours:

E.g., in the branches of industry already mentioned, which are of an exceedingly fatiguing nature; the official working-day means for each worker usually 12 hours by night or day. But the over-work beyond this amount is in many cases, to use the words of the English official report, “truly fearful.”⁹⁵

⁹⁵ l.c., 57, p. xii.

265:1 “It is impossible,” the report continues, “for any mind to realise the amount of work described in the following passages as being performed by boys of from 9 to 12 years of age ... without coming irresistibly to the conclusion that such abuses of the power of parents and of employers can no longer be allowed to exist.”⁹⁶

⁹⁶ l.c., Fourth Report (1865). 58. p. xii.

↑ Here again a critique of the parents as well as the employers, similar to 253:8–254:2.

265:2 “The practice of boys working at all by day and night turns either in the usual course of things, or at pressing times, seems inevitably to open the door to their not unfrequently working unduly long hours. These hours are, indeed, in some cases, not only cruelly but even incredibly long for children. Amongst a number of boys it will, of course, not unfrequently happen that one or more are from some cause absent. When this happens, their place is made up by one or more boys, who work in the other turn. That this is a well understood system is plain ... from the answer of the manager of some large rolling-mills, who, when I asked him how the place of the boys absent from their turn was made up, ‘I daresay, sir, you know that as well as I do,’ and admitted the fact.”⁹⁷

⁹⁷ l.c.

265:3 “At a rolling-mill where the proper hours were from 6 a.m. to 5 1/2 p.m., a boy worked about four nights every week till 8 1/2 p.m. at least ... and this for six months. Another, at 9 years old, sometimes made three 12-hour shifts running, and, when 10, has made two days and two nights running.” A third, “now 10 ... worked from 6 a.m. till 12 p.m. three nights, and till 9 p.m. the other nights.” “Another, now 13, ... worked from

Z.B. in den vorhin erwähnten, sehr anstrengenden Industriezweigen beträgt der offizielle Arbeitstag für jeden Arbeiter meist 12 Stunden, Nachtstunden oder Tagstunden. Aber die Überarbeit über diese Grenze hinaus ist in vielen Fällen, um die Worte des englischen offiziellen Berichts zu brauchen, „wirklich schauerhaft“ („truly fearful“).⁹⁵

⁹⁵ l.c. 57, p. XII.

273:1 „Kein menschliches Gemüt“, heißt es, „kann die Arbeitsmasse, die nach den Zeugnisaussagen durch Knaben von 9 bis 12 Jahren verrichtet wird, überdenken, ohne unwiderstehlich zum Schluß zu kommen, daß dieser Machtmißbrauch der Eltern und Arbeitgeber nicht länger erlaubt werden darf.“⁹⁶

⁹⁶ l.c. („4th Rep.“, 1865), 58, p. XII.

273:2 „Die Methode, Knaben überhaupt abwechselnd Tag und Nacht arbeiten zu lassen, führt, sowohl während des Geschäftsdranges als während des gewöhnlichen Verlaufs der Dinge, zu schmälicher Verlängerung des Arbeitstags. Diese Verlängerung ist in vielen Fällen nicht nur grausam, sondern gradezu unglaublich. Es kann nicht fehlen, daß aus einer oder der andren Ursache ein Ablösungsknabe hier und da wegbleibt. Einer oder mehrere der anwesenden Knaben, die ihren Arbeitstag bereits vollbracht, müssen dann den Ausfall gutmachen. Dies System ist so allgemein bekannt, daß der Manager eines Walzwerks auf meine Frage, wie die Stelle der abwesenden Ersatzknaben ausgefüllt würde, antwortete: Ich weiß wohl, daß Sie das ebenso gut wissen als ich, und er nahm keinen Anstand, die Tatsache zu gestehn.“⁹⁷

⁹⁷ l.c.

273:3/o „In einem Walzwerke, wo der nominelle Arbeitstag von 6 Uhr morgens bis 5 1/2 Uhr abends dauerte, arbeitete ein Junge 4 Nächte jede Woche bis mindestens 8 1/2 Uhr abends des nächstens Tags ... und dies während 6 Monaten.“ „Ein anderer arbeitete im Alter von 9 Jahren manchmal drei zwölfstündige Arbeitsschichten nacheinander und im Alter von 10 Jahren zwei Tage und zwei Nächte nacheinander.“ „Ein dritter, jetzt 10 Jahre, ar-

10. The Working-Day

6 p.m. till 12 noon next day, for a week together, and sometimes for three shifts together, e.g., from Monday morning till Tuesday night." "Another, now 12, has worked in an iron foundry at Stavely from 6 a.m. till 12 p.m. for a fortnight on end; could not do it any more." "George Allinsworth, age 9, came here as cellar-boy last Friday; next morning we had to begin at 3, so I stopped here all night. Live five miles off. Slept on the floor of the furnace, over head, with an apron under me, and a bit of a jacket over me. The two other days I have been here at 6 a.m. Aye! it is hot in here. Before I came here I was nearly a year at the same work at some works in the country. Began there, too, at 3 on Saturday morning—always did, but was very gain [near] home, and could sleep at home. Other days I began at 6 in the morning, and gi'en over at 6 or 7 in the evening," etc.⁹⁸

beitete von morgens 6 Uhr bis 12 Uhr in die Nacht drei Nächte durch und bis 9 Uhr abends während der andren Nächte." „Ein vierter, jetzt 13 Jahre, arbeitete von 6 Uhr nachmittags bis den andren Tag 12 Uhr mittags während einer ganzen Woche, und manchmal drei Schichten nacheinander, z.B. von Montag morgen bis Dienstag nacht.“ „Ein fünfter, jetzt 12 Jahre, arbeitete in einer Eisengießerei zu Stavely von 6 Uhr morgens bis 12 Uhr nachts während 14 Tagen, ist unfähig, es länger zu tun.“ George Allinsworth, neunjährig: „Ich kam hierhin letzten Freitag. Nächsten Tag hatten wir um 3 Uhr morgens anzufangen. Ich blieb daher die ganze Nacht hier. Wohne 5 Meilen von hier. Schief auf der Flur mit einem Schurzfell unter mir und einer kleinen Jacke über mir. Die zwei andren Tage war ich hier um 6 Uhr morgens. Ja! dies ist ein heißer Platz! Bevor ich herkam, arbeitete ich ebenfalls während eines ganzen Jahres in einem Hochofen. Es war ein sehr großes Werk auf dem Lande. Begann auch samstags morgens um 3 Uhr, aber ich konnte wenigstens nach Hause schlafen gehn, weil es nah war. An andren Tagen fing ich 6 Uhr morgens an und endete 6 oder 7 Uhr abends“ usw.⁹⁸

↓ Footnote 98: if the children must work this long, it is no wonder they have very little school knowledge:

⁹⁸ I.c., p. xiii. Naturally, the degree of culture of these "labor-powers" cannot be any higher than that manifested in the following dialogues with one of the commissioners: Jeremiah Haynes, age 12—"Four times four is 8; 4 fours are 16. A king is him that has all the money and gold. We have a king (told it is a Queen), they call her the Princess Alexandra. Told that she married the Queen's son. The Queen's son is the Princess Alexandra. A Princess is a man." William Turner, age 12—"Don't live in England. Think it is a country, but didn't know before." John Morris, age 14—"Have heard say that God made the world, and that all the people was drowned but one, heard say that one was a little bird." William Smith, age 15—"God made man, man made woman." Edward Taylor, age 15—"Do not know of London." Henry Matthewman, age 17—"Had been to chapel, but missed a good many times lately. One name that they preached about was Jesus Christ, but I cannot say any others, and I cannot tell anything about

⁹⁸ I.c. p. XIII. Die Bildungsstufe dieser „Arbeitskräfte“ muß natürlich so sein, wie sie in folgenden Dialogen mit einem der Untersuchungskommissäre erscheint! Jeremiah Haynes, 12 Jahre alt: „... Viermal vier ist acht, aber vier Vierer (4 fours) sind 16 ... Ein König ist ihm, der alles Geld und Gold hat. (A king is him that has all the money and gold.) Wir haben einen König, man sagt, er ist eine Königin, sie nennen sie Prinzessin Alexandra. Man sagt, sie heiratete der Königin Sohn. Eine Prinzessin ist ein Mann.“ Wm. Turner, zwölfjährig: „Lebe nicht in England. Denke, es gibt solch ein Land, wußte nichts davon zuvor.“ John Morris, vierzehnjährig: „Habe sagen hören, daß Gott die Welt gemacht und daß alles Volk ersoff, außer einem; habe gehört, daß der eine ein kleiner Vogel war.“ William Smith, fünfzehnjährig: „Gott machte den Mann; der Mann machte das Weib.“ Edward Taylor, fünfzehnjährig: „Weiß nichts von London.“ Henry Matthewman, siebzehnjährig: „Geh' manchmal in die Kirche ... Ein Name, worüber sie

him. He was not killed, but died like other people. He was not the same as other people in some ways, because he was religious in some ways and others isn't." (l.c., p. xv.) "The devil is a good person. I don't know where he lives." "Christ was a wicked man." "This girl spelt God as dog, and did not know the name of the queen." ("Ch. Employment Comm. V. Report, 1866 " p. 55, n. 278.)

predigen, war ein gewisser Jesus Christ, aber ich kann keine andren Namen nennen, und ich kann auch nichts über ihn sagen. Er wurde nicht gemordet, sondern starb wie andre Leute. Er war nicht so wie andre Leute in gewisser Art, weil er religiös war in gewisser Art, und andre ist es nicht. (He was not the same as other people in some ways, because he was religious in some ways, and others isn't.)" (l.c. 74, p. XV.) „Der Teufel ist eine gute Person. Ich weiß nicht, wo er lebt. Christus war ein schlechter Kerl.“ („The devil is a good person. I don't know where he lives. Christ was a wicked man.") „Dies Mädchen (10 Jahre) buchstabiert God Dog und kannte den Namen der Königin nicht.“ „Ch. Empl. Comm. V. Rep.“, 1866, p. 55, n. 278.)

↓ The rest of the footnote discusses shift work in the paper mills:

^{98 ctd} The same system obtains in the glass and paper works as in the metallurgical, already cited. In the paper factories, where the paper is made by machinery, night-work is the rule for all processes, except rag-sorting. In some cases night-work, by relays, is carried on incessantly throug the whole week, usually from Sunday night until midnight of the following Saturday. Those who are on day-work work 5 days of 12, and 1 day of 18 hours; those on night-work 5 nights of 12, and 1 of 6 hours in each week. In other cases each set works 24 hours consecutively on alternate days, one set working 6 hours on Monday, and 18 on Saturday to make up the 24 hours. In other cases an intermediate system prevails, by which all employed on the paper-making machinery work 15 or 16 hours every day in the week. This system, says Commissioner Lord, "seems to combine all the evils of both the 12 hours' and the 24 hours' relays." Children under 13, young persons under 18, and women, work under this night system. Sometimes under the 12 hours' system they are obliged, on account of the non-appearance of those that oupt to relieve them, to work a double turn of 24 hours. The evidence proves that boys and girls very often work overtime, which, not unfrequently, extends to 24 or even 36 hours of uninterrupted toil. In the continuous and unvarying process of glazing are found girls of 12 who work the whole month 14 hours a day, "without any regular relief or cessation beyond 2 or, at most, 3 breaks of half an hour each for meals." In some mills, where regular night-work has been entirely given up, over-work goes on to a terrible extent, "and that often in the dirtiest, and in

^{98 ctd} Dasselbe System, das in den erwähnten Metallmanufakturen, herrscht in den Glas- und Papierfabriken. In den Papierfabriken, wo das Papier mit Maschinen gemacht wird, ist Nachtarbeit die Regel für alle Prozesse außer dem der Lumpensortierung. In einigen Fällen wird die Nachtarbeit, vermittelt Ablösungen, unaufhörlich die ganz Woche durch fortgesetzt, gewöhnlich von Sonntag nacht bis 12 Uhr nachts des folgenden Samstags. Die Mannschaft, die sich an der Tagesreihe befindet, arbeitet 5 Tage von 12 und einen von 18 Stunden, und die der Nachtreihe 5 Nächte von 12 Stunden und eine von 6 Stunden, in jeder Woche. In andren Fällen arbeitet jede Reihe 24 Stunden, die eine nach der andren, an Wechseltagen. Eine Reihe arbeitet 6 Stunden am Montag und 18 am Samstag, um 24 Stunden vollzumachen. In andren Fällen ist ein Zwischensystem eingeführt, worin alle an der Papiermacher-Maschinerie Angestellten jeden Tag in der Woche 15–16 Stunden arbeiten. Dies System, sagt Untersuchungskommissär Lord, scheint alle Übel der Zwölfstunden- und Vierundzwanzigstunden-Ablösung zu vereinen. Kinder unter 13 Jahren, junge Personen unter 18 Jahren und Weiber arbeiten unter diesem Nachtsystem. Manchmal, in dem Zwölfstundensystem, mußten sie, wegen Ausbleibens der Ablöser, die doppelte Reihe von 24 Stunden arbeiten. Zeugenaussagen beweisen, daß Knaben und Mädchen sehr oft Überzeit arbeiten, die sich nicht selten zu 24, ja 36 Stunden ununterbrochener Arbeit ausdehnt. In dem „kontinuierlichen und unveränderlichen“ Prozeß der Glasierräume findet man Mädchen von 12 Jahren, die den ganzen

10. The Working-Day

the hottest, and in the most monotonous of the various processes.” (“Ch. Employment Comm. Report IV., 1865,” p. xxxviii, and xxxix.)

Monat durch täglich 14 Stunden arbeiten, „ohne irgendeine regelmäßige Erholung oder Unterbrechung außer zwei, höchstens drei halbstündigen Ausfällen für Mahlzeiten“. In einigen Fabriken, wo man die reguläre Nachtarbeit ganz aufgegeben, wird entsetzlich viel Überzeit gearbeitet und „dies häufig in den schmutzigsten, heißesten und monotonsten Prozessen“. „Children’s Employment Commission. Report IV“, 1865, p. XXXVIII and XXXIX.)

Until end of section: Comments of the capitalists themselves about day and night work. Of course, they do not admit the excesses and speak about it only in its normal form, but these interviews show what crimes against these children they are capable of just because of a small increase in profits.

Question 861 *Describe the role of children in the struggle for the working-day.*

266:1 Let us now hear how capital itself regards this 24 hours’ system. The extreme forms of the system, its abuse in the “cruel and incredible” extension of the working-day are naturally passed over in silence. Capital only speaks of the system in its “normal” form.

266:2–267:1 Messrs. Naylor & Vickers, steel manufacturers, who employ between 600 and 700 persons, among whom only 10 per cent are under 18, and of those, only 20 boys under 18 work in night sets, thus express themselves:

↑ Marx begins with the testimony of manufacturers who employ a smaller proportion of children than some of the other testimonies to follow. ↓ Their testimony is self-contradictory at every step.

“The boys do not suffer from the heat. The temperature is probably from 86° to 90° ...

275:1 Laßt uns nun hören, wie das Kapital selbst dies Vierundzwanzigstundensystem auffaßt. Die Übertreibungen des Systems, seinen Mißbrauch zur „grausamen und unglaublichen“ Verlängerung des Arbeitstags, übergeht es natürlich mit Stillschweigen. Es spricht nur von dem System in seiner „normalen“ Form.

275:2–276:0 Die Herren Naylor und Vickers, Stahlfabrikanten, die zwischen 600 und 700 Personen anwenden, und darunter nur 10% unter 18 Jahren, und hiervon wieder nur 20 Knaben zum Nachtpersonal, äußern sich wie folgt:

„Die Knaben leiden durchaus nicht von der Hitze. Die Temperatur ist wahrscheinlich 86° bis 90° ...

↑ They know that the temperature is 86° or more (presumably Fahrenheit), but they say that the kids do not suffer from the heat. ↓ They try to detract from the around-the-clock shifts in the forges by saying that everything else is day-work.

At the forges and in the rollingmills the hands work night and day, in relays, but all the other parts of the work are day-work, i.e., from 6 a.m. to 6 p.m. In the forge the hours are from 12 to 12. Some of the hands always work in the night, without any alternation of day and night work... We do not find any difference in the health of those who work regularly by night and those who

In den Schmiede- und Walzwerken arbeiten die Hände Tag und Nacht ablösungsweise, aber dahingegen ist auch alles andere Werk Tagwerk, von 6 Uhr morgens bis 6 Uhr abends. In der Schmiede wird von 12 Uhr bis 12 Uhr gearbeitet. Einige Hände arbeiten fortwährend des Nachts ohne Wechsel zwischen Tag- und Nachtzeit ... Wir finden nicht, daß Tag- oder Nachtarbeit ir-

work by day, and probably people can sleep better if they have the same period of rest than if it is changed . . . About 20 of the boys under the age of 18 work in the night sets . . . We could not well do without lads under 18 working by night. The objection would be the increase in the cost of production . . . Skilled hands and the heads in every department are difficult to get, but of lads we could get any number . . .

gendeinen Unterschied in der Gesundheit“ (der Herren Naylor und Vickers?) „macht, und wahrscheinlich schlafen Leute besser, wenn sie dieselbe Ruheperiode genießen, als wenn sie wechselt . . . Ungefähr zwanzig Knaben unter 18 Jahren arbeiten mit der Nachtmannschaft . . . Wir könnten’s nicht recht tun (not well do), ohne die Nacharbeit von Jungen unter 18 Jahren. Unser Einwurf ist—die Vermehrung der Produktionskosten. Geschickte Hände und Häupter von Departements sind schwer zu haben, aber Jungens kriegt man, soviel man will . . .

↑ If those boys want to work for them, why should they have any scruples? ↓ They just said that they could not do without the children for cost reasons, but now they turn around and say: since they only have such a small proportion of children in this situation (20 out of 600 employees), the matter of night work is not of much interest to them:

But from the small proportion of boys that we employ, the subject (*i.e.*, of restrictions on night-work) is of little importance or interest to us.”⁹⁹

Natürlich, in Anbetracht der geringen Proportion von Jungen, die wir verwenden, wären Beschränkungen der Nacharbeit von wenig Wichtigkeit oder Interesse für uns.“⁹⁹

⁹⁹ Fourth Report, etc., 1865, 79, p. xvi.

⁹⁹ „Fourth Report etc.“, 1865, 79, p. XVI.

↑ It is little comfort to the 20 children on night shift that 580 other employees of the same company are not in this situation. ↓ However the absolute numbers are much bigger in a different company:

267:2–3 Mr. J. Ellis, one of the firm of Messrs. John Brown & Co., steel and iron works, employing about 3,000 men and boys, part of whose operations, namely, iron and heavier steel work, goes on night and day by relays, states “that in the heavier steel work one or two boys are employed to a score or two men.” Their concern employs upwards of 500 boys under 18, of whom about 1/3 or 170 are under the age of 13. With reference to the proposed alteration of the law, Mr. Ellis says:

276:1–2 Herr J. Ellis, von der Firma der Herren John Brown et Co., Stahl- und Eisenwerke, die 3000 Männer und Jungen anwenden, und zwar für [einen] Teil der schweren Stahl- und Eisenarbeit „Tag und Nacht, in Ablösungen“, erklärt, daß in den schweren Stahlwerken ein oder zwei Jungen auf zwei Männer kommen. Ihr Geschäft zählt 500 Jungen unter 18 Jahren und davon ungefähr 1/3, oder 170, unter 13 Jahren. Mit Bezug auf die vorgeschlagene Gesetzänderung meint Herr Ellis:

“I do not think it would be very objectionable to require that no person under the age of 18 should work more than 12 hours in the 24. But we do not think that any line could be drawn over the age of 12, at which boys could be dispensed with for night-work. But we would sooner be prevented from employing boys under the age of 13, or even so high as 14, at all, than not be allowed to employ boys that we do have at night. Those boys who work in the day sets must take their turn in the night

„Ich glaube nicht, daß es sehr tadelhaft (very objectionable) wäre, keine Person unter 18 Jahren über 12 Stunden aus den 24 arbeiten zu lassen. Aber ich glaube nicht, daß man irgendeine Linie ziehen kann für die Entbehrlichkeit von Jungen über 12 Jahren für die Nacharbeit. Wir würden sogar eher ein Gesetz annehmen, überhaupt keine Jungen unter 13 Jahren oder selbst unter 15 Jahren zu verwenden, als ein Verbot, die Jungen, die wir einmal haben, während der Nacht zu brauchen. Die Jun-

10. The Working-Day

sets also, because the men could not work in the night sets only; it would ruin their health ... We think, however, that night-work in alternate weeks is no harm.

267:4–6 (Messrs. Naylor & Vickers, on the other hand, in conformity with the interest of their business, considered that periodically changed night-labor might possibly do more harm than continual night-labor.)

We find the men who do it, as well as the others who do other work only by day ... Our objections to not allowing boys under 18 to work at night, would be on account of the increase of expense, but this is the only reason. (What cynical naïveté!) We think that the increase would be more than the trade, with due regard to its being successfully carried out, could fairly bear. (What mealy-mouthed phraseology!) labor is scarce here, and might fall short if there were such a regulation.”

(i.e., Ellis Brown & Co. might fall into the fatal perplexity of being obliged to pay labor-power its full value.)¹⁰⁰

¹⁰⁰ l.c., 80. p. xvi.

268:1 The “Cyclops Steel and Iron Works,” of Messrs. Cammell & Co., are concocted on the same large scale as those of the above-mentioned John Brown & Co. The managing director had handed in his evidence to the Government Commissioner, Mr. White, in writing. Later he found it convenient to suppress the MS. when it had been returned to him for revision. Mr. White, however, has a good memory. He remembered quite clearly that for the Messrs. Cyclops the forbidding of the night-labor of children and young persons “would be impossible, it would be tantamount to stopping their works,” and yet their business employs little more than 6% of boys under 18, and

gen, die in der Tagesreihe, müssen wechselweise auch in der Nachtreihe arbeiten, weil die Männer nicht unaufhörlich Nachtarbeit verrichten können; es würde ihre Gesundheit ruinieren. Wir glauben jedoch, daß Nachtarbeit, wenn die Woche dafür wechselt, keinen Schaden tut.“

276:3–5 (Die Herren Naylor und Vickers glaubten, übereinstimmend mit dem Besten ihres Geschäfts, umgekehrt, daß statt der fortwährenden grade die periodisch wechselnde Nachtarbeit möglicherweise Schaden anrichtet.)

„Wir finden die Leute, die die alternierende Nachtarbeit verrichten, grade so gesund als die, die nur am Tage arbeiten ... Unsre Einwürfe gegen die Nichtanwendung von Jungen unter 18 Jahren zur Nachtarbeit würden gemacht werden von wegen Vermehrung der Auslage, aber dies ist auch der einzige Grund.“ (Wie zynisch naïv!) „Wir glauben, daß diese Vermehrung größer wäre, als das Geschäft (the trade) mit schuldiger Rücksicht auf seine erfolgreiche Ausführung billigerweise tragen könnte. (As the trade with due regard to etc. could fairly bear!)“ (Welche breimäulige Phraseologie!) „Arbeit ist hier rar und könnte unzureichend werden unter einer solchen Regulation.“

(d.h., Ellis, Brown et Co. könnten in die fatale Verlegenheit kommen, den Wert der Arbeitskraft voll zahlen zu müssen).¹⁰⁰

¹⁰⁰ l.c. 80, p. XVI, XVII.

276:6/o Die „Cyklops Stahl- und Eisenwerke“ der Herren Cammell et Co. werden auf derselben großen Stufenleiter ausgeführt wie die des besagten John Brown et Co. Der geschäftsführende Direktor hatte dem Regierungskommissär White seine Zeugenaussage schriftlich eingehändigt, fand es aber später passend, das zur Revision ihm wieder zurückgestellte Manuskript zu unterschlagen. Jedoch Herr White hat ein nachhaltiges Gedächtnis. Er erinnert sich ganz genau, daß für diese Herrn Zyklopen das Verbot der Nachtarbeit von Kindern und jungen Personen „ein Ding der Unmöglichkeit; es wäre dasselbe, als setzte man ihre Werke still“, und dennoch zählt ihr Geschäft

less than 1% under 13.¹⁰¹

¹⁰¹ l.c., 82. p. xvii.

268:2–269:1 On the same subject Mr. E. F. Sanderson, of the firm of Sanderson, Bros., & Co., steel rolling-mills and forges, Attercliffe, says:

“Great difficulty would be caused by preventing boys under 18 from working at night. The chief would be the increase of cost from employing men instead of boys. I cannot say what this would be, but probably it would not be enough to enable the manufacturers to raise the price of steel, and consequently it would fall on them, as of course the men (what queer-headed folk!) would refuse to pay it.”

Mr. Sanderson does not know how much he pays the children, but

“perhaps the younger boys get from 4s. to 5s. a week . . . The boys’ work is of a kind for which the strength of the boys is generally (‘generally,’ of course not always) quite sufficient, and consequently there would be no gain in the greater strength of the men to counterbalance the loss, or it would be only in the few cases in which the metal is heavy. The men would not like so well not to have boys under them, as men would be less obedient. Besides, boys must begin young to learn the trade. Leaving day-work alone open to boys would not answer this purpose.”

And why not? Why could not boys learn their handicraft in the day-time? Your reason?

“Owing to the men working-days and nights in alternate weeks, the men would be separated half the time from their boys, and would lose half the profit which they make from them. The training which they give to an apprentice is considered as part of the return for the boys’ labor, and thus enables the man to get it at a cheaper rate. Each man would want half of this profit.”

wenig mehr als 6% Jungen unter 18 und nur 1% unter 13 Jahren!¹⁰¹

¹⁰¹ l.c. 82, p. XVII.

277:1–278:1 Über denselben Gegenstand erklärt Herr E. F. Sanderson, von der Firma Sanderson, Bros. et Co., Stahl-, Walz- und Schmiedewerke, in Attercliffe:

„Große Schwierigkeiten würden entspringen aus dem Verbot, Jungen unter 18 Jahren des Nachts arbeiten zu lassen, die Hauptschwierigkeit aus der Vermehrung der Kosten, welche ein Ersatz der Knabenarbeit durch Männerarbeit notwendig nach sich zöge. Wieviel das betragen würde, kann ich nicht sagen, aber wahrscheinlich wäre es nicht so viel, daß der Fabrikant den Stahlpreis erhöhen könnte, und folglich fiel der Verlust auf ihn, da die Männer“ (welch querköpfig Volk!) „[sich] natürlich weigern würden, ihn zu tragen.“

Herr Sanderson weiß nicht, wieviel er den Kindern zahlt, aber

„vielleicht beträgt es 4 bis 5 sh. per Kopf die Woche . . . Die Knabenarbeit ist von einer Art, wofür im allgemeinen“ („generally“, natürlich nicht immer „im Besondern“) „die Kraft der Jungen grade ausreicht, und folglich würde kein Gewinn aus der größten Kraft der Männer fließen, um den Verlust zu kompensieren, oder doch nur in den wenigen Fällen, wo das Metall sehr schwer ist. Die Männer würden es auch minder lieben, keine Knaben unter sich zu haben, da Männer minder gehorsam sind. Außerdem müssen die Jungen jung anfangen, um das Geschäft zu lernen. Die Beschränkung der Jungen auf bloße Tagarbeit würde diesen Zweck nicht erfüllen.“

Und warum nicht? Warum können Jungen ihr Handwerk nicht bei Tag lernen? Deinen Grund?

„Weil dadurch die Männer, die in Wechselwochen bald den Tag, bald die Nacht arbeiten, von den Jungen ihrer Reihe während derselben Zeit getrennt, halb den Profit verlieren würden, den sie aus ihnen herausschlagen. Die Anleitung, die sie den Jungen geben, wird nämlich als Teil des Arbeitslohnes dieser Jungen berechnet und befähigt die Männer daher, die Jungenarbeit wohlfeiler zu bekommen. Jeder Mann würde seinen halben Profit verlieren.“

10. The Working-Day

In other words, Messrs. Sanderson would have to pay part of the wages of the adult men out of their own pockets instead of by the night-work of the boys. Messrs. Sanderson's profit would thus fall to some extent, and this is the good Sandersonian reason why boys cannot learn their handicraft in the day.¹⁰² In addition to this, it would throw night-labor on those who worked instead of the boys, which they would not be able to stand. The difficulties in fact would be so great that they would very likely lead to the giving up of night-work altogether, and "as far as the work itself is concerned," says E. F. Sanderson, "this would suit as well, but—" "But Messrs. Sanderson have something else to make besides steel. Steel-making is simply a pretext for surplus-value making. The smelting furnaces, rolling-mills, etc., the buildings, machinery, iron, coal, etc., have something more to do than transform themselves into steel. They are there to absorb surplus-labor, and naturally absorb more in 24 hours than in 12. In fact they give, by grace of God and law, the Sandersons a cheque on the working time of a certain number of hands for all the 24 hours of the day, and they lose their character as capital, are therefore a pure loss for the Sandersons, as soon as their function of absorbing labor is interrupted.

In andren Worten, die Herren Sanderson müßten einen Teil des Arbeitslohnes der erwachsenen Männer aus eigener Tasche statt mit der Nachtarbeit der Jungen zahlen. Der Profit der Herren Sanderson würde bei dieser Gelegenheit etwas fallen, und dies ist der Sandersonsche gute Grund, warum Jungen ihr Handwerk nicht bei Tag lernen können.¹⁰² Außerdem würde dies reguläre Nachtarbeit auf die Männer werfen, die nun von den Jungen abgelöst werden, und sie würden das nicht aushalten. Kurz und gut, die Schwierigkeiten wären so groß, daß sie wahrscheinlich zur gänzlichen Unterdrückung der Nachtarbeit führen würden. „Was die Produktion von Stahl selbst angeht“, sagt E. F. Sanderson, „würde es nicht den geringsten Unterschied machen, aber!“ Aber die Herren Sanderson haben mehr zu tun, als Stahl zu machen. Die Stahlmacherei ist bloßer Vorwand der Plusmacherei. Die Schmelzöfen, Walzwerke usw., die Baulichkeiten, die Maschinerie, das Eisen, die Kohle usw. haben mehr zu tun, als sich in Stahl zu verwandeln. Sie sind da, um Mehrarbeit einzusaugen, und saugen natürlich mehr in 24 Stunden als in 12. Sie geben in der Tat von Gottes und Rechts wegen den Sandersons eine Anweisung auf die Arbeitszeit einer gewissen Anzahl von Händen für volle 24 Stunden des Tags und verlieren ihren Kapitalcharakter, sind daher für die Sandersons reiner Verlust, sobald ihre Funktion der Arbeitseinsaugung unterbrochen wird.

“But then there would be the loss from so much expensive machinery, lying idle half the time, and to get through the amount of work which we are able to do on the present system, we should have to double our premises and plant, which would double the outlay.”

„Aber dann wäre da der Verlust an so viel kostspieliger Maschinerie, welche die halbe Zeit brachläge, und für eine solche Produktenmasse, wie wir fähig sind, sie bei dem gegenwärtigen System zu leisten, müßten wir Räumlichkeiten und Maschinenwerke verdoppeln, was die Auslage verdoppeln würde.“

↓ Footnote brings interesting Hegel quote about good reasons:

¹⁰² “In our reflecting and reasoning age a man is not worth much who cannot give a good reason for everything, no matter how bad or how crazy. Everything in the world that has been done wrong has been done wrong for the very best of reasons.” (Hegel, I.c., p. 249)

¹⁰² „In unsrer reflexionsreichen und räsionierenden Zeit muß es einer noch nicht weit gebracht haben, der nicht für alles, auch das Schlechteste und Verkehrteste, einen guten Grund anzugeben weiß. Alles, was in der Welt verdorben worden ist, das ist aus guten Gründen ver-

269:2 But why should these Sandersons pretend to a privilege not enjoyed by the other capitalists who only work during the day, and whose buildings, machinery, raw material, therefore lie "idle" during the night? E. F. Sanderson answers in the name of all the Sandersons:

"It is true that there is this loss from machinery lying idle in those manufactories in which work only goes on by day. But the use of furnaces would involve a further loss in our case. If they were kept up there would be a waste of fuel (instead of, as now, a waste of the living substance of the workers), and if they were not, there would be loss of time in laying the fires and getting the heat up (whilst the loss of sleeping time, even to children of 8 is a gain of working time for the Sanderson tribe), and the furnaces themselves would suffer from the changes of temperature" (whilst those same furnaces suffer nothing from the day and night change of labor).¹⁰³

¹⁰³ I.c., 85, p. xvii. To similar tender scruples of the glass manufacturers that regular meal-times for the children are impossible because as a consequence a certain quantity of heat, radiated by the furnaces, would be "a pure loss" or "wasted," Commissioner White makes answer. His answer is unlike that of Ure, Senior, etc., and their puny German plagiarists à la Roscher who are touched by the "abstinence," "self-denial," "saving," of the capitalists in the expenditure of their gold, and by their Timur-Tamerlanish prodigality of human life! "A certain amount of heat beyond what is usual at present might also be going to waste, if meal-times were secured in these cases, but it seems likely not equal in money-value to the waste of animal power now going on in glass-houses throughout the kingdom from growing boys not having enough quiet time to eat their meals at ease, with a little rest afterwards for digestion." (I.c., p. xiv.) And this in the year of progress 1865! Without considering the expenditure of strength in lifting and carrying, such a child, in the sheds where bottle and flint glass are made, walks during the performance of his work

dorben worden." (Hegel, I.c. p. 249.)

278:2–3 Aber warum beanspruchen gerade diese Sandersons ein Privilegium vor den andren Kapitalisten, die nur bei Tag arbeiten lassen dürfen und deren Baulichkeiten, Maschinerie, Rohmaterial daher bei Nacht „brach“ liegen?

„Es ist wahr“, antwortet E. F. Sanderson im Namen aller Sandersons, „es ist wahr, daß dieser Verlust von brachliegender Maschinerie alle Manufakturen trifft, worin nur bei Tag gearbeitet wird. Aber der Gebrauch der Schmelzöfen würde in unsrem Fall einen Extraverlust verursachen. Hält man sie im Gang, so wird Brennmaterial verwüstet“ (statt daß jetzt das Lebensmaterial der Arbeiter verwüstet wird), „und hält man sie nicht im Gang, so setzt das Zeitverlust im Wiederanlegen des Feuers und zur Gewinnung des nötigen Hitzegrads“ (während der Verlust, selbst Achtjähriger, an Schlafzeit Gewinn von Arbeitszeit für die Sandersonsippe), „und die Öfen selbst würden vom Temperaturwechsel leiden“ (während doch dieselbigen Öfen nichts leiden vom Tag- und Nachtwechsel der Arbeit).¹⁰³

¹⁰³ „Children's Employment Commission. Fourth Report“, 1865, 85, p. XVII. Auf ähnliches zartes Bedenken des Herrn Glasfabrikanten, daß „regelmäßige Mahlzeiten“ der Kinder unmöglich sind, weil dadurch ein bestimmtes Quantum Hitze, das die Öfen ausstrahlen, „reiner Verlust“ wäre oder „verwüstet“ würde, antwortet Untersuchungskommissär White, durchaus nicht gleich Ure, Senior etc. und ihren schmalen deutschen Nachkläffern, wie Roscher etc., gerührt von der „Enthaltbarkeit“, „Entsagung“ und „Sparsamkeit“ der Kapitalisten in Verausgabung ihres Geldes und ihrer Timur-Tamerlanschen „Verschwendung“ von Menschenleben: „Ein gewisses Quantum Hitze mag über das jetzige Maß hinaus verwüstet werden infolge von Sicherung regulärer Mahlzeiten, aber selbst in Geldwert ist es nichts, verglichen mit der Verwüstung von Lebenskraft (the waste of animal power), die jetzt dem Königreich daraus erwächst, daß in den Glashütten beschäftigte und im Wachstum begriffene Kinder nicht einmal die Muße finden, ihre Speisen bequem einzunehmen und zu verdauen.“ (I.c. p. XLV.) Und das im „Fortschritts-

10. The Working-Day

15–20 miles in every 6 hours! And the work of ten lasts 14 or 15 hours! In many of these glass works, as in the Moscow spinning mills, the system of 6 hours' relays is in force. "During the working part of the week six hours is the utmost unbroken period ever attained at any one time for rest, and out of this has to come the time spent in coming and going to and from work, washing, dressing, and meals, leaving a very short period indeed for rest, and none for fresh air and play, unless at the expense of the sleep necessary for young boys, especially at such hot and fatiguing work . . . Even the short sleep is obviously liable to be broken by a boy having to wake himself if it is night, or by the noise, if it is day." Mr. White gives cases where a boy worked 36 consecutive hours; others where boys of 12 drudged on until 2 in the morning, and then slept in the works till 5 a.m. (3 hours!) only to resume their work. "The amount of work," say Tremeneere and Tufnell, who drafted the general report, "done by boys, youths, girls, and women, in the course of their daily or nightly spell of labor, is certainly extraordinary." (l.c., xliii. and xlv.) Meanwhile, late by night, self-denying Mr. Glass-Capital, primed with port-wine, reels out of his club homeward droning out idiotically. "Britons never, never shall be slaves!"

jahr“ 1865! Abgesehn von der Kraftausgabe im Heben und Tragen, marschiert ein solches Kind in den Hütten, die Flaschen und Flintglas machen, während der kontinuierlichen Verrichtung seiner Arbeit, 15 bis 20 (englische) Meilen in 6 Stunden! Und die Arbeit dauert oft 14 bis 15 Stunden! In vielen dieser Glashütten herrscht, wie in den Spinnereien von Moskau, das System sechsstündiger Ablösungen. „Während der Arbeitszeit der Woche sind sechs Stunden die äußerste ununterbrochene Rastperiode, und davon geht ab die Zeit, zur und von der Fabrik zu gehn, Waschen, Kleiden, Speisen, was alles Zeit kostet. So bleibt in der Tat nur die kürzeste Ruhezeit. Keine Zeit für Spiel und frische Luft, außer auf Kosten des Schlafs, so unentbehrlich für Kinder, die in solch heißer Atmosphäre solch anstrengendes Werk verrichten . . . Selbst der kurze Schlaf ist dadurch unterbrochen, daß das Kind sich selbst wecken muß bei Nacht oder bei Tag vom Außenlärm geweckt wird. „Herr White gibt Fälle, wo ein Junge 36 Stunden nacheinander arbeitete; andre, wo Knaben von 12 Jahren bis 2 Uhr nachts schanzten und dann in der Hütte schlafen bis 5 Uhr morgens (3 Stunden!), um das Tagwerk von neuem zu beginnen! „Die Masse Arbeit“, sagen die Redakteure des allgemeinen Berichts, Tremeneere und Tufnell, „die Knaben, Mädchen und Weiber im Lauf ihres täglichen oder nächtlichen Arbeitsbanns (spell of labor) verrichten, ist fabelhaft.“ (l.c. p. XLIII und XLIV.) Unterdes wankt vielleicht eines Abends späte das „entsagungsvolle“ Glaskapital, portweinudlig, aus dem Klub nach Haus, idiotisch vor sich hersummend: „Britons never, never shall be slaves!“

This footnote addresses the waste of human labor against economy of constant capital (already mentioned in footnote 89 to paragraph 261:2–262:3).

Question 862 *Why is the economizing of constant capital so much more important for capital than the waste of human labor?*

10.5. The Struggle around the Normal Working-Day. Compulsory Laws for the Extension of the Working-Day from the Middle of the 14th to the End of the 17th Century

The remainder of chapter Ten, starting with section 10.5, discusses the struggle around the length of the normal working-day. When Marx wrote *Capital*, the working class had just

won an important victory in these struggles.

Originally, these struggles were initiated by the capitalists, not by the working class. The working class movement arose out of self-defense after centuries of sustained attacks by the capitalists. For 450 years, the English laborers had to put up with a steady prolongation of the working-day imposed on them by law.

10.5.a. [What is a working-day?]

Before discussing the struggles themselves, i.e. the historical *processes* through which the length of the working-day was fixed (243:1), Marx develops the mechanisms which determine this length, and their interconnection. (1) Marx starts with an entirely unregulated work day in which the capitalist extends the working hours until he runs into the worker's physiological bounds I. (2) In this process, capital also oversteps other bounds. Not only the "moral" bounds of the working-day, which used to be quite effective in the past, but also the physiological bounds II. (3) The disregard of the physiological bounds II implies that even capital's own long-run economic interest would be served by a shortening of the working-day. (4) However there is no competitive mechanism enforcing this. Why not? Because of rural overpopulation.

After this, as proof that these mechanisms are actually at work, Marx brings empirical evidence showing that at the time when the Factory Acts were passed, labor-power was indeed over-used to the point that it no longer possessed its normal strength.

270/o What is a working-day? What is the length of time during which capital may consume the labor-power whose daily value it has paid for? How far may the working-day be extended beyond the amount of labor-time necessary for the reproduction of labor-power itself?

279/oo „Was ist ein Arbeitstag?“ Wie groß ist die Zeit, während deren das Kapital die Arbeitskraft, deren Tageswert es zahlt, konsumieren darf? Wie weit kann der Arbeitstag verlängert werden über die zur Reproduktion der Arbeitskraft selbst notwendige Arbeitszeit?

↑ The importance of this question, as well as the economic indeterminacy of the length of the working-day, were already emphasized in 241:1–4. The formulation here makes clear that only the surplus part is variable.

↓ The capitalists's point of view:

It has been seen that to these questions capital replies: the working-day contains the full 24 hours, with only the few hours of repose subtracted without which labor-power absolutely refuses its service again.

Auf diese Fragen, man hat es gesehen, antwortet das Kapital: Der Arbeitstag zählt täglich volle 24 Stunden nach Abzug der wenigen Ruhestunden, ohne welche die Arbeitskraft ihren erneuerten Dienst absolut versagt.

↑ This is the maximum possible length in the absence of any regulation of the length of the working-day: the capitalist will simply use the labor-power until the worker is physically unable to continue to work. This was indeed the case in England during the Industrial Revolution. ↓ Marx criticizes this point of view in two ways:

(1) By insisting that everything the worker does must be related to work and not to any other purpose—which does not mean that he or she has to *work* 24 hours a day, the worker also has to recover from work and prepare for work, etc.—capital oversteps the *moral* bounds of the working-day. Marx continues to present the point of view of the capitalist, but now in a polemical, critical style:

10. The Working-Day

First of all it is self-evident that the laborer is for 24 hours a day nothing else than labor-power, that therefore all his disposable time is by nature and law labor-time, to be devoted to the self-expansion of capital. Time for education, for intellectual development, for the fulfilling of social functions and for social intercourse, for the free-play of his bodily and mental activity, even the rest time of Sunday (and that in a country of Sabbatarians!)¹⁰⁴ are nothing more than dispensable embellishments.

Es versteht sich zunächst von selbst, daß der Arbeiter seinen ganzen Lebenstag durch nichts ist außer Arbeitskraft, daß daher alle seine disponible Zeit von Natur und Rechts wegen Arbeitszeit ist, also der Selbstverwertung des Kapitals angehört. Zeit zu menschlicher Bildung, zu geistiger Entwicklung, zur Erfüllung sozialer Funktionen, zu geselligem Verkehr, zum freien Spiel der physischen und geistigen Lebenskräfte, selbst die Feierzeit des Sonntags—und wäre es im Lande der Sabbatheiligen¹⁰⁴—reiner Firlefanz!

Question 863 *Is it true today that the laborer is for 24 hours a day nothing else than labor-power?* 2012fa, 2009fa, 2007fa, 2007SP, 2004fa, 2003fa.

Footnote 104 illustrates the contradictory and hypocritical character of religious boundaries.

¹⁰⁴ In England even now occasionally in rural districts a laborer is condemned to imprisonment for desecrating the Sabbath, by working in his front garden. The same laborer is punished for breach of contract if he remains away from his metal, paper, or glass works on the Sunday, even if it be from a religious whim. The orthodox Parliament will hear nothing of Sabbath-breaking if it occurs in the process of expanding capital. A memorial (August 1863), in which the London day-laborers in fish and poultry shops asked for the abolition of Sunday labor, states that their work lasts for the first 6 days of the week on an average 15 hours a-day, and on Sunday 8–10 hours. From this same memorial we learn also that the delicate gourmands among the aristocratic hypocrits of Exeter Hall especially encourage this “Sunday labor.” These “holy ones,” so zealous “in attending to their bodily pleasures” show their Christianity by the humility with which they bear the overwork, the privations, and the hunger of others. Here, “gluttony is more pernicious to the stomach of others (the laborers).”

¹⁰⁴ In England z.B. wird immer noch hier und da auf dem Lande ein Arbeiter zu Gefängnisstrafe verurteilt wegen Entheiligung des Sabbats durch Arbeit auf dem Gärtchen vor seinem Hause. Derselbe Arbeiter wird wegen Kontraktbruches bestraft, bleibt er des Sonntags, sei es selbst aus religiösen Mucken, vom Metall-, Papier oder Glaswerk weg. Das orthodoxe Parlament hat kein Ohr für Sabbatentheiligung, wenn sie im „Verwertungsprozeß“ des Kapitals vorgeht. In einer Denkschrift (August 1863), worin die Londoner Tagelöhner in Fisch und Geflügelläden Abschaffung der Sonntagsarbeit verlangen, heißt es, ihre Arbeit daure während der ersten 6 Wochentage durchschnittlich 15 Stunden täglich und am Sonntag 8 bis 10 Stunden. Man entnimmt zugleich aus dieser Denkschrift, daß namentlich die kitzlige Gourmandise der aristokratischen Mucker von Exeter Hall diese „Sonntagsarbeit“ ermutigt. Diese „Heiligen“, so eifrig „in cute curanda“, bewähren ihr Christentum durch die Ergebung, womit sie die Überarbeit, die Entbehnungen und den Hunger dritter Personen ertragen. Obsequium ventris istis (den Arbeitern) perniciosus est.

Question 864 *Are religious boundaries which prohibit Sunday work good or bad for the workers?*

↓ (2) Capital also oversteps the *physiological* bounds II of the working-day.

But in its blind unrestrainable compulsion, its were-wolf hunger for surplus-labor, cap-

Aber in seinem maßlos blinden Trieb, seinem Werwolfs-Heißhunger nach Mehrar-

10.5. Compulsory Laws for Extension of Working-Day

ital oversteps not only the moral, but even the merely physical maximum bounds of the working-day. It usurps the time for growth, development, and healthy maintenance of the body. It steals the time required for the consumption of fresh air and sunlight. It higgles over a meal-time, incorporating it where possible with the process of production itself, so that food is given to the laborer as to a mere means of production, as coal is supplied to the boiler, grease and oil to the machinery. It reduces the sound sleep needed for the restoration, reparation, refreshment of the bodily powers to just so many hours of torpor as the revival of an organism, absolutely exhausted, renders essential.

beit, überrennt das Kapital nicht nur die moralischen, sondern auch die rein physischen Maximalschranken des Arbeitstags. Es usurpiert die Zeit für Wachstum, Entwicklung und gesunde Erhaltung des Körpers. Es raubt die Zeit, erheischt zum Verzehr von freier Luft und Sonnenlicht. Es knickert ab an der Mahlzeit und einverleibt sie womöglich dem Produktionsprozeß selbst, so daß dem Arbeiter als bloßem Produktionsmittel Speisen zugesetzt werden wie dem Dampfkessel Kohle und der Maschinerie Talg oder Öl. Den gesunden Schlaf zur Sammlung, Erneuerung und Erfrischung der Lebenskraft reduziert es auf so viel Stunden Erstarrung, als die Wiederbelebung eines absolut erschöpften Organismus unentbehrlich macht.

↓ The capitalist point of view about the length of the working day, against which Marx is polemicizing here, is itself defined by some kind of physiological boundary. This is why this commentary distinguishes between physiological boundary I and physiological boundary II. The difference between the two, according to Marx, is a reversal between what bounds and what is bounded:

It is not the normal maintenance of the labor-power which determines here the limits of the working-day; it is the greatest possible daily expenditure of labor-power, no matter how diseased, compulsory, and painful it may be, which determines the limits of the laborers' period of repose.

Statt daß die normale Erhaltung der Arbeitskraft hier die Schranke des Arbeitstags, bestimmt umgekehrt die größte täglich mögliche Verausgabung der Arbeitskraft, wie krankhaft gewaltsam und peinlich auch immer, die Schranke für die Rastzeit des Arbeiters.

↑ This gives an interesting characterization of the difference between physiological boundaries I and II: that which bounds and that which is bounded is reversed. Instead of being allowed to rest until their body is fully recovered (boundary II), the workers must work until they are no longer able to work, after which they are just given enough rest time until their ability to work returns (boundary I). The capitalist finds out how long he can use the labor-power every day before it absolutely refuses its service because of the exhaustion of the laborer; and only the rest of the day, which is no longer of use for the capitalist, is left to the worker to sleep, etc. This sleep may then be enough to enable the worker to work again long hours before he is exhausted on the next day, but it is not enough to regain full health and strength. ↓ The point of view of the capitalist, if unopposed, leads therefore to action that is destructive of the worker himself:

Capital cares nothing for the length of life of labor-power. All that concerns it is simply and solely the maximum of labor-power, that can be rendered fluent in one working-day. It attains this end by decreasing the length of the laborer's life, as a greedy

Das Kapital fragt nicht nach der Lebensdauer der Arbeitskraft. Was es interessiert, ist einzig und allein das Maximum von Arbeitskraft, das in einem Arbeitstag flüssig gemacht werden kann. Es erreicht dies Ziel durch Verkürzung der Dauer der Arbeits-

10. The Working-Day

farmer snatches increased produce from the soil by robbing it of its fertility.

kraft, wie ein habgieriger Landwirt gesteigerten Bodenertrag durch Beraubung der Bodenfruchtbarkeit erreicht.

↓ The analogy with the greedy farmer raises the question: won't this overextension of the working-day, the destruction of the labor-power which sustains capital, eventually contradict capital's own interests?

271:1 Capitalist production, which is essentially the production of surplus-value, the absorption of surplus-labor, produces thus, with the extension of the working-day, not only the stunting of human labor-power by robbing it of its normal moral and physical conditions of development and function. It produces also the premature exhaustion and destruction of this labor-power itself.¹⁰⁵ It extends the laborer's time of production during a given period by shortening his overall life-time.

281:1 Die kapitalistische Produktion, die wesentlich Produktion von Mehrwert, Einsaugung von Mehrarbeit ist, produziert also mit der Verlängerung des Arbeitstags nicht nur die Verkümmern der menschlichen Arbeitskraft, welche ihrer normalen moralischen und physischen Entwicklungs- und Betätigungsbedingungen beraubt wird. Sie produziert die vorzeitige Erschöpfung und Abtötung der Arbeitskraft selbst.¹⁰⁵ Sie verlängert die Produktionszeit des Arbeiters während eines gegebenen Terms durch Verkürzung seiner Lebenszeit.

Note the choice of words: Capitalism produces not only the stunting of the "human labor-power" (which is not allowed to develop itself morally, etc., as a human), but also the exhaustion and destruction of the "labor-power *itself*" (not only of its human characteristics but of its mere physiological existence).

¹⁰⁵ "We have given in our previous reports the statements of several experienced manufacturers to the effect that over-hours ... certainly tend prematurely to exhaust the working power of the men." (l.c., 64. p. xiii.)

¹⁰⁵ „In unseren früheren Berichten haben wir die Feststellungen verschiedner erfahrener Fabrikanten wiedergegeben, die besagen, daß Überstunden ... sicher die Gefahr in sich bergen, die Arbeitskraft des Menschen vorzeitig zu erschöpfen.“ (l.c. 64, p. XIII.)

Next, Marx brings a second argument, which has nothing to do with the concern for the worker, but is solely based on the self-interest of capital: it is against the interest of capital to ignore the physiological boundaries II:

272:1 But the value of the labor-power includes the value of the commodities necessary for the reproduction of the worker, or for the keeping up of the working-class. If then the unnatural extension of the working-day, that capital necessarily strives after in its unmeasured passion for self-expansion, shortens the length of life of the individual laborer, and therefore the duration of his labor-power, the forces used up have to be replaced at a more rapid rate and the sum of the expenses for the reproduction of labor-power will be greater; just as in a machine the part of its value to be reproduced every day is greater the more rapidly the machine is worn out.

281:2 Der Wert der Arbeitskraft schließt aber den Wert der Waren ein, welche zur Reproduktion des Arbeiters oder zur Fortpflanzung der Arbeiterklasse erheischt sind. Wenn also die naturwidrige Verlängerung des Arbeitstags, die das Kapital in seinem maßlosen Trieb nach Selbstverwertung notwendig anstrebt, die Lebensperiode der einzelnen Arbeiter und damit die Dauer ihrer Arbeitskraft verkürzt, wird rascherer Ersatz der verschlissenen nötig, also das Eingehen größerer Verschleißkosten in die Reproduktion der Arbeitskraft, ganz wie der täglich zu reproduzierende Wertteil einer Maschine um so größer ist, je rascher sie verschleißt.

10.5. Compulsory Laws for Extension of Working-Day

The comparison with a machine is not sufficient to make the point which comes next, since the capitalist does not lose as long as the higher wages are proportional to the higher amount of labor received. In *Value, Price and Profit*, [mecw20]141:1, Marx makes the further point:

“But this distinguishes the working man from the machine. Machinery does not wear out exactly in the same ratio in which it is used. Man, on the contrary, decays in a greater ratio than would be visible from the mere numerical addition of work.”

In *Capital*, Marx says something similar in chapter Seventeen, 527:2. It is because of this disproportionality that the overuse of labor-power decreases the rate of surplus-value.

It would seem therefore that the interest of capital itself points in the direction of a normal working-day.

Das Kapital scheint daher durch sein eignes Interesse auf einen Normalarbeitstag hingewiesen.

Question 865 Explain how an excessive lengthening of the work day decreases the rate of surplus-value. 2012fa, 2011fa, 2010fa, 2009fa, 2007SP, 2005fa, 2002fa.

Does this mean that capital will indeed shorten the work day? The answer is no, because the workers killed off prematurely are replaced from the rural overpopulation. In order to develop this part of the argument, Marx uses slavery as an example:

272:2–3 The slave-owner buys his laborer as he buys his horse. If he loses his slave, he loses capital that can only be restored by new outlay in the slave-market.

281:3–282:0 Der Sklavenhalter kauft seinen Arbeiter, wie er sein Pferd kauft. Mit dem Sklaven verliert er ein Kapital, das durch neue Auslage auf dem Sklavenmarkt ersetzt werden muß.

↑ Does this mean that the economic self-interest of the slave master protects the slave?
But

“the rice-grounds of Georgia, or the swamps of the Mississippi may be fatally injurious to the human constitution; but the waste of human life which the cultivation of these districts necessitates, is not so great that it cannot be repaired from the teeming preserves of Virginia and Kentucky.

Aber

„die Reisfelder von Georgien und die Sümpfe des Mississippi mögen fatalistisch zerstörend auf die menschliche Konstitution wirken; dennoch ist diese Verwüstung von menschlichem Leben nicht so groß, daß sie nicht gutgemacht werden könnte aus den strotzenden Gehegen von Virginien und Kentucky.

↓ Under these conditions, considerations of economy do not help the slave but, on the contrary, are murderous:

Considerations of economy, moreover, which, under a natural system, afford some security for humane treatment by identifying the master’s interest with the slave’s preservation, when once trading in slaves is practiced, become reasons for racking to the uttermost the toil of the slave; for, when his place can at once be supplied from foreign preserves, the duration of his life becomes a matter of less moment than its productiveness while it lasts. It is accordingly a maxim of slave management, in slave-importing countries, that the most effective economy is that which takes

Ökonomische Rücksichten, die eine Art Sicherheit für die menschliche Behandlung des Sklaven bieten könnten, sofern sie das Interesse des Herrn mit der Erhaltung des Sklaven identifizieren, verwandeln sich, nach Einführung des Sklavenhandels, umgekehrt in Gründe der extremsten Zugrunderichtung des Sklaven, denn sobald sein Platz einmal durch Zufuhr aus fremden Negergehegen ausgefüllt werden kann, wird die Dauer seines Lebens minder wichtig als dessen Produktivität, solange es dauert. Es ist daher eine Maxime der Sklavenwirtschaft in Ländern der Sklavenein-

10. The Working-Day

out of the human chattel in the shortest space of time the utmost amount of exertion it is capable of putting forth.

This quote also gives some empirical data:

It is in tropical culture, where annual profits often equal the whole capital of plantations, that negro life is most recklessly sacrificed. It is the agriculture of the West Indies, which has been for centuries prolific of fabulous wealth, that has engulfed millions of the African race. It is in Cuba, at this day, whose revenues are reckoned by millions, and whose planters are princes, that we see in the servile class, the coarsest fare, the most exhausting and unremitting toil, and even the absolute destruction of a portion of its numbers every year.”¹⁰⁶

¹⁰⁶ Cairnes, “The Slave Power,” pp. 110, 111.

↓ Very similar mechanisms are at work in capitalism:

272:4–273:1 Under a different name the story is being told about you. For slave-trade read labor-market, for Kentucky and Virginia, Ireland and the agricultural districts of England, Scotland, and Wales, for Africa, Germany. We heard how over-work thinned the ranks of the bakers in London. Nevertheless, the London labor-market is always over-stocked with German and other candidates for death in the bakeries. Pottery, as we saw, is one of the shortest-lived industries. Is there any want therefore of potters? Josiah Wedgwood, the inventor of modern pottery, himself originally a common workman, said in 1785 before the House of Commons that the whole trade employed from 15,000 to 20,000 people.¹⁰⁷ In the year 1861 the population alone of the town centres of this industry in Great Britain numbered 101,302.

“The cotton trade has existed for ninety years ... It has existed for three generations of the English race, and I believe I may safely say that during that period it has destroyed nine generations of factory operatives.”¹⁰⁸

¹⁰⁷ John Ward: “The Borough of Stoke-upon-Trent,” London, 1843, p. 42.

fuhr, daß die wirksamste Ökonomie darin besteht, die größtmöglichste Masse Leistung in möglichst kurzer Zeit dem Menschenvieh (human chattle) auszupressen.

Grade in tropischer Kultur, wo die jährlichen Profite oft dem Gesamtkapital der Pflanzungen gleich sind, wird das Negerleben am rücksichtslosesten geopfert. Es ist die Agrikultur Westindiens, seit Jahrhunderten die Wiege fabelhaften Reichtums, die Millionen der afrikanischen Race verschlungen hat. Es ist heutzutage in Kuba, dessen Revenuen nach Millionen zählen, und dessen Pflanze Fürsten sind, wo wir bei der Sklavenklasse außer der größten Nahrung, der erschöpfendsten und unablässigsten Plackerei einen großen Teil durch die langsame Tortur von Überarbeit und Mangel an Schlaf und Erholung jährlich direkt zerstört sehn.“¹⁰⁶

¹⁰⁶ Cairnes, l.c. p. 110, 111.

282:1 Mutato nomine de te fabula narratur! Lies statt Sklavenhandel Arbeitsmarkt, statt Kentucky und Virginien Irland und die Agrikulturdistrikte von England, Schottland und Wales, statt Afrika Deutschland! Wir hörten, wie die Überarbeit mit den Bäckern in London aufräumt, und dennoch ist der Londoner Arbeitsmarkt stets überfüllt mit deutschen und andren Todeskandidaten für die Bäckerei. Die Töpferei, wie wir sahen, ist einer der kurzlebigsten Industriezweige. Fehlt es deswegen an Töpfern? Josiah Wedgwood, der Erfinder der modernen Töpferei, von Haus selbst ein gewöhnlicher Arbeiter, erklärte 1785 vor dem Hause der Gemeinen, daß die ganze Manufaktur 15000 bis 20000 Personen beschäftigt.¹⁰⁷ Im Jahr 1861 betrug die Bevölkerung allein der städtischen Sitze dieser Industrie in Großbritannien 101302.

„Die Baumwollindustrie zählt 90 Jahre ... In drei Generationen der englischen Race hat sie neun Generationen von Baumwollarbeitern verspeist.“¹⁰⁸

¹⁰⁷ John Ward, „History of the Borough of Stoke-upon-Trent etc.“, London 1843, p. 42.

10.5. Compulsory Laws for Extension of Working-Day

¹⁰⁸ Ferrand's Speech in the House of Commons, 27th April, 1863.

¹⁰⁸ Ferrands Rede im „House of Commons“ vom 27. April 1863.

Question 866 *What is wrong with the argument that the economic self-interest of the capitalists themselves will see to it that they treat their workers well?* [2012fa](#), [2008fa](#), [2004fa](#), [2002fa](#).

273:2 No doubt in certain epochs of feverish activity the labor-market shows significant gaps. In 1834, *e.g.* But then the manufacturers proposed to the Poor Law Commissioners that they should send the “surplus-population” of the agricultural districts to the north, with the explanation “that the manufacturers would absorb and use it up.”¹⁰⁹

¹⁰⁹ Those were the very words used by the cotton manufacturers.” l.c.

273:3 “Agents were appointed with the consent of the Poor Law Commissioners ... An office was set up in Manchester, to which lists were sent of those workpeople in the agricultural districts wanting employment, and their names were registered in books. The manufacturers attended at these offices, and selected such persons as they chose; when they had selected such persons as their ‘wants required’, they gave instructions to have them forwarded to Manchester, and they were sent, ticketed like bales of goods, by canals, or with carriers, others tramping on the road, and many of them were found on the way lost and half-starved. This system had grown up unto a regular trade. This House will hardly believe it, but I tell them, that this traffic in human flesh was as well kept up, they were in effect as regularly sold to these [Manchester] manufacturers as slaves are sold to the cotton-grower in the United States ... In 1860, ‘the cotton trade was at its zenith.’ ... The manufacturers again found that they were short of hands ... They applied to the ‘flesh agents’, as they are called. Those agents sent to the southern downs of England, to the pastures of Dorsetshire, to the glades of Devonshire, to the people tending kine in Wiltshire, but they sought in vain. The surplus-population was ‘absorbed.’”

273:4–5 The *Bury Guardian* said, on the completion of the French treaty, that

282:3 Allerdings, in einzelnen Epochen fieberhaften Aufschwungs zeigte der Arbeitsmarkt bedenkliche Lücken. So z.B. 1834. Aber die Herren Fabrikanten schlugen nun den Poor Law Commissioners vor, die „Übervölkerung“ der Ackerbaudistrikte nach dem Norden zu schicken, mit der Erklärung, daß „die Fabrikanten sie absorbieren und konsumieren würden“. Dies waren ihre eigensten Worte.¹⁰⁹

¹⁰⁹ „That the manufacturers would absorb it and use it up. Those were the very words used by the cotton manufacturers.“ (l.c.)

283:1 „Agenten wurden zu Manchester bestellt mit Einwilligung der Poor Law Commissioners. Agrikulturarbeiterlisten wurden ausgefertigt und diesen Agenten übermacht. Die Fabrikanten liefen in die Büros, und nachdem sie, was ihnen paßte, ausgewählt, wurden die Familien vom Süden Englands verschickt. Diese Menschenpakete wurden geliefert mit Etiketten gleich so viel Güterballen, auf Kanal und Lastwagen—einige strolchten zu Fuß nach, und viele irrten verloren und halb verhungert in den Manufakturdistrikten umher. Dies entwickelte sich zu einem wahren Handelszweig. Das Haus der Gemeinen wird es kaum glauben. Dieser regelmäßige Handel, dieser Schacher in Menschenfleisch dauerte fort, und diese Leute wurden gekauft und verkauft von den Manchester Agenten an die Manchester Fabrikanten, ganz so regelmäßig wie Neger an die Baumwollpflanzer der südlichen Staaten ... Das Jahr 1860 bezeichnet das Zenit der Baumwollindustrie ... Es fehlte wieder an Händen. Die Fabrikanten wandten sich wieder an die Fleischagenten ... und diese durchstöberten die Dünen von Dorset, die Hügel von Devon und die Ebenen von Wilts, aber die Übervölkerung war bereits versepeist.“

283:2 Der „Bury Guardian“ jammerte, daß 10000 zusätzliche Hände nach Ab-

10. The Working-Day

“10,000 additional hands could be absorbed by Lancashire, and that 30,000 or 40,000 will be needed.” After the “flesh agents and sub-agents” had in vain sought through the agricultural districts,

“a deputation came up to London, and waited on the right hon. gentleman [Mr. Villiers, President of the Poor Law Board] with a view of obtaining poor children from certain union houses for the mills of Lancashire.”¹¹⁰

¹¹⁰ I.c. Mr. Villiers, despite the best of intentions on his part, was “legally” obliged to refuse the requests of the manufacturers. These gentlemen, however, attained their end through the obliging nature of the local poor law boards. Mr. A. Redgrave, Inspector of Factories, asserts that this time the system under which orphans and pauper children were treated “legally” as apprentices “was not accompanied with the old abuses” (on these “abuses” see Engels, l.c.), although in one case there certainly was “abuse of this system in respect to a number of girls and young women brought from the agricultural districts of Scotland into Lancashire and Cheshire.” Under this system the manufacturer entered into a contract with the workhouse authorities for a certain period. He fed, clothed and lodged the children, and gave them a small allowance of money. A remark of Mr. Redgrave to be quoted directly seems strange, especially if we consider that even among the years of prosperity of the English cotton trade, the year 1860 stands unparalleled, and that, besides, wages were exceptionally high. For this extraordinary demand for work had to contend with the depopulation of Ireland, with unexampled emigration from the English and Scotch agricultural districts to Australia and America, with an actual diminution of the population in some of the English agricultural districts, in consequence partly of an actual breakdown of the vital force of the laborers, partly of the already effected dispersion of the disposable population through the dealers in human flesh. Despite all this Mr. Redgrave says: “This kind of labor, however, would only be sought after when none other could be procured, for it is a high-priced labor. The ordinary wages of a boy of 13 would be about 4s. per week, but to lodge, to clothe, to feed, and to provide medical attendance and

schluß des englisch-französischen Handelsvertrags absorbiert werden könnten und bald an 30000 oder 40000 mehr nötig sein würden. Nachdem die Agenten und Subagenten des Fleischhandels die Agrikulturdistrikte 1860 ziemlich resultatlos durchgefegt,

„wandte sich eine Fabrikantendeputation an Herrn Villiers, Präsidenten des Poor Law Board, mit dem Gesuch, die Zufuhr der Armen- und Waisen Kinder aus den Workhouses wieder zu erlauben“¹¹⁰

¹¹⁰ I.c. Villiers, trotz bestem Willen, war „gesetzlich“ in der Lage, das Fabrikantenanliegen abschlagen zu müssen. Die Herren erreichten jedoch ihre Zwecke durch die Willfährigkeit der lokalen Armenverwaltungen. Herr A. Redgrave, Fabrikinspektor, versichert, daß diesmal das System, wonach die Waisen und Paupers Kinder „gesetzlich“ als apprentices (Lehrlinge) gelten, „nicht begleitet war von den alten Mißständen—(über diese „Mißstände“ vgl. Engels, l.c.)—, obgleich allerdings in einem Fall „Mißbrauch mit dem System getrieben worden ist, in bezug auf Mädchen und junge Weiber, die von den Agrikulturdistrikten Schottlands nach Lancashire und Cheshire gebracht wurden“. In diesem „System“ schließt der Fabrikant einen Kontrakt mit den Behörden der Armenhäuser für bestimmte Perioden. Er nährt, kleidet und logiert die Kinder und gibt ihnen einen kleinen Zuschuß in Geld. Sonderbar klingt folgende Bemerkung des Herrn Redgrave, namentlich wenn man bedenkt, daß selbst unter den Prosperitätsjahren der englischen Baumwollindustrie das Jahr 1860 einzig dasteht und die Arbeitslöhne außerdem hoch standen, weil die außerordentliche Arbeitsnachfrage auf Entvölkerung in Irland stieß, auf beispiellose Auswanderung aus englischen und schottischen Agrikulturdistrikten nach Australien und Amerika, auf positive Abnahme der Bevölkerung in einigen englischen Agrikulturdistrikten infolge teils glücklich erzielten Bruchs der Lebenskraft, teils des früheren Abschöpfens der disponiblen Bevölkerung durch die Händler in Menschenfleisch. Und trotz alledem sagt Herr Redgrave: „Diese Art Arbeit“ (der Armenhauskinder) „wird jedoch nur gesucht, wenn keine andre gefunden werden kann, denn es ist teure Arbeit (high-priced labor). Der gewöhnliche Arbeitslohn für einen Jungen von 13 Jahren ist un-

10.5. Compulsory Laws for Extension of Working-Day

proper superintendence for 50 or 100 of these boys, and to set aside some remuneration for them, could not be accomplished for 4s. a-head per week.” (Report of the Inspector of Factories for 30th April, 1860, p. 27.) Mr. Redgrave forgets to tell us how the laborer himself can do all this for his children out of their 4s. a-week wages, when the manufacturer cannot do it for the 50 or 100 children lodged, boarded, superintended all together. To guard against false conclusions from the text, I ought here to remark that the English cotton industry, since it was placed under the Factory Act of 1850 with its regulations of labor-time, etc., must be regarded as the model industry of England. The English cotton operative is in every respect better off than his Continental companion in misery. “The Prussian factory operative labors at least ten hours per week more than his English competitor, and if employed at his own loom in his own house, his labor is not restricted to even those additional hours. (“Rep. of Insp. of Fact.,” 31st October, 1855, p. 103.) Redgrave, the Factory Inspector mentioned above, after the Industrial Exhibition in 1851, travelled on the Continent, especially in France and Germany, for the purpose of inquiring into the conditions of the factories. Of the Prussian operative he says: “He receives a remuneration sufficient to procure the simple fare, and to supply the slender comforts to which he has been accustomed . . . He lives upon his coarse fare, and works hard, wherein his position is subordinate to that of the English operative.” (“Rep. of Insp. of Fact.” 31st Oct., 1855, p. 85.)

gefähr 4 sh. wöchentlich; aber 50 oder 100 solcher Jungen logieren, kleiden, nähren, mit ärztlicher Hilfsleistung und passender Oberaufsicht versehen und ihnen obendrein eine kleine Zubuße in Geld geben, ist untüchtig für 4 sh. per Kopf wöchentlich.“ („Rep. of the Insp. of Factories for 30th April 1860“, p. 27.) Herr Redgrave vergißt zu sagen, wie der Arbeiter selbst dies alles seinen Jungen für ihre 4 sh. Arbeitslohn leisten kann, wenn es der Fabrikant nicht kann für 50 oder 100 Jungen, die gemeinsam logiert, beköstigt und beaufsichtigt werden. Zur Abwehr falscher Schlußfolgerungen aus dem Text muß ich hier noch bemerken, daß die englische Baumwollindustrie, seit ihrer Unterwerfung unter den Factory Act von 1850 mit seiner Regelung der Arbeitszeit usw., als die englische Musterindustrie betrachtet werden muß. Der englische Baumwollarbeiter steht in jeder Hinsicht höher als sein kontinentaler Schicksalsgenosse. „Der preußische Fabrikarbeiter arbeitet mindestens 10 Stunden mehr per Woche als sein englischer Rival, und wenn er an seinem eignen Webstuhl zu Hause beschäftigt wird, fällt selbst diese Schranke seiner zusätzlichen Arbeitsstunden weg. („Rep. of Insp. of Fact. 31st Oct. 1855“, p. 103.) Der obenerwähnte Fabrikinspektor Redgrave reiste nach der Industrieausstellung von 1851 auf dem Kontinent, speziell in Frankreich und Preußen, um die dortigen Fabrikzustände zu untersuchen. Er sagt von dem preußischen Fabrikarbeiter: „Er erhält einen Lohn, ausreichend zur Verschaffung einfacher Kost und des wenigen Komforts, woran er gewöhnt und womit er zufrieden ist . . . Er lebt schlechter und arbeitet härter als sein englischer Rivale.“ („Rep. of Insp. of Fact. 31st Oct. 1855“, p. 85.)

Although a part of the population is killed off by overwork, the labor market is generally still full. Only “in certain epochs of feverish activity the labor-market shows significant gaps” 273:2. Where does this supply of labor come from?

- Immigration
- Rapid reproduction of the weak generations
- “Surplus-population” from the agricultural districts, trade in workers from the rural North to Manchester etc.
- Child labor (workhouses of orphans, 273:4–5).

The *general* reasons why there is always surplus-labor in capitalism are not discussed here, they will be developed in chapter Twenty-Five.

10. The Working-Day

Very important general conclusions about the workings of capitalism can be drawn from this. Marx first points out two empirical facts, and then says that because of the first of these two facts capital disregards the second. Here is the first fact:

274/oo What experience shows to the capitalist generally is a constant excess of population, i.e., an excess in relation to the momentary requirements of surplus-labor-absorbing capital, although this excess is made up of generations of human beings stunted, short-lived, swiftly replacing each other, plucked, so to say, before maturity.¹¹¹

¹¹¹ The over-worked “die off with strange rapidity; but the places of those who perish are instantly filled, and a frequent change of persons makes no alteration in the scene.” (“England and America,” London, 1833, vol. I, p. 55. By E. G. Wakefield.)

On the market there is a surplus-population in relation to the needs of capital to create surplus-value. It is again not discussed whether this surplus-population is an accident or why it is there. Now the second fact:

And, indeed, experience shows to the intelligent observer with what swiftness and grip the capitalist mode of production, dating, historically speaking, only from yesterday, has seized the vital power of the people by the very root—shows how the degeneration of the industrial population is only retarded by the constant absorption of primitive and physically uncorrupted elements from the country—shows how even the country laborers, in spite of fresh air and the principle of natural selection, that works so powerfully amongst them, and only permits the survival of the strongest, are already beginning to die off.¹¹²

¹¹² See “Public Health. Sixth Report of the Medical Officer of the Privy Council, 1863.” Published in London 1864. This report deals especially with the agricultural laborers. “Sutherland . . . is commonly represented as a highly improved county . . . but . . . recent inquiry has discovered that even there, in districts once famous for fine men and gallant soldiers, the inhabitants have degenerated into a meagre and stunted race. In the healthiest situations, on hill sides fronting the sea, the faces of their famished children are

284/oo Was die Erfahrung dem Kapitalisten im allgemeinen zeigt, ist eine beständige Übervölkerung, d.h. Übervölkerung im Verhältnis zum augenblicklichen Verwertungsbedürfnis des Kapitals, obgleich sie aus verkümmerten, schnell hinlebenden, sich rasch verdrängenden, sozusagen unreif gepflückten Menschengenerationen ihren Strom bildet.¹¹¹

¹¹¹ „Die Überarbeiteten sterben mit befremdlicher Raschheit; aber die Plätze derer, die untergehen, sind sofort wieder ausgefüllt, und ein häufiger Wechsel der Personen bringt keine Änderung auf der Bühne hervor.“ „England and America“, London 1833, t. I, p. 55. (Verfasser E. G. Wakefield.)

Allerdings zeigt die Erfahrung dem verständigen Beobachter auf der andren Seite, wie rasch und tief die kapitalistische Produktion, die, geschichtlich gesprochen, kaum von gestern datiert, die Volkskraft an der Lebenswurzel ergriffen hat, wie die Degeneration der industriellen Bevölkerung nur durch beständige Absorption naturwüchsiger Lebelemente vom Lande verlangsamt wird und wie selbst die ländlichen Arbeiter, trotz freier Luft und des unter ihnen so allmächtig waltenden principle of natural selection, das nur die kräftigsten Individuen aufkommen läßt, schon abzuleben beginnen.¹¹²

¹¹² Siehe Public Health. Sixth Report of the Medical Officer of the Privy Council. 1863. Veröffentlicht London 1864. Dieser Report handelt namentlich von den Agrikulturarbeitern. „Man hat die Grafschaft Sutherland als eine sehr verbesserte Grafschaft dargestellt, aber eine neuerliche Untersuchung hat entdeckt, daß hier in Distrikten, einst so berühmt wegen schöner Männer und tapfrer Soldaten, die Einwohner degeneriert sind zu einer magren und verkümmerten Race. In den gesunden Lagen, auf Hügelabhängen

10.5. Compulsory Laws for Extension of Working-Day

as pale as they could be in the foul atmosphere of a London alley.” (W. Th. Thornton. “Overpopulation and its Remedy.” l.c., pp. 74, 75.) They resemble in fact the 30,000 “gallant Highlanders” whom Glasgow herds together with prostitutes and thieves in its wynds and closes.

im Angesicht des Meeres, sind die Gesichter ihrer Kinder so dünn und blaß, wie sie nur in der faulen Atmosphäre einer Londoner Winkelgasse sein können.“ (Thornton, l.c. p. 74, 75.) Sie gleichen in der Tat den 30000 „gallant Highlanders“, die Glasgow in seinen wynds und closes mit Prostituierten und Dieben zusammenbettet.

Any “intelligent” (“verständige,” Hegel’s Verstand i.e., analytical reason, not Vernunft!) observer can see the degeneration of the industrial population. Capital, however, theoretically denies it:

Capital, that has such “good reasons” for denying the sufferings of the legions of workers that surround it, ...

Das Kapital, das so „gute Gründe“ hat, die Leiden der es umgebenden Arbeitergeneration zu leugnen, ...

Hegel says that any halfways intelligent person can come up with “good reasons” to excuse anything (citation in footnote 102 to paragraph 268:2–269:1 above). But the phrase “good reasons” also refers to capital’s profit motive. Capital is not moved by these sufferings because due to the surplus-labor they are not translated into higher wages and lower profits.

... is in practice moved as much and as little by the sight of the coming degradation and final depopulation of the human race, as by the probable fall of the earth into the sun.

... wird in seiner praktischen Bewegung durch die Aussicht auf zukünftige Verfaulung der Menschheit und schließlich doch unaufhaltsame Entvölkerung so wenig und so viel bestimmt als durch den möglichen Fall der Erde in die Sonne.

Question 867 *Why is nobody in his right mind determined in his actions by the eventual fall of the earth into the sun?* 2011fa, 2009fa.

In every stock-jobbing swindle everyone knows that some time or other the crash must come, but everyone hopes that it may fall on the head of his neighbor, after he himself has caught the shower of gold and placed it in secure hands. *After me the deluge* is the watchword of every capitalist and of every capitalist nation.

In jeder Aktienschwindelei weiß jeder, daß das Unwetter einmal einschlagen muß, aber jeder hofft, daß es das Haupt seines Nächsten trifft, nachdem er selbst den Goldregen aufgefangen und in Sicherheit gebracht hat. *Après moi le déluge!* ist der Wahlruf jedes Kapitalisten und jeder Kapitalistennation.

Capital’s only standard is profitability. This is why it must be forced *by law* to heed the bounds of the working-day:

Capital therefore takes no account of the health and the length of life of the worker, unless society forces it to do so.¹¹³

Das Kapital ist daher rücksichtslos gegen Gesundheit und Lebensdauer des Arbeiters, wo es nicht durch die Gesellschaft zur Rücksicht gezwungen wird.¹¹³

Note that it is “society,” not “the working-class,” or “the state” which forces capital! Society, however, is an empty abstraction if one does not look at its two main classes. It is therefore not society acting in unison, but it is the struggle of the working class against the capitalists which imposes on the capitalist class the self-discipline needed for their long-term interests.

¹¹³ ‘But though the health of a population is so important a fact of the national capital, we are

¹¹³ „Obgleich die Gesundheit der Bevölkerung ein so wichtiges Element des nationalen Kapi-

10. The Working-Day

afraid it must be said that the class of employers of labor have not been the most forward to guard and cherish this treasure ... The consideration of the health of the operatives was forced upon the mill owners' (*The Times*, 5 November 1861). 'The men of the West Riding became the clothiers of mankind ... the health of the workpeople was sacrificed, and the race in a few generations must have degenerated. But a reaction set in. Lord Shaftesbury's Bill limited the hours of children's labor, etc.' (Twenty-Second Annual Report of the Registrar-General, for October 1861).

To the outcry about physical and mental degradation, the premature death, the torture of overwork, it answers: Ought these to trouble us since they increase our profits?

Note that the profits are increased although we got before the result that if the full value of the labor-power would have been paid, the rate of surplus-value would have fallen. Either economy of constant capital or payment below the value of labor-power (surplus-population) or both.

But looking at things as a whole, all this does not, indeed, depend on the good or ill will of the individual capitalist. Free competition enforces the inherent laws of capitalist production as external coercive necessities confronting the individual capitalist.¹¹⁴

Footnote 114 throws light on the workings of competition: it can go against the will of the capitalists, can force them to do things which they do not want to do.

¹¹⁴ We, therefore, find, e.g., that in the beginning of 1863, 26 firms owning extensive potteries in Staffordshire, including Josiah Wedgwood and Sons, petition in a memorial for "some legislative enactment." "Competition with other capitalists" permits them no "voluntary" limitation of working time for children, etc. "Much as we deplore the evils before mentioned, it would not be possible to prevent them by any scheme of agreement between the manufacturers ... Taking all these points into consideration, we have come to the conviction that some legislative enactment is wanted." ("Children's Employment Comm." Rep. I, 1863, p. 322.)

^{114 ctd} Most recently a much more striking example offers. The rise in the price of cotton during a period of feverish activity, had induced the manufacturers in Blackburn to shorten, by mu-

tals ist, fürchten wir, gestehn zu müssen, daß die Kapitalisten durchaus nicht bei der Hand sind, diesen Schatz zu erhalten und wert zu achten ... Die Rücksicht auf die Gesundheit der Arbeiter wurde den Fabrikanten aufgezwungen." („Times“, 5. Novbr. 1861.) „Die Männer des West Riding wurden die Tuchmacher der Menschheit ... die Gesundheit des Arbeitervolks wurde geopfert, und in ein paar Generationen wäre die Race degeneriert, aber eine Reaktion trat ein. Die Stunden der Kinderarbeit wurden beschränkt usw.“ („Twenty-second annual Report of the Registrar General“, 1861.)

Der Klage über physische und geistige Verkümmrung, vorzeitigen Tod, Tortur der Überarbeit, antwortet es: Sollte diese Qual uns quälen, da sie unsre Lust (den Profit) vermehrt?

Im großen und ganzen hängt dies aber auch nicht vom guten oder bösen Willen des einzelnen Kapitalisten ab. Die freie Konkurrenz macht die immanenten Gesetze der kapitalistischen Produktion dem einzelnen Kapitalisten gegenüber als äußerliches Zwangsgesetz geltend.¹¹⁴

¹¹⁴ Wir finden daher z.B., daß Anfang 1863 26 Firmen, welche ausgedehnte Töpfereien in Staffordshire besitzen, darunter auch J. Wedgwood und Söhne, in einer Dankschrift „um gewaltsame Einmischung des Staats“ petitionieren. Die „Konkurrenz mit andren Kapitalisten“ erlaube ihnen keine „freiwillige“ Beschränkung der Arbeitszeit der Kinder usw. „Sosehr wir daher die oben erwähnten Übel beklagen, würde es unmöglich sein, sie durch irgendeine Art Übereinkunft unter den Fabrikanten zu verhindern ... In Anbetracht aller dieser Punkte, sind wir zur Überzeugung gelangt, daß ein Zwangsgesetz nötig ist.“ („Children's Emp. Comm., Rep. I“, 1863, p. 322.)

^{114 ctd} Zusatz zu Note 114. Ein viel frappantes Beispiel bot die jüngste Vergangenheit. Die Höhe der Baumwollpreise, in einer Epoche fieberhaften Geschäfts, hatte die Besitzer

10.5. Compulsory Laws for Extension of Working-Day

tual consent, the working time in their mills during a certain fixed period. This period terminated about the end of November, 1871. Meanwhile, the wealthier manufacturers, who combined spinning with weaving, used the diminution of production resulting from this agreement, to extend their own business and thus to make great profits at the expense of the small employers. The latter thereupon turned in their extremity to the operatives, urged them earnestly to agitate for the 9 hours' system, and promised contributions in money to this end.

von Baumwollwebereien in Blackburn veranlaßt, durch gemeinschaftliche Übereinkunft die Arbeitszeit in ihren Fabriken während eines bestimmten Termins abzukürzen. Dieser Termin lief ab ungefähr Ende November (1871). Unterdes benutzten die reichen Fabrikanten, welche Spinnerei mit Weberei verbinden, den durch jene Übereinkunft veranlaßten Ausfall der Produktion dazu, ihr eignes Geschäft auszudehnen und so auf Kosten der kleinen Meister große Profite zu machen. Letztre wandten sich nun in ihrer Not—an die Fabrikarbeiter, riefen sie auf, die Neunstundenagitation ernsthaft zu betreiben, und versprachen Geldbeiträge zu diesem Behuf!

Question 870 *Why were some capitalists themselves in favor of shortening the work day?*
2012fa.

The remainder of section 5 and the remainder of chapter Ten are not yet ready for publication.

10.5.b. [Legislation Extending the working-day]

Two phases in the struggle between capitalist and laborer for the determination of the working-day: first extension, later shortening.

276:1/o The establishment of a normal working-day is the result of centuries of struggle between capitalist and laborer. The history of this struggle shows two opposite tendencies. Compare, e.g., the English factory legislation of our time with the English labor Statutes from the 14th century to well into the middle of the 18th.¹¹⁵ Whilst the modern Factory Acts compulsorily shortened the working-day, the earlier statutes tried to lengthen it by compulsion.

¹¹⁵ The labor Statutes, the like of which were enacted at the same time in France, the Netherlands, and elsewhere, were first formally repealed in England in 1813, long after the changes in relations of production had rendered them obsolete.

286:1/o Die Festsetzung eines normalen Arbeitstags ist das Resultat eines vielhundertjährigen Kampfes zwischen Kapitalist und Arbeiter. Doch zeigt die Geschichte dieses Kampfes zwei entgegengesetzte Strömungen. Man vergleiche z.B. die englische Fabrikgesetzgebung unsrer Zeit mit den englischen Arbeitsstatuten vom 14. bis tief in die Mitte des 18. Jahrhunderts.¹¹⁵ Während das moderne Fabrikgesetz den Arbeitstag gewaltsam abkürzt, suchen ihn jene Statute gewaltsam zu verlängern.

¹¹⁵ Diese Arbeiterstatute, die man gleichzeitig auch in Frankreich, den Niederlanden usw. findet, wurden in England erst 1813 formell aufgehoben, nachdem sie längst von den Produktionsverhältnissen beseitigt waren.

Instead of "relations of production" Moore-Aveling has "methods of production."

The early legal extension is modest compared to the extension during the Industrial Revolution based on market forces.

Of course the demands of capital in embryo—when, in the process of becoming, it secures
Allerdings erscheinen die Ansprüche des Kapitals im Embryozustand, wo es erst

10. The Working-Day

the right of absorbing a sufficient amount of surplus-labor not yet by the mere force of economic relations, but also by the help of the State—appear very modest when compared with the concessions that, growling and reluctantly, it has to make in its adult condition. It takes centuries before the “free” laborer, thanks to the development of capitalist production, agrees, *i.e.*, is compelled by social conditions, to sell the whole of his active life, his very capacity for work, for the price of the necessities of life, his birth-right for a mess of pottage.

The upper limit of the extension for adults roughly equal to the lower limit of shortening for children at the time *Capital* was written (this will once more be taken up in 282:1).

Hence it is natural that the lengthening of the working-day, which capital, from the middle of the 14th to the end of the 17th century, tries to impose by State-measures on adult laborers, approximately coincides with the shortening of the working-day which, in the second half of the 19th century, has here and there been effected by the State to prevent the coining of children’s blood into capital. That which to-day, *e.g.*, in the State of Massachusetts, until recently the freest State of the North-American Republic, has been proclaimed as the statutory limit of the labor of children under 12, was in England, even in the middle of the 17th century, the normal working-day of able-bodied artisans, robust laborers, and athletic blacksmiths.¹¹⁶

wird, also noch nicht durch bloße Gewalt der ökonomischen Verhältnisse, sondern auch durch Hilfe der Staatsmacht sein Einsaugungsrecht eines genügenden Quantum Mehrarbeit sichert, ganz und gar bescheiden, vergleicht man sie mit den Konzessionen, die es in seinem Mannesalter knurrend und widerstrebend machen muß. Es kostet Jahrhunderte, bis der „freie“ Arbeiter infolge entwickelter kapitalistischer Produktionsweise sich freiwillig dazu versteht, d.h. gesellschaftlich gezwungen ist, für den Preis seiner gewohnheitsmäßigen Lebensmittel seine ganze aktive Lebenszeit, ja seine Arbeitsfähigkeit selbst, seine Erstgeburt für ein Gericht Linsen zu verkaufen.

Es ist daher natürlich, daß die Verlängerung des Arbeitstags, die das Kapital von Mitte des 14. bis Ende des 17. Jahrhunderts staatsgewaltig den volljährigen Arbeitern aufzudringen sucht, ungefähr mit der Schranke der Arbeitszeit zusammenfällt, die in der zweiten Hälfte des 19. Jahrhunderts der Verwandlung von Kinderblut in Kapital hier und da von Staats wegen gezogen wird. Was heute, z.B. im Staate Massachusetts, bis jüngst dem freisten Staate der nordamerikanischen Republik, als Staatsschranke der Arbeit von Kindern unter 12 Jahren proklamiert ist, war in England noch Mitte des 17. Jahrhunderts der normale Arbeitstag vollblütiger Handwerker, robuster Ackerknechte und riesenhafter Grobschmiede.¹¹⁶

Question 871 Why did the state first pass laws to extend the working-day, and then to shorten it?

¹¹⁶ “No child under 12 years of age shall be employed in any manufacturing establishment more than 10 hours in one day.” General Statutes of Massachusetts, 63, ch. 12. (The various Statutes were passed between 1836 and 1858.) “Labor performed during a period of 10 hours on any day in all cotton, woollen, silk, paper, glass, and flax factories, or in manufactories of iron and brass, shall be considered a legal day’s labor.

¹¹⁶ „Kein Kind unter 12 Jahren darf in einem Fabrikbetrieb länger als 10 Stunden täglich beschäftigt werden.“ („General Statutes of Massachusetts“, ch. 60, §3. Die Ordonnanzen wurden erlassen 1836 bis 1858.) „Arbeit, die in einem Zeitraum von 10 Stunden täglich in allen Baumwoll-, Woll-, Seiden-, Papier-, Glas, und Flachsfabriken oder in eisen- und anderen metallverarbeitenden Betrieben ausgeführt wird,

10.5. Compulsory Laws for Extension of Working-Day

And be it enacted, that hereafter no minor engaged in any factory shall be holden or required to work more than 10 hours in any day, or 60 hours in any week; and that hereafter no minor shall be admitted as a worker under the age of 10 years in any factory within this State." State of New Jersey. An Act to limit the hours of labor, etc., § 1 and 2. (Law of 18th March, 1851.) "No minor who has attained the age of 12 years, and is under the age of 15 years, shall be employed in any manufacturing atabishment more than 11 hours in any one day, nor before 5 o'clock in the morning, nor after 7.30 in the evening." ("Revised Statutes of the State of Rhode Island," etc., ch. 139, § 23, 1st July, 1857.)

soll als Tagewerk im Sinne des Gesetzes angesehen werden. Es sei ferner gesetzlich festgelegt, daß künftig kein Minderjähriger, der in irgendeiner Fabrik beschäftigt wird, angehalten oder aufgefordert werden darf, mehr als 10 Stunden täglich oder 60 Stunden wöchentlich zu arbeiten; weiter, daß in Zukunft kein Minderjähriger unter 10 Jahren als Arbeiter in einer Fabrik innerhalb des Gebietes dieses Staates beschäftigt werden darf." („State of New Jersey. An act to limit the hours of labor etc.“, § 1 und 2. Gesetz vom 18. März 1851.) „Kein Minderjähriger zwischen 12 und 15 Jahren darf in irgendeinem Fabrikbetrieb mehr als täglich 11 Stunden oder vor 5 Uhr morgens oder nach 7 1/2 Uhr abends beschäftigt werden.“ („Revised Statutes of the State of Rhode Island etc.“, ch. 139, § 23, 1st July 1857.)

In the extension phase, capital was not yet strong enough to compel the laborer to work by anonymous market relations, but needed support by the power of the state.

277:1–278:1 The first "Statute of Laborers" (23 Edward III., 1349) found its immediate pretext (not its cause, for legislation of this kind lasts centuries after the pretext for it has disappeared) in the great plague that decimated the people, so that, as a Tory writer says, "The difficulty of getting men to work on reasonable terms, (*i.e.*, at a price that left their employers a reasonable quantity of surplus-labor) grew to such a height as to be quite intolerable."¹¹⁷ Reasonable wages were, therefore, fixed by law as well as the limits of the working-day. The latter point, the only one that here interests us, is repeated in the Statute of 1496 (Henry VII). The working-day for all artificers and field laborers from March to September ought, according to this statute (which, however, could not be enforced), to last from 5 in the morning to between 7 and 8 in the evening. But the meal-times consist of 1 hour for breakfast, 1 1/2 hours for dinner, and 1/2 an hour for "noon-meate," *i.e.*, exactly twice as much as under the factory acts now in force.¹¹⁸ In winter, work was to last from 5 in the morning until dark, with the same intervals. A statute of Elizabeth of 1562 leaves the length of the working-day for all laborers "hired for daily or weekly wage" untouched, but aims at limiting the inter-

287:1–289:0 Das erste „Statute of Laborers“ (23 Eduard III. 1349) fand seinen unmittelbaren Vorwand (nicht seine Ursache, denn die Gesetzgebung dieser Art dauert Jahrhunderte fort ohne den Vorwand) in der großen Pest, welche die Bevölkerung dezimierte, so daß, wie ein Tory-Schriftsteller sagt, „die Schwierigkeit, Arbeiter zu rasonablen Preisen“ (*d.h.* zu Preisen, die ihren Anwendern ein rasonables Quantum Mehrarbeit ließen) „an die Arbeit zu setzen, in der Tat unerträglich wurde“.¹¹⁷ Rasonable Arbeitslöhne wurden daher zwangsgesetzlich diktiert, ebenso wie die Grenze des Arbeitstags. Der letztre Punkt, der uns hier allein interessiert, ist wiederholt in dem Statut von 1496 (unter Henry VII.). Der Arbeitstag für alle Handwerker (*artificers*) und Ackerbauarbeiter vom März bis September sollte damals, was jedoch nie durchgesetzt wurde, dauern von 5 Uhr morgens bis zwischen 7 und 8 Uhr abends, aber die Stunden für Mahlzeiten betragen 1 Stunde für Frühstück, 1 1/2 Stunden für Mittagessen und 1/2 Stunde für Vieruhrbrot, also gerade doppelt soviel als nach dem jetzt gültigen Fabrikakt.¹¹⁸ Im Winter sollte gearbeitet werden von 5 Uhr morgens bis zum Dunkeln, mit denselben Unterbrechungen. Ein Statut der Elisabeth von 1562 für alle

10. The Working-Day

vals to 2 1/2 hours in the summer, or to 2 in the winter. Dinner is only to last 1 hour, and the "afternoon-sleep of half an hour" is only allowed between the middle of May and the middle of August. For every hour of absence 1d. is to be subtracted from the wage. In practice, however, the conditions were much more favourable to the laborers than in the statute-book. William Petty, the father of Political Economy, and to some extent the founder of Statistics, says in a work that he published in the last third of the 17th century:

"Laboring-men (then meaning field-laborers) work 10 hours per diem, and make 20 meals per week, viz., 3 a day for working-days, and 2 on Sundays; whereby it is plain, that if they could fast on Friday nights, and dine in one hour and an half, whereas they take two, from eleven to one; thereby thus working 1/20 more, and spending 1/20 less, the above-mentioned (tax) might be raised."¹¹⁷

¹¹⁷ "Sophisms of Free Trade." 7th Ed. London, 1850, p. 205, 9th Ed., p. 253. This same Tory, moreover, admits that "Acts of Parliament regulating wages, but against the laborer and in favour of the master, lasted for the long period of 464 years. Population grew. These laws were then found, and really became, unnecessary and burdensome." (l.c., p. 206.)

¹¹⁸ In reference to this statute, J. Wade with truth remarks: "From the statement above (i.e., with regard to the statute) it appears that in 1496 the diet was considered equivalent to one-third of the income of an artificer and one-half the income of a laborer, which indicates a greater degree of independence among the working-classes than prevails at present; for the board, both of laborers and artificers, would now be reckoned at a much higher proportion of their wages." [Wad35, p. 24, 25, and 577]. The opinion that this difference is due to the difference in the price relations between food and clothing then and now is refuted by the most cursory glance at "Chronicon

Arbeiter „gedungen für Lohn per Tag oder Woche“, läßt die Länge des Arbeitstags unberührt, sucht aber die Zwischenräume zu beschränken auf 2 1/2 Stunden für den Sommer und 2 für den Winter. Das Mittagessen soll nur eine Stunde dauern und „der Nachmittagsschlaf von 1/2 Stunde“ nur zwischen Mitte Mai und Mitte August erlaubt sein. Für jede Stunde Abwesenheit soll 1 d. (etwa 8 Pfennige) vom Lohn abgehn. In der Praxis jedoch war das Verhältnis den Arbeitern viel günstiger als im Statutenbuch. Der Vater der politischen Ökonomie und gewissermaßen der Erfinder der Statistik, William Petty, sagt in einer Schrift, die er im letzten Drittel des 17. Jahrhunderts veröffentlichte:

„Arbeiter“ (laboring men, eigentlich damals Ackerbauarbeiter) „arbeiten 10 Stunden täglich und nehmen wöchentlich 20 Mahlzeiten ein, nämlich an Arbeitstagen täglich drei und an Sonntagen zwei; woraus man klärlich sieht, daß, wenn sie an Freitagabenden fasten wollten und in anderthalb Stunden zu Mittag speisen wollten, während sie jetzt zu dieser Mahlzeit zwei Stunden brauchen, von 11 bis 1 Uhr morgens, wenn sie also 1/20 mehr arbeiteten und 1/20 weniger verzehrten, das Zehntel der oben erwähnten Steuer aufbringbar wäre.“¹¹⁹

¹¹⁷ [J. B. Byles,] „Sophisms of Free Trade“, 7th edit., Lond. 1850, p. 205. Derselbe Tory gibt übrigens zu: „Parlamentsakte, die die Arbeitslöhne gegen die Arbeiter zugunsten der Arbeitsanwender regulierten, währten für die lange Periode von 464 Jahren. Die Bevölkerung wuchs. Diese Gesetze wurden nun überflüssig und lästig.“ (l.c. p. 206.)

¹¹⁸ J. Wade bemerkt mit Recht in bezug auf dies Statut: „Aus dem Statut von 1496 geht hervor, daß die Nahrung als Äquivalent für 1/2 des Einkommens eines Handwerkers und 1/3 des Einkommens eines Agrikulturarbeiters galt, und dies zeigt eine größere Stufe von Unabhängigkeit unter den Arbeitern an, als jetzt vorherrscht, wo die Nahrung der Arbeiter in Agrikultur und Manufaktur ein viel höheres Verhältnis zu ihren Löhnen bildet.“ [Wad35, p. 24, 25 und 577] Die Meinung, als sei diese Differenz etwa der Differenz im Preisverhältnis zwischen Nahrungsmitteln und Kleidungsstücken, jetzt und damals, geschuldet, widerlegt der oberflächlichste Blick auf

10.5. Compulsory Laws for Extension of Working-Day

Preciosum, etc.” by Bishop Fleetwood, 1st Ed., London, 1707; 2nd Ed., London, 1745.

¹¹⁹ [Pet91, p. 10].

278:2–279:0 Was not Dr. Andrew Ure right in crying down the 12 hours’ bill of 1833 as a retrogression to the times of the dark ages? It is true these regulations contained in the statute mentioned by Petty, apply also to apprentices. But the condition of child-labor, even at the end of the 17th century, is seen from the following complaint:

“‘Tis not their practice (in Germany) as with us in this kingdom, to bind an apprentice for seven years; three or four is their common standard: and the reason is, because they are educated from their cradle to something of employment, which renders them the more apt and docile, and consequently the more capable of attaining to a ripeness and quicker proficiency in business. Whereas our youth, here in England, being bred to nothing before they come to be apprentices, make a very slow progress and require much longer time wherein to reach the perfection of accomplished artists.”¹²⁰

¹²⁰ “A Discourse on the necessity of encouraging Mechanick Industry,” London, 1690, p. 13. Macaulay, who has falsified English history in the interests of the Whigs and the bourgeoisie, declares as follows: “The practice of setting children prematurely to work . . . prevailed in the 17th century to an extent which, when compared with the extent of the manufacturing system, seems almost incredible. At Norwich, the chief seat of the clothing trade, a little creature of six years old was thought fit for labor. Several writers of that time, and among them some who were considered as eminently benevolent, mention with exultation the fact that in that single city, boys and girls of very tender age create wealth exceeding what was necessary for their own subsistence by twelve thousand pounds a year. The more carefully we examine the history of the past, the more reason shall we find to dissent from those who imagine that our age has been fruitful of new social evils. . . . That which is new is the intelligence and the humanity which remedies them.” (“History of England,” vol. 1., p. 417.) Macaulay

„Chronicon Preciosum etc.“ By Bishop Fleetwood, 1st edit., London 1707, 2nd edit., London 1745.

¹¹⁹ W. Petty, [Pet91, p. 10]

289:1 Hatte Dr. Andrew Ure nicht recht, die Zwölfstundenbill von 1833 als Rückgang in die Zeiten der Finsternis zu verschreien? Allerdings gelten die in den Statuten und von Petty erwähnten Bestimmungen auch für „apprentices“ (Lehrlinge). Wie es aber noch Ende des 17. Jahrhunderts mit der Kinderarbeit stand, ersieht man aus folgender Klage:

„Unsere Jugend, hier in England, treibt gar nichts bis zu der Zeit, wo sie Lehrlinge werden, und dann brauchen sie natürlich lange Zeit—sieben Jahre—, um sich zu vollkommenen Handwerkern zu bilden.“ Deutschland wird dagegen gerühmt, weil dort die Kinder von der Wiege auf wenigstens zu „ein bißchen Beschäftigung erzogen werden“.¹²⁰

¹²⁰ „A Discourse on the Necessity of Encouraging Mechanick Industry“, London 1690, p. 13. Macaulay, der die englische Geschichte im Whig- und Bourgeoisinteresse zurechtgefälscht hat, deklamiert, wie folgt: „Die Praxis, Kinder vorzeitig an die Arbeit zu setzen, herrschte im 17. Jahrhundert in einem für den damaligen Zustand der Industrie fast unglaublichen Grad vor. Zu Norwich, dem Hauptsitz der Wollindustrie, wurde ein Kind von 6 Jahren für arbeitsfähig gehalten. Verschiedne Schriftsteller jener Zeit und darunter manche, die als außerordentlich wohlgesinnt betrachtet wurden, erwähnen mit ‚Exultation‘ (Entzücken) die Tatsache, daß in dieser Stadt allein Knaben und Mädchen einen Reichtum schaffen, der über ihren eignen Unterhalt hinaus 12000 Pfd.St. in einem Jahr betrug. Je genauer wir die Geschichte der Vergangenheit untersuchen, desto mehr Grund finden wir, die Ansicht derer zu verwerfen, die unser Zeitalter für fruchtbar an neuen sozialen Übeln halten. Das, was neu ist, ist die Intelligenz, die die Übel entdeckt, und die Humanität, die sie

10. The Working-Day

might have reported further that “extremely well disposed” *amis du commerce* in the 17th century, narrate with “exultation” how in a poor-house in Holland a child of four was employed, and that this example of “*vertu mise en pratique*” passes muster in all the humanitarian works, à la Macaulay, to the time of Adam Smith. It is true that with the substitution of manufacture for handicrafts, traces of the exploitation of children begin to appear. This exploitation existed always to a certain extent among peasants, and was the more developed, the heavier the yoke pressing on the husbandman. The tendency of capital is there unmistakably; but the facts themselves are still as isolated as the phenomena of two-headed children. Hence they were noted “with exultation” as especially worthy of remark and as wonders by the far-seeing “*amis du commerce*,” and recommended as, modds for their own time and for posterity. This same Scotch sycophant and fine talker, Macaulay, says: “We hear to-day only of retrogression and see only progress.” What eyes, and especially what ears!

heilt.“ („History of England“, v. I, p. 417.) Macaulay hätte weiter berichten können, daß „außerordentlich wohlgesinnte“ *amis du commerce* im 17. Jahrhundert mit „Exultation“ erzählen, wie in einem Armenhaus in Holland ein Kind von 4 Jahren beschäftigt wurde, und daß dies Beispiel der „*vertu mise en pratique*“ in allen Schriften von Humanitären à la Macaulay Muster passiert bis zur Zeit A. Smiths. Es ist richtig, daß mit dem Aufkommen der Manufaktur, im Unterschied zum Handwerk, sich Spuren der Kinderexploitation zeigen, die von jeher bis zu einem gewissen Grad bei den Bauern existiert und um so entwickelter, je härter das Joch, das auf dem Landmann lastet. Die Tendenz des Kapitals ist unverkennbar, aber die Tatsachen selbst stehn noch so vereinzelt wie die Erscheinung zweiköpfiger Kinder. Sie wurden daher mit „Exultation“, als besonders merkwürdig und bewundernswert, von ahnungsvollen „*amis du commerce*“ für Mit- und Nachwelt aufgezeichnet und zur Nachahmung empfohlen. Derselbe schottische Sykophant und Schönredner Macaulay sagt: „Man höre heute nur von Rückschritt und sehe nur Fortschritt.“ Was für Augen und namentlich was für Ohren!

History of the legislation prolonging the working-day. These laws often decrease the wages at the same time! Marx disregards this here, but I think it is important to know about this connection: also the prolongation of the working-day under machinery is one without increasing the wages, or even with decreasing them! It is only a prolongation of the surplus-labor, not one of the necessary labor. Note that in reality the days were generally shorter than the laws prescribed. Regulations not only for adults but also for apprentices and children.

By the way, the beginning of is discussed in [Coh80, p. 279:2–4] as an example of functional explanation. Gives cross reference to footnote 144 to paragraph 406:2 in chapter Fifteen: “Die Engländer, die gern die erste empirische Erscheinungsform einer Sache als ihren Grund betrachten, ...” Cohen also refers here to [mecw8]327:1 (25. Februar 1849), which is interesting regarding legislation.

Despite this legislation, capital did not succeed in taking away from the workers all the free time they had (except from the agrarian workers), i.e., in overriding the traditional *moral* barriers of the working-day. Note that again for the real movement the price is the starting point: the capitalists pay the laborers wages which allow them to live 7 days, but they did not get a full week’s labor-power in return. Pro’s and Con’s of these moral barriers from the point of view of the laborers and the capitalists (Is the point of view of the laborers a part of the “political economy of the working class” about which Marx spoke in a political debate of the International Workmen’s association (According to Naphtali, Wirtschaftsdemokratie, 1928, Reprint FFM 1960, quoted in SoPo 6/7, 48). The one writing for the capitalists proposes an “ideal workhouse” to force the unemployed paupers to work all day long.

279:1–280:0 Still, during the greater part of the 18th century, up to the epoch of Modern Industry and machinism, capital in Eng-

290:1 Noch während des größten Teils des 18. Jahrhunderts, bis zur Epoche der großen Industrie, war es dem Kapital in

10.5. Compulsory Laws for Extension of Working-Day

land had not succeeded in seizing for itself, by the payment of the weekly value of labor-power, the whole week of the laborer, with the exception, however, of the agricultural laborers. The fact that they could live for a whole week on the wage of four days, did not appear to the laborers a sufficient reason that they should work the other two days for the capitalist. One party of English economists, in the interest of capital, denounces this obstinacy in the most violent manner, another party defends the laborers. Let us listen, *e.g.*, to the contest between Postlethwayt, whose Dictionary of Trade then had the same reputation as the kindred works of MacCulloch and MacGregor to-day, and the author (already quoted) of the "Essay on Trade and Commerce."¹²¹

¹²¹ Among the accusers of the workpeople, the most angry is the anonymous author quoted in the text of "An Essay on Trade and Commerce, containing Observations on Taxes, etc.," London, 1770. He had already dealt with this subject in his earlier work: "Considerations on Taxes," London, 1765. On the same side follows Polonius Arthur Young, the unutterable statistical prattler. Among the defenders of the working-classes the foremost are: Jacob Vanderlint, in: "Money Answers all Things," London, 1734, the Rev. Nathaniel Forster, D. D., in "An Enquiry into the Causes of the Present High Price of Provisions," London, 1767; Dr. Price, and especially Postlethwayt, as well in the supplement to his "Universal Dictionary of Trade and Commerce," as in his "Great Britain's Commercial Interest explained and improved," 2nd Edition, 1755. The facts themselves are confirmed by many other writers of the time, among others by Josiah Tucker.

280:1–2 Postlethwayt says among other things:

"We cannot put an end to those few observations, without noticing that trite remark in the mouth of too many; that if the industrious poor can obtain enough to maintain themselves in five days, they will not work the whole six. Whence they infer the necessity of even the necessities of life being made

England nicht gelungen, durch Zahlung des wöchentlichen Werts der Arbeitskraft sich der ganzen Woche des Arbeiters, Ausnahme bilden jedoch die Agriculturarbeiter, zu bemächtigen. Der Umstand, daß sie eine ganze Woche mit dem Lohn von 4 Tagen leben konnten, schien den Arbeitern kein hinreichender Grund, auch die andren zwei Tage für den Kapitalisten zu arbeiten. Eine Seite der englischen Ökonomen denunzierte im Dienst des Kapitals diesen Eigensinn aufs wütendste, eine andre Seite verteidigte die Arbeiter. Hören wir z.B. die Polemik zwischen Postlethwayt, dessen Handels-Diktionär damals denselben Ruf genoß wie heutzutage ähnliche Schriften von MacCulloch und MacGregor, und dem früher zitierten Verfasser des „Essay on Trade and Commerce“¹²¹.

¹²¹ Unter den Anklägern der Arbeiter ist der grimmigste der im Text erwähnte anonyme Verfasser von: „An Essay on Trade and Commerce: containing Observations on Taxation etc.“, London 1770. Schon früher in seiner Schrift „Consideration on Taxes“, London 1765. Auch Polonius Arthur Young, der unsägliche statistische Schwätzer, folgt in derselben Linie. Unter den Verteidigern der Arbeiter stehn oben an: Jacob Vanderlint in „Money answers all things“, London 1734, Rev. Nathaniel Forster, D. D. in „An Enquiry into the Causes of the Present [High] Price of Provisions“, London 1767, Dr. Price, und namentlich auch Postlethwayt, sowohl in einem Supplement zu seinem „Universal Dictionary of Trade and Commerce“ als in „Great-Britain's Commercial Interest explained and improved“, 2nd edit., Lond. 1759. Die Tatsachen selbst findet man bei vielen andren gleichzeitigen Schriftstellern konstatiert, u.a. bei Josiah Tucker.

290:2–291:0 Postlethwayt sagt u.a.:

„Ich kann diese wenigen Bemerkungen nicht abschließen, ohne Notiz zu nehmen von der trivialen Redensart in dem Munde zu vieler, daß, wenn der Arbeiter (industrious poor) in 5 Tagen genug erhalten kann, um zu leben, er nicht volle 6 Tage arbeiten will. Daher schließen sie auf die Notwendigkeit, selbst die not-

10. *The Working-Day*

dear by taxes, or any other means, to compel the working artisan and manufacturer to labor the whole six days in the week, without ceasing. I must beg leave to differ in sentiment from those great politicians, who contend for the perpetual slavery of the working people of this kingdom; they forget the vulgar adage, all work and no play. Have not the English boasted of the ingenuity and dexterity of her working artists and manufacturers which have heretofore given credit and reputation to British wares in general? What has this been owing to? To nothing more probably than the relaxation of the working people in their own way. Were they obliged to toil the year round, the whole six days in the week, in a repetition of the same work, might it not blunt their ingenuity, and render them stupid instead of alert and dexterous; and might not our workmen lose their reputation instead of maintaining it by such eternal slavery? ... And what sort of workmanship could we expect from such hard-driven animals? ... Many of them will execute as much work in four days as a Frenchman will in five or six. But if Englishmen are to be eternal drudges, 'tis to be feared they will degenerate below the Frenchmen. As our people are famed for bravery in war, do we not say that it is owing to good English roast beef and pudding in their bellies, as well as their constitutional spirit of liberty? And why may not the superior ingenuity and dexterity of, our artists and manufacturers, be owing to that freedom and liberty to direct themselves in their own way, and I hope we shall never have them deprived of such privileges and that good living from whence their ingenuity no less than their courage may proceed.'

wendigen Lebensmittel durch Steuern oder irgendwelche andre Mittel zu verteuern, um den Handwerker und Manufakturarbeiter zu un-
ausgesetzter sechstägiger Arbeit in der Woche zu zwingen. Ich muß um die Erlaubnis bitten, andrer Meinung zu sein als diese großen Politiker, welche für die beständige Sklaverei der Arbeiterbevölkerung dieses Königreichs (the perpetual slavery of the working people) die Lanze einlegen; sie vergessen das Sprichwort „all work and no play“ (nur Arbeit und kein Spiel) macht dumm. Brüsten sich die Engländer nicht mit der Genialität und Gewandtheit ihrer Handwerker und Manufakturarbeiter, die bisher den britischen Waren allgemeinen Kredit und Ruf verschafft haben? Welchem Umstand war dies geschuldet? Wahrscheinlich keinem andren als der Art und Weise, wie unser Arbeitsvolk, eigenlaunig, sich zu zerstreuen weiß. Wären sie gezwungen, das ganze Jahr durchzuarbeiten, alle sechs Tage in der Woche, in steter Wiederholung desselben Werkes, würde das nicht ihre Genialität abstumpfen und sie dumm-träg statt munter und gewandt machen; und würden unsre Arbeiter infolge solcher ewigen Sklaverei ihren Ruf nicht verlieren statt erhalten? ... Welche Art Kunstgeschick könnten wir erwarten von solch hart geplackten Tieren (hard driven animals)? ... Viele von ihnen verrichten soviel Arbeit in 4 Tagen als ein Franzose in 5 oder 6. Aber wenn Engländer ewige Schanzarbeiter sein sollen, so steht zu fürchten, daß sie noch unter die Franzosen entarten (degenerate) werden. Wenn unser Volk wegen seiner Tapferkeit im Krieg berühmt ist, sagen wir nicht, daß dies einerseits dem guten englischen Roastbeef und Pudding in seinem Leibe, andererseits nicht minder unsrem konstitutionellen Geiste der Freiheit geschuldet ist? Und warum sollte die größere Genialität, Energie und Gewandtheit unsrer Handwerker und Manufakturarbeiter nicht der Freiheit geschuldet sein, womit sie sich in ihrer eignen Art und Weise zerstreuen? Ich hoffe, sie werden nie wieder diese Privilegien verlieren, noch das gute Leben, woraus ihre Arbeitstüchtigkeit und ihr Mut gleichmäßig herkommen!’”¹²²

10.5. Compulsory Laws for Extension of Working-Day

280:3–281:1 Thereupon the author of the „Essay on Trade and Commerce” replies:

“If the making of every seventh day an holiday is supposed to be of divine institution, as it implies the appropriating the other six days to labor” (he means capital as we shall soon see) “surely it will not be thought cruel to enforce it ... That mankind in general, are naturally inclined to ease and indolence, we fatally experience to be true, from the conduct of our manufacturing populace, who do not labor, upon an average, above four days in a week, unless provisions happen to be very dear ... Put all the necessities of the poor under one denomination; for instance, call them all wheat, or suppose that ... the bushel of wheat shall cost five shillings and that he (a manufacturer) earns a shilling by his labor, he then would be obliged to work five days only in a week. If the bushel of wheat should cost but four shillings, he would be obliged to work but four days; but as wages in this kingdom are much higher in proportion to the price of necessities ... the manufacturer, who labors four days, has a surplus of money to live idle with the rest of the week ... I hope I have said enough to make it appear that the moderate labor of six days in a week is no slavery. Our laboring people do this, and to all appearance are the happiest of all our laboring poor,¹²³ but the Dutch do this in manufactures, and appear to be a very happy people. The French do so, when holidays do not intervene.¹²⁴ But our populace have adopted a notion, that as Englishmen they enjoy a birthright privilege of being more free and independent than in any country in Europe. Now this idea, as far as it may affect the bravery of our troops, may be of some use; but the less the manufacturing poor have of it, certainly the better for themselves and for the State. The laboring people should never think themselves independent of their superiors ... It is extremely dangerous to encourage mobs in a commercial state like ours, where, perhaps, seven parts out of eight of the whole, are people with little or no property. The cure will not be perfect, till our manufacturing poor are contented to labor six days for the same sum which they now earn in four days.”¹²⁵

291:1–292:0 Darauf antwortet der Verfasser des „Essay on Trade and Commerce“:

„Wenn es für eine göttliche Einrichtung gilt, den siebenten Tag der Woche zu feiern, so schließt dies ein, daß die andren Wochentage der Arbeit“ (er meint dem Kapital, wie man gleich sehen wird) „angehören, und es kann nicht grausam gescholten werden, dies Gebot Gottes zu erzwingen ... Daß die Menschheit im allgemeinen von Natur zur Bequemlichkeit und Trägheit neigt, davon machen wir die fatale Erfahrung im Betragen unsres Manufakturpöbels, der durchschnittlich nicht über 4 Tage die Woche arbeitet, außer im Fall einer Teuerung der Lebensmittel ... Gesetz, ein Bushel Weizen repräsentiere alle Lebensmittel des Arbeiters, koste 5 sh., und der Arbeiter verdiene einen Schilling täglich durch seine Arbeit. Dann braucht er bloß 5 Tage in der Woche zu arbeiten; nur 4, wenn der Bushel 4 sh. beträgt ... Da aber der Arbeitslohn in diesem Königreich viel höher steht, verglichen mit dem Preise der Lebensmittel, so besitzt der Manufakturarbeiter, der 4 Tage arbeitet, einen Geldüberschuß, womit er während des Rests der Woche müßig lebt ... Ich hoffe, ich habe genug gesagt, um klarzumachen, daß mäßige Arbeit während 6 Tagen in der Woche keine Sklaverei ist. Unsre Agrikulturarbeiter tun dies und, allem Anscheine nach, sind sie die Glücklichsten unter den Arbeitern (laboring poor),¹²³ aber die Holländer tun es in den Manufakturen und scheinen ein sehr glückliches Volk. Die Franzosen tun es, soweit nicht die vielen Feiertage dazwischenkommen¹²⁴ ... Aber unser Pöbel hat sich die fixe Idee in den Kopf gesetzt, daß ihm als Engländer durch das Recht der Geburt das Privilegium zukommt, freier und unabhängiger zu sein als“ (das Arbeitervolk) „in irgendeinem andren Lande von Europa. Nun, diese Idee, soweit sie auf die Tapferkeit unsrer Soldaten einwirkt, mag von einigem Nutzen sein; aber je weniger die Manufakturarbeiter davon haben, desto besser für sie selbst und den Staat. Arbeiter sollten sich nie für unabhängig von ihren Vorgesetzten (independent of their superiors) halten ... Es ist außerordentlich gefährlich, mobs in einem kommerziellen Staat, wie dem unsrigen, zu encou-
ragieren, wo vielleicht 7 Teile von den 8 der

10. The Working-Day

¹²³ „An Essay,” etc. He himself relates on p. 96 wherein the “happiness” of the English agricultural laborer already in 1770 consisted. “Their powers are always upon the stretch, they cannot live cheaper than they do, nor work harder.”

¹²⁴ Protestantism, by changing almost all the traditional holidays into workdays, plays an important part in the genesis of capital.

This footnote discussed and mis-interpreted in [Coh80, p. 279:1]. Perhaps make a question out of it.

¹²⁵ „An Essay,” etc., pp. 15, 41, 96, 97, 55, 57.

¹²⁶ I.c., p. 69. Jacob Vanderlint, as early as 1734, declared that the secret of the out-cry of the capitalists as to the laziness of the working people was simply that they claimed for the same wages 6 days’ labor instead of 4.

281:2/o To this end, and for “extirpating idleness debauchery and excess,” promoting a spirit of industry, “lowering the price of labor in our manufactories, and easing the lands of the heavy burden of poor’s rates,” our “faithful Eckart” of capital proposes this approved device: to shut up such laborers as become dependent on public support, in a word, paupers, in “an *ideal workhouse*.” Such ideal workhouse must be made a “House of Terror,” and not an asylum for the poor, “where they are to be plentifully fed, warmly and decently clothed, and where they do but little work.”¹²⁷ In this “House of Terror,” this “ideal workhouse, the poor shall work 14 hours in a day, allowing proper time for meals, in such manner that there shall remain 12 hours of neat-labor.”¹²⁸

¹²⁷ I.c., p. 242.

Gesamtbevölkerung Leute mit wenig oder keinem Eigentum sind¹²⁵ ... Die Kur wird nicht vollständig sein, bis unsre industriellen Armen sich bescheiden, 6 Tage für dieselbe Summe zu arbeiten, die sie nun in 4 Tagen verdienen.“¹²⁶

¹²³ „An Essay etc.“ Er selbst erzählt p. 96, worin schon 1770 „das Glück“ der englischen Agrikulturarbeiter bestand. „Ihre Arbeitskräfte (their working powers) sind stets auf das äußerste angespannt (on the stretch); sie können nicht schlechter leben, als sie tun (they cannot live cheaper than they do), noch härter arbeiten (nor work harder).“

¹²⁴ Der Protestantismus spielt schon durch seine Verwandlung fast aller traditionellen Feiertage in Werkstage eine wichtige Rolle in der Genesis des Kapitals.

¹²⁵ „An Essay etc.“, p. 41, 15, 96, 97, 55, 56, 57.

¹²⁶ I.c. p. 69. Jacob Vanderlint erklärte schon 1734, das Geheimnis der Kapitalistenklage über die Faulenzerei des Arbeitervolks sei einfach, daß sie für denselben Lohn 6 statt 4 Arbeitstage beanspruchten.

292:1 Zu diesem Zwecke, wie zur „Ausrottung der Faulenzerei, Ausschweifung und romantischen Freiheitsduselei“, ditto „zur Minderung der Armentaxe, Förderung des Geistes der Industrie und Herabdrückung des Arbeitspreises in den Manufakturen“, schlägt unser treuer Eckart des Kapitals das probate Mittel vor, solche Arbeiter, die der öffentlichen Wohltätigkeit anheimfallen, in einem Wort, Paupers, einzusperren in ein „ideales Arbeitshaus“ (an ideal Workhouse). „Ein solches Haus muß zu einem Hause des Schreckens (House of Terror) gemacht werden.“¹²⁷ In diesem „Hause des Schreckens“, diesem „Ideal von einem Workhouse“, soll gearbeitet werden „14 Stunden täglich mit Einbegriff jedoch der passenden Mahlzeiten, so daß volle 12 Arbeitsstunden übrigbleiben“¹²⁸

¹²⁷ „An Essay etc.“, p. 242, 243: „Such ideal workhouse must be made a „House of Terror“, und nicht zu einem Asyl für die Armen,

10.5. Compulsory Laws for Extension of Working-Day

¹²⁸ I.c. "The French," he says, "laugh at our enthusiastic ideas of liberty." I.c., p. 78.

wo sie reichlich zu essen bekommen, warm und anständig gekleidet werden sollen und sie nur wenig arbeiten."

¹²⁸ „In this ideal workhouse the poor shall work 14 hours in a day, allowing proper time for meals, in such manner that there shall remain 12 hours of neat labor." (I.c. [p. 260.]) „Die Franzosen", sagt er, „lachen über unsre enthusiastischen Ideen von Freiheit." (I.c. p. 78.)

The next two paragraphs constitute the transition to the following section. This workhouse will be realized in a much more terrible form than dreamed up by this bourgeois writer—in the *factory*.

282:1 Twelve working-hours daily in the Ideal Workhouse, in the "House of Terror" of 1770! 63 years later, in 1833, when the English Parliament reduced the working-day for children of 13 to 18, in four branches of industry to 12 full hours, the judgment day of English Industry had dawned! In 1852, when Louis Bonaparte sought to secure his position with the bourgeoisie by tampering with the legal working-day, the French working people cried out with one voice "the law that limits the working-day to 12 hours is the one good that has remained to us of the legislation of the Republic!"¹²⁹ At Zurich the work of children over 10 is limited to 12 hours; in Aargau in 1862, the work of children between 13 and 16 was reduced from 12 1/2 to 12 hours; in Austria in 1860, for children between 14 and 16, the same reduction was made.¹³⁰ "What a progress," since 1770! Macaulay would shout "with exultation"!

293:1 Zwölf Arbeitsstunden täglich im „Ideal-Workhouse“, im Hause des Schreckens von 1770! Dreiundsechzig Jahre später, 1833, als das englische Parlament in vier Fabrikzweigen den Arbeitstag für Kinder von 13 bis 18 Jahren auf 12 volle Arbeitsstunden herabsetzte, schien der Jüngste Tag der englischen Industrie angebrochen! 1852, als L. Bonaparte bürgerlich Fuß zu fassen suchte durch Rütteln am gesetzlichen Arbeitstag, schrie das französische Arbeitervolk aus einem Munde: „Das Gesetz, das den Arbeitstag auf 12 Stunden verkürzt, ist das einzige Gut, das uns von der Gesetzgebung der Republik blieb!"¹²⁹ In Zürich ist die Arbeit von Kindern über 10 Jahren auf 12 Stunden beschränkt; im Aargau wurde 1862 die Arbeit von Kindern zwischen 13 und 16 Jahren von 12 1/2 Stunden reduziert, in Österreich 1860 für Kinder zwischen 14 und 16 Jahren ditto auf 12 Stunden.¹³⁰ Welch ein „Fortschritt seit 1770!", würde Macaulay „mit Exultation" aufjauchzen!

¹²⁹ "They especially objected to work beyond the 12 hours per day, because the law which fixed those hours, is the only good which remains to them of the legislation of the Republic." ("Rep. of Insp. of Fact.", 31 st October, 1856, p. 80.) The French Twelve Hours' Bill of September 5th, 1850, a bourgeois edition of the decree of the Provisional Government of March 2nd, 1848, holds in all workshops without exceptions. Before this law the working-day in France was without definite limit. It lasted in the factories 14, 15, or more hours. See "Des classes ouvrières en France, pendant l'année 1848. Par M. Blanqui." M. Blanqui the economist, not the Revolutionist,

¹²⁹ „Sie widersetzten sich besonders deshalb einer Arbeit von mehr als den 12 Stunden täglich, weil das Gesetz, das diese Stundenzahl festsetzte, das einzige Gut ist, was ihnen von der Gesetzgebung der Republik übrigbleibt." („Rep. of Insp. of Fact. 31st Octob. 1855", p. 80.) Das französische Zwölfstundengesetz vom 5. September 1850, eine verbürgerlichte Ausgabe des Dekrets der provisorischen Regierung vom 2. März 1848, erstreckt sich auf alle Ateliers ohne Unterschied. Vor diesem Gesetz war der Arbeitstag in Frankreich unbeschränkt. Er währte in den Fabriken 14, 15 und mehr Stunden. Siehe „Des classes ouvrières en France, pendant l'année 1848. Par M.

10. The Working-Day

had been entrusted by the Government with an inquiry into the condition of the working-class.

¹³⁰ Belgium is the model bourgeois state in regard to the regulation of the working-day. Lord Howard of Welden, English Plenipotentiary at Brussels, reports to the Foreign Office May 12th, 1862: “M. Rogier, the minister, informed me that children’s labor is limited neither by a general law nor by any local regulations; that the Government, during the last three years, intended in every session to propose a bill on the subject, but always found an insuperable obstacle in the jealous opposition to any legislation in contradiction with the principle of perfect freedom of labor.”

282:2 The “House of Terror” for paupers of which the capitalistic soul of 1770 only dreamed, was realised a few years later in the shape of a gigantic “Workhouse” for the industrial worker himself. It is called the Factory. And the ideal this time fades before the reality.

Blanqui“. Herr Blanqui, der Ökonom, nicht der Revolutionär, war von Regierung wegen mit der Enquete über die Arbeiterzustände betraut.

¹³⁰ Belgien bewährt sich auch mit Bezug auf die Regulation des Arbeitstags als bürgerlicher Musterstaat. Lord Howard de Walden, englischer Bevollmächtigter in Brüssel, berichtet dem Foreign Office d.d. 12. Mai 1862: „Der Minister Rogier erklärte mir, daß weder ein allgemeines Gesetz noch Lokalregulationen die Kinderarbeit irgendwie beschränken; daß die Regierung sich während der letzten 3 Jahre in jeder Sitzung mit dem Gedanken trug, den Kammern ein Gesetz über den Gegenstand vorzulegen, daß sie aber stets ein unüberwindliches Hindernis fand an der eifersüchtigen Angst gegen irgendwelche Gesetzgebung im Widerspruch mit dem Prinzip vollkommener Freiheit der Arbeit“!

293:2 Das „Haus des Schreckens“ für Paupers, wovon die Kapitaleseele 1770 noch träumte, erhob sich wenige Jahre später als riesiges „Arbeitshaus“ für die Manufakturarbeiter selbst. Es hieß Fabrik. Und diesmal erblaßte das Ideal vor der Wirklichkeit.

10.6. The Struggle around the Normal Working-Day. Compulsory Limitation by Law of the Working Time. The English Factory Acts, 1833–1864

10.6.a. [Industrial Revolution Overturns all Limits of the working-day]

In the centuries before 1766, capital caused a gradual extension of the working day (1) up to the normal maximal bounds (i.e., the labor-time of those workers who had worked less than the norm was made equal to the norm), and (2) to the limits of the natural day of 12 hours during which there is enough daylight. This was a slow process. But since the birth of large-scale industry 1766–1800 a sudden spurt occurred in which all bounds were overturned.

283:1 After capital had taken centuries in extending the working-day to its normal maximum limit, and then beyond this to the limit of the natural day of 12 hours,¹³¹ there followed on the birth of machinism and modern industry in the last third of the 18th century, a violent encroachment like that of an avalanche in its intensity and extent.

294:1 Nachdem das Kapital Jahrhunderte gebraucht, um den Arbeitstag bis zu seinen normalen Maximalgrenzen und dann über diese hinaus, bis zu den Grenzen des natürlichen Tags von 12 Stunden zu verlängern,¹³¹ erfolgte nun, seit der Geburt der großen Industrie im letzten Drittel des 18. Jahrhunderts, eine lawinenartig gewaltsame und maßlose Überstürzung. Jede Schranke

¹³¹ It is certainly much to be regretted that any class of persons should toil 12 hours a day, which, including the time for their meals and for going to and returning from their work, amounts, in fact, to 14 of the 24 hours ... Without entering into the question of health, no one will hesitate, I think, to admit that, *in a moral point of view*, so entire an absorption of the time of the working-classes, without intermission, from the early age of 13, and in trades not subject to restriction, much younger, must be extremely prejudicial, and is an evil greatly to be deplored ... For the sake, therefore, of public morals, of bringing up an orderly population, and of giving the great body of the people a reasonable enjoyment of life, it is much to be desired that in all trades some portion of every working-day should be reserved for rest and leisure.” (Leonard Homer in “Reports of Insp. of Fact. for 31st Dec., 1841.”)

All bounds of morals and nature, age and gender, day and night, were broken down. Even the ideas of day and night, of rustic simplicity in the old statutes, became so confused that an English judge, as late as 1860, needed a quite Talmudic sagacity to explain “judicially” what was day and what was night.¹³² Capital celebrated its orgies.

¹³² See “Judgment of Mr. J. H. Otway, Belfast. Hilary Sessions, County Antrim, 1860.”

The working class which, between 1766 and 1800, had been “stunned by the noise and turmoil of the new mode of production,” begins its resistance around 1800. But for the next 30 years it has only nominal success.

283:2–284:1 As soon as the working-class, stunned at first by the noise and turmoil of the new system of production, recovered, in some measure, its senses, its resistance began, and first in the native land of machinism, in England. For 30 years, however, the concessions conquered by the workpeople were purely nominal. Parliament passed 5 labor Laws between 1802 and 1833, but was shrewd enough not to vote a penny for their carrying out, for the requisite officials, etc.¹³³ They remained a dead letter.

von Sitte und Natur, Alter und Geschlecht, Tag und Nacht, wurde zertrümmert.

¹³¹ „Es ist sicher sehr bedauerlich, daß irgendeine Klasse von Personen 12 Stunden täglich sich abplacken muß. Rechnet man die Mahlzeiten zu und die Zeit, um zu und von der Werkstatt zu gehn, so beträgt dies in der Tat 14 von den 24 Tagesstunden ... Abgesehen von der Gesundheit, wird niemand, ich hoffe, anstehn zuzugeben, daß vom moralischen Gesichtspunkt eine so gänzliche Absorption der Zeit der arbeitenden Klassen, ohne Unterlaß, beim frühen Alter von 13 Jahren, und in den „freien“ Industriezweigen selbst von viel frühem Alter an, außerordentlich schädlich und ein furchtbares Übel ist ... Im Interesse der öffentlichen Moral, für die Aufziehung einer tüchtigen Bevölkerung, und um der großen Masse des Volks einen vernünftigen Lebensgenuß zu verschaffen, muß darauf gedrungen werden, daß in allen Geschäftszweigen ein Teil jedes Arbeitstags reserviert werde für Erholung und Muße.“ (Leonard Horner in „Reports of Insp. of Fact. 31st Dec. 1841“.)

Selbst die Begriffe von Tag und Nacht, bäuerlich einfach in den alten Statuten, verschwammen so sehr, daß ein englischer Richter noch 1860 wahrhaft talmudistischen Scharfsinn aufbieten mußte, um „urteilskräftig“ zu erklären, was Tag und Nacht sei.¹³² Das Kapital feierte seine Orgien.

¹³² Sieh „Judgment of Mr. J. H. Otway, Belfast, Hilary Sessions, County Antrim 1860“.

294:2–295:1 Sobald die vom Produktionslärm übertölpelte Arbeiterklasse wieder einigermaßen zur Besinnung kam, begann ihr Widerstand, zunächst im Geburtsland der großen Industrie, in England. Während drei Dezennien jedoch blieben die von ihr ertrotzten Konzessionen rein nominell. Das Parlament erließ 5 Arbeits-Akte von 1802 bis 1833, war aber so schlau, keinen Pfennig für ihre zwangsmäßige Ausführung, das nötige Beamtenpersonal usw. zu votieren.¹³³ Sie blieben ein toter Buchstabe.

10. The Working-Day

¹³⁴ Report of Insp. of Fact. 30th April, 1860, p. 50.

↑ The state passes laws which are not enforced. This contradictory activity shows that the state does *not* act here as an agent of the bourgeoisie: it is forced by the proletariat to pass these laws, but due to the power of the capitalists it sabotages them at the same time, by not providing money to enforce them.

“The fact is, that prior to the Act of 1833, young persons and children were worked all night, all day, or both *ad libitum*.”¹³⁴

¹³⁴ „Rep. of Insp. of Fact. 30th April 1860“, p. 50.

„Die Tatsache ist, daß vor dem Akt von 1833 Kinder und junge Personen abgearbeitet wurden (were worked) die ganze Nacht, den ganzen Tag, oder beide *ad libitum*.“¹³⁴

↓ In France, the laws were not only not enforced, but they are also distinguished by their number: only one law was passed regarding the working-day in a society which likes to regulate everything:

¹³³ It is very characteristic of the regime of Louis Philippe, the bourgeois king, that the one Factory Act passed during his reign, that of March 22nd 1841, was never put in force. And this law only dealt with child-labor. It fixed 8 hours a day for children between 8 and 12, 12 hours for children between 12 and 16, etc., with many exceptions which allow night-work even for children 8 years old. The supervision and enforcement of this law are, in a country where every mouse is under police administration, left to the good-will of the *amis du commerce*. Only since 1853, in one single department—the Département du Nord—has a paid government inspector been appointed. Not less characteristic of the development of French society, generally, is the fact, that Louis Philippe’s law stood solitary among the all-embracing mass of French laws, till the Revolution of 1848.

¹³³ Sehr charakteristisch ist es für das Regime Louis-Philippes, des roi bourgeois, daß das einzige unter ihm erlassenen Fabrikgesetz vom 22. März 1841 niemals durchgeführt worden ist. Und dies Gesetz betrifft nur Kinderarbeit. Es setzt 8 Stunden für Kinder zwischen 8 und 12, zwölf Stunden für Kinder zwischen 12 und 16 Jahren usw. fest, mit vielen Ausnahmen, welche die Nachtarbeit selbst für Achtjährige erlauben. Überwachung und Erzwingung des Gesetzes blieben in einem Lande, wo jede Maus polizeilich administriert wird, dem guten Willen der „amis du commerce“ überlassen. Erst seit 1853 gibt es in einem einzigen Departement, dem Departement du Nord, einen bezahlten Regierungsinspektor. Nicht minder charakteristisch für die Entwicklung der französischen Gesellschaft überhaupt ist es, daß Louis-Philippes Gesetz bis zur Revolution von 1848 einzig dastand in der alles umspinnenden französischen Gesetzfabrik!

Question 872 *If the state passes laws protecting the working class which it does not enforce, what does this tell us about the nature of the state?*

10.6.b. [The Factory Act of 1833]

After 30 years of pretenses and stalling, the factory legislation begins in earnest in 1833:

284:2 A normal working-day for modern industry only dates from the Factory Act of 1833, which included cotton, wool, flax, and silk factories. Nothing is more characteristic of the spirit of capital than the history of the English Factory Acts from 1833 to 1864.

284:3 The Act of 1833 declares the ordinary factory working-day to be from half-past five in the morning to half-past eight

295:2 Erst seit dem Fabrikakt von 1833—umfassend Baumwoll-, Woll-, Flachs- und Seidenfabriken—datiert für die moderne Industrie ein Normalarbeitstag. Nichts charakterisiert den Geist des Kapitals besser als die Geschichte der englischen Fabrikgesetzgebung von 1833 bis 1864!

295:3 Das Gesetz von 1833 erklärt, der gewöhnliche Fabrikarbeitstag solle beginnen um halb 6 Uhr morgens und enden halb

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

in the evening and within these limits, a period of 15 hours, it is lawful to employ young persons (*i.e.*, persons between 13 and 18 years of age), at any time of the day, provided no one individual young person should work more than 12 hours in any one day, except in certain cases especially provided for. The 6th section of the Act provided: “That there shall be allowed in the course of every day not less than one and a half hours for meals to every such person restricted as hereinbefore provided.” The employment of children under 9, with exceptions mentioned later was forbidden; the work of children between 9 and 13 was limited to 8 hours a day, night-work, *i.e.*, according to this Act, work between 8:30 p.m. and 5:30 a.m., was forbidden for all persons between 9 and 18.

9 Uhr abends, und innerhalb dieser Schranken, einer Periode von 15 Stunden, solle es gesetzlich sein, junge Personen (d.h. Personen zwischen 13 und 18 Jahren) zu irgend-einer Zeit des Tags anzuwenden, immer vorausgesetzt, daß ein und dieselbe junge Person nicht mehr als 12 Stunden innerhalb eines Tags arbeite, mit Ausnahme gewisser speziell vorgesehener Fälle. Die 6. Sektion des Akts bestimmt, „daß im Laufe jedes Tags jeder solchen Person von beschränkter Arbeitszeit mindestens 1 1/2 Stunden für Mahlzeiten eingeräumt werden sollen“. Die Anwendung von Kindern unter 9 Jahren, mit später zu erwähnender Ausnahme, ward verboten, die Arbeit der Kinder von 9 bis 13 Jahren auf 8 Stunden täglich beschränkt. Nacharbeit, d.h. nach diesem Gesetz, Arbeit zwischen halb 9 Uhr abends und halb 6 Uhr morgens, ward verboten für alle Personen zwischen 9 und 18 Jahren.

↑↑ Note that the working time for adult workers was not regulated! Since children and adults have to work together, the regulation of child labor contradicts the commitment to leave adult labor unregulated.

284:4–5 The law-makers were so far from wishing to trench on the freedom of capital to exploit adult labor-power, or, as they called it, “the freedom of labor,” that they created a special system in order to prevent the Factory Acts from having such an outrageous consequence.

295:4–296:0 Die Gesetzgeber waren so weit entfernt, die Freiheit des Kapitals in Aussaugung der erwachsenen Arbeitskraft oder, wie sie es nannten, „die Freiheit der Arbeit“ antasten zu wollen, daß sie ein eigenes System ausheckten, um solcher haarsträubenden Konsequenz des Fabrikakts vorzubeugen.

↓ The relay system is an attempt to bridge this contradiction:

“The great evil of the factory system as at present conducted,” says the first report of the Central Board of the Commission of June 28th 1833, “has appeared to us to be that it entails the necessity of continuing the labor of children to the utmost length of that of the adults. The only remedy for this evil, short of the limitation of the labor of adults which would, in our opinion, create an evil greater than that which is sought to be remedied, appears to be the plan of working double sets of children.”

„Das große Übel des Fabriksystems, wie es gegenwärtig eingerichtet ist“, heißt es im ersten Bericht des Zentralrats der Kommission vom 25. Juni 1833, „besteht darin, daß es die Notwendigkeit schafft, die Kinderarbeit zur äußersten Länge des Arbeitstags der Erwachsenen auszudehnen. Das einzige Heilmittel für dies Übel, ohne Beschränkung der Arbeit der Erwachsenen, woraus ein Übel entspringen würde, größer als das, dem vorgebeugt werden soll, scheint der Plan, doppelte Reihen von Kindern zu verwenden.“

284:6 Under the name of System of Relays, such a “plan” was therefore carried out, that, e.g., from 5.30 a.m. until 1.30 in

296:1 Unter dem Namen Relaisystem („System of Relays“; Relay heißt im Englischen wie im Französischen: das Wechseln

10. The Working-Day

the afternoon, one set of children between 9 and 13, and from 1.30 p.m. to 8.30 in the evening another set were "put to," etc.

284:7-285:1 In order to reward the manufacturers for having, in the most barefaced way, ignored all the Acts as to children's labor passed during the last twenty-two years, the pill was yet further gilded for them. Parliament decreed that after March 1st, 1834, no child under 11, after March 1st 1835, no child under 12, and after March 1st, 1836, no child under 13 was to work more than eight hours in a factory. This "liberalism," so full of consideration for "capital," was the more noteworthy as Dr. Farre, Sir A. Carlisle, Sir B. Brodie, Sir C. Bell, Mr. Guthrie, etc., in a word, the most distinguished physicians and surgeons in London, had declared in their evidence before the House of Commons, that there was danger in delay. Dr. Farre expressed himself still more bluntly: "Legislation is necessary for the prevention of death, in any form in which it can be prematurely inflicted, and certainly this (i.e., the factory method) must be viewed as a most cruel mode of inflicting it."

135

285:3 That same "reformed" Parliament, which in its delicate consideration for the manufacturers, condemned children under 13, for years to come, to 72 hours of work per week in the Factory Hell, on the other hand, in the Emancipation Act, which also administered freedom drop by drop, forbade the planters, from the outset, to work any negro slave more than 45 hours a week.

der Postpferde auf verschiedenen Stationen) wurde daher dieser „Plan“ ausgeführt, so daß z.B. von halb 6 Uhr morgens bis halb 2 Uhr nachmittags eine Reihe von Kindern zwischen 9 und 13 Jahren, von halb 2 Uhr nachmittags bis halb 9 Uhr abends eine andere Reihe vorgespannt wird usw.

296:2-3 Zur Belohnung dafür, daß die Herren Fabrikanten alle während der letzten 22 Jahre erlassenen Gesetze über Kinderarbeit aufs frechste ignoriert hatten, ward ihnen jetzt aber auch die Pille vergoldet. Das Parlament bestimmte, daß nach dem 1. März 1834 kein Kind unter 11 Jahren, nach dem 1. März 1835 kein Kind unter 12 Jahren und nach dem 1. März 1836 kein Kind unter 13 Jahren über 8 Stunden in einer Fabrik arbeiten solle! Dieser für das „Kapital“ so schonungsvolle „Liberalismus“ war um so anerkennenswerter, als Dr. Farre, Sir A. Carlisle, Sir B. Brodie, Sir C. Bell, Mr. Guthrie usw., kurz die bedeutendsten physicians und surgeons Londons in ihren Zeugenaussagen vor dem Unterhaus erklärt hatten, daß *periculum in mora*! Dr. Farre drückte sich noch etwas gröber dahin aus: „Gesetzgebung ist gleich notwendig für die Vorbeugung des Todes in allen Formen, worin er vorzeitig angetan werden kann, und sicher dieser“ (der Fabrikmodus) „muß als eine der grausamsten Methoden, ihn anzutun, betrachtet werden.“¹³⁵

¹³⁵ „Legislation is equally necessary for the prevention of death, in any form in which it can be prematurely inflicted, and certainly this must be viewed as a most cruel mode of inflicting it.“

296:4 Dasselbe „reformierte“ Parlament, das aus Zartsinn für die Herrn Fabrikanten Kinder unter 13 Jahren noch jahrelang in die Hölle 72ständiger Fabrikarbeit per Woche festbannte, verbot dagegen in dem Emanzipationsakt, der auch die Freiheit tropfenweise eingab, von vornherein den Pflanzern, irgendeinen Negersklaven länger als 45 Stunden per Woche abzuarbeiten!

10.6.c. [Efforts to Prevent and Circumvent the 1833 Law]

↓ Marx looks at the development in historical perspective. The 1833 law met lots of resistance: between 1833 and 1836 an unsuccessful last-ditch effort of capital to prevent full implementation of the law, and then it was successfully circumvented and gutted by a new “system of relays.”

285:4 But in no wise conciliated, capital now began a noisy agitation that went on for several years.

296:5/o Aber keineswegs gesöhnt, eröffnete das Kapital jetzt eine mehrjährige und geräuschvolle Agitation.

↓ Alleged content of the agitation is the question: who is a child?

It turned chiefly on the age of those who, under the name of children, were limited to 8 hours’ work, and were subject to a certain amount of compulsory education. According to capitalistic anthropology, the age of childhood ended at 10, or at the outside, at 11.

Sie drehte sich hauptsächlich um das Alter der Kategorien, die unter dem Namen Kinder auf 8stündige Arbeit beschränkt und einem gewissen Schulzwang unterworfen worden waren. Nach der kapitalistischen Anthropologie hörte das Kindesalter im 10. oder, wenn es hoch ging, im 11. Jahre auf.

↓ But the intensity of the discussion was governed by the time schedule when the Factory Acts would take full force:

The more nearly the time approached for the coming into full force of the Factory Act, the fatal year 1836, the more wildly raged the mob of manufacturers. They managed, in fact, to intimidate the government to such an extent that in 1835 it proposed to lower the limit of the age of childhood from 13 to 12.

Je näher der Termin der vollen Ausführung des Fabrikakts, das verhängnisvolle Jahr 1836 rückte, um so wilder raste der Fabrikantenmob. Es gelang ihm in der Tat, die Regierung so weit einzuschüchtern, daß sie 1835 den Termin des Kindesalters von 13 auf 12 Jahre herabzusetzen vorschlug.

↓ But the strength of the working class prevented the legislators from caving in:

In the meantime the pressure from without grew more threatening. Courage failed the House of Commons. It refused to throw children of 13 under the Juggernaut Car of capital for more than 8 hours a day, and the Act of 1833 came into full operation. It remained unaltered until June, 1844.

Indes wuchs die pressure from without drohend an. Der Mut versagte dem Unterhause. Es verweigerte, Dreizehnjährige länger als 8 Stunden täglich unter das Juggernaut-Rad des Kapitals zu werfen, und der Akt von 1833 trat in volle Wirkung. Er blieb unverändert bis Juni 1844.

↓ But even with the law in operation the excesses continued—because the “new relais system” made it impossible to enforce these laws.

285:5/o In the ten years during which it regulated factory work, first in part, and then entirely, the official reports of the factory inspectors teem with complaints as to the impossibility of putting the Act into force.

297:1/o Während des Dezenniums, worin er erst teilweise, dann ganz die Fabrikarbeit regulierte, strotzen die offiziellen Berichte der Fabrikinspektoren von Klagen über die Unmöglichkeit seiner Ausführung.

↓ Here are the details why it was impossible to enforce these laws:

As the law of 1833 left it optional with the lords of capital during the 15 hours, from 5.30 a.m. to 8.30 p.m., to make every “young person,” and “every child” begin, break off, resume, or end his 12 or 8 hours at

Da das Gesetz von 1833 es nämlich den Herrn vom Kapital freistellte, in der fünfzehnstündigen Periode von halb 6 Uhr morgens bis halb 9 Uhr abends jede „junge Person“ und jedes „Kind“ zu irgend beliebiger

10. The Working-Day

any moment they liked, and also permitted them to assign to different persons, different times for meals, these gentlemen soon discovered a new “system of relays,” by which the labor-horses were not changed at fixed stations, but were constantly re-harnessed at changing stations.

Zeit die zwölf-, respektive die achtstündige Arbeit beginnen, unterbrechen, enden zu lassen, und ebenso den verschiedenen Personen verschiedene Stunden der Mahlzeiten anzuweisen, fanden die Herrn bald ein neues „Relaissystem“ aus, wonach die Arbeitspferde nicht an bestimmten Stationen gewechselt, sondern an wechselnden Stationen stets wieder von neuem vorgespannt werden.

↓ This loophole made the whole factory act mute.

We do not pause longer on the beauty of this system, as we shall have to return to it later. But this much is clear at the first glance: that this system annulled the whole Factory Act, not only in the spirit, but in the letter. How could factory inspectors, with this complex bookkeeping in respect to each individual child or young person, enforce the legally determined work-time and the granting of the legal mealtimes? In a great many of the factories, the old brutalities soon blossomed out again unpunished. In an interview with the Home Secretary (1844), the factory inspectors demonstrated the impossibility of any control under the newly invented relay system.¹³⁶

Wir verweilen nicht weiter bei der Schönheit dieses Systems, da wir später darauf zurückkommen müssen. So viel ist aber auf den ersten Blick klar, daß es den ganzen Fabrikakt nicht nur seinem Geist, sondern auch seinem Buchstaben nach aufhob. Wie sollten die Fabrikinspektoren bei dieser komplizierten Buchführung über jedes einzelne Kind und jede junge Person die gesetzlich bestimmte Arbeitszeit und die Gewährung der gesetzlichen Mahlzeiten erzwingen? In einem großen Teil der Fabriken blühte der alte brutale Unfug bald wieder ungestraft auf. In einer Zusammenkunft mit dem Minister des Innern (1844) bewiesen die Fabrikinspektoren die Unmöglichkeit jeder Kontrolle unter dem neuausgeheckten Relaissystem.¹³⁶

¹³⁶ “Rep. of Insp. of Fact.,” 31st October, 1849, p. 6.

¹³⁶ „Rep. of Insp. of Fact. 31st October 1849“, p. 6.

↑ The relays system will be discussed in greater detail in [295:2/op](#).

10.6.d. [The Additional Factory Act from 1844]

↓ Marx gives four points explaining why the next effort, the additional Factory Act of 1844, was more successful:

In the meantime, however, circumstances had greatly changed.

Unterdes hatten sich aber die Umstände sehr geändert.

↓ (1) Votes of the Factory laborers depended on 10-hours bill.

The factory hands, especially since 1838, had made the Ten Hours’ Bill their economic, as they had made the Charter their political, election-cry.

Die Fabrikarbeiter, namentlich seit 1838, hatten die Zehnstundenbill zu ihrem ökonomischen, wie die Charter zu ihrem politischen Wahlauf Ruf gemacht.

↓ (2) Part of the factory owners themselves turned to Parliament against the breach of laws by their competitors.

Some of the manufacturers, even, who had managed their factories in conformity with the Act of 1833, overwhelmed Parliament

Ein Teil der Fabrikanten selbst, der den Fabrikbetrieb dem Akt von 1833 gemäß geregelt hatte, überwarf das Parlament mit

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

with memorials on the immoral competition of their false brethren whom greater impudence, or more fortunate local circumstances, enabled to break the law.

Denkschriften über die unsittliche „Konkurrenz“ der „falschen Brüder“, denen größere Frechheit oder glücklichere Lokumstände den Gesetzesbruch erlaubten.

(3) Political leaders of the capitalist class needed the workers as allies against the landowners in their agitation for the repeal of the corn (tariff) laws (landowners favor corn tariffs which guarantee high returns from agriculture).

Moreover, however much the individual manufacturer might give the rein to his old lust for gain, the spokesmen and political leaders of the manufacturing class ordered a change of front and of speech towards the workpeople. They had entered upon the contest for the repeal of the Corn Laws, and needed the workers to help them to victory. They promised therefore, not only a double-sized loaf of bread, but the enactment of the Ten Hours' Bill in the Free-trade millennium.¹³⁷ Thus they still less dared to oppose a measure intended only to make the law of 1833 a reality.

Zudem, wie sehr immerhin der einzelne Fabrikant der alten Raubgier den Zügel frei schießen lassen mochte, die Wortführer und politischen Leiter der Fabrikantenklasse geboten eine veränderte Haltung und veränderte Sprache gegenüber den Arbeitern. Sie hatten den Feldzug zur Abschaffung der Korngesetze eröffnet und bedurften der Hilfe der Arbeiter zum Siege! Sie versprachen daher nicht nur Verdopplung des Laibes Brot, sondern Annahme der Zehnstundenbill unter dem tausendjährigen Reich des Free Trade.¹³⁷ Sie durften also um so weniger eine Maßregel bekämpfen, die nur den Akt von 1833 zur Wahrheit machen sollte.

↓ (4) The land owners unsuccessfully tried to prevent such a coalition by preaching against the “nefarious practices” of the capitalists.

Threatened in their holiest interest, the rent of land, the Tories thundered with philanthropic indignation against the “nefarious practices”¹³⁸ of their foes.

In ihrem heiligsten Interesse, der Grundrente, bedroht, donnerten endlich die Tories entrüstet philanthropisch über die „infamen Praktiken“¹³⁸ ihrer Feinde.

¹³⁷ “Rept. of Insp. of Fact.,” 31st October, 1848, p. 98.

¹³⁷ „Rep. of Insp. of Fact. 31st October 1848“, p. 98.

¹³⁸ Leonard Homer uses the expression “nefarious practices” in his official reports. (“Report of Insp. of Fact.,” 31st October, 1859, p. 7.)

¹³⁸ Übrigens braucht Leonard Horner den Ausdruck „nefarious practices“ offiziell. „Reports of Insp. of Fact. 31st October 1859“, p. 7.)

↓ The additional Factory Act from 1844 plugged the loopholes with the “spurious relay system,” further shortened work time for children and, importantly, for the first time included adults—not adult men but adult women.

286:1–287:1 This was the origin of the additional Factory Act of June 7th, 1844. It came into effect on September 10th, 1844.

298:1–2 So kam der zusätzliche Fabrikakt vom 7. Juni 1844 zustande. Er trat am 10. September 1844 in Wirkung.

↓ (1) It includes also women, who were placed on the same footing as young persons. This is an important inroad, since previously, the regulation of the working-days of adult persons had been considered an infringement into their “freedom of contracts.”

It places under protection a new category of workers, viz., the women over 18. They were placed in every respect on the same footing as the young persons, their work-

Er gruppiert eine neue Kategorie von Arbeitern unter die Beschützten, nämlich die Frauenzimmer über 18 Jahre. Sie wurden in jeder Rücksicht den jungen Personen

10. The Working-Day

time limited to twelve hours, their night-labor forbidden, etc. For the first time, legislation saw itself compelled to control directly and officially the labor of adults. In the Factory Report of 1844–1845, it is said with irony:

“No instances have come to my knowledge of adult women having expressed any regret at their *rights* being thus far interfered with.”¹³⁹

¹³⁹ “Rept.,” etc., 30th Sept., 1844, p. 15.

(2) Children’s labor was shortened to 6 1/2 or 7 hours. However here one regressive provision (mentioned by Marx in 288:1): minimum age for children reduced from 9 to 8 “in order to get an additional supply of factory children.”

In order to get rid of the abuses of the “spurious relay system” it was practically prohibited to spread the working-day out for children and young persons.

287:2 The working time of children under 13 was reduced to 6 1/2, and in certain circumstances to 7 hours a day.¹⁴⁰

¹⁴⁰ The Act allows children to be employed for 10 hours if they do not work day after day, but only on alternate days. In the main, this clause remained inoperative.

287:3–6 To get rid of the abuses of the “spurious relay system,” the law established besides others the following important regulations:

“That the hours of work of children and young persons shall be reckoned from the time when any child or young person shall begin to work in the morning.”

So that if *A*, e.g., begins work at 8 in the morning, and *B* at 10, *B*’s work-day must nevertheless end at the same hour as *A*’s. “The time shall be regulated by a public clock,” for example, the nearest railway clock, by which the factory clock is to be set. The occupier is to hang up a “legible” printed notice stating the hours for the beginning and ending of work and the times allowed for the several meals.

↓ But shift work is still possible:

Children beginning work before 12 noon may not be again employed after 1 p.m. The afternoon shift must therefore consist

gleichgesetzt, ihre Arbeitszeit auf 12 Stunden beschränkt, Nachtarbeit ihnen untersagt usw. Zum erstenmal sah sich die Gesetzgebung also gezwungen, auch die Arbeit Volljähriger direkt und offiziell zu kontrollieren. In dem Fabrikbericht von 1844/1845 heißt es ironisch:

„Es ist kein einziger Fall zu unsrer Kenntnis gekommen, wo erwachsne Weiber sich über diesen Eingriff in ihre Rechte beschwert hätten.“¹³⁹

¹³⁹ „Rep. etc. for 30th Sept. 1844“, p. 15.

298:3 Die Arbeit von Kindern unter 13 Jahren wurde auf 6 1/2 und, unter gewissen Bedingungen, 7 Stunden täglich reduziert.¹⁴⁰

¹⁴⁰ Der Akt erlaubt, Kinder 10 Stunden anzuwenden, wenn sie nicht Tag nach Tag, sondern nur einen Tag über den andren arbeiten. Im ganzen blieb diese Klausel wirkungslos.

298:4–299:2 Um die Mißbräuche des falschen „Relaisystems“ zu beseitigen, traf das Gesetz u.a. folgende wichtige Detailbestimmungen:

„Der Arbeitstag für Kinder und junge Personen ist von der Zeit an zu zählen, wo irgend ein Kind oder eine junge Person des Morgens in der Fabrik zu arbeiten anfängt.“

So daß, wenn *A* z.B. um 8 Uhr morgens die Arbeit beginnt und *B* um 10 Uhr, der Arbeitstag dennoch für *B* zur selben Stunde enden muß wie für *A*. Der Anfang des Arbeitstags soll angezeigt werden durch eine öffentliche Uhr, z.B. die nächste Eisenbahnuhr, wonach die Fabrikglocke zu richten. Der Fabrikant hat eine großgedruckte Notiz in der Fabrik aufzuhängen, worin Anfang, Ende, Pausen des Arbeitstags angegeben sind.

Kinder, die ihre Arbeit des Vormittags vor 12 Uhr beginnen, dürfen nicht wieder nach 1 Uhr mittags verwandt werden. Die Nach-

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

of other children than those employed in the morning.

⇓ Very detailed regulations concerning the meal times, but the manufacturers still tried to get around them, see 291:2–3.

Of the hour and a half for meal-times, “one hour thereof at the least shall be given before three of the clock in the afternoon ... and at the same period of the day. No child or young person shall be employed more than five hours before 1 p.m. without an interval for meal-time of at least 30 minutes. No child or young person [or female] shall be employed or allowed to remain in any room in which any manufacturing process is then [*i.e.*, at mealtimes] carried on,” etc.

Interesting theoretical comment: Parliamentary laws not invented or derived from some abstract set of human rights, but the content of these laws gradually emerged from the nature of the mode of production (Marx calls them “natural laws of the modern mode of production”). Their formulation and official recognition is the effect of a long class struggle.

287:7/o It has been seen that these minutiae, which, with military uniformity, regulate by stroke of the clock the times, limits, pauses of the work were not at all the products of Parliamentary fancy. They developed gradually out of circumstances as natural laws of the modern mode of production. Their formulation, official recognition, and proclamation by the State, were the result of a long struggle of classes.

⇓ An apparently unintended consequence (since it was no longer possible to have young persons and children around for 15 hours) was also the working-day for adult workers was, for all practical matters, shortened to 12 hours.

One of their first consequences was that in practice the working-day of the adult males in factories became subject to the same limitations, since in most processes of production the co-operation of the children, young persons, and women is indispensable. On the whole, therefore, during the period from 1844 to 1847, the 12 hours’ working-day became general and uniform in all branches of industry under the Factory Act.

⇓ At the end, Marx mentions the one regressive provision of the Act:

288:1 The manufacturers, however, did not allow this “progress” without a compen-

mittagsreihe muß also aus andren Kindern bestehn als die Vormittagsreihe.

Die 1 1/2 Stunden für Mahlzeit müssen allen beschützten Arbeitern zu denselben Tagesperioden eingeräumt werden, eine Stunde wenigstens vor 3 Uhr nachmittags. Kinder oder junge Personen dürfen nicht länger als 5 Stunden vor 1 Uhr mittags verwandt werden, ohne eine mindestens halbstündige Pause für Mahlzeit. Kinder, junge Personen oder Frauenzimmer dürfen während keiner Mahlzeit in einer Fabrikstube bleiben, worin irgendein Arbeitsprozeß vorgeht usw.

299:3 Man hat gesehn: Diese minutiösen Bestimmungen, welche die Periode, Grenzen, Pausen der Arbeit so militärisch uniform nach dem Glockenschlag regeln, waren keineswegs Produkte parlamentarischer Hirnweberei. Sie entwickelten sich allmählich aus den Verhältnissen heraus, als Naturgesetze der modernen Produktionsweise. Ihre Formulierung, offizielle Anerkennung und staatliche Proklamation waren Ergebnis langwieriger Klassenkämpfe.

Eine ihrer nächsten Folgen war, daß die Praxis auch den Arbeitstag der erwachsenen männlichen Fabrikarbeiter denselben Schranken unterwarf, da in den meisten Produktionsprozessen die Kooperation der Kinder, jungen Personen und Frauenzimmer unentbehrlich. Im großen und ganzen galt daher während der Periode von 1844–1847 der zwölfstündige Arbeitstag allgemein und uniform in allen der Fabrikgesetzgebung unterworfenen Industriezweigen.

299:4 Die Fabrikanten erlaubten diesen „Fortschritt“ jedoch nicht ohne einen kom-

10. The Working-Day

sating “retrogression.” At their instigation the House of Commons reduced the minimum age for exploitable children from 9 to 8, in order to assure that additional supply of factory children which is due to capitalists, according to divine and human law.¹⁴¹

¹⁴¹ “As a reduction in their hours of work would cause a larger number (of children) to be employed, it was thought that the additional supply of children from 8 to 9 years of age would meet the increased demand” (l.c., p. 13).

pensierenden „Rückschritt“. Auf ihren Antrieb reduzierte das Unterhaus das Minimalalter der zu verarbeitenden Kinder von 9 Jahren auf 8, zur Sicherung der dem Kapital von Gott und Rechts wegen geschuldeten „additionellen Fabrikkindenzufuhr“¹⁴¹.

¹⁴¹ „Da eine Herabsetzung ihrer Arbeitszeit zur Einstellung einer großen Anzahl“ (von Kindern) „führen würde, dachte man, daß die zusätzliche Zufuhr von Kindern im Alter von 8 und 9 Jahren die vermehrte Nachfrage decken würde.“ (l.c. p. 13.)

Under this law, the working day for children was limited to 7 hours, and that for adults to 12 hours. But the basis was laid to reach the proclaimed goal of the period, the 10-hour working day.

10.6.e. [Failed Attempts to Prevent the 1848 Ten-Hour Law]

↓ In 1846/47, several movements came together making possible a great leap forward in factory legislation.

288:2 The years 1846–47 are epoch-making in the economic history of England.

300:1 Die Jahre 1846/1847 machen Epoche in der ökonomischen Geschichte Englands.

↓ Corn laws repealed

The Repeal of the Corn Laws, and of the duties on cotton and other raw material; Free-trade proclaimed as the guiding star of legislation; in a word, the arrival of the millenium.

Widerruf der Korngesetze, die Einfuhrzölle auf Baumwolle und andre Rohmaterialien abgeschafft, der Freihandel zum Leitstern der Gesetzgebung erklärt! Kurz, das tausendjährige Reich brach an.

↓ Climax of Chartist movement.

On the other hand, in the same years, the Chartist movement and the 10 hours’ agitation reached their highest point.

Andrerseits erreichten in denselben Jahren Chartistenbewegung und Zehnstundenagitation ihren Höhepunkt.

↓ Tories angry at the manufacturers because of the repeal of the Corn Laws, allied with the Chartists.

They found allies in the Tories panting for revenge.

Sie fanden Bundesgenossen in den rache-schnaubenden Tories.

↓ Why did the Free-traders not keep their word?

Despite the fanatical opposition of the army of perjured Free-traders, with Bright and Cobden at their head, the Ten Hours’ Bill, struggled for so long, went through Parliament.

Trotz des fanatischen Widerstands des wortbrüchigen Freihandelsheers mit Bright und Cobden an der Spitze ging die so lang erstrebte Zehnstundenbill durch das Parlament.

↑ Therefore the law of 1847 was enacted. ↓ It shortens the working-day of young persons and female laborers to 11 hours in 1847 and 10 hours in 1848.

288:3 The new Factory Act of June 8th, 1847, enacted that on July 1st, 1847, there should be a preliminary shortening of the

300:2 Der neue Fabrikakt vom 8. Juni 1847 setzte fest, daß am 1. Juli 1847 eine vorläufige Verkürzung des Arbeitstags

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

working-day for “young persons” (from 13 to 18), and all females to 11 hours, but that on May 1st, 1848, there should be a definite limitation of the working-day to 10 hours. In other respects, the Act only amended and completed the Acts of 1833 and 1844.

der „jungen Personen“ (von 13 bis 18 Jahren) und aller Arbeiterinnen auf 11 Stunden, am 1. Mai 1848 aber die definitive Beschränkung auf 10 Stunden eintreten sollte. Im übrigen war der Akt nur ein amendierender Zusatz der Gesetze von 1833 und 1844.

This progress was so fast that capital strongly resisted. Capital’s resistance has two prongs. The present subsection discusses what Marx calls the “preliminary” campaign, in which capital tried to prevent the full enactment of the 10-hour bill in 1848, and the next subsection discusses their attempts to repeal the Act after its enactment.

288:4–289:0 Capital now entered upon a preliminary campaign in order to hinder the Act from coming into full force on May 1st, 1848. And the workers themselves, allegedly wisened up by experience, were to help in the destruction of their own work.

300:3–4 Das Kapital unternahm einen vorläufigen Feldzug, um die volle Ausführung des Akts am 1. Mai 1848 zu verhindern. Und zwar sollten die Arbeiter selbst, angeblich durch die Erfahrung gewitzigt, ihr eignes Werk wieder zerstören helfen.

How were they able to enlist the workers to fight against their interests?

↓ (1) Favorable exterior circumstances: crisis of 1846/47:

The moment was cleverly chosen.

Der Augenblick war geschickt gewählt.

“It must be remembered, too, that there has been more than two years of great suffering (in consequence of the terrible crisis of 1846–47) among the factory operatives, from many mills having worked short time, and many being altogether closed. A considerable number of the operatives must therefore be in very narrow circumstances many, it is to be feared, in debt; so that it might fairly have been presumed that at the present time they would prefer working the longer time, in order to make up for past losses, perhaps to pay off debts, or get their furniture out of pawn, or replace that sold, or to get a new supply of clothes for themselves and their families.”¹⁴²

„Man muß sich erinnern, daß infolge der furchtbaren Krise von 1846/1847 großes Leid unter den Fabrikarbeitern vorherrschte, da viele Fabriken nur für kurze Zeit gearbeitet, andere ganz stillgestanden hatten. Eine beträchtliche Anzahl der Arbeiter befand sich daher in drückendster Lage, viele in Schulden. Man konnte daher mit ziemlicher Gewißheit annehmen, daß sie die längere Arbeitszeit vorziehen würden, um die vergangnen Verluste gutzumachen, vielleicht Schulden abzuzahlen oder ihre Möbel aus dem Pfandhaus zu holen oder verkaufte Habseligkeiten zu ersetzen oder neue Kleidungsstücke sich selbst und ihren Familien zu verschaffen.“¹⁴²

¹⁴² “Rep. of Insp. of Fact.,” 31st Oct., 1848, p. 16.

¹⁴² „Rep. of Insp. of Fact. 31st Oct. 1848“, p. 16.

(2) Cut in wages after repeal of the Corn Laws:

289:1 The manufacturers tried to aggravate the natural effect of these circumstances by a general reduction of wages by 10%. This was done so to say, to celebrate the inauguration of the new Free-trade era. Then followed a further reduction of 8 1/3% as soon as the working-day was shortened to 11, and a reduction of double that amount as soon as it was finally shortened to 10 hours. Wherever, therefore, circumstances allowed it, a reduction of wages of at least 25% took

300:5/o Die Herrn Fabrikanten suchten die natürliche Wirkung dieser Umstände zu steigern durch eine allgemeine Lohnherabsetzung von 10%. Dies geschah sozusagen zur Einweihungsfeier der neuen Freihandelsära. Dann folgte weitere Herabsetzung um 8 1/3%, sobald der Arbeitstag auf 11, und um das Doppelte, sobald er definitiv auf 10 Stunden verkürzt wurde. Wo es daher irgendwie die Verhältnisse zuließen, fand eine Lohnherabsetzung von wenigstens 25%

10. The Working-Day

place.¹⁴³

¹⁴³ “I found that men who had been getting 10s. a week, had had 1 s. taken off for a reduction in the rate of 10 per cent, and 1 s. 6 d. off the remaining 9s. for the reduction in time, together 2s. 6d., and notwithstanding this, many of them said they would rather work 10 hours.” l.c.

↓ Capitalists tried to use these favorable circumstances to enlist the workers in their propaganda against the Ten Hour Bill. But they didn’t succeed:

Under such favourably prepared conditions the agitation among the factory workers for the repeal of the Act of 1847 was begun. Neither lies, bribery, nor threats were spared in this attempt. But all was in vain.

↓ Petitions: petitioners testified that they were forced.

Concerning the half-dozen petitions in which workpeople were made to complain of “their oppression by the Act,” the petitioners themselves declared under oral examination, that their signatures had been extorted from them. “They felt themselves oppressed, but not exactly by the Factory Act.”¹⁴⁴

¹⁴⁴ “‘Though I signed it [the petition], I said at the time I was putting my hand to a wrong thing.’ ‘Then why did you put your hand to it?’ ‘Because I should have been turned off if I had refused.’ Whence it would appear that this petitioner felt himself ‘oppressed,’ but not exactly by the Factory Act.” l.c., p. 102.

↓ Press campaign to denounce the factory inspectors:

But if the manufacturers did not succeed in making the workpeople speak as they wished, they themselves shrieked all the louder in press and Parliament in the name of the workpeople. They denounced the Factory Inspectors as a kind of revolutionary commissioners like those of the French National Convention ruthlessly sacrificing the unhappy factory workers to their humanitarian crotchet. This manoeuvre also failed. Factory Inspector Leonard Homer conducted in his own person, and through his sub-inspectors, many examinations of witnesses in the factories of Lancashire. About 70% of the workpeople examined de-

statt.¹⁴³

¹⁴³ „Ich fand, daß man Leuten, die 10 sh. wöchentlich erhalten hatten, 1 sh. abzog auf Rechnung der allgemeinen Lohnherabsetzung von 10% und weitere 1 sh. 6 d. für die Zeitverkürzung, zusammen 2 sh. 6 d., und trotz alledem hielt die Mehrzahl fest an der Zehnstundenbill.“ (l.c.)

Unter so günstig vorbereiteten Chancen begann man die Agitation unter den Arbeitern für Widerruf des Akts von 1847. Kein Mittel des Betrugs, der Verführung und der Drohung wurde dabei verschmäht, aber alles umsonst.

Mit Bezug auf das halbe Dutzend Petitionen, worin die Arbeiter klagen mußten über „ihre Unterdrückung durch den Akt“, erklärten die Bittsteller selbst, bei mündlichem Verhör, ihre Unterschriften seien abgenötigt worden. „Sie seien unterdrückt, aber von jemand anders als dem Fabrikakt.“¹⁴⁴

¹⁴⁴ „Als ich die Petition unterzeichnete, erklärte ich zugleich, ich tue damit etwas Schlechtes.—Warum habt ihr sie denn unterzeichnet?—Weil man mich im Weigerungsfalle auf das Pflaster geworfen hätte.—Der Bittsteller fühlte sich in der Tat „unterdrückt“, aber nicht grade durch den Fabrikakt.“ (l.c. p. 102.)

Wenn es aber den Fabrikanten nicht gelang, die Arbeiter in ihrem Sinn sprechen zu machen, schrien sie selbst nur um so lauter in Presse und Parlament im Namen der Arbeiter. Sie denunzierten die Fabrikinspektoren als eine Art Konvents-kommissäre, die ihrer Weltverbesserungsgrille den unglücklichen Arbeiter unbarmherzig aufopfert. Auch dies Manöver schlug fehl. Fabrikinspektor Leonard Horner stellte in eigener Person und durch seine Unterinspektoren zahlreiche Zeugenverhöre in den Fabriken Lancshires an. Ungefähr 70% der verhörten Arbeiter erklärten sich für 10 Stunden, eine viel geringere Prozentzahl für 11 und eine

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

clared in favour of 10 hours, a much smaller percentage in favour of 11, and an altogether insignificant minority for the old 12 hours.¹⁴⁵

¹⁴⁵ p. 17, l.c. In Mr. Homer's district 10,270 adult male laborers were thus examined in 181 factories. Their evidence is to be found in the appendix to the Factory Reports for the half-year ending October 1848. These examinations furnish valuable material in other connexions also.

↓ They forced the workers to work longer and then expected them to say it was voluntary:

290:1–2 Another "friendly" dodge was to make the adult males work 12 to 15 hours, and then to blazon abroad this fact as the best proof of what the proletariat desired in its heart of hearts. But the "ruthless" Factory Inspector Leonard Homer was again to the fore. The majority of the "over-times" declared:

"They would much prefer working ten hours for less wages, but that they had no choice; that so many were out of employment (so many spinners getting very low wages by having to work as piecers, being unable to do better), that if they refused to work the longer time, others would immediately get their places, so that it was a question with them of agreeing to work the longer time, or of being thrown out of employment altogether."¹⁴⁶

¹⁴⁶ l.c. See the evidence collected by Leonard Homer himself, Nos. 69, 70, 71, 72, 92, 93, and that collected by Sub-Inspector A., Nos. 51, 52, 58, 59, 62, 70, of the Appendix. One manufacturer, too, tells the plain truth. See No. 14, and No. 265, l.c.

ganz unbedeutende Minorität für die alten 12 Stunden.¹⁴⁵

¹⁴⁵ l.c. p. 17. In Herrn Horners Distrikt wurden so 10 270 erwachsne männliche Arbeiter in 181 Fabriken verhört. Man findet ihre Aussagen im Appendix des Fabrikreports für das Halbjahr endend Oktober 1848. Diese Zeugenverhöre bieten auch in andrer Beziehung schätzbares Material.

301:1–2 Ein andres „gütliches“ Manöver war, die erwachsenen männlichen Arbeiter 12 bis 15 Stunden arbeiten zu lassen und dann diese Tatsache für den besten Ausdruck der proletarischen Herzenswünsche zu erklären. Aber der „unbarmherzige“ Fabrikinspektor Leonard Horner war wieder an Ort und Stelle. Die meisten „Überstündigen“ sagten aus,

„sie würden es bei weitem vorziehen, 10 Stunden für geringen Arbeitslohn zu arbeiten, aber sie hätten keine Wahl; so viele von ihnen seien arbeitslos, so viele Spinner gezwungen, als bloße piecers zu arbeiten, daß, wenn sie die längre Arbeitszeit verweigerten, andre sofort ihre Stellen einnehmen würden, so daß die Frage so für sie stehe: entweder die längre Zeit arbeiten oder auf dem Pflaster liegen.“¹⁴⁶

¹⁴⁶ l.c. Siehe die von Leonard Horner selbst gesammelten Aussagen Nr. 69, 70, 71, 72, 92, 93 und die von Subinspektor A. gesammelten Nr. 51, 52, 58, 59, 62, 70 des „Appendix“. Ein Fabrikant schenkte selbst klaren Wein ein. Siehe Nr. 14 nach Nr. 265 l.c.

10.6.f. [Victorious Revolt of Capital against 10 Hours Bill]

290:3 The preliminary campaign of capital thus came to grief, and the Ten Hours' Act came into force May 1st, 1848.

But the further development of the exterior circumstances created the conditions for a backlash:

(1) Fiasco of Chartist Party.

But meanwhile the fiasco of the Chartist party whose leaders were imprisoned, and whose organisation was dismembered, had

302:1 Der vorläufige Feldzug des Kapitals war mißglückt, und das Zehnstundengesetz trat am 1. Mai 1848 in Kraft.

Unterdes hatte jedoch das Fiasko der Chartistenpartei, deren Führer eingekerkert und deren Organisation zersprengt, bereits das

10. The Working-Day

shaken the confidence of the English working-class in its own strength.

↓ (2) Defeat of June insurrection in Paris.

Soon after this the June insurrection in Paris and its bloody suppression united, in England as on the Continent, all fractions of the ruling classes, landlords and capitalists, stock-exchange wolves and shop-keepers, Protectionists and Free traders, government and opposition, priests and freethinkers, young whores and old nuns, under the common cry for the salvation of Property, Religion, the Family and Society.

↓ (3) General anti-working-class sentiments:

The working-class was everywhere proclaimed, placed under a ban, under a virtual law of suspects.

↓ These circumstances allowed a victorious open revolt of the capitalists against the 10 hours bill and the other legislative regulation of the working-day.

The manufacturers had no need any longer to restrain themselves. They broke out in open revolt not only against the Ten Hours' Act, but against the whole of the legislation that since 1833 had aimed at restricting in some measure the "free" exploitation of labor-power. It was a pro-slavery rebellion in miniature, carried on for over two years with a cynical recklessness, a terrorist energy all the cheaper because the rebel capitalist risked nothing except the skin of his "hands."

↓ Achilles heel of the existing legislation is that (1) male adults are not regulated, and (2) the legal day during which the work had to be performed was still 15 hours.

290:4/o To understand that which follows we must remember that the Factory Acts of 1833, 1844, and 1847 were all three in force so far as the one did not amend the other: that not one of these limited the working-day of the male worker over 18, and that since 1833 the 15 hours from 5.30 a.m. to 8.30 p.m. had remained the legal "day," within the limits of which at first the 12, and later the 10 hours' labor of young persons and women had to be performed under the prescribed conditions.

Selbstvertrauen der englischen Arbeiterklasse erschüttert.

Bald darauf vereinigte die Pariser Juni-Insurrektion und ihre blutige Erstickung, wie im kontinentalen Europa so in England, alle Fraktionen der herrschenden Klassen, Grundeigentümer und Kapitalisten, Börsenwölfe und Krämer, Protektionisten und Freihändler, Regierung und Opposition, Pfaffen und Freigeister, junge Huren und alte Nonnen, unter dem gemeinschaftlichen Ruf zur Rettung des Eigentums, der Religion, der Familie, der Gesellschaft!

Die Arbeiterklasse wurde überall verfehmt, in den Bann getan, unter das „loi des suspects“ gestellt.

Der Herr Fabrikanten brauchten sich also nicht zu genieren. Sie brachen in offene Revolte aus nicht nur wider das Zehnstundengesetz, sondern wider die ganze Gesetzgebung, welche seit 1833 die „freie“ Aus-saugung der Arbeitskraft einigermaßen zu zügeln suchte. Es war eine Proslavery Rebellion in Miniatur, während mehr als zwei Jahren durchgeführt mit zynischer Rücksichtslosigkeit, mit terroristischer Energie, beide um so wohlfeiler, als der rebellische Kapitalist nichts riskierte außer der Haut Arbeiter.

302:2 Zum Verständnis des Nachfolgenden muß man sich erinnern, daß die Fabrikakte von 1833, 1844 und 1847 alle drei in Rechtskraft, soweit der eine nicht den andern amendiert; daß keiner derselben den Arbeitstag des männlichen Arbeiters über 18 Jahre beschränkt und daß seit 1833 die fünfzehnstündige Periode von halb 6 Uhr morgens bis halb 9 Uhr abends der gesetzliche „Tag“ blieb, innerhalb dessen erst die zwölf- später die zehnstündige Arbeit der jungen Personen und Frauenzimmer unter

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

den vorgeschriebnen Bedingungen zu verrichten war.

Question 873 *Why were male workers not protected by the laws?*

(1) In order to take advantage of this, factory owners discharge many women and children and re-institute night labor for men.

291:1 The manufacturers began by here and there discharging a part of, in many cases half of the young persons and women employed by them, and then, for the adult males, restoring the almost obsolete night-work. The Ten Hours' Act, they cried, leaves no other alternative.¹⁴⁷

¹⁴⁷ Reports, etc., for 31st October, 1848, pp. 133, 134.

(2) Meal times were now given outside the 10-hour day:

291:2–3 Their second step dealt with the legal pauses for meals. Let us hear the Factory Inspectors.

“Since the restriction of the hours of work to ten, the factory occupiers maintain, although they have not yet practically gone the whole length, that supposing the hours of work to be from 9 a.m. to 7 p.m. they fulfil the provisions of the statutes by allowing an hour before 9 a.m. and half an hour after 7 p.m. [for meals]. In some cases they now allow an hour, or half an hour for dinner, insisting at the same time, that they are not bound to allow any part of the hour and a half in the course of the factory working-day.”¹⁴⁸

¹⁴⁸ Reports, etc., for 30th April, 1848, p. 47.

291:4–5 The manufacturers maintained therefore that the scrupulously strict provisions of the Act of 1844 with regard to meal-times only gave the operatives permission to eat and drink before coming into, and after leaving the factory—i.e., at home. And why should not the workpeople eat their dinner before 9 in the morning? The crown lawyers, however, decided that the prescribed meal-times

302:3 Die Fabrikanten begannen hie und da mit Entlassung eines Theils, manchmal der Hälfte, der von ihnen beschäftigten jungen Personen und Arbeiterinnen und stellten dagegen die fast verschollne Nacharbeit unter den Erwachsenen wieder her. Das Zehnstundengesetz, riefen sie, lasse ihnen keine andre Alternative!¹⁴⁷

¹⁴⁷ „Reports etc. for 31st October 1848“, p. 133, 134.

302:4–303:0 Der zweite Schritt bezog sich auf die gesetzlichen Pausen für Mahlzeiten. Hören wir die Fabrikinspektoren.

„Seit der Beschränkung der Arbeitsstunden auf 10 behaupten die Fabrikanten, obgleich sie praktisch ihre Ansicht noch nicht bis zur letzten Konsequenz durchführen, daß, wenn z.B. von 9 Uhr morgens bis 7 Uhr abends gearbeitet wird, sie den gesetzlichen Vorschriften genug tun, indem sie eine Stunde für Mahlzeit vor 9 Uhr morgens und eine halbe Stunde nach 7 Uhr abends, also 1 1/2 Stunden für Mahlzeiten geben. In einigen Fällen erlauben sie jetzt eine halbe oder ganze Stunde für Mittagessen, bestehn aber zugleich darauf, sie seien durchaus nicht verpflichtet, irgendeinen Teil der 1 1/2 Stunden im Lauf des zehnstündigen Arbeitstags einzuräumen.“¹⁴⁸

¹⁴⁸ „Reports etc. for 30th April 1848“, p. 47.

303:1–2 Die Herrn Fabrikanten behaupteten also, die peinlich genauen Bestimmungen des Akts von 1844 über Mahlzeiten gäben den Arbeitern nur die Erlaubnis, vor ihrem Eintritt in die Fabrik und nach ihrem Austritt aus der Fabrik, also bei sich zu Hause, zu essen und zu trinken! Und warum sollten die Arbeiter auch nicht vor 9 Uhr morgens ihr Mittagessen einnehmen? Die Kronjuristen entschieden jedoch, daß die vorgeschriebnen Mahlzeiten

10. The Working-Day

“must be in the interval during the working-hours, and that it will not be lawful to work for 10 hours continuously, from 9 a.m. to 7 p.m., without any interval.”¹⁴⁹

¹⁴⁹ Reports, etc., for 31st October, 1848, p. 130.

(3) The real revolt begins with the stretching-out of the work times for the children:

291:6 After these pleasant demonstrations, Capital preluded its revolt by a step which agreed with the letter of the law of 1844, and was therefore legal.

291:7–292:1 The Act of 1844 certainly prohibited the employment after 1 p.m. of such children, from 8 to 13, as had been employed before noon. But it did not regulate in any way the 6 1/2 hours’ work of the children whose work-time began at 12 midday or later. Children of 8 might, if they began work at noon, be employed from 12 to 1, 1 hour; from 2 to 4 in the afternoon, 2 hours; from 5 to 8.30 in the evening, 3 1/2 hours; in all, the legal 6 1/2 hours. Or better still. In order to make their work coincide with that of the adult male laborers up to 8.30 p.m., the manufacturers only had to give them no work till 2 in the afternoon, they could then keep them in the factory without intermission till 8.30 in the evening.

“And it is now expressly admitted that the practice exists in England from the desire of mill-owners to have their machinery at work for more than 10 hours a-day, to keep the children at work with male adults after all the young persons and women have left, and until 8.30 p.m. if the factory-owners choose.”¹⁵⁰

¹⁵⁰ Reports, etc., l.c., p. 142.

292:2 Workmen and factory inspectors protested on hygienic and moral grounds, but Capital answered:

„in Pausen während des wirklichen Arbeitstags gegeben werden müssen und daß es ungesetzlich, 10 Stunden nacheinander von 9 Uhr morgens bis 7 Uhr abends ohne Unterbrechung arbeiten zu lassen“.¹⁴⁹

¹⁴⁹ „Reports etc. for 31st Oct. 1848“, p. 130.

303:3 Nach diesen gemütlichen Demonstrationen leitete das Kapital seine Revolte ein durch einen Schritt, der dem Buchstaben des Gesetzes von 1844 entsprach, also legal war.

303:4–304:0 Das Gesetz von 1844 verbot allerdings, Kinder von 8 bis 13 Jahren, die vor 12 Uhr vormittags beschäftigt würden, wieder nach 1 Uhr mittags zu beschäftigen. Aber es regelte in keiner Weise die 6 1/2stündige Arbeit der Kinder, deren Arbeitszeit um 12 Uhr vormittags oder später begann! Achtjährige Kinder konnten daher, wenn sie die Arbeit um 12 Uhr vormittags begannen, von 12 bis 1 Uhr verwandt werden, 1 Stunde; von 2 Uhr bis 4 Uhr nachmittags, 2 Stunden, und von 5 Uhr bis halb 9 Uhr abends, 3 1/2 Stunden; alles in allem die gesetzlichen 6 1/2 Stunden! Oder noch besser. Um ihre Verwendung der Arbeit erwachsener männlicher Arbeiter bis halb 9 Uhr abends anzupassen, brauchten ihnen die Fabrikanten kein Werk zu geben vor 2 Uhr nachmittags und konnten sie dann ununterbrochen in der Fabrik halten bis halb 9 Uhr abends!

„Und es wird jetzt ausdrücklich zugestanden, daß neuerdings infolge der Fabrikantengier, ihre Maschinerie länger als 10 Stunden laufen zu lassen, sich die Praxis in England eingeschlichen hat, acht- bis dreizehnjährige Kinder beiderlei Geschlechts nach Entfernung aller jungen Personen und Weiber aus der Fabrik allein mit den erwachsenen Männern bis halb 9 Uhr abends arbeiten zu lassen.“¹⁵⁰

¹⁵⁰ „Reports etc.“, l.c. p. 142.

304:1–2 Arbeiter und Fabrikinspektoren protestierten aus hygienischen und moralischen Gründen. Aber das Kapital antwortete:

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

“My deeds upon my head! I crave the law,
The penalty and forfeit of my bond.”

292:3 In fact, according to statistics laid before the House of Commons on July 26th, 1850, in spite of all protests, on July 15th, 1850, 3,742 children were subjected to this “practice” in 257 factories.¹⁵¹

¹⁵¹ Reports etc., for 31st October, 1850, pp. 5, 6.

„Meine Taten auf mein Haupt! Mein Recht verlang’ ich!

Die Buße und Verpfändung meines Scheins!“

304:3–4 In der Tat waren nach statistischer Vorlage an das Unterhaus vom 26. Juli 1850, trotz aller Proteste, am 15. Juli 1850 3732 Kinder in 257 Fabriken dieser „Praxis“ unterworfen.¹⁵¹

¹⁵¹ „Reports etc. for 31st Oct. 1850“, p. 5, 6.

(4) Another trick: children’s breaks in the afternoons were not regulated.

Still, this was not enough. The lynx eye of Capital discovered that the Act of 1844 did not allow 5 hours’ work before mid-day without a pause of at least 30 minutes for refreshment, but prescribed nothing of the kind for work after mid-day. Therefore, it claimed and obtained the enjoyment not only of making children of 8 drudge without intermission from 2 to 8.30 p.m., but also of making them hunger during that time.

“Ay, his heart.
So says the bond.”

↓ Footnote 152 has an important remark:

¹⁵² The nature of capital remains the same in its developed as in its undeveloped form. In the code which the influence of the slave-owners, shortly before the outbreak of the American Civil War, imposed on the territory of New Mexico, it is said that the laborer, in as much as the capitalist has bought his labor-power, “is his (the capitalist’s) money.” The same view was current among the Roman patricians. The money they had advanced to the plebeian debtor had been transformed via the means of subsistence into the flesh and blood of the debtor. This “flesh and blood” were, therefore, “their money.” Hence, the Shylock-law of the Ten Tables. Linguet’s hypothesis that the patrician creditors from time to time prepared, beyond the Tiber, banquets of debtors’ flesh, may remain as undecided as that of Daumer on the Christian Eucharist.

Noch nicht genug! Das Luchsauge des Kapitals entdeckte, daß der Akt von 1844 fünfstündige Arbeit des Vormittags nicht ohne Pause von wenigstens 30 Minuten für Erfrischung erlaubt, aber nichts der Art für die Nachmittagsarbeit vorschreibt. Es verlangte und ertrotzte daher den Genuß, achtjährige Arbeiterkinder unausgesetzt von 2 bis halb 9 Uhr abends nicht nur schansen, sondern auch hungern zu lassen!

„Ja, die Brust,
So sagt der Schein.“¹⁵²

¹⁵² Die Natur des Kapitals bleibt dieselbe, in seinen unentwickelten, wie in seinen entwickelten Formen. In dem Gesetzbuch, das der Einfluß der Sklavenhalter kurz vor Ausbruch des Amerikanischen Bürgerkriegs dem Territorium von New-Mexico aufherrschte, heißt es: der Arbeiter, soweit der Kapitalist seine Arbeitskraft gekauft hat, „ist sein (des Kapitalisten) Geld“. („The laborer is his (the capitalist’s) money.“) Dieselbe Anschauung war gangbar bei den römischen Patriziern. Das Geld, das sie dem plebejischen Schuldner vorgeschossen, hatte sich vermittelst seiner Lebensmittel in Fleisch und Blut des Schuldners verwandelt. Dies „Fleisch und Blut“ war daher „ihr Geld“. Daher das Shylocksche Gesetz der 10 Tafeln! Linguets Hypothese, daß die patrizischen Gläubiger von Zeit zu Zeit jenseits der Tiber Festschmäuse in gekochtem Schuldnerfleisch veranstalteten, bleibe ebenso dahingestellt wie Daumers Hypothese über das christliche Abendmahl.

(5) From following the Laws to the letter to open efforts to abolish the Laws:

292:4/op This Shylock-clinging to the letter of the law of 1844, so far as it regulated children’s labor, was but to lead up

304:5–305:1 Die Shylocksche Festklammer am Buchstaben des Gesetzes von 1844, soweit es die Kinderarbeit regelt, soll-

10. The Working-Day

to an open revolt against the same law, so far as it regulated the labor of “young persons and women.” It will be remembered that the abolition of the “false relay system” was the chief aim and object of that law. The masters began their revolt with the simple declaration that the sections of the Act of 1844 which prohibited the *ad libitum* use of young persons and women in such short fractions of the day of 15 hours as the employer chose, were

“comparatively harmless” so long as the work-time was fixed at 12 hours. But under the Ten Hours’ Act they were a “grievous hardship.”¹⁵³

¹⁵³ Reports, etc., for 31st Oct., 1848, p. 133.

They informed the inspectors in the coolest manner that they should place themselves above the letter of the law, and re-introduce the old system on their own account.¹⁵⁴ They were acting in the interests of the ill-advised operatives themselves,

“in order to be able to pay them higher wages.” “This was the only possible plan by which to maintain, under the Ten Hours’ Act, the industrial supremacy of Great Britain.”¹⁵⁵ “Perhaps it may be a little difficult to detect irregularities under the relay system; but what of that? Is the great manufacturing interest of this country to be treated as a secondary matter in order to save some little trouble to Inspectors and Sub-Inspectors of Factories?”¹⁵⁶

¹⁵⁴ Thus, among others, Philanthropist Ashworth to Leonard Horner, in a disgusting Quaker letter. (Reports, etc., April, 1849, p. 4.)

¹⁵⁵ Reports etc. for 31st Oct. 1848, p. 138.

¹⁵⁶ I.c., p. 140.

(6) Storm of petitions by the factory-owners against suits of the Factory Inspectors.

293:2–3 All these shifts naturally were of no avail. The Factory Inspectors appealed to the Law Courts. But soon such a cloud of dust in the way of petitions from the masters overwhelmed the Home Secretary, Sir

te jedoch nur die offene Revolte gegen dasselbe Gesetz vermitteln, soweit es die Arbeit von „jungen Personen und Frauenzimmern“ regelt. Man erinnert sich, daß die Abschaffung des „falschen Relaisystems“ Hauptzweck und Hauptinhalt jenes Gesetzes bildet. Die Fabrikanten eröffneten ihre Revolte mit der einfachen Erklärung, die Sektionen des Akts von 1844, welche beliebigen Nießbrauch der jungen Personen und Frauenzimmer in beliebigen kürzeren Abschnitten des fünfzehnstündigen Fabriktags verbieten, seien

„vergleichungsweise harmlose (comparatively harmless) geblieben, solange die Arbeitszeit auf 12 Stunden eingeschränkt war. Unter dem Zehnstundengesetz seien sie eine unerträgliche Unbill (hardship)“.¹⁵³

¹⁵³ „Report etc. for 31st Oct. 1848“, p. 133.

305:2–3 Sie zeigten daher den Inspektoren in der kühnsten Weise an, daß sie sich über den Buchstaben des Gesetzes hinwegsetzen und das alte System auf eigene Faust wieder einführen würden.¹⁵⁴ Es geschehe im Interesse der übelberatnen Arbeiter selbst,

„um ihnen höhere Löhne zahlen zu können“. „Es sei der einzig mögliche Plan, um unter dem Zehnstundengesetz die industrielle Suprematie Großbritanniens zu erhalten.“¹⁵⁵ „Es möge schwer sein, Unregelmäßigkeiten unter dem Relaisystem zu entdecken, aber was heiße das? (what of that?) Soll das große Fabrikinteresse dieses Landes als ein sekundäres Ding behandelt werden, um den Fabrikinspektoren und Subinspektoren ein bißchen mehr Mühe (some little trouble) zu sparen?“¹⁵⁶

¹⁵⁴ So unter andren Philanthrop Ashworth in einem quäkerhaft widrigen Brief an Leonard Horner. „Rep. Apr. 1849“, p. 4.)

¹⁵⁵ „Reports etc. for 31st Oct. 1848“, p. 138.

¹⁵⁶ I.c. p. 140.

305:2 Alle diese Flausen halfen natürlich nichts. Die Fabrikinspektoren schritten gerichtlich ein. Bald aber überschüttete eine solche Staubwolke von Fabrikantenpetitionen den Minister des Innern, Sir George

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

George Grey, that in a circular of August 5th, 1848, he recommends the inspectors not

“to lay informations against mill-owners for a breach of the letter of the Act, or for employment of young persons by relays in cases in which there is no reason to believe that such young persons have been actually employed for a longer period than that sanctioned by law.”

Grey, daß er in einem Zirkular vom 5. August 1848 die Inspektoren anwies,

„im allgemeinen nicht einzuschreiten wegen Verletzung des Buchstabens des Akts, so oft das Relaisystem nicht erwiesenermaßen mißbraucht werde, um junge Personen und Frauenzimmer über 10 Stunden arbeiten zu lassen“.

⇓ At least in Scotland, these petitions were successful:

Hereupon, Factory Inspector J. Stuart allowed the so-called relay system during the 15 hours of the factory day throughout Scotland, where it soon flourished again as of old. The English Factory Inspectors, on the other hand, declared that the Home Secretary had no power dictatorially to suspend the law, and continued their legal proceedings against the pro-slavery rebellion.

305:3 Hierauf erlaubte Fabrikinspektor J. Stuart das sogenannte Ablösungssystem während der fünfzehnstündigen Periode des Fabriktags in ganz Schottland, wo es bald wieder in alter Weise aufblühte. Die englischen Fabrikinspektoren dagegen erklärten, der Minister besitze keine diktatorische Gewalt zur Suspension der Gesetze, und fuhrten mit gerichtlicher Prozedur wider die Proslavery-Rebellen fort.

(7) The courts were a farce, blurring the distinction between legal and illegal:

293:5–294:1 But what was the good of summoning the capitalists when the Courts in this case the country magistrates—Cobbett’s “Great Unpaid”—acquitted them? In these tribunals, the masters sat in judgment on themselves An example. One Eskrigge, cotton-spinner, of the firm of Kershaw, Leese, & Co., had laid before the Factory Inspector of his district the scheme of a relay system intended for his mill. Receiving a refusal, he at first kept quiet. A few months later, an individual named Robinson, also a cotton-spinner, and if not his Man Friday, at all events related to Eskrigge, appeared before the borough magistrates of Stockport on a charge of introducing the identical plan of relays invented by Eskrigge. Four Justices sat, among them three cottonspinners, at their head this same inevitable Eskrigge. Eskrigge acquitted Robinson, and now was of opinion that what was right for Robinson was fair for Eskrigge. Supported by his own legal decision, he introduced the system at once into his own factory.¹⁵⁸ Of course, the composition of this tribunal was in itself a violation of the law.¹⁵⁹

306:1–2 Wozu jedoch alle Ladung vors Gericht, sobald die Gerichte, die county magistrates¹⁵⁷, freisprachen? In diesen Gerichten saßen die Herrn Farikanten über sich selbst zu Gericht. Ein Beispiel. Ein gewisser Eskrigge, Baumwollspinner von der Firma Kershaw, Leese et Co., hatte dem Fabrikinspektor seines Distrikts das Schema eines für seine Fabrik bestimmten Relaisystems vorgelegt. Abschlägig beschieden, verhielt er sich zunächst passiv. Wenige Monate später stand ein Individuum namens Robinson, ebenfalls Baumwollspinner, und wenn nicht der Freitag, so jedenfalls der Verwandte des Eskrigge, vor den Borough Justices zu Stockport, wegen Einführung des identischen, von Eskrigge ausgeheckten Relaisplans. Es saßen 4 Richter, darunter 3 Baumwollspinner, an ihrer Spitze derselbe unvermeidliche Eskrigge. Eskrigge sprach den Robinson frei und erklärte nun, was dem Robinson recht, sei dem Eskrigge billig. Auf seine eigne rechtskräftige Entscheidung gestützt, führte er sofort das System in seiner eignen Fabrik ein.¹⁵⁸ Allerdings war schon die Zusammensetzung

10. The Working-Day

These judicial farces, exclaims Inspector Howell, “urgently call for a remedy—either that the law should be so altered as to be made to conform to these decisions, or that it should be administered by a less fallible tribunal, whose decisions would conform to the law ... when these cases are brought forward. I long for a stipendiary magistrate.”¹⁶⁰

¹⁵⁷ Diese ‘county magistrates’, the ‘great unpaid’, as William Cobbett described them, are unpaid judges chosen from the most eminent people in each county. They constitute in fact the patrimonial jurisdiction of the ruling classes.

¹⁵⁸ Reports, etc., for 30th April, 1849, pp. 21, 22. Cf like examples *ibid.*, pp. 4, 5.

¹⁵⁹ By I. and II. Will. IV., ch. 24, s. 10, known as Sir John Wobhouse’s Factory Act, it was forbidden to any owner of a cotton-spinning or weaving mill, or the father, son, or brother of such owner, to act as Justice of the Peace in any inquiries that concerned the Factory Act.

¹⁶⁰ *l.c.*

(8) Therefore even Leonard Horner says that due to the relay system the Factory Acts are unenforcable:

294:2–3 The crown lawyers declared the masters’ interpretation of the Act of 1848 absurd. But the Saviours of Society would not allow themselves to be turned from their purpose. Leonard Homer reports,

“Having endeavoured to enforce the Act ... by ten prosecutions in seven magisterial divisions, and having been supported by the magistrates in one case only ... I considered it useless to prosecute more for this evasion of the law. That part of the Act of 1848 which was framed for securing uniformity in the hours of work, ... is thus no longer in force in my district (Lancashire). Neither have the sub-inspectors or myself any means of satisfying ourselves, when we inspect a mill working by shifts, that the young persons and women are not working more than 10 hours a-day ... In a return of the 30th April, ... of millowners working by shifts, the number amounts to 114, and has been for some time rapidly increasing. In general, the time of working the mill is ex-

dieser Gerichte eine offene Verletzung des Gesetzes.¹⁵⁹

„Diese Art gerichtlicher Farcen“, ruft Inspektor Howell aus, „schreien nach einem Heilmittel ... entweder paßt das Gesetz diesen Urtheilssprüchen an, oder laßt es verwalten durch ein minder fehlbares Tribunal, das seine Entscheidungen dem Gesetz anpaßt ... in allen solchen Fällen. Wie sehnt man sich nach einem bezahlten Richter!“¹⁶⁰

¹⁵⁷ Diese „county magistrates“, die „great unpaid“, wie W. Cobbett sie nennt, sind eine Art unbezahlter Friedensrichter, aus den Honoratioren der Grafschaften gebildet. Sie bilden in der Tat die Patrimonialgerichte der herrschenden Klassen.

¹⁵⁸ „Reports etc. for 30th April 1849“, p. 21, 22. Vgl. ähnliche Beispiele, *ibid.*, p. 4, 5.

¹⁵⁹ Durch 1 und 2 W[illia]m IV., c. 29, s. 10, bekannt als Sir John Hobhouse’s Factory Act, wird verboten, daß irgendein Besitzer einer Baumwollspinnerei oder Weberei oder Vater, Sohn und Bruder eines solchen Besitzers in Fragen, die den Factory Act betreffen, als Friedensrichter funktionieren.

¹⁶⁰ „Reports etc. for 30th April 1849“ [p. 22].

306:2–307:0 Die Kronjuristen erklärten die Fabrikanten-Interpretation des Aktes von 1848 für abgeschmackt, aber die Gesellschaftsretter ließen sich nicht beirren.

„Nachdem ich“, berichtet Leonard Horner, „durch 10 Verfolgungen in 7 verschiedenen Gerichtsbezirken versucht habe, das Gesetz zu erzwingen und nur in einem Fall von den Magistraten unterstützt wurde, ... halte ich weitere Verfolgung wegen Umgehung des Gesetzes für nutzlos. Der Teil des Akts, der verfaßt wurde, um Uniformität in den Arbeitsstunden zu schaffen, ... existiert nicht mehr in Lancashire. Auch besitze ich mit meinen Unteragenten durchaus kein Mittel, uns zu versichern, daß Fabriken, wo sog. Relaisystem herrscht, junge Personen und Frauenzimmer nicht über 10 Stunden beschäftigen ... Ende April 1849 arbeiteten schon 114 Fabriken in meinem Distrikt nach dieser Methode, und ihre Anzahl nimmt in der letzten Zeit reißend zu. Im allge-

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

tended to 13 1/2 hours' from 6 a.m. to 7 1/2 p.m., ... in some instances it amounts to 15 hours, from 5 1/2 a.m. to 8 1/2 p.m."¹⁶¹

¹⁶¹ Reports, etc., for 30th April, 1849, p. 5.

294:4–295:1 Already, in December, 1848, Leonard Horner had a list of 65 manufacturers and 29 overlookers who unanimously declared that no system of supervision could, under this relay system, prevent enormous over-work.¹⁶² Now, the same children and young persons were shifted from the spinning-room to the weaving-room, now, during 15 hours, from one factory to another.¹⁶³ How was it possible to control a system which,

“under the guise of relays, is some one of the many plans for shuffling ‘the hands’ about in endless variety, and shifting the hours of work and of rest for different individuals throughout the day, so that you may never have one complete set of hands working together in the same room at the same time.”¹⁶⁴

¹⁶² Reports, etc., for 31st October, 1849, p. 6.

¹⁶³ Reports, etc., for 30th April, 1849, p. 21.

¹⁶⁴ Reports, etc., for 31st October, 1848, p. 95.

(9) More detailed look at the relay system:

295:2/op But altogether independently of actual over-work, this so-called relay system was an offspring of capitalistic fantasy, such as Fourier, in his humorous sketches of “Courses Séances,” has never surpassed, except that the “attraction of labor” was changed into the attraction of capital. Look, for example, at those schemes of the masters which the “respectable” press praised as models of “what a reasonable degree of care and method can accomplish.” The *personnel* of the workpeople was sometimes divided into from 12 to 14 categories, which themselves constantly changed and recharged their constituent parts. During the 15 hours of the factory day, capital dragged in the laborer now for 30 minutes, now for an hour, and then pushed him out again, to drag him into the factory and to thrust him

meinen arbeiten sie jetzt 13 1/2 Stunden, von 6 Uhr morgens bis halb 8 Uhr abends; in einigen Fällen 15 Stunden von halb 6 Uhr morgens bis halb 9 Uhr abends.“¹⁶¹

¹⁶¹ „Reports etc. for 30th April 1849“, p. 5.

307:1–2 Schon Dezember 1848 besaß Leonard Horner eine Liste von 65 Fabrikanten und 29 Fabrikaufsehern, die einstimmig erklärten, kein System der Oberaufsicht könne unter diesem Relaisystem die intensivste Überarbeit verhindern.¹⁶² Bald wurden dieselben Kinder und jungen Personen aus der Spinnstube in die Webestube usw., bald, während 15 Stunden, aus einer Fabrik in die andre geschoben (shifted).¹⁶³ Wie ein System kontrollieren,

„welches das Wort Ablösung mißbraucht, um die Hände in endloser Mannigfaltigkeit wie Karten durcheinanderzumischen und die Stunden der Arbeit und der Rast für die verschiedenen Individuen täglich so zu verschieben, daß ein und dasselbe vollständige Assortiment von Händen niemals an demselben Platze zur selben Zeit zusammenwirkt“!¹⁶⁴

¹⁶² „Rep. etc. for 31st Oct. 1849“, p. 6.

¹⁶³ „Rep. etc. for 30th April 1849“, p. 21.

¹⁶⁴ „Rep. etc. 31st Oct. 1848“, p. 95.

307:3/o Aber ganz abgesehen von wirklicher Überarbeitung, war dies sog. Relaisystem eine Ausgeburt der Kapitalphantasie, wie sie Fourier in seinen humoristischen Skizzen der „coursées séances“ nie übertroffen hat, nur daß die Attraktion der Arbeit verwandelt war in die Attraktion des Kapitals. Man sehe sich jene Fabrikantenschemata an, welche die gute Presse pries als Muster von dem, „was ein vernünftiger Grad von Sorgfalt und Methode ausrichten kann“ (what a reasonable degree of care and method can accomplish“). Das Arbeiterpersonal wurde manchmal in 12 bis 15 Kategorien verteilt, die selbst wieder ihre Bestandteile beständig wechselten. Während der fünfzehnstündigen Periode des Fabriktags zog das Kapital den Arbeiter jetzt für 30 Minuten, jetzt für eine Stunde an und stieß ihn

10. *The Working-Day*

out afresh, hounding him hither and thither, in scattered shreds of time, without ever losing hold of him until the full 10 hours' work was done.

⇓ Comparison with stage.

As on the stage, the same persons had to appear in turns in the different scenes of the different acts. But as an actor during the whole course of the play belongs to the stage, so the operatives, during 15 hours, belonged to the factory, without reckoning the time for going and coming.

⇓ What did the workers do in the (unpaid) long breaks during the day?

Thus the hours of rest were turned into hours of enforced idleness, which drove the youths to the pot-house, and the girls to the brothel. At every new trick that the capitalist, from day to day, hit upon for keeping his machinery going 12 or 15 hours without increasing the number of his hands, the worker had to swallow his meals now in this fragment of time, now in that.

⇓ Manufacturers steal from the laborers, contradicting the propaganda against the corn laws.

At the time of the 10 hours' agitation, the masters cried out that the working mob petitioned in the hope of obtaining 12 hours' wages for 10 hours' work. Now they reversed the medal. They paid 10 hours' wages for 12 or 15 hours' lordship over labor-power.¹⁶⁵ This was the gist of the matter, this the masters' interpretation of the 10 hours' law! These were the same unctuous Free-traders, perspiring with the love of humanity, who for full 10 years, during the Anti-Corn Law agitation, had preached to the operatives, by a reckoning of pounds, shillings, and pence, that with free importation of corn, and with the means possessed by English industry, 10 hours' labor would be quite enough to enrich the capitalists.¹⁶⁶

dann wieder ab, um ihn von neuem in die Fabrik zu ziehn und aus der Fabrik zu stoßen, ihn hin und her hetzend in zerstreuten Zeitfetzen, ohne je den Halt auf ihn zu verlieren, bis die zehnstündige Arbeit vollgemacht.

Wie auf der Bühne hatten dieselben Personen abwechselnd in den verschiedenen Szenen der verschiedenen Akte aufzutreten. Aber wie ein Schauspieler während der ganzen Dauer des Dramas der Bühne gehört, so gehörten die Arbeiter jetzt während 15 Stunden der Fabrik, nicht eingerechnet die Zeit, um von und zu ihr zu gehn.

Die Stunden der Rast verwandelten sich so in Stunden erzwungenen Müßiggangs, welche den jungen Arbeiter in die Kneipe und die junge Arbeiterin in das Bordell trieben. Bei jedem neuen Einfall, den der Kapitalist täglich ausheckte, um seine Maschine ohne Vermehrung des Arbeiterpersonals 12 oder 15 Stunden im Gang zu halten, hatte der Arbeiter bald in diesem Stück Zeitabfall, bald in jenem seine Mahlzeit einzuschlucken.

Zur Zeit der Zehnstundenagitation schrien die Fabrikanten, das Arbeiterpack petitioniere, in der Erwartung, zwölfstündigen Arbeitslohn für zehnstündige Arbeit zu erhalten. Sie hatten jetzt die Medaille umgekehrt. Sie zahlten zehnstündigen Arbeitslohn für zwölf- und fünfzehnstündige Verfügung über die Arbeitskräfte!¹⁶⁵ Dies war des Pudels Kern, dies die Fabrikantenausgabe des Zehnstundengesetzes! Es waren dieselben salbungsvollen, Menschenliebe triefenden Freihändler, die den Arbeitern 10 volle Jahre, während der Anti-Corn-Law-Agitation, auf Heller und Pfennig vorgerechnet, daß bei freier Korneinfuhr eine zehnstündige Arbeit, mit den Mitteln der englischen Industrie, vollständig genüge, um die Kapitalisten zu bereichern.¹⁶⁶

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

¹⁶⁵ See Reports, etc., for 30th April, 1849, p. 6, and the detailed explanation of the “shifting system,” by Factory Inspectors Howell and Saunders, in “Reports, etc., for 31st October, 1848.” See also the petition to the Queen from the clergy of Ashton and vicinity, in the spring of 1849, against the shift system.”

¹⁶⁶ Cf. for example, ‘The Factory Question and the Ten Hours’ Bill’, By R. H. Greg, 1837.

⇓ Victory: court declares Factory Act meaningless:

296:0p This revolt of capital, after two years was at last crowned with victory by a decision of one of the four highest Courts of Justice in England, the Court of Exchequer, which in a case brought before it on February 8th, 1850, decided that the manufacturers were certainly acting against the sense of the Act of 1844, but that this Act itself contained certain words that rendered it meaningless. “By this decision, the Ten Hours’ Act was abolished.”¹⁶⁷ A crowd of masters, who until then had been afraid of using the relay system for young persons and women, now took it up heart and soul.¹⁶⁸

¹⁶⁷ F. Engels: ‘The English Ten Hours’ Bill.’ (In the “Neue Rheinische Zeitung. Politisch-ökonomische Revue.” Edited by K. Marx. April number, 1850, p. 13.) The same “high” Court of Justice discovered, during the American Civil War, a verbal ambiguity which exactly reversed the meaning of the law against the arming of pirate ships.

¹⁶⁸ Rep., etc., for 30th April, 1850.

¹⁶⁵ Siehe „Reports etc. for 30th April 1849“, p. 6, und die weitläufige Auseinandersetzung des „shifting system“ durch die Fabrikinspektoren Howell und Saunders in „Reports etc. for 31st Oct. 1848“. Siehe auch die Petition der Geistlichkeit von Ashton und Nachbarschaft, Frühling 1849, an die Königin, gegen das „shift system“.

¹⁶⁶ Vgl. z.B. „The Factory Question and the Ten Hours Bill“, von R. H. Greg, 1837.

308:1 Die zweijährige Kapitalrevolte wurde endlich gekrönt durch den Urteilsspruch eines der vier höchsten Gerichtshöfe von England, des Court of Exchequer, der in einem vor ihn gebrachten Fall am 8. Februar 1850 entschied, daß die Fabrikanten zwar wider den Sinn des Akts von 1844 handelten, dieser Akt selbst aber gewisse Worte enthalte, die ihn sinnlos machten. „Mit dieser Entscheidung war das Zehnstundengesetz abgeschafft.“¹⁶⁷ Eine Masse Fabrikanten, die bisher noch das Relaisystem für junge Personen und Arbeiterinnen gescheut, griffen nun mit beiden Händen zu.¹⁶⁸

¹⁶⁷ F. Engels, „Die englische Zehnstundenbill“ (in der von mir herausgegebenen „Neuen Rh. Zeitung. Politisch-ökonomische Revue“, Aprilheft 1850, [mecw]). Derselbe „hohe“ Gerichtshof entdeckte ebenfalls während des amerikanischen Bürgerkriegs eine Wortschraube, die das Gesetz gegen Ausrüstung von Piratenschiffen ins direkte Gegenteil verkehrt.

¹⁶⁸ „Rep. etc. for 30th April 1850.“

10.6.g. [Growing Resistance of the Proletariat]

⇓ This victory turned working class resistance from passive to active:

296:1–297:1 But on this apparently decisive victory of capital, followed at once a revulsion. The workpeople had hitherto offered a passive, although inflexible and unremitting resistance. They now protested in Lancashire and Yorkshire in threatening meetings. The pretended Ten Hours’ Act was thus simple humbug, parliamentary cheating, had never existed! The Factory Inspectors urgently warned the Government that the antagonism of classes had arrived at

309:1–3 Mit diesem scheinbar definitiven Sieg des Kapitals trat aber sofort ein Umschlag ein. Die Arbeiter hatten bisher passiven, obgleich unbeugsamen und täglich erneuten Widerstand geleistet. Sie protestierten jetzt in laut drohenden Meetings in Lancashire und Yorkshire. Das angebliche Zehnstundengesetz sei also bloßer humbug, parlamentarische Prellerei, und habe nie existiert! Die Fabrikinspektoren warnen dringend die Regierung, der Klassenant-

10. The Working-Day

an incredible tension.

agonismus sei zu einer unglaublichen Höhe gespannt.

↓ Even some capitalists dissatisfied. Small capitalists do not have enough workers for the relay system.

Some of the masters themselves murmured:

Ein Teil der Fabrikanten selbst murrte:

“On account of the contradictory decisions of the magistrates, a condition of things altogether abnormal and anarchical obtains. One law holds in Yorkshire, another in Lancashire, one law in one parish of Lancashire, another in its immediate neighbourhood. The manufacturer in large towns could evade the law, the manufacturer in country districts could not find the people necessary for the relay system, still less for the shifting of hands from one factory to another,” etc.

„Durch die widersprechenden Entscheidungen der Magistrate herrsche ein ganz abnormer und anarchischer Zustand. Ein andres Gesetz gelte in Yorkschire, ein andres in Lancashire, ein andres Gesetz in einer Pfarrei von Lancashire, ein andres in ihrer unmittelbaren Nachbarschaft. Der Fabrikant in großen Städten könne das Gesetz umgehen, der in Landflecken finde nicht das nötige Personal für das Relais-system und noch minder zur Verschiebung der Arbeiter aus einer Fabrik in die andre usw.“

And equal exploitation of labor-power by all capitalists is the first human right of capital.

Und gleiche Exploitation der Arbeitskraft ist das erste Menschenrecht des Kapitals.

↑ “Human right” is a pun. It does not mean the right of capital as a human being, but the rights to exploit the human proletarians claimed by capital.

Question 874 What did Marx mean by the statement: “equal exploitation of labor-power by all capitalists is the first human right of capital?”

↓ Compromise in the additional Factory Act of 1850; working time for young persons and women lengthened during the week but shortened on Saturdays so that the average is 10 hours. All work must go on between 6 am and 6 pm, which meant the end of the relais system. The drawbacks of this law will be discussed shortly!

297:2 Under these circumstances a compromise between masters and men was effected that received the seal of Parliament in the additional Factory Act of August 5th, 1850. The working-day for “young persons and women,” was raised from 10 to 10 1/2 hours for the first five days of the week, and shortened to 7 1/2 on the Saturday. The work was to go on between 6 a.m. and 6 p.m.,¹⁶⁹ with pauses of not less than 1 1/2 hours for meal-times, these meal-times to be allowed at one and the same time for all, and conformably to the conditions of 1844. By this an end was put to the relay system once for all.¹⁷⁰ For children’s labor, the Act of 1844 remained in force.

309:4 Unter diesen Umständen kam es zu einem Kompromiß zwischen Fabrikanten und Arbeitern, der in dem neuen zusätzlichen Fabrikakt vom 5. August 1850 parlamentarisch besiegelt ist. Für „junge Personen und Frauenzimmer“ wurde der Arbeitstag in den ersten 5 Wochentagen von 10 auf 10 1/2 Stunden erhöht, für den Samstag auf 7 1/2 Stunden beschränkt. Die Arbeit muß in der Periode von 6 Uhr morgens bis 6 Uhr abends vorgehn,¹⁶⁹ mit 1 1/2 stündigen Pausen für Mahlzeiten, die gleichzeitig und gemäß den Bestimmungen von 1844 einzuräumen sind usw. Damit war dem Relais-system ein für allemal ein Ende gemacht.¹⁷⁰ Für die Kinderarbeit blieb das Gesetz von 1844 in Kraft.

¹⁶⁹ In winter, from 7 a.m. to 7 p.m. may be substituted.

¹⁶⁹ Im Winter kann die Periode zwischen 7 Uhr morgens und 7 Uhr abends an die Stellen treten.

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

¹⁷⁰ “The present law (of 1850) was a compromise whereby the employed surrendered the benefit of the Ten Hours’ Act for the advantage of one uniform period for the commencement and termination of the labor of those whose labor is restricted.” (Reports, etc., for 30th April, 1852, p. 14.)

↓ Exception for silk weavers:

297:3–299:1 One set of masters, this time as before, secured to itself special seigniorial rights over the children of the proletariat. These were the silk manufacturers. In 1833 they had howled out in threatening fashion, “if the liberty of working children of any age for 10 hours a day were taken away, it would stop their works.”¹⁷¹ It would be impossible for them to buy a sufficient number of children over 13. They extorted the privilege they desired. The pretext was shown on subsequent investigation to be a deliberate lie. It did not, however, prevent them, during 10 years, from spinning silk 10 hours a day out of the blood of little children who had to be placed upon stools for the performance of their work.¹⁷² The Act of 1844 certainly “robbed” them of the “liberty” of employing children under 11 longer than 6 1/2 hours a day. But it secured to them, on the other hand, the privilege of working children between 11 and 13, 10 hours a day, and of annulling in their case the education made compulsory for all other factory children. This time the pretext was

“the delicate texture of the fabric in which they were employed, requiring a lightness of touch, only to be acquired by their early introduction to these factories.”¹⁷³

The children were slaughtered out-and-out for the sake of their delicate fingers, as in Southern Russia the horned cattle for the sake of their hide and tallow. At length, in 1850, the privilege granted in 1844, was limited to the departments of silk-twisting and silk-winding. But here, to make amends to capital bereft of its “freedom,” the worklime for children from 11 to 13 was raised

¹⁷⁰ „Das gegenwärtige Gesetz“ (von 1850) „war ein Kompromiß, bei dem die Arbeiter auf den Segen des Zehnstundengesetzes für den Vorteil eines einheitlichen Arbeitsbeginns und Arbeitsschlusses jener verzichteten, deren Arbeitszeit der Begrenzung unterliegt.“ („Reports etc. for 30th April 1852“, p. 14.)

309:5–311:1 Eine Fabrikantenkategorie sicherte sich diesmal, wie früher, besondere Seigniorialrechte auf Proletariatkinder. Es waren dies die Seidenfabrikanten. Im Jahr 1833 hatten sie drohend geheult, „wenn man ihnen die Freiheit raube, Kinder jedes Alters täglich 10 Stunden abzurackern, setze man ihre Fabriken still“ („if the liberty of working children of any age for 10 hours a day was taken away, it should stop their works“). Es sei ihnen unmöglich, eine hinreichende Anzahl von Kindern über 13 Jahren zu kaufen. Sie erpreßten das gewünschte Privilegium. Der Vorwand stellte sich bei später Untersuchung als bare Lüge heraus,¹⁷¹ was sie jedoch nicht verhinderte, während eines Dezenniums aus dem Blut kleiner Kinder, die zur Verrichtung ihrer Arbeit auf Stühle gestellt werden mußten, täglich 10 Stunden Seide zu spinnen.¹⁷² Der Akt von 1844 „beraubte“ sie zwar der „Freiheit“, Kinder unter 11 Jahren länger als 6 1/2 Stunden, sicherte ihnen dagegen das Privilegium, Kinder zwischen 11 und 13 Jahren 10 Stunden täglich zu verarbeiten, und kassierte den für andre Fabrikinder vorgeschriebenen Schulzwang. Diesmal der Vorwand:

„Die Delikatesse des Gewebes erheische eine Fingerzartheit, die nur durch frühen Eintritt in die Fabrik zu sichern.“¹⁷³

Der delikaten Finger wegen wurden die Kinder ganz geschlachtet, wie Hornvieh in Südrußland wegen Haut und Talg. Endlich, 1850, wurde das 1844 eingeräumte Privilegium auf die Departements der Seidenzwirnerie und Seidenhaspellei beschränkt, hier aber, zum Schadenersatz des seiner „Freiheit“ beraubten Kapitals, die Arbeitszeit für Kinder von 11 bis 13 Jahren von 10

10. The Working-Day

from 10 to 10 1/2 hours. Pretext: "Labor in silk mills was lighter than in mills for other fabrics, and less likely in other respects also to be prejudicial to health."¹⁷⁴ Official medical inquiries proved afterwards that, on the contrary,

"the average death-rate is exceedingly high in the silk districts and amongst the female part of the population is higher even than it is in the cotton districts of Lancashire."¹⁷⁵

Despite the protests of the Factory Inspector, renewed every 6 months, the mischief continues to this hour.¹⁷⁶

¹⁷¹ Reports, etc., for Sept., 1844, p. 13.

¹⁷² I.c.

¹⁷³ "Reports, etc., for 31st Oct., 1846," p. 20.

¹⁷⁴ Reports, etc., for 31st Oct., 1861, p. 26.

¹⁷⁵ I.c., p. 27. On the whole the working population, subject to the Factory Act, has greatly improved physically. All medical testimony agrees on this point, and personal observation at different times has convinced me of it. Nevertheless, and exclusive of the terrible death-rate of children in the first years of their life, the official reports of Dr. Greenhow show the unfavourable health condition of the manufacturing districts as compared with "agricultural districts of normal health." As evidence, take the following table from his 1861 report:

¹⁷⁶ It is well known with what reluctance the English "Free-traders," gave up the protective duty on the silk manufacture. Instead of the protection against French importation, the absence of protection to English factory children now serves their turn.

⇓ It was an anomaly, perhaps an oversight, in the Factory Acts that children could be used within the limits of a longer working-day than women. The factory owners intended to use this anomaly in order to lengthen the time for male adults back to 15 hours. But it became clear that this would meet fierce resistance of the male workers; therefore the act of 1853 closed this loophole.

299:2 The Act of 1850 changed the 15 hours' time from 6 a.m. to 8.30 p.m., into the 12 hours from 6 a.m. to 6 p.m. for

auf 10 1/2 Stunden erhöht. Vorwand: „Die Arbeit sei leichter in Seidenfabriken als in den andren Fabriken und in keiner Weise so nachteilig für die Gesundheit.“¹⁷⁴ Offizielle ärztliche Untersuchung bewies hinterher, daß umgekehrt

„die durchschnittliche Sterblichkeitsrate in den Seidendistrikten ausnahmsweise hoch und unter dem weiblichen Teil der Bevölkerung selbst höher ist als in den Baumwolldistrikten von Lancashire“¹⁷⁵.

Trotz der halbjährlich wiederholten Proteste der Fabrikinspektoren dauert der Unfug bis zur Stunde fort.¹⁷⁶

¹⁷¹ „Reports etc. for 30th Sept. 1844“, p. 13.

¹⁷² I.c.

¹⁷³ „The delicate texture of the fabric in which they were employed requiring a lightness of touch, only to be acquired by their early introduction to these factories.“ „Rep. etc. for 31st Oct. 1846“, p. 20.)

¹⁷⁴ „Reports etc. for 31st Oct. 1861“, p. 26.

¹⁷⁵ I.c. p. 27. Im allgemeinen hat sich die dem Fabrikgesetz unterworfenen Arbeiterbevölkerung physisch sehr verbessert. Alle ärztlichen Zeugnisse stimmen darin überein und eigne persönliche Anschauung zu verschiedenen Perioden hat mich davon überzeugt. Dennoch, und abgesehen von der ungeheuren Sterblichkeitsrate der Kinder in den ersten Lebensjahren, zeigen die offiziellen Berichte des Dr. Greenhow den ungünstigen Gesundheitszustand der Fabrikdistrikte, verglichen mit „Agrikulturdistrikten von normaler Gesundheit“. Zum Beweis u.a. folgende Tabelle aus seinem Bericht von 1861:

¹⁷⁶ Man weiß, wie widerstrebend die englischen „Freihändler“ dem Schutzzoll für Seidenmanufaktur entsagten. Statt des Schutzes gegen französische Einfuhr dient nun die Schutzlosigkeit englischer Fabrikinder.

311:2/o Das Gesetz von 1850 verwandelte nur für „junge Personen und Frauenzimmer“ die fünfzehnstündige Periode von halb

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

“young persons and women” only. It did not, therefore, affect children who could always be employed for half an hour before and 2 1/2 hours after this period, provided the whole of their labor did not exceed 6 1/2 hours. Whilst the bill was under discussion, the Factory Inspectors laid before Parliament statistics of the infamous abuses due to this anomaly. To no purpose. In the background lurked the intention of screwing up, during prosperous years, the working-day of adult males to 15 hours by the aid of the children. The experience of the three following years showed that such an attempt must come to grief against the resistance of the adult male operatives.¹⁷⁷ The Act of 1850 was therefore finally completed in 1853 by forbidding the “employment of children in the morning before and in the evening after young persons and women.”

6 Uhr morgens bis halb 9 Uhr abends in die zwölfstündige Periode von 6 Uhr morgens bis 6 Uhr abends. Also nicht für Kinder, die immer noch eine halbe Stunde vor Beginn und 2 1/2 Stunden nach Schluß dieser Periode verwertbar blieben, wenn auch die Gesamtdauer ihrer Arbeit 6 1/2 Stunden nicht überschreiten durfte. Während der Diskussion des Gesetzes wurde dem Parlament von den Fabrikinspektoren eine Statistik über die infamen Mißbräuche jener Anomalie unterbreitet. Jedoch umsonst. Im Hintergrund lauerte die Absicht, den Arbeitstag der erwachsenen Arbeiter mit Beihilfe der Kinder in Prosperitätsjahren wieder auf 15 Stunden zu schrauben. Die Erfahrung der folgenden 3 Jahre zeigte, daß solcher Versuch am Widerstand der erwachsenen männlichen Arbeiter scheitern müsse.¹⁷⁷ Der Akt von 1850 wurde daher 1853 endlich ergänzt durch das Verbot, „Kinder des Morgens vor und Abends nach den jungen Personen und Frauenzimmern zu verwenden“.

↓ This meant that the factory acts regulated the labor times of all workers.

Henceforth with a few exceptions the Factory Act of 1850 regulated the working-day of all workers in the branches of industry that come under it.¹⁷⁸ Since the passing of the first Factory Act half a century had elapsed.¹⁷⁹

Von nun an regelte, mit wenigen Ausnahmen, der Fabrikakt von 1850 in den ihm unterworfenen Industriezweigen den Arbeitstag aller Arbeiter.¹⁷⁸ Seit dem Erlass des ersten Fabrikakts war jetzt ein halbes Jahrhundert verflossen.¹⁷⁹

¹⁷⁷ Reports etc. for 30th April 1853, p. 30.

¹⁷⁷ „Reports etc. for 30th April 1853“, p. 30.

↓ Footnote 178 shows how the male adult workers fought for a limitation of their working hours:

¹⁷⁸ During 1859 and 1860, the zenith years of the English cotton industry, some manufacturers tried, by the decoy bait of higher wages for over-time, to reconcile the adult male operatives to an extension of the working-day. The hand-mule spinners and self-actor mincers put an end to the experiment by a petition to their employers in which they say, “Plainly speaking, our lives are to us a burthen; and, while we are confined to the mills *nearly two days a week more* than the other operatives of the country, we feel like helots in the land, and that we are perpetuating a system injurious to ourselves and future generations . . . This, therefore, is to give you most respectful notice that when we commence work

¹⁷⁸ Während der Zenitjahre der englischen Baumwollindustrie, 1859 und 1860, versuchten einige Fabrikanten durch die Lockangel hoher Arbeitslöhne für Extrazeit, die Erwachsenen männlichen Spinner usw. zur Verlängerung des Arbeitstags zu bestimmen. Die Hand-Mule Spinner und Self-Actor Minders machten dem Experiment ein Ende durch eine Denkschrift an ihre Anwender, worin es u.a. heißt: „Grad herausgesprochen, unser Leben ist uns zur Last, und solange wir fast 2 Tage die Woche“ (20 Stunden) „länger an die Fabrik gekettet sind als die andren Arbeiter, fühlen wir uns gleich Heloten im Lande und werfen uns selbst vor, ein System zu verewigen, das uns selbst und unsre Nach-

10. The Working-Day

again after the Christmas and New Year's holidays, we shall work 60 hours per week, and no more, or from six to six, with one hour and a half out." (Reports, etc., for 30th April, 1860, p. 30.)

¹⁷⁹ On the means that the wording of this Act afforded for its violation cf. the Parliamentary Return "Factories Regulation Act" (6th August, 1859), and in it Leonard Homer's "Suggestions for amending the Factory Acts to enable the Inspectors to prevent illegal working, now becoming very prevalent."

kommen physisch und moralisch beschädigt ... Daher geben wir hier mit respektvoller Notiz, daß wir von Neujahrstag an keine Minute mehr als 60 Stunden wöchentlich, von 6 Uhr bis 6 Uhr, mit Abzug der gesetzlichen Pausen von 1 1/2 Stunden, arbeiten werden." „Reports etc. for 30th April 1860“, p. 30.)

¹⁷⁹ Über die Mittel, die die Fassung dieses Gesetzes für seinen Bruch gewährt, cf. den Parliamentary Return „Factories Regulation Acts“ (9. August 1859) und darin Leonard Horners „Suggestions for Amending the Factory Acts to enable the Inspectors to prevent illegal working, now become very prevalent“.

10.6.h. [“Wonderful Development” 1853–1860]

The only remaining limitation preventing a general regulation of the working-day consisted in the fact that the factory acts applied only for a few selected industries.

↓ “Printworks’ Act of 1845” (i.e., 8 years before the 1853 laws which Marx is presently discussing) had been the first attempt to extend factory legislation beyond the industries for which it was originally intended.

299:3/o Factory legislation for the first time went beyond its original sphere in the “Printworks’ Act of 1845.” The displeasure with which capital received this new “extravagance” speaks through every line of the Act.

In the machinery chapter, 497:1, Marx will say more about the contradiction between the necessity to pass the legislation, and the reluctance to apply it.

It limits the working-day for children from 8 to 13, and for women to 16 hours, between 6 a.m. and 10 p.m., without any legal pause for meal-times. It allows males over 13 to be worked at will day and night.¹⁸⁰ It is a Parliamentary abortion.¹⁸¹

¹⁸⁰ “Children of the age of 8 years and upwards, have, indeed, been employed from 6 a.m. to 9 p.m. during the last half year in my district.” (Reports, etc., for 31st October, 1857, p. 39.)

¹⁸¹ “The Printworks’ Act is admitted to be a failure both with reference to its educational and protective provisions.” (Reports, etc., for 31st October, 1862, p. 52.)

312:1 Über ihre ursprüngliche Sphäre griff die Gesetzgebung zuerst hinaus durch den „Printworks’ Act“ (Gesetz über Kattundruckereien usw.) von 1845. Die Unlust, womit das Kapital diese neue „Extravaganz“ zuließ, spricht aus jeder Zeile des Akts!

Er beschränkt den Arbeitstag für Kinder von 8–13 Jahren und für Frauenzimmer auf 16 Stunden zwischen 6 Uhr morgens und 10 Uhr abends, ohne irgendeine gesetzliche Pause für Mahlzeiten. Er erlaubt, männliche Arbeiter über 13 Jahre Tag und Nacht hindurch beliebig abzuarbeiten.¹⁸⁰ Er ist ein parlamentarischer Abort.¹⁸¹

¹⁸⁰ „Kinder von 8 Jahren und darüber sind in der Tat von 6 Uhr morgens bis 9 Uhr abends während des letzten Halbjahrs“ (1857) „in meinem Distrikt abgerackert worden.“ „Reports etc. for 31st Oct. 1857“, p. 39.)

¹⁸¹ „Das Gesetz über Kattundruckereien ist zugestandenmaßen ein Fehlgriff sowohl in bezug auf seine Erziehungs- als auch seine Schutzmaßregeln.“ „Reports etc. for 31st Oct. 1862“, p. 52.)

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

↑ This first attempt to extend the factory acts to other industries had therefore been a failure. ↓ But the 1853 victory of the factory acts in the original industries, which are the industries most characteristic of the capitalist mode of production, constituted a victory of “the principle,” opening the door to a “wonderful development” not only of the welfare of the working class but of the entire capitalist mode of production 1853–1860.

300:1 However, the principle had triumphed with its victory in those branches of big industry which form the most characteristic creation of the modern mode of production. Their wonderful development from 1853 to 1860, hand-in-hand with the physical and moral regeneration of the factory workers, struck the most purblind.

312:2/o Dennoch hatte das Prinzip gesiegt mit seinem Sieg in den großen Industriezweigen, welche das eigenste Geschöpf der modernen Produktionsweise. Ihre wundervolle Entwicklung von 1853–1860, Hand in Hand mit der physischen und moralischen Wiedergeburt der Fabrikarbeiter, schlug das blödeste Auge.

“Their wonderful development” means here: the wonderful development of the branches of industry covered by the Factory Acts. This is unambiguous in the original German. Not only the workers benefited, but those branches of industry in which the factory laws applied also had higher profits and higher productivity.

This shows the victory of which principle? In his 1864 “Inaugural Address to the First International” Marx said that the Ten Hours’ Bill in England

was not only a great practical success; it was the victory of a principle; it was the first time that in broad daylight the political economy of the middle class (blind rule of the supply and demand laws) succumbed to the political economy of the working class (social production controlled by social foresight).

(I inserted the parentheses from the directly preceding sentence by Marx).

Marx stresses the importance of the development of the working class also in the Preface to the First Edition, 9:4/o; this is the reason why he put so much emphasis on the working-day. In chapter Fifteen, 504:3/o, Marx also mentions that despite its inevitability as a protective measure for the working class the factory legislation sharpens the contradictions inherent in the capitalist mode of production.

Question 875 Which principle did Marx mean when he said in 408:2/o that “the principle had triumphed”?

↓ The general benefits of the factory legislation were so obvious that even the capitalists, who had originally fought it tooth and nail, now bragged about it:

The masters from whom the legal limitation and regulation had been wrung step by step after a civil war of half a century, themselves referred ostentatiously to the contrast with the branches of exploitation still “free.”¹⁸²

Die Fabrikanten selbst, denen die gesetzliche Schranke und Regel des Arbeitstags durch halbhundertjährigen Bürgerkrieg Schritt für Schritt abgetrotzt, wiesen prahlend auf den Kontrast mit den noch „freien“ Exploitationsgebieten hin.¹⁸²

¹⁸² Thus, e.g., E. Potter in a letter to the *Times* of March 24th, 1863. The *Times* reminded him of the manufacturers’ revolt against the Ten Hours’ Bill.

¹⁸² So z.B. E. Potter in Brief an „Times“ vom 24. März 1863. Die „Times“ erinnert ihn an die Fabrikantenrevolte gegen das Zehnstundengesetz.

After their defeat, the capitalists did not admit that they ever had fought against this progressive legislation, but tried to even get credit for it.

10. The Working-Day

Question 876 *Why did the capitalists praise the advantages of the factory acts after they were passed?*

↓ After the laws were achieved through class struggle, the political economists suddenly got the enlightenment that such laws were a necessity:

The Pharisees of "Political Economy" now proclaimed the discernment of the necessity of a legally fixed working-day as a characteristic new discovery of their "science."¹⁸³

¹⁸³ Thus, among others, Mr. W. Newmarch, collaborator and editor of Tooke's "History of Prices." Is it a scientific advance to make cowardly concessions to public opinion?

↓ Also the resistance of the capitalists weakened. Once the laws were an actuality, they no longer seemed so outrageous.

It will be easily understood that after the factory magnates had resigned themselves and become reconciled to the inevitable, the power of resistance of capital gradually weakened, whilst at the same time the power of attack of the working-class grew with the number of its allies in the classes of society not immediately interested in the question. Hence the comparatively rapid advance since 1860.

↓ Expansion of this legislation into other industries.

300:1–302:0 The dye-works and bleach-works all came under the Factory Act of 1850 in 1860;¹⁸⁴ lace and stocking manufactures in 1861.

↓ The footnote shows that they tried to repeat the same tricks which were also tried in the cotton factories:

¹⁸⁴ The Act passed in 1860, determined that, in regard to dye and bleachworks, the working-day should be fixed on August 1st, 1861, provisionally at 12 hours, and definitely on August 1st, 1862, at 10 hours, *i.e.*, at 10 1/2 hours for ordinary days, and 7 1/2 for Saturday. Now, when the fatal year, 1862, came, the old farce was repeated. Besides, the manufacturers petitioned Parliament to allow the employment of young persons and women for 12 hours during one year longer. "In the existing condition of the trade (the time of the cotton famine), it was greatly to the advantage of the operatives to work 12 hours per day, and make wages when they could." A bill to this effect had been brought in, "and it was mainly due to the action of the operative bleach-

Die Pharisäer der „politischen Ökonomie“ proklamierten nun die Einsicht in die Notwendigkeit eines gesetzlich geregelten Arbeitstags als charakteristische Neuerrungenschaft ihrer „Wissenschaft“.¹⁸³

¹⁸³ So u.a. Herr W. Newmarch, Mitarbeiter an und Herausgeber von Tookes „History of Prices“. Ist es wissenschaftlicher Fortschritt, der öffentlichen Meinung feige Konzessionen zu machen?

Man versteht leicht, daß, nachdem sich die Fabrikmagnaten in das Unvermeidliche gefügt und mit ihm ausgesöhnt, die Widerstandskraft des Kapitals graduell abschwächte, während zugleich die Angriffskraft der Arbeiterklasse wuchs mit der Zahl ihrer Verbündeten in den nicht unmittelbar interessierten Gesellschaftsschichten. Daher vergleichungsweise rascher Fortschritt seit 1860.

313:1/oo Die Färbereien und Bleichereien¹⁸⁴ wurden 1860, die Spitzenfabriken und Strumpfwirkereien 1861 dem Fabrikakt von 1850 unterworfen.

¹⁸⁴ Der 1860 erlassene Akt über Bleichereien und Färbereien bestimmt, daß der Arbeitstag am 1. August 1861 vorläufig auf 12, am 1. August 1862 definitiv auf 10 Stunden, d.h. 10 1/2 für Werkeltage und 7 1/2 für Samstage herabgesetzt werde. Als nun das böse Jahr 1862 anbrach, wiederholte sich die alte Farce. Die Herrn Fabrikanten petitionierten das Parlament, nur noch für ein einziges Jahr länger die zwölfstündige Beschäftigung von jungen Personen und Frauenzimmern zu dulden ... „Beim gegenwärtigen Zustand des Geschäfts“ (zur Zeit der Baumwollnot) „sei es ein großer Vorteil für die Arbeiter, wenn man ihnen erlaubt, 12 Stunden täglich zu arbeiten und so viel Arbeitslohn als möglich herauszuschlagen ... Es war bereits gelungen, eine Bill in die-

10.6. Limitation by Law of the Working Time. Factory Acts 1833–64

ers in Scotland that the bill was abandoned.” (Reports, etc., for 31st October, 1862, pp. 14–15.) Thus defeated by the very workpeople, in whose name it pretended to speak. Capital discovered, with the help of lawyer spectacles, that the Act of 1860, drawn up, like all the Acts of Parliament for the “protection of labor,” in equivocal phrases, gave them a pretext to exclude from its working the calenderers and finishers. English jurisprudence, ever the faithful servant of capital, sanctioned in the Court of Common Pleas this piece of pettifogging. “The operatives have been greatly disappointed . . . they have complained of over-work, and it is greatly to be regretted that the clear intention of the legislature should have failed by reason of a faulty definition.” (l.c., p. 18.)

sem Sinn ins Unterhaus zu bringen. Sie fiel vor der Agitation der Arbeiter in den Bleichereien Schottlands.“ („Reports etc. for 31st Oct. 1862“, p. 14, 15.) So geschlagen von den Arbeitern selbst, in deren Namen es zu sprechen vorgab, entdeckte das Kapital nun, mit Hilfe juristischer Brillen, daß der Akt von 1860, gleich allen Parlamentasakten zum „Schutz der Arbeit“, in sinnverwirrten Wortschraubungen abgefaßt, einen Vorwand gebe, die „calenderers“ und „finishers“ von seiner Wirkung auszuschließen. Die englische Jurisdiktion, stets getreuer Knecht des Kapitals, sanktionierte durch den Hof der „Common Pleas“ die Rabulisterie. „Es hat große Unzufriedenheit unter den Arbeitern erregt und ist sehr bedauerlich, daß die klare Absicht der Gesetzgebung auf Vorwand einer mangelhaften Wortdefinition vereitelt wird.“ (l.c. p. 18.)

↓ *The Children’s Employment Commission* caused regulation of many industries.

In consequence of the first report of the Commission on the employment of children (1863) the same fate was shared by the manufacturers of all earthenwares (not merely pottery), Lucifer-matches, percussion-caps, cartridges, carpets, fustian-cutting, and many processes included under the name of “finishing.” In the year 1863 bleaching in the open air¹⁸⁵ and baking were placed under special Acts, by which, in the former case, the labor of young persons and women during the night-time (from 8 in the evening to 6 in the morning), and in the latter, the employment of journeymen bakers under 18, between 9 in the evening and 5 in the morning were forbidden.

Infolge des ersten Berichts der „Kommission über die Beschäftigung der Kinder“ (1863) teilten dasselbe Schicksal die Manufaktur aller Erdenwaren (nicht nur Töpfereien), der Zündhölzer, Zündhütchen, Patronen, Tapetenfabrik, Baumwollsamtscherelei (fustian cutting) und zahlreiche Prozesse, die unter dem Ausdruck „finishing“ (letzte Appretur) zusammengefaßt sind. Im Jahre 1863 wurden die „Bleicherei in offener Luft“¹⁸⁵ und die Bäckerei unter eigne Akte gestellt, wovon der erste u.a. die Arbeit von Kindern, jungen Personen und Weibern zur Nachtzeit (von 8 Uhr abends bis 6 Uhr morgens) und der zweite die Anwendung von Bäckergehilfen unter 18 Jahren zwischen 9 Uhr abends und 5 Uhr morgens verbietet.

¹⁸⁵ The “open-air bleachers” had evaded the law of 1860, by means of the lie that no women worked at it in the night. The lie was exposed by the Factory Inspectors, and at the same time Parliament was, by petitions from the operatives, bereft of its notions as to the cool meadow-fragrance, in which bleaching in the open-air was reported to take place. In this aerial bleaching, drying-rooms were used at temperatures of from 90° to 100° Fahrenheit, in which the work was done for the most part by girls. “Cooling” is the technical expression for their occasional escape from the drying-rooms into the fresh air. “Fifteen girls in stoves. Heat from 80° to 90° for linens,

¹⁸⁵ Die „Bleicher in offener Luft“ hatten sich dem Gesetz von 1860 über „Bleicherei“ durch die Lüge entzogen, daß sie keine Weiber des Nachts verarbeiteten. Die Lüge wurde von den Fabrikinspektoren aufgedeckt, zugleich aber das Parlament durch Arbeiterpetitionen seiner wiesenduftkühlen Vorstellungen von „Bleicherei in offener Luft“ beraubt. In dieser Luftbleicherei werden Trockenzimmer von 90 bis 100 Grad Fahrenheit angewandt, worin hauptsächlich Mädchen arbeiten. „Cooling“ (Abkühlung) ist der technische Ausdruck für gelegentliches Entrinnen aus dem Trockenzimmer in die freie Luft. „Fünfzehn Mädchen in den Trockenzimmern. Hitze

10. The Working-Day

and 100° and upwards for cambrics. Twelve girls ironing and doing-up in a small room about 10 feet square, in the centre of which is a close stove. The girls stand round the stove, which throws out a terrific heat, and dries the cambrics rapidly for the ironers. The hours of work for these hands are unlimited. If busy, they work till 9 or 12 at night for successive nights.” (Reports, etc., for 31st October, 1862, p. 56.) A medical man states: “No special hours are allowed for cooling, but if the temperature gets too high, or the workers’ hands get soiled from perspiration, they are allowed to go out for a few minutes . . . My experience, which is considerable, in treating the diseases of stove workers, compels me to express the opinion that their sanitary condition is by no means so high as that of the operatives in a spinning factory (and Capital, in its memorials to Parliament, had painted them as floridly healthy after the manner of Rubens.) The diseases most observable amongst them are phthisis, bronchitis, irregularity of uterine functions, hysteria in its most aggravated forms, and rheumatism. All of these, I believe, are either directly or indirectly induced by the impure, overheated air of the apartments in which the hands are employed and the want of sufficient comfortable clothing to protect them from the cold, damp atmosphere, in winter, when going to their homes.” (l.c., pp. 56–57.)

von 80 zu 90° für Leinwand, von 100° und mehr für Cambrics. Zwölf Mädchen bügeln und legen auf (die Cambrics etc.) in einem kleinen Zimmer von ungefähr 10 Fuß im Quadrat, in der Mitte ein enggeschlossener Ofen. Die Mädchen stehen rund um den Ofen herum, der eine schreckliche Glut ausstrahlt und die Cambrics rasch für die Büglerinnen trocknet. Die Stundenzahl für diese Hände ist unbeschränkt. Wenn geschäftig, arbeiten sie bis 9 oder 12 Uhr nachts viele Tage hintereinander.“ „Reports etc. for 31st Oct. 1862“, p. 56.) Ein Arzt erklärt: „Für die Abkühlung sind keine besondern Stunden erlaubt, aber wenn die Temperatur zu unerträglich wird, oder die Hände der Arbeiterinnen sich von Schweiß beschmutzen, ist ihnen gestattet, ein paar Minuten fortzugehen . . . Meine Erfahrung in der Behandlung der Krankheiten dieser Arbeiterinnen zwingt mich zu konstatieren, daß ihr Gesundheitszustand tief unter dem der Baumwollspinnerinnen steht“ (und das Kapital hatte sie in seinen Bittschriften an das Parlament in der Manier von Rubens übergesandt gemalt!). „Ihre auffallendsten Krankheiten sind Phthisis, Bronchitis, Uterinkrankheiten, Hysterie in der scheußlichsten Form und Rheumatismus. Alle diese entspringen, wie ich glaube, direkt oder indirekt, aus der überhitzten Luft ihrer Arbeitszimmer und dem Mangel genügender komfortabler Kleidung, um sie beim Nachhausegehen während der Wintermonate vor der kaltefeuchten Atmosphäre zu schützen.“ (l.c. p. 56, 57.)

↓ Despite these horrible conditions, the 1863 law remained ineffectual.

^{185 ctd} The Factory Inspectors remarked on the supplementary law of 1860, torn from these open-air bleachers: “The Act has not only failed to afford that protection to the workers which it appears to offer, but contains a clause . . . apparently so worded that, unless persons are detected working after 8 o’clock at night they appear to come under no protective provisions at all, and if they do so work the mode of proof is so doubtful that a conviction can scarcely follow.” (l.c., p. 52.) “To all intents and purposes, therefore, as an Act for any benevolent or educational purpose, it is a failure; since it can scarcely be called benevolent to permit, which is tantamount to compelling, women and children to work 14 hours a day with or without meals, as the case may be, and perhaps for longer hours than these, without limit as to age, without reference to sex, and without regard to the social habits of the fam-

^{185 ctd} Die Fabrikinspektoren bemerken über das den jovialen „Bleichern in offener Luft“ nachträglich abgetrozzte Gesetz von 1863: „Dieser Akt hat nicht nur verfehlt, den Arbeitern den Schutz zu gewähren, den er zu gewähren scheint . . . er ist so formuliert, daß der Schutz erst eintritt, sobald man Kinder und Frauenzimmer nach 8 Uhr abends an der Arbeit ertappt, und selbst dann ist die vorgeschriebene Beweismethode so verklausuliert, daß Bestrafung kaum erfolgen kann.“ (l.c. p. 52.) „Als ein Akt mit humanen und auf Erziehung gerichteten Zwecken ist er ganz und gar verfehlt. Man wird es doch kaum human nennen, Weibern und Kindern zu erlauben, oder, was auf dasselbe hinauskommt, sie zu zwingen, 14 Stunden täglich, mit oder ohne Mahlzeiten, wie es sich treffen mag, und vielleicht noch längere Stunden zu arbeiten, ohne Schranke mit Bezug auf das Alter, ohne Unterschied des Geschlechts

10.7. Effect of English Factory Acts on Other Countries

ilies of the neighbourhood, in which such works (bleaching and dyeing) are situated.” (Reports, etc., for 30th April, 1863, p. 40.)

We shall return to the later proposals of the same Commission, which threatened to deprive of their “freedom” all the important branches of English Industry, with the exception of agriculture, mines, and the means of transport.^{185a}

^{185a} Note to the 2nd Ed. Since 1866, when I wrote the above passages, a reaction has again set in.

und ohne Rücksicht auf die gesellschaftlichen Gewohnheiten der Familien der Nachbarschaft, worin die Bleichwerke liegen.“ („Reports etc. for 30th April 1863“, p. 40.)

Auf die spätern Vorschläge der erwähnten Kommission, welche, mit Ausnahme des Ackerbaus, der Minen und des Transportwesens, alle wichtigen englischen Industriezweige der „Freiheit“ zu berauben drohen, kommen wir zurück.^{185a}

^{185a} Note zur 2. Ausg. Seit 1866, wo ich das im Text Befindliche schrieb, ist wieder eine Reaktion eingetreten.

10.7. The Struggle around the Normal Working-Day. Effect of the English Factory Acts on Other Countries

This section discusses not only the geographical dispersal of the Factory Acts, but also their generalization to other industries after they were first introduced as exceptional legislation in the cotton industry.

302:1 The reader will bear in mind that the production of surplus-value, or the extraction of surplus-labor, is the specific end and aim, the sum and substance, of capitalist production, quite apart from any changes in the mode of production, which may arise from the subordination of labor to capital.

315:1 Der Leser erinnert sich, daß die Produktion von Mehrwert oder die Extraktion von Mehrarbeit den spezifischen Inhalt und Zweck der kapitalistischen Produktion bildet, abgesehen von jedweder aus der Unterordnung der Arbeit unter das Kapital etwa entspringenden Umgestaltung der Produktionsweise selbst.

↑ Marx has made a similar remark in footnote 152 to paragraph 292:3. The transformation of the mode of production itself is not the purpose. The capitalist does not care whether it occurs or not, he only cares about his profits. Why do we therefore discuss this transformation of production here in such detail? There is also another point where the present discussion seems atypical:

He will remember that as far as we have at present gone only the independent laborer, and therefore only the laborer legally qualified to act for himself, enters as a vendor of a commodity into a contract with the capitalist. If, therefore, in our historical sketch, on the one hand, modern industry, on the other, the labor of those who are physically and legally minors, play important parts, the former was to us only a special department, and the latter only a specially striking example of labor exploitation. Without, however,

Er erinnert sich, daß auf dem bisher entwickelten Standpunkt nur der selbständige und daher gesetzlich mündige Arbeiter als Warenverkäufer mit dem Kapitalisten kontrahiert. Wenn also in unsrer historischen Skizze einerseits die moderne Industrie eine Hauptrolle spielt, andererseits die Arbeit physisch und rechtlich Unmündiger, so galt uns die eine nur als besondere Sphäre, die andre nur als besonders schlagendes Beispiel der Arbeitsausaugung. Ohne jedoch der spätern Entwicklung vorzugreifen, folgt

10. The Working-Day

anticipating the subsequent development of our inquiry, from the mere connexion of the historic facts before us it follows:

(1) Factory legislation started as exceptional legislation, restricted to textile production, where machinery was used first. This machinery changed the social relations of the producers (child labor). This made excesses possible which required social control.

302:2/o *First.* The passion of capital for an unlimited and reckless extension of the working-day, is first gratified in the industries earliest revolutionised by water-power, steam, and machinery, in those first creations of the modern mode of production, cotton, wool, flax, and silk spinning, and weaving. The changes in the material mode of production, and the corresponding changes in the social relations of the producers¹⁸⁶ gave rise first to an extravagance beyond all bounds, and then in opposition to this, called forth a control on the part of Society which legally limits, regulates, and makes uniform the working-day and its pauses.

↑ Interesting formulation: the excesses of the capitalists call forth social control. The conflict is here not seen as one between the capitalist class and the working class, but as one between capitalist agents who (driven by competition) commit excesses which require social control. Similar formulation also in the machinery chapter, 412:1.

¹⁸⁶ "The conduct of each of these classes (capitalists and workmen) has been the result of the relative situation in which they have been placed." (Reports, etc., for 31st October, 1848, p. 113.)

↓ Reasons why this legislation lost its exceptional character.

This control appears, therefore, during the first half of the nineteenth century simply as exceptional legislation.¹⁸⁷ As soon as this primitive dominion of the new mode of production was conquered, it was found that, in the meantime, not only had many other branches of production been made to adopt the same factory system, but that manufactures with more or less obsolete methods, such as potteries, glass-making, etc., that old-fashioned handicrafts, like baking, and, finally, even that the so-called domestic industries, such as nail-making,¹⁸⁸ had long since fallen as completely under capitalist exploitation as the factories themselves. Legislation was, therefore, compelled to

aus dem bloßen Zusammenhang der geschichtlichen Tatsachen:

315:2/o *Erstens:* In den durch Wasser, Dampf und Maschinerie zunächst revolutionisierten Industrien, in diesen ersten Schöpfungen der modernen Produktionsweise, den Baumwolle-, Wolle-, Flachs-, Seide-Spinnereien und Webereien wird der Trieb des Kapitals nach maß- und rücksichtsloser Verlängerung des Arbeitstags zuerst befriedigt. Die veränderte materielle Produktionsweise und die ihr entsprechend veränderten sozialen Verhältnisse der Produzenten¹⁸⁶ schaffen erst die maßlose Ausschreitung und rufen dann im Gegensatz die gesellschaftliche Kontrolle hervor, welche den Arbeitstag mit seinen Pausen gesetzlich beschränkt, reguliert und uniformiert.

¹⁸⁶ „Das Verhalten jeder dieser Klassen“ (Kapitalisten und Arbeiter) „war das Ergebnis der jeweiligen Situation, in die sie versetzt worden waren.“ (Reports etc. for 31st Oct. 1848“, p. 113.)

Diese Kontrolle erscheint daher während der ersten Hälfte des 19. Jahrhunderts bloß als Ausnahmegesetzgebung.¹⁸⁷ Sobald sie das Urgebiet der neuen Produktionsweise erobert hatte, fand sich, daß unterdes nicht nur viele andre Produktionszweige in das eigentliche Fabrikregime eingetreten, sondern daß Manufakturen mit mehr oder minder verjährter Betriebsweise, wie Töpfereien, Glasereien usw., daß altmodische Handwerke, wie die Bäckerei, und endlich selbst die zerstreute sog. Hausarbeit, wie Nägelmacherei usw.,¹⁸⁸ seit lange der kapitalistischen Exploitation ebensosehr verfallen waren als die Fabrik. Die Gesetzgebung ward daher gezwungen, ihren Ausnahme-

10.7. Effect of English Factory Acts on Other Countries

gradually get rid of its exceptional character, or where, as in England, it proceeds after the manner of the Roman Casuists, to declare any house in which work was done to be a factory.¹⁸⁹

¹⁸⁷ “The employments, placed under restriction, were connected with the manufacture of textile fabrics by the aid of steam or water-power. There were two conditions to which an employment must be subject to cause it to be inspected, viz., the use of steam or waterpower, and the manufacture of certain specified fibers.” (Reports, etc., for 31st October, 1864, p. 8.)

¹⁸⁸ On the condition of so-called domestic industries, specially valuable materials are to be found in the latest reports of the Children’s Employment Commission.

¹⁸⁹ “The Acts of last Session (1864) ... embrace a diversity of occupations, the customs in which differ greatly, and the use of mechanical power to give motion to machinery is no longer one of the elements necessary, as formerly, to constitute, in legal phrase, a ‘Factory.’” (Reports, etc., for 31st October, 1864, p. 8.)

charakter allmählich abzustreifen, oder, wo sie römisch kasuistisch verfährt, wie in England, irgendein Haus, worin man arbeitet, nach Belieben für eine Fabrik (factory) zu erklären.¹⁸⁹

¹⁸⁷ „Die Verrichtungen, die unter die Einschränkung fielen, waren mit der Herstellung von Textilerzeugnissen mit Hilfe von Dampf- oder Wasserkraft verbunden. Zwei Bedingungen mußte eine Arbeitstätigkeit erfüllen, damit sie unter den Schutz der Fabrikinspektion fiel, nämlich die Anwendung von Dampf- oder Wasserkraft und die Verarbeitung bestimmter spezifizierter Faserstoffe.“ („Reports etc. for 31st October 1864“, p. 8.)

¹⁸⁸ Über den Zustand dieser sogenannten häuslichen Industrie äußerst reichhaltiges Material in den letzten Berichten der „Children’s Employment Commission“.

¹⁸⁹ „Die Gesetze der letzten Sitzungsperiode“ (1864) „... umfassen Beschäftigungszweige verschiedener Art, in denen sehr verschiedene Gewohnheiten herrschen, und die Verwendung mechanischer Kraft zum Antrieb der Maschinerie gehört nicht mehr, wie früher, zu den notwendigen Bedingungen, unter denen ein Betrieb im Sinne des Gesetzes als Fabrik galt.“ („Reports etc. for 31st Oct. 1864“, p. 8.)

Question 877 Why was it generalized?

Secondly: As soon as capitalism has reached a certain maturity, the worker is defeated without being able to put up any resistance if he tries to fight back by himself. From this, Marx concludes that the struggle turns into a class struggle. More about that in the famous very last paragraph of this chapter 301:3/o. The class character of these struggles also implies that the struggle of the English working class benefits the working classes in the other countries as well. Marx also mentions another fact which can be considered a consequence of the struggles of the English working class: the English theoreticians also took on capital.

303:1/o *Second.* The history of the regulation of the working-day in certain branches of production, and the struggle still going on in others in regard to this regulation, prove conclusively that the isolated laborer, the laborer as “free” vendor of his labor-power, when capitalist production has once attained a certain stage, succumbs without any power of resistance. The creation of a normal working-day is, therefore, the product of a protracted civil war, more

316:1/o Zweitens: Die Geschichte der Regelung des Arbeitstags in einigen Produktionsweisen, in andren der noch fortdauernde Kampf um diese Regelung, beweisen handgreiflich, daß der vereinzelte Arbeiter, der Arbeiter als „freier“ Verkäufer seiner Arbeitskraft, auf gewisser Reifestufe der kapitalistischen Produktion, widerstandslos unterliegt. Die Schöpfung eines Normalarbeitstags ist daher das Produkt eines langwierigen, mehr oder minder versteck-

10. The Working-Day

or less dissembled, between the capitalist class and the working-class.

↓ Not only is the cotton industry the original area of the specific capitalist mode of production, but England is also its home country.

As the contest takes place in the arena of modern industry, it first breaks out in the home of that industry—England.¹⁹⁰

↓ In contrast to England, the footnote tells about backwards Belgium:

¹⁹⁰ Belgium, the paradise of Continental Liberalism, shows no trace of this movement. Even in the coal and metal mines laborers of both sexes, and all ages, are consumed, in perfect “freedom” at any period and through any length of time. Of every 1,000 persons employed there, 733 are men, 88 women, 135 boys, and 44 girls under 16; in the blast furnaces, etc., of every 1,000, 668 are men, 149 women, 98 boys, and 85 girls under 16. Add to this the low wages for the enormous exploitation of mature and immature labor-power. The average daily pay for a man is 2s. 8d., for a woman, 1s. 8d., for a boy, 1s. 2 1/2d. As a result, Belgium had in 1863, as compared with 1850, nearly doubled both the amount and the value of its exports of coal, iron, etc.

The English factory workers were the champions, not only of the English, but of the modern working-class generally, as their theorists were the first to throw down the gauntlet to the theory of capital.¹⁹¹

↓ The footnote brings an example for a theoretician throwing the gauntlet:

¹⁹¹ Robert Owen, soon after 1810, not only maintained the necessity of a limitation of the working-day in theory, but actually introduced the 10 hours’ day into his factory at New Lanark. This was laughed at as a communistic Utopia; so were his “Combination of children’s education with productive labor” and the Co-operative Societies of workingmen first called into being by him. Today, the first Utopia is a Factory Act, the second figures as an official phrase in all Factory Acts, the third is already being used as a cloak for reactionary humbug.

↓ But the main text continues with a counterexample, a scientist defining capital:

Hence, the philosopher of the Factory, Ure, denounces as an ineffable disgrace to the

ten Bürgerkriegs zwischen der Kapitalistenklasse und der Arbeiterklasse.

Wie der Kampf eröffnet wird im Umkreis der modernen Industrie, so spielt er zuerst in ihrem Heimatland, England.¹⁹⁰

about backwards Belgium:

¹⁹⁰ Belgien, das Paradies des kontinentalen Liberalismus, zeigt auch keine Spur dieser Bewegung. Selbst in seinen Kohlengruben und Metallminen werden Arbeiter beider Geschlechter und von jeder Altersstufe mit vollkommener „Freiheit“ für jede Zeitdauer und Zeitperiode konsumiert. Auf je 1000 darin beschäftigten Personen kommen 733 Männer, 88 Weiber, 135 Jungen und 44 Mädchen unter 16 Jahren; in den Hochöfen usw. kommen auf je 1000: 668 Männer, 149 Weiber, 98 Jungen und 85 Mädchen unter 16 Jahren. Kommt nun noch hinzu niedriger Arbeitslohn für enorme Ausbeutung reifer und unreifer Arbeitskräfte, im Tagesdurchschnitt 2 sh. 8 d. für Männer, 1 sh. 8 d. für Weiber, 1 sh. 2 1/2 d. für Jungen. Dafür hat Belgien aber auch 1863, verglichen mit 1850, Quantum und Wert seiner Ausfuhr von Kohlen, Eisen usw. ziemlich verdoppelt. Die englischen Fabrikarbeiter waren die Preisfechter nicht nur der englischen, sondern der modernen Arbeiterklasse überhaupt, wie auch ihre Theoretiker der Theorie des Kapitals zuerst den Fehdehandschuh hinwarfen.¹⁹¹

¹⁹¹ Als Robert Owen kurz nach dem ersten Dezennium dieses Jahrhunderts die Notwendigkeit einer Beschränkung des Arbeitstags nicht nur theoretisch vertrat, sondern den Zehnstundentag wirklich in seine Fabrik zu New-Lanark einführte, ward das als kommunistische Utopie verlacht, ganz so wie seine „Verbindung von produktiver Arbeit mit Erziehung der Kinder“, ganz wie die von ihm ins Leben gerufenen Kooperationsgeschäfte der Arbeiter. Heutzutage ist die erste Utopie Fabrikgesetz, die zweite figuriert als offizielle Phrase in allen „Factory Acts“, und die dritte dient sogar schon zum Deckmantel reaktionärer Schwindeleien.

Der Fabrikphilosoph Ure denunziert es daher als unauslöschliche Schmach der engli-

10.7. Effect of English Factory Acts on Other Countries

English working-class that they inscribed “the slavery of the Factory Acts” on the banner which they bore against capital, manfully striving for “perfect freedom of labor.”¹⁹²

¹⁹² Ure: “French translation, *Philosophie des Manufactures*.” Paris, 1836, Vol. II, pp. 39, 40, 67, 77, etc.

↓ France: later than England, legislation gained not in a protracted hidden civil war but at one stroke in the February revolution. However it is weaker, 12 not 10 hours.

304:1/o France limps slowly behind England. The February revolution was necessary to bring into the world the 12 hours’ law,¹⁹³ which is much more deficient than its English original.

¹⁹³ In the *Compte Rendu* of the International Statistical Congress at Paris, 1855, it is stated: “The French law, which limits the length of daily labor in factories and workshops to 12 hours, does not confine this work to definite fixed hours. Only for children’s labor the work-time is prescribed as between 5 a.m. and 9 p.m. Therefore, some of the masters use the right which this fatal silence gives them to keep their works going, without intermission, day in, day out, possibly with the exception of Sunday. For this purpose they use two different sets of workers, of whom neither is in the workshop more than 12 hours at a time, but the work of the establishment lasts day and night. The law is satisfied, but is humanity?” Besides “the destructive influence or night-labor on the human organism,” stress is also laid upon “the fatal influence of the association of the two sexes by night in the same badly-lighted workshops.”

↓ French method has the advantage that the laws are enacted for all workshops and all workers. (1) Introduced everywhere at same time.

For all that, the French revolutionary method has its specific advantages. It once for all commands the same limit to the working-day in all shops and factories without distinction, whilst English legislation reluctantly yields to the pressure of circumstances, now on this point, now on that, and is getting lost in a hopelessly bewildering tangle of contradictory enactments.¹⁹⁴

schen Arbeiterklasse, daß sie „die Sklaverei der Fabrikakte“ auf ihre Fahne schrieb gegenüber dem Kapital, das männlich für „vollkommne Freiheit der Arbeit“ stritt.¹⁹²

¹⁹² Ure (franz. Übers.), „*Philosophie des Manufactures*“, Paris 1836, t. II, p. 39, 40, 67, 77 etc.

317:1/o Frankreich hinkt langsam hinter England her. Es bedarf der Februarrevolution zur Geburt des Zwölfstundengesetzes,¹⁹³ das viel mangelhafter ist als sein englisches Original.

¹⁹³ In dem *Compte Rendu* des „Internationalen Statistischen Kongresses zu Paris, 1855“, heißt es u.a.: „Das französische Gesetz, das die Dauer der täglichen Arbeit in Fabriken und Werkstätten auf 12 Stunden beschränkt, begrenzt diese Arbeit nicht innerhalb bestimmter fixer Stunden“ (Zeitperioden), „indem nur für die Kinderarbeit die Periode zwischen 5 Uhr vormittags und 9 Uhr abends vorgeschrieben ist. Daher bedient sich ein Teil der Fabrikanten des Rechts, welches ihnen dies verhängnisvolle Schweigen gibt, um tagaus, tagein, vielleicht mit Ausnahme der Sonntage, ohne Unterbrechung arbeiten zu lassen. Sie wenden dazu zwei verschiedene Arbeiterreihen an, von denen keine mehr als 12 Stunden in der Werkstätte zubringt, aber das Werk des Etablissements dauert Tag und Nacht. Das Gesetz ist befriedigt, aber ist es die Humanität ebenfalls?“ Außer dem „zerstörenden Einfluß der Nachtarbeit auf den menschlichen Organismus“, wird auch „der fatale Einfluß der nächtlichen Assoziation beider Geschlechter in denselben trüb erleuchteten Werkstätten“ betont.

Trotzdem macht die französische revolutionäre Methode auch ihre eigentümlichen Vorzüge geltend. Mit einem Schlag diktiert sie allen Ateliers und Fabriken ohne Unterschied dieselbe Schranke des Arbeitstags, während die englische Gesetzgebung bald an diesem Punkt, bald an jenem, dem Druck der Verhältnisse widerwillig weicht und auf dem besten Weg ist, einen neuen

10. The Working-Day

juristischen Rattenkönig auszubrüten.¹⁹⁴

Footnote 194 gives examples of this legislative tangle in England:

¹⁹⁴ “For instance, there is within my district one occupier who, within the same curtilage, is at the same time a bleacher and dyer under the Bleaching and Dyeing Works Act, a printer under the Print Works Act, and a finisher under the Factory Act.” (Repon of Mr. Baker, in Reports, lic., for October 31st, 1861, p. 20.) After enumerating the different provisions of these Acts, and the complications arising from them, Mr. Baker says: “It will hence appear that it must be very difficult to secure the execution of these three Acts of Parliament where the occupier chooses to evade the law.” But what is assured to the lawyers by this is law-suits.

↓ (2) Second advantage of French method: it is valid for everybody, not only children and women.

On the other hand, the French law proclaims as a principle that which in England was only won in the name of children, minors, and women, and has been only recently for the first time claimed as a general right.¹⁹⁵

¹⁹⁴ „Z.B. in meinem Distrikt, in denselben Fabrikbaulichkeiten, ist derselbe Fabrikant Bleicher und Färber unter dem ‚Bleicherei- und Färberei-Akt‘, Drucker unter dem ‚Printworks-Akt‘ und finisher unter dem ‚Fabrikakt‘ ...“ (Report of Mr. Baker in „Reports etc. for 31st Oct. 1861“, p. 20.) Nach Aufzählung der verschiedenen Bestimmungen dieser Akte und der daher folgenden Komplikation, sagt Herr Baker: „Man sieht, wie schwer es sein muß, die Vollziehung dieser 3 Parlamentsakte zu sichern, wenn der Fabrikeigner das Gesetz zu umgehn beliebt.“ [l.c. p.21.] Was aber den Herrn Juristen dadurch gesichert ist, sind Prozesse.

Andrerseits proklamiert das französische Gesetz prinzipiell, was in England nur im Namen von Kindern, Unmündigen und Frauenzimmern erkämpft und erst neuerdings als allgemeines Recht beansprucht wird.¹⁹⁵

Footnote 195 gives evidence that this generalization is also starting in England:

¹⁹⁵ Thus the Factory Inspectors at last venture to say: “These objections (of capital to the legal limitation of the working-day) must succumb before the broad principle of the rights of labor... There is a time when the master’s right in his workman’s labor ceases, and his time becomes his own, even if there were no exhaustion in the question.” (Reports, 8cc., for 31st Oct., 1862, p. 54.)

¹⁹⁵ So getrauen sich endlich die Fabrikinspektoren zu sagen: „Diese Einwände“ (des Kapitals gegen legale Beschränkung der Arbeitszeit) „müssen unterliegen vor dem großen Grundsatz der Rechte der Arbeit ... es gibt einen Zeitpunkt, an dem des Unternehmers Recht auf die Arbeit seines Arbeiters aufhört und dieser selbst über seine Zeit verfügen kann, auch wenn er noch nicht erschöpft ist.“ („Reports etc. for 31st Oct. 1862“, p. 54.)

Question 878 *What are the advantages and disadvantages of the French revolutionary versus the more pragmatic English method?*

USA: the abolition of slavery was necessary before a vital labor movement could develop. Agitation for the Eight Hour Day was “first fruit of Civil War:”

305:1–2 In the United States of North America, every independent movement of the workers was paralysed so long as slavery disfigured a part of the Republic. Labor cannot emancipate itself in the white skin where in the black it is branded. But out of the death of slavery a new life at once arose. The first fruit of the Civil War was the eight hours’ agitation, that ran with the

318:1–319:1 In den Vereinigten Staaten von Nordamerika blieb jede selbständige Arbeiterbewegung gelähmt, solange die Sklaverei einen Teil der Republik verunstaltete. Die Arbeit in weißer Haut kann sich nicht dort emanzipieren, wo sie in schwarzer Haut gebrandmarkt wird. Aber aus dem Tod der Sklaverei entsproß sofort ein neu verjüngtes Leben. Die erste Frucht des

10.7. Effect of English Factory Acts on Other Countries

seven-leagued boots of the locomotive from the Atlantic to the Pacific, from New England to California.

Bürgerkriegs war die Achtstundenagitation, mit den Siebenmeilenstiefeln der Lokomotive vom Atlantischen bis zum Stillen Ozean ausschreitend, von Neuengland bis nach Kalifornien.

The fundamental role of the limitation of the working-day for any other achievements of the labor movement is stressed in the following resolutions:

The General Congress of labor at Baltimore (August 16th, 1866) declared:

Der allgemeine Arbeiterkongreß zu Baltimore (Aug. 1866) erklärt:

“The first and great necessity of the present, to free the labor of this country from capitalistic slavery, is the passing of a law by which eight hours shall be the normal working-day in all States of the American Union. We are resolved to put forth all our strength until this glorious result is attained.”¹⁹⁶

„Das erste und große Erheischnis der Gegenwart, um die Arbeit dieses Landes von der kapitalistischen Sklaverei zu befreien, ist der Erlaß eines Gesetzes, wodurch 8 Stunden den Normalarbeitstag in allen Staaten der amerikanischen Union bilden sollen. Wir sind entschlossen, alle unsre Macht aufzubieten, bis dies glorreiche Resultat erreicht ist.“¹⁹⁶

Footnote 196 gives the text of a resolution by one attending contingent of workers, presumably at the same congress:

¹⁹⁶ “We, the workers of Dunkirk, declare that the length of time of labor required under the present system is too great, and that, far from leaving the worker time for rest and education, it plunges him into a condition of servitude but little better than slavery. That is why we decide that 8 hours are enough for a working-day, and ought to be legally recognised as enough; why we call to our help that powerful lever, the press; ... and why we shall consider all those that refuse us this help as enemies of the reform of labor and of the rights of the laborer.” (Resolution of the Working Men of Dunkirk, New York State, 1866.)

¹⁹⁶ „Wir, die Arbeiter von Dunkirk, erklären, daß die unter dem jetzigen System erheischte Länge der Arbeitszeit zu groß ist und dem Arbeiter keine Zeit für Erholung und Entwicklung läßt, ihn vielmehr auf einen Zustand der Knechtschaft herabdrückt, der wenig besser als die Sklaverei ist (a condition of servitude but little better than slavery). Deshalb beschlossen, daß 8 Stunden für einen Arbeitstag genügen und legal als genügend anerkannt werden müssen; daß wir zu unsrem Beistand die Presse anrufen, den gewaltigen Hebel ... und alle, die diesen Beistand versagen, als Feinde der Arbeitsreform und Arbeiterrechte betrachten.“ (Beschlüsse der Arbeiter zu Dunkirk, Staat New York, 1866.)

But similar statements also in Europe:

305:3/o At the same time (the beginning of September 1866), the Congress of the International Working Men’s Association at Geneva, on the proposition of the London General Council, resolved that “the limitation of the working-day is a preliminary condition without which all further attempts at improvement and emancipation must prove abortive ... The Congress proposes eight hours as the legal limit of the working-day.”

319:1 Gleichzeitig (Anfang September 1866) beschloß der „Internationale Arbeiterkongreß“ zu Genf auf Vorschlag des Londoner Generalrats: „Wir erklären die Beschränkung des Arbeitstags für eine vorläufige Bedingung, ohne welche alle andren Bestrebungen nach Emanzipation scheitern müssen ... Wir schlagen 8 Arbeitsstunden als legale Schranke des Arbeitstags vor.“

↓ Limitation of working-day necessary before further progress can be made.

306:1–2 Thus the movement of the working-class on both sides of the Atlantic, that

319:2–3 So besiegelt die auf beiden Seiten des Atlantischen Meers instinktiv

10. The Working-Day

had grown instinctively out of the conditions of production themselves, endorsed the words of the English Factory Inspector, R. J. Saunders:

Further steps towards a reformation of society can never be carried out with any hope of success, unless the hours of labor be limited, and the prescribed limit strictly enforced.¹⁹⁷

¹⁹⁷ Reports, etc., for Oct., 1848, p. 112.

aus den Produktionsverhältnissen selbst erwachsene Arbeiterbewegung den Ausspruch des englischen Fabrikinspektors R. J. Saunders:

Weitere Schritte zur Reform der Gesellschaft sind niemals mit irgendeiner Aussicht auf Erfolg durchzuführen, wenn nicht zuvor der Arbeitstag beschränkt und seine vorgeschriebne Schranke strikt erzwungen wird.“¹⁹⁷

¹⁹⁷ „Reports etc. for 31st Oct. 1848“, p. 112.

Question 879 *Why was the shortening of the labor day termed the condition for any further emancipation of the worker? Did the later history of the labor movement prove Marx's expectations right?*

↓ In order to understand why the shortening of the working-day is so important, we must answer the following question: why do the workers, who are selling their labor-power voluntarily, have to be prevented by law from selling too much of it?

301:3/o It must be acknowledged that our laborer comes out of the process of production other than he entered. In the market he stood as owner of the commodity “labor-power” face to face with other owners of commodities, dealer against dealer. The contract by which he sold to the capitalist his labor-power proved, so to say, in black and white that he disposed of himself freely. The bargain concluded, it is discovered that he was no “free agent,” that the time for which he is free to sell his labor-power is the time for which he is forced to sell it,¹⁹⁸ that in fact the vampire will not lose its hold on him “so long as there is a muscle, a nerve, a drop of blood to be exploited.”¹⁹⁹

319:4/o Man muß gestehn, daß unser Arbeiter anders aus dem Produktionsprozeß herauskommt, als er in ihn eintrat. Auf dem Markt trat er als Besitzer der Ware „Arbeitskraft“ andren Warenbesitzern gegenüber, Warenbesitzer dem Warenbesitzer. Der Kontrakt, wodurch er dem Kapitalisten seine Arbeitskraft verkaufte, bewies sozusagen schwarz auf weiß, daß er frei über sich selbst verfügt. Nach geschlossenem Handel wird entdeckt, daß er „kein freier Agent“ war, daß die Zeit, wofür es ihm freisteht, seine Arbeitskraft zu verkaufen, die Zeit ist, wofür er gezwungen ist, sie zu verkaufen,¹⁹⁸ daß in der Tat sein Sauger nicht losläßt, „solange noch ein Muskel, eine Sehne, ein Tropfen Bluts auszubeuten“¹⁹⁹.

Question 880 *What is the difference which Marx saw between the laborer entering the production process and the laborer coming out of it?*

The change of the worker has two components. First of all, the labor-time which he is free to sell turns out to be the time which he is forced to sell. This transformation will be discussed in more detail in chapter Twenty-Three, see 570:2/o.

Question 881 *Marx claims that the freedom of the laborer to sell his labor-power is really a coercion: he must sell his labor-power. Explain.*

Footnote 198 already gives the transition to a second kind of change among the workers: in order to defend themselves against the onslaught of capital, the workers can no longer act as atomistic individuals but must band their heads together in order to act as a class.

10.7. Effect of English Factory Acts on Other Countries

¹⁹⁸ “The proceedings (the manoeuvres of capital, e.g., from 1848–50) have afforded, moreover, incontrovertible proof of the fallacy of the assertion so often advanced, that operatives need no protection, but may be considered as free agents in the disposal of the only property which they possess—the labor of their hands and the sweat of their brows.” (Reports, etc., for April 30th, 1850, p. 45.) “Free labor (if so it may be termed) even in a free country, requires the strong arm of the law to protect it.” (Reports, etc., for October 31st, 1864, p. 34.) “To permit, which is tantamount to compelling . . . to work 14 hours a day with or without meals,” etc. (Repts., etc., for April 30th, 1863, p. 40.)

¹⁹⁹ Friedrich Engels, l.c., p. 5.

Here is now this other change not only in the footnote but in the main text:

For “protection” against “the serpent of their agonies,” the laborers must band together and, as a class, compel the passing of a law, an all-powerful social barrier that shall prevent the very workers from selling, by voluntary contract with capital, themselves and their families into slavery and death.²⁰⁰

¹⁹⁸ „Diese Machenschaften“ (die Manöver des Kapitals z.B. 1848–1850) „haben überdies den unwiderlegbaren Beweis erbracht, wie falsch die so oft vorgebrachte Behauptung ist, die Arbeiter hätten keinen Schutz nötig, sondern müßten angesehen werden als frei verfügende Besitzer des einzigen Eigentums, das sie haben, der Arbeit ihrer Hände und des Schweißes ihrer Stirn.“ („Reports etc. for 30th April 1850“, p. 45.) „Freie Arbeit, wenn sie überhaupt so genannt werden kann, bedarf zu ihrem Schutze selbst in einem freien Land des starken Armes des Gesetzes.“ („Reports etc. for 31st Oct. 1864, p. 34.) „Zu erlauben, was gleichbedeutend ist mit zwingen, . . . 14 Stunden täglich mit oder ohne Mahlzeiten zu arbeiten usw.“ („Reports etc. for 30th April 1863“, p. 40.)

¹⁹⁹ Friedrich Engels, „Die englische Zehn-stundenbill“, l.c. p. 5.

Zum „Schutz“ gegen die Schlange ihrer Qualen müssen die Arbeiter ihre Köpfe zusammenrotten und als Klasse ein Staatsgesetz erzwingen, ein übermächtiges gesellschaftliches Hindernis, das sie selbst verhindert, durch freiwilligen Kontrakt mit dem Kapital sich und ihr Geschlecht in Tod und Sklaverei zu verkaufen.²⁰⁰

This is the Moore-Aveling translation with the exception of the word “band together,” where Moore-Aveling has “put together.” “Put together” suggests that they

have to consult with each other; “band together” means they have to give up their individual action and act as a group. Fowkes does not say “other than

he entered” but “looking different.” This leaves it open whether there is a real change or not.

“**Zusammenrotten**” is a rather drastic formulation which the usual translations do not capture. People are forced to make some fundamental changes in the ways they relate to each other, in order to be able to make their suffering bearable.

↓ Footnote 200 documents that also in the Factory Reports the workers were deemed to need “protection”:

²⁰⁰ The 10 Hours’ Act has, in the branches of industry that come under it, “put an end to the premature decrepitude of the former long-hour workers.” (Reports, etc., for 31st Oct., 1859, p. 47.) “Capital (in factories) can never be employed in keeping the machinery in motion beyond a limited time, without certain injury to the health and morals of the laborers employed; and they are not in a position to protect themselves.” l.c., p. 8)

²⁰⁰ Die Zehnstundenbill hat in den ihr unterworfenen Industriezweigen „die Arbeiter vor gänzlicher Degeneration gerettet und ihren physischen Zustand beschützt.“ („Reports etc. for 31st Oct. 1859“, p. 47.) „Das Kapital“ (in den Fabriken) „kann niemals die Maschinerie in Bewegung halten über eine begrenzte Zeitperiode, ohne die beschäftigten Arbeiter an ihrer Gesundheit und ihrer Moral zu beschädigen; und sie sind nicht in einer Lage, sich selbst zu schützen. (l.c. p. 8.)

10. The Working-Day

Question 882 *Why do free laborers need legal “protection”?*

Question 883 *Discuss the objection that the factory acts infringe on the “freedom” of the workers. Draw parallels to the contemporary “right to work” campaigns.*

⇓ This is the birth of something new, but much less celebrated than the Human Rights:

In place of the ornate catalogue of the “inalienable rights of man” comes the modest Magna Charta of a legally limited working-day, which shall make clear “when the time which the worker sells is ended, and when his own begins.”²⁰¹ Quantum mutatus ab illo!

An die Stelle des prunkvollen Katalogs der „unveräußerlichen Menschenrechte“ tritt die bescheidne Magna Charta eines gesetzlich beschränkten Arbeitstags, die „endlich klar-macht, wann die Zeit, die der Arbeiter verkauft, endet und wann die ihm selbst gehörige Zeit beginnt“²⁰¹ Quantum mutatus ab illo!

↑ This is a reference to the end of chapter Six, 186:1, where we go from the sphere of circulation, the kingdom of human rights, to the sphere of production.

²⁰¹ “A still greater boon is the distinction at last made clear between the worker’s own time and his master’s. The worker knows now when that which he sells is ended, and when his own begins; and by possessing a sure foreknowledge of this, is enabled to prearrange his own minutes for his own purposes.” (l.c., p. 52.) “By making them masters of their own time (the Factory Acts) have given them a moral energy which is directing them to the eventual possession of political power” (l.c., p. 47).

²⁰¹ „Einen noch größeren Vorteil bedeutet es, daß endlich klar unterschieden wird zwischen der Zeit, die dem Arbeiter selbst und der, die seinem Unternehmer gehört. Der Arbeiter weiß nun, wann die Zeit, die er verkauft, beendet ist und seine eigne beginnt, und da er dies vorher genau weiß, kann er über seine eignen Minuten für seine eignen Zwecke im voraus verfügen.“ (l.c. p. 52.) „Indem sie“ (die Fabrikgesetze) sie zu Herrn ihrer eignen Zeit gemacht haben, haben sie ihnen eine moralische Energie gegeben, die sie dahinführt, möglicherweise die politische Macht in Besitz zu nehmen.“ (l.c. p. 47.)

⇓ Influence of the proletariat not only good for capital but also for the capitalists.

With suppressed irony, and in very well weighed words, the Factory Inspectors hint that the actual law also frees the capitalist from some of the brutality natural to a man who is a mere embodiment of capital, and that it has given him time for a little “culture.” “Formerly the master had no time for anything but money; the servant had no time for anything but labor” (l.c., p. 48).

Mit verhaltner Ironie und in sehr vorsichtigen Ausdrücken deuten die Fabrikinspektoren an, daß das jetzige Zehnstundengesetz auch den Kapitalisten einigermaßen von seiner naturwüchsigen Brutalität als bloßer Verkörperung des Kapitals befreit und ihm Zeit zu einiger „Bildung“ gegeben habe. Vorher „hatte der Unternehmer für nichts anderes als Geld, der Arbeiter für nichts andres als Arbeit Zeit“. (l.c. p. 48.)

About footnote 201 see also Foner [Fon47, p. 279].

Question 884 *In whose interest were the English factory Acts?*

Question 885 *Why did the state interfere and and not the unions?*

Question 886 *What does the state do in chapter Ten?*

11. Rate and Mass of Surplus-Value

After discussing the rate of surplus-value in chapter Nine, Marx discusses now the mass of surplus-value. The rate must be discussed before the mass because we first have to know the degree at which each worker is exploited (which is a social constant, determined by the status of technology and the class struggle). This degree together with the number of hours worked by each worker and the number of workers working for a given capitalist gives the amount, i.e., the mass of surplus-value appropriated by this capitalist.

↓ The value of labor-power is assumed to be constant. This assumption will be relaxed in the next chapter.

In this chapter, as hitherto, the value of labor-power, and therefore the part of the working day necessary for the reproduction or maintenance of that labor-power, are assumed as given, constant magnitudes.

321:1 Wie bisher wird in diesem Kapitel der Wert der Arbeitskraft, also der zur Reproduktion oder Erhaltung der Arbeitskraft notwendige Teil des Arbeitstags, als gegebene, konstante Größe unterstellt.

11.1. [Four Quantitative Laws Regarding the Mass of Surplus-Value]

11.1.a. [First Law]

The first law says that the mass of surplus-value is equal to variable capital times the rate of surplus-value. Marx derives this in several steps.

↓ Mass of surplus-value per worker = necessary labor times rate of surplus-value.

This premised, with the rate, the mass is at the same time given of the surplus-value that the individual laborer furnishes to the capitalist in a definite period of time. If, e.g., the necessary labor amounts to 6 hours daily, expressed in a quantum of gold = 3 shillings, then 3s. is the daily value of one labor-power or the value of the capital advanced in the buying of one labor-power. If, further, the rate of surplus-value be = 100%, this variable capital of 3s. produces a mass of surplus-value of 3s., or the laborer supplies daily a mass of surplus labor equal to 6 hours.

321:2 Dies also vorausgesetzt, ist mit der Rate zugleich die Masse des Mehrwerts gegeben, die der einzelne Arbeiter dem Kapitalisten in bestimmter Zeitperiode liefert. Beträgt z.B. die notwendige Arbeit täglich 6 Stunden, ausgedrückt in einem Goldquantum von 3 sh. = 1 Taler, so ist der Taler der Tageswert einer Arbeitskraft oder der im Ankauf einer Arbeitskraft vorgeschossene Kapitalwert. Ist ferner die Rate des Mehrwerts 100%, so produziert dies variable Kapital von 1 Taler eine Masse Mehrwert von 1 Taler, oder der Arbeiter liefert täglich eine Masse Mehrarbeit von 6 Stunden.

↓ Variable capital proportional to number of workers employed.

But the variable capital of a capitalist is the expression in money of the total value of all the labor-powers that he employs simul-

321:3 Das variable Kapital ist aber der Geldausdruck für den Gesamtwert aller Arbeitskräfte, die der Kapitalist gleichzeitig

11. Rate and Mass of Surplus-Value

taneously. Its value is, therefore, equal to the average value of one labor-power, multiplied by the number of labor-powers employed. With a given value of labor-power, therefore, the magnitude of the variable capital varies directly as the number of laborers employed simultaneously. If the daily value of one labor-power = 3s., then a capital of 300s. must be advanced in order to exploit daily 100 labor-powers, of n times 3s., in order to exploit daily n labor-powers.

↑ The size of the variable capital is a sign for the number of workers. One gets the number of worker days by dividing the total variable capital by the daily value of one labor-power.

↓ The same calculation that can be made for the variable capital advanced can also be made for the surplus-value harvested. If one multiplies the number of worker days by the surplus-value generated by one worker in one day, one gets the total amount of surplus-value:

In the same way, if a variable capital of 3s., being the daily value of one labor-power, produce a daily surplus-value of 3s., a variable capital of 300s. will produce a daily surplus-value of 300s., and one of n times 3s. a daily surplus-value of $n \times 3s.$ The mass of the surplus-value produced is therefore equal to the surplus-value which the working day of one laborer supplies, multiplied by the number of laborers employed.

↓ From this follows the first law.

But as further the mass of surplus-value which a single laborer produces, the value of labor-power being given, is determined by the rate of the surplus-value, this law follows: the mass of the surplus-value produced is equal to the amount of the variable capital advanced, multiplied by the rate of surplus-value, in other words: it is determined by the compound ratio between the number of labor-powers exploited simultaneously by the same capitalist and the degree of exploitation of each individual labor-power.

↓ Now a mathematical formulation of the first law:

Let the mass of the surplus-value be S , the surplus-value supplied by the individual laborer in the average day s the variable capital daily advanced in the purchase of one individual labor-power v , the sum total of

verwendet. Sein Wert ist also gleich dem Durchschnittswert einer Arbeitskraft, multipliziert mit der Anzahl der verwandten Arbeitskräfte. Bei gegebenem Wert der Arbeitskraft steht also die Größe des variablen Kapitals in direktem Verhältnis zur Anzahl der gleichzeitig beschäftigten Arbeiter. Ist der Tageswert einer Arbeitskraft = 1 Taler, so ist also ein Kapital vorzuschießen von 100 Talern, um 100, von n Talern, um n Arbeitskräfte täglich zu exploitierten.

321:4 Ebenso: Produziert ein variables Kapital von 1 Taler, der Tageswert einer Arbeitskraft, einen täglichen Mehrwert von 1 Taler, so ein variables Kapital von 100 Talern einen täglichen Mehrwert von 100, und eins von n Talern einen täglichen Mehrwert von 1 Taler $\times n$. Die Masse des produzierten Mehrwerts ist also gleich dem Mehrwert, den der Arbeitstag des einzelnen Arbeiters liefert, multipliziert mit der Anzahl der angewandten Arbeiter.

Da aber ferner die Masse Mehrwert, die der einzelne Arbeiter produziert, bei gegebenem Wert der Arbeitskraft, durch die Rate des Mehrwerts bestimmt ist, so folgt dies erste Gesetz: Die Masse des produzierten Mehrwerts ist gleich der Größe des vorgeschossenen variablen Kapitals multipliziert mit der Rate des Mehrwerts oder ist bestimmt durch das zusammengesetzte Verhältnis zwischen der Anzahl der von demselben Kapitalisten gleichzeitig exploitierten Arbeitskräfte und dem Exploitationsgrad der einzelnen Arbeitskraft.

322:1 Nennen wir also die Masse des Mehrwerts M , den vom einzelnen Arbeiter im Tagesdurchschnitt gelieferten Mehrwert m , das im Ankauf der einzelnen Arbeitskraft täglich vorgeschößne variable Kapital v , die

11.1. [Four Quantitative Laws Regarding the Mass of Surplus-Value]

the variable capital V , the value of an average labor-power p , its degree of exploitation $\frac{a'}{a}$ ($\frac{\text{surplus-labor}}{\text{necessary labor}}$) and the number of laborers employed n ; we have:

$$S = \frac{s}{v} \times V, \quad S = p \times \frac{a'}{a} \times n.$$

Gesamtsumme des variablen Kapitals V , den Wert einer Durchschnitts-Arbeitskraft k , ihren Exploitationsgrad $\frac{a'}{a}$ ($\frac{\text{Mehrbarbeit}}{\text{Notwendige Arbeit}}$)

und die Anzahl der angewandten Arbeiter n , so erhalten wir:

$$M = \frac{m}{v} \times V, \quad M = k \times \frac{a'}{a} \times n.$$

Derivation of the first law: $S = \frac{s}{v} \times V$. Although this law, written in this form, almost looks self-explanatory, probably the best way to derive it is to go over the surplus-value created by one worker and then use V as a measure for the number of workers:

$$\begin{aligned} S &= n \times s \\ &= n \times p \times \frac{a'}{a} \\ &= V \times \frac{s}{v}. \end{aligned} \quad (11.1)$$

because $V = n \times p$ and $\frac{a'}{a} = \frac{s}{v}$.

It is always supposed, not only that the value of an average labor-power is constant, but that the laborers employed by a capitalist are reduced to average laborers. There are exceptional cases in which the surplus-value produced does not increase in proportion to the number of laborers exploited, but then the value of the labor-power does not remain constant.

Es wird fortwährend unterstellt, nicht nur daß der Wert einer Durchschnitts-Arbeitskraft konstant ist, sondern daß die von einem Kapitalisten angewandten Arbeiter auf Durchschnitts-Arbeiter reduziert sind. Es gibt Ausnahmefälle, wo der produzierte Mehrwert nicht verhältnismäßig zur Anzahl der exploitierten Arbeiter wächst, aber dann bleibt auch der Wert der Arbeitskraft nicht konstant.

↑ What are these exceptional cases?

Question 890 Labor Leaflet or Essay for a Labor Newsletter [2010fa](#).

Question 891 Assume that the daily value of one worker's labor-power is $p = \$40$, which is the value product of 2 hours, so that the necessary labor $a = 2$ hours. Let the rate of surplus-value s/v be 300%. How much surplus-value s does a worker produce every day, and how long is the surplus-labor a' every day?

Question 892 With the same assumptions as in the previous question, how much capital must be advanced by a capitalist every day, if he employs $n = 70$ workers? (Assume that he pays out the wages every day). What is the mass of surplus-value produced by his variable capital?

11. Rate and Mass of Surplus-Value

Question 893 Now assume that the capitalist lays off 10 workers and forces the remaining 60 workers to work 9 hours every day instead of the 8 hours before, for the same daily wage of \$40. (This example is parallel to the example used by Marx. Although today such blatant cuts in the hourly wage are rare, modern capitalists get the same effect by increasing the intensity of labor so that they get 9 hours worth of labor in 8 hours without having to pay more wages.) Show that the rate of surplus-value has gone up enough to compensate for the drop in the number of workers, so that the mass of surplus-value remains the same. Did the total value produced by the workers remain the same, too.

↓ Corollary to the first law: declining number of workers can be compensated for by rising rate of surplus-value.

In the production of a definite mass of surplus-value, therefore the decrease of one factor may be compensated by the increase of the other. If the variable capital diminishes, and at the same time the rate of surplus-value increases in the same ratio, the mass of surplus-value produced remains unaltered. If on our earlier assumption the capitalist must advance 300s., in order to exploit 100 laborers a day, and if the rate of surplus-value amounts to 50%, this variable capital of 300s. yields a surplus-value of 150s. or of 100×3 working hours. If the rate of surplus-value doubles, or the working day, instead of being extended from 6 to 9, is extended from 6 to 12 hours and at the same time variable capital is lessened by half, and reduced to 150s., it yields also a surplus-value of 150s. or 50×6 working hours. Diminution of the variable capital may therefore be compensated by a proportionate rise in the degree of exploitation of labor-power, or the decrease in the number of the laborers employed by a proportionate extension of the working day.

322:2/o In der Produktion einer bestimmten Masse Mehrwert kann daher die Abnahme des einen Faktors durch Zunahme des andren ersetzt werden. Wird das variable Kapital vermindert und gleichzeitig in demselben Verhältnis die Rate des Mehrwerts erhöht, so bleibt die Masse des produzierten Mehrwerts unverändert. Muß unter den frühern Annahmen der Kapitalist 100 Taler vorschießen, um 100 Arbeiter täglich zu exploitiern, und beträgt die Rate des Mehrwerts 50%, so wirft dies variable Kapital von 100 einen Mehrwert von 50 Talern ab oder von 100×3 Arbeitsstunden. Wird die Rate des Mehrwerts verdoppelt, oder der Arbeitstag, statt von 6 zu 9, von 6 zu 12 Stunden verlängert, so wirft das um die Hälfte verminderte variable Kapital von 50 Talern ebenfalls einen Mehrwert von 50 Talern ab oder von 50×6 Arbeitsstunden. Verminderung des variablen Kapitals ist also ausgleichbar durch proportionelle Erhöhung im Exploitationsgrad der Arbeitskraft oder die Abnahme in der Anzahl der beschäftigten Arbeiter durch proportionelle Verlängerung des Arbeitstags.

↓ Now Marx draws an important conclusion from this:

Within certain limits therefore the supply of labor exploitable by capital is independent of the supply of laborers.²⁰² On the contrary, a fall in the rate of surplus-value leaves unaltered the mass of the surplus-value produced, if the amount of the variable capital, or number of the laborers employed, increases in the same proportion.

Innerhalb gewisser Grenzen wird die vom Kapital erpreßbare Zufuhr der Arbeit also unabhängig von der Arbeiterzufuhr.²⁰² Umgekehrt läßt Abnahme in der Rate des Mehrwerts die Masse des produzierten Mehrwerts unverändert, wenn proportionell die Größe des variablen Kapitals oder die Anzahl der beschäftigten Arbeiter wächst.

↑ We will see in chapter Twenty-Five how this possibility becomes a reality. ↓ Interesting critique of the demand-supply mechanism:

11.1. [Four Quantitative Laws Regarding the Mass of Surplus-Value]

²⁰² This elementary law appears to be unknown to the vulgar economists, who, upside-down Archimedes, in the determination of the market-price of labor by supply and demand, imagine they have found the fulcrum by means of which, not to move the world, but to stop its motion.

²⁰² Dies Elementargesetz scheint den Herren von der Vulgärökonomie unbekannt, die, umgekehrte Archimedes, in der Bestimmung der Marktpreise der Arbeit durch Nachfrage und Zufuhr den Punkt gefunden zu haben glauben, nicht um die Welt aus den Angeln zu heben, sondern um sie stillzusetzen.

How does Marx come to the suspicion that this law is unknown to the vulgar economists?

11.1.b. [Second Law]

This replacing, about which the corollary to the first law spoke, cannot go on forever but is limited by the fact that no worker can produce surplus-value for longer than 24 hours a day.

This limit of surplus-value by the length of the day is trivial if one accepts the labor theory of value, but if one does not, then there is no reason to assume such a limit.

Nevertheless, the compensation of a decrease in the number of laborers employed, or of the amount of variable capital advanced by a rise in the rate of surplus-value, or by the lengthening of the working-day, has impassable limits. Whatever the value of labor-power may be, whether the workingtime necessary for the maintenance of the laborer is 2 or 10 hours, the total value that a laborer can produce, day in, day out, is always less than the value in which 24 hours of labor are embodied, less than 12s., if 12s. is the money expression for 24 hours of realised labor. In our former assumption, according to which 6 working hours are daily necessary in order to reproduce the labor-power itself or to replace the value of the capital advanced in its purchase, a variable capital of 1,500s., that employs 500 laborers at a rate of surplus-value of 100% with a 12 hours' working day, produces daily a surplus-value of 1,500s. or of 6×500 working hours. A capital of 300s. that employs 100 laborers a day with a rate of surplus-value of 200% or with a working day of 18 hours, produces only a mass of surplus-value of 600s. or 12×100 working hours; and its total value-product, the equivalent of the variable capital advanced plus the surplus-value, can, day in, day out, never reach the sum of 1,200s. or 24×100 working hours. The absolute limit of the average working day—this being by nature always

323:1/o Indes hat der Ersatz von Arbeiteranzahl oder Größe des variablen Kapitals durch gesteigerte Rate des Mehrwerts oder Verlängerung des Arbeitstags unüberspringbare Schranken. Welches immer der Wert der Arbeitskraft sei, ob daher die zur Erhaltung des Arbeiters notwendige Arbeitszeit 2 oder 10 Stunden betrage, der Gesamtwert, den ein Arbeiter tagaus, tagein produzieren kann, ist immer kleiner als der Wert, worin sich 24 Arbeitsstunden vergegenständlichen, kleiner als 12 sh. oder 4 Taler, wenn dies der Geldausdruck von 24 vergegenständlichten Arbeitsstunden. Unter unserer frühern Annahme, wonach täglich 6 Arbeitsstunden erheischt, um die Arbeitskraft selbst zu reproduzieren oder den in ihrem Ankauf vorgeschossenen Kapitalwert zu ersetzen, produziert ein variables Kapital von 500 Talern, das 500 Arbeiter zu Mehrwert-rate von 100% oder mit zwölfstündigem Arbeitstag verwendet, täglich einen Mehrwert von 500 Talern oder 6×500 Arbeitsstunden. Ein Kapital von 100 Talern, das 100 Arbeiter täglich verwendet zur Mehrwert-rate von 200% oder mit 18stündigem Arbeitstag, produziert nur eine Mehrwert-masse von 200 Talern oder 12×100 Arbeitsstunden. Und sein gesamtes Wertprodukt, Äquivalent des vorgeschossenen variablen Kapitals plus Mehrwert, kann tagaus, tagein niemals die Summe von 400 Talern oder 24×100 Arbeitsstunden erreichen.

11. Rate and Mass of Surplus-Value

less than 24 hours—sets an absolute limit to the compensation of a reduction of variable capital by a higher rate of surplus-value, or of the decrease of the number of laborers exploited by a higher degree of exploitation of labor-power.

Die absolute Schranke des durchschnittlichen Arbeitstags, der von Natur immer kleiner ist als 24 Stunden, bildet eine absolute Schranke für den Ersatz von vermindertem variablen Kapital durch gesteigerte Rate des Mehrwerts oder von verringerter exploitierten Arbeiteranzahl durch erhöhten Exploitationsgrad der Arbeitskraft.

Question 894 *Into which contradictions do the capitalists run if they continue to lay off a part of the workers in order to exploit the remaining workers more?*

↓ Commentary to second law.

This palpable law is of importance for the clearing up of many phenomena, arising from a tendency (to be worked out later on) of capital to reduce as much as possible the number of laborers employed by it, or its variable constituent transformed into labor-power, in contradiction to its other tendency to produce the greatest possible mass of surplus-value. On the other hand, if the mass of labor-power employed, or the amount of variable capital, increases, but not in proportion to the fall in the rate of surplus-value, the mass of the surplus-value produced, falls.

Dies handgreifliche zweite Gesetz ist wichtig zur Erklärung vieler Erscheinungen, entspringend aus der später zu entwickelnden Tendenz des Kapitals, die von ihm beschäftigte Arbeiteranzahl oder seinen variablen in Arbeitskraft umgesetzten Bestandteil soviel als immer möglich zu reduzieren, im Widerspruch zu seiner anderen Tendenz, die möglichst große Masse von Mehrwert zu produzieren. Umgekehrt. Wächst die Masse der verwandten Arbeitskräfte oder die Größe des variablen Kapitals, aber nicht verhältnismäßig zur Abnahme in der Rate des Mehrwerts, so sinkt die Masse des produzierten Mehrwerts.

11.1.c. [Third Law]

Surplus value proportional only to variable capital, not to the whole capital.

A third law results from the determination, of the mass of the surplus-value produced, by the two factors: rate of surplus-value and amount of variable capital advanced. The rate of surplus-value, or the degree of exploitation of labor-power, and the value of labor-power, or the amount of necessary workingtime being given, it is selfevident that the greater the variable capital, the greater would be the mass of the value produced and of the surplus-value. If the limit of the working-day is given, and also the limit of its necessary constituent, the mass of value and surplus-value that an individual capitalist produces, is clearly exclusively dependent on the mass of labor

324:1/o Ein drittes Gesetz ergibt sich aus der Bestimmung der Masse des produzierten Mehrwerts durch die zwei Faktoren, Rate des Mehrwerts und Größe des vorge-schoßnen variablen Kapitals. Die Rate des Mehrwerts oder den Exploitationsgrad der Arbeitskraft, und den Wert der Arbeitskraft oder die Größe der notwendigen Arbeitseit gegeben, ist es selbstverständlich, daß, je größer das variable Kapital, desto größer die Masse des produzierten Werts und Mehrwerts. Ist die Grenze des Arbeitstags gegeben, ebenso die Grenze seines notwendigen Bestandteils, so hängt die Masse von Wert und Mehrwert, die ein einzelner Kapitalist produziert, offenbar ausschließlich ab

11.1. [Four Quantitative Laws Regarding the Mass of Surplus-Value]

that he sets in motion. But this, under the conditions supposed above, depends on the mass of labor-power, or the number of laborers whom he exploits, and this number in its turn is determined by the amount of the variable capital advanced. With a given rate of surplus-value, and a given value of labor-power, therefore, the masses of surplus-value produced vary directly as the amounts of the variable capitals advanced.

von der Masse Arbeit, die er in Bewegung setzt. Diese aber hängt, unter den gegebenen Annahmen, ab von der Masse Arbeitskraft oder der Arbeiteranzahl, die er exploitiert, und diese Anzahl ihrerseits ist bestimmt durch die Größe des von ihm vorgeschossenen variablen Kapitals. Bei gegebener Rate des Mehrwerts und gegebenem Wert der Arbeitskraft verhalten sich also die Massen des produzierten Mehrwerts direkt wie die Größen der vorgeschossenen variablen Kapitale.

↓ Reformulation of the third law because not all capital advanced is variable capital:

Now we know that the capitalist divides his capital into two parts. One part he lays out in means of production. This is the constant part of his capital. The other part he lays out in living labor-power. This part forms his variable capital. On the basis of the same mode of social production, the division of capital into constant and variable differs in different branches of production, and within the same branch of production, too, this relation changes with changes in the technical conditions and in the social combinations of the processes of production. But in whatever proportion a given capital breaks up into a constant and a variable part, whether the latter is to the former as 1:2 or 1:10 or 1:x, the law just laid down is not affected by this. For, according to our previous analysis, the value of the constant capital reappears in the value of the product, but does not enter into the newly produced value, the newly created valueproduct. To employ 1,000 spinners, more raw material, spindles, etc., are, of course, required, than to employ 100. The value of these additional means of production however may rise, fall, remain unaltered, be large or small; it has no influence on the process of creation of surplus-value by means of the labor-powers that put them in motion. The law demonstrated above now, therefore, takes this form: the masses of value and of surplus-value produced by different capitals—the value of labor-power being given and its degree of exploitation

Nun weiß man aber, daß der Kapitalist sein Kapital in zwei Teile teilt. Einen Teil legt er aus in Produktionsmitteln. Dies ist der konstante Teil seines Kapitals. Den andren Teil setzt er um in lebendige Arbeitskraft. Dieser Teil bildet sein variables Kapital. Auf Basis derselben Produktionsweise findet in verschiedenen Produktionszweigen verschiedene Teilung des Kapitals in konstanten und variablen Bestandteil statt. Innerhalb desselben Produktionszweige wechselt dies Verhältnis mit wechselnder technischer Grundlage und gesellschaftlicher Kombination des Produktionsprozesses. Wie aber ein gegebenes Kapital immer zerfalle in konstanten und variablen Bestandteil, ob der letztere sich zum erstren verhalte wie 1 : 2, 1 : 10 oder 1 : x, das eben aufgestellte Gesetz wird nicht davon berührt, da früherer Analyse gemäß der Wert des konstanten Kapitals im Produktenwert zwar wiedererscheint, aber nicht in das neugebildete Wertprodukt eingeht. Um 1000 Spinner zu verwenden, sind natürlich mehr Rohmaterialien, Spindeln usw. erheischt, als um 100 zu verwenden. Der Wert dieser zuzusetzenden Produktionsmittel aber mag steigen, fallen, unverändert bleiben, groß oder klein sein, er bleibt ohne irgendeinen Einfluß auf den Verwertungsprozeß der sie bewegenden Arbeitskräfte. Das oben konstatierte Gesetz nimmt also die Form an: Die von verschiedenen Kapitalen produzierten Massen von Wert und Mehrwert verhalten sich bei gegebenem Wert und gleich großem Ex-

11. Rate and Mass of Surplus-Value

being equal—vary directly as the amounts of the variable constituents of these capitals, *i.e.*, as their constituents transformed into living labor-power.

↓ Law in contradiction to experience, but right now Marx is not going to explain where this discrepancy comes from.

This law clearly contradicts all experience based on plainly visible evidence. Everyone knows that a cotton spinner, who, reckoning the percentage on the whole of his applied capital, employs much constant and little variable capital, does not, on account of this, pocket less profit or surplus-value than a baker, who relatively sets in motion much variable and little constant capital.

exploitationsgrad der Arbeitskraft direkt wie die Größen der variablen Bestandteile dieser Kapitale, d.h. ihrer in lebendige Arbeitskraft umgesetzten Bestandteile.

325:1 Dies Gesetz widerspricht offenbar aller auf den Augenschein gegründeten Erfahrung. Jedermann weiß, daß ein Baumwollspinner, der, die Prozentteile des angewandten Gesamtkapitals berechnet, relativ viel konstantes und wenig variables Kapital anwendet, deswegen keinen kleineren Gewinn oder Mehrwert erbeutet als ein Bäcker, der relativ viel variables und wenig konstantes Kapital in Bewegung setzt.

Question 895 Assume a capitalist advances \$500 every day, \$100 for labor and \$400 for materials and machinery. Another capitalist in a more labor-intensive industry advances also \$500 every day, \$300 for labor and \$200 for materials and machinery. How much surplus-value does each capitalist produce if the rate of surplus-value is 100%? Why does this result “contradict all experience based on appearance”? (p. 421:1/o)

For the solution of this apparent contradiction, many intermediate terms are as yet missing, as from the standpoint of elementary algebra many intermediate terms are required to understand that $0/0$ can represent an actual magnitude. Classical economy, although not formulating the law, holds instinctively to it, because it is a necessary consequence of the general law of value. It tries to rescue the law from collision with contradictory phenomena by a violent abstraction. It will be seen later²⁰³ how the school of Ricardo has come to grief over this stumbling block. Vulgar economy which, indeed, “has really learnt nothing,” here as everywhere sticks to appearances in opposition to the law which regulates and explains them. In opposition to Spinoza, it believes that “ignorance is a sufficient reason.”

Zur Lösung dieses scheinbaren Widerspruchs bedarf es noch vieler Mittelglieder, wie es vom Standpunkt der elementaren Algebra vieler Mittelglieder bedarf, um zu verstehen, daß $0/0$ eine wirkliche Größe darstellen kann. Obgleich sie das Gesetz nie formuliert hat, hängt die klassische Ökonomie instinktiv daran fest, weil es eine notwendige Konsequenz des Wertgesetzes überhaupt ist. Sie sucht es durch gewaltsame Abstraktion vor den Widersprüchen der Erscheinung zu retten. Man wird später²⁰³ sehen, wie die Ricardosche Schule an diesem Stein des Anstoßes gestolpert ist. Die Vulgärökonomie, die „wirklich auch nichts gelernt hat“, pocht hier, wie überall, auf den Schein gegen das Gesetz der Erscheinung. Sie glaubt im Gegensatz zu Spinoza, daß „die Unwissenheit ein hinreichender Grund ist“.

Question 896 Marx argues against empiricism that they claim “ignorance is a sufficient reason.” Elaborate.

Corollary to third law: Growth of surplus-value of the whole society is limited by growth of working population and lengthening of working-day.

11.1. [Four Quantitative Laws Regarding the Mass of Surplus-Value]

The labor which is set in motion by the total capital of a society, day in, day out, may be regarded as a single collective working day. If, *e.g.*, the number of laborers is a million, and the average working-day of a laborer is 10 hours, the social working day consists of ten million hours. With a given length of this working day, whether its limits are fixed physically or socially, the mass of surplus-value can only be increased by increasing the number of laborers, *i.e.*, of the laboring population. The growth of population here forms the mathematical limit to the production of surplus-value by the total social capital. On the contrary, with a given amount of population, this limit is formed by the possible lengthening of the working day.²⁰⁴ It will, however, be seen in the following chapter that this law only holds for the form of surplus-value dealt with up to the present.

²⁰³ Further particulars will be given in Book IV.

²⁰⁴ “The Labor, that is the economic time, of society, is a given portion, say ten hours a day of a million of people, or ten million hours . . . Capital has its boundary of increase. This boundary may, at any given period, be attained in the actual extent of economic time employed.” (“An Essay on the Political Economy of Nations.” London, 1821, pp. 47, 49.)

325:2 Die Arbeit, die vom Gesamtkapital einer Gesellschaft tagaus, tagein in Bewegung gesetzt wird, kann als ein einziger Arbeitstag betrachtet werden. Ist z.B. die Zahl der Arbeiter eine Million und beträgt der Durchschnittsarbeitstag eines Arbeiters 10 Stunden, so besteht der gesellschaftliche Arbeitstag aus 10 Millionen Stunden. Bei gegebener Länge dieses Arbeitstags, seien seine Grenzen physisch oder sozial gezogen, kann die Masse des Mehrwerts nur vermehrt werden durch Vermehrung der Arbeiteranzahl, d.h. der Arbeiterbevölkerung. Das Wachstum der Bevölkerung bildet hier die mathematische Grenze für Produktion des Mehrwerts durch das gesellschaftliche Gesamtkapital. Umgekehrt. Bei gegebener Größe der Bevölkerung wird diese Grenze gebildet durch die mögliche Verlängerung des Arbeitstags.²⁰⁴ Man wird im folgenden Kapitel sehen, daß dies Gesetz nur für die bisher behandelte Form des Mehrwerts gilt.

²⁰³ Näheres darüber im „Vierten Buch“.

²⁰⁴ „Die Arbeit einer Gesellschaft, das ist die in der Wirtschaft verwandte Zeit, stellt eine gegebene Größe dar, sagen wir 10 Stunden täglich von einer Million Menschen oder 10 Millionen Stunden . . . Das Kapital ist in seinem Wachstum begrenzt. In jeder gegebenen Periode besteht diese Grenze in dem wirklichen Ausmaß der in der Wirtschaft verwandten Zeit.“ („An Essay on the Political Economy of Nations“, London 1821, p. 47, 49.)

11.1.d. [Fourth Law]

Here is another law. (Marx doesn't call it the fourth law but we do.) Minimum of capital is determined by the mass of surplus-value necessary for the capitalist to survive.

From the treatment of the production of surplus-value, so far, it follows that not every sum of money, or of value, is at pleasure transformable into capital. To effect this transformation, in fact, a certain minimum of money or of exchange-value must be presupposed in the hands of the individual possessor of money or commodities. The minimum of variable capital is the cost

326:1/o Aus der bisherigen Betrachtung der Produktion des Mehrwerts ergibt sich, daß nicht jede beliebige Geld- oder Wertsomme in Kapital verwandelbar, zu dieser Verwandlung vielmehr ein bestimmtes Minimum von Geld oder Tauschwert in der Hand des einzelnen Geld- oder Warenbesitzers vorausgesetzt ist. Das Minimum von variablem Kapital ist der Kostenpreis ei-

11. Rate and Mass of Surplus-Value

price of a single labor-power, employed the whole year through, day in, day out, for the production of surplus-value. If this laborer were in possession of his own means of production, and were satisfied to live as a laborer, he need not work beyond the time necessary for the reproduction of his means of subsistence, say 8 hours a day. He would, besides, only require the means of production sufficient for 8 working hours. The capitalist, on the other hand, who makes him do, besides these 8 hours, say 4 hours' surplus-labor, requires an additional sum of money for furnishing the additional means of production. On our supposition, however, he would have to employ two laborers in order to live, on the surplus-value appropriated daily, as well as, and no better than a laborer, i.e., to be able to satisfy his necessary wants. In this case the mere maintenance of life would be the end of his production, not the increase of wealth; but this latter is implied in capitalist production. That he may live only twice as well as an ordinary laborer, and besides turn half of the surplus-value produced into capital, he would have to raise, with the number of laborers, the minimum of the capital advanced 8 times.

ner einzelnen Arbeitskraft, die das ganze Jahr durch, tagaus, tagein, zur Gewinnung von Mehrwert vernutzt wird. Wäre dieser Arbeiter im Besitz seiner eignen Produktionsmittel und begnüge er sich, als Arbeiter zu leben, so genüge ihm die zur Reproduktion seiner Lebensmittel notwendige Arbeitszeit, sage von 8 Stunden täglich. Er brauchte also auch nur Produktionsmittel für 8 Arbeitsstunden. Der Kapitalist dagegen, der ihn außer diesen 8 Stunden sage 4 Stunden Mehrarbeit verrichten läßt, bedarf einer zusätzlichen Geldsumme zur Beschaffung der zusätzlichen Produktionsmittel. Unter unsrer Annahme jedoch müßte er schon zwei Arbeiter anwenden, um von dem täglich angeeigneten Mehrwert wie ein Arbeiter leben, d.h. seine notwendigen Bedürfnisse befriedigen zu können. In diesem Fall wäre bloßer Lebensunterhalt der Zweck seiner Produktion, nicht Vermehrung des Reichtums, und das letztere ist unterstellt bei der kapitalistischen Produktion. Damit er nur doppelt so gut lebe wie ein gewöhnlicher Arbeiter und die Hälfte des produzierten Mehrwerts in Kapital zurückverwandele, müßte er zugleich mit der Arbeiterzahl das Minimum des vorgeschobnen Kapitals um das Achtfache steigern.

↑ If rate of surplus-value is 50%, then the minimum is 8 workers per capitalist.

Question 897 *What are the ultimate limits of the growth of the mass of the surplus-value which the capitalists in a given society can reap?*

Question 898 *Make an estimate for the minimum number of workers necessary to support each capitalist if the rate of surplus-value is 50%.*

↓ Capitalist is only real capitalist if the number of his workers exceeds this minimum.

Of course he can, like his laborer, take to work himself, participate directly in the process of production, but he is then only a hybrid between capitalist and laborer, a "small master." A certain stage of capitalist production necessitates that the capitalist be able to devote the whole of the time during which he functions as a capitalist, i.e., as personified capital, to the appropriation and therefore control of the labor of others, and to the

Allerdings kann er selbst, gleich seinem Arbeiter, unmittelbar Hand im Produktionsprozesse anlegen, aber ist dann auch nur ein Mittelding zwischen Kapitalist und Arbeiter, ein „kleiner Meister“. Ein gewisser Höhegrad der kapitalistischen Produktion bedingt, daß der Kapitalist die ganze Zeit, während deren er als Kapitalist, d.h. als personifiziertes Kapital funktioniert, zur Aneignung und daher Kontrolle fremder Ar-

11.1. [Four Quantitative Laws Regarding the Mass of Surplus-Value]

selling of the products of this labor.²⁰⁵

²⁰⁵ “The farmer cannot rely on his own labor, and if he does, I will maintain that he is a loser by it. His employment should be a general attention to the whole: his thresher must be watched, or he will soon lose his wages in corn not threshed out, his mowers, reapers, etc., must be looked after; he must constantly go round his fences; he must see there is no neglect; which would be the case if he was confined to any one spot.” (“An Inquiry into the Connexion between the Present Price of Provisions and the Size of Farms, etc. By a Farmer.” London, 1773, p. 12.) This book is very interesting. In it the genesis of the “capitalist farmer” or “merchant farmer,” as he is explicitly called, may be studied, and his self-glorification at the expense of the small farmer who has only to do with bare subsistence, be noted.

↓ Here a different author, and much later:

^{205 ctd} “The class of capitalists are from the first partially, and they become ultimately completely, discharged from the necessity of the manual labor.” (“Textbook of Lectures on the Political Economy of Nations. By the Rev. Richard Jones.” Hertford 1852. Lecture III., p. 39.)

↓ Quantity into Quality:

The guilds of the middle ages therefore tried to prevent by force the transformation of the master of a trade into a capitalist, by limiting the number of laborers that could be employed by one master within a very small maximum. The possessor of money or commodities actually turns into a capitalist in such cases only where the minimum sum advanced for production greatly exceeds the maximum of the middle ages. Here, as in natural science, is shown the correctness of the law discovered by Hegel (in his “Logic”), that merely quantitative differences beyond a certain point pass into qualitative changes.^{205a}

^{205a} The molecular theory of modern chem-

beit und zum Verkauf der Produkte dieser Arbeit verwenden könne.²⁰⁵

²⁰⁵ „Der Pächter darf nicht auf seiner eigenen Arbeit aufbauen; und wenn er es tut, so wird er meiner Meinung nach dadurch verlieren. Seine Tätigkeit sollte in der Beaufsichtigung des Ganzen bestehen: er muß auf seinen Drescher achten, denn sonst wird bald der Lohn hinausgeworfen sein für Getreide, das nicht ausgedroschen ist; ebenso müssen seine Mäher, Schnitter usw. überwacht werden; er muß ständig seine Zäune nachsehen; er muß aufpassen, ob nichts vernachlässigt wird; das würde der Fall sein, wenn er sich auf einen Punkt beschränken würde.“ ([J. Arbuthnot,] „An Enquiry into the Connection between the Price of Provisions, and the Size of Farms etc.“ By a Farmer, London 1773, p. 12.) Diese Schrift ist sehr interessant. Man kann darin die Genesis des „capitalist farmer“ oder „merchant farmer“, wie er ausdrücklich genannt wird, studieren und seiner Selbstverherrlichung gegenüber dem „small farmer“, dem es wesentlich um die Subsistenz zu tun ist, zuhören.

^{205 ctd} „Die Kapitalistenklasse wird zuerst teilweise und schließlich ganz und gar entbunden von der Notwendigkeit der Handarbeit.“ („Textbook of Lectures on the Polit. Economy of Nations“. By the Rev. Richard Jones, Hertford 1852, Lecture III, p. 39.)

Die Verwandlung des Handwerksmeisters in den Kapitalisten suchte das Zunftwesen des Mittelalters dadurch gewaltsam zu verhindern, daß es die Arbeiteranzahl, die ein einzelner Meister beschäftigen durfte, auf ein sehr geringes Maximum beschränkte. Der Geld- oder Warenbesitzer verwandelt sich erst wirklich in einen Kapitalisten, wo die für die Produktion vorgeschosßene Minimalsumme weit über dem mittelalttrigen Maximum steht. Hier, wie in der Naturwissenschaft, bewährt sich die Richtigkeit des von Hegel in seiner „Logik“ entdeckten Gesetzes, daß bloß quantitative Veränderungen auf einem gewissen Punkt in qualitative Unterschiede umschlagen.^{205a}

^{205a} Die in der modernen Chemie angewand-

11. Rate and Mass of Surplus-Value

istry first scientifically worked out by Laurent and Gerhardt rests on no other law. (Addition to 3rd Edition.) For the explanation of this statement, which is not very clear to nonchemists, we remark that the author speaks here of the homologous series of carbon compounds, first so named by C. Gerhardt in 1843, each series of which has its own general algebraic formula. Thus the series of paraffins: C_nH_{2n+2} , that of the normal alcohols: $C_nH_{2n+2}O$; of the normal fatty acids: $C_nH_{2n}O_2$ and many others. In the above examples, by the simply quantitative addition of CH_2 to the molecular formula, a qualitatively different body is each time formed. On the share (overestimated by Marx) of Laurent and Gerhardt in the determination of this important fact see Kopp, "Entwicklung der Chemie." München, 1873, pp. 709, 716, and Schorlemmer, "The Rise and Development of Organic Chemistry." London, 1879, p. 54.—F. E.

te, von Laurent und Gerhardt zuerst wissenschaftlich entwickelte Molekulartheorie beruht auf keinem andren Gesetze. {Zusatz zur 3. Ausg.}—Wir bemerken zur Erklärung dieser für den Nichtchemiker ziemlich dunklen Anmerkung, daß der Verfasser hier von den von C. Gerhardt 1843 zuerst so benannten „homologen Reihen“ von Kohlenwasserstoffverbindungen spricht, von denen jede eine eigne algebraische Zusammensetzungsformel hat. So die Reihe der Paraffine: C_nH_{2n+2} ; die der normalen Alkohole: $C_nH_{2n+2}O$; die der normalen fetten Säuren: $C_nH_{2n}O_2$ und viele andre. In obigen Beispielen wird durch einfachen quantitativen Zusatz von CH_2 zur Molekularformel jedesmal ein qualitativ verschiedener Körper gebildet. Über die, von Marx überschätzte, Teilnahme Laurents und Gerhardts an der Feststellung dieser wichtigen Tatsache vgl. Kopp, „Entwicklung der Chemie“, München 1873, S. 709 und 716, und Schorlemmer, „Rise and Progress of Organic Chemistry“, London 1879, p. 54.—F. E.

Exam Question 899 *Why did the early capitalists have more workers work together than had been customary in pre-capitalistic production?*

The concluding paragraph about the fourth law alludes to a different criterion for the minimum: namely, the amount of machinery and scale of production necessary for technology.

The minimum of the sum of value that the individual possessor of money or commodities must command, in order to metamorphose himself into a capitalist, changes with the different stages of development of capitalist production, and is at given stages different in different spheres of production, according to their special and technical conditions. Certain spheres of production demand, even at the very outset of capitalist production, a minimum of capital that is not as yet found in the hands of single individuals. This gives rise partly to state subsidies to private persons, as in France in the time of Colbert, and as in many German states up to our own epoch, partly to the formation of societies with legal monopoly for the exploitation of certain branches of industry and commerce, the forerunners of our modern joint stock companies.²⁰⁶

327:1/o Das Minimum der Wertsomme, worüber der einzelne Geld- oder Warenbesitzer verfügen muß, um sich in einen Kapitalisten zu entpuppen, wechselt auf verschiedenen Entwicklungsstufen der kapitalistischen Produktion und ist, bei gegebener Entwicklungsstufe, verschieden in verschiedenen Produktionssphären, je nach ihren besondern technischen Bedingungen. Gewisse Produktionssphären erheischen schon in den Anfängen der kapitalistischen Produktion ein Minimum von Kapital, das sich noch nicht in der Hand einzelner Individuen vorfindet. Dies veranlaßt teils Staatssubsidien an solche Private, wie in Frankreich zur Zeit Colberts und wie in manchen deutschen Staaten bis in unsre Epoche hinein, teils die Bildung von Gesellschaften mit gesetzlichem Monopol für den Betrieb gewisser Industrie- und Handelszweige²⁰⁶—die Vorläufer der modernen Aktiengesellschaften.

²⁰⁶ Martin Luther calls these kinds of institutions: “The Company Monopolia.”

²⁰⁶ „Die Gesellschaft Monopolia“ nennt Martin Luther derartige Institute.

11.2. [Changed Character of Production Process]

The rest of the chapter is a transition to the relative surplus-value. Marx discusses how already under formal subsumption (this word not used here, but there is a parallel discussion in “Resultate” where this word is used) the production process changes its character.

We shall not examine in detail the changes which take place in the relation between the capitalist and the wage laborer during the process of production, and therefore also not the further form determinations of capital itself. Only a few main points shall be emphasized here.

Within the process of production, as we have seen, capital acquired the command over labor, *i.e.*, over functioning labor-power or the laborer himself. Personified capital, the capitalist takes care that the laborer does his work regularly and with the proper degree of intensity.

↑ If a petty commodity producer works at an intensity and pace that is below the social average for his branch of production, he or she will be penalized by the market, since the value of his or her product is determined by the labor of average intensity needed. But apart from this, the market does not force him or her to change his work speed. It is otherwise with a wage laborer: the wage-laborer is forced to work at the normal intensity.

Capital further developed into a coercive relation, which compels the working class to do more work than the narrow round of its own life wants prescribes. As a producer of the activity of others, as a pumper-out of surplus labor and exploiter of labor-power, it surpasses in energy, disregard of bounds, recklessness and efficiency, all earlier systems of production based on directly compulsory labor.

↑ This is a memorable sentence. Too bad it is buried in a chapter which is not often read.

At first, capital subordinates labor on the basis of the technical conditions in which it historically finds it. It does not, therefore, change immediately the mode of production. The production of surplus-value—in the form hitherto considered by us—by means of simple extension of the working

328:1 Wir halten uns nicht beim Detail der Veränderungen auf, die das Verhältnis von Kapitalist und Lohnarbeiter im Verlaufe des Produktionsprozesses erfuh, also auch nicht bei den weitren Fortbestimmungen des Kapitals selbst. Nur wenige Hauptpunkte seien hier betont.

328:2 Innerhalb des Produktionsprozesses entwickelte sich das Kapital zum Kommando über die Arbeit, d.h. über die sich betätigende Arbeitskraft oder den Arbeiter selbst. Das personifizierte Kapital, der Kapitalist, paßt auf, daß der Arbeiter sein Werk ordentlich und mit dem gehörigen Grad von Intensität verrichte.

328:3 Das Kapital entwickelte sich ferner zu einem Zwangsverhältnis, welches die Arbeiterklasse nötigt, mehr Arbeit zu verrichten, als der enge Umkreis ihrer eignen Lebensbedürfnisse vorschrieb. Und als Produzent fremder Arbeitsamkeit, als Auspumper von Mehrarbeit und Exploiteur von Arbeitskraft übergipfelt es an Energie, Maßlosigkeit und Wirksamkeit alle frühern auf direkter Zwangsarbeit beruhenden Produktionssysteme.

328:4 Das Kapital ordnet sich zunächst die Arbeit unter mit den technischen Bedingungen, worin es sie historisch vorfindet. Es verändert daher nicht unmittelbar die Produktionsweise. Die Produktion von Mehrwert in der bisher betrachteten Form, durch einfache Verlängerung des Arbeitstags,

11. Rate and Mass of Surplus-Value

day, proved, therefore, to be independent of any change in the mode of production itself. It was not less active in the old fashioned bakeries than in the modern cotton factories.

If we consider the process of production from the point of view of the simple labor process, the laborer stands in relation to the means of production, not in their quality as capital, but as the mere means and material of his own intelligent productive activity. In tanning, *e.g.*, he deals with the skins as his simple object of labor. It is not the capitalist whose skin he tans. But it is different as soon as we deal with the process of production from the point of view of the process of creation of surplus-value. The means of production are at once changed into means for the absorption of the labor of others. It is now no longer the laborer that employs the means of production, but the means of production that employ the laborer. Instead of being consumed by him as material elements of his productive activity, they consume him as the ferment necessary to their own life-process, and the life-process of capital consists only in its movement as value constantly expanding, constantly multiplying itself. Furnaces and workshops that stand idle by night, and absorb no living labor, are "a mere loss" to the capitalist. Hence, furnaces and workshops constitute lawful claims upon the night labor of the work-people. The simple transformation of money into the material factors of the process of production, into means of production, transforms the latter into a title and a right to the labor and surplus-labor of others.

Is the inversion of the relation of dead and living labor in the process of valorization an instance of the fetish-like character of commodities? It seems so!

Question 900 *Is the inversion of the relation of dead and living labor in the process of valorization an instance of the fetish-like character of capital?*

An example will show, in conclusion, how this inversion and even perversion, peculiar to and characteristic of capitalist production,

erschien daher von jedem Wechsel der der Produktionsweise selbst unabhängig. Sie war in der altmodischen Bäckerei nicht minder wirksam als in der modernen Baumwollspinnerei.

328:5/o Betrachten wir den Produktionsprozeß unter dem Gesichtspunkt des Arbeitsprozesses, so verhielt sich der Arbeiter zu den Produktionsmitteln nicht als Kapital, sondern als bloßem Mittel und Material seiner zweckmäßigen produktiven Tätigkeit. In einer Gerberei z.B. behandelt er die Felle als seinen bloßen Arbeitsgegenstand. Es ist nicht der Kapitalist, dem er das Fell gerbt. Anders, sobald wir den Produktionsprozeß unter dem Gesichtspunkt des Verwertungsprozesses betrachten. Die Produktionsmittel verwandeln sich sofort in Mittel zur Einsaugung fremder Arbeit. Es ist nicht mehr der Arbeiter, der die Produktionsmittel anwendet, sondern es sind die Produktionsmittel, die den Arbeiter anwenden. Statt von ihm als stoffliche Elemente seiner produktiven Tätigkeit verzehrt zu werden, verzehren sie ihm als Ferment ihres eignen Lebensprozesses, und der Lebensprozeß des Kapitals besteht nur in seiner Bewegung als sich selbst verwertender Wert. Schmelzöfen und Arbeitsgebäude, die des Nachts ruhn und keine lebendige Arbeit einsaugen, sind „reiner Verlust“ („mere loss“) für den Kapitalisten. Darum konstituieren Schmelzöfen und Arbeitsgebäude einen „Anspruch auf die Nachtarbeit“ der Arbeitskräfte. Die bloße Verwandlung des Geldes in gegenständliche Faktoren des Produktionsprozesses, in Produktionsmittel, verwandelt letztere in Rechtstitel und Zwangstitel auf fremde Arbeit und Mehrarbeit.

Wie diese der kapitalistischen Produktion eigentümliche und sie charakterisierende Verkehrung, ja Verrückung des Verhältnis-

of the relation between dead and living labor, between value and the force that creates value, mirrors itself in the consciousness of capitalists. During the revolt of the English factory lords between 1848 and 1850, “the head of one of the oldest and most respectable houses in the West of Scotland, Messrs. Carlile Sons & Co., of the linen and cotton thread factory at Paisley, a company which has now existed for about a century, which was in operation in 1752, and four generations of the same family have conducted it” ... this “very intelligent gentleman” then wrote a letter²⁰⁷ in the *Glasgow Daily Mail* of April 25th, 1849, with the title, “The relay system,” in which among other things the following grotesquely naïve passage occurs:

²⁰⁷ Reports of Insp. of Fact., April 30th, 1849, p. 59.

“Let us now ... see what evils will attend the limiting to 10 hours the working of the factory ... They amount to the most serious damage to the mill owner’s prospects and property. If he (i.e., his “hands”) worked 12 hours before, and is limited to 10, then every 12 machines or spindles in his establishment shrink to 10, and should the works be disposed of, they will be valued only as 10, so that a sixth part would thus be deducted from the value of every factory in the country.”²⁰⁸

²⁰⁸ I.c., p. 60. Factory Inspector Stuart, himself a Scotchman, and in contrast to the English Factory Inspectors, quite taken captive by the capitalistic method of thinking, remarks expressly on this letter which he incorporates in his report that it is “the most useful of the communications which any of the factoryowners working with relays have given to those engaged in the same trade, and which is the most calculated to remove the prejudices of such of them as have scruples respecting any change of the arrangement of the hours of work.”

ses von toter und lebendiger Arbeit, von Wert und wertschöpferischer Kraft, sich im Bewußtsein der Kapitalistenköpfe abspiegelt, zeige schließlich noch ein Beispiel. Während der englischen Fabrikantenrevolte von 1848–1850 schrieb „der Chef der Leinen- und Baumwollspinnerei zu Paisley, einer der ältesten und respektabelsten Firmen von Westschottland, der Kompagnie Carlile, Söhne und Co., die seit 1752 besteht und Generation nach Generation von derselben Familie geführt wird“ — dieser äußerst intelligente Gentleman also schrieb in die „Glasgow Daily Mail“ vom 25. April 1849 einen Brief²⁰⁷ unter dem Titel: „Das Relaisystem“, worin u.a. folgende grotesk naive Stelle unterläuft:

²⁰⁷ „Reports of Insp. of Fact. for 30th April 1849“, p. 59.

329:1 „Laßt uns nun die Übel betrachten, die aus einer Reduktion der Arbeitszeit von 12 auf 10 Stunden fließen ... Sie ‚belaufen‘ sich auf die allerernsthafte Beschädigung der Aussichten und des Eigentums des Fabrikanten. Arbeitete er“ (d.h. seine „Hände“) „12 Stunden und wird er auf 10 beschränkt, dann schrumpfen je 12 Maschinen oder Spindeln seines Etablissements auf 10 zusammen (then every 12 machines or spindles, in his establishment, shrink to 10), und wollte er seine Fabrik verkaufen, so würden sie nur als 10 gewertschätzt werden, so daß so ein sechster Teil vom Wert einer jeden Fabrik im ganzen Lande abgezogen würde.“²⁰⁸

²⁰⁸ I.c. p. 60. Fabrikinspektor Stuart, selbst Schotte, und im Gegensatz zu den englischen Fabrikinspektoren ganz in kapitalistischer Denkart befangen, bemerkt ausdrücklich, dieser Brief, den er seinem Bericht einverleibt, „sei die allernützlichste Mitteilung, die irgendeiner der Fabrikanten, welche das Relaisystem anwenden, gemacht, und ganz besonders darauf berechnet, die Vorurteile und Bedenken gegen jenes System zu beseitigen“.

11. Rate and Mass of Surplus-Value

To this West of Scotland bourgeois brain, inheriting the accumulated capitalistic qualities of "four generations," the value of the means of production, spindles, etc., is so inseparably mixed up with their property, as capital, to expand their own value, and to swallow up daily a definite quantity of the unpaid labor of others, that the head of the firm of Carlile & Co. actually imagines that if he sells his factory, not only will the value of the spindles be paid to him, but, in addition, their power of annexing surplus-value, not only the labor which is embodied in them, and is necessary to the production of spindles of this kind, but also the surplus-labor which they help to pump out daily from the brave Scots of Paisley, and for that very reason he thinks that with the shortening of the working day by 2 hours, the selling price of 12 spinning machines dwindles to that of 10!

330:1 Diesem erbangestammten Kapitalhirn von Westschottland schwimmt der Wert der Produktionsmittel, Spindeln usw., so sehr mit ihrer Kapitaleigenschaft, sich selbst zu verwerten oder täglich ein bestimmtes Quantum fremder Gratisarbeit einzuschlucken, daß der Chef des Hauses Carlile und Co. in der Tat wähnt, beim Verkauf seiner Fabrik werde ihm nicht nur der Wert der Spindeln gezahlt, sondern obendrein ihre Verwertung, nicht nur die Arbeit, die in ihnen steckt und zur Produktion von Spindeln der selben Art nötig ist, sondern auch die Mehrarbeit, die sie täglich aus den braven Westschotten von Paisley auspumpen helfen, und ebendeshalb meint er, schrumpfe mit der Verkürzung des Arbeitstags um zwei Stunden der Verkaufspreis von je 12 Spinnmaschinen auf den von je 10 zusammen!

Question 901 *Explain and illustrate how the relation of dead and living labor is completely inverted in capitalistic production.*

Part IV.

The Production of Relative Surplus-Value

12. The Concept of Relative Surplus-Value

12.1. [Introduction of Relative Surplus-Value]

Question 902 Compare capitalism with simple commodity production regarding how technical innovation benefits (a) the producer and (b) society at large. [2013fa](#), [1996ut](#).

As in chapter Ten, [239:2/o](#), Marx represents the working day as a two-part interval $a—b—c$, where $a—b$ is necessary labor and $b—c$ surplus labor:

317:1 That portion of the working day which produces a mere equivalent for the value of the labor-power paid by the capitalist has so far been treated as a constant magnitude. Under given conditions of production at a given stage in the economic development of society, it is indeed constant. Beyond this necessary labor-time, the worker continued to work for 2, 3, 4, 6, etc. hours. The rate of surplus-value and the length of the working day depended on the length of this extension. Although the necessary labor-time was constant, the total working day was variable.

331:1 Der Teil des Arbeitstags, der bloß ein Äquivalent für den vom Kapital gezahlten Wert der Arbeitskraft produziert, galt uns bisher als konstante Größe, was er in der Tat ist unter gegebenen Produktionsbedingungen, auf einer vorhandenen ökonomischen Entwicklungsstufe der Gesellschaft. Über diese seine notwendige Arbeitszeit hinaus konnte der Arbeiter 2, 3, 4, 6 usw. Stunden arbeiten. Von der Größe dieser Verlängerung hingen Rate des Mehrwerts und Größe des Arbeitstags ab. War die notwendige Arbeitszeit konstant, so dagegen der Gesamtarbeitstag variabel.

↑ Until now, the assumptions were: necessary labor constant, total day variable. This variability was the subject of chapter Ten, see [240:1](#). ↓ Now Marx makes the assumption that the total day is constant. Marx also maintains, for now, the assumption that the necessary labor is fixed.

Question 905 How does Marx define the concept of necessary labor if the capitalist pays his workers less than the value of the labor-power? Is it the time they need to produce an equivalent of the value of their labor-power, or is it the time the workers need to produce an equivalent of the wage they actually get? [2013fa](#), [1996ut](#), [1996sp](#), [1995ut](#).

Now suppose a working day with a given length and division between necessary labor and surplus labor. Let the whole line AC , $A—B—C$, represent, for example, a working day of 12 hours; the section AB 10 hours of necessary labor, and the section BC 2 hours of surplus labor.

Unterstelle jetzt einen Arbeitstag, dessen Größe und dessen Teilung in notwendige Arbeit und Mehrarbeit gegeben sind. Die Linie ac , $a—b—c$, stelle z.B. einen zwölfstündigen Arbeitstag vor, das Stück ab 10 Stunden notwendige Arbeit, das Stück bc 2 Stunden Mehrarbeit.

This is not just a hypothetical question, but it was the situation after passage of the Ten Hour Bills. The fixation of the work day to ten hours did not mean the end of capitalism. As before, capitalists were cutting costs and/or increasing output in order to increase their profits. And they still seemed to succeed. But how were they doing it now? According to the labor theory of value, profits can rise only if the unpaid labor of the laborers rises. The question before us is therefore:

How can the production of surplus-value be increased, i.e. how can surplus labor be prolonged, without any prolongation, or independently of any prolongation, of the line AC ?

Wie kann nun die Produktion von Mehrwert vergrößert, d.h. die Mehrarbeit verlängert werden, ohne jede weitere Verlängerung oder unabhängig von jeder weiteren Verlängerung von ac ?

As in other situations in *Capital*, Marx has set up the question in such a way that a simple solution suggests itself: the capitalists have to push b to the left. This is the only possibility.

317:2/o Although the boundaries of the working day, A and C , are given, it would seem possible to lengthen the line BC (other than by extending it beyond its end point C , which is also the end of the working day AC) by pushing back its starting point B in the direction of A .

331:2/o Trotz gegebner Grenzen des Arbeitstags ac scheint bc verlängerbar, wenn nicht durch Ausdehnung über seinen Endpunkt c , der zugleich der Endpunkt des Arbeitstags ac ist, so durch Verschiebung seines Anfangspunkts b in entgegengesetzter Richtung nach a hin.

Question 906 According to Marx, the only way to increase profits is to shorten the portion of the day during which the workers produce an equivalent of their wage, and to extend that portion of the day when they create unreimbursed new value for the capitalist. Are the capitalists aware of it that all their cost cutting measures, if successful, go at the expense of their workers? 2013fa, 2012fa, 2011fa, 2010fa, 2009fa, 2008fa, 2008SP, 2007fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa.

But this solution is derived from the geometry of our little interval, which is a model of the working day but not the working day itself. Does this solution represent a real situation in the economy of which the interval is an image? In order to make the transition from the geometric model to the economy itself, Marx constructs a concrete example in which all numbers are known:

Assume that $B'B$ in the line $A-B-C$ is equal to half of BC , or to 1 hour's labor-time. If now, in the 12-hour working day AC , point B is moved to B' , then BC becomes $B'C$, the surplus labor increases by one half, from 2 hours to 3 hours, although the working day remains 12 hours as before.

Nimm an, $b'b$ in $a-b-c$ sei gleich der Hälfte von bc oder gleich einer Arbeitsstunde. Wird nun in dem zwölfstündigen Arbeitstag ac der Punkt b nach b' verrückt, so dehnt sich bc aus zu $b'c$, die Mehrarbeit wächst um die Hälfte, von 2 auf 3 Stunden, obgleich der Arbeitstag nach wie vor nur 12 Stunden zählt.

↑ Marx is proceeding here at a snail's pace. As expected, the shift from B to B' increases surplus-value. This is consistent with our experience of capitalism still thriving after the passage of the ten-hour laws. ↓ But what are the implications of this shift for the necessary labor?

This extension of the surplus labor-time from BC to $B'C$, from 2 hours to 3 hours, is however evidently impossible without a

Diese Ausdehnung der Mehrarbeit von bc auf $b'c$, von 2 auf 3 Stunden, ist aber offenbar unmöglich ohne gleichzeitige Zusam-

12. Concept of Relative Surplus-Value

simultaneous contraction of the necessary labor-time from AB to AB' , from 10 hours to 9 hours. The prolongation of surplus labor would be accompanied by an equal shortening of necessary labor. A portion of the labor-time previously consumed, in effect, for the worker's own benefit, would be converted into labor-time expended for the capitalist. It would not be the length of the working day that changes, but its division into necessary labor-time and surplus labor-time.

menziehung der notwendigen Arbeit von ab auf ab' , von 10 auf 9 Stunden. Der Verlängerung der Mehrarbeit entspräche die Verkürzung der notwendigen Arbeit, oder ein Teil der Arbeitszeit, die der Arbeiter bisher in der Tat für sich selbst verbraucht, verwandelt sich in Arbeitszeit für den Kapitalisten. Was verändert, wäre nicht die Länge des Arbeitstags, sondern seine Teilung in notwendige Arbeit und Mehrarbeit.

Fowkes (Moore-Aveling): "The prolongation of (the) surplus labor would correspond to a shortening of (the) necessary labor." But

Marx has it exactly the other way round: "To the prolongation of surplus labor would correspond a shortening of necessary labor." In

the translation used here, "the prolongation of surplus labor would be accompanied by an equal shortening of necessary labor."

↑ Surplus-value can only increase if necessary labor becomes shorter. ↓ But this does not seem possible! If the length of the working-day is given, and the value of labor-power is given, then surplus-value is given and cannot be reduced.

In the translation of Marx's numerical examples that follow, the English currency used by Marx is converted into a decimal currency (dollars), so that it is easier for the reader to follow the math.

318:1/o On the other hand, the magnitude of surplus labor is evidently given when the length of the working day and the value of labor-power are given. The value of labor-power, i.e. the labor-time necessary to produce labor-power, determines the labor-time necessary for the reproduction of the value of labor-power. If 1 hour of work is represented in 12 cents, and the value of a day's labor-power is \$1.20, the worker must work 10 hours every day in order to replace the value paid by capital for his labor-power, or to produce an equivalent for the value of the means of subsistence he needs to consume every day. Given the value of these means of subsistence, the value of his labor-power can be calculated;¹ and given the value of his labor-power, the length of his necessary labor-time can be calculated. The duration of the surplus labor, however, is arrived at by subtracting the necessary labor-time from the total working day: 10 from 12 leaves 2, and it is not evident how, under the given conditions, the surplus labor could possibly

332:1/o Andererseits ist die Größe der Mehrarbeit offenbar selbst gegeben mit gegebener Größe des Arbeitstags und gegebenem Wert der Arbeitskraft. Der Wert der Arbeitskraft, d.h. die zu ihrer Produktion erheischte Arbeitszeit, bestimmt die zur Reproduktion ihres Werts notwendige Arbeitszeit. Stellt sich eine Arbeitsstunde in einem Goldquantum von einem halben Shilling oder 6 d. dar, und beträgt der Tageswert der Arbeitskraft 5 sh., so muß der Arbeiter täglich 10 Stunden arbeiten, um den ihm vom Kapital gezahlten Tageswert seiner Arbeitskraft zu ersetzen oder ein Äquivalent für den Wert seiner notwendigen täglichen Lebensmittel zu produzieren. Mit dem Wert dieser Lebensmittel ist der Wert seiner Arbeitskraft,¹ mit dem Wert seiner Arbeitskraft ist die Größe seiner notwendigen Arbeitszeit gegeben. Die Größe der Mehrarbeit aber wird erhalten durch Subtraktion der notwendigen Arbeitszeit vom Gesamtarbeitstag. Zehn Stunden subtrahiert von zwölf lassen zwei, und es ist nicht abzu-

be prolonged beyond 2 hours.

sehen, wie die Mehrarbeit unter den gegebenen Bedingungen über zwei Stunden hinaus verlängert werden kann.

↓ Footnote 1 stresses through the voices of many economists that the value of labor-power is given, which contradicts our implication of a shorter necessary labor.

¹ The value of his average daily wages is determined by what the worker needs ‘so as to live, labor, and generate’ [Pet91, p. 64]. ‘The price of labor is always constituted of the price of necessities . . . Whenever . . . the laboring man’s wages will not, suitably to his low rank and station, as a laboring man, support such a family as is often the lot of many of them to have’, he is not receiving the proper wages [Van34, p. 15]. ‘The simple worker, who possesses nothing but his arms and his industriousness, has nothing unless he manages to sell his labor to others . . . In every kind of labor, it must happen, and it does in fact happen, that the wage of the worker is limited to what he needs to secure his own subsistence’ (Turgot, *Reflexions*, etc., in *Oeuvres*, ed. Daire, Vol. I, p. 10). ‘The price of the necessities of life is, in fact, the cost of producing labor’ [Mal15, p. 48, Note]

¹ „Der Wert des täglichen Durchschnittslohns ist bestimmt durch das, was der Arbeiter braucht, um zu leben, zu arbeiten und sich fortzupflanzen“. [Pet91, p. 64] „Der Preis der Arbeit wird immer vom Preis der notwendigen Lebensmittel bestimmt.“ Der Arbeiter erhält nicht den entsprechenden Lohn, „wann immer . . . der Lohn des Arbeiters nicht hinreicht eine so große Familie, wie sie das Los vieler von ihnen ist, entsprechend seinem niedrigen Stand und als Arbeiter zu ernähren.“ [Van34, p. 15] „Der einfache Arbeiter, der nichts als seine Arme und seinen Fleiß besitzt, hat nichts, außer wenn es ihm gelingt, seine Arbeit an andre zu verkaufen . . . Bei jeder Art Arbeit muß es dahin kommen, und kommt es in der Tat dahin, daß der Lohn des Arbeiters auf das begrenzt ist, was er notwendig zu seinem Lebensunterhalt braucht.“ (Turgot, „*Reflexions* etc.“, „*Oeuvres*“, éd. Daire, t. I, p. 10.) „Der Preis der Subsistenzmittel ist in der Tat gleich den Kosten der Produktion der Arbeit.“ [Mal15, p. 48, Note]

Question 908 Turgot wrote: “In every kind of labor, it must happen, and it does in fact happen, that the wage of the worker is limited to what he needs to secure his own subsistence.” Why is this so? Is this still valid today? 2013fa, 2012fa, 2011fa, 2010fa, 2009fa, 2008fa, 2007fa, 2007SP.

We are at an impasse. The capitalist wants to change the division of the working-day into necessary and surplus-labor in his favor. Not only is it his motivation, he seems to be successful at it. Capitalism is thriving, profits are growing, despite the limits on the working-day. But from the argument given it seems that the laws of economics do not permit this.

As in the other impasse situations, the resolution consists in opening up the inquiry, by bringing in things which were until now not considered. But this time, the resolution will not be given in one step but in two steps. Knocking at all the walls which box him in, in order to see whether they are hollow, Marx first investigates the wall which seems the most hollow because of the obvious market power of the capitalists. He asks: can these continued profits be explained by the capitalists violating the law of value?

Of course, the capitalist could, instead of \$1.20, pay the worker \$1.08 or even less. 9 hours’ labor-time would be sufficient to reproduce this value of \$1.08; and consequently 3 hours of surplus labor, instead of 2, would accrue to the capitalist. The surplus-value would rise from 24 cents to

Allerdings mag der Kapitalist statt 5 sh. dem Arbeiter nur 4 sh. 6 d. oder noch weniger zahlen. Zur Reproduktion dieses Werts von 4 sh. 6 d. würden 9 Arbeitsstunden genügen, von dem zwölfstündigen Arbeitstag daher 3 statt 2 Stunden der Mehrarbeit anheimfallen und der Mehrwert selbst von 1 sh. auf

12. Concept of Relative Surplus-Value

36 cents. This result, however, could be attained only by depressing the wage of the worker below the value of his labor-power. With the \$1.08, which he produces in 9 hours, he commands one-tenth less of the means of subsistence than before, and consequently the reproduction of his labor-power can take place only in a stunted way. The surplus labor would in this case be prolonged only by transgressing its normal limits; its domain would be extended only by a usurpation of part of the domain of necessary labor-time.

↑ Marx does *not* say here that it is impossible to shorten the necessary labor by lengthening the surplus labor. It *is* possible and happens often. ↓ Nevertheless Marx will not discuss it here.

Despite the important part which this method plays in practice, we are barred from considering it here by our assumption, that all commodities, including labor-power, are bought and sold at their full values.

1 sh. 6 d. steigen. Dies Resultat wäre jedoch nur erzielt durch Herabdrückung des Lohns des Arbeiters unter den Wert seiner Arbeitskraft. Mit den 4 sh. 6 d., die er in 9 Stunden produziert, verfügt er über 1/10 weniger Lebensmittel als vorher, und so findet nur eine verkümmerte Reproduktion seiner Arbeitskraft statt. Die Mehrarbeit würde hier nur verlängert durch Überschreitung ihrer normalen Grenzen, ihre Domäne nur ausgedehnt durch usurpatorischen Abbruch von der Domäne der notwendigen Arbeitszeit.

Trotz der wichtigen Rolle, welche diese Methode in der wirklichen Bewegung des Arbeitslohnes spielt, ist sie hier ausgeschlossen durch die Voraussetzung, daß die Waren, also auch die Arbeitskraft, zu ihrem vollen Wert gekauft und verkauft werden.

Question 909 Marx clearly excludes, in 430:1/o, the discussion of situations where wages fall below the value of labor-power. Does he also exclude the discussion of situations where wages rise above the value of labor-power? (Compare 655:2 and 747:2–750:0.)

Question 910 Do you know examples where the working class responded through direct class action or sought political intervention because wages fell below the value of the habitual means of subsistence? [2013fa](#).

There are good reasons for the assumption that labor-power is paid its full price. A deviation from this can only allow a short-term boost in profits which will however create problems for the capitalist system later on, since it undermines the development of the working-class. But capitalism is genuinely thriving in the long run, therefore deviations of the price of labor-power from its value cannot be the explanation. Therefore only one possible explanation remains:

Once we assume this, the labor-time necessary for the production of labor-power, or for the reproduction of its value, cannot be lessened by a fall in the worker's wages below the value of his labor-power, but only by a fall in this value itself.

Dies einmal unterstellt, kann die zur Produktion der Arbeitskraft oder zur Reproduktion ihres Werts notwendige Arbeitszeit nicht abnehmen, weil der Lohn des Arbeiters unter den Wert seiner Arbeitskraft, sondern nur wenn dieser Wert selbst sinkt.

↑ A solution just fell into our laps; where did it come from? The procedure here is very similar to the one in chapters Five and Six: after chapter Five seemed to show the impossibility of M–C–M', chapter Six showed that after etching away all the impossibilities the contours of what is the only possibility had become visible. The transition just made is very similar, and ↓ Marx remarks that this transition is a reversal of cause and effect. For a dialectician like Marx this means: this is the negation of a negation.

With the length of the working day as a given, the prolongation of the surplus labor must originate in the shortening of the necessary labor-time, instead of the latter arising from the former.

Bei gegebner Länge des Arbeitstags muß die Verlängerung der Mehrarbeit aus der Verkürzung der notwendigen Arbeitszeit entspringen, nicht umgekehrt die Verkürzung der notwendigen Arbeitszeit aus der Verlängerung der Mehrarbeit.

Fowkes Translation: "Given the length of the working-day, the prolongation of the surplus labor must of necessity originate in the curtailment of the necessary labor-time; the latter cannot arise from the former." The translator seems to have forgotten the context in which Marx makes this statement. There is nothing in the

German of which "of necessity" is the translation. Furthermore, since the verb in the first half of the sentence is "must," I am assuming the implied verb in the second half of the sentences is "must not" (instead of "cannot"), meaning: it is possible but our assumptions prohibit consideration of this case. I wrote "with the length of the

working day as a given" instead of "if the length of the working day is given," because I wanted to indicate that this is an assumption which has always been in the background, and which must therefore be added to the assumption of prices equal values, instead of taking its place.

↑ If the capitalist depresses the price of labor-power below its value in order to increase surplus-value, then the necessary labor decreases because the surplus labor increases. On the other hand, if the value of labor-power falls, then the surplus labor increases because the necessary labor decreases. This is a reversal of cause and effect, i.e., this effect is not something the capitalists are directly pushing for, it is an indirect effect.

Question 911 *If the length of the working day is fixed, then the division of the day into necessary and surplus labor can be made more favorable for the capitalist in two ways: either the necessary labor is shortened by extending the surplus labor, or the surplus labor is extended by shortening the necessary labor. Which of these two possibilities is Marx discussing here, and why is he not discussing the other possibility?* 2013fa, 2001fa, 1999SP, 1998WI, 1997ut, 1997sp, 1997WI, 1996ut, 1996sp, 1995ut.

↓ In terms of the numerical example from 317:2/o, the second option would look as follows:

In our example, the value of labor-power must go through a decline of one-tenth, in order to shorten the necessary labor-time by one-tenth, i.e. from 10 hours to 9, and therefore to lengthen the surplus labor from 2 hours to 3.

In unsrem Beispiel muß der Wert der Arbeitskraft wirklich um 1/10 sinken, damit die notwendige Arbeitszeit um 1/10 abnehme, von 10 auf 9 Stunden, und daher die Mehrarbeit sich von 2 auf 3 Stunden verlängere.

The "wirklich" represents a real process brought about by the cumulative effect of productivity

changes (instead of just the wishful thinking of the capitalist, or his ability to cut wages because

of superior market power). I tried to render this in the translation by saying: must go through a decline.

Question 912 *Did the legal fixation of the length of the working day discussed in chapter Ten prevent an increase of exploitation?* 2013fa, 1997WI, 1996ut, 1996sp, 1995ut, 1995WI.

↓ Now the second step in the way out out the above impasse: in order for this to be possible, an additional new point has to be brought in, namely, changes in productivity:

12. Concept of Relative Surplus-Value

319:1/o A fall of this kind in the value of labor-power implies, however, that the same means of subsistence formerly produced in 10 hours can now be produced in 9 hours. But this is impossible without an increase in the productive power of labor.

An increase in productivity is therefore the solution of the dilemma. Note that Marx writes here: “the same means of subsistence,” i.e., he makes the assumption that real wages remain constant.

For example, suppose a cobbler, with a given set of tools, makes one pair of boots in one working day of 12 hours. If he is to make two pairs in the same time, the productive power of his labor must be double; and this cannot happen without an alteration in his tools and/or work method. Hence the conditions of production of his labor, i.e. his mode of production, hence the labor process itself, must be revolutionized. By an increase in the productive power of labor, we mean an alteration in the labor process of such a kind as to shorten the labor-time socially required for the production of a commodity, therefore to endow a given quantity of labor with the power of producing a greater quantity of use-value.²

333:1/o Eine solche Senkung des Werts der Arbeitskraft um 1/10 bedingt aber ihrerseits, daß dieselbe Masse Lebensmittel, die früher in 10, jetzt in 9 Stunden produziert wird. Dies ist jedoch unmöglich ohne eine Erhöhung der Produktivkraft der Arbeit.

Mit gegebenen Mitteln kann ein Schuster z.B. ein Paar Stiefel in einem Arbeitstag von 12 Stunden machen. Soll er in der selben Zeit zwei Paar Stiefel machen, so muß sich die Produktivkraft seiner Arbeit verdoppeln, und sie kann sich nicht verdoppeln ohne eine Änderung in seinen Arbeitsmitteln oder seiner Arbeitsmethode oder beiden zugleich. Es muß daher eine Revolution in den Produktionsbedingungen seiner Arbeit eintreten, d.h. in seiner Produktionsweise und daher im Arbeitsprozeß selbst. Unter Erhöhung der Produktivkraft der Arbeit verstehen wir hier überhaupt eine Veränderung im Arbeitsprozeß, wodurch die zur Produktion einer Ware gesellschaftlich erheischte Arbeitszeit verkürzt wird, ein kleineres Quantum Arbeit also die Kraft erwirbt, ein größeres Quantum Gebrauchswert zu produzieren.²

“Productive power” is a better translation of “Produktivkraft” than the usual “productive force.”

² ‘When the crafts assume a more perfect form, this means nothing other than the discovery of new ways of making a product with fewer people, or (which is the same thing) in a shorter time, than previously’ [Gal03, pp. 158–9] ‘Economies in the cost of production can only be economies in the quantity of labor employed in production’ (Sismondi, *Études*, Vol. I, p. 22).

² „Wenn die Gewerbe sich vervollkommen, so bedeutet das nichts anderes als die Entdeckung neuer Wege, auf denen ein Produkt mit weniger Menschen oder (was das selbe ist) in kürzerer Zeit als vorher gefertigt werden kann.“ [Gal03, pp. 158–9] „Die Ersparnis an den Kosten der Produktion kann nichts anderes sein als Ersparnis an der zur Produktion angewandten Arbeitsmenge.“ (Sismondi, „Études etc.“, t. I, p. 22.)

Capitalism must therefore change its mode of production for this kind of exploitation to be possible.

For the production of surplus-value in the form considered until now, we have assumed that the mode of production was given and only the duration of the labor process was prolonged. But when surplus-

Während also bei der Produktion des Mehrwerts in der bisher betrachteten Form die Produktionsweise als gegeben unterstellt war, genügt es für die Produktion von Mehrwert durch Verwandlung notwendiger Ar-

value has to be produced by the conversion of necessary labor into surplus labor, it by no means suffices for capital to take over the labor process in its historically transmitted or given shape. The technical and social conditions of the labor process and consequently the mode of production itself must be revolutionized if the productivity of labor is to be increased, by this the value of labor-power to be lowered, and the portion of the working day necessary for the reproduction of that value to be shortened.

beit in Mehrarbeit keineswegs, daß das Kapital sich des Arbeitsprozesses in seiner historisch überlieferten oder vorhandenen Gestalt bemächtigt und nur seine Dauer verlängert. Es muß die technischen und gesellschaftlichen Bedingungen des Arbeitsprozesses, also die Produktionsweise selbst umwälzen, um die Produktivkraft der Arbeit zu erhöhen, durch die Erhöhung der Produktivkraft der Arbeit den Wert der Arbeitskraft zu senken und so den zur Reproduktion dieses Werts notwendigen Teil des Arbeitstags zu verkürzen.

If capitalism revolutionizes its own presuppositions, this clinches its character as a self-acting force: it no longer depends on conditions provided to it from the outside. One can also consider this as a transition from quantity into quality: capital, which so far was only interested in a quantitative expansion of value, achieves this not merely by a quantitative extension of the working day, but by the qualitative changes of the production process.

320:1 I call that surplus-value which is produced by the lengthening of the working day, absolute surplus-value. In contrast to this, I call that surplus-value which arises from the shortening of the necessary labor-time, and from the corresponding alteration in the respective lengths of the two components of the working day, relative surplus-value.

334:1 Durch Verlängerung des Arbeitstags produzierten Mehrwert nenne ich absoluten Mehrwert; den Mehrwert dagegen, der aus Verkürzung der notwendigen Arbeitszeit und entsprechender Veränderung im Größenverhältnis der beiden Bestandteile des Arbeitstags entspringt—relativen Mehrwert.

The introduction of this new kind of surplus-value is concluded by giving it a name, “relative” because it is an increase in the gap between capitalist and laborer. These are not so much two kinds of surplus-value as two mechanisms to gain surplus-value.

Exam Question 914 *What is relative surplus-value? Which mechanisms, that were so far taken as given, affect the magnitude of relative surplus-value?* *Answer, 2013fa, 2012fa, 2011fa, 2010fa, 2008fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa, 1999SP, 1998WI, 1997ut, 1997sp, 1997WI, 1996ut, 1996sp, 1995ut, 1995WI.*

This ends the first third of this chapter, and the chapter title “Concept of Relative Surplus-Value” apparently refers only to this first third of the chapter.

12.2. [From Productivity to Relative Surplus-Value]

We have seen that under the given conditions (constant working day and all commodities are sold at their values), the only possibility for the capitalists to increase surplus-value is a rise in the productivity of the production of the workers’ means of consumption. Next Marx verifies whether such a rise, if it occurs, indeed has this effect. Marx conducts this investigation in form of a dialog: he introduces doubts why surplus-value may not rise noticeably and then answers these doubts.

12. Concept of Relative Surplus-Value

320:2/o In order to lower the value of labor-power, the rise in the productivity of labor must seize upon those branches of industry whose products determine the value of labor-power, and consequently either belong to the category of normal means of subsistence, or are capable of replacing them.

↑ We just read the first doubt: it looks as if only few branches of industry can affect the value of labor-power through increasing productivity. ↓ Reply:

But the value of a commodity is determined not only by the quantity of labor which gives it its final form, but also by the quantity of labor contained in the instruments by which it has been produced. For instance, the value of a pair of boots depends not only on the labor of the cobbler, but also on the value of the leather, wax, thread, etc. Hence a fall in the value of labor-power is also brought about by an increase in the productivity of labor, and by a corresponding cheapening of commodities, in those industries which supply the instruments of labor and the material for labor, i.e. the physical elements of constant capital which are required for producing the means of subsistence.

↑ This increases the scope drastically, ↓ but there are still some branches left which are not affected.

But an increase in the productivity of labor in those branches of industry which supply neither the necessary means of subsistence nor the means by which they are produced leaves the value of labor-power undisturbed.

334:2 Um den Wert der Arbeitskraft zu senken, muß die Steigerung der Produktivkraft Industriezweige ergreifen, deren Produkte den Wert der Arbeitskraft bestimmen, also entweder dem Umkreis der gewohnheitsmäßigen Lebensmittel angehören oder sie ersetzen können.

Der Wert einer Ware ist aber nicht nur bestimmt durch das Quantum der Arbeit, welche ihr die letzte Form gibt, sondern ebenso wohl durch die in ihren Produktionsmitteln enthaltne Arbeitsmasse. Z.B. der Wert eines Stiefels nicht nur durch die Schusterarbeit, sondern auch durch den Wert von Leder, Pech, Draht usw. Steigerung der Produktivkraft und entsprechende Verwohlfeilerung der Waren in den Industrien, welche die stofflichen Elemente des konstanten Kapitals, die Arbeitsmittel und das Arbeitsmaterial, zur Erzeugung der notwendigen Lebensmittel liefern, senken also ebenfalls den Wert der Arbeitskraft.

In Produktionszweigen dagegen, die weder notwendige Lebensmittel liefern noch Produktionsmittel zu ihrer Herstellung, läßt die erhöhte Produktivkraft den Wert der Arbeitskraft unberührt.

Question 916 *Does the existence of industries whose product does not enter the value of labor-power either directly or indirectly refute Marx's implied claim that productivity increases have the purpose to increase relative surplus-value?* 2004f.a.

↓ Marx's second doubt is: the cheapening of one single kind of use-value can only have a negligible impact on wages.

321:1 The cheapening of the commodity, of course, causes only a corresponding fall in the value of labor-power, a fall proportional to the extent to which that commodity enters into the reproduction of labor-power. Shirts, for instance, are a necessary means of subsistence, but only one out of many. Their cheapening merely reduces the expenses of the worker for shirts.

334:3/o Die verwohlfeilerte Ware senkt natürlich den Wert da Arbeitskraft nur pro tanto, d.h. nur im Verhältnis, worin sie in die Reproduktion der Arbeitskraft eingeht. Hemden z.B. sind ein notwendiges Lebensmittel, aber nur eins von vielen. Ihre Verwohlfeilerung vermindert bloß die Ausgabe des Arbeiters für Hemden.

This last sentence is missing in the Fowkes translation.

Again this doubt can be answered:

The total sum of the necessary means of subsistence, however, consists of various commodities, each the product of a distinct industry; and the value of each of those commodities enters as a component part into the value of labor-power. The latter value decreases with the decrease of the labor-time necessary for its reproduction. The total decrease of necessary labor-time is equal to the sum of all the different reductions in labor-time which have occurred in those various distinct branches of production.

Die Gesamtsumme der notwendigen Lebensmittel besteht jedoch nur aus verschiedenen Waren, lauter Produkten besonderer Industrien, und der Wert jeder solchen Ware bildet stets einen aliquoten Teil vom Wert der Arbeitskraft. Dieser Wert nimmt ab mit der zu seiner Reproduktion notwendigen Arbeitszeit, deren Gesamtverkürzung gleich der Summe ihrer Verkürzungen in allen jenen besondern Produktionszweigen ist.

The flow of the argument might have been a little smoother if Marx had reversed the order of these two objections as follows: First objection: the cheapening of a single article of consumption can only have a negligible effect. Answer: workers' consumption covers more than one article. This answer, then, leads to the next objection: even if one looks at all means of consumption together, only a small part of the economy is devoted to workers' means of consumption. This can again be refuted, but not entirely. Also those industries count which enter the workers' means of consumption indirectly, but there are indeed industries which enter workers' consumption neither directly nor indirectly.

Perhaps Marx brought his two objections in the "wrong" order because he wanted a smooth transition to the next issue: since this is an aggregate effect, negligible in the individual case, it cannot be the motivation of the individual capitalist. The rest of the paragraph discusses this important cleavage between surface and core.

We treat this general result here as if it were the immediate result and the immediate aim in each individual case.

Wir behandeln dies allgemeine Resultat hier so, als wäre es unmittelbares Resultat und unmittelbarer Zweck in jedem einzelnen Fall.

This sentence says three things:

- The reduction in the value of labor-power is a *general* result, i.e., it comes not from the cheapening of shirts, but from the cheapening of many means of subsistence.
- It is not always the *immediate result* of each individual case. This means, even if shirts become cheaper, this does not always mean immediately that the value of labor-power declines.
- And it is not always the *immediate aim* of each individual case, i.e., the shirt manufacturer may have had quite different aims than lowering the value of labor-power.

This last point is elaborated in the next sentence, and a laconic answer is given: what matters is not the capitalists' intentions, but what matters is what they actually do:

When an individual capitalist cheapens shirts, for instance, by increasing the productivity of labor, he by no means necessarily aims to reduce the value of labor-power

Wenn ein einzelner Kapitalist durch Steigerung der Produktivkraft der Arbeit z.B. Hemden verwohlfeilert, schwebt ihm keineswegs notwendig der Zweck vor, den

12. Concept of Relative Surplus-Value

and in this way shorten the necessary labor-time. But he contributes towards increasing the general rate of surplus-value only in so far as his actions ultimately contribute to the reduction in the value of labor-power.³

Capitalists invariably increase productivity, and they may have various motivations to do so: gain extra surplus-value if they are the first ones, keep up with the competitors if they are followers, get machines which controls their laborers better, or respond to labor struggles, etc. Whatever their motivation, the *effect* of their actions will only then be a durable increase in surplus-value if it leads to a cheapening of the workers' means of subsistence. Ramsay, in the footnote, stresses this:

³ 'Let us suppose ... the products ... of the manufacturer are doubled by improvement in machinery ... he will be able to clothe his workmen by means of a smaller proportion of the entire return ... and thus his profit will be raised. But in no other way will it (ultimately) be influenced'. [Ram36, pp. 168–9]

Wert der Arbeitskraft und daher die notwendige Arbeitszeit pro tanto zu senken, aber nur soweit er schließlich zu diesem Resultat beiträgt, trägt er bei zur Erhöhung der allgemeinen Rate des Mehrwerts.³

³ „Wenn der Fabrikant durch Verbesserung der Maschinerie seine Produkte verdoppelt ... gewinnt er (schließlich) bloß, sofern er dadurch befähigt wird, den Arbeiter wohlfeiler zu kleiden ... und so ein kleinerer Teil des Gesamtertrags auf den Arbeiter fällt.“ [Ram36, pp. 168–9]

Question 917 Which are the motives why a capitalist might want to introduce new technology? 2013fa, 1996sp, 1995ut, 1995WI.

At the present point, Marx does not elaborate how the actions which lead to a cheapening of the laborer's means of subsistence may be motivated. Instead, he gives a general methodological remark, which is one of the few comments about his methodology one can find in *Capital*.

The general and necessary tendencies of capital must be distinguished from their forms of appearance.

Die allgemeinen und notwendigen Tendenzen des Kapitals sind zu unterscheiden von ihren Erscheinungsformen.

Question 918 What does Marx mean by the statement: “The general and necessary tendencies of capital must be distinguished from their forms of appearance”? Give examples of “general and necessary tendencies of capital” and of “forms of appearance” of such tendencies. 2013fa, 2010fa, 2009fa, 2005fa, 2004fa, 1999SP, 1998WI, 1996ut.

Term Paper Topic 919 How do modern intellectual property rights fit together with Marx's theory of capitalism? 2013fa, 2009fa, 2008fa, 2008SP, 2007fa, 2007SP, 2005fa, 2004fa, 2002fa.

12.3. [Individual Motivation for Innovation]

The last remaining question is: if the capitalists' motivation for introduction of technical innovations in the production of the workers' means of consumption is not the relative surplus-value, what then is their motivation? To answer this, Marx has to go into the sphere of competition. He introduces this with a famous general passage about “competition.” By the laws of “competition” Marx means the laws governing the surface interaction of individual capitals. Any activity by which an individual capitalist tries to best take advantage of market forces is an act of “competition.” Superior competitive skills can increase profits for

individual capitalist firms, but Marx is not interested at this point in the differences between individual firms. The more important effect of competition, i.e., of the efforts of all market participants to beat out their competitors, is that these competitive pressures force everyone to act in such a way that the laws of “capital in general” are implemented.

321:2 This is not the place to investigate how the immanent laws of capitalist production manifest themselves in the external movement of the individual capitals, assert themselves as the necessities of competition, and therefore enter into the consciousness of the capitalist as his or her driving motives.

335:1 Die Art und Weise, wie die immanenten Gesetze der kapitalistischen Produktion in der äußern Bewegung der Kapitale erscheinen, sich als Zwangsgesetze der Konkurrenz geltend machen und daher als treibende Motive dem individuellen Kapitalisten zum Bewußtsein kommen, ist jetzt nicht zu betrachten, ...

In the German, “individual” is an attribute to “Kapitalisten”; in my

translation it is an attribute to “capitals.” I don’t think this

changes the meaning but it makes the formulation clearer.

This is an interesting formulation: the competitive motivation of the capitalist is not really his own motivation, but this is how he experiences his subjugation to the laws of capital.

Marx’s *Capital* is only one of several books about the political economy which Marx had planned to write. In one of his other books he wanted to discuss the “sphere of competition,” but he never had time to write this book. Without going into this specialized study, Marx can only make very general remarks here about competition:

But this much is clear from the beginning: a scientific analysis of competition is possible only after the inner nature of capital has been understood, just as the apparent motions of the heavenly bodies can be understood only by someone who is acquainted with their real motions—which are not perceptible to the senses.

... aber soviel erhellt von vornherein: Wissenschaftliche Analyse der Konkurrenz ist nur möglich, sobald die innere Natur des Kapitals begriffen ist, ganz wie die scheinbare Bewegung der Himmelskörper nur dem verständlich, der ihre wirkliche, aber sinnlich nicht wahrnehmbare Bewegung kennt.

This is an argument against empiricism. We first must grasp the inner nature of capital before we can understand the surface phenomena generated by the competition of the economic agents. This is why the book *Capital* itself contains only occasional references to the sphere of competition, only when it is necessary for a better understanding of the laws of “capital in general.” ↓ We are in such a situation right now.

Question 920 *Why can we gain a scientific understanding of “the sphere of competition” only after having grasped the inner nature of capital?* 2012fa, 2011fa, 2010fa, 2009fa, 2008fa, 2008SP, 2007fa, 2005fa, 2004fa, 2003fa, 2002fa, 1997sp, 1997WI, 1996sp.

Nevertheless, for the understanding of the production of relative surplus-value, and only on the basis of the results already achieved, we may add the following.

Dennoch ist zum Verständnis der Produktion des relativen Mehrwerts und bloß auf Grundlage der bereits gewonnenen Resultate folgendes zu bemerken.

Marx makes here a digression into the sphere of competition because he has not yet explained how individual capitalists are motivated to create relative surplus-value.

321:3/oo If 1 hour’s labor is embodied in 12 cents, a value of \$1.44 will be produced in a working day of 12 hours. Suppose that

335:2/o Stellt sich eine Arbeitsstunde in einem Geldquantum von 6 d. oder 1/2 sh. dar, so wird in zwölfstündigem Arbeitstag

12. Concept of Relative Surplus-Value

with labor of the currently prevailing productive power, twelve articles are produced in these 12 hours. Let the value of the means of production used up in each article be 12 cents. Under these circumstances, each article costs 24 cents: 12 cents for the value of the means of production, and 12 cents for the value newly added in working with those means.

ein Wert von 6 sh. produziert. Gesetzt, mit der gegebenen Produktivkraft der Arbeit wurden 12 Stück Waren in diesen 12 Arbeitsstunden gefertigt. Der Wert der in jedem Stück vernutzten Produktionsmittel, Rohmaterial usw. sei 6 d. Unter diesen Umständen kostet die einzelne Ware 1 sh., nämlich 6 d. für den Wert der Produktionsmittel, 6 d. für den in ihrer Verarbeitung neu zugesetzten Wert.

↑ Warning: the use of the word “costs” is misleading here. Marx is not adding the wage costs (which are often called “labor costs”) but the value created by that labor. The above numbers describe the situation before the change in productivity. Now assume productivity changes:

Now let some one capitalist contrive to double the productivity of labor, and to produce twenty-four instead of twelve articles in the course of a working day of 12 hours. The value of the means of production remaining the same, the value of each article will fall to 18 cents, made up of 12 cents for the value of the means of production and 6 cents for the value newly added by the labor. Even though the productivity of labor has doubled, the day’s labor creates no more new value than before, namely, \$1.44. However it is now spread over twice as many articles. Each article now has embodied in it $\frac{1}{24}$ th of the new value instead of $\frac{1}{12}$ th, 6 cents instead of 12 cents; or, what amounts to the same thing, only half an hour of labor-time, instead of a whole hour, is now added to the means of production when they are transformed into articles.

Es gelinge nun einem Kapitalisten die Produktivkraft der Arbeit zu verdoppeln und daher 24 statt 12 Stück dieser Warenart in dem zwölfstündigen Arbeitstag zu produzieren. Bei unverändertem Wert der Produktionsmittel sinkt der Wert der einzelnen Ware jetzt auf 9 d., nämlich 6 d. für den Wert der Produktionsmittel, 3 d. für den durch die letzte Arbeit neu zugesetzten Wert. Trotz der verdoppelten Produktivkraft schafft der Arbeitstag nach wie vor nur einen Neuwert von 6 sh., welcher sich jedoch jetzt auf doppelt soviel Produkte verteilt. Auf jedes einzelne Produkt fällt daher nur noch $\frac{1}{24}$ statt $\frac{1}{12}$ dieses Gesamtwerts, 3 d. statt 6 d. oder, was dasselbe ist, den Produktionsmitteln wird bei ihrer Verwandlung in Produkt, jedes Stück berechnet, jetzt nur noch eine halbe statt wie früher eine ganze Arbeitsstunde zugesetzt.

Question 922 *Do the workers after introduction of new machinery produce more value per hour?* Answer, 2013fa, 2012fa, 2011fa, 2010fa, 2009fa, 2008fa, 2007fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa, 1999SP, 1998WI, 1997ut, 1997sp, 1997WI, 1996ut, 1996sp, 1995WI.

↑ In this example there is a huge change in productivity, but the same amount of labor is performed as before, therefore the total new value produced in this production process does not increase. Since more pieces are produced, the value of every piece falls. This is a dilemma. The capitalist increases productivity because he wants to get more surplus-value, but all he managed to do is produce more products, more wealth. The *value* produced remains the same. ↓ Marx takes a closer look. By the assumption of this example, only one capitalist is producing more efficiently; all the others still use the old production method. In order to deal with this situation, Marx introduces the concept of the innovator’s “individual

value” of the commodity, which is a category from the “sphere of competition.” The value calculation which Marx just made will eventually be relevant for all capitalists, when *all* producers have introduced the new production method; but right now it is only correct for the innovator’s individual value:

The individual value of these articles is now below their social value; in other words, they have cost less labor-time than the great bulk of the same articles produced under the average social conditions. Each article costs, on an average, 24 cents, and represents 2 hours of social labor; but under the altered mode of production it costs only 18 cents, or contains only 1 1/2 hours’ labor.

Der individuelle Wert dieser Ware steht nun unter ihrem gesellschaftlichen Wert, d.h., sie kostet weniger Arbeitszeit als der große Haufen derselben Artikel, produziert unter den gesellschaftlichen Durchschnittsbedingungen. Das Stück kostet im Durchschnitt 1 sh. oder stellt 2 Stunden gesellschaftlicher Arbeit dar; mit der veränderten Produktionsweise kostet es nur 9 d. oder enthält nur 1 1/2 Arbeitsstunden.

↑ The numbers are the same as before. Constant capital 12 cents, and new value added fell from 12 cents to 6 cents. But now it is individual value, not social value, ↓ and that makes a big difference:

The effective value of a commodity, however, is not its individual but its social value; i.e., its value is not measured by the labor-time that the article actually costs the producer in this individual case, but by the labor-time socially required for its production.

Der wirkliche Wert einer Ware ist aber nicht ihr individueller, sondern ihr gesellschaftlicher Wert, d.h., er wird nicht durch die Arbeitszeit gemessen, die sie im einzelnen Fall dem Produzenten tatsächlich kostet, sondern durch die gesellschaftlich zu ihrer Produktion erheischte Arbeitszeit.

What are the implications of this gap between individual and social value for the price of the commodity? If the new technology was introduced by just one of many producers, who does not have an influence on the market, then the price remains unchanged. This makes it necessary for Marx to introduce another new concept, that of extra surplus-value:

If, therefore, the capitalist who applies the new method sells his commodity at its social value of 24 cents, he sells it for 6 cents above its individual value, and thus he realizes an extra surplus-value of 6 cents.

Verkauft also der Kapitalist, der die neue Methode anwendet, seine Ware zu ihrem gesellschaftlichen Wert von 1 sh., so verkauft er sie 3 d. über ihrem individuellen Wert und realisiert so einen Extramehrwert von 3 d.

Question 923 *Why is the social value, and not the individual value, the “effective” or “real” value?* [1997sp](#), [1997WI](#), [1996ut](#), [1996sp](#), [1995ut](#), [1995WI](#).

Can the capitalist therefore just keep his innovation secret, pretend that he is still using the same production methods as the others, and merrily rake in extra surplus-value? Well, there is one problem with this. He has now greater output and must see to it that this output is sold:

On the other hand, the working day of 12 hours is now represented, for him, by twenty-four articles instead of twelve. Hence, in order to sell the product of one working day, he needs double the demand than before, i.e. the market must become twice as extensive. Other things being equal, the

Andrerseits stellt sich aber der zwölfstündige Arbeitstag jetzt für ihn in 24 Stück Ware dar statt früher in 12. Um also das Produkt eines Arbeitstags zu verkaufen, bedarf er doppelten Absatzes oder eines zweifach größeren Markts. Unter sonst gleichbleibenden Umständen erobern seine Waren nur

12. Concept of Relative Surplus-Value

capitalist's commodities can only command a more extensive market if their prices are reduced. He will therefore sell them above their individual but below their social value, say at 20 cents each. By this means he still squeezes an extra surplus-value of 2 cents out of each.

Important: the innovator has to lower the price to get room in the market for his increased output. Despite this price cut, he still sells the products above their individual values and therefore still makes an extra surplus-value:

This increase of surplus-value for the capitalist takes place whether or not his commodities belong to the class of necessary means of subsistence, and therefore enter the determination of the general value of labor-power. Whether or not this latter condition is satisfied, therefore, the motive exists for every individual capitalist to cheapen his commodities by increasing the productivity of labor.

This answers the question why capitalists innovate. We see that *everyone* has the incentive to innovate in order to gain extra surplus-value, not only those capitalists whose products enter the value of labor-power. And everybody's extra surplus-value is only temporary, over time it will be competed away again. But the extra surplus-value of those who produce the workers' means of consumption, does not entirely disappear but is reborn as relative surplus-value for all capitalists.

This raises the question: what is the source of this extra surplus-value? Marx argues that extra surplus-value, just like relative surplus-value, comes from a shortening of the necessary labor. The goal of the innovating capitalist is to reduce their cost more than their sales price. They probably don't believe that the labor theory of value holds, but in the framework of this theory their goal is to reduce necessary labor more than the total labor input into the commodity, i.e., their goal is to increase relative surplus-value.

323:1/o Nevertheless, even in this case, the increased production of surplus-value arises from the shortening of the necessary labor-time and the corresponding prolongation of the surplus labor.^{3a}

Marx is about to give a somewhat long-winded argument to support this non-obvious point. But first he sticks footnote 3a in, in which Cazenove comes to the same conclusion as Marx, although he seems to employ a rather simple-minded argument. Marx's development in the main text will fill in the missing links, by which Cazenove's argument can be viewed as a short form of Marx's own argument.

^{3a} 'A man's profit does not depend upon his command of the produce of other men's labor, but upon his command of labor itself. If he can sell his goods at a higher price, while his workmen's wages remain unaltered, he is clearly benefited ... A smaller proportion of what he pro-

größern Marktraum durch Kontraktion ihrer Preise. Er wird sie daher über ihrem individuellen, aber unter ihrem gesellschaftlichen Wert verkaufen, sage zu 10 d. das Stück. So schlägt er an jedem einzelnen Stück immer noch einen Extramehrwert von 1 d. heraus.

Diese Steigerung des Mehrwerts findet für ihn statt, ob oder ob nicht seine Ware dem Umkreis der notwendigen Lebensmittel angehört und daher bestimmend in den allgemeinen Wert der Arbeitskraft eingeht. Vom letzten Umstand abgesehen, existiert also für jeden einzelnen Kapitalisten das Motiv, die Ware durch erhöhte Produktivkraft der Arbeit zu verwohlfeilern.

336:1/oo Indes entspringt selbst in diesem Fall die gesteigerte Produktion von Mehrwert aus der Verkürzung der notwendigen Arbeitszeit und entsprechender Verlängerung der Mehrarbeit.^{3a}

^{3a} „Der Profit eines Menschen hängt nicht ab von seinem Kommando über das Produkt der Arbeit anderer, sondern von seinem Kommando über Arbeit selbst. Wenn er seine Waren zu einem höhern Preis verkaufen kann, während die Löhne seiner Arbeiter unverändert bleiben, so zieht er

duces is sufficient to put that labor into motion, and a larger proportion consequently remains for himself.' ([J. Cazenove,] *Outlines of Political Economy*, London 1832. pp. 49, 50.)

augenscheinlich Gewinn daraus ... Ein kleinerer Teil dessen, was er produziert, reicht hin, jene Arbeit in Bewegung zu setzen, und demzufolge verbleibt ihm ein größerer Teil." ([J. Cazenove,] „*Outlines of Polit. Econ.*“, London 1832. p. 49, 50.)

With this footnote Marx is not trying to argue that the laborer working with the new machines creates more surplus-value because the capitalist can use a smaller portion of the product to pay his wages. The causality goes the opposite direction: since the labor working with the new machine is converted into potentiated labor, the capitalist is able to replace the value of labor-power with a smaller portion of the value of the daily product. (This last sentence is an almost literal quote from the machinery chapter, 409:1.)

The *support* of the claim that the laborer working with the new machine creates more value per hour than the average worker is not given in the footnote, but in the main text. For this argument, Marx needs a quantitative accounting of the social mass of surplus-value:

Let the necessary labor-time amount to 10 hours, i.e. the value of a day's labor-power to \$1.20, and the surplus labor-time to 2 hours, i.e. the daily surplus-value to 24 cents.

Die notwendige Arbeitszeit betrage 10 Stunden oder der Tageswert der Arbeitskraft 5 sh., die Mehrarbeit 2 Stunden, der täglich produzierte Mehrwert daher 1 sh.

This was before the change in productivity, or under the average conditions. Remember that 12 cents represent 1 hour of labor. But for the one capitalist with the superior technology things look different:

But our capitalist produces 24 articles now, which he sells at 20 cents each, making \$4.80 in all. Since the value of the means of production is \$2.88, $14\frac{2}{5}$ of these articles merely replace the constant capital advanced. The labor of the 12 hour working day is represented by the remaining $9\frac{3}{5}$ articles. Since the price of the labor-power is \$1.20, 6 articles represent the necessary labor-time, and $3\frac{3}{5}$ articles the surplus labor. The ratio of necessary labor to surplus labor, which under average social conditions was 5:1, has now fallen to 5:3.

Unser Kapitalist produziert aber jetzt 24 Stück, die er zu 10 d. per Stück oder zusammen zu 20 sh. verkauft. Da der Wert der Produktionsmittel gleich 12 Schilling, ersetzen $14\frac{2}{5}$ Stück Ware nur das vorge-schoßne konstante Kapital. Der zwölfstündige Arbeitstag stellt sich in den übrigbleibenden $9\frac{3}{5}$ Stück dar. Da der Preis der Arbeitskraft = 5 sh., stellt sich im Produkt von 6 Stück die notwendige Arbeitszeit dar und in $3\frac{3}{5}$ Stück die Mehrarbeit. Das Verhältnis der notwendigen Arbeit zur Mehrarbeit, welches unter den gesellschaftlichen Durchschnittsbedingungen 5:1 betrug, beträgt jetzt nur noch 5:3.

↑ This is Cazenove's calculation in footnote 3a, which measures everything in units of the final product. ↓ It can also be measured in money:

We may arrive at the same result in the following way. The value of the product of the working day of 12 hours is \$4.80. Of this sum, \$2.88 represent the value of the means of production, a value that merely re-appears in the finished product. There remain \$1.92, which are the expression in money of the value newly created during

Dasselbe Resultat erhält man so: Der Produktenwert des zwölfstündigen Arbeitstags ist 20 sh. Davon gehören 12 sh. dem nur wieder erscheinenden Wert der Produktionsmittel. Bleiben also 8 sh. als Geldausdruck des Werts, worin sich der Arbeitstag darstellt. Dieser Geldausdruck ist höher als der Geldausdruck der gesellschaftlichen

12. Concept of Relative Surplus-Value

the working day. This sum is greater than the sum in which average social labor of the same kind is expressed: 12 hours of the latter labor are expressed by only \$1.44. The exceptionally productive labor has the effect of potentiated labor; it creates in equal periods of time greater values than the labor of the same kind conforming with the social average.

Durchschnittsarbeit von derselben Sorte, wovon sich 12 Stunden nur in 6 sh. ausdrücken. Die Arbeit von ausnahmsweiser Produktivkraft wirkt als potenzierte Arbeit oder schafft in gleichen Zeiträumen höhere Werte als die gesellschaftliche Durchschnittsarbeit derselben Art.

Marx makes the same point also in the machinery chapter 409:1. In both places he uses the expression “potentiated labor,” i.e., labor made more potent, an expression which was first introduced in 54:1/o. The reason why different laborers produce different amounts of value in one hour is again the same: one labor-power is not exactly like any other. The potentiated labor of the laborer servicing the new machine produces a value of \$1.92 per day, i.e., 16 cents per hour, instead of the normal 12 cents.

Fowkes translates “*potenziert*” with “intensified,” which is blatantly wrong.

Once we know how much value has been produced, the implications for surplus-value follow immediately:

But our capitalist still continues to pay as before only \$1.20 as the daily value of labor-power. Hence, instead of 10 hours, the worker now needs to work for only 7 1/2 hours in order to reproduce this value. His surplus labor therefore grows by 2 1/2 hours, and the surplus-value he produces increases from 24 cents to 72 cents. Hence the capitalist who applies the improved method of production appropriates and devotes to surplus labor a greater portion of the working day than the other capitalists in the same business. He does individually what capital itself does as a whole when producing relative surplus-value.

Aber unser Kapitalist zahlt nach wie vor nur 5 sh. für den Tageswert der Arbeitskraft. Der Arbeiter bedarf daher, statt früher 10, jetzt nur noch 7 1/2 Stunden zur Reproduktion dieses Werts. Seine Mehrarbeit wächst daher um 2 1/2 Stunden, der von ihm produzierte Mehrwert von 1 auf 3 sh. Der Kapitalist, der die verbesserte Produktionsweise anwendet, eignet sich daher einen größeren Teil des Arbeitstags für die Mehrarbeit an als die übrigen Kapitalisten in demselben Geschäft. Er tut im einzelnen, was das Kapital bei der Produktion des relativen Mehrwerts im großen und ganzen tut.

There is a numerical discrepancy between the German and the English text, 7 1/2 versus 7 1/5 and 2 1/2 versus 2 4/5. But nowhere a remark why this is so. The German is right, and I took those numbers also into my translation.

Exam Question 925 *What is extra surplus-value? How is it related to relative surplus-value?* 2013fa, 2012fa, 2011fa, 2008fa, 2008SP, 2007fa, 2007SP, 2005fa, 2004fa, 2003fa, 2002fa, 2001fa, 2000fa, 1999SP, 1998WI, 1997WI, 1996sp, 1995ut.

The above is an argument that the competitive mechanism is connected with its ultimate result after all; it is the same result which was aimed for on an individual plane—and was lost again, as will be seen in the next sentence:

On the other hand, however, this extra surplus-value disappears as soon as the new

Andrerseits aber verschwindet jener Ex-tramehrwert, sobald die neue Produkti-

method of production is generalized, for then the difference between the individual value of the cheapened commodity and its social value vanishes. The same law of the determination of value by labor-time, which makes itself felt to the individual capitalist who applies the new method of production by compelling him to sell his goods under their social value, this same law, acting as a coercive law of competition, forces his competitors to adopt the new method.⁴

onsweise sich verallgemeinert und damit die Differenz zwischen dem individuellen Wert der wohlfeiler produzierten Waren und ihrem gesellschaftlichen Wert verschwindet. Dasselbe Gesetz der Wertbestimmung durch die Arbeitszeit, das dem Kapitalisten mit der neuen Methode in der Form fühlbar wird, daß er seine Ware unter ihrem gesellschaftlichen Wert verkaufen muß, treibt seine Mitbewerber als Zwangsgesetz der Konkurrenz zur Einführung der neuen Produktionsweise.⁴

It was already discussed above that the innovator himself had to lower the price to get more room in the market. This stirs up competition and forces the others to follow suit. The footnote leaves no doubt that this is what is meant:

⁴ 'If my neighbour by doing much with little labor, can sell cheap, I must contrive to sell as cheap as he. So that every art, trade, or engine, doing work with labor of fewer hands, and consequently cheaper, begets in others a kind of necessity and emulation, either of using the same art, trade, or engine, or of inventing something like it, that every man may be upon the square, that no man may be able to undersell his neighbour' (The Advantages of the East-India Trade to England, London, 1720, p. 67).

⁴ „Wenn mein Nachbar billig verkaufen kann, indem er mit wenig Arbeit viel herstellt, muß ich danach trachten, ebenso billig wie er zu verkaufen. So erzeugt jede Kunst, jedes Verfahren oder jede Maschine, die mit der Arbeit von weniger Händen und infolgedessen billiger arbeitet, bei andren eine Art Zwang und einen Wettbewerb, entweder dieselbe Kunst, dasselbe Verfahren oder dieselbe Maschine anzuwenden, oder etwas Ähnliches zu erfinden, damit alle auf gleichem Stand seien und keiner seinen Nachbar unterbieten könne.“ („The Advantages of the East-India Trade to England“. Lond. 1720, p. 67.)

Does this mean that this increase in productivity has *no* lasting effect on value relations?

The general rate of surplus-value is therefore ultimately affected by the whole process only when the increase in the productivity of labor has seized upon those branches of production and cheapened those commodities that contribute towards the necessary means of subsistence, and are therefore elements of the value of labor-power.

Die allgemeine Rate des Mehrwerts wird also durch den ganzen Prozeß schließlich nur berührt, wenn die Erhöhung der Produktivkraft der Arbeit Produktionszweige ergriffen, also Waren verwohlfeilert hat, die in den Kreis der notwendigen Lebensmittel eingehn, daher Elemente des Werts der Arbeitskraft bilden.

Here one sees how the individual capitalists are motivated to produce relative surplus-value. Their motivation usually focuses on extra surplus-value only. This does increase their profits, but this benefit will usually be only short-lived and the extra surplus-value will be competed away again. In those cases, however, in which competition lowers the price of wage goods, this extra surplus-value does not disappear but becomes relative surplus-value benefiting all capitalists.

Marx no longer spins on his quantitative example to substantiate this last claim. Here is a proposed extension of his calculations, which shows that also quantitatively the extra surplus-value is equal to the relative surplus value arising later when the value has equalized.

As in Marx's example, one working hour produces 12 cents. The working day is 12 hours,

12. Concept of Relative Surplus-Value

therefore one man-day of labor produces a value of \$1.44. The year has 300 working days, therefore 1 man year of labor produces a value of \$432.

The hourly wage is 10 cents, therefore the hourly surplus-value is 2 cents. The daily wage is \$1.20, therefore the daily surplus-value is 24 cents. The annual wage is \$360, therefore the annual surplus-value is \$72.

Look at the whole society, say a big city. It has 60,000 productive workers with their families. During the year they produce a value of $60,000 \times \$432 = \$25,920,000$. Their wages during the year are $60,000 \times \$360 = \$21,600,000$. And the surplus-value in one year is \$4,320,000.

Now let us go to shirt manufacturing. In the manufactures, every shirt requires one man hour of labor and 12 cents worth of materials etc. Assuming this is the socially necessary labor, the value of the shirt is 24 cents, which splits up in 12 cents constant capital + 10 cents variable capital + 2 cents surplus-value. Assume there are two shirt manufacturers in the city with 25 workers each. Then every manufacturer produces $300 \times 12 \times 25 = 90,000$ shirts per year. These 180,000 shirts together are sufficient for every worker to buy for himself and his family 3 shirts per year.

To produce his shirts, each capitalist needs a constant capital of $90,000 \times 12 \text{ cents} = \$10,800$, wages of \$9000, and gets a surplus-value of \$1,800 per year. The value of the 90,000 shirts is \$21,600.

Now assume the following situation. One of the two capitalists improves his production method so that he needs only 1/2 hours of work for every shirt. The second capitalist learns that and starts to produce something other than shirts in his factory. The first capitalist works with as many laborers as before, producing twice as many shirts.

Now let us look at three different scenarios. First assume that the socially necessary production method and the value of the shirts is still the old one. This capitalist now needs twice as much constant capital as before, namely \$21,600 worth per year, and has twice the sales as before, namely, \$43,200. That means, the new value produced by his 25 men is \$21,600, which is twice as much as before, or \$10,800 more than before. "The exceptionally productive labor has the effect of potentiated labor" (323:1/o). Since the wages for the 25 men are still the same as before, namely, \$9000, the surplus-value soared for this capitalist from \$1,800 to \$12,600 per year. This is an increase in the surplus-value by \$10,800. Since we assumed that the surplus-value of all other capitalists is still the same as before, the total value produced in our city rises from \$25,920,000 to \$25,930,800. The total sum of wages is still the same as before, namely, \$21,600,000, and the total sum of surplus-value is $\$25,920,000 + \$10,800 - \$21,600,000 = \$4,330,800$.

Second szenario: in order to avert the threat of re-entry by the other manufacturer, the unique manufacturer sells the shirts for 20 cents, this is 4 cents below the value before, but still 2 cents above the individual value of the shirt manufacturer. The total sales of the shirt manufacturer are now \$36,000, of which \$21,600 are constant capital and \$14,400 is newly created value. He still creates, with his 25 workers, \$3,600 more value per year than before the changes in productiveness, i.e., the labor of his workers still counts as multiplied labor. But now, also the value of the labor-power goes down: for the three shirts which every workers buys every year, he needs no longer 72 cents but only 60 cents, i.e., he saves 12 cents per year. Assuming the value of the labor-power is determined by the value of the necessary means of subsistence, it also goes down 12 cents per year, from \$360 to \$359.88. The total wage sum goes down by $60,000 \times 12 \text{ cents} = \$7,200$. The total surplus-value is now $\$25,920,000 + \$3,600 - (\$21,600,000 - \$7,200) = \$4,330,800$, which is the same as before.

Third szenario: the social value of the shirts falls to the level of the individual values of our

manufacturer: he has to sell his shirts for 18 cents, which is 12 cents for constant capital, and 6 cents for 1/2 hour of labor. The total value produced in the city is back down where it was before. The wages fall once more by another 6 cents per year, i.e., the total wage sum falls by another \$3,600 and is therefore $\$21,600,000 - \$7,200 - \$3,600 = \$21,600,000 - \$10,800$. The total surplus-value is $\$25,920,000 - (\$21,600,000 - \$10,800) = \$4,330,800$ which is, again, the same as before.

The total amount of surplus-value is therefore the same in all three scenarios, only the distribution of the surplus-value is different. In the first scenario, only the capitalist who applied the exceptional productivity enjoyed this surplus-value, and in the third it is shared equally by all capitalists. “He does individually what capital itself does as a whole when producing relative surplus-value.” (323:1/o).

Question 931 *Relative surplus-value requires the value of labor-power to fall. Does this mean that in today's world with sticky wages and union contracts, relative surplus-value is impossible?* 2012fa, 2010fa, 2009fa, 2008fa, 2005fa.

12.4. [Value and Productivity]

The last third of the chapter is an essay about the paradox that capitalists, who are only interested in the value-aspect of their products, nevertheless continually strive to decrease the exchange-values of their commodities. Capitalists often introduce more productive machinery in order to undercut their competitors, or to expand production to make more profits. Whatever the case, it is self-understood that the capitalists use all advantages of the improved machinery for themselves and leave the worker where he or she is. Thus the machinery increases the gap between capitalist and laborer, i.e., the relative surplus-value.

324:1/o The value of commodities stands in inverse ratio to the productivity of labor. So, too, does the value of labor-power, since it depends on the values of commodities. Relative surplus-value, however, is directly proportional to the productive power of labor. It rises and falls together with it.

338:1 Der Wert der Waren steht in umgekehrtem Verhältnis zur Produktivkraft der Arbeit. Ebenso, weil durch Warenwerte bestimmt, der Wert der Arbeitskraft. Dagegen steht der relative Mehrwert in direktem Verhältnis zur Produktivkraft der Arbeit. Er steigt mit steigender und fällt mit fallender Produktivkraft.

Now Marx makes an assumption which colors everything he is going to say: the value of money, in terms of labor-time, is fixed:

The value of money being assumed to be constant, an average social working day of 12 hours always produces the same new value, \$1.44, no matter how this sum may be apportioned between surplus-value and wages. But if, as a result of an increase in productivity, there is a fall in the value of the means of subsistence, and the daily value of labor-power is thereby reduced from \$1.20 to 72 cents, the surplus-value will increase from 24 cents to 72 cents. 10 hours were necessary for the reproduction of the value

Ein gesellschaftlicher Durchschnittsarbeitstag von 12 Stunden, Geldwert als gleichbleibend vorausgesetzt, produziert stets dasselbe Wertprodukt von 6 sh., wie diese Wertsomme sich immer verteile zwischen Äquivalent für den Wert der Arbeitskraft und Mehrwert. Fällt aber infolge gesteigerter Produktivkraft der Wert der täglichen Lebensmittel und daher der Tageswert der Arbeitskraft von 5 sh. auf 3 sh., so wächst der Mehrwert von 1 sh. auf 3 sh. Um den Wert der Arbeitskraft zu reproduzieren, waren 10

12. Concept of Relative Surplus-Value

of the labor-power; now only 6 are required. 4 hours have been set free, and can be annexed to the domain of surplus labor.

und sind jetzt nur noch 6 Arbeitsstunden nötig. Vier Arbeitsstunden sind frei geworden und können der Domäne der Mehrarbeit annexiert werden.

Interesting insight about competition which has practical implications for labor struggles: these 4 hours are up for grabs! Workers can fight for them too.

Capital therefore has an immanent drive, and a constant tendency, towards increasing the productivity of labor, in order to cheapen commodities and, by cheapening commodities, to cheapen the worker himself.⁵

Es ist daher der immanente Trieb und die beständige Tendenz des Kapitals, die Produktivkraft der Arbeit zu steigern, um die Ware und durch die Verwohlfeilung der Ware den Arbeiter selbst zu verwohlfeilern.⁵

There are two statements in this sentence. (1) cheapening of the commodities implies cheapening of the laborer, and (2) hence capital has the immanent tendency to raise the productivity of labor. Footnote 5 concentrates on statement (1) only. Statement (2) is an interesting issue from the theory of competition. The present chapter gives only some isolated remarks about it but cannot give a full and systematic development of the issue.

⁵ In whatever proportion the expenses of a laborer are diminished, in the same proportion will his wages be diminished, if the restraints on industry are at the same time taken off" [Ano53, p. 7] 'The interest of trade requires, that corn and all provisions should be as cheap as possible; for whatever makes them dear, must make labor dear also ... in all countries, where industry is not restrained, the price of provisions must affect the price of labor. This will always be diminished when the necessities of life grow cheaper' [Ano53, p. 3] 'Wages are decreased in the same proportion as the powers of production increase. Machinery, it is true, cheapens the necessities of life, but it also cheapens the laborer' [Ano34, p. 27]

⁵ "In welchem Verhältnis immer die Ausgaben eines Arbeiters verringert werden, in gleichem Verhältnis wird auch sein Lohn verringert, wenn die Einschränkungen der Industrie gleichzeitig aufgehoben werden. [Ano53, p. 7] „Das Interesse der Industrie erfordert, daß Korn und alle Lebensmittel so billig wie möglich sind; was immer sie verteuert, muß auch die Arbeit verteuern ... in allen Ländern, in denen die Industrie keinen Einschränkungen unterliegt, muß der Preis der Lebensmittel auf den Preis der Arbeit einwirken. Dieser wird stets herabgesetzt werden, wenn die notwendigen Lebensmittel billiger werden.“ [Ano53, p. 3] Die Löhne werden im selben Verhältnis gesenkt, in dem die Produktionskräfte anwachsen. Die Maschine verbilligt zwar die notwendigen Lebensmittel, aber sie verbilligt außerdem auch den Arbeiter.“ [Ano34, p. 27]

325:1–2 The absolute value of a commodity is, in itself, of no interest to the capitalist who produces it. All that interests him is the surplus-value present in it, which can be realized by sale. Realization of the surplus-value necessarily carries with it the replacement of the value advanced. Now, since relative surplus-value increases in direct proportion to the development of the productivity of labor, while the value of commodities stands in precisely the opposite relation to the growth of productivity; since the same process both cheapens commodities and augments the surplus-value

338:2/o Der absolute Wert der Ware ist dem Kapitalisten, der sie produziert, an und für sich gleichgültig. Ihn interessiert nur der in ihr steckende und im Verkauf realisierbare Mehrwert. Realisierung von Mehrwert schließt von selbst Ersatz des vorgeschossenen Werts ein. Da nun der relative Mehrwert in direktem Verhältnis zur Entwicklung der Produktivkraft der Arbeit wächst, während der Wert der Waren in umgekehrtem Verhältnis zur selben Entwicklung fällt, da also derselbe identische Prozeß die Waren verwohlfeilert und den in ihnen enthaltenen Mehrwert steigert, löst sich

contained in them, we have here the solution of the following riddle: Why does the capitalist, whose sole concern is to produce exchange-value, continually strive to bring down the exchange-value of commodities? One of the founders of political economy, Quesnay, used to torment his opponents with this question, and they could find no answer to it.

‘You acknowledge,’ he says, that the more one can reduce the expenses and costs of labor in the manufacture of industrial products, without injury to production, the more advantageous is that reduction, because it diminishes the price of the finished article. And yet you believe that the production of wealth, which arises from the labor of the craftsmen, consists in the augmentation of the exchange-value of their products.

Footnote 6 brings the French text:

⁶ „Ils conviennent que plus on peut, sans préjudice, épargner de frais ou de travaux dispendieux dans la fabrication des ouvrages des artisans, plus cette épargne est profitable par la diminution des prix de ces ouvrages. Cependant ils croient que la production de richesse qui résulte des travaux des artisans consiste dans l’augmentation de la valeur vénale de leurs ouvrages.” (Quesnay, *Dialogues sur le Commerce et sur les Travaux des Artisans*, pp. 188, 189.)

das Rätsel, daß der Kapitalist, dem es nur um die Produktion von Tauschwert zu tun ist, den Tauschwert der Waren beständig zu senken strebt, ein Widerspruch, womit einer der Gründer der politischen Ökonomie, Quesnay, seine Gegner quälte und worauf sie ihm die Antwort schuldig blieben.

„Ihr gebt zu“, sagt Quesnay, „daß, je mehr man, ohne Nachteil für die Produktion, Kosten oder kostspielige Arbeiten in der Fabrikation industrieller Produkte ersparen kann, desto vorteilhafter diese Ersparung, weil sie den Preis des Machwerks vermindert. Und trotzdem glaubt ihr, daß die Produktion des Reichtums, der aus den Arbeiten der Industriellen herkommt, in der Vermehrung des Tauschwerts ihres Machwerks besteht.“⁶

⁶ „Ils conviennent que plus on peut, sans préjudice, épargner de frais ou de travaux dispendieux dans la fabrication des ouvrages des artisans, plus cette épargne est profitable par la diminution des prix de ces ouvrages. Cependant ils croient que la production de richesse qui résulte des travaux des artisans consiste dans l’augmentation de la valeur vénale de leurs ouvrages.“ (Quesnay, „*Dialogues sur le Commerce et sur les Travaux des Artisans*“, p. 188, 189.)

Question 932 Does the continual striving by the capitalists to lower the value of their products contradict the basic tenet of the labor theory of value that they are only interested in value, not use-value? 2011fa, 2010fa, 2005fa, 2004fa, 2001fa, 2000fa, 1999SP, 1998WI, 1997WI, 1996ut, 1995WI.

325:3/o The shortening of the working day, therefore, is by no means what is aimed at in capitalist production, when labor is economized by increasing its productivity.⁷ It is only the shortening of the labor-time necessary for the production of a definite quantity of commodities that is aimed at. The fact that the worker, when the productivity of his labor has been increased, produces say ten times as many commodities as before, and thus spends one-tenth as much labor-time on each, by no means prevents him from continuing to work 12 hours as be-

339:2/o Ökonomie der Arbeit durch Entwicklung der Produktivkraft der Arbeit⁷ bezweckt in der kapitalistischen Produktion also durchaus nicht Verkürzung des Arbeits-tags. Sie bezweckt nur Verkürzung der für Produktion eines bestimmten Warenquantums notwendigen Arbeitszeit. Daß der Arbeiter bei gesteigerter Produktivkraft seiner Arbeit in einer Stunde z.B. 10mal mehr Ware als früher produziert, also für jedes Stück Ware 10mal weniger Arbeitszeit braucht, verhindert durchaus nicht, ihn nach wie vor 12 Stunden arbeiten und in den 12 Stunden

12. Concept of Relative Surplus-Value

fore, nor from producing in those 12 hours 1,200 articles instead of 120. Indeed, his working day may simultaneously be prolonged, so as to make him produce say 1,400 articles in 14 hours.

Sometimes, the capitalists even have the gall to say: since we have invested so much in expensive machinery, now everyone must show up on time.

Therefore in the treatises of economists of the stamp of MacCulloch, Ure, Senior and the like, we may read on one page that the worker owes a debt of gratitude to capital for developing his productivity, because the necessary labor-time is thereby shortened, and on the next page that he must prove his gratitude by working in future for 15 hours instead of 10. The objective of the development of the productivity of labor within the context of capitalist production is the shortening of that part of the working day in which the worker must work for himself, and the lengthening, thereby, of the other part of the day, in which he is free to work for nothing for the capitalist.

1200 statt früher 120 Stück produzieren zu lassen. Ja, sein Arbeitstag mag gleichzeitig verlängert werden, so daß er jetzt in 14 Stunden 1400 Stück produziert usw.

Man kann daher bei Ökonomen vom Schlag eines MacCulloch, Ure, Senior und tutti quanti auf einer Seite lesen, daß der Arbeiter dem Kapital für die Entwicklung der Produktivkräfte Dank schuldet, weil sie die notwendige Arbeitszeit verkürzt, und auf der nächsten Seite, daß er diesen Dank beweisen muß, indem er statt 10 künftig 15 Stunden arbeitet. Die Entwicklung der Produktivkraft der Arbeit, innerhalb der kapitalistischen Produktion, bezweckt, den Teil des Arbeitstags, den der Arbeiter für sich selbst arbeiten muß, zu verkürzen, um gerade dadurch den andren Teil des Arbeitstags, den er für den Kapitalisten umsonst arbeiten kann, zu verlängern.

Question 933 *Should we be glad there is capitalism because of the increased productivity it generates, even if we disagree with the motives or means of that increase?* 2013fa, 2012fa.

⁷ ‘These speculators, who are so economical of the labor of the workers they would have to pay’ (J. N. Bidaut, *Du monopole qui s’établit dans les arts industriels et le commerce*, Paris, 1828, p. 13). ‘The employer will be always on the stretch to economise time and labor’ (Dugald Stewart, *Lectures on Political Economy*, in *Works*, ed. by Sir W. Hamilton, Vol. 8, Edinburgh, 1855, p. 318). ‘Their’ (the capitalists’) ‘interest is that the productive powers of the laborers they employ should be the greatest possible. On promoting that power their attention is fixed and almost exclusively fixed’ (R. Jones, op. cit., Lecture III [p. 38]).

How far this result can also be attained without cheapening commodities will appear from the following chapters, where we examine the particular methods of producing relative surplus-value.

⁷ „Diese Spekulanten, die so sehr sparen an der Arbeit der Arbeiter, die sie bezahlen müßten.“ (J. N. Bidaut, *„Du Monopole qui s’établit dans les arts industriels et le commerce“*, Paris 1828, p. 13.) „Der Unternehmer wird immer alles daransetzen, um Zeit und Arbeit zu sparen.“ (Dugald Stewart, *„Works“*, ed. by Sir W. Hamilton, v. VIII, Edinburgh 1855, *„Lectures on Polit. Econ.“*, p. 318.) „Sie“ (die Kapitalisten) „sind daran interessiert, daß die Produktivkräfte der Arbeiter, die sie beschäftigen, so groß wie möglich seien. Diese Kraft zu steigern, darauf ist ihre Aufmerksamkeit, und zwar fast ausschließlich gerichtet.“ (R. Jones, l.c., Lecture III.)

Wieweit dies Resultat auch ohne Verwohlfleierung der Waren erreichbar, wird sich zeigen in den besondren Produktionsmethoden des relativen Mehrwerts, zu deren Betrachtung wir jetzt übergehn.

13. Co-Operation

Chapters Thirteen, Fourteen, and Fifteen discuss the *specific capitalist mode of production*. Pre-capitalist modes of production did not put much emphasis on technical progress. In the Middle Ages, inventors were sometimes beheaded, because their inventions threatened the established social order. Capitalism, by contrast, is dynamic and innovative. Marx explains in this chapter how capitalism came to be so innovative.

Capital originally introduced co-operation for reasons that had nothing to do with technology. Each capitalist had to employ many workers in order to produce enough surplus value so that he can live from it and still accumulate part of it. (At that time still all capitalists were men.) The quantitative increase in the number of employees turned into a qualitative change, since these employees started to work together. This process will be discussed in this chapter.

13.1. [Changes in the Capitalist Production Process which Precede The Specific Capitalist Mode of Production]

Even without a change in the traditional technologies, i.e., even without co-operation, the quantitative extension of production is already the cause of some “modifications.” They will be discussed in what is called here section 13.1.

13.1.a. [Implications of the Employment of Many Laborers by the Same Capital]

322:1 As we have seen, capitalist production begins to actually establish itself only where each individual capital simultaneously employs a comparatively large number of workers, and where, as a result, the labor-process is carried on on an extensive scale, and yields relatively large quantities of products.

341:1 Die kapitalistische Produktion beginnt, wie wir sahen, in der Tat erst, wo dasselbe individuelle Kapital eine größere Anzahl Arbeiter gleichzeitig beschäftigt, der Arbeitsprozeß also seinen Umfang erweitert und Produkt auf größerer quantitativer Stufenleiter liefert.

“begins to in fact establish itself only where” leans on the French

[megaII/7]276:1 “ne commence en fait à s’établir que là où.”

↑ “As we have seen” apparently refers to . Capitalism is not possible without many workers working under the same command.

A large number of workers working together, at the same time, in one place (or,

Das Wirken einer größeren Arbeiteranzahl zur selben Zeit, in demselben Raum (oder,

13.1. [Changes in the Capitalist Production Process which Precede The Specific Capitalist Mode of Production]

if you like, in the same field of labor), in order to produce the same sort of commodity under the command of the same capitalist, constitutes, historically and conceptually, the point of departure of capitalist production.

↑ If one thinks of capitalist production, one thinks of one capitalist employing many workers to produce a large quantity of the same product. This simple image is, according to Marx, historically and conceptually the point of departure of capitalist production. This image does not necessarily require that the workers co-operate. All they have to do is act in the same “field of labor.” ↓ And indeed, initially the workers did not co-operate, they simply continued to use the production methods familiar to them as independent craftsmen.

With regard to the mode of production itself, manufactories can hardly be distinguished, in their earliest stages, from the handicraft trades of the guilds, except by the greater number of workers simultaneously employed by the same capital. The workshop of the master craftsman is only enlarged.

↑ “Manufactories” are establishments based on hand work and division of labor. The historical fact that at the beginning, technology did not change qualitatively but only quantitatively, is supporting evidence for Marx’s claim that the reason for this co-operation was the necessity to add enough workers together so that the sum of their surplus-values can sustain a capitalist. There is no qualitative change in production yet. ↓ And the nature of value does not seem to require such qualitative change, since value is additive.

At first, then, the difference is purely quantitative. We have shown that the surplus-value produced by a given capital is equal to the surplus-value produced by each worker multiplied by the number of workers simultaneously employed. The number of workers does not in itself affect the rate of surplus-value or the degree of exploitation of labor-power and, with regard to the production of commodity-values in general, every qualitative alteration in the labor process seems irrelevant. This follows from the nature of value.

↑ Marx uses here the word “seem,” because this conclusion suggests itself if one looks at the issue naively. The qualifier “in and for itself” goes in the same direction; it indicates that the inner nature of the value relations does not contain any dependence of the rate of surplus-value on the number of laborers. From the point of view of value, therefore, the changes to be discussed in this chapter do not seem necessary. Qualitative changes in the labor process seem permitted but not required.

↓ Next Marx introduces a numerical example which illustrates the additivity of value and will also be used for other points to be made below.

wenn man will, auf demselben Arbeitsfeld), zur Produktion derselben Warensorte, unter dem Kommando desselben Kapitalisten, bildet historisch und begrifflich den Ausgangspunkt der kapitalistischen Produktion.

Mit Bezug auf die Produktionsweise selbst unterscheidet sich z.B. die Manufaktur in ihren Anfängen kaum anders von der zünftigen Handwerksindustrie als durch die größere Zahl der gleichzeitig von demselben Kapital beschäftigten Arbeiter. Die Werkstatt des Zunftmeisters ist nur erweitert.

341:2 Der Unterschied ist also zunächst bloß quantitativ. Man sah, daß die Masse des Mehrwerts, welche ein gegebenes Kapital produziert, gleich dem Mehrwert, den der einzelne Arbeiter liefert, multipliziert mit der Anzahl der gleichzeitig beschäftigten Arbeiter. Diese Anzahl ändert an und für sich nichts an der Rate des Mehrwerts oder dem Exploitationsgrad der Arbeitskraft, und mit Bezug auf die Produktion von Warenwert überhaupt scheint jede qualitative Veränderung des Arbeitsprozesses gleichgültig. Es folgt dies aus der Natur des Werts.

13. Co-Operation

If a working day of 12 hours is objectified in \$1.44, 1,200 working days of 12 hours will be objectified in 1,200 times \$1.44. In one case $12 \times 1,200$ working-hours are incorporated in the products, and in the other case 12 working-hours. In the production of value many workers always only count as so many individual workers, and it therefore makes no difference in the value produced whether the 1,200 men work separately or united under the command of one capitalist.

Vergegenständlicht sich ein zwölfstündiger Arbeitstag in 6 sh., so 1200 solcher Arbeitstage in 6 sh. $\times$ 1200. In dem einen Fall haben sich 12×1200 , in dem andren 12 Arbeitsstunden den Produkten einverleibt. In der Wertproduktion zählen viele immer nur als viele einzelne. Für die Wertproduktion macht es also keinen Unterschied, ob 1200 Arbeiter vereinzelt produzieren oder vereint unter dem Kommando desselben Kapitals.

Question 944 *In 439:2, Marx stresses that with respect to value produced, the whole is not more than the sum of its parts. Can you think of other situations where Marx stresses that the whole is not more than the sum of its parts?*

Question 945 *What does Marx mean by: "In value production, many workers always only count as so many individual workers"?*

[Co-Operative Labor is Average Labor]

Although there is no big qualitative change, there are some modifications:

322:2/oo Nevertheless, within certain limits, a modification takes place.

341:2/oo Indes findet doch innerhalb gewisser Grenzen eine Modifikation statt.

Question 946 *What is the difference between a change and a modification?*

Marx will repeat at the end of this paragraph 322:2/oo that the "modifications" listed in this paragraph do not require the workers to actually co-operate; it is only necessary that all workers are working for the same capitalist.

First modification: co-operative labor is average labor. This is pretty obvious, but what makes it exciting is that average labor is exactly the labor that creates value. $\Downarrow$ Marx begins this point with a little digression about the nature of value.

The labor objectified in *value* is labor of average social quality, i.e., the expenditure of average labor-power.

In *Wert* vergegenständlichte Arbeit ist Arbeit von gesellschaftlicher Durchschnittsqualität, also die Äußerung einer durchschnittlichen Arbeitskraft.

$\Uparrow$ This is true whether a capitalist has few or many employees. $\Downarrow$ However the definition of the magnitude of value by an average leads to the question how this average *exists*, and for large capitals, the answer to this question is different than for small ones:

Any average magnitude, however, always only *exists* as the average of many separate magnitudes all of one kind, but differing as to quantity.

Eine Durchschnittsgröße *existiert* aber immer nur als Durchschnitt vieler verschiedener Größenindividuen derselben Art.

$\Uparrow$ Look at a die. The average of its throws is 3.5; this number does not exist as one of the faces of the die. The same is true for workers. There is no such thing as a Mr. Average.

In every industry, each individual laborer, be he Peter or Paul, differs more or less from the average laborer.

In jedem Industriezweig weicht der individuelle Arbeiter, Peter oder Paul, mehr oder minder vom Durchschnittsarbeiter ab.

13.1. [Changes in the Capitalist Production Process which Precede The Specific Capitalist Mode of Production]

↓ But one can synthesize the elusive Mr. Average by hiring several workers at the same time:

These individual differences, or “errors” as they are called in mathematics, compensate one another, and vanish, whenever one adds a certain minimum number of workmen together. The celebrated sophist and sycophant, Edmund Burke, goes so far as to make the following assertion, based on his practical observations as a farmer; viz., that “in so small a platoon” as that of five farm laborers, all individual differences in the labor vanish, and that consequently any given five adult farm laborers taken together, will in the same time do as much work as any other five.⁸

⁸ “Unquestionably, there is a good deal of difference between the value of one man’s labor and that of another from strength, dexterity, and honest application. But I am quite sure, from my best observation, that any given five men will, in their total, afford a proportion of labor equal to any other five within the periods of life I have stated; that is, that among such five men there will be one possessing all the qualifications of a good workman, one bad, and the other three middling, and approximating to the first, and the last. So that in so small a platoon as that of even five, you will find the full complement of all that five men can earn.” (E. Burke, l.c., pp. 15, 16.) Compare Quételet on the average individual.

Burke’s claim may be exaggerated but in principle he is right:

But, however that may be, it is clear, that the aggregate working-day of a large number of workmen simultaneously employed, divided by the number of these workmen, gives one day of average social labor.

↓ To illustrate this, Marx resumes his earlier example:

For example, let the working-day of each individual be 12 hours. Then the aggregate working-day of 12 men simultaneously employed consists of 144 hours. The labor of each of the dozen men may deviate more or less from average social labor, each of them

Diese individuellen Abweichungen, welche mathematisch „Fehler“ heißen, kompensieren sich und verschwinden, sobald man eine größere Anzahl Arbeiter zusammennimmt. Der berühmte Sophist und Sykophant Edmund Burke will aus seinen praktischen Erfahrungen als Pächter sogar wissen, daß schon „für ein so geringes Peloton“ wie 5 Ackerknechte aller individuelle Unterschied der Arbeit verschwindet, also die ersten besten im Mannesalter befindlichen fünf englischen Ackerknechte zusammengenommen in derselben Zeit grad soviel Arbeit verrichten als beliebige andre fünf englische Ackerknechte.⁸

⁸ „Ohne Frage besteht ein beträchtlicher Unterschied zwischen dem Wert der Arbeit eines Mannes und dem der Arbeit eines andren durch unterschiedliche Kraft, Geschicklichkeit und redlichen Fleiß. Aber ich bin auf Grund meiner sorgfältigen Beobachtung völlig sicher, daß beliebige fünf Mann in ihrer Gesamtheit eine gleiche Menge Arbeit liefern wie fünf andre, die in den erwähnten Lebensperioden stehen. Das heißt, daß sich unter diesen fünf Mann einer befindet, der alle Eigenschaften eines guten Arbeiters hat, einer ein schlechter Arbeiter ist, während die andren drei mittelmäßig sind und sich dem ersten und letzten annähern. So wird man also schon in einer so kleinen Gruppe von selbst fünf Mann die Gesamtheit all dessen finden, was fünf Mann leisten können.“ (E. Burke, l.c. p. 15, 16.) Cf. Quételet über das Durchschnittsindividuum.

Wie dem auch sei, es ist klar, daß der Gesamtarbeitstag einer größeren Anzahl gleichzeitig beschäftigter Arbeiter, dividiert durch die Anzahl der Arbeiter, an und für sich ein Tag gesellschaftlicher Durchschnittsarbeit ist.

Der Arbeitstag des einzelnen sei z.B. zwölfstündig. So bildet der Arbeitstag von 12 gleichzeitig beschäftigten Arbeitern einen Gesamtarbeitstag von 144 Stunden, und obgleich die Arbeit eines jeden des Dutzend mehr oder minder von der gesellschaftli-

13. Co-Operation

requiring a different time for the same operation. Nevertheless, if the working-day of each individual worker is taken to be one-twelfth of the aggregate working-day of 144 hours, it possesses the qualities of an average social working-day.

chen Durchschnittsarbeit abweichen, der einzelne daher etwas mehr oder weniger Zeit zu derselben Verrichtung brauchen mag, besitzt der Arbeitstag jedes einzelnen als ein Zwölftel des Gesamtarbeitstags von 144 Stunden die gesellschaftliche Durchschnittsqualität.

↑ Marx's argument here can be broken up into two steps: (a) The individual differences of the 12 workers cancel each other out, therefore the total output is equal to the output of 144 average hours. (b) If each individual worker is considered one twelfth of the group of twelve then it follows that each individual work day is average as well.

Ad (a): By the laws of probability, the standard deviation of the average of 12 independent random variables with equal standard deviation s is $1/\sqrt{12} s$, i.e., it is less than $1/3$ of the standard deviation of each individual variable, but it is not zero. Marx, however, says that the sample average is equal to the population mean, i.e., its standard deviation is zero. He can only say this if this standard deviation has become so small that it is no longer practically relevant. The differences between different teams of twelve are probably no greater than the differences between the same individual today and tomorrow. The production process must therefore be organized in such a way that such differences do not matter. Another justification for Marx's assumption that the product of twelve workers is exactly equal to the social average may be that proximity (Marx does not yet assume co-operation itself here) causes the workers to compare themselves to each other and to adjust their labor output to some "normal" level. Co-operation itself goes beyond this; it imposes a rhythm on the workers, they compensate for each other and help each other out.

Ad (b): It would be justified to consider the labor each worker as $1/12$ th of the total labor in a situation where the joint output cannot be attributed to individual laborers and where the assumption can be made that each worker contributes equally to this joint output. But Marx does not claim here that the contribution of each worker is equal, on the contrary, he stresses that different workers may use different times for equal work processes. The conclusion is therefore counterfactual: Marx only says that each individual working-day has exactly social average quality *if* each individual working day is considered to be exactly one twelfth of the combined working-day. (The "*if*" is my own translation; the formulation in the German original does not make it quite as obvious that Marx means it counterfactually. Nevertheless I think this is the correct reading of Marx.)

↓ The next sentence says "however" in order to clinch the argument: although the above argument was counterfactual, since each individual laborer does not contribute exactly $1/12$ th of the overall output, this counterfactual outcome is reality for the capitalist in relation with his workers. The capitalist does not receive separate outputs from each worker individually but instead the aggregate output of their joint labor. And if time wages instead of piece wages are paid, the capitalist also does not pay each worker by his or her actual output, but all workers are paid the same hourly wage.

For the capitalist, however, who employs these 12 men, the working-day exists as the aggregate working-day of the whole dozen. Each individual man's day exists as an aliquot part of the aggregate working-day, no matter whether the 12 men assist one another in their work, or whether the

Für den Kapitalisten aber, der ein Dutzend beschäftigt, existiert der Arbeitstag als Gesamtarbeitstag des Dutzend. Der Arbeitstag jedes einzelnen existiert als aliquoter Teil des Gesamtarbeitstags, ganz unabhängig davon, ob die zwölf einander in die Hand arbeiten oder ob der ganze Zusammenhang ih-

13.1. [Changes in the Capitalist Production Process which Precede The Specific Capitalist Mode of Production]

connexion between their operations consists merely in the fact, that the men are all working *for* the same capitalist.

rer Arbeiten nur darin besteht, daß sie für denselben Kapitalisten arbeiten.

But outside this relation, for instance if the twelve workers work for six different small masters, their individual differences do not cancel out:

But if the 12 men are employed in six pairs, by as many different small masters, it will be quite a matter of chance, whether each of these masters produces the same value, and consequently whether he realises the general rate of surplus-value. Individual deviations would take place.

Werden dagegen von den 12 Arbeitern je zwei von einem kleinen Meister beschäftigt, so wird es zufällig, ob jeder einzelne Meister dieselbe Wertmasse produziert und daher die allgemeine Rate des Mehrwerts realisiert. Es fänden individuelle Abweichungen statt.

If my interpretation is correct, then this last sentence should not be translated as “there would be individual differences.” Individual

differences also exist among the workers hired by the big capitalist; but for the big capitalist, these differences will not lead to

differences in output, while in the case of only two employees they do.

↑ Big capitalists face different conditions than small capitalists; Marx makes this point occasionally.

[Average Laborer Must Exceed a Minimum of Dexterity]

↓ Next Marx discusses a second implication of employing many people together, which is dialectically related to the first. The real definition of an “average worker” is transfactual; the average worker is not defined by his or her speed of output but an average worker is a worker who has no particular differences from any other worker. However capitalist co-operation imposes more stringent conditions on what *counts* as an average worker.

If one workman required considerably more time for the production of a commodity than is socially necessary, i.e., if the duration of his individual labor-time deviated considerably from the socially necessary or average labor-time, then his labor would not count as average labor, nor his labor-power as average labor-power. It would either be not saleable at all, or only at something below the average value of labor-power. A fixed minimum of efficiency in all labor is therefore assumed, and we shall see, later on, that capitalist production finds ways to measure this minimum.

Verbrauchte ein Arbeiter bedeutend mehr Zeit in der Produktion einer Ware, als gesellschaftlich erheischt ist, wiche die für ihn individuell notwendige Arbeitszeit bedeutend ab von der gesellschaftlich notwendigen oder der Durchschnittsarbeitszeit, so gälte seine Arbeit nicht als Durchschnittsarbeit, seine Arbeitskraft nicht als durchschnittliche Arbeitskraft. Sie verkaufte sich gar nicht oder nur unter dem Durchschnittswert der Arbeitskraft. Ein bestimmtes Minimum der Arbeitsfertigkeit ist also vorausgesetzt, und wir werden später sehn, daß die kapitalistische Produktion Mittel findet, dies Minimum zu messen.

One might say that, in contrast to Marx’s transfactual definition, capitalism imposes an *empiricist* conception of the average worker. Why does capitalism do this? Because the social average has now become a tangible quantity, individuals can and therefore will be compared against the group average.

13. Co-Operation

Question 949 *Did Marx overlook a possible source of profits when he calls also those workers average workers whose performance is below average? Why can't the capitalist introduce a strict merit payment system in which each worker is paid by his or her performance, or why can't the capitalist fire all those below average and in this way try to build up a superior workforce?*

The elimination of the workers below the allowable minimum decreases the variability of the workforce, but it does not make the workforce completely homogeneous. The earlier-mentioned difference between big and small capitalists therefore still exists.

Nevertheless, this minimum deviates from the average, although on the other hand the capitalist has to pay the average value of labor-power.

Nichtsdestoweniger weicht das Minimum vom Durchschnitt ab, obgleich auf der anderen Seite der Durchschnittswert der Arbeitskraft gezahlt werden muß.

Question 950 *Why does every worker get average pay, even if he or she does not match average performance?*

For the small masters in 322:2/oo, this has the following implications:

Of the six small masters, one would therefore squeeze out more than the average rate of surplus-value, another less. The inequalities would be compensated for the society at large, but not for the individual masters.

Von den sechs Kleinmeistern würde der eine daher mehr, der andre weniger als die allgemeine Rate des Mehrwerts herauschlagen. Die Ungleichheiten würden sich für die Gesellschaft kompensieren, aber nicht für den einzelnen Meister.

↓ The concluding sentence establishes a link between capitalism and commodity production in general:

Thus the law of valorization is only fully actualized for the individual producer, if he produces as a capitalist and employs a number of workmen together, whose labor, by its collective nature, is from the outset stamped as average social labor.⁹

Das Gesetz der Verwertung überhaupt realisiert sich also für den einzelnen Produzenten erst vollständig, sobald er als Kapitalist produziert, viele Arbeiter gleichzeitig anwendet, also von vornherein gesellschaftliche Durchschnittsarbeit in Bewegung setzt.⁹

The footnote brings a dissenting result from the literature, together with its refutation.

⁹ Professor Roscher claims to have discovered that one needlewoman employed by Mrs. Roscher during two days, does more work than two needlewomen employed together during one day. The learned professor should not study the capitalist process of production in the nursery, nor under circumstances where the principal personage, the capitalist, is wanting.

⁹ Herr Professor Roscher will entdeckt haben, daß eine Nähmamsell, die während zwei Tagen von der Frau Professorin beschäftigt wird, mehr Arbeit liefert, als zwei Nähmamsellen, welche die Frau Professorin am selben Tage beschäftigt. Der Herr Professor stelle seine Beobachtungen über den kapitalistischen Produktionsprozeß nicht in der Kinderstube an und nicht unter Umständen, worin die Hauptperson fehlt, der Kapitalist.

Question 951 *How does co-operation lend to individual labor the character of average social labor? What does that mean for the consciousness of the workers?*

13.1.b. [Effects of Many Workers Working on the Same Premises]

Two interlinked points were made so far: the employment of many workers by the same capitalist has the effect that the actual labor-time performed by these workers is equal to

13.1. [Changes in the Capitalist Production Process which Precede The Specific Capitalist Mode of Production]

the average labor-time, and that those workers performing too far below average are either paid a lower wage or altogether excluded from employment. Both points did not require that the workers work on the same place at the same time; they would also have been valid for workers working in different workshops or at home for the same capitalist.

⇓ If the workers work at the same place and time, additional modifications occur. Even if they do not work together but just work side by side at the same place and time without a change in the mode of their labor, this results in a “revolution” (qualitative change) of the objective conditions of the labor process, namely, an economizing of certain parts of the constant capital.

Even without an alteration in the system of working, the simultaneous employment of a large number of laborers effects a revolution in the material conditions of the labor-process. The buildings in which they work, the store-houses for the raw material, the implements and utensils used simultaneously or in turns by the workmen; in short, a portion of the means of production, are now consumed in common.

343:1/o Auch bei gleichbleibender Arbeitsweise bewirkt die gleichzeitige Anwendung einer größeren Arbeiteranzahl eine Revolution in den gegenständlichen Bedingungen des Arbeitsprozesses. Baulichkeiten, worin viele arbeiten, Lager für Rohmaterial usw., Gefäße, Instrumente, Apparate usw., die vielen gleichzeitig oder abwechselnd dienen, kurz, ein Teil der Produktionsmittel wird jetzt gemeinsam im Arbeitsprozeß konsumiert.

⇓ This joint consumption of the means of production leads to a less than proportional increase in their costs:

On the one hand, the exchange-value of these means of production is not increased; for the exchange-value of a commodity is not raised by its use-value being consumed more thoroughly and to greater advantage. On the other hand, they are used in common, and therefore on a larger scale than before. A room where twenty weavers work at twenty looms must be larger than the room of a single weaver with two assistants. But it costs less labor to build one workshop for twenty persons than to build ten to accommodate two weavers each; thus the value of the means of production that are concentrated for use in common on a large scale does not increase in direct proportion to the expansion and to the increased useful effect of those means.

Einerseits wird der Tauschwert von Waren, also auch von Produktionsmitteln, durchaus nicht erhöht durch irgendwelche erhöhte Ausbeutung ihres Gebrauchswerts. Andererseits wächst der Maßstab der gemeinsam gebrauchten Produktionsmittel. Ein Zimmer, worin 20 Weber mit ihren 20 Webstühlen arbeiten, muß weiter gestreckt sein als das Zimmer eines unabhängigen Webers mit zwei Gesellen. Aber die Produktion einer Werkstatt für 20 Personen kostet weniger Arbeit als die von 10 Werkstätten für je zwei Personen, und so wächst überhaupt der Wert massenweise konzentrierter und gemeinsamer Produktionsmittel nicht verhältnismäßig mit ihrem Umfang und ihrem Nutzeffekt.

⇓ Each product is therefore produced at a lower cost:

When consumed in common, they give up a smaller part of their value to each single product; partly because the total value they part with is spread over a greater quantity of products, and partly because their value, though absolutely greater, is, having regard

Gemeinsam vernutzte Produktionsmittel geben geringeren Wertbestandteil an das einzelne Produkt ab, teils weil der Gesamtwert, den sie abgeben, sich gleichzeitig auf eine größere Produktenmasse verteilt, teils weil sie, im Vergleich zu vereinzelter Pro-

13. Co-Operation

to their sphere of action in the process, relatively less than the value of isolated means of production. Owing to this, the value of a part of the constant capital falls, and in proportion to the magnitude of the fall, the total value of the commodity also falls. The effect is the same as if the means of production had cost less.

duktionsmitteln, zwar mit absolut größerem, aber, ihren Wirkungskreis betrachtet, mit relativ kleinrem Wert in den Produktionsprozeß eintreten. Damit sinkt ein Wertbestandteil des konstanten Kapitals, also proportionell zu seiner Größe auch der Gesamtwert der Ware. Die Wirkung ist dieselbe, als ob die Produktionsmittel der Ware wohlfeiler produziert würden.

↓ In other words, the means of production are socialized before labor itself is:

The economy in their application is entirely owing to their being consumed in common by a large number of workmen. Moreover, this character of being necessary conditions of social labor, a character that distinguishes them from the dispersed and relatively more costly means of production of isolated, independent laborers, or small masters, is acquired even when the numerous workmen assembled together do not assist one another, but merely work side by side. A portion of the instruments of labor acquires this social character before the labor-process itself does so.

Diese Ökonomie in der Anwendung der Produktionsmittel entspringt nur aus ihrem gemeinsamen Konsum im Arbeitsprozeß vieler. Und sie erhalten diesen Charakter als Bedingungen gesellschaftlicher Arbeit oder gesellschaftliche Bedingungen der Arbeit im Unterschied von den zersplitterten und relativ kostspieligen Produktionsmitteln vereinzelter selbständiger Arbeiter oder Kleinmeister, selbst wenn die vielen nur räumlich zusammen, nicht miteinander arbeiten. Ein Teil der Arbeitsmittel erwirbt diesen gesellschaftlichen Charakter, bevor ihn der Arbeitsprozeß selbst erwirbt.

Exam Question 952 *How does “a portion of the instruments of labor acquire a social character before the labor-process itself does”?*

↓ This is beneficial for capital on two counts.

Economy in the use of the means of production has to be considered under two aspects. First, as cheapening commodities, and thereby bringing about a fall in the value of labor-power. Secondly, as altering the ratio of the surplus-value to the total capital advanced, i.e., to the sum of the values of the constant and variable capital.

344:1 Die Ökonomie der Produktionsmittel ist überhaupt von doppeltem Gesichtspunkt zu betrachten. Das eine Mal, soweit sie Waren wohlfeilert und dadurch den Wert der Arbeitskraft senkt. Das andre Mal, soweit sie das Verhältnis des Mehrwerts zum vorgeschossenen Gesamtkapital, d.h. zur Wertsumme seiner konstanten und variablen Bestandteile, verändert.

↓ Only one of these benefits can be discussed here, the discussion of the other has to wait until volume Three:

The latter aspect will not be considered until we come to the third book, to which, with the object of treating them in their proper connexion, we also relegate many other points that relate to the present question.

Der letzte Punkt wird erst im ersten Abschnitt des Dritten Buchs dieses Werks erörtert, wohin wir des Zusammenhangs wegen auch manches schon hierher Gehörige verweisen.

Question 953 *What are the twofold benefits of the economy of constant capital, and why can one of these two benefits only be discussed in Capital III?*

↓ The subject-matter must be split up because two different real generative mechanisms are at work. This difference is not only theoretical but it is part of the worker's everyday experience:

The march of our analysis compels this splitting up of the subject-matter, a splitting up that is quite in keeping with the spirit of capitalist production. For since, in this mode of production, the workman finds the instruments of labor existing independently of him as another man's property, economy in their use appears as a distinct operation, one that does not concern him, and which, therefore, has no connexion with the methods by which his own personal productiveness is increased.

Der Gang der Analyse gebietet diese Zerreißung des Gegenstands, die zugleich dem Geist der kapitalistischen Produktion entspricht. Da hier nämlich die Arbeitsbedingungen dem Arbeiter selbständig gegenüber treten, erscheint auch ihre Ökonomie als eine besondere Operation, die ihn nichts angeht und daher getrennt ist von den Methoden, welche seine persönliche Produktivität erhöhen.

Moore-Abeling had here: appears, with regards to him. This is wrong: it does not just appear this way with regards to him, but

the social form of appearance of the economy of constant capital is such that it does not concern the worker, although this economy

itself is the effect of the workers' combined labor.

Question 954 *The economy in the means of production due to increased scale of production benefits the capitalist in two different ways. What are they?*

13.2. [Simple Co-Operation]

From now on Marx talks about co-operation proper, which is qualitatively, not only quantitatively different from the individual labors. He begins with the definition of co-operation:

When numerous laborers work next to and with each other in accordance with a plan, whether in one and the same process, or in different but connected processes, they are said to co-operate, or to work in co-operation.¹⁰

¹⁰ "Confluence of forces." (Destutt de Tracy, l.c., p. 80.)

Co-operative labor is not just a quantitative change but the creation of something new, Marx calls it a new "social force."

Just as the offensive power of a squadron of cavalry, or the defensive power of a regiment of infantry is essentially different from the sum of the offensive or defensive powers of the individual cavalry or infantry soldiers taken separately, so the sum total of the mechanical forces exerted by isolated workmen differs from the social force that is developed, when many hands take part simultaneously in one and the same undivided opera-

344:2 Die Form der Arbeit vieler, die in demselben Produktionsprozeß oder in verschiedenen, aber zusammenhängenden Produktionsprozessen planmäßig neben- und miteinander arbeiten, heißt Kooperation.¹⁰

¹⁰ „Concours de forces.“ (Destutt de Tracy, l.c. p. 80.)

345:1 Wie die Angriffskraft einer Kavallerieschwadron oder die Widerstandskraft eines Infanterieregiments wesentlich verschieden ist von der Summe der von jedem Kavalleristen und Infanteristen vereinzelt entwickelten Angriffs- und Widerstandskräfte, so die mechanische Kraftsumme vereinzelter Arbeiter von der gesellschaftlichen Kraftpotenz, die sich entwickelt, wenn viele Hände gleichzeitig in derselben ungeteil-

13. Co-Operation

tion, such as raising a heavy weight, turning a winch, or removing an obstacle.¹¹

ten Operation zusammenwirken, z.B. wenn es gilt, eine Last zu heben, eine Kurbel zu drehn oder einen Widerstand aus dem Weg zu räumen.¹¹

↑ The formulation “when many hands take part simultaneously in one and the same *undivided* operation” (my emphasis) makes it clear that Marx is talking here about *simple* co-operation. This is the simplest form of co-operation, in which people who do similar things work together. It must be distinguished from division of labor, which is a specific form of co-operation in which each of the workers co-operating specializes on a *different* task. Carrying a piano or participating in a discussion is a form of co-operation in which labor is not “divided.”

On the one hand Marx discusses this simple co-operation here, on the other he discusses those elements which all co-operative production processes have in common. ↓ Also the Wakefield quote in footnote 11 refers specifically to simple co-operation.

¹¹ There are numerous operations of so simple a kind as not to admit a division into parts, which cannot be performed without the co-operation of many pairs of hands. I would instance the lifting of a large tree on to a wain . . . , everything, in short, which cannot be done unless a great many pairs of hands help each other in the same undivided employment and at the same time.” (E. G. Wakefield: “A View of the Art of Colonization.” London, 1849, p. 168.)

¹¹ „Es gibt zahlreiche Verrichtungen von so einfacher Art, daß sie keine Zerlegung in Teile zulassen, die jedoch nur durch das Zusammenwirken vieler Paare von Händen ausgeführt werden können. So das Heben eines großen Baumstamms auf einen Wagen . . . kurz, alles, was nicht getan werden kann, ohne daß sich eine große Zahl von Händepaaren gegenseitig und gleichzeitig bei derselben ungeteilten Beschäftigung helfen.“ (E. G. Wakefield, „A View of the Art of Colonization“, London 1849, p. 168.)

Co-operation changes the production process qualitatively:

In such cases the effect of the combined labor could either not be produced at all by isolated individual labor, or it could only be produced by a great expenditure of time, or on a very dwarfed scale. Not only have we here an increase in the productive power of the individual, by means of co-operation, but the creation of a new power, namely, the collective power of masses.^{11a}

Die Wirkung der kombinierten Arbeit könnte hier von der vereinzelter gar nicht oder nur in viel längeren Zeiträumen oder nur auf einem Zwergmaßstab hervorgebracht werden. Es handelt sich hier nicht nur um Erhöhung der individuellen Produktivkraft durch die Kooperation, sondern um die Schöpfung einer Produktivkraft, die an und für sich Massenkraft sein muß.^{11a}

^{11a} “As one man cannot, and ten men must strain to lift a ton of weight, yet 100 men can do it only by the strength of a finger of each of them.” (John Bellers: “Proposals for Raising a Colledge of Industry.” London, 1696, p. 21.)

^{11a} „Während ein Mann nicht fähig ist, eine Tonnenlast zu heben, und 10 Mann sich dabei anstrengen müssen, können es einhundert Mann aber mit der Kraft nur je eines ihrer Finger tun.“ (John Bellers, „Proposals for raising a colledge of industry“, London 1696, p. 21.)

Next, Marx brings a long list of the effects of co-operation. The culmination of this list will be that co-operation is a new social force. (In the second half of the chapter, Marx will say that in capitalism, this new social force is appropriated by the capitalist without reimbursing the workers.) In critical realist terms, the result which Marx is going to develop right now is that co-operation is *real*, i.e., it has causal effects. The things listed here as the effects of co-operation are the things co-operation does.

13.2.a. [Stimulation of Animal Spirits]

The first effect of co-operation is an effect not on the product or on the labor process but on the laborer. Co-operation not only generates a new collective productive power; it also enhances the individual productive powers by stimulating the “animal spirits” of the individual workers

Apart from the new power that arises from the fusion of many forces into one single force, mere social contact begets in most industries an emulation and stimulation of the animal spirits that heighten the efficiency of each individual workman. Hence it is that a dozen persons working together will, in their collective working-day of 144 hours, produce far more than twelve isolated men each working 12 hours, or than one man who works twelve days in succession.¹² The reason of this is that man is, if not as Aristotle contends, a political,¹³ at all events a social animal.

345:2/o Abgesehn von der neuen Kraftpotenz, die aus der Verschmelzung vieler Kräfte in eine Gesamtkraft entspringt, erzeugt bei den meisten produktiven Arbeiten der bloße gesellschaftliche Kontakt einen Wetteifer und eine eigne Erregung der Lebensgeister (animal spirits), welche die individuelle Leistungsfähigkeit der einzelnen erhöhen, so daß ein Dutzend Personen zusammen in einem gleichzeitigen Arbeitstag von 144 Stunden ein viel größeres Gesamtprodukt liefern als zwölf vereinzelte Arbeiter, von denen jeder 12 Stunden, oder als ein Arbeiter, der 12 Tage nacheinander arbeitet.¹² Dies rührt daher, daß der Mensch von Natur, wenn nicht, wie Aristoteles meint, ein politisches¹³, jedenfalls ein gesellschaftliches Tier ist.

The German word “*Wetteifer*” means the eagerness to keep up with the others and not to be the slow person on the team, rather

than the desire to beat each other out. Moore/Aveling found the apt translation “emulation” (which I also saw in some of the footnotes),

while Fowkes uses rivalry, which gives the wrong connotations.

¹² “There is also” (when the same number of men are employed by one farmer on 300 acres, instead of by ten farmers with 30 acres a piece) “an advantage in the proportion of servants, which will not so easily be understood but by practical men; for it is natural to say, as 1 is to 4, so are 3 to 12; but this will not hold good in practice; for in harvest time and many other operations which require that kind of despatch by the throwing many hands together, the work is better and more expeditiously done: f.i. in harvest, 2 drivers, 2 loaders, 2 pitchers, 2 rakers, and the rest at the rick, or in the barn, will despatch double the work that the same number of hands would do if divided into different gangs on different farms.” (“An Inquiry into the Connexion between the Present Price of Provisions and the Size of Farms.” By a Farmer. London, 1773, pp. 7, 8.)

¹² „Man hat auch“ (wenn dieselbe Arbeiterzahl von einem Pächter auf 300, statt von 10 Pächtern auf je 30 acres angewandt wird) „in der relativen Zahl der Knechte einen Vorteil, der nicht so leicht zu erkennen ist, außer von Männern der Praxis. Man sagt natürlich, daß sich 1:4 wie 3:12 verhält; aber dies bewährt sich nicht in der Praxis. Denn in der Erntezeit und bei vielen andren Verrichtungen, die ähnliche Eile erfordern, wird durch Zusammenfassen vieler Arbeitskräfte die Arbeit besser und schneller geschafft. Z.B. bewältigen bei der Ernte 2 Fuhrleute, 2 Auflader, 2 Zureicher, 2 Recher, dazu der Rest beim Schober oder in der Scheune zusammen doppelt soviel Arbeit wie die gleiche Anzahl, wenn sie in verschiedene Gruppen und auf verschiedene Pachten aufgeteilt wäre.“ ([J. Arbuthnot,] „An Enquiry into the Connection between the present price of provisions and the size of farms.“ By a Farmer, London 1773, p. 7, 8.)

13. Co-Operation

¹³ Strictly, Aristotle's definition is that man is by nature a town-citizen. This is quite as characteristic of ancient classical society as Franklin's definition of man, as a tool-making animal, is characteristic of Yankeedom.

¹³ Aristoteles' Definition ist eigentlich die, daß der Mensch von Natur Stadtbürger. Sie ist für das klassische Altertum ebenso charakteristisch als Franklins Definition, daß der Mensch von Natur Instrumentenmacher, für das Yankeetum.

13.2.b. [Implicit Division of Labor in Simple Co-Operation]

Even if everyone does the *same*, his or her labor may represent a *different* phase of the labor process itself. Although this is still simple co-operation, it is already the transition to division of labor, which will briefly be mentioned in the next paragraph.

Although a number of men may be occupied together at the same time on the same, or the same kind of work, yet the labor of each, as a part of the collective labor, may correspond to a different phase of the labor-process, through all whose phases, in consequence of co-operation, the subject of their labor passes with greater speed. For instance, if a dozen masons place themselves in a row, so as to pass stones from the foot of a ladder to its summit, each of them does the same thing; nevertheless, their separate acts form connected parts of one total operation; they are particular phases, which must be gone through by each stone; and the stones are thus carried up quicker by the 24 hands of the row of men than they could be if each man went separately up and down the ladder with his burden.¹⁴ The object is carried over the same distance in a shorter time.

¹⁴ "On doit encore remarquer que cette division partielle de travail peut se faire quand même les ouvriers sont occupés d'une même besogne. Des maçons par exemple, occupés à faire passer de mains en mains des briques à un échafaudage supérieur, font tous la même besogne, et pourtant il existe parmi eux une espèce de division de travail, qui consiste en ce que chacun d'eux fait passer la brique par un espace donné, et que tous ensemble la font parvenir beaucoup plus promptement à l'endroit marqué qu'ils ne le feraient si chacun d'eux portait sa brique séparément jusqu'à l'échafaudage supérieur." (F. Skarbek: "Théorie des richesses sociales." Paris, 1839, t. I, pp. 97, 98.)

The next example is dual to the previous one:

Again, a combination of labor occurs whenever a building, for instance, is taken in

346:1 Obgleich viele dasselbe oder Gleichartiges gleichzeitig miteinander verrichten, kann die individuelle Arbeit eines jeden dennoch als Teil der Gesamtarbeit verschiedene Phasen des Arbeitsprozesses selbst darstellen, die der Arbeitsgegenstand, infolge der Kooperation, rascher durchläuft. Z.B. wenn Maurer eine Reihe von Händen bilden, um Bausteine vom Fuß eines Gerüsts bis zu seiner Spitze zu befördern, tut jeder von ihnen dasselbe, aber dennoch bilden die einzelnen Verrichtungen kontinuierliche Teile einer Gesamtverrichtung, besondere Phasen, die jeder Baustein im Arbeitsprozeß durchlaufen muß und wodurch ihn etwa die 24 Hände des Gesamtarbeiters rascher fördern als die zwei Hände jedes einzelnen Arbeiters, der das Gerüst auf- und abstiege.¹⁴ Der Arbeitsgegenstand durchläuft denselben Raum in kürzerer Zeit.

¹⁴ „Ferner muß man feststellen, daß diese partielle Arbeitsteilung auch da erfolgen kann, wo die Arbeiter mit einer gleichen Verrichtung beschäftigt sind. Maurer z.B., die Ziegel von Hand zu Hand zu einem höheren Gerüst wandern lassen, tun alle die gleiche Arbeit, und dennoch existiert unter ihnen eine Art von Arbeitsteilung, die darin besteht, daß jeder von ihnen den Ziegel ein bestimmtes Stück weiterwandern läßt und alle zusammen ihn viel schneller an den gegebenen Ort kommen lassen, als wenn jeder von ihnen seinen Ziegel einzeln bis zum höheren Gerüst hinauftrüge.“ (F. Skarbek, „Théorie des richesses sociales“, 2ème éd., Paris 1839, t. I, p. 97, 98.)

Andererseits findet Kombination der Arbeit statt, wenn ein Bau z.B. von verschiedenen

hand on different sides simultaneously; although here also the co-operating masons are doing the same, or the same kind of work. The 12 masons, in their collective working-day of 144 hours, make much more progress with the building than one mason could make working for 12 days, or 144 hours. The reason is, that a body of men working in concert has hands and eyes both before and behind, and is, to a certain degree, omnipresent. The various parts of the work progress simultaneously.

Seiten gleichzeitig angegriffen wird, obgleich die Kooperierenden dasselbe oder Gleichartige tun. Der kombinierte Arbeitstag von 144 Stunden, der den Arbeitsgegenstand vielseitig im Raum angreift, weil der kombinierte Arbeiter oder Gesamtarbeiter vorn und hinten Augen und Hände hat und in gewissem Grad Allgegenwart besitzt, fördert das Gesamtprodukt rascher als 12 zwölfstündige Arbeitstage mehr oder minder einzelner Arbeiter, die ihr Werk einseitiger angreifen müssen. In derselben Zeit reifen verschiedene Raumteile des Produkts.

↑ This implicit division of labor is an additional factor improving the productivity of simple co-operation.

Exam Question 955 *What is co-operation? What is simple co-operation? What is division of labor?*

13.2.c. [Simple Co-Operation Can Lead to Division of Labor]

The subject of the present chapter is co-operation in general, while the next chapter discusses division of labor and the one after that co-operation mediated by machinery. Marx does not want to anticipate these later chapters, therefore the examples in the present chapter are situations in which co-operation occurs without a change in the individual labor-process itself. One benefit of this kind of co-operation is that it allows, if the labor process is complicated, to *divide* the different operations between different hands. This division of labor will be discussed in the next chapter, but Marx mentions the potential of division of labor as one of the benefits of simple co-operation already here.

In the above instances we have laid stress upon the point that the men do the same, or the same kind of work, because this, the most simple form of labor in common, plays a great part in co-operation, even in its most fully developed stage.

346:2/o Wir betonten, daß die vielen, die einander ergänzen, dasselbe oder Gleichartige tun, weil diese einfachste Form gemeinsamer Arbeit auch in der ausgebildeten Gestalt der Kooperation eine große Rolle spielt.

↑ Marx explains now, after the fact, why his earlier examples referred to simple co-operation only.

If the work be complicated, then the mere number of the men who co-operate allows to apportion the various operations to different hands, and, consequently, to carry them on simultaneously. The time necessary for the completion of the whole work is thereby shortened.¹⁵

Ist der Arbeitsprozeß kompliziert, so erlaubt die bloße Masse der Zusammenarbeitenden, die verschiedenen Operationen unter verschiedene Hände zu verteilen, daher gleichzeitig zu verrichten und dadurch die zur Herstellung des Gesamtprodukts nötige Arbeitszeit zu verkürzen.¹⁵

¹⁵ „Est-il question d'exécuter un travail compliqué, plusieurs choses doivent être faites simultanément. L'un en fait une pendant que l'autre en fait une autre, et tous contribuent à l'effet

¹⁵ „Wenn es sich um die Ausführung einer komplizierten Arbeit handelt, müssen verschiedene Dinge gleichzeitig getan werden. Der eine macht das eine, während der andere etwas

13. Co-Operation

qu'un sent homme n'aurait pu produire. L'un rame pendant que l'autre tient le gouvernail, et qu'un troisième jette le filet on harponne le poisson, et la pêche a un succès impossible sans ce concours." (Destutt de Tracy, l.c.)

andres macht, und alle tragen zu einer Wirkung bei, die ein einzelner Mensch nicht hätte erzeugen können. Der eine rudert, während der andere steuert und ein dritter das Netz auswirft oder den Fisch harpuniert, und der Fischfang hat einen Erfolg, der ohne diese Kooperation unmöglich wäre." (Destutt de Tracy, l.c. p. 78.)

This apportionment to different laborers is called "division of labor," and Marx will devote the whole chapter Fourteen to it.

13.2.d. [Concentration in Time]

An increase in productivity is not the only benefit of co-operative labor. Co-operation also allows a large amount of labor to be concentrated in a short timespan or on a small area. In certain situations, this is very necessary and beneficial even if the productivity per worker is not increased:

In many industries, there are critical periods, determined by the nature of the process, during which certain definite results must be obtained. For instance, if a flock of sheep has to be shorn, or a field of wheat to be cut and harvested, the quantity and quality of the product depends on the work being begun and ended within a certain time. In these cases, the time that ought to be taken by the process is prescribed, just as it is in herring fishing. A single person cannot carve a working-day of more than, say 12 hours, out of the natural day, but 100 men co-operating extend the working-day to 1,200 hours. The shortness of the time allowed for the work is compensated for by the large mass of labor thrown upon the field of production at the decisive moment. The completion of the task within the proper time depends on the simultaneous application of numerous combined working-days; the amount of useful effect depends on the number of laborers; this number, however, is always smaller than the number of isolated laborers required to do the same amount of work in the same period.¹⁶

347:1 In vielen Produktionszweigen gibt es kritische Momente, d.h. durch die Natur des Arbeitsprozesses selbst bestimmte Zeitepochen, während deren bestimmte Arbeitsergebnisse erzielt werden müssen. Soll z.B. eine Herde Schafe geschoren oder eine Morgenanzahl Kornland gemäht und geherbstet werden, so hängt Quantität und Qualität des Produkts davon ab, daß die Operation zu einer gewissen Zeit begonnen und zu einer gewissen Zeit beendet wird. Der Zeitraum, den der Arbeitsprozeß einnehmen darf, ist hier vorgeschrieben, wie etwa beim Heringsfang. Der einzelne kann aus einem Tag nur einen Arbeitstag heraus-schneiden, sage von 12 Stunden, aber die Kooperation von 100 z.B. erweitert einen zwölfstündigen Tag zu einem Arbeitstag von 1200 Stunden. Die Kürze der Arbeitsfrist wird kompensiert durch die Größe der Arbeitsmasse, die im entscheidenden Augenblick auf das Produktionsfeld geworfen wird. Die rechtzeitige Wirkung hängt hier ab von der gleichzeitigen Anwendung vieler kombinierten Arbeitstage, der Umfang des Nutzeffekts von der Arbeiteranzahl, die jedoch stets kleiner bleibt als die Anzahl der Arbeiter, die vereinzelt in demselben Zeitraum denselben Wirkungsraum ausfüllen würden.¹⁶

¹⁶ “The doing of it (agricultural work) at the critical juncture is of so much the greater consequence.” (“An Inquiry into the Connexion between the Present Price,” etc., p. 9.) “In agriculture, there is no more important factor than that of time.” (Liebig: “Über Theorie und Praxis in der Landwirthschaft.” 1856, p. 23.)

¹⁶ „Ihre“ (der Arbeit in der Agrikultur) „Ausführung im entscheidenden Augenblick hat um so größere Wirkung.“ ([J. Arbuthnot,] „An Inquiry into the Connection between the present price etc.“, p. 7.) „In der Agrikultur gibt es keinen wichtigeren Faktor als den Faktor der Zeit.“ (Liebig, „Über Theorie und Praxis in der Landwirthschaft“, 1856, p. 23.)

↓ Destruction of wealth if such co-operation is not possible:

It is owing to the absence of this kind of co-operation that, in the western part of the United States, quantities of corn, and in those parts of East India where English rule has destroyed the old communities, quantities of cotton, are yearly wasted.¹⁷

¹⁷ “The next evil is one which one would scarcely expect to find in a country which exports more labor than any other in the world, with the exception, perhaps, of China and England—the impossibility of procuring a sufficient number of hands to clean the cotton. The consequence of this is that large quantities of the crop are left unpicked, while another portion is gathered from the ground when it has fallen, and is of course discoloured and partially rotted, so that for want of labor at the proper season the cultivator is actually forced to submit to the loss of a large part of that crop for which England is so anxiously looking.” (“Bengal Hurkaru.” Bi-Monthly Overland Summary of News, 22nd July, 1861.)

Es ist der Mangel dieser Kooperation, wodurch im Westen der Vereinigten Staaten eine Masse Korn und in den Teilen Ostindiens, wo englische Herrschaft das alte Gemeinwesen zerstört hat, eine Masse Baumwolle jährlich verwüstet wird.¹⁷

¹⁷ „Das nächste Übel, das man schwerlich in einem Lande zu finden erwartet, welches mehr Arbeit exportiert als irgendein andres der Welt, abgesehen vielleicht von China und England, besteht in der Unmöglichkeit, eine genügende Anzahl von Händen zur Baumwollernte zu beschaffen. Infolgedessen bleiben große Mengen Baumwolle ungepflückt, während ein andrer Teil von der Erde aufgesammelt wird, wenn er abgefallen und selbstverständlich verfärbt und teilweise verfault ist, so daß wegen Arbeitermangels zur richtigen Jahreszeit der Pflanze tatsächlich gezwungen ist, sich mit dem Verlust eines großen Teils jener Baumwollernte abzufinden, auf die England so sehr wartet.“ („Bengal Hurkaru. Bi-Monthly Overland Summary of News“, 22nd July 1861.)

13.2.e. [Spacial Extension and Contraction of Arena]

If we go from the time dimension to the spacial dimension, co-operation can help not only with concentration of labor in space but also with the extension of labor in space. Sometimes, co-operation is beneficial because it prevents the work area from spreading out too much, by arranging for the performance of many different labor processes in quick succession.

On the one hand, co-operation allows of the work being carried on over an extended space; it is consequently imperatively called for in certain undertakings, such as draining, constructing dykes, irrigation works, and the making of canals, roads and railways. On the other hand, while extending the scale of production, it renders possible a relative contraction of the arena. This contraction of arena simultaneous with, and arising from, extension of scale, whereby a number of

348:1 Auf der einen Seite erlaubt die Kooperation, die Raumsphäre der Arbeit auszudehnen, und wird daher für gewisse Arbeitsprozesse schon durch den räumlichen Zusammenhang des Arbeitsgegenstandes erheischt, wie bei Trockenlegung von Land, Eindämmung, Bewässerung, Kanal-, Straßen-, Eisenbahnbauten usw. Andererseits ermöglicht sie, verhältnismäßig zur Stufenleiter der Produktion, räumliche Verengung des Produktionsgebiets. Diese Be-

13. Co-Operation

useless expenses are cut down, is owing to the conglomeration of laborers, to the aggregation of various processes, and to the concentration of the means of production.¹⁸

¹⁸ In the progress of culture "all, and perhaps more than all, the capital and labor which once loosely occupied 500 acres, are now concentrated for the more complete tillage of 100." Although "relatively to the amount of capital and labor employed, space is concentrated, it is an enlarged sphere of production, as compared to the sphere of production formerly occupied or worked upon by one single independent agent of production." (R. Jones: "An Essay on the Distribution of Wealth," part I. On Rent. London, 1831. p. 191.)

schränkung der Raumsphäre der Arbeit bei gleichzeitiger Ausdehnung ihrer Wirkungssphäre, wodurch eine Masse falscher Kosten (*faux frais*) erspart werden, entspringt aus der Konglomeration der Arbeiter, dem Zusammenrücken verschiedener Arbeitsprozesse und der Konzentration der Produktionsmittel.¹⁸

¹⁸ „Beim Fortschritt in der Bodenbebauung wird alles Kapital und alle Arbeit, die früher zerstreut auf 500 acres verwandt wurden, ja vielleicht noch mehr, jetzt auf die gründlichere Bearbeitung von 100 acres konzentriert.“ Obgleich „im Verhältnis zum angewandten Betrage von Kapital und Arbeit der Raum enger geworden ist, stellt er doch eine erweiterte Produktionssphäre dar, im Vergleich zu der Produktionssphäre, die früher von einem einzigen, unabhängigen Produzenten besessen oder bebaut worden war“. (R. Jones, „An Essay on the Distribution of Wealth“, „On Rent“, London 1831, p. 191.)

13.2.f. [Summary: Social Productive Powers of Labor]

The concluding paragraph returns to the theme of social productive powers of co-operative labor broached in . If one compares the *product* of co-operation with the product of individual labor, one sees that co-operation is the source of a new productive force, the productive force of social labor, or the social productive force of labor. This paragraph also contains a summary of all points made so far:

The combined working-day produces, relatively to an equal sum of isolated working-days, a greater quantity of use-values, and, consequently, diminishes the labor-time necessary for the production of a given useful effect. Whether the combined working-day, in a given case, acquires this increased productive power, because it heightens the mechanical force of labor, or extends its sphere of action over a greater space, or contracts the field of production relatively to the scale of production, or at the critical moment sets large masses of labor to work, or excites emulation between individuals and raises their animal spirits, or impresses on the similar operations carried on by a number of men the stamp of continuity and many-sidedness, or performs simultaneously different operations, or economises the means of production by use in common,

348:2/o Verglichen mit einer gleich großen Summe vereinzelter individueller Arbeitstage, produziert der kombinierte Arbeitstag größere Massen von Gebrauchswert und vermindert daher die zur Produktion eines bestimmten Nutzeffekts nötige Arbeitszeit. Ob er im gegebenen Fall diese gesteigerte Produktivkraft erhält, weil er die mechanische Kraftpotenz der Arbeit erhöht oder ihre räumliche Wirkungssphäre ausdehnt oder das räumliche Produktionsfeld im Verhältnis zur Stufenleiter der Produktion verengt oder im kritischen Moment viel Arbeit in wenig Zeit flüssig macht oder den Wetteifer der einzelnen erregt und ihre Lebensgeister spannt oder den gleichartigen Verrichtungen vieler den Stempel der Continuität und Vielseitigkeit aufdrückt, oder verschiedene Operationen gleichzeitig verrichtet oder die Produktionsmittel durch ih-

13.3. [The Capitalist Character of Co-operation]

or lends to individual labor the character of average social labor—whichever of these be the cause of the increase, the special productive power of the combined working-day is, under all circumstances, a social productive power of labor, or a productive power of social labor. This power is due to co-operation itself.

ren gemeinschaftlichen Gebrauch ökonomisiert oder der individuellen Arbeit den Charakter gesellschaftlicher Durchschnittsarbeit verleiht, unter allen Umständen ist die spezifische Produktivkraft des kombinierten Arbeitstags gesellschaftliche Produktivkraft der Arbeit oder Produktivkraft gesellschaftlicher Arbeit. Sie entspringt aus der Kooperation selbst.

↓ The effect of this co-operation on the worker allows humans to be what they really are. In Hegelian terms, the particularity of the individual laborer is subsumed into the universality of the work force, and by extension, of the human race itself.

When the laborer co-operates systematically with others, he strips off the fetters of his individuality, and develops the capabilities of his species.¹⁹

Im planmäßigen Zusammenwirken mit andern streift der Arbeiter seine individuellen Schranken ab und entwickelt sein Gattungsvermögen.¹⁹

¹⁹ “La forza di ciascuno uomo è minima, ma la riunione delle minime forze forma una forza totale maggiore anche della somma delle forze medesime fino a che le forze per essere riunite possono diminuire il tempo ed accrescere lo spazio della loro azione.” (G. R. Carli, Note to P. Verri, I.c., t. xv., p. 196.)

¹⁹ „Die Kraft des einzelnen Menschen ist ganz gering, aber die Vereinigung der ganz geringen Kräfte ergibt eine Gesamtkraft, die größer ist als die Summe aller Teilkräfte, so daß schon die bloße Vereinigung der Kräfte die Zeit verringern und den Raum ihrer Wirkung vergrößern kann.“ (G. R. Carli, Note zu P. Verri, I.c., t. XV, p. 196.)

13.3. [The Capitalist Character of Co-operation]

Recall how co-operation was introduced: in order to make enough surplus-value, the capitalist had to hire a certain minimum number of laborers. Out of this simultaneous hiring of many workers grew their co-operation. Co-operation was therefore a by-product of the necessity to add the surplus-values of many individual laborers together so that the capitalist could be a full-time capitalist and therefore capital could become an independent force.

Once this co-operation was in place, it proved to be a very powerful lever for increased efficiency of the labor-process. The present section shows how this qualitative change in the production process acts back on and deepens the capitalist relations of production: the minimum size of capital increases, the command of the capitalist over the laborer gains more authority.

While Marx showed earlier that capitalist relations of production lead to co-operation; now he focuses on the reverse causality, the effects of co-operation on the capitalist relations of production. Marx’s starting point is therefore co-operation in capitalism.

↓ Wage-laborers can co-operate only if employed by the same capitalist:

As a general rule, laborers cannot co-operate without being brought together: their assemblage in one place is a necessary condition of their co-operation. Hence wage-laborers cannot co-operate, unless they are employed simultaneously by the same capital, the same capitalist, and un-

349:1 Wenn Arbeiter überhaupt nicht unmittelbar zusammenwirken können, ohne zusammen zu sein, ihre Konglomeration auf bestimmtem Raum daher Bedingung ihrer Kooperation ist, können Lohnarbeiter nicht kooperieren, ohne daß dasselbe Kapital, derselbe Kapitalist sie gleichzeitig anwendet,

13. Co-Operation

less therefore their labor-powers are bought simultaneously by him.

also ihre Arbeitskräfte gleichzeitig kauft.

What conditions must the capitalist relations satisfy so that co-operation is possible, and how does co-operation modify these relations?

13.3.a. [Minimum Size of Capital Determined by Technology]

The only *conditions* discussed by Marx derive from the necessity that the co-operating laborers must be employed by the same capitalist. First of all, this capitalist must have enough variable capital to hire many workers.

The total value of these labor-powers, or the amount of the wages of these laborers for a day, or a week, as the case may be, must be ready in the pocket of the capitalist, before the workmen are assembled for the process of production. The payment of 300 workmen at once, though only for one day, requires a greater outlay of capital, than does the payment of a smaller number of men, week by week, during a whole year. Hence the number of the laborers that co-operate, or the scale of co-operation, depends, in the first instance, on the amount of capital that the individual capitalist can spare for the purchase of labor-power; in other words, on the extent to which a single capitalist has command over the means of subsistence of a number of laborers.

Der Gesamtwert dieser Arbeitskräfte oder die Lohnsumme der Arbeiter für den Tag, die Woche usw., muß daher in der Tasche des Kapitalisten vereint sein, bevor die Arbeitskräfte selbst im Produktionsprozeß vereint werden. Zahlung von 300 Arbeitern auf einmal, auch nur für einen Tag, bedingt mehr Kapitalauslage als Zahlung weniger Arbeiter Woche für Woche, während des ganzen Jahrs. Die Anzahl der kooperierenden Arbeiter, oder die Stufenleiter der Kooperation, hängt also zunächst ab von der Größe des Kapitals, das der einzelne Kapitalist im Ankauf von Arbeitskraft auslegen kann, d.h. von dem Umfang, worin je ein Kapitalist über die Lebensmittel vieler Arbeiter verfügt.

↓ A second implication of the need to employ many workers is that the capitalists must have enough constant capital, although the increase is sub-proportional.

And as with the variable, so it is with the constant capital. For example, the outlay on raw material is 30 times as great, for the capitalist who employs 300 men, as it is for each of the 30 capitalists who employ 10 men. The value and quantity of the instruments of labor used in common do not, it is true, increase at the same rate as the number of workmen, but they do increase very considerably. Hence, concentration of large masses of the means of production in the hands of individual capitalists, is a material condition for the co-operation of wage-laborers, and the extent of the co-operation or the scale of production, depends on the extent of this concentration.

349:2 Und wie mit dem variablen, verhält es sich mit dem konstanten Kapital. Die Auslage für Rohmaterial z.B. ist 30mal größer für den einen Kapitalisten, der 300, als für jeden der 30 Kapitalisten, der je 10 Arbeiter beschäftigt. Wertumfang und Stoffmasse der gemeinsam benutzten Arbeitsmittel wachsen zwar nicht in demselben Grad wie die beschäftigte Arbeiteranzahl, aber sie wachsen beträchtlich. Konzentration größerer Massen von Produktionsmitteln in der Hand einzelner Kapitalisten ist also materielle Bedingung für die Kooperation von Lohnarbeitern, und der Umfang der Kooperation, oder die Stufenleiter der Produktion, hängt ab vom Umfang dieser Konzentration.

13.3. [The Capitalist Character of Co-operation]

↑ This last sentences echoes a parallel remark in the last sentence of the preceding paragraph regarding the variable capital only, and it will itself be echoed in the next chapter, about division of labor, in the last sentence of .

Question 956 *Is the degree of co-operation even today determined, limited, by the centralization of capital, or has the centralization overtaken the needs for co-operation?*

↓ In other words, limits of the capitalist relations of production which had been formal limits, i.e., which had arisen from the relations of production themselves, have turned now into technological conditions of production. One might say that “soft” limits have turned into “hard” limits.

We saw in a former chapter, that a certain minimum amount of capital was necessary, in order that the number of laborers simultaneously employed, and, consequently, the amount of surplus-value produced, might suffice to liberate the employer himself from manual labor, to convert him from a small master into a capitalist, and thus formally to establish capitalist production. We now see that a certain minimum amount is a necessary condition for the conversion of numerous isolated and independent processes into one combined social process.

349:3/o Ursprünglich erschien eine gewisse Minimalgröße des individuellen Kapitals notwendig, damit die Anzahl der gleichzeitig ausgebeuteten Arbeiter, daher die Masse des produzierten Mehrwerts hinreiche, den Arbeitsanwender selbst von der Handarbeit zu entbinden, aus einem Kleinmeister einen Kapitalisten zu machen und so das Kapitalverhältnis formell herzustellen. Sie erscheint jetzt als materielle Bedingung für die Verwandlung vieler zersplitterter und voneinander unabhängiger individueller Arbeitsprozesse in einen kombinierten gesellschaftlichen Arbeitsprozeß.

The “former chapter” is apparently the same reference alluded to in 322:1, namely, .

13.3.b. [Capitalist becomes Supervisor in Co-Operation]

A change in the supervisory role of the capitalist is a second effect of co-operation back on capitalist relations. The supervision of the labor of the wage laborer by the capitalist was at first *only* a formal consequence of the relation of production: it was a consequence of the capitalist’s ownership of the labor process. See Resultate for an elaboration of the tasks of the capitalist.

We also saw that at first, the subjection of labor to capital was only a formal result of the fact, that the laborer, instead of working for himself, works for and consequently under the capitalist.

350:1 Ebenso erschien ursprünglich das Kommando des Kapitals über die Arbeit nur als formelle Folge davon, daß der Arbeiter statt für sich, für den Kapitalisten und daher unter dem Kapitalisten arbeitet.

With the development of co-operation, some sort of organization and supervision becomes necessary for the labor process itself, not because of the capitalist nature of production but simply because the labor process is co-operative.

Since the capitalist is the one who brings the workers together, also this second kind of supervision falls to him. (This step is not given explicitly but mentioned as a side remark in). Since the supervision of co-operative labor is legitimate and necessary, also the capitalist’s supervision seems legitimate and necessary: his orders are as necessary as the general’s orders on the battlefield.

By the co-operation of numerous wage-laborers, the sway of capital develops into

Mit der Kooperation vieler Lohnarbeiter entwickelt sich das Kommando des Kapi-

13. Co-Operation

a requisite for carrying on the labor-process itself, into a real requisite of production. That a capitalist should command on the field of production, is now as indispensable as that a general should command on the field of battle.

⇓ Now Marx begins a major digression in which he distinguishes those elements of supervision which flow from the nature of co-operative labor from those which flow from capitalism. First some remarks about the co-operative labor process itself:

All combined labor on a large scale requires, more or less, a directing authority, in order to secure the harmonious working of the individual activities, and to perform the general functions that have their origin in the action of the combined organism, as distinguished from the action of its separate organs. A single violin player is his own conductor; an orchestra requires a separate one.

↑ Modern Jazz music shows that an orchestra does not always need a director: perhaps Marx was too timid in his assumptions how co-operation can be structured.

The work of directing, superintending, and adjusting becomes one of the functions of capital, from the moment that the labor under the control of capital, becomes co-operative. Once a function of capital, it acquires special characteristics.

The last sentence ↑ introduces the main topic of this digression, namely, specific characteristics of the supervision by the capitalist:

The driving motive and determining purpose of capitalist production is to extract the greatest possible amount of surplus-value,²⁰ and consequently to exploit labor-power to the greatest possible extent. As the number of the co-operating laborers increases, so too does their resistance to the domination of capital, and with it, the necessity for capital to overcome this resistance by counterpressure. The control exercised by the capitalist is not only a particular function springing from the nature of the social labor-process which falls to the capitalist, but it is, at the same time, a function of the exploitation of a social labor-process, and is consequently rooted in the unavoidable antagonism between the exploiter and the tar-

tals zum Erheischnis für Ausführung des Arbeitsprozesses selbst, zu einer wirklichen Produktionsbedingung. Der Befehl des Kapitalisten auf dem Produktionsfeld wird jetzt so unentbehrlich wie der Befehl des Generals auf dem Schlachtfeld.

350:2 Alle unmittelbar gesellschaftliche oder gemeinschaftliche Arbeit auf größtem Maßstab bedarf mehr oder minder einer Direktion, welche die Harmonie der individuellen Tätigkeiten vermittelt und die allgemeinen Funktionen vollzieht, die aus der Bewegung des produktiven Gesamtkörpers im Unterschied von der Bewegung seiner selbständigen Organe entspringen. Ein einzelner Violinspieler dirigiert sich selbst, ein Orchester bedarf des Musikdirektors.

Diese Funktion der Leitung, Überwachung und Vermittlung, wird zur Funktion des Kapitals, sobald die ihm untergeordnete Arbeit kooperativ wird. Als spezifische Funktion des Kapitals erhält die Funktion der Leitung spezifische Charaktermale.

350:3/o Zunächst ist das treibende Motiv und der bestimmende Zweck des kapitalistischen Produktionsprozesses möglichst große Selbstverwertung des Kapitals,²⁰ d.h. möglichst große Produktion von Mehrwert, also möglichst große Ausbeutung der Arbeitskraft durch den Kapitalisten. Mit der Masse der gleichzeitig beschäftigten Arbeiter wächst ihr Widerstand und damit notwendig der Druck des Kapitals zur Bewältigung dieses Widerstands. Die Leitung des Kapitalisten ist nicht nur eine aus der Natur des gesellschaftlichen Arbeitsprozesses entspringende und ihm angehörige besondere Funktion, sie ist zugleich Funktion der Ausbeutung eines gesellschaftlichen Arbeitsprozesses und daher bedingt durch den

13.3. [The Capitalist Character of Co-operation]

get of his exploitation.

²⁰ “Profits . . . is the sole end of trade.” (J. Vanderlint, l.c., p. 11.)

unvermeidlichen Antagonismus zwischen dem Ausbeuter und dem Rohmaterial seiner Ausbeutung.

²⁰ „Profite . . . sind der einzige Zweck des Geschäfts.“ (J. Vanderlint, l.c. p. 11.)

Question 957 *Explain the twofold character of the control of the capitalist over the worker. Where are the foremen in this relationship?*

⇓ The resistance of the workers to exploitation and overwork is one reason why more supervision is necessary. But the need for supervision grows also for other reasons. Since the means of production confront the laborer as alien property, they need protection from the worker’s wrath.

Again, in proportion to the increasing mass of the means of production, now no longer the property of the laborer, but of the capitalist, the necessity increases for some effective control over the proper application of those means.²¹

²¹ That Philistine paper, the *Spectator*, states that after the introduction of a sort of partnership between capitalist and workmen in the “Wire-work Company of Manchester,” “the first result was a sudden decrease in waste, the men not seeing why they should waste their own property any more than any other master’s, and waste is, perhaps, next to bad debts, the greatest source of manufacturing loss.” The same paper finds that the main defect in the Rochdale co-operative experiments is this: “They showed that associations of workmen could manage shops, mills, and almost all forms of industry with success, and they immediately improved the condition of the men; but then they did not leave a clear place for masters.” Quelle horreur!

Ebenso wächst mit dem Umfang der Produktionsmittel, die dem Lohnarbeiter als fremdes Eigentum gegenüberstehn, die Notwendigkeit der Kontrolle über deren sachgemäße Verwendung.²¹

²¹ Ein englisches Philisterblatt, der „Spectator“ vom 26. Mai 1866, berichtet, daß nach Einführung einer Art von Kompagniegeschäft zwischen Kapitalist und Arbeitern in der „wire-work company of Manchester“: „das erste Ergebnis eine plötzliche Abnahme der Materialverschwendung war, da die Arbeiter nicht einsahen, weshalb sie mit ihrem Eigentum verschwenderischer umgehen sollten als mit dem der Kapitalisten, und Materialverschwendung ist neben schlechten Außenständen vielleicht die größte Verlustquelle in den Fabriken“. Das selbe Blatt entdeckt als Grundmangel der Rochdale co-operative experiments: „They showed that associations of workmen could manage shops, mills, and almost all forms of industry with success, and they immensely improved the condition of the men, but then they did not leave a clear place for masters.“ („Sie bewiesen, daß Arbeiterassoziationen Boutiquen, Fabriken und beinahe alle Formen der Industrie mit Erfolg handhaben können, und sie verbesserten außerordentlich die Lage der Leute selbst, aber! aber, dann ließen sie keinen sichtbaren Platz für Kapitalisten offen.“ Quelle horreur!)

Not only the means of production are alien to the workers, also their own connexion is imposed on them. The direction of their co-operation is therefore not participatory but despotic:

Moreover, the co-operation of wage-laborers is entirely brought about by the capital that employs them. Their union into one single

Die Kooperation der Lohnarbeiter ist ferner bloße Wirkung des Kapitals, das sie gleichzeitig anwendet. Der Zusammenhang ihrer

13. Co-Operation

productive body and the establishment of a connexion between their individual functions, are matters foreign and external to them, are not their own act, but the act of the capital that brings and keeps them together. Hence the connexion existing between their various labors confronts them, notionally, in the shape of a preconceived plan of the capitalist, and practically in the shape of the authority of the same capitalist, in the shape of the powerful will of another, who subjects their activity to his aims.

↑ This is the most profound critique of the capitalist's leadership: it does not organically flow from the labor process itself but is imposed by an alien structure. ↓ The next paragraph juxtaposes form and content of this despotism:

While the direction by the capitalist is therefore in substance two-fold—by reason of the two-fold nature of the process of production itself, which, on the one hand, is a social process for producing use-values, on the other, a process for creating surplus-value—the direction by the capitalist is, in form, despotic.

↑ in chapter Fourteen talks about the dialectics between anarchy of the market and despotism in the production process.

↓ At this point, Marx briefly touches on the developmental forms of this despotism with the development of large-scale capitalist co-operation.

As co-operation extends its scale, this despotism takes its own peculiar forms. Just as at first the capitalist is relieved from actual labor so soon as his capital has reached that minimum amount with which capitalist production, as such, begins, so now, he hands over the work of direct and constant supervision of the individual workmen, and groups of workmen, to a special kind of wage-laborer. An industrial army of workmen, under the command of a capitalist, requires, like a real army, officers (managers), and sergeants (foremen, overlookers), who, while the work is being done, command in the name of the capitalist. The work of supervision becomes their established and exclusive function.

Funktionen und ihre Einheit als produktiver Gesamtkörper liegen außer ihnen, im Kapital, das sie zusammenbringt und zusammenhält. Der Zusammenhang ihrer Arbeiten tritt ihnen daher ideell als Plan, praktisch als Autorität des Kapitalisten gegenüber, als Macht eines fremden Willens, der ihr Tun seinem Zweck unterwirft.

351:1/o Wenn daher die kapitalistische Leitung dem Inhalt nach zwieschlächtig ist, wegen der Zwieschlächtigkeit des zu leitenden Produktionsprozesses selbst, welcher einerseits gesellschaftlicher Arbeitsprozeß zur Herstellung eines Produkts, andererseits Verwertungsprozeß des Kapitals, so ist sie der Form nach despotisch.

Mit der Entwicklung der Kooperation auf größtem Maßstab entwickelt dieser Despotismus seine eigentümlichen Formen. Wie der Kapitalist zunächst entbunden wird von der Handarbeit, sobald sein Kapital jene Minimalgröße erreicht hat, womit die eigentlich kapitalistische Produktion erst beginnt, so tritt er jetzt die Funktion unmittelbarer und fortwährender Beaufsichtigung der einzelnen Arbeiter und Arbeitergruppen selbst wieder ab an eine besondere Sorte von Lohnarbeitern. Wie eine Armee militärischer, bedarf eine unter dem Kommando desselben Kapitals zusammenwirkende Arbeitermasse industrieller Oberoffiziere (Dirigenten, managers) und Unteroffiziere (Arbeitsaufseher, foremen, overlookers, contre-mâtres), die während des Arbeitsprozesses im Namen des Kapitals kommandieren. Die Arbeit der Oberaufsicht befestigt sich zu ihrer ausschließlichen Funktion.

13.3. [The Capitalist Character of Co-operation]

Next, Marx discusses the connection between the two sides of this supervision, namely, (1) coming from the co-operative nature of the labor process itself, and (2) coming from exploitation.

When comparing the mode of production of isolated peasants and artisans with production by slave-labor, the political economist counts this labor of superintendence among the *faux frais* of production.^{21a} But, when considering the capitalist mode of production, he, on the contrary, treats the work of control made necessary by the co-operative character of the labor-process as identical with the different work of control, necessitated by the capitalist character of that process and the antagonism of interests between capitalist and laborer.²²

Bei Vergleichung der Produktionsweise unabhängiger Bauern oder selbständiger Handwerker mit der auf Sklaverei beruhenden Plantagenwirtschaft zählt der politische Ökonom diese Arbeit der Oberaufsicht zu den *faux frais de production*.^{21a} Bei Betrachtung der kapitalistischen Produktionsweise identifiziert er dagegen die Funktion der Leitung, soweit sie aus der Natur des gemeinschaftlichen Arbeitsprozesses entspringt, mit derselben Funktion, soweit sie durch den kapitalistischen und daher antagonistischen Charakter dieses Prozesses bedingt wird.²²

↑ In slavery, the political economists considered it only as *faux frais* of production (only point 2), while in capitalism, all supervision is attributed to the co-operative character of the labor process (only point 1). Side (1) falls to the capitalist because he has from the beginning side (2).

^{21a} Professor Cairnes, after stating that the superintendence of labor is a leading feature of production by slaves in the Southern States of North America, continues: "The peasant proprietor (of the North), appropriating the whole produce of his toil, needs no other stimulus to exertion. Superintendence is here completely dispensed with." (Cairnes, l.c., pp. 48, 49.)

^{21a} Nachdem Professor Cairnes die „superintendence of labour“ als einen Hauptcharakter der Sklavenproduktion in den südlichen Staaten von Nordamerika dargestellt hat, fährt er fort: „Da der bäuerliche Eigentümer“ (des Nordens) „das ganze Produkt seines Bodens für sich behält, braucht er keine besonderen Ansporn zur Anstrengung. Überwachung wird hier völlig unnötig.“ (Cairnes, l.c. p. 48, 49.)

²² Sir James Steuart, a writer altogether remarkable for his quick eye for the characteristic social distinctions between different modes of production, says: "Why do large undertakings in the manufacturing way ruin private industry, but by coming nearer to the simplicity of slaves?" ("Prin. of Pol. Econ.," London, 1767, v. I., pp. 167, 168.)

²² Sir James Steuart, überhaupt ausgezeichnet durch offnes Auge für die charakteristisch-gesellschaftlichen Unterschiede verschiedener Produktionsweisen, bemerkt: „Warum vernichten große Manufakturunternehmen das Hausgewerbe, wenn nicht dadurch, daß sie der Einfachheit der Sklavenarbeit näher kommen?“ („Princ. of Pol. Econ.“, London 1767, v. I, p. 167, 168.)

It is not because he is a leader of industry that a man is a capitalist; on the contrary, he is a leader of industry because he is a capitalist. The leadership of industry is an attribute of capital, just as in feudal times the functions of general and judge were attributes of landed property.^{22a}

Der Kapitalist ist nicht Kapitalist, weil er industrieller Leiter ist, sondern er wird industrieller Befehlshaber, weil er Kapitalist ist. Der Oberbefehl in der Industrie wird Attribut des Kapitals, wie zur Feudalzeit der Oberbefehl in Krieg und Gericht Attribut des Grundeigentums war.^{22a}

^{22a} Auguste Comte and his school might therefore have shown that feudal lords are an eternal necessity in the same way that they have

^{22a} Auguste Comte und seine Schule hätten daher in derselben Art die ewige Notwendigkeit von Feudalherrn beweisen können, wie sie dies

13. Co-Operation

done in the case of the lords of capital.

für die Kapitalherrschaft getan.

13.3.c. [The Social Productive Powers of Labor Belong to Capital]

The central relation of capitalism is the sale and consumption of labor-power, which creates surplus-value. This relation is modified by co-operation as well. The laborer always sells his or her labor as an individual seller. Since the capitalist is the one who combines the laborers, the capitalist receives the social productive forces of the co-operation of many laborers at a zero price. They become productive forces of capital.

The laborer is the owner of his labor-power until he has done bargaining for its sale with the capitalist; and he can sell no more than what he has, i.e., his individual, isolated labor-power. This state of things is in no way altered by the fact that the capitalist, instead of buying the labor-power of one man, buys that of 100, and enters into separate contracts with 100 unconnected men instead of with one. He is at liberty to set the 100 men to work, without letting them co-operate. He pays them the value of 100 independent labor-powers, but he does not pay for the combined labor-power of the hundred. Being independent of each other, the laborers are isolated persons, who enter into relations with the capitalist, but not with one another. This co-operation begins only with the labor-process, but they have then ceased to belong to themselves. On entering that process, they become incorporated with capital. As co-operators, as members of a working organism, they are but special modes of existence of capital.

352:1/o Eigentümer seiner Arbeitskraft ist der Arbeiter, solange er als Verkäufer derselben mit dem Kapitalist handelt, und er kann nur verkaufen, was er besitzt, seine individuelle, vereinzelte Arbeitskraft. Dies Verhältnis wird in keiner Weise dadurch verändert, daß der Kapitalist 100 Arbeitskräfte statt einer kauft oder mit 100 voneinander unabhängigen Arbeitern Kontrakte schließt statt mit einem einzelnen. Er kann die 100 Arbeiter anwenden, ohne sie kooperieren zu lassen. Der Kapitalist zahlt daher den Wert der 100 selbständigen Arbeitskräfte, aber er zahlt nicht die kombinierte Arbeitskraft der Hundert. Als unabhängige Personen sind die Arbeiter Vereinzelte, die in ein Verhältnis zu demselben Kapital, aber nicht zueinander treten. Ihre Kooperation beginnt erst im Arbeitsprozeß, aber im Arbeitsprozeß haben sie bereits aufgehört, sich selbst zu gehören. Mit dem Eintritt in denselben sind sie dem Kapital einverleibt. Als Kooperierende, als Glieder eines werktätigen Organismus, sind sie selbst nur eine besondere Existenzweise des Kapitals.

↑ This is a form of alienation. ↓ The social productive powers of labor are productive power of capital which it seems to possess *by nature*.

Hence, the productive power which the laborer develops when working in co-operation, is the productive power of capital. This social productive power of labor develops itself without cost to capital, whenever the workmen are placed under the appropriate conditions, and it is capital that places them under such conditions. Because this power costs capital nothing, and because, on the other hand, the laborer himself does not develop it before his labor belongs to capital, it appears as a power with which capital

Die Produktivkraft, die der Arbeiter als gesellschaftlicher Arbeiter entwickelt, ist daher Produktivkraft des Kapitals. Die gesellschaftliche Produktivkraft der Arbeit entwickelt sich unentgeltlich, sobald die Arbeiter unter bestimmte Bedingungen gestellt sind, und das Kapital stellt sie unter diese Bedingungen. Weil die gesellschaftliche Produktivkraft der Arbeit dem Kapital nichts kostet, weil sie andererseits nicht von dem Arbeiter entwickelt wird, bevor seine Arbeit selbst dem Kapital gehört, erscheint

13.4. [Historical Overview of Simple Co-Operation]

is endowed by nature, as capital's inherent productive power.

sie als Produktivkraft, die das Kapital von Natur besitzt, als seine immanente Produktivkraft.

The sentence “the social productive power of labor ... appears ... as capital's inherent productive power” illustrates well how the word “appears as” is to be understood. The laborers are combined under the ownership and command of capital, therefore the benefits of the social productive powers of the workers fall to the capitalist. The workers do not have a claim on these productive powers because they have, one by one, sold their labor-power to capital. The word “appears” not only describes what things look like, but it also describes the social relations—which are such as if the productive powers came from capital rather than the workers. (Is this again the look at it from the form side?)

Question 958 *What is the “productive power of capital”? Does it come from capital or from the worker?*

This paragraph is parallel to the earlier : Capital profits from the difference between individual labor and co-operative labor. In modern economics, the benefits from the co-operative labor process are called “economies of scale.” This terminology makes it sound as if these benefits came from capital, not from labor.

Question 959 *What effects does co-operation have on the working class?*

Question 960 *Is the subject of chapter Thirteen, on Co-operation, simply the economies of scale, without Marx ever using this term, or is something else going on?*

13.4. [Historical Overview of Simple Co-Operation]

The historical overview in the rest of the chapter culminates in a characterization of the historical role of capitalism. The first two paragraphs discuss the role of co-operation in the different relations of production.

The colossal effects of simple co-operation are to be seen in the gigantic structures of the ancient Asiatics, Egyptians, Etruscans, etc.

353:1–2 Kolossal zeigt sich die Wirkung der einfachen Kooperation in den Riesenwerken der alten Asiaten, Ägypter, Etrusker usw.

“It has happened in times past that these Oriental States, after supplying the expenses of their civil and military establishments, have found themselves in possession of a surplus which they could apply to works of magnificence or utility and in the construction of these their command over the hands and arms of almost the entire non-agricultural population has produced stupendous monuments which still indicate their power. The teeming valley of the Nile ... produced food for a swarming non-agricultural population, and this food, belonging to the monarch and the priesthood, afforded the means of erecting the mighty monuments which filled the land ... In moving the

„Es geschah in vergangenen Zeiten, daß diese asiatischen Staaten nach Bestreitung ihrer Zivil- und Militärausgaben sich im Besitz eines Überschusses von Lebensmitteln befanden, die sie für Werke der Pracht und des Nutzens verausgaben konnten. Ihr Kommando über die Hände und Arme fast der ganzen nicht ackerbauenden Bevölkerung und die ausschließliche Verfügung des Monarchen und der Priesterschaft über jenen Überschuß boten ihnen die Mittel zur Errichtung jener mächtigen Monumente, womit sie das Land erfüllten ... In der Bewegung der kolossalen Statuen und der enormen Massen, deren Transport Staunen erregt, wurde fast nur menschli-

13. Co-Operation

colossal statues and vast masses of which the transport creates wonder, human labor almost alone, was prodigally used ... The number of the laborers and the concentration of their efforts sufficed. We see mighty coral reefs rising from the depths of the ocean into islands and firm land, yet each individual depositor is puny, weak, and contemptible. The non-agricultural laborers of an Asiatic monarchy have little but their individual bodily exertions to bring to the task, but their number is their strength, and the power of directing these masses gave rise to the palaces and temples, the pyramids, and the armies of gigantic statues of which the remains astonish and perplex us. It is that confinement of the revenues which feed them, to one or a few hands, which makes such undertakings possible.”²³

²³ R. Jones, “Textbook of Lectures,” etc., pp. 77, 78. The ancient Assyrian, Egyptian, and other collections in London, and in other European capitals, make us eye-witnesses of the modes of carrying on that co-operative labor.

The examples of the Egyptian pyramids, etc., show two things. (1) How powerful simple co-operation is (not machinery or division of labor), as long as it combines sufficiently many people in the same labor process. (2) The social prerequisite for this co-operation was the concentration of enough money in one or few hands to pay for the livelihood of the laborers.

This power of Asiatic and Egyptian kings, Etruscan theocrats, etc., has in modern society been transferred to the capitalist, whether he be an isolated, or as in joint-stock companies, a collective capitalist.

che Arbeit verschwenderisch angewandt. Die Zahl der Arbeiter und die Konzentration ihrer Mühen genügte. So sahen wir mächtige Korallenriffe aus den Tiefen des Ozeans zu Inseln anschwellen und festes Land bilden, obgleich jeder individuelle Ablagerer (depositary) winzig, schwach und verächtlich ist. Die nicht ackerbauenden Arbeiter einer asiatischen Monarchie haben außer ihren individuellen körperlichen Bemühungen wenig zum Werk zu bringen, aber ihre Zahl ist ihre Kraft, und die Macht der Direktion über diese Massen gab jenen Riesenwerken den Ursprung. Es war die Konzentration der Revenuen, wovon die Arbeiter leben, in einer Hand oder wenigen Händen, welcher solche Unternehmungen möglich machte.“²³

²³ R. Jones, „Text-book of Lectures etc.“, p. 77, 78. Die altassyrischen, ägyptischen usw. Sammlungen in London und andren europäischen Hauptstädten machen uns zu Augenzeugen jener kooperativen Arbeitsprozesse.

353:3 Diese Macht asiatischer und ägyptischer Könige oder etruskischer Theokraten usw. ist in der modernen Gesellschaft auf den Kapitalisten übergegangen, ob er nun als vereinzelter Kapitalist auftritt, oder, wie bei Aktiengesellschaften, als kombinierter Kapitalist.

↑ The concentration of enough money in one or few hands to pay for the livelihood of the laborers is still a condition for today’s capitalist co-operation: these income streams are combined in the hands of the capitalists.

The next paragraph points out some important *differences* between these early forms of co-operation and capitalistic co-operation: Those were based on common ownership of production, this on private ownership. Those were based on the fact that the individual had not yet torn himself off from the navel-string of the tribe or community; this is based on individualization. Those based on relation of domination and servitude, often slavery; this on the laborer formally freely selling his labor-power.

Co-operation, such as we find it at the dawn of human development, among races who live by the chase,^{23a} or, say, in the agriculture of Indian communities, is based, on the one hand, on ownership in common of the means of production, and on the other

353:4/o Die Kooperation im Arbeitsprozeß, wie wir sie in den Kulturanfängen der Menschheit, bei Jägervölkern^{23a} oder etwa in der Agrikultur indischer Gemeinwesen vorherrschend finden, beruht einerseits auf dem Gemeineigentum an den Produk-

13.4. [Historical Overview of Simple Co-Operation]

hand, on the fact, that in those cases, each individual has no more torn himself off from the navel-string of his tribe or community, than each bee has freed itself from connexion with the hive. Such co-operation is distinguished from capitalistic co-operation by both of the above characteristics. The sporadic application of co-operation on a large scale in ancient times, in the middle ages, and in modern colonies, reposes on relations of dominion and servitude, principally on slavery. The capitalistic form, on the contrary, pre-supposes from first to last, the free wage-laborer, who sells his labor-power to capital.

^{23a} Linguet, in his “Théorie des Lois Civiles,” is probably right, when he declares hunting to be the first form of co-operation, and man-hunting (war) one of the earliest forms of hunting.

tionsbedingungen, andererseits darauf, daß das einzelne Individuum sich von der Nabelschnur des Stammes oder des Gemeinwesens noch ebensowenig losgerissen hat wie das Bienenindividuum vom Bienenstock. Beides unterscheidet sie von der kapitalistischen Kooperation. Die sporadische Anwendung der Kooperation auf großem Maßstab in der antiken Welt, dem Mittelalter und den modernen Kolonien beruht auf unmittelbaren Herrschafts- und Knechtschaftsverhältnissen, zumeist auf der Sklaverei. Die kapitalistische Form setzt dagegen von vornherein den freien Lohnarbeiter voraus, der seine Arbeitskraft dem Kapital verkauft.

^{23a} Linguet in seiner „Théorie des Lois civiles“ hat vielleicht nicht unrecht, wenn er die Jagd für die erste Form der Kooperation und Menschenjagd (Krieg) für eine der ersten Formen der Jagd erklärt.

Question 961 *Is there a connection between war and co-operation?*

⇓ For this historical overview it is also important to note that capitalist co-operation is not the culmination of a historical succession of large scale co-operation. Rather, capitalism arose from a mode of production with little direct co-operation between different producers: Historically, however, this form is developed in opposition to peasant agriculture and to the carrying on of independent handicrafts whether in guilds or not.²⁴ From the standpoint of these, capitalist co-operation does not appear as a particular historical form of co-operation, but co-operation itself as a historical form peculiar to, and specifically distinguishing, the capitalist process of production.

²⁴ Peasant agriculture on a small scale, and the carrying on of independent handicrafts, which together form the basis of the feudal mode of production, and after the dissolution of that system, continue side by side with the capitalist mode, also form the economic foundation of the classical communities at their best, after the primitive form of ownership of land in common had disappeared, and before slavery had seized on production in earnest.

Historisch jedoch entwickelt sie sich im Gegensatz zur Bauernwirtschaft und zum unabhängigen Handwerksbetrieb, ob dieser zünftige Form besitze oder nicht.²⁴ Ihnen gegenüber erscheint die kapitalistische Kooperation nicht als eine besondere historische Form der Kooperation, sondern die Kooperation selbst als eine dem kapitalistischen Produktionsprozeß eigentümliche und ihn spezifisch unterscheidende historische Form.

²⁴ Die kleine Bauernwirtschaft und der unabhängige Handwerksbetrieb, die beide teils die Basis der feudalen Produktionsweise bilden, teils nach deren Auflösung neben dem kapitalistischen Betrieb erscheinen, bilden zugleich die ökonomische Grundlage der klassischen Gemeinwesen zu ihrer besten Zeit, nachdem sich das ursprünglich orientalische Gemeineigentum aufgelöst und bevor sich die Sklaverei der Produktion ernsthaft bemächtigt hat.

The next paragraph places *capitalist* co-operation in historical perspective. Compare also 619:1/o in the accumulation chapter.

13. Co-Operation

The highest pre-capitalistic mode of production was the so-called petty production (Kleinbetrieb). This mode of production, in which the *individualized* productive forces find their ultimate development, is the necessary condition for the development of the free individuality of the producers themselves. The relation of production which fits best to this mode of production is the private ownership of the means of production by the producers themselves. Such private ownership does not allow for direct co-operation of several producers in the same labor process (exception military). This does not mean that petty production is not co-operative. Any social production is co-operative in some form. In petty production this co-operation does not have the form that the producers work side by side together in the same labor process, but the social production process is divided into many individual labor processes in which only one person produces one kind of commodity.

In earlier economic formations, the social production process was directly co-operative. However this co-operation was either based on communal property and societies in which the individual has not yet freed himself of the navelstring of the community, or direct domination and subordination (slavery etc.). The relations of production and also the mode of production had been inferior to petty production.

What is new about the co-operation under capitalism as opposed to those early forms of co-operation is that for the first time producers co-operate whose individuality is freely developed and who are not in a direct relationship of subordination. Although the capitalists give the labor process this co-operative form only in order to be able to exploit it better, they fulfill at the same time the historical task of developing the co-operative labor process.

Question 962 *What distinguishes capitalist co-operation from earlier forms of co-operation?*

Just as the social productive power of labor that is developed by co-operation, appears to be the productive power of capital, so co-operation itself, contrasted with the process of production carried on by isolated independent laborers, or even by small employers, appears to be a specific form of the capitalist process of production. It is the first change experienced by the actual labor-process, when subjected to capital. This change takes place spontaneously. The simultaneous employment of a large number of wage-laborers, in one and the same process, which is a necessary condition of this change, also forms the starting-point of capitalist production. This point coincides with the birth of capital itself. If then, on the one hand, the capitalist mode of production presents itself to us historically, as a necessary condition to the transformation of the labor-process into a social process, so, on the other hand, this social form of the labor-process presents itself, as a method employed by capital for the more profitable

354:1 Wie die durch die Kooperation entwickelte gesellschaftliche Produktivkraft der Arbeit als Produktivkraft des Kapitals erscheint, so die Kooperation selbst als eine spezifische Form des kapitalistischen Produktionsprozesses im Gegensatz zum Produktionsprozeß vereinzelter unabhängiger Arbeiter oder auch Kleinmeister. Es ist die erste Änderung, welche der wirkliche Arbeitsprozeß durch seine Subsumtion unter das Kapital erfährt. Diese Änderung geht naturwüchsig vor sich. Ihre Voraussetzung, gleichzeitige Beschäftigung einer größeren Anzahl von Lohnarbeitern in demselben Arbeitsprozeß, bildet den Ausgangspunkt der kapitalistischen Produktion. Dieser fällt mit dem Dasein des Kapitals selbst zusammen. Wenn sich die kapitalistische Produktionsweise daher einerseits als historische Notwendigkeit für die Verwandlung des Arbeitsprozesses in einen gesellschaftlichen Prozeß darstellt, so andererseits diese gesellschaftliche Form des Arbeitsprozesses als eine vom Kapital angewandte Methode, um

13.4. [Historical Overview of Simple Co-Operation]

exploitation of labor, by increasing that labor's productiveness.

ihn durch Steigerung seiner Produktivkraft profitlicher auszubeuten.

A clearer formulation of this last sentence can be found in the French edition, where it forms a paragraph of its own: "We see that the capitalistic mode of production presents itself as a historic necessity to transform the isolated labor into social labor; however, in the hands of capital, this socialization of labor augments the productive forces of labor only in order to exploit it with more profit." Note that the means and the end are interchanged in a cunning-of-reason-like fashion: While capitalism uses the co-operative production process for its own ends, in order to increase its profits, to better exploit labor, history uses capitalism as a means to achieve a co-operative production process.

↓ Although co-operation is real, it does not, or only very cursorily, represent a specific evolutionary phase in the history of capitalism.

In the elementary form, under which we have hitherto viewed it, co-operation is a necessary concomitant of all production on a large scale, but it does not, in itself, represent a fixed form characteristic of a particular epoch in the development of the capitalist mode of production. At the most it appears to do so, and that only approximately, in the handicraft-like beginnings of manufacture,²⁵ and in that kind of agriculture on a large scale, which corresponds to the epoch of manufacture, and is distinguished from peasant agriculture, mainly by the number of the laborers simultaneously employed, and by the mass of the means of production concentrated for their use. Simple co-operation is always the prevailing form, in those branches of production in which capital operates on a large scale, and division of labor and machinery play but a subordinate part.

354:2/o In ihrer bisher betrachteten einfachen Gestalt fällt die Kooperation zusammen mit der Produktion auf größerer Stufenleiter, bildet aber keine feste charakteristische Form einer besondern Entwicklungs-epoche der kapitalistischen Produktionsweise. Höchstens erscheint sie annähernd so in den noch handwerksmäßigen Anfängen der Manufaktur²⁵ und in jener Art großer Agrikultur, welche der Manufakturperiode entspricht und sich wesentlich nur durch die Masse der gleichzeitig angewandten Arbeiter und den Umfang der konzentrierten Produktionsmittel von der Bauernwirtschaft unterscheidet. Die einfache Kooperation ist stets noch vorherrschende Form solcher Produktionszweige, worin das Kapital auf großer Stufeneiter operiert, ohne daß Teilung der Arbeit oder Maschinerie eine bedeutende Rolle spielte.

Misprint in the German edition:
"jeder Art großer Agrikultur"

should read "jener." French: en ce genre, English: in that kind. Also

Volksausgabe has "jener."

²⁵ "Whether the united skill, industry, and emulation of many together on the same work be not the way to advance it? And whether it had been otherwise possible for England, to have carried on her Woollen Manufacture to so great a perfection?" (Berkeley. "The Querist." London, 1751, p. 56, par. 521.)

Co-operation ever constitutes the fundamental form of the capitalist mode of production. Nevertheless the elementary form of co-operation continues to subsist as a par-

²⁵ „Ist nicht die Vereinigung von Geschicklichkeit, Fleiß und Wetteifer vieler zusammen am selben Werk der Weg, es vorwärts zu bringen? Und wäre es sonst England möglich gewesen, seine Wollmanufaktur zu einem solchen Grad der Vollendung zu bringen?“ (Berkeley, „The Querist“, Lond. 1750, p. 56, § 521.)

355:1 Die Kooperation bleibt die Grundform der kapitalistischen Produktionsweise, obgleich ihre einfache Gestalt selbst als besondere Form neben ihren weiterentwickel-

13. Co-Operation

ticular form side by side with the more de- | ten Formen erscheint.
veloped forms of co-operation.

↑ This last sentence of the chapter is somewhat ambiguous in German and has given rise to incorrect translations in English. The French version [megaII/7]287:4 is clearer and unambiguous: “Co-operation is the *fundamental mode* of capitalist production. The rudimentary form of co-operation, while containing the germ for more complex forms, not only reappears in these more complex forms as one of their elements, but maintains itself also beside them as a particular mode.”

↑ These last two paragraphs are connected with the beginning of the next chapter.

14. Division of Labor and Manufactories

While the modern English word “manufacture” refers to any site of mass production, the German “*Manufaktur*” refers to a specific mass production technology which does not use heavy machinery but which achieves efficiency by division of labor and specialization of the workers. We will use the translation “manufactory” for this. Chapter Fourteen explains the origin of capitalist manufactories, why manufactories were the characteristic form of capitalist production for over 200 years, but why they then gave way to a different production technology (production using machines, discussed in chapter Fifteen).

14.1. Two-Fold Origin of Manufactories

⇓ The first paragraph is an introduction to the whole chapter, not just to section 14.1.

That kind of co-operation which is based on division of labor creates its classical shape for itself in the manufactories.

356:1 Die auf Teilung der Arbeit beruhende Kooperation schafft sich ihre klassische Gestalt in der Manufaktur.

The above translation “that kind of co-operation which” leans on the French [megaII/7]288:1 “cette espèce de coopération qui” which is clearer and more explicit than the German. Moore-Aveling

[megaII/9]290:2 has “that co-operation which,” and Fowkes has “that form of co-operation which.” Instead of “classical shape” (here and Fowkes), Moore-Aveling has “typical form.”

Although typical for capitalism at that time, we will see later that this is a very limited form, therefore the translation given here avoided the word “typical.”

⇑ Marx’s figure of speech “creates for itself” treats co-operation as something active. Marx possibly meant that very literally. One of the main results of chapter Thirteen was that division of labor is *real* in the critical-realist definition that something is real if it is causally efficacious. The first sentence also implies that division of labor is one of several possible forms of co-operation. In *Poverty of Philosophy*, chapter 2, Sect. 2 [mecw6]178–190, Marx refutes Proudhon’s thesis that division of labor simply came out of the idea of “dividing the labor,” and argues that it must be explained by the relations of production.

Term Paper Topic 963 *Term Paper about chapter 2, Sect. 2 of Marx’s Poverty of Philosophy, [mecw6]178–190*

It prevails as the characteristic form of the capitalist process of production throughout the period of manufactories properly so called. That period, roughly speaking, extends from the middle of the 16th to the last third of the 18th century.

Als charakteristische Form des kapitalistischen Produktionsprozesses herrscht sie vor während der eigentlichen Manufakturperiode, die, rauh angeschlagen, von Mitte des 16. Jahrhunderts bis zum letzten Drittel des achtzehnten währt.

14. Division of Labor and Manufactories

↓ The next brief paragraph repeats the claim already indicated in the title of this section, that the division of labor in the manufactories has a twofold origin:

Manufactories arise in two ways:

356:2 Die Manufaktur entspringt auf doppelte Weise.

The next two paragraphs describe these two development paths one by one.

(1) By the assemblage, in one workshop under the control of a single capitalist, of laborers belonging to independent handicrafts of different kinds, through whose hands a given article must pass on its way to completion. A carriage, for example, was formerly the product of the labor of a great number of independent artificers, such as wheelwrights, harness-makers, tailors, locksmiths, upholsterers, turners, fringe-makers, glaziers, painters, polishers, gilders, etc. In a manufactory of carriages, all these different artificers are assembled in one building where they work into one another's hands.

356:3/o Entweder werden Arbeiter von verschiedenartigen, selbständigen Handwerkern, durch deren Hände ein Produkt bis zu seiner letzten Reife laufen muß, in eine Werkstatt unter dem Kommando desselben Kapitalisten vereinigt. Z.B. eine Kutsche war das Gesamtprodukt der Arbeiten einer großen Anzahl unabhängiger Handwerker, wie Stellmacher, Sattler, Schneider, Schlosser, Gürtler, Drechsler, Posamentierer, Glaser, Maler, Lackierer, Vergolder usw. Die Kutschenmanufaktur vereinigt alle diese verschiednen Handwerker in ein Arbeitshaus, wo sie einander gleichzeitig in die Hand arbeiten.

↓ Time succession becomes spacial coexistence:

It is true that a carriage cannot be gilt before it has been made. But if a number of carriages are being made simultaneously, some may be in the hands of the gilders while others are going through an earlier process.

Man kann eine Kutsche zwar nicht vergolden, bevor sie gemacht ist. Werden aber viele Kutschen gleichzeitig gemacht, so kann ein Teil beständig vergoldet werden, während ein anderer Teil eine frühere Phase des Produktionsprozesses durchläuft.

↓ Now the changes in the producers induced by this production arrangement (negation):

So far, we are still in the domain of simple co-operation, which finds its materials ready to hand, be it humans or objects.

Soweit stehn wir noch auf dem Boden der einfachen Kooperation, die ihr Material an Menschen und Dingen vorfindet.

Question 964 Give examples of human materials of co-operation. Give examples of objective materials of co-operation.

↓ But now we are witnessing the causal effects of the division of labor:

But very soon an essential change occurs. The tailor, the locksmith, and the other artificers, being now exclusively occupied in carriage-making, each gradually loses, through want of practice, the ability to carry on, to its full extent, his old handicraft. But, on the other hand, his activity now confined in one groove, assumes the form best adapted to the narrowed sphere of action.

Indes tritt sehr bald eine wesentliche Veränderung ein. Der Schneider, Schlosser, Gürtler usw., der nur im Kutschenmachen beschäftigt ist, verliert nach und nach mit der Gewohnheit auch die Fähigkeit, sein altes Handwerk in seiner ganzen Ausdehnung zu betreiben. Andererseits erhält sein vereinseitigtes Tun jetzt die zweckmäßigste Form für die verengte Wirkungssphäre.

↓ From combination of many different crafts to the division of one process (negation of negation):

14.1. Two-Fold Origin of Manufactories

At first, the carriage manufactury took the form of a combination of various independent handicrafts. By degrees, it becomes the splitting up of carriage-making into its various detail processes, each of which crystallizes into the exclusive function of a particular workman, the manufacture, as a whole, being carried on by the combined partial laborers as a group.

The craftsman's loss of skills to perform the entire range of his craft is compared here to a loss of fluidity, a crystallization. His skills have become so narrow that he can no longer make a living working independently. He is now locked in as a non-autonomous component of a group of workers. This group is now the subject performing the labor process, not he as an individual.

In the same way, cloth manufacture, as also a whole series of other manufactures, arose by combining different handicrafts together under the control of a single capitalist.²⁶

The footnote shows a more recent example, from well after the period of manufactories: social division of labor between independent silk artisans just before they were gathered into the same factory by a capitalist:

²⁶ To give a more modern instance: The silk spinning and weaving of Lyon and Nîmes "est toute patriarcale; elle emploie beaucoup de femmes et d'enfants, mais sans les épuiser ni les corrompre; elle les laisse dans leur belles valises de la Drôme, du Var, de l'Isère, de Vaucluse, pour y élever des vers et dévider leurs cocons; jamais elle n'entre dans une véritable fabrique. Pour être aussi bien observe . . . le principe de la division du travail s'y revêt d'un caractère spécial. Il y a bien des dévideuses, des moulineurs, des teinturiers, des encolleurs, puis des tisserands; mais ils ne sont pas réunis dans un même établissement, ne dépendent pas d'un même maître, tous ils sont indépendants" (A. Blanqui: "Cours, d'Econ. Industrielle." Recueilli par A. Blaise. Paris, 1838–39, p. 79.) Since Blanqui wrote this, the various independent laborers have, to some extent, been united in factories. {And since Marx wrote the above, the power-loom has invaded these factories, and is now 1886 rapidly superseding the hand-loom. (Added in the 4th German edition. The Krefeld silk industry also has its tale to tell about this subject.) F. E.}

Ursprünglich erschien die Kutschenmanufaktur als eine Kombination selbständiger Handwerke. Sie wird allmählich Teilung der Kutschenproduktion in ihre verschiedenen Sonderoperationen, wovon jede einzelne zur ausschließlichen Funktion eines Arbeiters kristallisiert und deren Gesamtheit vom Verein dieser Teilarbeiter verrichtet wird.

Ebenso entstand die Tuchmanufaktur und eine ganze Reihe anderer Manufakturen aus der Kombination verschiedener Handwerke unter Kommando desselben Kapitals.²⁶

²⁶ Um ein mehr modernes Beispiel dieser Bildungsart der Manufaktur anzuführen, folgendes Zitat. Die Seidenspinnerei und Weberei von Lyon und Nîmes „ist ganz patriarchalisch; sie beschäftigt viele Frauen und Kinder, aber ohne sie zu übermüden oder zugrunde zu richten; sie läßt sie in ihren schönen Tälern der Drôme, des Var, der Isère und von Vaucluse, um dort Seidenraupen zu züchten, und ihre Kokons abzuwickeln; sie wird niemals zu einem regelrechten Fabrikbetrieb. Um trotzdem in so hohen Maße angewandt zu werden . . . nimmt hier das Prinzip der Arbeitsteilung eine besondere Eigenart an. Es gibt zwar Hasplerinnen, Seidenzwirner, Färber, Kettenschlichter, ferner Weber; aber sie sind nicht in derselben Werkstatt vereinigt, nicht von demselben Meister abhängig; alle sind sie unabhängig.“ (A. Blanqui, „Cours d'Econ. Industrielle“, Recueilli par A. Blaise, Paris 1838–1839, p. 79.) Seit Blanqui dies schrieb, sind die verschiedenen unabhängigen Arbeiter zum Teil in Fabriken vereinigt worden. {Zur 4. Aufl.—Und seit Marx obiges schrieb, hat der Kraftstuhl sich in diesen Fabriken eingebürgert und verdrängt rasch den Handwebstuhl. Die Krefelder Seidenindustrie weiß ebenfalls ein Lied davon zu singen.—F. E.}

Second development process: a given labor process is split up.

(2) Manufactories also arise in a way

357:1/o Die Manufaktur entspringt aber

14. Division of Labor and Manufactories

exactly the reverse of this, namely, by one capitalist employing simultaneously in one workshop a number of artificers, who all do the same or similar kind of work, such as making paper, type, or needles. This is co-operation in its simplest form. Each of these artificers (with the help, perhaps, of one or two apprentices), makes the entire commodity, and he consequently performs in succession all the operations necessary for its production. He still works in his old handicraft-like way.

auch auf entgegengesetztem Wege. Es werden viele Handwerker, die dasselbe oder Gleichartige tun, z.B. Papier oder Typen oder Nadeln machen, von demselben Kapital gleichzeitig in derselben Werkstatt beschäftigt. Es ist dies Kooperation in der einfachsten Form. Jeder dieser Handwerker (vielleicht mit einem oder zwei Gesellen) macht die ganze Ware und vollbringt also die verschiedenen, zu ihrer Herstellung erforderlichen Operationen der Reihe nach. Er arbeitet in seiner alten handwerksmäßigen Weise fort.

↓ The *changes* from this original state (negation) are not planned but are driven by everyday practical emergencies which justify breaking the old patterns:

But very soon external circumstances cause a different use to be made of the concentration of the workmen on one spot, and of the simultaneousness of their work. An increased quantity of the article has perhaps to be delivered within a given time. The work is therefore re-distributed. Instead of each man being allowed to perform all the various operations in succession, these operations are changed into disconnected, isolated ones, carried on side by side; each is assigned to a different artificer, and the whole of them together are performed simultaneously by the co-operating workmen. This accidental repartition gets repeated, develops advantages of its own, and gradually ossifies into a systematic division of labor.

Indes veranlassen bald äußere Umstände, die Konzentration der Arbeiter in demselben Raum und die Gleichzeitigkeit ihrer Arbeiten anders zu vernutzen. Es soll z.B. ein größeres Quantum fertiger Ware in einer bestimmten Zeitfrist geliefert werden. Die Arbeit wird daher verteilt. Statt die verschiedenen Operationen von demselben Handwerker in einer zeitlichen Reihenfolge verrichten zu lassen, werden sie voneinander losgelöst, isoliert, räumlich nebeneinander gestellt, jede derselben einem andren Handwerker zugewiesen und alle zusammen von den Kooperierenden gleichzeitig ausgeführt. Diese zufällige Verteilung wiederholt sich, zeigt ihre eigentümlichen Vorteile und verknöchert nach und nach zur systematischen Teilung der Arbeit.

↑ Here Marx uses the metaphor “ossification” instead of ‘crystallization.’ ↓ This, too, leads to new state which is again the negation of the negation:

The commodity, from being the individual product of an independent artificer, becomes the social product of a union of artificers, each of whom performs one, and only one, of the constituent partial operations.

Aus dem individuellen Produkt eines selbständigen Handwerkers, der vielerlei tut, verwandelt sich die Ware in das gesellschaftliche Produkt eines Vereins von Handwerkern, von denen jeder fortwährend nur eine und dieselbe Teiloperation verrichtet.

↓ Paper manufactories as example:

The same operations which, in the case of a papermaker belonging to a German Guild, merged one into the other as the successive acts of one artificer, became in the Dutch paper manufacture so many partial opera-

Dieselben Operationen, die ineinander flossen als sukzessive Verrichtungen des deutschen zünftigen Papiermachers, verselbständigten sich in der holländischen Papiermanufaktur zu nebeneinander laufenden

14.1. Two-Fold Origin of Manufactories

tions carried on side by side by numerous co-operating laborers.

⇓ Example of needle manufactories:

The needlemaker of the Nuremberg Guild was the cornerstone on which the English needle manufactories were raised. But while in Nuremberg that single artificer performed a series of perhaps 20 operations one after another, in England it was not long before there were 20 needlemakers side by side, each performing one alone of those 20 operations, and in consequence of further experience, each of those 20 operations was again split up, isolated, and made the exclusive function of a separate workman.

Teiloperationen vieler kooperierenden Arbeiter.

Der zünftige Nadler von Nürnberg bildet das Grundelement der englischen Nadelmanufaktur. Während aber jener eine Nadler eine Reihe von vielleicht 20 Operationen nacheinander durchlief, verrichteten hier bald 20 Nadler nebeneinander, jeder nur eine der 20 Operationen, die infolge von Erfahrungen noch viel weiter gespaltet, isoliert und zu ausschließlichen Funktionen einzelner Arbeiter verselbständigt wurden.

Two different pathways leading to the same result. ⇓ The summary points out the inner connection between these two development paths:

The mode in which manufactories arise, their growth out of handicrafts, is therefore two-fold. On the one hand, they arise from the union of various independent handicrafts, which become stripped of their independence and specialized to such an extent as to be reduced to mere supplementary fractional processes in the production of one particular commodity. On the other hand, they arise from the co-operation of artificers of one handicraft; they split up that particular handicraft into its various detail operations, isolating, and making these operations independent of one another up to the point where each becomes the exclusive function of a particular laborer.

358:1 Die Ursprungsweise der Manufaktur, ihre Herausbildung aus dem Handwerk ist also zwieschlächtig. Einerseits geht sie von der Kombination verschiedenartiger, selbständiger Handwerke aus, die bis zu dem Punkt verunselbständigt und vereinseitigt werden, wo sie nur noch einander ergänzende Teiloperationen im Produktionsprozeß einer und derselben Ware bilden. Andererseits geht sie von der Kooperation gleichartiger Handwerker aus, zersetzt dasselbe individuelle Handwerk in seine verschiedenen besondern Operationen und isoliert und verselbständigt diese bis zu dem Punkt, wo jede derselben zur ausschließlichen Funktion eines besondern Arbeiters wird.

Production processes which have been independent are made dependent, or phases in a production process which have been dependent are made independent. In fact, dependence and independence always occur together, what changes is what is the main part of the contradiction. Or say, which leg of the contradiction is primary. In the social division of labor of silk weavers, the independence is primary, and in the manufactory, the dependence is primary.

On the one hand, therefore, manufactories either introduce division of labor into a process of production, or further develop that division; on the other hand, they combine handicrafts that were formerly separate.

Einerseits führt daher die Manufaktur Teilung der Arbeit in einen Produktionsprozeß ein oder entwickelt sie weiter, andererseits kombiniert sie früher geschiedne Handwerke.

⇑ Two very opposite pathways, either division or combination. Later in this chapter, when discussing the division of labor in society, Marx finds a similar duality, see .

14. Division of Labor and Manufactories

But whatever may have been its particular starting-point, its final form is the same—a productive mechanism whose parts are human beings.

Welches aber immer ihr besondrer Ausgangspunkt, ihre Schlußgestalt ist dieselbe—ein Produktionsmechanismus, dessen Organe Menschen sind.

↑ The result of both development paths is the same: human beings are incorporated into a “mechanism of production” consistig of people. This composite production organism will be discussed in .

Question 965 *By which two different routes can division of labor develop? Does the character of the production process depend on which development route was taken?*

Question 966 *What is the role of the capitalist in the development of the division of labor, and to what extent is this development driven by the inner dialectic of a co-operative labor-process?*

The next paragraph makes two remarks important for a critical evaluation of the division of labor as implemented in the manufactories. (And the reader should be aware what kind of division of labor is being investigated here—in the first sentence of the first paragraph of this section Marx called it its “classical shape”. It is strictly the division of labor on the basis of the handicraft mode of production, which demands that each partial laborer becomes the organ of a detail function, i.e., the organ performing this detail function only.)

For a proper understanding of the division of labor in manufactories, it is essential that the following points be firmly grasped.

358:2/o Zum richtigen Verständnis der Teilung der Arbeit in der Manufaktur ist es wesentlich, folgende Punkte festzuhalten:

↓ First remark: Division of labor decomposes the production process into smaller component parts. Therefore, the development of the division of labor is driven by the general dialectic between dependence and independence: division of labor either arises from making independent labor processes dependent, or making dependent labor processes independent. The general character of this discussion should not lull the reader into overlooking the particularities here, which eventually lead to the supersession of this mode of production by big machinery: Each of these partial labors must still be carried out in a handicraft manner.

First, the analysis of a production process into its distinct phases coincides, here, strictly with the decomposition of a handicraft into its successive manual operations. Whether composite or simple, each operation has to be done by hand, retains the character of a handicraft, and is therefore dependent on the strength, skill, quickness, and sureness, of the individual workman in handling his tools. The handicraft continues to be the basis.

Zunächst fällt die Analyse des Produktionsprozesses in seine besondren Phasen hier ganz und gar zusammen mit der Zersetzung einer handwerksmäßigen Tätigkeit in ihre verschiedenen Teiloperationen. Zusammengesetzt oder einfach, die Verrichtung bleibt handwerksmäßig und daher abhängig von Kraft, Geschick, Schnelle, Sicherheit des Einzelarbeiters in Handhabung seines Instruments. Das Handwerk bleibt die Basis.

↓ This prevents a “truly scientific” analysis (i.e., a decomposition of the production process into its *real* components). As elsewhere in this volume, Marx uses here epistemological categories for actual (ontological) social processes:

This narrow technical basis precludes a truly scientific analysis of any definite process of industrial production, since it is still a condi-

Diese enge technische Basis schließt wirklich wissenschaftliche Analyse des Produktionsprozesses aus, da jeder Teilpro-

tion that each detail process gone through by the product must be capable of being done by hand and of forming, in its way, a separate handicraft.

zeß, den das Produkt durchmacht, als handwerksmäßige Teilarbeit ausführbar sein muß.

This constraint not only cripples the production process, it also cripples the worker:

It is just because handicraft skill continues, in this way, to be the foundation of the process of production, that each workman becomes exclusively assigned to a partial function, and that for the rest of his life, his labor-power is turned into the organ of this detail function.

Eben weil das handwerksmäßige Geschick so die Grundlage des Produktionsprozesses bleibt, wird jeder Arbeiter ausschließlich einer Teilfunktion angeeignet und seine Arbeitskraft in das lebenslängliche Organ dieser Teilfunktion verwandelt.

↓ Second remark: Some of the advantages of this division of labor are advantages of co-operation in general, not specific to this kind of co-operation.

Secondly, this division of labor is a particular sort of co-operation, and many of its advantages spring from the general character of co-operation, and not from this particular form of it.

Endlich ist diese Teilung der Arbeit eine besondere Art der Kooperation, und manche ihrer Vorteile entspringen aus dem allgemeinen Wesen, nicht aus dieser besondern Form der Kooperation.

Translation error in the original Moore-Aveling translation of the last sentence, as reproduced in [megaII/9]293:1: what should be “advantages” was translated as

“disadvantages.” The German says “advantages” (*Vorteile*) not only in the fourth edition but also in the first edition [megaII/5]274:2/o, second edition, [megaII/6]334:1/o,

and third edition [megaII/8]335:2. Also the French edition [megaII/7]290:3 says “advantages.”

14.2. The Specialized Worker and His Tools

After discussing the origins of manufacture, Marx looks at its simple elements.

↓ The first “element” Marx looks at is the individual worker. The mechanized labor process changes the worker; the worker develops highly specialized skills by doing one and the same limited task over and over again. Greater productivity goes therefore at the expense of a balanced development of the worker.

If we now go more into detail, it is, in the first place, clear that a laborer who all his life performs one and the same simple operation, converts his whole body into the automatic, specialized implement of that operation. Consequently, he takes less time in doing it, than the artificer who performs a whole series of operations in succession.

359:1 Gehn wir nun näher auf das einzelne ein, so ist zunächst klar, daß ein Arbeiter, der lebenslang eine und dieselbe einfache Operation verrichtet, seinen ganzen Körper in ihr automatisch einseitiges Organ verwandelt und daher weniger Zeit dazu verbraucht als der Handwerker, der eine ganze Reihe von Operationen abwechselnd ausführt.

↓ As in , the subject performing the labor process is the combined worker:

But the combined laborer, who constitutes the living mechanism of manufacture, is made up solely of such specialised detail laborers. Hence, in comparison with the independent handicraft, more is produced in a

Der kombinierte Gesamtarbeiter, der den lebendigen Mechanismus der Manufaktur bildet, besteht aber aus lauter solchen einseitigen Teilarbeitern. Im Vergleich zum selbständigen Handwerk wird daher mehr in we-

14. Division of Labor and Manufactories

given time, or the productive power of labor is increased.²⁷

²⁷ The more any manufacture of much variety shall be distributed and assigned to different artists, the same must needs be better done and with greater expedition, with less loss of time and labor." ("The Advantages of the East India Trade," Lond., 1720, p. 71.)

⇓ This simplification and speedup of the individual processes also leads to their perfection (negation of negation):

Moreover, when once this fractional work is established as the exclusive function of one person, the methods it employs become perfected. The workman's continued repetition of the same simple act, and the concentration of his attention on it, teach him by experience how to attain the desired effect with the minimum of exertion. But since at any given time there are always several generations of laborers living together, and working together in the same manufactories, the technical skill, the tricks of the trade thus acquired, become established, and are accumulated and handed down.²⁸

²⁸ "Easy labor is transmitted skill." (Th. Hodgskin, "Popular Political Economy," p. 48.)

↑ The theme that workers harbor skills and pass these skills from one to the next also appears several times in this volume, for instance in 575:1–576:1.

⇓ Comparison of division of labor in the manufactories with division of labor in a society. The extreme division of labor found in the manufactories corresponds to and deepens the division of labor in societies.

Manufactories, in fact, produce the skill of the detail laborer, by reproducing, and systematically driving to an extreme within the workshop, the naturally developed differentiation of trades which they found ready to hand in society at large.

The capitalist's command over the laborers is also duplicated by the efforts in earlier societies to fix the division of labor (caste and guild system).

On the other hand, the conversion of fractional work into the life-calling of one man, corresponds to the tendency shown by earlier societies, to make trades hereditary; either to petrify them into castes, or whenever definite historical conditions beget in the individual a tendency to vary in a manner in-

niger Zeit produziert oder die Produktivkraft der Arbeiter gesteigert.²⁷

²⁷ „Je mehr eine Arbeit von großer Mannigfaltigkeit gegliedert und verschiedenen Teilarbeitern zugewiesen wird, um so mehr muß sie notwendigerweise besser und schneller ausgeführt werden, mit weniger Verlust an Zeit und Arbeit.“ („The Advantages of the East India Trade“, Lond. 1720, p. 71.)

Auch vervollkommnet sich die Methode der Teilarbeit, nachdem sie zur ausschließlichen Funktion einer Person verselbstständigt ist. Die stete Wiederholung desselben beschränkten Tuns und die Konzentration der Aufmerksamkeit auf dieses Beschränkte lehren erfahrungsmäßig den bezweckten Nutzeffekt mit geringstem Kraftaufwand erreichen. Da aber immer verschiedene Arbeitergenerationen gleichzeitig zusammenleben und in denselben Manufakturen zusammenwirken, befestigen, häufen und übertragen sich bald die so gewonnenen technischen Kunstgriffe.²⁸

²⁸ „Leicht von der Hand gehende Arbeit ist überlieferte Geschicklichkeit.“ (Th. Hodgskin, Popular Political Economy, p. 48.)

359:2–360:1 Die Manufaktur produziert in der Tat die Virtuosität des Detailarbeiters, indem sie die naturwüchsige Sonderung der Gewerbe, die sie in der Gesellschaft vorfand, im Innern der Werkstatt reproduziert und systematisch zu Extrem treibt.

Andrerseits entspricht ihre Verwandlung der Teilarbeit in den Lebensberuf eines Menschen dem Trieb früherer Gesellschaften, die Gewerbe erblich zu machen, sie in Kasten zu versteinern oder in Zünfte zu verknöchern, falls bestimmte historische Bedingungen dem Kastenwesen widerspre-

compatible with the nature of castes, to ossify them into guilds.

chende Variabilität des Individuums erzeugen.

Both spring from the same “natural law.” Marx also sees analogies to the particularization of plants and animals into species and subspecies.

Castes and guilds arise from the action of the same natural law, that regulates the differentiation of plants and animals into species and varieties, except that, when a certain degree of development has been reached, the heredity of castes and the exclusiveness of guilds are ordained as a law of society.²⁹

Kasten und Zünfte entspringen aus demselben Naturgesetz, welches die Sonderung von Pflanzen und Tieren in Arten und Unterarten regelt, nur daß auf einem gewissen Entwicklungsgrad die Erblichkeit der Kasten oder die Ausschließlichkeit der Zünfte als gesellschaftliches Gesetz dekretiert wird.²⁹

↓ Footnote: Already Diodorus argued for social restrictions to preventing people from doing too many different things (and he apparently also thought that popular assemblies are a waste of time):

²⁹ “The arts also have ... in Egypt reached the requisite degree of perfection. For it is the only country where artificers may not in any way meddle with the affairs of another class of citizens, but must follow that calling alone which by law is hereditary in their clan ... In other countries it is found that tradesmen divide their attention between too many objects. At one time they try agriculture, at another they take to commerce, at another they busy themselves with two or three occupations at once. In free countries, they mostly frequent the assemblies of the people ... In Egypt, on the contrary, every artificer is severely punished if he meddles with affairs of State, or carries on several trades at once. Thus there is nothing to disturb their application to their calling ... Moreover, since they inherit from their forefathers numerous rules, they are eager to discover fresh advantages” (Diodorus Siculus: *Bibl. Hist. I. I. c. 74.*)

²⁹ „Auch die Künste sind ... in Ägypten zu dem gehörigen Grad von Vollkommenheit gediehn. Denn in diesem Lande allein dürfen die Handwerker durchaus nicht in die Geschäfte einer andren Bürgerklasse eingreifen, sondern bloß den nach dem Gesetz ihrem Stamme erblich zugehörigen Beruf treiben ... Bei andren Völkern findet man, daß die Gewerbsleute ihre Aufmerksamkeit auf zu viele Gegenstände verteilen ... Bald versuchen sie es mit dem Landbau, bald lassen sie sich in Handelsgeschäfte ein, bald befassen sie sich mit zwei oder drei Künsten zugleich. In Freistaaten laufen sie meist in die Volksversammlungen ... In Ägypten dagegen verfällt jeder Handwerker in schwere Strafen, wenn er sich in Staatsgeschäfte mischt oder mehrere Künste zugleich treibt. So kann nichts ihren Berufsfleiß stören ... Zudem wie sie von ihren Vorfahren viele Regeln haben, sind sie eifrig darauf bedacht, noch neue Vorteile aufzufinden.“ (Diodorus Siculus: „Historische Bibliothek“, I. I. c. 74.)

So far the footnote. The main text gives a striking example of the importance of skills, which make extraordinary products possible even with the most primitive tools:

“The muslins of Dakka in fineness, the calicoes and other piece goods of Coromandel in brilliant and durable colours, have never been surpassed. Yet they are produced without capital, machinery, division of labor, or any of those means which give such facilities to the manufacturing interest of Europe. The weaver is merely a detached individual, working a web when ordered of a customer, and with a loom of the rudest construction, consisting sometimes of a few branches or bars of wood,

„Die Musline von Dakka sind an Feinheit, die Kattune und andre Zeuge von Koromandel an Pracht und Dauerhaftigkeit der Farben niemals übertroffen worden. Und dennoch werden sie produziert ohne Kapital, Maschinerie, Teilung der Arbeit oder irgendeins der andren Mittel, die der Fabrikation in Europa so viele Vorteile bieten. Der Weber ist ein einzeltes Individuum, der das Gewebe auf Bestellung eines Kunden verfertigt und mit einem Webstuhl von der einfachsten Konstruk-

14. Division of Labor and Manufactories

put roughly together. There is even no expedient for rolling up the warp; the loom must therefore be kept stretched to its full length, and becomes so inconveniently large, that it cannot be contained within the hut of the manufacturer, who is therefore compelled to ply his trade in the open air, where it is interrupted by every vicissitude of the weather.”³⁰

³⁰ “Historical and descriptive account of Brit. India, etc.,” by Hugh Murray and James Wilson, etc., Edinburgh 1832, v. II., p. 449. The Indian loom is upright, i.e., the warp is stretched vertically.

⇓ However the Hindu’s specialization is nothing compared with the specialization forced on the manufacturing laborer:

It is only the special skill accumulated from generation to generation, and transmitted from father to son, that gives to the Hindu, as it does to the spider, this proficiency. And yet the work of such a Hindu weaver is very complicated, compared with the majority of laborers in the manufactories.

⇓ Finally: how does division of labor increase productivity? Productivity increases due to increased continuity of the labor process (fewer “gaps”) may either come from greater intensity or from less unproductive use of the labor-power.

An artificer, who performs one after another the various fractional operations in the production of a finished article, must at one time change his place, at another his tools. The transition from one operation to another interrupts the flow of his labor, and creates, so to say, gaps in his working-day. These gaps close up so soon as he is tied to one and the same operation all day long; they vanish in proportion as the changes in his work diminish. The resulting increased productive power is owing either to an increased expenditure of labor-power in a given time, i.e., to increased intensity of labor, or to a decrease in the amount of labor-power unproductively consumed. The extra expenditure of power, demanded by every transition from rest to motion, is made up for by prolonging the duration of the normal velocity when once acquired.

tion, manchmal nur bestehend aus hölzernen, roh zusammengefügt Stangen. Er besitzt nicht einmal einen Apparat zum Aufziehen der Kette, der Webstuhl muß daher in seiner ganzen Länge ausgestreckt bleiben und wird so unförmlich und weit, daß er keinen Raum findet in der Hütte des Produzenten, der seine Arbeit daher in freier Luft verrichten muß, wo sie durch jede Wetteränderung unterbrochen wird.“³⁰

³⁰ „Historical and descriptive Account of Brit. India etc.“ By Hugh Murray, James Wilson etc., Edinburgh 1832, v. II, p. 449, 450. Der indische Webstuhl ist hochschäftig, d.h., die Kette ist vertikal aufgespannt.

360:2 Es ist nur das von Generation auf Generation gehäufte und von Vater auf Sohn vererbte Sondergeschick, das dem Hindu wie der Spinne diese Virtuosität verleiht. Und dennoch verrichtet ein solcher indischer Weber sehr komplizierte Arbeit, verglichen mit der Mehrzahl der Manufakturarbeiter.

360:3/o Ein Handwerker, der die verschiedenen Teilprozesse in der Produktion eines Machwerks nacheinander ausführt, muß bald den Platz, bald die Instrumente wechseln. Der Übergang von einer Operation zur andren unterbricht den Fluß seiner Arbeit und bildet gewissermaßen Poren in seinem Arbeitstag. Diese Poren verdichten sich, sobald er den ganzen Tag eine und dieselbe Operation kontinuierlich verrichtet, oder sie verschwinden in dem Maße, sie der Wechsel seiner Operation abnimmt. Die gesteigerte Produktivität ist hier entweder der zunehmenden Ausgabe von Arbeitskraft in einem gegebenen Zeitraum geschuldet, also wachsender Intensität der Arbeit oder einer Abnahme des unproduktiven Verzehrs von Arbeitskraft. Der Überschuß von Kraftaufwand nämlich, den jeder Übergang aus der Ruhe in die Bewegung erheischt, kompen-

14.2. The Specialized Worker and His Tools

siert sich bei längerer Fortdauer der einmal erreichten Normalgeschwindigkeit.

This monotoneity is good for productivity but it destroys the vital spirits (Lebensgeister) of the laborer.

On the other hand, constant labor of one uniform kind disturbs the intensity and flow of a man's animal spirits, which find recreation and delight in mere change of activity.

Andrerseits zerstört die Kontinuität gleichförmiger Arbeit die Spann- und Schwungkraft der Lebensgeister, die im Wechsel der Tätigkeit selbst ihre Erholung und ihren Reiz finden.

Question 967 *If someone does the same thing all the time: is this greater efficiency or greater intensity?*

↑ This concludes the discussion of the worker. ↓ Now Marx looks at the tools.

The productiveness of labor depends not only on the proficiency of the workman, but on the perfection of his tools. Tools of the same kind, such as knives, drills, gimlets, hammers, etc., may be employed in different processes; and the same tool may serve various purposes in a single process. But so soon as the different operations of a labor-process are disconnected the one from the other, and each fractional operation acquires in the hands of the detail laborer a suitable and peculiar form, alterations become necessary in the implements that previously served more than one purpose.

361:1/o Die Produktivität der Arbeit hängt nicht nur von der Virtuosität des Arbeiters ab, sondern auch von der Vollkommenheit seiner Werkzeuge. Werkzeuge derselben Art, wie Schneide-, Bohr-, Stoß-, Schlaginstrumente usw., werden in verschiedenen Arbeitsprozessen gebraucht, und in demselben Arbeitsprozeß dient dasselbe Instrument zu verschiedenen Verrichtungen. Sobald jedoch die verschiedenen Operationen eines Arbeitsprozesses voneinander losgelöst sind und jede Teiloperation in der Hand des Teilarbeiters eine möglichst entsprechende und daher ausschließliche Form gewinnt, werden Veränderungen der vorher zu verschiedenen Zwecken dienenden Werkzeuge notwendig.

How do the tools develop? Marx describes here a spontaneous development process, he would probably call it *naturwüchsig*. The traditional shape of the tools creates difficulties which are overcome by more refined shapes.

The direction taken by this change is determined by the difficulties experienced in consequence of the unchanged form of the implement.

Die Richtung ihres Formwechsels ergibt sich aus der Erfahrung der besondern Schwierigkeiten, welche die unveränderte Form in den Weg legt.

Tools which were previously used for several different purposes are now only used for one purpose. This changes their shape: they are improved and simplified, and also multiplied:

Manufacture is characterised by the differentiation of the instruments of labor, a differentiation whereby implements of a given sort acquire fixed shapes, adapted to each particular application, and by the specialisation of those instruments, giving to each special implement its full play only in the hands of a specific detail laborer. In Birm-

Die Differenzierung der Arbeitsinstrumente, wodurch Instrumente derselben Art besondere feste Formen für jede besondere Nutzanwendung erhalten, und ihre Spezialisierung, wodurch jedes solches Sonderinstrument nur in der Hand spezifischer Teilarbeiter in seinem ganzen Umfang wirkt, charakterisieren die Manufaktur. Zu Birming-

14. Division of Labor and Manufactories

ingham alone 500 varieties of hammers are produced, and not only is each adapted to one particular process, but several varieties often serve exclusively for the different operations in one and the same process. The manufacturing period simplifies, improves, and multiplies the implements of labor, by adapting them to the exclusively special functions of each detail laborer.³¹

Comparison with Darwinian selection:

³¹ Darwin in his epoch-making work on the origin of species, remarks, with reference to the natural organs of plants and animals: "So long as one and the same organ has different kinds of work to perform, a ground for its changeability may possibly be found in this, that natural selection preserves or suppresses each small variation of form less carefully than if that organ were destined for one special purpose alone. Thus, knives that are adapted to cut all sorts of things, may, on the whole, be of one shape; but an implement destined to be used exclusively in one way must have a different shape for every different use."

↓ This creates the material preconditions of machinery:

It thus creates at the same time one of the material conditions for the existence of machinery, which consists of a combination of simple instruments.

↓ Transition to next section:

The detail laborer and his implements are the simplest elements of manufacture. Let us now turn to its aspect as a whole.

ham allein produziert man etwa 500 Varietäten von Hämmern, wovon jeder nicht nur für einen besondern Produktionsprozeß, sondern eine Anzahl Varietäten oft nur für verschiedene Operationen in demselben Prozeß dient. Die Manufakturperiode vereinfacht, verbessert und vermännigfacht die Arbeitswerkzeuge durch deren Anpassung an die ausschließlichen Sonderfunktionen der Teilarbeiter.³¹

³¹ Darwin bemerkt in seinem epochemachenden Werk „Über die Entstehung der Arten“ mit Bezug auf die natürlichen Organe der Pflanzen und Tiere: „Solange ein und dasselbe Organ verschiedene Arbeiten zu verrichten hat, läßt sich ein Grund für seine Veränderlichkeit vielleicht darin finden, daß natürliche Züchtung jede kleine Abweichung der Form weniger sorgfältig erhält oder unterdrückt, als wenn dasselbe Organ nur zu einem besondern Zwecke allein bestimmt wäre. So mögen Messer, welche allerlei Dinge zu schneiden bestimmt sind, im ganzen so ziemlich von einerlei Form sein, während ein nur zu einerlei Gebrauch bestimmtes Werkzeug für jeden andren Gebrauch auch eine andre Form haben muß.“

Sie schafft damit zugleich eine der materiellen Bedingungen der Maschinerie, die aus einer Kombination einfacher Instrumente besteht.

362:1 Der Detailarbeiter und sein Instrument bilden die einfachen Elemente der Manufaktur. Wenden wir uns jetzt zu ihrer Gesamtgestalt.

14.3. The Two Basic Forms of Manufacture—Heterogeneous and Organic

After having discussed the elements of manufacture, Marx looks now at manufacture as a whole, as a totality of interconnected elements.

14.3.a. [Two Forms of Manufacture]

Manufacture has two basic forms, according to the nature of the product: either the same object goes through many stages, or the final object is an assembly of many different parts.

14.3. Heterogeneous and Organic Manufacture

This is the same duality in the phenomenology of fully developed manufactories that was already observed in the history of the origin of manufactories.

The organisation of manufacture has two fundamental forms which, in spite of occasional blending, are essentially different in kind, and, moreover, play very distinct parts in the subsequent transformation of manufacture into modern industry carried on by machinery. This double character arises from the nature of the article produced. This article either results from the mere mechanical fitting together of partial products made independently, or owes its completed shape to a series of connected processes and manipulations.

362:2 Die Gliederung der Manufaktur besitzt zwei Grundformen, die trotz gelegentlicher Verschlingung zwei wesentlich verschiedene Arten bilden und namentlich auch bei der spätern Verwandlung der Manufaktur in die maschinenartig betriebene, große Industrie eine ganz verschiedene Rolle spielen. Dieser Doppelcharakter entspringt aus der Natur des Machwerks selbst. Es wird entweder gebildet durch bloß mechanische Zusammensetzung selbständiger Teilprodukte oder verdankt seine fertige Gestalt einer Reihenfolge zusammenhängender Prozesse und Manipulationen.

Marx calls the first form heterogeneous manufacture and the second organic manufacture. Marx discusses heterogeneous manufacturing first. He begins with some examples:

A locomotive, for instance, consists of more than 5,000 independent parts. It cannot, however, serve as an example of the first kind of genuine manufacture, for it is a structure produced by modern mechanical industry.

362:3/oo Eine Lokomotive z.B. besteht aus mehr als 5000 selbständigen Teilen. Sie kann jedoch nicht als Beispiel der ersten Art der eigentlichen Manufaktur gelten, weil sie ein Gebilde der großen Industrie ist.

The example of a locomotive shows that this classification of division of labor is not limited to the manufacturing period proper. Second example: watch.

But a watch can; and William Petty used it to illustrate the division of labor in manufacture. Formerly the individual work of a Nuremberg artificer, the watch has been transformed into the social product of an immense number of detail laborers, such as mainspring makers, dial makers, spiral spring makers, jewelled hole makers, ruby lever makers, hand makers, case makers, screw makers, gilders, with numerous subdivisions, such as wheel makers (brass and steel separate), pin makers, movement makers, acheveur de pignon (fixes the wheels on the axles, polishes the facets, etc.), pivot makers, planteur de finissage (puts the wheels and springs in the works), finisseur de barillet (cuts teeth in the wheels, makes the holes of the right size, etc.), escapement makers, cylinder makers for cylinder escapements, escapement wheel makers, balance wheel makers, raquette makers (apparatus for regulating the watch),

Wohl aber die Uhr, an welcher auch William Petty die manufakturmäßige Teilung der Arbeit veranschaulicht. Aus dem individuellen Werk eines Nürnberger Handwerkers verwandelte sich die Uhr in das gesellschaftliche Produkt einer Unzahl von Teilarbeitern, wie Rohwerkmacher, Uhrfedermacher, Zifferblattmacher, Spiralfedermacher, Steinloch- und Rubinhebelmacher, Zeigermacher, Gehäusemacher, Schraubenmacher, Vergolder, mit vielen Unterabteilungen, wie z.B. Räderfabrikant (Messing- und Stahlräder wieder geschieden), Triebmacher, Zeigerwerkmacher, acheveur de pignon (befestigt die Räder auf den Trieben, poliert die facettes usw.), Zapfenmacher, planteur de finissage (setzt verschiedene Räder und Triebe in das Werk), finisseur de barillet (läßt Zähne einschneiden, macht die Löcher zur richtigen Weite, härtet Stellung und Gesperr), Hemmungmacher, bei der Zylinderhemmung wieder Zylindermacher,

14. Division of Labor and Manufactories

the planteur d'échappement (escapement maker proper); then the repasseur de barillet (finishes the box for the spring, etc.), steel polishers, wheel polishers, screw polishers, figure painters, dial enamellers (melt the enamel on the copper), fabricant de pendants (makes the ring by which the case is hung), finisseur de charnière (puts the brass hinge in the cover, etc.), faiseur de secret (puts in the springs that open the case), graveur, ciseleur, polisseur de boîte, etc., etc., and last of all the repasseur, who fits together the whole watch and hands it over in a going state.

Steigradmacher, Unruhemacher, Requettemacher (das Rückwerk, woran die Uhr reguliert wird), planteur d'échappement (eigentliche Hemmungmacher); dann der repasseur de barillet (macht Federhaus und Stellung ganz fertig), Stahlpolierer, Räderpolierer, Schraubenpolierer, Zahlenmaler, Blattmacher (schmilzt das Email auf das Kupfer), fabricant de pendants (macht bloß die Bügel des Gehäuses), finisseur de charnière (steckt den Messingstift in die Mitte des Gehäuses etc.), faiseur de secret (macht die Federn im Gehäuse, die den Deckel aufspringen machen), graveur, ciseleur, polisseur de boîte usw., usw., endlich der repasseur, der die ganze Uhr zusammensetzt und sie gehend abliefert.

After this impressive catalog of the breadth of the division of labor, Marx stresses that vertically, this division of labor is very shallow: the workers co-operate directly only on few places. Therefore there is not much advantage in combining them in the same building. Many parts still produced off-site.

Only a few parts of the watch pass through several hands; and all these membra disjecta come together for the first time in the hand that binds them into one mechanical whole. This external relation between the finished product, and its various and diverse elements makes it, as well in this case as in the case of all similar finished articles, a matter of chance whether the detail laborers are brought together in one workshop or not. The detail operations may further be carried on like so many independent handicrafts, as they are in the Cantons of Vaud and Neuchâtel; while in Geneva there exist large watch manufactories where the detail laborers directly co-operate under the control of a single capitalist. And even in the latter case the dial, the springs, and the case, are seldom made in the factory itself. To carry on the trade as a manufacture, with concentration of workmen, is, in the watch trade, profitable only under exceptional conditions, because competition is greater between the laborers who desire to work at home, and because the splitting up of the work into a number of heterogeneous processes, permits but little use of the instru-

Nur wenige Teile der Uhr laufen durch verschiedene Hände, und alle diese membra disjecta sammeln sich erst in der Hand, die sie schließlich in ein mechanisches Ganzes verbindet. Dies äußerliche Verhältnis des fertigen Produkts zu seinen verschiedenartigen Elementen läßt hier, wie bei ähnlichem Machwerk, die Kombination der Teilarbeiter in derselben Werkstatt zufällig. Die Teilarbeiten können selbst wieder als voneinander unabhängige Handwerke betrieben werden, wie im Kanton Waadt und Neuchâtel, während in Genf z.B. große Uhrenmanufakturen bestehn, d.h. unmittelbare Kooperation der Teilarbeiter unter dem Kommando eines Kapitals stattfindet. Auch im letzteren Fall werden Zifferblatt, Feder und Gehäuse selten in der Manufaktur selbst gefertigt. Der kombinierte manufakturmäßige Betrieb ist hier nur unter ausnahmsweisen Verhältnissen profitlich, weil die Konkurrenz unter den Arbeitern, die zu Hause arbeiten wollen, am größten ist, die Zersplitterung der Produktion in eine Masse heterogener Prozesse wenig Verwendung gemeinschaftlicher Arbeitsmittel erlaubt und der Kapitalist bei der zerstreuten Fabrikation die Auslage

14.3. Heterogeneous and Organic Manufacture

ments of labor in common, and the capitalist, by scattering the work, saves the outlay on workshops, etc.³² Nevertheless the position of this detail laborer who, though he works at home, does so for a capitalist (manufacturer, *éta blisseur*), is very different from that of the independent artificer, who works for his own customers.³³

³² In the year 1854 Geneva produced 80,000 watches, which is not one-fifth of the production in the Canton of Neuchâtel. La Chaux-de-Fond alone, which we may look upon as a huge watch manufactory, produces yearly twice as many as Geneva. From 1850–61 Geneva produced 720,000 watches. See “Report from Geneva on the Watch Trade” in “Reports by H. M.’s Secretaries of Embassy and Legation on the Manufactures, Commerce, etc., No. 6, 1863.” The want of connexion alone, between the processes into which the production of articles that merely consist of parts fitted together is split up, makes it very difficult to convert such a manufacture into a branch of modern industry carried on by machinery; but in the case of a watch there are two other impediments in addition, the minuteness and delicacy of its parts, and its character as an article of luxury. Hence their variety, which is such, that in the best London houses scarcely a dozen watches are made alike in the course of a year. The watch manufactory of Messrs. Vacheron & Constantin, in which machinery has been employed with success, produces at the most three or four different varieties of size and form.

³³ In watchmaking, that classical example of heterogeneous manufacture, we may study with great accuracy the above-mentioned differentiation and specialisation of the instruments of labor caused by the subdivision of handicrafts.

für Arbeitsgebäude usw. erspart.³² Indes ist auch die Stellung dieser Detailarbeiter, die zu Hause, aber für einen Kapitalisten (Fabrikant, *éta blisseur*) arbeiten, ganz und gar verschieden von der des selbständigen Handwerkers, welcher für seine eignen Kunden arbeitet.³³

³² Genf hat im Jahr 1854 80 000 Uhren produziert, noch nicht ein Fünftel der Uhrenproduktion des Kantons Neuchâtel. Chaux-de-Fonds, das man als eine einzige Uhrenmanufaktur betrachten kann, liefert allein jährlich doppelt soviel als Genf. Von 1850–1861 lieferte Genf 720 000 Uhren. Siehe „Report from Geneva on the Watch Trade“ in „Reports by H.M.’s Secretaries of Embassy and Legation on the Manufactures, Commerce etc.“, Nr. 6, 1863. Wenn die Zusammenhangslosigkeit der Prozesse, worin die Produktion nur zusammengesetzter Machwerke zerfällt, an und für sich die Verwandlung solcher Manufakturen in den Maschinenbetrieb der großen Industrie sehr erschwert, kommen bei der Uhr noch zwei andre Hindernisse hinzu, die Kleinheit und Delikatesse ihrer Elemente und ihr Luxuscharakter, daher ihre Varietät, so daß z.B. in den besten Londoner Häusern das ganze Jahr hindurch kaum ein Dutzend Uhren gemacht werden, die sich ähnlich sehn. Die Uhrenfabrik von Vacheron & Constantin, die mit Erfolg Maschinerie anwendet, liefert auch höchstens 3–4 verschiedene Varietäten von Größe und Form.

³³ In der Uhrmacherei, diesem klassischen Beispiel der heterogenen Manufaktur, kann man sehr genau die oben erwähnte aus der Zersetzung der handwerksmäßigen Tätigkeit entspringende Differenzierung und Spezialisierung der Arbeitsinstrumente studieren.

Needle manufacturing is an example for the second form of manufacturing.

The second kind of manufacture, its perfected form, produces articles that go through connected phases of development, through a series of processes step by step, like the wire in the manufacture of needles, which passes through the hands of 72 and sometimes even 92 different detail workmen.

364:1 Die zweite Art der Manufaktur, ihre vollendete Form, produziert Machwerke, die zusammenhängende Entwicklungsphasen, eine Reihenfolge von Stufenprozessen durchlaufen, wie z.B. der Draht in der Nähadelmanufaktur die Hände von 72 und selbst 92 spezifischen Teilarbeitern durchläuft.

14.3.b. [The Basic Contradiction of Manufacture]

The mode of production based on Manufactories has a contradictory character: on the one hand it combines many different labor processes, but on the other hand it isolates and ossifies (*verselbständigt*) each phase of production since it must be done by a different worker. This creates an immanent limitation of manufacture, the need to establish the connection between the isolated functions:

In so far as such a manufacture, when first started, combines scattered handicrafts, it lessens the space by which the various phases of production are separated from each other. The time taken in passing from one stage to another is shortened, so is the labor that effectuates this passage.³⁴ In comparison with a handicraft, productive power is gained, and this gain is owing to the general co-operative character of manufacture.

³⁴ "In so close a cohabitation of the people, the carriage must needs be less." ("The Advantages of the East India Trade," p. 106.)

↑ Productivity is gained, ↓ but there is also a drawback:

On the other hand, division of labor, which is the distinguishing principle of manufacture, requires the isolation of the various stages of production and their independence of each other. The establishment and maintenance of a connexion between the isolated functions necessitates the incessant transport of the article from one hand to another, and from one process to another.

The character of this limitation can only be seen clearly after the limitation has been overcome.

From the standpoint of modern mechanical industry, this necessity stands forth as a characteristic and costly disadvantage, and one that is immanent in the principle of manufacture.³⁵

³⁵ "The isolation of the different stages of manufacture, consequent upon the employment of manual labor, adds immensely to the cost of production, the loss mainly arising from the mere removals from one process to another." ("The Industry of Nations." Lond., 1855, Part II, p. 200.)

364:2 Soweit solche Manufaktur ursprünglich zerstreute Handwerke kombiniert, vermindert sie die räumliche Trennung zwischen den besondern Produktionsphasen des Machwerks. Die Zeit seines Übergangs aus einem Stadium in das andre wird verkürzt, ebenso die Arbeit, welche diese Übergänge vermittelt.³⁴ Im Vergleich zum Handwerk wird so Produktivkraft gewonnen, und zwar entspringt dieser Gewinn aus dem allgemeinen kooperativen Charakter der Manufaktur.

³⁴ „Wenn die Menschen so dicht nebeneinander arbeiten, muß der Transport notwendigerweise geringer sein.“ („The Advantages of the East India Trade“, p. 106.)

Andrerseits bedingt ihr eigentümliches Prinzip der Teilung der Arbeit eine Isolierung der verschiedenen Produktionsphasen, die als ebenso viele handwerksmäßige Teilarbeiten gegeneinander verselbständigt sind. Die Herstellung und Erhaltung des Zusammenhangs zwischen den isolierten Funktionen ernötigt beständigen Transport des Machwerks aus einer Hand in die andre und aus einem Prozeß in den andren.

Vom Standpunkt der großen Industrie tritt dies als eine charakteristische, kostspielige und dem Prinzip der Manufaktur immanente Beschränktheit hervor.³⁵

³⁵ „Die Vereinzelung der verschiedenen Produktionsstufen in der Manufaktur, die aus der Verwendung von Handarbeit folgt, erhöht die Produktionskosten ungeheuer, wobei der Verlust in der Hauptsache durch die bloße Beförderung von einem Arbeitsprozeß zum anderen entsteht.“ („The Industry of Nations“, Lond. 1855, part II, p. 200.)

Question 968 *Explain the costly disadvantage immanent in the principle of manufacture.*

The temporal succession of the production processes also manifests itself locally as simultaneity.

If we confine our attention to some particular lot of raw materials, of rags, for instance, in paper manufacture, or of wire in needle manufacture, we perceive that it passes in succession through a series of stages in the hands of the various detail workmen until completion. On the other hand, if we look at the workshop as a whole, we see the raw material in all the stages of its production at the same time. The collective laborer, with one set of his many hands armed with one kind of tools, draws the wire, with another set, armed with different tools, he, at the same time, straightens it, with another, he cuts it, with another, points it, and so on. The different detail processes, which were successive in time, have become simultaneous, go on side by side in space. Hence, production of a greater quantum of finished commodities in a given time.³⁶

³⁶ "It (the division of labor) produces also an economy of time by separating the work into its different branches, all of which may be carried on into execution at the same moment . . . By carrying on all the different processes at once, which an individual must have executed separately, it becomes possible to produce a multitude of pins completely finished in the same time as a single pin might have been either cut or pointed." (Dugald Stewart, l.c., p. 319.)

364:3/o Betrachtet man ein bestimmtes Quantum Rohmaterial, z.B. von Lumpen in der Papiermanufaktur oder von Draht in der Nadelmanufaktur, so durchläuft es in den Händen der verschiedenen Teilarbeiter eine zeitliche Stufenfolge von Produktionsphasen bis zu seiner Schlußgestalt. Betrachtet man dagegen die Werkstatt als einen Gesamtmechanismus, so befindet sich das Rohmaterial gleichzeitig in allen seinen Produktionsphasen auf einmal. Mit einem Teil seiner vielen instrumentbewaffneten Hände zieht der aus den Detailarbeiten kombinierte Gesamtarbeiter den Draht, während er gleichzeitig mit andren Händen und Werkzeugen ihn streckt, mit andren schneidet, spitzt etc. Aus einem zeitlichen Nacheinander sind die verschiedenen Stufenprozesse in ein räumliches Nebeneinander verwandelt. Daher Lieferung von mehr fertiger Ware in demselben Zeitraum.³⁶

³⁶ „Sie“ (die Teilung der Arbeit) „verursacht auch eine Zeitersparnis, indem sie die Arbeit in ihre verschiedenen Zweige zerlegt, die alle im gleichen Augenblick ausgeführt werden können . . . Durch die gleichzeitige Durchführung all der verschiedenen Arbeitsprozesse, die ein einzelner getrennt hätte ausführen müssen, wird es z.B. möglich, eine Menge Nadeln in derselben Zeit fertigzustellen, in der eine einzelne Nadel sonst nur abgeschnitten oder zugespitzt worden wäre.“ (Dugald Stewart, l.c. p. 319.)

↓ In the second half of this paragraph, Marx works out one of the main drawbacks of manufacturing: division of labor is pushed to crippling extremes.

This simultaneity, it is true, is due to the general co-operative form of the process as a whole; but Manufacture not only finds the conditions for co-operation ready to hand, it also, to some extent, creates them by the sub-division of handicraft labor. On the other hand, it accomplishes this social organisation of the labor-process only by riveting each laborer to a single fractional detail.

Jene Gleichzeitigkeit entspringt zwar aus der allgemeinen kooperativen Form des Gesamtprozesses, aber die Manufaktur findet nicht nur die Bedingungen der Kooperation vor, sondern schafft sie teilweise erst durch die Zerlegung der handwerksmäßigen Tätigkeit. Andererseits erreicht sie diese gesellschaftliche Organisation des Arbeitsprozesses nur durch Festschmieden desselben Arbeiters an dasselbe Detail.

14. Division of Labor and Manufactories

The localization of a temporal flow is bad news for the worker: instead of one worker performing several different activities in succession, now there are several workers, each limited to one activity only. On top of this one-sidedness, they are forced to synchronize their labor in a rigid way.

Since the fractional product of each detail laborer is, at the same time, only a particular stage in the development of one and the same finished article, each laborer, or each group of laborers, prepares the raw material for another laborer or group. The result of the labor of the one is the starting-point for the labor of the other. The one workman therefore gives occupation directly to the other. The labor-time necessary in each partial process, for attaining the desired effect, is learnt by experience; and the mechanism of Manufacture, as a whole, is based on the assumption that a given result will be obtained in a given time. It is only on this assumption that the various supplementary labor-processes can proceed uninterruptedly, simultaneously, and side by side. It is clear that this direct dependence of the operations, and therefore of the laborers, on each other, compels each one of them to spend on his work no more than the necessary time, and thus a continuity, uniformity, regularity, order,³⁷ and even intensity of labor, of quite a different kind, is begotten than is to be found in an independent handicraft or even in simple co-operation.

³⁷ "The more variety of artists to every manufacture . . . the greater the order and regularity of every work, the same must needs be done in less time, the labor must be less." ("The Advantages," etc., p. 68.)

↓ In a short digression Marx interjects that commodity production already imposes a discipline on the labor process: those who take longer than socially necessary will not be able to compete on the market.

In the production of commodities generally, the labor-time expended on a commodity must not exceed that which is socially necessary for its production. This takes the form of an external compulsion by competition, since, in the surface interactions, each individual producer is obliged to sell

365:1/o Da das Teilprodukt jedes Teilarbeiters zugleich nur eine besondere Entwicklungsstufe desselben Machwerks ist, liefert ein Arbeiter dem andren oder eine Arbeitergruppe der andern ihr Rohmaterial. Das Arbeitsergebnis des einen bildet den Ausgangspunkt für die Arbeit des andren. Der eine Arbeiter beschäftigt daher hier unmittelbar den andren. Die notwendige Arbeitszeit zur Erreichung des bezweckten Nutzeffekts in jedem Teilprozeß wird erfahrungsmäßig festgestellt, und der Gesamtmechanismus der Manufaktur beruht auf der Voraussetzung, daß in gegebener Arbeitszeit ein gegebenes Resultat erzielt wird. Nur unter dieser Voraussetzung können die verschiedenen, einander ergänzenden Arbeitsprozesse ununterbrochen, gleichzeitig und räumlich nebeneinander fortgehn. Es ist klar, daß diese unmittelbare Abhängigkeit der Arbeiten und daher der Arbeiter voneinander jeden einzelnen zwingt, nur die notwendige Zeit zu seiner Funktion zu verwenden, und so eine ganz andre Kontinuität, Gleichförmigkeit, Regelmäßigkeit, Ordnung³⁷ und namentlich auch Intensität der Arbeit erzeugt wird als im unabhängigen Handwerk oder selbst der einfachen Kooperation.

³⁷ „Je mannigfaltiger die Spezialarbeiter in jeder Manufaktur, . . . um so ordentlicher und regelmäßiger ist jede Arbeit; diese muß notwendig in weniger Zeit getan werden, und die Arbeit muß sich vermindern.“ („The Advantages etc.“, p. 68.)

Daß auf eine Ware nur die zu ihrer Herstellung gesellschaftlich notwendige Arbeitszeit verwandt wird, erscheint bei der Warenproduktion überhaupt als äußerer Zwang der Konkurrenz, weil, oberflächlich ausgedrückt, jeder einzelne Produzent die Ware zu ihrem Marktpreis verkaufen muß.

his commodity at its market-price.

An law on the level of production, namely, that production must not take more than the socially necessary labor-time, “appears” (*erscheint*) on the surface as the exterior compulsion of competition. It is not something the agents want to do, not something they see as their goal, but something that seems to be imposed on them from the outside, by market constraints. Although this looks like an exterior constraint, it is indeed the form of appearance of an internal law.

↓ The technology of manufactories adds a second constraint which is more confining than market competition. While market competition allows individual differences but rewards them differently, manufactories do not even have room for those differences to exist:

In Manufacture, on the contrary, the turning out of a given quantum of product in a given time is a technical law of the process of production itself.³⁸

³⁷ “The more variety of artists to every manufacture . . . the greater the order and regularity of every work, the same must needs be done in less time, the labor must be less.” (“The Advantages,” etc., p. 68.)

³⁸ Nevertheless, the manufacturing system, in many branches of industry, attains this result but very imperfectly, because it knows not how to control with certainty the general chemical and physical conditions of the process of production.

Lieferung von gegebenem Produktenquantum in gegebener Arbeitszeit wird dagegen in der Manufaktur technisches Gesetz des Produktionsprozesses selbst.³⁸

³⁷ „Je mannigfaltiger die Spezialarbeiter in jeder Manufaktur, . . . um so ordentlicher und regelmäßiger ist jede Arbeit; diese muß notwendig in weniger Zeit getan werden, und die Arbeit muß sich vermindern.“ („The Advantages etc.“, p. 68.)

³⁸ Indes erreicht der manufakturmäßige Betrieb dies Resultat in vielen Zweigen nur unvollkommen, weil er die allgemeinen chemischen und physikalischen Bedingungen des Produktionsprozesses nicht mit Sicherheit zu kontrollieren weiß.

Now the problems of coordination coming with this close interdependence:

Different operations take, however, unequal periods, and yield therefore in equal times unequal quantities of fractional products. If, therefore, the same laborer has, day after day, to perform the same operation, there must be a different number of laborers for each operation; for instance, in type manufacture, there are four founders and two breakers to one rubber: the founder casts 2,000 type an hour, the breaker breaks up 4,000, and the rubber polishes 8,000. Here we have again the principle of co-operation in its simplest form, the simultaneous employment of many doing the same thing; only now, this principle is the expression of an organic relation. The division of labor, as carried out in Manufacture, not only simplifies and multiplies the qualitatively different parts of the social collective laborer, but also creates a fixed mathematical relation or ratio which regulates the

366:1 Verschiedne Operationen bedürfen jedoch ungleicher Zeitlängen und liefern daher in gleichen Zeiträumen ungleiche Quanten von Teilprodukten. Soll also derselbe Arbeiter tagaus, tagein stets nur dieselbe Operation verrichten, so müssen für verschiedene Operationen verschiedene Verhältniszahlen von Arbeitern verwandt werden, z.B. 4 Gießer und 2 Abbrecher auf einen Frottierer in einer Typenmanufaktur, wo der Gießer stündlich 2000 Typen gießt, der Abbrecher 4000 abbricht und der Frottierer 8000 blank reibt. Hier kehrt das Prinzip der Kooperation in seiner einfachsten Form zurück, gleichzeitige Beschäftigung vieler, die Gleichartiges tun, aber jetzt als Ausdruck eines organischen Verhältnisses. Die manufakturmäßige Teilung der Arbeit vereinfacht und vermannigfaltigt also nicht nur die qualitativ unterschiednen Organe des gesellschaftlichen Gesamtarbeiters, sondern

14. Division of Labor and Manufactories

quantitative extent of those parts i.e., the relative number of laborers, or the relative size of the group of laborers, for each detail operation. It develops, along with the qualitative sub-division of the social labor-process, a quantitative rule and proportionality for that process.

When once the most fitting proportion has been experimentally established for the numbers of the detail laborers in the various groups when producing on a given scale, that scale can be extended only by employing a multiple of each particular group.³⁹ There is this to boot, that the same individual can do certain kinds of work just as well on a large as on a small scale; for instance, the labor of superintendence, the carriage of the fractional product from one stage to the next, etc. The isolation of such functions, their allotment to a particular laborer, does not become advantageous till after an increase in the number of laborers employed; but this increase must affect every group proportionally.

In this way manufacturing has difficulties adjusting its scale of production and drives towards the increase in scale of production! Marx will say this more explicitly later.

³⁹ "When (from the peculiar nature of the produce of each manufactory), the number of processes into which it is most advantageous to divide it is ascertained, as well as the number of individuals to be employed, then all other manufactories which do not employ a direct multiple of this number will produce the article at a greater cost . . . Hence arises one of the causes of the great size of manufacturing establishments." (C. Babbage. "On the Economy of Machinery," 1st ed. London. 1832. Ch. xxi, pp. 172–73.)

Glass manufacturing as example for the structuring of the labor process:

The isolated group of laborers to whom any particular detail function is assigned, is made up of homogeneous elements, and is one of the constituent parts of the total mechanism. In many manufactures, however, the group itself is an organised body of labor, the total mechanism being a repetition or multiplication of these elementary

schaftt auch ein mathematisch festes Verhältnis für den quantitativen Umfang dieser Organe, d.h. für die relative Arbeiterzahl oder relative Größe der Arbeitergruppen in jeder Sonderfunktion. Sie entwickelt mit der qualitativen Gliederung die quantitative Regel und Proportionalität des gesellschaftlichen Arbeitsprozesses.

366:2/o Ist die passendste Verhältniszahl der verschiedenen Gruppen von Teilarbeitern erfahrungsmäßig festgesetzt für eine bestimmte Stufenleiter der Produktion, so kann man diese Stufenleiter nur ausdehnen, indem man ein Multipel jeder besondern Arbeitergruppe verwendet.³⁹ Es kommt hinzu, daß dasselbe Individuum gewisse Arbeiten ebensogut auf größerer als kleinerer Stafel ausführt, z.B. die Arbeit der Oberaufsicht, den Transport der Teilprodukte aus einer Produktionsphase in die andre usw. Die Verselbständigung dieser Funktionen oder ihre Zuweisung an besondere Arbeiter wird also erst vorteilhaft mit Vergrößerung der beschäftigten Arbeiterzahl, aber diese Vergrößerung muß sofort alle Gruppen proportionell ergreifen.

³⁹ „Wenn die Erfahrung, je nach der besondern Natur der Produkte jeder Manufaktur, sowohl die vorteilhafteste Art, die Fabrikation in Teiloperationen zu spalten, als auch die für sie nötige Arbeiterzahl kennen gelehrt hat, werden alle Etablissements, die kein exaktes Multipel dieser Zahl anwenden, mit mehr Kosten fabrizieren . . . Dies ist eine der Ursachen der kolossalen Ausdehnung industrieller Etablissements.“ (Ch. Babbage, „On the Economy of Machinery“, Lond. 1832, ch. XXI, p. 172, 173.)

367:1/o Die einzelne Gruppe, eine Anzahl von Arbeitern, die dieselbe Teilfunktion verrichten, besteht aus homogenen Elementen und bildet ein besondres Organ des Gesamtmechanismus. In verschiedenen Manufakturen jedoch ist die Gruppe selbst ein gegliederter Arbeitskörper, während der Gesamtmechanismus durch die Wiederholung

organisms. Take, for instance, the manufacture of glass bottles. It may be resolved into three essentially different stages. First, the preliminary stage, consisting of the preparation of the components of the glass, mixing the sand and lime, etc., and melting them into a fluid mass of glass.⁴⁰ Various detail laborers are employed in this first stage, as also in the final one of removing the bottles from the drying furnace, sorting and packing them, etc. In the middle, between these two stages, comes the glass melting proper, the manipulation of the fluid mass. At each mouth of the furnace, there works a group, called "the hole," consisting of one bottle-maker or finisher, one blower, one gatherer, one putter-up or whetter-off, and one taker-in. These five detail workers are so many special organs of a single working organism that acts only as a whole, and therefore can operate only by the direct co-operation of the whole five. The whole body is paralysed if but one of its members be wanting. But a glass furnace has several openings (in England from 4 to 6), each of which contains an earthenware melting-pot full of molten glass, and employs a similar five-membered group of workers. The organisation of each group is based on division of labor, but the bond between the different groups is simple co-operation, which, by using in common one of the means of production, the furnace, causes it to be more economically consumed. Such a furnace, with its 4–6 groups, constitutes a glass house; and a glass manufactory comprises a number of such glass houses, together with the apparatus and workmen requisite for the preparatory and final stages.

oder Vervielfältigung dieser produktiven Elementarorganismen gebildet wird. Nehmen wir z.B. die Manufaktur von Glasflaschen. Sie zerfällt in drei wesentlich unterschiedne Phasen. Erstens die vorbereitende Phase, wie Bereitung der Glaskomposition, Mengung von Sand, Kalk usw. und Schmelzung dieser Komposition zu einer flüssigen Glasmasse.⁴⁰ In der ersten Phase sind verschiedene Teilarbeiter beschäftigt, ebenso in der Schlußphase, der Entfernung der Flaschen aus den Trockenöfen, ihrer Sortierung, Verpackung usw. Zwischen beiden Phasen steht in der Mitte die eigentliche Glasmacherei oder Verarbeitung der flüssigen Glasmasse. An demselben Munde eines Glasofens arbeitet eine Gruppe, die in England das „hole“ (Loch) heißt und aus einem bottle maker oder finisher, einem blower, einem gatherer, einem putter up oder whetter off und einem taker in zusammengesetzt ist. Diese fünf Teilarbeiter bilden ebenso viele Sonderorgane eines einzigen Arbeitskörpers, der nur als Einheit, also nur durch unmittelbare Kooperation der fünf wirken kann. Fehlt ein Glied des fünfteiligen Körpers, so ist er paralysiert. Derselbe Glasofen hat aber verschiedene Öffnungen, in England z.B. 4–6, deren jede einen irdenen Schmelztiegel mit flüssigem Glas birgt und wovon jede eine eigne Arbeitergruppe von derselben fünfgliedrigen Form beschäftigt. Die Gliederung jeder einzelnen Gruppe beruht hier unmittelbar auf der Teilung der Arbeit, während das Band zwischen den verschiedenen gleichartigen Gruppen einfache Kooperation ist, die eins der Produktionsmittel, hier den Glasofen, durch gemeinsamen Konsum ökonomischer verbraucht. Ein solcher Glasofen mit seinen 4–6 Gruppen bildet eine Glashütte, und eine Glasmanufaktur umfaßt eine Mehrzahl solcher Hütten, zugleich mit den Vorrichtungen und Arbeitern für die einleitenden und abschließenden Produktionsphasen.

⁴⁰ In England, the melting-furnace is distinct from the glass-furnace in which the glass is ma-

⁴⁰ In England ist der Schmelzofen getrennt vom Glasofen, an dem das Glas verarbeitet wird,

14. Division of Labor and Manufactories

nipulated. In Belgium, one and the same furnace serves for both processes.

in Belgien z.B. dient derselbe Ofen zu beiden Prozessen.

The technical necessities of production not only lead to the growth and internal differentiation of one operation, it can also lead to the combination of previously separate operations:

Finally, just as Manufacture arises in part from the combination of various handicrafts, so, too, it develops into a combination of various manufactures. The larger English glass manufacturers, for instance, make their own earthenware melting-pots, because, on the quality of these depends, to a great extent, the success or failure of the process. The manufacture of one of the means of production is here united with that of the product. On the other hand, the manufacture of the product may be united with other manufactures, of which that product is the raw material, or with the products of which it is itself subsequently mixed. Thus, we find the manufacture of flint glass combined with that of glass cutting and brass founding; the latter for the metal settings of various articles of glass.

368:1 Endlich kann die Manufaktur, wie sie teilweise aus der Kombination verschiedener Handwerke entspringt, sich zu einer Kombination verschiedener Manufakturen entwickeln. Die größten englischen Glashütten z.B. fabrizieren ihre irdenen Schmelztiegel selbst, weil von deren Güte das Gelingen oder Mißlingen des Produkts wesentlich abhängt. Die Manufaktur eines Produktionsmittels wird hier mit der Manufaktur des Produkts verbunden. Umgekehrt kann die Manufaktur des Produkts verbunden werden mit Manufakturen, worin es selbst wieder als Rohmaterial dient oder mit deren Produkten es später zusammengesetzt wird. So findet man z.B. die Manufaktur von Flintglas kombiniert mit der Glasschleiferei und der Gelbgießerei, letztre für die metallische Einfassung mannigfacher Glasartikel.

↓ But this combination has its limits which cannot be overcome by manufacturing itself: The various manufactures so combined form more or less separate departments of a larger manufacture, but are at the same time independent processes, each with its own division of labor. In spite of the many advantages offered by this combination of manufactures, it never grows into a complete technical system on its own foundation. That happens only on its transformation into an industry carried on by machinery.

Die verschiedenen kombinierten Manufakturen bilden dann mehr oder minder räumlich getrennte Departemente einer Gesamtmanufaktur, zugleich voneinander unabhängige Produktionsprozesse, jeder mit eigener Teilung der Arbeit. Trotz mancher Vorteile, welche die kombinierte Manufaktur bietet, gewinnt sie, auf eigener Grundlage, keine wirklich technische Einheit. Diese entsteht erst bei ihrer Verwandlung in den maschinenmäßigen Betrieb.

Again: if one looks back to manufactories from machine technology, one can see better the contradictions which manufactories failed to resolve.

14.3.c. [Effect of the System of Manufacture back down on the Laborer and his Instrument]

First paragraph shows the effects on the instruments. Manufacture leads to sporadic use of machinery.

Early in the manufacturing period, the principle of lessening the necessary labor-time in the production of commodities,⁴¹ was accepted and formulated: and the use

368:2/o Die Manufakturperiode, welche Verminderung der zur Warenproduktion notwendigen Arbeitszeit bald als bewußtes Prinzip ausspricht⁴¹, entwickelt sporadisch

of machines, especially for certain simple first processes that have to be conducted on a very large scale, and with the application of great force, sprang up here and there. Thus, at an early period in paper manufacture, the tearing up of the rags was done by paper-mills; and in metal works, the pounding of the ores was effected by stamping mills.⁴² The Roman Empire had handed down the elementary form of all machinery in the water-wheel.⁴³

⁴¹ This can be seen from W. Petty, John Bellers, Andrew Yarranton, "The Advantages of the East India Trade," and J. Vanderlint, not to mention others.

⁴² Towards the end of the 16th century, mortars and sieves were still used in France for pounding and washing ores.

⁴³ The whole history of the development of machinery can be traced in the history of the corn mill. The factory in England is still a "mill". In German technological works of the first decade of this century, the term "Mühle" is still found in use, not only for all machinery driven by the forces of Nature, but also for all manufactures where apparatus in the nature of machinery is applied.

auch den Gebrauch von Maschinen, namentlich für gewisse einfache erste Prozesse, die massenhaft und mit großem Kraftaufwand auszuführen sind. So wird z.B. bald in der Papiermanufaktur das Zermalmen der Lumpen durch Papiermühlen und in der Metallurgie das Zerstoßen der Erze durch sogenannte Pochmühlen verrichtet.⁴²

Die elementarische Form aller Maschinerie hatte das römische Kaiserreich überliefert in der Wassermühle.⁴³

⁴¹ Man kann dies unter andren ersehn aus W. Petty, John Bellers, Andrew Yarranton, „The Advantages of the East-India Trade“ und J. Vanderlint.

⁴² Noch gegen Ende des 16. Jahrhunderts bedient sich Frankreich der Mörser und Siebe zum Pochen und Waschen der Erze.

⁴³ Die ganze Entwicklungsgeschichte der Maschinerie läßt sich verfolgen an der Geschichte der Getreidemühlen. Die Fabrik heißt im Englischen immer noch mill. In deutschen technologischen Schriften aus den ersten Dezennien des 19. Jahrhunderts findet man noch den Ausdruck Mühle nicht nur für alle mit Naturkräften getriebene Maschinerie, sondern selbst für alle Manufakturen, die maschinenartige Apparate anwenden.

↓ Big inventions come from the handicraft period; machinery had subordinate role.

The handicraft period bequeathed to us the great inventions of the compass, of gunpowder, of type-printing, and of the automatic clock. But, on the whole, machinery played that subordinate part which Adam Smith assigns to it in comparison with division of labor.⁴⁴ The sporadic use of machinery in the 17th century was of the greatest importance, because it supplied the great mathematicians of that time with a practical basis and stimulant to the creation of the science of mechanics.

Die Handwerksperiode vermachte die großen Erfindungen des Kompasses, des Pulvers, der Buchdruckerei und der automatischen Uhr. Im großen und ganzen jedoch spielt die Maschinerie jene Nebenrolle, die Adam Smith ihr neben der Teilung der Arbeit anweist.⁴⁴ Sehr wichtig wurde die sporadische Anwendung der Maschinerie im 17. Jahrhundert, weil sie den großen Mathematikern jener Zeit praktische Anhaltspunkte und Reizmittel zur Schöpfung der modernen Mechanik darbot.

Question 969 Which great inventions were bequeathed by the handicraft period?

⁴⁴ As will be seen more in detail in the fourth book of this work, Adam Smith has not established a single new proposition relating to division of labor. What, however, characterises him as the political economist par excellence of the

⁴⁴ Wie man aus dem Vierten Buch dieser Schrift näher sehn wird, hat A. Smith keinen einzigen neuen Satz über die Teilung der Arbeit aufgestellt. Was ihn aber als den zusammenfassenden politischen Ökonomen der Manufaktur-

14. Division of Labor and Manufactories

period of Manufacture, is the stress he lays on division of labor. The subordinate part which he assigns to machinery gave occasion in the early days of modern mechanical industry to the polemic of Lauderdale, and, at a later period, to that of Ure. A. Smith also confounds differentiation of the instruments of labor, in which the detail laborers themselves took an active part, with the invention of machinery; in this latter, it is not the workmen in manufactories, but learned men, handicraftsman, and even peasants (Brindley), who play a part.

periode charakterisiert, ist der Akzent, den er auf die Teilung der Arbeiter legt. Die untergeordnete Rolle, die er der Maschinerie anweist, rief im Beginn der großen Industrie Lauderdale's, in einer weiterentwickelten Epoche Ure's Polemik hervor. A. Smith verwechselt auch die Differenzierung der Instrumente, wobei die Teilarbeiter der Manufaktur selbst sehr tätig waren, mit der Maschinenerfindung. Es sind nicht Manufakturarbeiter, sondern Gelehrte, Handwerker, selbst Bauern (Brindley) usw., die hier eine Rolle spielen.

Question 970 *Why did the workers in the manufactories play no role as inventors of machinery?*

After this discussion of the tools, Marx discusses the workers next. Earlier, in , the workers were considered individually; now the combination of the detail laborers to an aggregate laborer is discussed.

The collective laborer, formed by the combination of a number of detail laborers, is the machinery specially characteristic of the manufacturing period. The various operations that are performed in turns by the producer of a commodity, and coalesce one with another during the progress of production, lay claim to him in various ways. In one operation he must exert more strength, in another more skill, in another more attention; and the same individual does not possess all these qualities in an equal degree. After Manufacture has once separated, made independent, and isolated the various operations, the laborers are divided, classified, and grouped according to their predominating qualities. If their natural endowments are, on the one hand, the foundation on which the division of labor is built up, on the other hand, Manufacture, once introduced, develops in them new powers that are by nature fitted only for limited and special functions.

369:1/o Die spezifische Maschinerie der Manufakturperiode bleibt der aus vielen Teilarbeitern kombinierte Gesamtarbeiter selbst. Die verschiedenen Operationen, die der Produzent einer Ware abwechselnd verrichtet und die sich im Ganzen seines Arbeitsprozesses verschlingen, nehmen ihn verschiedenartig in Anspruch. In der einen muß er mehr Kraft entwickeln, in der andren mehr Gewandtheit, in der dritten mehr geistige Aufmerksamkeit usw., und dasselbe Individuum besitzt diese Eigenschaften nicht in gleichem Grad. Nach der Trennung, Verselbständigung und Isolierung der verschiedenen Operationen werden die Arbeiter ihren vorwiegenden Eigenschaften gemäß geteilt, klassifiziert und gruppiert. Bilden ihre Naturbesonderheiten die Grundlage, worauf sich die Teilung der Arbeit pfpöpft, so entwickelt die Manufaktur, einmal eingeführt, Arbeitskräfte, die von Natur nur zu einseitiger Sonderfunktion taugen.

↑ The Simple commodity producer performs in turns various operations which require various skills, although one individual worker may not have all these skills to the same degree. In manufacture, these operations are separated, made independent, and isolated, and the laborers are allocated according to their prevailing skills and exclusively used for these specific functions.

↓ Therefore the aggregate laborer in manufacture is perfect, even though his individual components are one-sided:

14.3. Heterogeneous and Organic Manufacture

The collective laborer now possesses, in an equal degree of excellence, all the qualities requisite for production, and expends them in the most economical manner, by exclusively employing all his organs, consisting of particular laborers, or groups of laborers, in performing their special functions.⁴⁵ The one-sidedness and the deficiencies of the detail laborer become perfections when he is a part of the collective laborer.⁴⁶ The habit of doing only one thing converts him into a never failing instrument, while his connexion with the whole mechanism compels him to work with the regularity of the parts of a machine.⁴⁷

Der Gesamtarbeiter besitzt jetzt alle produktiven Eigenschaften in gleich hohem Grad der Virtuosität und verausgabt sie zugleich aufs ökonomischste, indem er alle seine Organe, individualisiert in besonderen Arbeitern oder Arbeitergruppen, ausschließlich zu ihren spezifischen Funktionen verwendet.⁴⁵ Die Einseitigkeit und selbst die Unvollkommenheit des Teilarbeiters werden zu seiner Vollkommenheit als Glied des Gesamtarbeiters.⁴⁶ Die Gewohnheit einer einseitigen Funktion verwandelt ihn in ihr naturgemäß sicher wirkendes Organ, während der Zusammenhang des Gesamtmechanismus ihn zwingt, mit der Regelmäßigkeit eines Maschinenteils zu wirken.⁴⁷

↑ The individual workers are forced to keep up with the labor process as if they were part of a machine.

⁴⁵ “The master manufacturer, by dividing the work to be executed into different processes, each requiring different degrees of skill or of force, can purchase exactly that precise quantity of both which is necessary for each process; whereas, if the whole work were executed by one workman, that person must possess sufficient skill to perform the most difficult, and sufficient strength to execute the most laborious of the operations into which the article is divided.” (Ch. Babbage, l.c., ch. xix.)

⁴⁶ For instance, abnormal development of some muscles, curvature of bones, etc.

⁴⁷ The question put by one of the Inquiry Commissioners, How the young persons are kept steadily to their work, is very correctly answered by Mr. Wm. Marshall, the general manager of a glass manufactory: “They cannot well neglect their work; when they once begin, they must go on; they are just the same as parts of a machine.” (“Children’s Empl. Comm.,” 4th Rep., 1865, p. 247.)

⁴⁵ „Indem man das Machwerk in mehrere verschiedene Operationen teilt, deren jede verschiedene Grade von Gewandtheit und Kraft erheischt, kann der Manufakturherr sich genau das jeder Operation entsprechende Quantum von Kraft und Gewandtheit verschaffen. Wäre dagegen das ganze Werk von einem Arbeiter zu verrichten, so müßte dasselbe Individuum genug Gewandtheit für die delikatesten und genug Kraft für die mühseligsten Operationen besitzen.“ (Ch. Babbage, l.c., ch. XIX.)

⁴⁶ Z.B. einseitige Muskelentwicklung, Knochenverkrümmung usw.

⁴⁷ Sehr richtig antwortet Herr Wm. Marshall, der general manager einer Glasmanufaktur, auf die Frage des Untersuchungskommissärs, wie die Arbeitsamkeit unter den beschäftigten Jungen aufrechterhalten werde: „Sie können ihre Arbeit gar nicht vernachlässigen; haben sie erst einmal zu arbeiten begonnen, so müssen sie auch weitermachen; sie sind gradeso wie Teile einer Maschine.“ („Child. Empl. Comm., Fourth Report“, 1865, p. 247.)

Since these specific functions have different complexities, the individual laborers have different degrees of education and different values, therefore there is a hierarchy. Then the different labor functions are assimilated to this hierarchy (in order to save wages, no laborer should perform functions which require different skills). Here the monotony of the labor process is revealed as the consequence of capitalism, not of mass production in general.

Since the collective laborer has functions, both simple and complex, both high

370:1 Da die verschiedenen Funktionen des Gesamtarbeiters einfacher oder zusam-

14. Division of Labor and Manufactories

and low, his members, the individual labor-powers, require different degrees of training, and must therefore have different values. Manufacture, therefore, develops a hierarchy of labor-powers, to which there corresponds a scale of wages. If, on the one hand, the individual laborers are appropriated and annexed for life by a limited function; on the other hand, the various operations of the hierarchy are parcelled out among the laborers according to both their natural and their acquired capabilities.⁴⁸ Every process of production, however, requires certain simple manipulations, which every man is capable of doing. They too are now severed from their connexion with the more pregnant moments of activity, and ossified into exclusive functions of specially appointed laborers.

⁴⁸ Dr. Ure, in his apotheosis of Modern Mechanical Industry, brings out the peculiar character of manufacture more sharply than previous economists, who had not his polemical interest in the matter, and more sharply even than his contemporaries Babbage, e.g., who, though much his superior as a mathematician and mechanician, treated mechanical industry from the standpoint of manufacture alone. Ure says, "This appropriation . . . to each, a workman of appropriate value and cost was naturally assigned, forms the very essence of division of labor." On the other hand, he describes this division as "adaptation of labor to the different talents of men," and lastly, characterises the whole manufacturing system as "a system for the division or gradation of labor," as "the division of labor into degrees of skill," etc. (Ure, l.c., pp. 19–23 passim.)

The simple "unskilled" manipulations are severed from the more difficult ones, and the unskilled laborer is created (same thing which was strictly excluded in the handicraft workshop).

Question 971 Explain how the category of "unskilled labor" (which did not exist in handicraft production) arose.

All these are means to make wages lower:

Hence, Manufacture begets, in every handicraft that it seizes upon, a class of so-called unskilled laborers, a class which

mengesetzter, niedriger oder höher, erscheinen seine Organe, die individuellen Arbeitskräfte, sehr verschiedene Grade der Ausbildung und besitzen daher sehr verschiedene Werte. Die Manufaktur entwickelt also eine Hierarchie der Arbeitskräfte, der eine Stufenleiter der Arbeitslöhne entspricht. Wird einerseits der individuelle Arbeiter einer einseitigen Funktion angeeignet und lebenslang annexiert, so werden ebensosehr die verschiedenen Arbeitsverrichtungen jener Hierarchie der natürlichen und erworbenen Geschicklichkeiten angepaßt.⁴⁸ Jeder Produktionsprozeß bedingt indes gewisse einfache Hantierungen, deren jeder Mensch, wie er geht und steht, fähig ist. Auch sie werden jetzt von ihrem flüssigen Zusammenhang mit den inhaltvollern Momenten der Tätigkeit losgelöst und zu ausschließlichen Funktionen verknöchert.

⁴⁸ Dr. Ure in seiner Apotheose der großen Industrie fühlt die eigentümlichen Charaktere der Manufaktur schärfer heraus als frühere Ökonomen, die nicht sein polemisches Interesse hatten, und selbst als seine Zeitgenossen, z.B. Babbage, der ihm zwar überlegen ist als Mathematiker und Mechaniker, aber dennoch die große Industrie eigentlich nur vom Standpunkt der Manufaktur auffaßt. Ure bemerkt: „Die Aneignung der Arbeiter an jede Sonderoperation bildet das Wesen der Verteilung der Arbeiten.“ Andererseits bezeichnet er diese Verteilung als „Anpassung der Arbeiten an die verschiedenen individuellen Fähigkeiten“ und charakterisiert endlich das ganze Manufaktursystem als „ein System von Gradationen nach dem Rang der Geschicklichkeit“, als „eine Teilung der Arbeit nach den verschiedenen Graden des Geschicks“ usw. (Ure, „Philos. of Manuf.“, p. 19–23 passim.)

371:1 Die Manufaktur erzeugt daher in jedem Handwerk, das sie ergreift, eine Klasse sogenannter ungeschickter Arbeiter, die

14.4. Division of Labor in Manufacture and in Society

handicraft industry strictly excluded. If it develops a one-sided speciality into a perfection, at the expense of the whole of a man's working capacity, it also begins to make a speciality of the absence of all development. Alongside of the hierarchic gradation there steps the simple separation of the laborers into skilled and unskilled. For the latter, the cost of apprenticeship vanishes; for the former, it diminishes, compared with that of artificers, in consequence of the functions being simplified. In both cases the value of labor-power falls.⁴⁹

⁴⁹ "Each handicraftsman being ... enabled to perfect himself by practice in one point, became ... a cheaper workman." (Ure, l.c., p. 19.)

der Handwerksbetrieb streng ausschloß. Wenn sie die durchaus vereinseitigte Spezialität auf Kosten des ganzen Arbeitsvermögens zur Virtuosität entwickelt, beginnt sie auch schon den Mangel aller Entwicklung zu einer Spezialität zu machen. Neben die hierarchische Abstufung tritt die einfache Scheidung der Arbeiter in geschickte und ungeschickte. Für letztere fallen die Erlernungskosten ganz weg, für erstere sinken sie, im Vergleich zum Handwerker, infolge vereinfachter Funktion. In beiden Fällen sinkt der Wert der Arbeitskraft.⁴⁹

⁴⁹ „Jeder Handwerker, der ... instand gesetzt wurde, sich durch die Praxis in einer Einzelverrichtung zu vervollkommen ... wurde ein billigerer Arbeiter.“ (Ure, l.c. p. 19.)

Exception: the decomposition of the labor-process also creates new comprehensive functions.

An exception to this law holds good whenever the decomposition of the labor-process begets new and comprehensive functions, that either had no place at all, or only a very modest one, in handicrafts.

Ausnahme findet statt, soweit die Zersetzung des Arbeitsprozesses neue zusammenfassende Funktionen erzeugt, die im Handwerksbetrieb gar nicht oder nicht in demselben Umfang vorkamen.

↓ The creation of unskilled labor and devaluation of the laborer is source of relative surplus-value.

The fall in the value of labor-power, caused by the disappearance or diminution of the expenses of apprenticeship, implies a direct increase of surplus-value for the benefit of capital; for everything that shortens the necessary labor-time required for the reproduction of labor-power, extends the domain of surplus-labor.

Die relative Entwertung der Arbeitskraft, die aus dem Wegfall oder der Verminderung der Erlernungskosten entspringt, schließt unmittelbar höhere Verwertung des Kapitals ein, denn alles, was die zur Reproduktion der Arbeitskraft notwendige Zeit verkürzt, verlängert die Domäne der Mehrarbeit.

14.4. Division of Labor in Manufacture and Division of Labor in Society

After having discussed the origin (out of co-operation) of the division of labor in the manufactories, its simple elements, and the totality of these elements, Marx discusses now the relation between the division of labor in the manufactories and the social division of labor in existence when the manufactories were formed. The main question is: is the division of labor in the manufactories the organic further development of the division of labor mediated by commodity exchange, or must it be understood as a capitalist phenomenon. Marx will show that it is a specific capitalist phenomenon.

14. Division of Labor and Manufactories

We first considered the origin of Manufacture out of co-operation, then its simple elements, then the detail laborer and his implements, and finally, the totality of the mechanism. We shall now lightly touch upon the relation between the division of labor in manufacture, and the social division of labor, which forms the foundation of all production of commodities.

371:2 Wir betrachteten erst den Ursprung der Manufaktur, dann ihre einfachen Elemente, den Teilarbeiter und sein Werkzeug, endlich ihren Gesamtmechanismus. Wir berühren jetzt kurz das Verhältnis zwischen der manufakturmäßigen Teilung der Arbeit und der gesellschaftlichen Teilung der Arbeit, welche die allgemeine Grundlage aller Warenproduktion bildet.

The above translation “the origin of Manufacture out of co-operation” leans on the French [megaII/7]301:1 “nous avons vu comment la manufacture est sortie

de la coopération” which is clearer and more explicit than the German. Moore-Aveling [megaII/7]288:1 and Fowkes have “We first considered the origin of

Manufacture,” they leave out the phrase “out of co-operation” which is not in the German but in the French edition.

14.4.a. [General Classification of Division of Labor]

Marx begins with a classification of division of labor using the categories general, particular, and individual (im einzelnen).

If we keep labor alone in view, we may designate the separation of social production into its main divisions or *genera*—viz., agriculture, industries, etc., as division of labor in general, and the splitting up of these genera into species and sub-species, as division of labor in particular, and the division of labor within the workshop as division of labor in singular or in detail.⁵⁰

371:3 Hält man nur die Arbeit selbst im Auge, so kann man die Trennung der gesellschaftlichen Produktion in ihre großen Gattungen, wie Agrikultur, Industrie usw., als Teilung der Arbeit im allgemeinen, die Sonderung dieser Produktionsgattungen in Arten und Unterarten als Teilung der Arbeit im besondern, und die Teilung der Arbeit innerhalb einer Werkstatt als Teilung der Arbeit im einzelnen bezeichnen.⁵⁰

⁵⁰ “Division of labor proceeds from the separation of professions the most widely different to that division, where several laborers divide between them the preparation of one and the same product, as in manufacture.” (Storch: “Cours d’Econ. Pol.,” Paris Edn. t. I., p. 173.) “Nous rencontrons chez les peuples parvenus à un certain degré de civilisation trois genres de divisions d’industrie: la première, que nous nommerons générale, amène la distinction des producteurs en agriculteurs, manufacturiers et commerçants, elle se rapporte aux trois principales branches d’industrie nationale; la seconde, qu’on pourrait appeler spéciale, est la division de chaque genre d’industrie en espèces ... la troisième division d’industrie, celle enfin qu’on devrait qualifier de division de la besogne ou de travail proprement dit, est celle qui s’établit dans les arts et les métiers séparés ... qui s’établit dans la plupart des manufactures et des ateliers.” (Skarbek,

⁵⁰ „Die Teilung der Arbeit geht von der Trennung der verschiedenartigsten Professionen fort bis zu jener Teilung, wo mehrere Arbeiter sich in die Anfertigung eines und desselben Produkts teilen, wie in der Manufaktur.“ (Storch, „Cours d’Écon. Pol.“, Pariser Ausgabe, t. I, p. 173.) „Wir begegnen bei den Völkern, die eine gewisse Stufe der Zivilisation erreicht haben, drei Arten von Arbeitsteilung: die erste, die wir die allgemeine nennen, führt die Scheidung der Produzenten in Landwirte, Gewerbetreibende und Kaufleute herbei, sie entspricht den drei Hauptzweigen der nationalen Arbeit; die zweite, die man die besondere nennen könnte, ist die Teilung jedes Arbeitszweigs in Arten ... die dritte Arbeitsteilung endlich, die man als Teilung der Arbeitsverrichtung oder als Arbeitsteilung im eigentlichen Sinne bezeichnen sollte, ist diejenige, die sich in den einzelnen Handwerken und Berufen herausbildet ... und in den meisten Manufakturen und Werkstät-

l.c., pp. 84, 85.)

| ten Fuß faßt.“ (Skarbek, l.c. p. 84, 85.)

14.4.b. [Double Origin of the Division of Labor]

The same duality which we observed in the origin of manufactories and the phenomenology of developed manufactories can also be observed in the origin of social division of labor:

↓ *Origin* of division of labor in society is twofold, just as the origin of division of labor in one manufactory is twofold. This is one of their “analogies” as he calls them in . In both cases, the dialectics between dependence and independence is responsible for this twofold origin. Note the *three* phases:

- 1) “Physiological” division of labor one of the points of departure.
- 2) Exchange on the borders of independent communities which produce different things due to different conditions the other point of departure.
- 3) This exchange acts back on the internal division of labor, until the connection is mediated only by the exchange of commodities between individuals.

This exchange occurs when the division of labor is fully developed and the centrifugal part, the independence, gains the upper hand.

Division of labor in a society, and the corresponding tying down of individuals to a particular calling, develops itself, just as does the division of labor in manufacture, from opposite starting-points.

372/o Die Teilung der Arbeit innerhalb der Gesellschaft und die entsprechende Beschränkung der Individuen auf besondere Berufssphären entwickelt sich, wie die Teilung der Arbeit innerhalb der Manufaktur, von entgegengesetzten Ausgangspunkten.

First development path:

Within a family,^{50a} and after further development within a tribe, there springs up naturally a division of labor, caused by differences of sex and age, a division that is consequently based on a purely physiological foundation, which division enlarges its materials by the expansion of the community, by the increase of population, and more especially, by the conflicts between different tribes, and the subjugation of one tribe by another.

Innerhalb einer Familie,^{50a} weiter entwickelt eines Stammes, entspringt eine naturwüchsige Teilung der Arbeit aus den Geschlechts- und Altersverschiedenheiten, also auf rein physiologischer Grundlage, die mit der Ausdehnung des Gemeinwesens, der Zunahme der Bevölkerung und namentlich dem Konflikt zwischen verschiedenen Stämmen und der Unterjochung eines Stamms durch den andren ihr Material ausweitet.

^{50a} *Note to the third edition.* Subsequent very searching study of the primitive condition of man, led the author to the conclusion, that it was not the family that originally developed into the tribe, but that, on the contrary, the tribe was the primitive and spontaneously developed form of human association, on the basis of blood relationship, and that out of the first incipient loosening of the tribal bonds, the many and various forms of the family were afterwards developed. F. E.

^{50a} {Note zur 3. Aufl.—Spätere sehr gründliche Studien der menschlichen Urzustände führten den Verfasser zum Ergebnis, daß ursprünglich nicht die Familie sich zum Stamm ausgebildet, sondern umgekehrt, der Stamm die ursprüngliche naturwüchsige Form der auf Blutsverwandtschaft beruhenden menschlichen Vergesellschaftung war, so daß aus der beginnenden Auflösung der Stammesbände erst später die vielfach verschidnen Formen der Familie sich entwickelten.—F. E.}

The second development path was already discussed earlier, in 98:1:

14. Division of Labor and Manufactories

On the other hand, as I have before remarked, the exchange of products springs up at the points where different families, tribes, communities, come in contact; for, in the beginning of civilisation, it is not private individuals but families, tribes, etc., that meet on an independent footing. Different communities find different means of production, and different means of subsistence in their natural environment. Hence, their modes of production, and of living, and their products are different. It is this spontaneously developed difference which, when different communities come in contact, calls forth the mutual exchange of products, and the consequent gradual conversion of those products into commodities. Exchange does not create the differences between the spheres of production, but brings what are already different into relation, and thus converts them into more or less inter-dependent branches of the collective production of an enlarged society.

Andrerseits, wie ich früher bemerkt, entspringt der Produktaustausch an den Punkten, wo verschiedene Familien, Stämme, Gemeinwesen in Kontakt kommen, denn nicht Privatpersonen, sondern Familien, Stämme usw. treten sich in den Anfängen der Kultur selbständig gegenüber. Verschiedne Gemeinwesen finden verschiedene Produktionsmittel und verschiedene Lebensmittel in ihrer Naturumgebung vor. Ihre Produktionsweise, Lebensweise und Produkte sind daher verschieden. Es ist diese naturwüchsige Verschiedenheit, die bei dem Kontakt der Gemeinwesen den Austausch der wechselseitigen Produkte und daher die allmähliche Verwandlung dieser Produkte in Waren hervorruft. Der Austausch schafft nicht den Unterschied der Produktionssphären, sondern setzt die unterschiednen in Beziehung und verwandelt sie so in mehr oder minder voneinander abhängige Zweige einer gesellschaftlichen Gesamtproduktion.

Comparison of and connection between the two development paths:

In the latter case, the social division of labor arises from the exchange between spheres of production, that are originally distinct and independent of one another. In the former, where the physiological division of labor is the starting-point, the particular organs of a compact whole grow loose, and break off, principally owing to the exchange of commodities with foreign communities, and then isolate themselves so far, that the sole bond still connecting the various kinds of work is the exchange of the products as commodities.

Hier entsteht die gesellschaftliche Teilung der Arbeit durch den Austausch ursprünglich verschiedner, aber voneinander unabhängiger Produktionssphären. Dort, wo die physiologische Teilung der Arbeit den Ausgangspunkt bildet, lösen sich die besondren Organe eines unmittelbar zusammengehörigen Ganzen voneinander ab, zersetzen sich, zu welchem Zersetzungsprozeß der Warenaustausch mit fremden Gemeinwesen den Hauptanstoß gibt, und verselbständigen sich bis zu dem Punkt, wo der Zusammenhang der verschiedenen Arbeiten durch den Austausch der Produkte als Waren vermittelt wird.

↓ The following characterization is shared also by the two alternative pathways to manufactures, see :

In the one case, it is the making dependent what was before independent; in the other case, the making independent what was before dependent.

Es ist in dem einen Fall Verunselbständigung der früher Selbständigen, in dem andren Verselbständigung der früher Unselbständigen.

↑ Note that the making dependent of the formerly independent gave the stimulus to make that independent what was formerly dependent.

14.4.c. [Division of Labor Mediated by Commodity Exchange]

So far, Marx has discussed division of labor in any society. Now he focuses on the division of labor mediated by commodity exchange.

Separation between town and country “foundation of every division of labor that is *well developed*, and *brought about by the exchange of commodities*.”

The foundation of every division of labor that is well developed, and brought about by the exchange of commodities, is the separation between town and country.⁵¹ It may be said, that the whole economic history of society is summed up in the movement of this antithesis. We pass it over, however, for the present.

373:1 Die Grundlage aller entwickelten und durch Warenaustausch vermittelten Teilung der Arbeit ist die Scheidung von Stadt und Land.⁵¹ Man kann sagen, daß die ganze ökonomische Geschichte der Gesellschaft sich in der Bewegung dieses Gegensatzes resümiert, auf den wir jedoch hier nicht weiter eingehen.

The formulation “movement of this contradiction” is revealing. It also applies to what Marx is doing in the present chapter: he is studying the movement of the contradiction inherent in the division of labor.

⁵¹ Sir James Steuart is the economist who has handled this subject best. How little his book, which appeared ten years before the “Wealth of Nations,” is known, even at the present time, may be judged from the fact that the admirers of Malthus do not even know that the first edition of the latter’s work on population contains, except in the purely declamatory part, very little but extracts from Steuart, and in a less degree, from Wallace and Townsend.

⁵¹ Sir James Steuart hat diesen Punkt am besten behandelt. Wie wenig sein Werk, welches 10 Jahre vor dem „Wealth of Nations“ erschien, heutzutage bekannt ist, sieht man u.a. daraus, daß die Bewunderer des Malthus nicht einmal wissen, daß dieser in der ersten Ausgabe seiner Schrift über die „Population“, vom rein deklamatorischen Teil abgesehen, neben den Pfaffen Wallace und Townsend fast nur den Steuart abschreibt.

Density of population in society a material prerequisite of division of labor, just as the increased number of workers in the same workshop was the material prerequisite for the division of labor in one manufactory (another “analogy”). Impulse of the division of labor in the manufactories came from the labor process, this is its capitalist birthmark which is only overcome in machinery, where the impulse came from the tool.

Just as a certain number of simultaneously employed laborers are the material pre-requisites for division of labor in manufacture, so are the number and density of the population, which here correspond to the agglomeration in one workshop, a necessary condition for the division of labor in society.⁵²

373:2 Wie für die Teilung der Arbeit innerhalb der Manufaktur eine gewisse Anzahl gleichzeitig angewandter Arbeiter die materielle Voraussetzung bildet, so für die Teilung der Arbeit innerhalb der Gesellschaft die Größe der Bevölkerung und ihre Dichtigkeit, die hier an die Stelle der Agglomeration in derselben Werkstatt tritt.⁵²

⁵² “There is a certain density of population which is convenient, both for social intercourse, and for that combination of powers by which the produce of labor is increased.” (James Mill, l.c., p. 50.) “As the number of laborers increases, the productive power of society augments in the compound ratio of that increase, multiplied by the effects of the division of labor.” (Th. Hodgskin, l.c., pp. 125, 126.)

⁵² „Es gibt eine gewisse Bevölkerungsdichte, die zweckdienlich ist, sowohl für den gesellschaftlichen Verkehr als auch für jenes Zusammenwirken der Kräfte, durch das der Ertrag der Arbeit gesteigert wird.“ (James Mill, l.c. p. 50.) „Wenn die Zahl der Arbeiter wächst, steigt die Produktivkraft der Gesellschaft im gleichen Verhältnis zu diesem Wachstum, multipliziert mit der Wirkung der Arbeitsteilung.“ (Th. Hodgskin, l.c.

14. Division of Labor and Manufactories

p. 120.)

↓ More details about what this density means:

Nevertheless, this density is more or less relative. A relatively thinly populated country, with well-developed means of communication, has a denser population than a more numerous populated country, with badly-developed means of communication; and in this sense the Northern States of the American Union, for instance, are more thickly populated than India.⁵³

⁵³ In consequence of the great demand for cotton after 1861, the production of cotton, in some thickly populated districts of India, was extended at the expense of rice cultivation. In consequence there arose local famines, the defective means of communication not permitting the failure of rice in one district to be compensated by importation from another.

Indes ist diese Dichtigkeit etwas Relatives. Ein relativ spärlich bevölkertes Land mit entwickelten Kommunikationsmitteln besitzt eine dichtere Bevölkerung als ein mehr bevölkertes Land mit unentwickelten Kommunikationsmitteln, und in dieser Art sind z.B. die nördlichen Staaten der amerikanischen Union dichter bevölkert als Indien.⁵³

⁵³ Infolge der großen Baumwollnachfrage seit 1861 wurde in einigen sonst zahlreich bevölkerten Distrikten Ostindiens die Baumwollproduktion auf Kosten der Reisproduktion ausgedehnt. Es entstand daher partielle Hungersnot, weil wegen mangelnder Kommunikationsmittel und daher mangelnden physischen Zusammenhangs der Reisausfall in einem Distrikt nicht durch Zufuhr aus andren Distrikten ausgeglichen werden konnte.

14.4.d. [Connections between Division of Labor in Society and in the Manufactories]

↓ Division of labor in the manufactories can only develop after the social division of labor mediated by commodity exchange has already reached a certain level:

Since the production and the circulation of commodities are the general prerequisites of the capitalist mode of production, division of labor in manufacture requires that division of labor in society at large should previously have attained a certain degree of development.

↓ But then the division of labor in the manufactories deepens and multiplies the social division of labor:

Inversely, the division of labor in the manufactories reacts upon and develops and multiplies that in society.

374/o Da Warenproduktion und Warenzirkulation die allgemeine Voraussetzung der kapitalistischen Produktionsweise, erheischt manufakturmäßige Teilung der Arbeit eine schon bis zu gewissem Entwicklungsgrad gereifte Teilung der Arbeit im Innern der Gesellschaft.

Umgekehrt entwickelt und vervielfältigt die manufakturmäßige Teilung der Arbeit rückwirkend jene gesellschaftliche Teilung der Arbeit.

This happens in several ways. (1) The specialization of labor and differentiation of means of production inside the manufactories also fosters a deeper social division of labor.

Simultaneously, with the differentiation of the instruments of labor, the industries that produce these instruments, become more and more differentiated.⁵⁴ If the manufacturing system seize upon an industry, which, previously, was carried on in con-

Mit der Differenzierung der Arbeitsinstrumente differenzieren sich mehr und mehr die Gewerbe, welche diese Instrumente produzieren.⁵⁴ Ergreift der manufakturmäßige Betrieb ein Gewerbe, das bisher als Haupt- oder Nebengewerbe mit andren zusammen-

14.4. Division of Labor in Manufacture and in Society

nexion with others, either as a chief or as a subordinate industry, and by one producer, these industries immediately separate their connexion, and become independent. If it seizes upon a particular stage in the production of a commodity, the other stages of its production become converted into so many independent industries.

hing und von demselben Produzenten ausgeführt wurde, so findet sofort Scheidung und gegenseitige Verselbständigung statt. Ergreift er eine besondere Produktionsstufe einer Ware, so verwandeln sich ihre verschiedenen Produktionsstufen in verschiedene unabhängige Gewerbe.

(2) Social division of labor is fostered also by those manufactories which combine many different crafts:

It has already been stated, that where the finished article consists merely of a number of parts fitted together, the detail operations may re-establish themselves as genuine and separate handicrafts.

Es ward bereits angedeutet, daß, wo das Machwerk ein bloß mechanisch zusammengesetztes Ganze von Teilprodukten, die Teilarbeiten sich selbst wieder zu eignen Handwerken verselbständigen können.

The manufactories even split themselves into parts in order to accomplish a “more perfect” division of labor:

In order to carry out more perfectly the division of labor in a manufactory, a formerly undivided branch of production is, according to the varieties of its raw material, or the various forms that one and the same raw material may assume, split up into numerous, and to some extent, entirely new manufactories. Accordingly, in France alone, in the first half of the 18th century, over 100 different kinds of silk stuffs were woven, and, in Avignon, it was law, that “every apprentice should devote himself to only one sort of fabrication, and should not learn the preparation of several kinds of stuff at once.”

Um die Teilung der Arbeiter vollkommener innerhalb einer Manufaktur auszuführen, wird derselbe Produktionszweig, je nach der Verschiedenheit seiner Rohstoffe oder der verschiedenen Formen, die derselbe Rohstoff erhalten kann, in verschiedene, zum Teil ganz neue Manufakturen gespaltet. So wurden bereits in der ersten Hälfte des 18. Jahrhunderts in Frankreich allein über 100 verschiedenartige Seidenzeuge gewebt, und in Avignon z.B. war es Gesetz, daß „jeder Lehrling sich immer nur einer Fabrikationsart widmen und nicht die Verfertigung mehrerer Zeugarten zugleich lernen durfte“.

Also territorial division of labor and division of labor within the colonial system are stimulated by the system of manufactories.

The territorial division of labor, which confines special branches of production to special districts of a country, acquires fresh stimulus from the system of manufactories, which exploits every special advantage.⁵⁵ The Colonial system and the opening out of the markets of the world, both of which are included in the general conditions of existence of the manufacturing period, furnish rich material for developing the division of labor in society.

Die territoriale Teilung der Arbeit, welche besondere Produktionszweige an besondere Distrikte eines Landes bannt, erhält neuen Anstoß durch den manufakturmäßigen Betrieb, der alle Besonderheiten ausbeutet.⁵⁵ Reiches Material zur Teilung der Arbeit innerhalb der Gesellschaft liefert der Manufakturperiode die Erweiterung des Weltmarkts und das Kolonialsystem, die zum Umkreis ihrer allgemeinen Existenzbedingungen gehören.

⁵⁴ Thus the fabrication of shuttles formed as early as the 17th century, a special branch of industry in Holland.

⁵⁴ So bildete die Fabrikation der Weberschiffchen schon während des 17. Jahrhunderts einen besondern Industriezweig in Holland.

14. Division of Labor and Manufactories

⁵⁵ Whether the woollen manufacture of England is not divided into several parts or branches appropriated to particular places, where they are only or principally manufactured; fine cloths in Somersetshire, coarse in Yorkshire, long ells at Exeter, soies at Sudbury, crapes at Norwich, linseys at Kendal, blankets at Whitney, and so forth.” (Berkeley: “The Querist,” 1751, §520.)

⁵⁵ „Ist nicht die Wollmanufaktur Englands in verschiedene Teile oder Zweige geschieden, die sich an besonderen Orten festgesetzt haben, wo sie allein oder hauptsächlich hergestellt werden; feine Tuche in Somersetshire, grobe in Yorkshire, doppelbreite in Exeter, in Sudbury, Krepps in Norwich, Halbwollstoffe in Kendal, Decken in Whitney usw.!“ (Berkeley, „The Querist“, 1750, §520.)

↓ Non-economic effects of the manufactorial division of labor: specialization and sorting everywhere.

It is not the place, here, to go on to show how division of labor seizes upon, not only the economic, but every other sphere of society, and everywhere lays the foundation of that all engrossing system of specialising and sorting men, that development in a man of one single faculty at the expense of all other faculties, which caused A. Ferguson, the master of Adam Smith, to exclaim: “We make a nation of Helots, and have no free citizens.”⁵⁶

Es ist hier nicht der Ort, weiter nachzuweisen, wie sie neben der ökonomischen jede andre Sphäre der Gesellschaft ergreift und überall die Grundlage zu jener Ausbildung des Fachwesens, der Spezialitäten, und einer Parzellierung des Menschen legt, die schon A. Ferguson, den Lehrer A. Smiths, in den Ausruf ausbrechen ließ: „Wir machen eine Nation von Heloten, und es gibt keine Freien unter uns.“⁵⁶

⁵⁶ A. Ferguson: “History of Civil Society.” Edinburgh, 1767; Part iv, sect. ii., p. 285.

⁵⁶ A. Ferguson, „History of Civil Society“, Edinb. 1767, part IV, sect. II, p. 285.

14.4.e. [Essential Differences between Division of Labor in Society and in the Manufactories]

But, in spite of the numerous analogies and links connecting them, division of labor in the interior of a society, and that in the interior of a workshop, differ not only in degree, but also in kind.

375:1/oo Trotz der zahlreichen Analogien jedoch und der Zusammenhänge zwischen der Teilung der Arbeit im Innern der Gesellschaft und der Teilung innerhalb einer Werkstatt sind beide nicht nur graduell, sondern wesentlich unterschieden.

To make the case that there is a difference between division of labor in society and division of labor in the manufactories, Marx begins with a situation where the division of labor in society seems the most *similar* to the division of labor in a manufactory:

Such analogy seems perhaps most striking where an inner bond weaves through different branches of trade.

Am schlagendsten scheint die Analogie unstreitig, wo ein innres Band verschiedene Geschäftszweige verschlingt.

“*Unstreitig*” (undisputably) is translated with “perhaps,” i.e.,

Marx’s overstatement is replaced by an English-speaking understatement.

↑ If different branches in the social division of labor are united by an inner bond, one might think that there is no essential difference between their social division of labor and the division of labor in a manufactory. Marx is about to give an Achilles-heel critique of this mistaken notion, he critiques it at the point where it seems most convincing. ↓ Livestock as an example:

14.4. Division of Labor in Manufacture and in Society

For instance the cattle-breeder produces hides, the tanner makes the hides into leather, and the shoemaker, the leather into boots. Here the thing produced by each of them is but a step towards the final form, which is the product of all their labors combined. There are, besides, all the various industries that supply the cattle-breeder, the tanner, and the shoemaker with the means of production.

Der Viehzüchter z.B. produziert Häute, der Gerber verwandelt die Häute in Leder, der Schuster das Leder in Stiefel. Jeder produziert hier ein Stufenprodukt, und die letzte fertige Gestalt ist das kombinierte Produkt ihrer Sonderarbeiten. Es kommen hinzu die mannigfachen Arbeitszweige, die dem Viehzüchter, Gerber, Schuster Produktionsmittel liefern.

The mistaken notion that the distinction between division of labor in society and that in manufacture is only subjective seems even more convincing because it was held by Adam Smith:

Now it is quite possible to imagine, with Adam Smith, that the difference between the above social division of labor, and the division in manufacture, is merely subjective, exists merely for the observer, who, in a manufacture, can see with one glance, all the numerous operations being performed on one spot, while in the instance given above, the spreading out of the work over great areas, and the great number of people employed in each branch of labor, obscure the connexion.⁵⁷

Man kann sich nun mit A. Smith einbilden, diese gesellschaftliche Teilung der Arbeit unterscheide sich von der manufakturmäßigen nur subjektiv, nämlich für den Beobachter, der hier die mannigfachen Teilarbeiten auf einen Blick räumlich zusammensieht, während dort ihre Zerstreuung über große Flächen und die große Zahl der in jedem Sonderzweig Beschäftigten den Zusammenhang verdunkeln.⁵⁷

The footnote gives textual evidence that Smith held this view:

⁵⁷ In manufacture proper, he says, the division of labor seems to be greater, because "those employed in every different branch of the work can often be collected into the same workhouse, and placed at once under the view of the spectator. In those great manufactures, (!) on the contrary, which are destined to supply the great wants of the great body of the people, every different branch of the work employs so great a number of workmen, that it is impossible to collect them all into the same workhouse ... the division is not near so obvious." (A. Smith: "Wealth of Nations," bk. I, ch. I.) The celebrated passage in the same chapter that begins with the words, "Observe the accommodation of the most common artificer or day-laborer in a civilised and thriving country," etc., and then proceeds to depict what an enormous number and variety of industries contribute to the satisfaction of the wants of an ordinary laborer, is copied almost word for word from B. de Mandeville's Remarks to his "Fable of the Bees, or Private Vices, Publick Benefits." (First ed., without the remarks, 1706; with the

⁵⁷ In den eigentlichen Manufakturen, sagt er, scheint die Teilung der Arbeit größer, weil „die in jedem einzelnen Arbeitszweig Beschäftigten oft in einem Arbeitshaus zusammen sein und vom Beobachter mit einem Blick übersehen werden können. In jenen großen Manufakturen (!) dagegen, welche dazu bestimmt sind, die Hauptbedürfnisse der großen Masse der Bevölkerung zu befriedigen, sind in jedem einzelnen Arbeitszweig so viele Arbeiter beschäftigt, daß man sie unmöglich in einem Arbeitshaus zusammenbringen kann ... die Teilung ist nicht annähernd so offensichtlich.“ (A. Smith, „Wealth of Nations“, b. I, ch. I.) Der berühmte Passus in demselben Kapitel, der mit den Worten beginnt: „Man betrachte die Habe des gewöhnlichsten Handwerkers oder Tagelöhners in einem zivilisierten und blühenden Lande usw.“ und dann weiter ausmalt, wie zahllos mannigfaltige Gewerbe zur Befriedigung der Bedürfnisse eines gewöhnlichen Arbeiters zusammenwirken, ist ziemlich wörtlich kopiert aus B. de Mandevilles Remarks zu seiner „Fable of the Bees, or, Private Vices, Publick Be-

14. Division of Labor and Manufactories

remarks, 1714.)

nefits.“ (Erste Ausgabe ohne Remarks 1705, mit den Remarks 1714.)

Even in this case, when the division of labor in society seems most similar to the division of labor in a manufactory, there are many essential differences. Marx gives a list. ↓ First item in this list: they two kinds of division of labor are mediated by different mechanisms. Markets play a role in both, but for the division of labor in society it is the product market, while for the division of labor in the manufactory it is the labor market.

But what is it that forms the bond between the independent labors of the cattle-breeder, the tanner, and the shoemaker? It is the fact that their respective products are commodities. What, on the other hand, characterises division of labor in manufactures? The fact that the detail laborer produces no commodities.⁵⁸ It is only the common product of all the detail laborers that becomes a commodity.^{58a} Division of labor in society is brought about by the purchase and sale of the products of different branches of industry, while the connexion between the detail operations in a workshop is due to the sale of the labor-power of several workmen to one capitalist, who applies it as combined labor-power.

⁵⁸ “There is no longer anything which we can call the natural reward of individual labor. Each laborer produces only some part of a whole, and each part, having no value or utility in itself, there is nothing on which the laborer can seize, and say: It is my product, this I will keep to myself.” (“Labor Defended against the Claims of Capital.” Lond., 1825, p. 25.) The author of this admirable work is the Th. Hodgskin I have already cited.

^{58a} This distinction between division of labor in society and in manufacture, was practically illustrated to the Yankees. One of the new taxes devised at Washington during the civil war, was the duty of 6% “on all industrial products.” Question: What is an industrial product? Answer of the legislature: A thing is produced “when it is made,” and it is made when it is ready for sale. Now, for one example out of many. The New York and Philadelphia manufacturers had previously been in the habit of “making” umbrellas with all their belongings. But since an umbrella is a *mixtum compositum* of very heterogeneous parts, by degrees these parts became the prod-

Was aber stellt den Zusammenhang her zwischen den unabhängigen Arbeiten von Viehzüchter, Gerber, Schuster? Das Dasein ihrer respektiven Produkte als Waren. Was charakterisiert dagegen die manufakturmäßige Teilung der Arbeit? Daß der Teilarbeiter keine Ware produziert.⁵⁸ Erst das gemeinsame Produkt der Teilarbeiter verwandelt sich in Ware.^{58a} Die Teilung der Arbeit im Innern der Gesellschaft ist vermittelt durch den Kauf und Verkauf der Produkte verschiedener Arbeitszweige, der Zusammenhang der Teilarbeiten in der Manufaktur durch den Verkauf verschiedener Arbeitskräfte an denselben Kapitalisten, der sie als kombinierte Arbeitskraft verwendet.

⁵⁸ „Es gibt aber nichts mehr, was man als den natürlichen Lohn der Arbeit eines einzelnen bezeichnen könnte. Jeder Arbeiter erzeugt nur einen Teil eines Ganzen, und da jeder Teil für sich allein ohne Wert oder Nutzen ist, gibt es nichts, was der Arbeiter nehmen und wovon er sagen könnte: Das ist mein Erzeugnis, das will ich für mich behalten.“ („Labour defended against the claims of Capital“, Lond. 1825, p. 25.) Der Verfasser dieser vorzüglichen Schrift ist der früher zitierte Th. Hodgskin.

^{58a} Note zur 2. Ausgabe. Dieser Unterschied zwischen gesellschaftlicher und manufakturmäßiger Teilung der Arbeit wurde den Yankees praktisch illustriert. Eine der während des Bürgerkriegs zu Washington neu ausgeheckten Steuern war die Akzise von 6% auf „alle industriellen Produkte“. Frage: Was ist ein industrielles Produkt? Antwort des Gesetzgebers: Ein Ding ist produziert, „wenn es gemacht ist“ (when it is made), und es ist gemacht, wenn für den Verkauf fertig. Nun ein Beispiel aus vielen. Manufakturen zu New York und Philadelphia hatten früher Regenschirme mit allem Zubehör „gemacht“. Da ein Regenschirm aber ein *Mixtum compositum*

14.4. Division of Labor in Manufacture and in Society

ucts of various separate industries, carried on independently in different places. They entered as separate commodities into the umbrella manufactory, where they were fitted together. The Yankees have given to articles thus fitted together, the name of "assembled articles," a name they deserve, for being an assemblage of taxes. Thus the umbrella "assembles," first, 6% on the price of each of its elements, and a further 6% on its own total price.

ganz heterogener Bestandteile, wurden letztere nach und nach zu Machwerken unabhängig voneinander und an verschiedenen Orten betriebener Geschäftszweige. Ihre Teilprodukte gingen nun als selbständige Waren ein in die Regenschirm-Manufaktur, welche sie nur noch in ein Ganzes zusammensetzt. Die Yankees haben derartige Artikel „assembled articles“ (versammelte Artikel) getauft, was sie namentlich verdienen als Sammelplätze von Steuern. So „versammelte“ der Regenschirm erstens 6% Akzise auf den Preis jedes seiner Elemente und hinwiederum 6% auf seinen eignen Gesamtpreis.

Next point: concentration versus dispersion of the means of production:

The division of labor in the workshop implies concentration of the means of production in the hands of one capitalist; the division of labor in society implies their dispersion among many independent producers of commodities.

Die manufakturmäßige Teilung der Arbeit unterstellt Konzentration der Produktionsmittel in der Hand eines Kapitalisten, die gesellschaftliche Teilung der Arbeit Zersplitterung der Produktionsmittel unter viele voneinander unabhängige Warenproduzenten.

Regulation a priori versus a posteriori:

While within the workshop, the iron law of proportionality subjects definite numbers of workmen to definite functions, in the society outside the workshop, chance and caprice have full play in distributing the producers and their means of production among the various branches of industry. The different spheres of production, it is true, constantly tend to an equilibrium: for, on the one hand, while each producer of a commodity is bound to produce a use-value, to satisfy a particular social want, and while the extent of these wants differs quantitatively, still there exists an inner relation which settles their proportions into a regular system, and that system one of spontaneous growth; and, on the other hand, the law of the value of commodities ultimately determines how much of its disposable working-time society can expend on each particular class of commodities.

Statt daß in der Manufaktur das eherner Gesetz der Verhältniszahl oder Proportionalität bestimmte Arbeitermassen unter Funktionen subsumiert, treiben Zufall und Willkür ihr buntes Spiel in der Verteilung der Warenproduzenten und ihrer Produktionsmittel unter die verschiedenen gesellschaftlichen Arbeitszweige. Zwar suchen sich die verschiedenen Produktionssphären beständig ins Gleichgewicht zu setzen, indem einerseits jeder Warenproduzent einen Gebrauchswert produzieren, also ein besonderes gesellschaftliches Bedürfnis befriedigen muß, der Umfang dieser Bedürfnisse aber quantitativ verschieden ist und ein inneres Band die verschiedenen Bedürfnismassen zu einem naturwüchsigen System verkettet; indem andererseits das Wertgesetz der Waren bestimmt, wieviel die Gesellschaft von ihrer ganzen disponiblen Arbeitszeit auf die Produktion jeder besondern Warenart verausgaben kann.

↑ Interesting side remark about the law of value!

But this constant tendency to equilibrium, of the various spheres of production, is exercised, only in the shape of a reaction against the constant upsetting of this equilibrium.

Aber diese beständige Tendenz der verschiedenen Produktionssphären, sich ins Gleichgewicht zu setzen, betätigt sich nur als Reaktion gegen die beständige Aufhebung die-

14. Division of Labor and Manufactories

The *a priori* system on which the division of labor, within the workshop, is regularly carried out, becomes in the division of labor within the society, an *a posteriori*, nature-imposed necessity, controlling the lawless caprice of the producers, and perceptible in the barometrical fluctuations of the market-prices.

Anarchy of market versus despotism in the manufactory.

Division of labor within the workshop implies the undisputed authority of the capitalist over men, that are but parts of a mechanism that belongs to him. The division of labor within the society brings into contact independent commodity-producers, who acknowledge no other authority but that of competition, of the coercion exerted by the pressure of their mutual interests; just as in the animal kingdom, the *bellum omnium contra omnes* more or less preserves the conditions of existence of every species.

ses Gleichgewichts. Die bei der Teilung der Arbeit im Innern der Werkstatt *a priori* und planmäßig befolgte Regel wirkt bei der Teilung der Arbeit im Innern der Gesellschaft nur *a posteriori* als innre, stumme, im Barometerwechsel der Marktpreise wahrnehmbare, die regellose Willkür der Warenproduzenten überwältigende Naturnotwendigkeit.

Die manufakturmäßige Teilung der Arbeit unterstellt die unbedingte Autorität des Kapitalisten über Menschen, die bloße Glieder eines ihm gehörigen Gesamtmechanismus bilden; die gesellschaftliche Teilung der Arbeit stellt unabhängige Warenproduzenten einander gegenüber, die keine andre Autorität anerkennen als die der Konkurrenz, den Zwang, den der Druck ihrer wechselseitigen Interessen auf sie ausübt, wie auch im Tierreich das *bellum omnium contra omnes* die Existenzbedingungen aller Arten mehr oder minder erhält.

↑ Marx compares capitalist competition with Darwinian survival of the fittest, and characterizes the Darwinian struggle for survival as “*bellum omnium contra omnium*.” This goes against modern literature emphasizing the role of co-operation in the survival of species.

Bourgeois apologists contradict themselves because they try to defend both on general grounds.

The same bourgeois mind which praises division of labor in the workshop, life-long annexation of the laborer to a partial operation, and his complete subjection to capital, as being an organisation of labor that increases its productiveness, that same bourgeois mind denounces with equal vigour every conscious attempt to socially control and regulate the process of production, as an inroad upon such sacred things as the rights of property, freedom and unrestricted play for the bent of the individual capitalist. It is very characteristic that the enthusiastic apologists of the factory system have nothing more damning to urge against a general organisation of the labor of society, than that it would turn all society into one immense factory.

Dasselbe bürgerliche Bewußtsein, das die manufakturmäßige Teilung der Arbeit, die lebenslängliche Annexation des Arbeiters an eine Detailverrichtung und die unbedingte Unterordnung der Teilarbeiter unter das Kapital als eine Organisation der Arbeit feiert, welche ihre Produktivkraft steigere, denunziert daher ebenso laut jede bewußte gesellschaftliche Kontrolle und Regelung des gesellschaftlichen Produktionsprozesses als einen Eingriff in die unverletzlichen Eigentumsrechte, Freiheit und sich selbst bestimmende „Genialität“ des individuellen Kapitalisten. Es ist sehr charakteristisch, daß die begeisterten Apologeten des Fabriksystems nichts Ärgres gegen jede allgemeine Organisation der gesellschaftlichen Arbeit zu sagen wissen, als daß sie die ganze Gesellschaft in eine Fabrik verwandeln würde.

↑ The same people who celebrate factories so much oppose social planning on the grounds

that it would turn society into a factory.

14.4.f. [Capitalist versus Pre-Capitalist Division of Labor]

In capitalism, the anarchy of the market and despotism in the manufactory condition each other (in the footnote Marx quotes himself saying this). In earlier modes of production, the social division of labor is not anarchic but on the contrary despotically subjected to a plan, while individual workshops remain small.

If, in a society with capitalist production, anarchy in the social division of labor and despotism in that of the workshop are mutual conditions the one of the other, we find, on the contrary, in those earlier forms of society in which the separation of trades has been spontaneously developed, then crystallised, and finally made permanent by law, on the one hand, a specimen of the organisation of the labor of society, in accordance with an approved and authoritative plan, and on the other, the entire exclusion of division of labor in the workshop, or at all events a mere dwarflike or sporadic and accidental development of the same.⁵⁹

⁵⁹ “On peut ... établir en règle générale, que moins l'autorité préside à la division du travail dans l'intérieur de la société, plus la division du travail se développe dans l'intérieur de l'atelier, et plus elle y est soumise à l'autorité d'un seul. Ainsi l'autorité dans l'atelier et celle dans la société, par rapport à la division du travail, sont en raison inverse l'une de l'autre.” (Karl Marx, “Misère,” etc., pp. 130–131.)

377:1/o Wenn die Anarchie der gesellschaftlichen und die Despotie der manufakturäßigen Arbeitsteilung einander in der Gesellschaft der kapitalistischen Produktionsweise bedingen, bieten dagegen frühere Gesellschaftsformen, worin die Besonderung der Gewerbe sich naturwüchsig entwickelt, dann kristallisiert und endlich gesetzlich befestigt hat, einerseits das Bild einer plan- und autoritätsmäßigen Organisation der gesellschaftlichen Arbeit, während sie anderseits die Teilung der Arbeit innerhalb der Werkstatt ganz ausschließen oder nur auf einem Zwergmaßstab oder nur sporadisch und zufällig entwickeln.⁵⁹

⁵⁹ „Man kann als allgemeine Regel aufstellen: Je weniger die Autorität der Teilung der Arbeit innerhalb der Gesellschaft vorsteht, desto mehr entwickelt sich die Arbeitsteilung im Innern der Werkstatt und um so mehr ist sie der Autorität eines einzelnen unterworfen. Danach steht die Autorität in der Werkstatt und die in der Gesellschaft, in bezug auf die Arbeitsteilung, im umgekehrten Verhältnis zueinander.“ (Karl Marx, l.c. p. 130, 131.)

Marx is going to illustrate this general statement by two examples: India, and the guild system. ↓ Long paragraph about the social division of labor in India.

Those small and extremely ancient Indian communities, some of which have continued down to this day, are based on possession in common of the land, on the blending of agriculture and handicrafts, and on an unalterable division of labor, which serves, whenever a new community is started, as a plan and scheme ready cut and dried. Occupying areas of from 100 up to several thousand acres, each forms a compact whole producing all it requires. The chief part of the products is destined for direct use by the community itself, and does not take the

378:1/o Jene uraltertümlichen, kleinen indischen Gemeinwesen z.B., die zum Teil noch fortexistieren, beruhen auf gemeinschaftlichem Besitz des Grund und Bodens, auf unmittelbarer Verbindung von Agrikultur und Handwerk und auf einer festen Teilung der Arbeit, die bei Anlage neuer Gemeinwesen als gegebener Plan und Grundriß dient. Sie bilden sich selbst genügende Produktionsganze, deren Produktionsgebiet von 100 bis auf einige 1000 Acres wechselt. Die Hauptmasse der Produkte wird für den unmittelbaren Selbstbedarf der

14. *Division of Labor and Manufactories*

form of a commodity. Hence, production here is independent of that division of labor brought about, in Indian society as a whole, by means of the exchange of commodities. It is the surplus alone that becomes a commodity, and a portion of even that, not until it has reached the hands of the State, into whose hands from time immemorial a certain quantity of these products has found its way in the shape of rent in kind. The constitution of these communities varies in different parts of India. In those of the simplest form, the land is tilled in common, and the produce divided among the members. At the same time, spinning and weaving are carried on in each family as subsidiary industries. Side by side with the masses thus occupied with one and the same work, we find the "chief inhabitant," who is judge, police, and tax-gatherer in one; the book-keeper, who keeps the accounts of the tillage and registers everything relating thereto; another official, who prosecutes criminals, protects strangers travelling through and escorts them to the next village; the boundary man, who guards the boundaries against neighbouring communities; the water-overseer, who distributes the water from the common tanks for irrigation; the Brahmin, who conducts the religious services; the schoolmaster, who on the sand teaches the children reading and writing; the calendar-Brahmin, or astrologer, who makes known the lucky or unlucky days for seed-time and harvest, and for every other kind of agricultural work; a smith and a carpenter, who make and repair all the agricultural implements; the potter, who makes all the pottery of the village; the barber, the washerman, who washes clothes, the silversmith, here and there the poet, who in some communities replaces the silversmith, in others the schoolmaster. This dozen of individuals is maintained at the expense of the whole community. If the population increases, a new community is founded, on the pattern of the old one, on unoccupied land. The whole mechanism discloses a systematic di-

Gemeinde produziert, nicht als Ware, und die Produktion selbst ist daher unabhängig von der durch Warenaustausch vermittelten Teilung der Arbeit im großen und ganzen der indischen Gesellschaft. Nur der Überschuß der Produkte verwandelt sich in Ware, zum Teil selbst wieder erst in der Hand des Staats, dem ein bestimmtes Quantum seit undenklichen Zeiten als Naturalrente zufließt. Verschiedne Teile Indiens besitzen verschiedne Formen des Gemeinwesens. In der einfachsten Form bebaut die Gemeinde das Land gemeinschaftlich und verteilt seine Produkte unter ihre Glieder, während jede Familie Spinnen, Weben usw. als häusliches Nebengewerb treibt. Neben dieser gleichartig beschäftigten Masse finden wir den „Haupteinwohner“, Richter, Polizei und Steuereinnahmer in einer Person; den Buchhalter, der die Rechnung über den Ackerbau führt und alles darauf Bezügliche katastrirt und registriert; einen Beamten, der Verbrecher verfolgt und fremde Reisende beschützt und von einem Dorf zum andren geleitet; den Grenzmann, der die Grenzen der Gemeinde gegen die Nachbargemeinden bewacht; den Wasseraufseher, der das Wasser aus den gemeinschaftlichen Wasserbehältern zu Ackerbauzwecken verteilt; den Braminen, der die Funktionen des religiösen Kultus verrichtet; den Schulmeister, der die Gemeindekinder im Sand schreiben und lesen lehrt; den Kalenderbraminen, der als Astrolog die Zeiten für Saat, Ernte und die guten und bösen Stunden für alle besondren Ackerbauarbeiten angibt; einen Schmied und einen Zimmermann, welche alle Ackerbauwerkzeuge verfertigen und ausbessern; den Töpfer, der alle Gefäße für das Dorf macht; den Barbier, den Wäscher für die Reinigung der Kleider, den Silberschmied, hier und da den Poeten, der in einigen Gemeinden den Silberschmied, in andren den Schulmeister ersetzt. Dies Dutzend Personen wird auf Kosten der ganzen Gemeinde erhalten. Wächst die Bevölkerung, so wird eine neue Gemeinde nach dem Muster der alten auf unbebautem Boden an-

14.4. Division of Labor in Manufacture and in Society

vision of labor; but a division like that in manufactures is impossible, since the smith and the carpenter, etc., find an unchanging market, and at the most there occur, according to the sizes of the villages, two or three of each, instead of one.⁶⁰

⁶⁰ Lieut.-Col. Mark Wilks: "Historical Sketches of the South of India." Lond., 1810–17, v. I., pp. 118–20. A good description of the various forms of the Indian communities is to be found in George Campbell's "Modern India." Lond., 1852.

gesiedelt. Der Gemeindemechanismus zeigt planmäßige Teilung der Arbeit, aber ihre manufakturmäßige Teilung ist unmöglich, indem der Markt für Schmied, Zimmermann usw. unverändert bleibt und höchstens, je nach dem Größenunterschied der Dörfer, statt eines Schmieds, Töpfers usw. ihrer zwei oder drei vorkommen.⁶⁰

⁶⁰ Lieut. Col. Mark Wilks, „Historical Skethes on the South of India“, Lond. 1810 bis 1817, v. I, p. 118–120. Eine gute Zusammenstellung der verschiedenen Formen des indischen Gemeinwesens findet man in George Campbells „Modern India“, London 1852.

Interpretation and extrapolation about the Asiatic mode of production:

The law that regulates the division of labor in the community acts with the irresistible authority of a law of Nature, at the same time that each individual artificer, the smith, the carpenter, and so on, conducts in his workshop all the operations of his handicraft in the traditional way, but independently, and without recognising any authority over him. The simplicity of the organisation for production in these self-sufficing communities that constantly reproduce themselves in the same form, and when accidentally destroyed, spring up again on the spot and with the same name,⁶¹ this simplicity supplies the key to the secret of the unchangeableness of Asiatic societies, an unchangeableness in such striking contrast with the constant dissolution and refounding of Asiatic States, and the never-ceasing changes of dynasty. The structure of the economic elements of society remains untouched by the storm-clouds of the political sky.

Das Gesetz, das die Teilung der Gemeindearbeit regelt, wirkt hier mit der unverbrüchlichen Autorität eines Naturgesetzes, während jeder besondrer Handwerker, wie Schmied usw., nach überlieferter Art, aber selbständig und ohne Anerkennung irgendeiner Autorität in seiner Werkstatt, alle zu seinem Fach gehörigen Operationen verrichtet. Der einfache produktive Organismus dieser selbstgenügenden Gemeinwesen, die sich beständig in derselben Form reproduzieren und, wenn zufällig zerstört, an demselben Ort, mit demselben Namen, wieder aufbauen,⁶¹ liefert den Schlüssel zum Geheimnis der Unveränderlichkeit asiatischer Gesellschaften, so auffallend kontrastiert durch die beständige Auflösung und Neubildung asiatischer Staaten und rastlosen Dynastenwechsel. Die Struktur der ökonomischen Grundelemente der Gesellschaft bleibt von den Stürmen der politischen Wolkenregion unberührt.

Unchangeability and resilience due to simplicity. This division of labor is like a natural law, and like the natural laws it does not affect the freedom of the producers.

⁶¹ "Under this simple form ... the inhabitants of the country have lived from time immemorial. The boundaries of the villages have been but seldom altered; and though the villages themselves have been sometimes injured, and even desolated by war, famine, and disease, the same name, the same limits, the same interests, and even the same families, have continued for ages. The inhabitants give themselves no trouble

⁶¹ „Unter dieser einfachen Form ... haben die Einwohner des Landes seit unvordenklichen Zeiten gelebt. Die Grenzen der Dorfgebiete wurden nur selten geändert; und obgleich die Dörfer wiederholt durch Krieg, Hungersnot und Seuchen heimgesucht, ja verwüstet wurden, haben derselbe Name, dieselben Grenzen, dieselben Interessen und selbst dieselben Familien sich durch Generationen fortgesetzt. Die Einwohner ließen

14. Division of Labor and Manufactories

about the breaking up and division of kingdoms; while the village remains entire, they care not to what power it is transferred, or to what sovereign it devolves; its Internal economy remains unchanged." (Th. Stamford Raffles, late Lieut. Gov. of Java: "The History of Java." Lond., 1817, Vol. I., p. 285.)

sich durch den Zusammenbruch und die Teilung von Königreichen nicht anfechten; solange das Dorf ungeteilt bleibt, ist es ihnen gleichgültig, an welche Macht es abgetreten wird oder welchem Herrscher es zufällt. Seine innere Wirtschaft bleibt unverändert." (Th. Stamford Raffles, late Lieut. Gov. of Java, „The History of Java“, Lond. 1817, v. I, p. 285.)

The discussion of the guilds begins with an elaboration of a remark made in :

The rules of the guilds, as I have said before, by limiting most strictly the number of apprentices and journeymen that a single master could employ, prevented him from becoming a capitalist. Moreover, he could not employ his journeymen in many other handicrafts than the one in which he was a master. The guilds zealously repelled every encroachment by the capital of merchants, the only form of free capital with which they came in contact. A merchant could buy every kind of commodity, but labor as a commodity he could not buy. He existed only on sufferance, as a dealer in the products of the handicrafts. If circumstances called for a further division of labor, the existing guilds split themselves up into varieties, or founded new guilds by the side of the old ones; all this, however, without concentrating various handicrafts in a single workshop. Hence, the guild organisation, however much it may have contributed by separating, isolating, and perfecting the handicrafts, to create the material conditions for the existence of manufacture, excluded division of labor in the workshop. On the whole, the laborer and his means of production remained closely united, like the snail with its shell, and thus there was wanting the principal basis of manufacture, the separation of the laborer from his means of production, and the conversion of these means into capital.

379:1/o Die Zunftgesetze, wie schon früher bemerkt, verhinderten planmäßig, durch äußerste Beschränkung der Gesellenzahl, die ein einzelner Zunftmeister beschäftigen durfte, seine Verwandlung in einen Kapitalisten. Ebenso konnte er Gesellen nur beschäftigen in dem ausschließlichen Handwerk, worin er selbst Meister war. Die Zunft wehrte eifersüchtig jeden Übergriff des Kaufmannskapitals ab, der einzig freien Form des Kapitals, die ihr gegenüberstand. Der Kaufmann konnte alle Waren kaufen, nur nicht die Arbeit als Ware. Er war nur geduldet als Verleger der Handwerksprodukte. Riefen äußere Umstände eine fortschreitende Teilung der Arbeit hervor, so zerspalteten sich bestehende Zünfte in Unterarten oder lagerten sich neue Zünfte neben die alten hin, jedoch ohne Zusammenfassung verschiedener Handwerke in einer Werkstatt. Die Zunftorganisation, so sehr ihre Besondrung, Isolierung und Ausbildung der Gewerbe zu den materiellen Existenzbedingungen der Manufakturperiode gehören, schloß daher die manufakturmäßige Teilung der Arbeit aus. Im großen und ganzen blieben der Arbeiter und seine Produktionsmittel miteinander verbunden wie die Schnecke mit dem Schneckenhaus, und so fehlte die erste Grundlage der Manufaktur, die Verselbständigung der Produktionsmittel als Kapital gegenüber dem Arbeiter.

It is not the laws of social division of labor, but the laws of capitalism which lead to manufactories.

While division of labor in society at large, whether such division be brought about or not by exchange of commodities, is common to economic formations of soci-

380:1 Während die Teilung der Arbeit im Ganzen einer Gesellschaft, ob vermittelt oder unvermittelt durch den Warenaustausch, den verschiedenartigsten ökonomi-

ety the most diverse, division of labor in the workshop, as practised by manufacture, is a special creation of the capitalist mode of production alone.

schen Gesellschaftsformationen angehört, ist die manufakturmäßige Teilung der Arbeit eine ganz spezifische Schöpfung der kapitalistischen Produktionsweise.

14.5. The Capitalist Character of Manufacture

This section shows how the manufactories are the realization, objectification, of the capitalistic relations of production, and where its limits lie, which prevent it from being the ultimate capitalistic mode of production.

Question 972 *What are the limits of manufactories based on division of labor, preventing them from becoming the ultimate capitalistic mode of production?*

14.5.a. [Increased Minimum and Faster Growth of Capital]

The introduction of the division of labor in the manufactories changes the capital-labor relations. These changes begin with the size of individual capitals:

An increased number of laborers under the control of one capitalist is the natural starting-point, as well of co-operation generally, as of the manufactory system in particular.

380:2/o Eine größere Arbeiteranzahl unter dem Kommando desselben Kapitals bildet den naturwüchsigen Ausgangspunkt, wie der Kooperation überhaupt, so der Manufaktur.

At the very beginning, the motivation of the capitalists to combine many workers was economic, not technological: the more workers the capitalist would employ, the more surplus-value he would get. Regarded as a phase in the development of technology, this point of departure was therefore spontaneous and unsystematic (*naturwüchsig*). But once manufacture has been developed, the increase in establishments becomes a technical necessity:

But the division of labor in manufacture makes this increase in the number of workmen a technical necessity.

Umgekehrt entwickelt die manufakturmäßige Teilung der Arbeit das Wachstum der angewandten Arbeiterzahl zur technischen Notwendigkeit.

It does so in two ways: (a) size itself is determined by technology, and (b) increases in size, in order to capture further savings, cannot occur gradually but in jumps, by doubling etc., so that the already existing division of labor can be reproduced.

The minimum number that any given capitalist is bound to employ is here prescribed by the previously established division of labor.

Das Arbeiterminimum, das ein einzelner Kapitalist anwenden muß, ist ihm jetzt durch die vorhandne Teilung der Arbeit vorgeschrieben.

This is not only a one-time requirement for the beginning of a new business, but continuing growth has to deal with a similar effect:

On the other hand, the advantages of further division are obtainable only by adding to the number of workmen, and this can be done only by adding multiples of the various detail groups.

Andrerseits sind die Vorteile weiterer Teilung bedingt durch weitere Vermehrung der Arbeiteranzahl, die nur noch in Vielfachen ausführbar.

14. Division of Labor and Manufactories

↑ I.e., this increase cannot be incremental but it requires doubling or tripling of the original scale, in order to maintain the present economies of the division of labor. This lumpiness comes from the necessity to cut the production process into human-sized chunks.

↓ Along with the number of workers also the constant capital must increase, even faster than the variable capital due to the increased productivity:

But an increase in the variable component of the capital employed necessitates an increase in its constant component, too, in the workshops, implements, etc., and, in particular, in the raw material, the call for which grows quicker than the number of workmen. The quantity of it consumed in a given time, by a given amount of labor, increases in the same ratio as does the productive power of that labor in consequence of its division. Hence, it is a law, based on the very nature of manufacture, that the minimum amount of capital, which is bound to be in the hands of each capitalist, must keep increasing; in other words, that the transformation into capital of the social means of production and subsistence must keep extending.⁶²

⁶² "It is not sufficient that the capital" (the writer should have said the necessary means of subsistence and of production) "required for the subdivision of handicrafts should be in readiness in the society: it must also be accumulated in the hands of the employers in sufficiently large quantities to enable them to conduct their operations on a large scale . . . The more the division increases, the more does the constant employment of a given number of laborers require a greater outlay of capital in tools, raw material, etc." (Storch: "Cours d'Econ. Polit." Paris Ed., t. I., pp. 250, 251.) "La concentration des instruments de production et la division du travail sont aussi inséparables l'une de l'autre que le sont, dans le régime politique, la concentration des pouvoirs publics et la division des intérêts." (Karl Marx, I.c., p. 134.)

Mit dem variablen muß aber auch der konstante Bestandteil des Kapitals wachsen, neben dem Umfang der gemeinsamen Produktionsbedingungen, wie Baulichkeiten, Öfen usw., namentlich auch und viel rascher als die Arbeiteranzahl, das Rohmaterial. Seine Masse, verzehrt in gegebener Zeit durch gegebenes Arbeitsquantum, nimmt in demselben Verhältnis zu wie die Produktivkraft der Arbeit infolge ihrer Teilung. Wachsender Minimalumfang von Kapital in der Hand der einzelnen Kapitalisten oder wachsende Verwandlung der gesellschaftlichen Lebensmittel und Produktionsmittel in Kapital ist also ein aus dem technischen Charakter der Manufaktur entspringendes Gesetz.⁶²

⁶² „Es genügt nicht, daß das zur Unterabteilung der Handwerke nötige Kapital“ (sollte heißen, die dazu nötigen Lebens- und Produktionsmittel) „sich in der Gesellschaft vorhanden vorfinde; es ist außerdem nötig, daß es in den Händen der Unternehmer in hinreichend beträchtlichen Massen akkumuliert sei, um sie zur Arbeit auf großer Stufenleiter zu befähigen . . . Je mehr die Teilung zunimmt, erheischt die beständige Beschäftigung einer selben Zahl von Arbeitern immer beträchtlicheres Kapital in Werkzeugen, Rohstoffen usw.“ (Storch, „Cours d'Écon. Polit.“, Pariser Ausg., t. I, p. 250, 251.) „Die Konzentration der Produktionsinstrumente und die Arbeitsteilung sind ebenso untrennbar voneinander wie auf dem Gebiete der Politik die Zentralisation der öffentlichen Gewalten und die Teilung der Privatinteressen.“ (Karl Marx, I.c. p. 134.)

↑ The end of the footnote brings an interesting analogy to politics.

14.5.b. [Changes Imposed on the Individual Laborer by the Division of Labor]

↓ As in simple co-operation, the productive forces springing from the combination of the laborers appear as productive forces of capital

14.5. The Capitalist Character of Manufacture

In manufacture, as well as in simple co-operation, the collective working organism is a form of existence of capital. The mechanism that is made up of numerous individual detail laborers belongs to the capitalist. Hence, the productive power resulting from a combination of labors appears as the productive power of capital.

381:1/o Wie in der einfachen Kooperation ist in der Manufaktur der funktionierende Arbeitskörper eine Existenzform des Kapitals. Der aus vielen individuellen Teilarbeitern zusammengesetzte gesellschaftliche Produktionsmechanismus gehört dem Kapitalisten. Die aus der Kombination der Arbeiten entspringende Produktivkraft erscheint daher als Produktivkraft des Kapitals.

The Moore-Aveling translation

“appears to be” is wrong.

Question 974 What does Marx 481/o mean by “the collective working organism is a form of existence of capital”?

↑ The productive powers not only *seem* to be springing from capital but their social form is such that socially they *count* as springing from capital. A detailed argument is given in .

↓ Creation of a hierarchy among the workers:

Manufacture proper not only subjects the previously independent workman to the discipline and command of capital, but, in addition, creates a hierarchic gradation of the workmen themselves.

Die eigentliche Manufaktur unterwirft nicht nur den früher selbständigen Arbeiter dem Kommando und der Disziplin des Kapitals, sondern schafft überdem eine hierarchische Gliederung unter den Arbeitern selbst.

↑ Now there is no longer only a hierarchy between capitalist and laborer (with discipline for the laborer) but also hierarchy among the laborers.

The changes within the working class go even further. ↓ Division of labor, unlike simple cooperation, turns the individual worker into a “crippled monstrosity.”

While simple co-operation leaves the mode of working by the individual for the most part unchanged, manufacture thoroughly revolutionizes it, and seizes labor-power by its very roots. It converts the laborer into a crippled monstrosity, by forcing his detail dexterity at the expense of a world of productive capabilities and instincts; just as in the States of La Plata they butcher a whole beast for the sake of his hide or his tallow.

Während die einfache Kooperation die Arbeitsweise der einzelnen im großen und ganzen unverändert läßt, revolutioniert die Manufaktur sie von Grund aus und ergreift die individuelle Arbeitskraft an ihrer Wurzel. Sie verkrüppelt den Arbeiter in eine Abnormität, indem sie sein Detailgeschick treibhausmäßig fördert durch Unterdrückung einer Welt von produktiven Trieben und Anlagen, wie man in den La-Plata-Staaten ein ganzes Tier schlachtet, um sein Fell oder seinen Talg zu erbeuten.

Interesting analogy to hunting in Argentina.

Not only is the detail work distributed to the different individuals, but the individual himself is made the automatic motor of a fractional operation,⁶³ and the absurd fable of Menenius Agrippa, which makes man a mere fragment of his own body, becomes

Die besondern Teilarbeiten werden nicht nur unter verschiedene Individuen verteilt, sondern das Individuum selbst wird geteilt, in das automatische Triebwerk einer Teilarbeit verwandelt⁶³ und die abgeschmackte Fabel des Menenius Agrippa verwirklicht,

14. Division of Labor and Manufactories

realised.⁶⁴

⁶³ Dugald Stewart calls manufacturing laborers “living automaton . . . employed in the details of the work.” (l.c., p. 318.)

⁶⁴ In corals, each individual is, in fact, the stomach of the whole group; but it supplies the group with nourishment, instead of, like the Roman patrician, withdrawing it.

die einen Menschen als bloßes Fragment seines eignen Körpers darstellt.⁶⁴

⁶³ Dugald Stewart nennt die Manufakturarbeiter „lebende Automaten . . ., die für Teilarbeiten verwandt werden“. (l.c. p. 318.)

⁶⁴ Bei den Korallen bildet jedes Individuum in der Tat den Magen für die ganze Gruppe. Es führt ihr aber Nahrungsstoff zu, statt wie der römische Patrizier ihn wegzuführen.

Question 976 *Explain how in manufacture, not only the labor is divided, but also the laborer is cut into pieces.*

⇓ Labor is no longer only separated from the means of production (a social condition), but labor itself has become unusable without capital (a matter of skills and technology).

If, at first, the workman sells his labor-power to capital, because the material means of producing a commodity fail him, now his very labor-power refuses its services unless it has been sold to capital.

Wenn der Arbeiter ursprünglich seine Arbeitskraft an das Kapital verkauft, weil ihm die materiellen Mittel zur Produktion einer Ware fehlen, versagt jetzt seine individuelle Arbeitskraft selbst ihren Dienst, sobald sie nicht an das Kapital verkauft wird.

⇓ That the group of laborers, instead of an individual laborer, is the subject of the labor process, has very tangible implications. (FIXME I have to fix the translation: environment is not the same as connection.)

Its functions can be exercised only in an environment that exists in the workshop of the capitalist after the sale. By nature unfitted to make anything independently, the manufacturing laborer develops productive activity as a mere appendage of the capitalist's workshop.⁶⁵ As the chosen people bore in their features the sign manual of Jehovah, so division of labor brands the manufacturing workman as the property of capital.

Sie funktioniert nur noch in einem Zusammenhang, der erst nach ihrem Verkauf existiert, in der Werkstatt des Kapitalisten. Seiner natürlichen Beschaffenheit nach unfähig, etwas Selbständiges zu machen, entwickelt der Manufakturarbeiter produktive Tätigkeit nur noch als Zubehör zur Werkstatt des Kapitalisten.⁶⁵ Wie dem ausgewählten Volk auf der Stirn geschrieben stand, daß es das Eigentum Jehovas, so drückt die Teilung der Arbeit dem Manufakturarbeiter einen Stempel auf, der ihn zum Eigentum des Kapitals brandmarkt.

⁶⁵ “L’ouvrier qui porte dans ses bras tout un métier, peut aller partout exercer son industrie et trouver des moyens de subsister: l’autre (the manufacturing laborer) n’est qu’un accessoire qui, séparé de ses confrères, n’a plus ni capacité, ni indépendance, et qui se trouve forcé d’accepter la loi qu’on juge à propos de lui imposer.” (Storch, l.c., Petersb. edit., 1815, t. I., p. 204.)

⁶⁵ „Der Arbeiter, der ein ganzes Handwerk beherrscht, kann überall arbeiten und seinen Unterhalt finden: der andere“ (der Manufakturarbeiter) „ist nur noch ein Zubehör und besitzt, von seinen Arbeitskollegen getrennt, weder Befähigung noch Unabhängigkeit und ist deshalb gezwungen, das Gesetz anzunehmen, das man für richtig hält, ihm aufzuerlegen.“ (Storch, l.c., édit. Petersb. 1815, t. I, p. 204.)

↑ The labor-power becomes really, not only economically, the property of capital because the individual laborer can not even *use* his labor-power otherwise. This is further developed

in the machinery chapter 433:1–435:2. This loss of use value also leads to a loss in exchange-value, lower wages.

Question 977 *How does the capitalistic division of labor brand the workman as the property of capital?*

The knowledge, the judgement, and the will, which, though in ever so small a degree, are practised by the independent peasant or handicraftsman, in the same way as the savage makes the whole art of war consist in the exercise of his personal cunning these faculties are now required only for the workshop as a whole. Intelligence in production expands in one direction, because it vanishes in many others. What is lost by the detail laborers, is concentrated in the capital that employs them.⁶⁶ It is a result of the division of labor in manufactures, that the laborer is brought face to face with the intellectual potencies of the material process of production, as the property of another, and as a ruling power. This separation begins in simple co-operation, where the capitalist represents to the single workman, the oneness and the will of the associated labor. It is developed in manufacture which cuts down the laborer into a detail laborer. It is completed in modern industry, which makes science a productive force distinct from labor and presses it into the service of capital.⁶⁷

⁶⁶ A. Ferguson, l.c., p. 281: “The former may have gained what the other has lost.”

⁶⁷ “The man of knowledge and the productive laborer come to be widely divided from each other, and knowledge, instead of remaining the handmaid of labor in the hand of the laborer to increase his productive powers . . . has almost everywhere arrayed itself against labor . . . systematically deluding and leading them (the laborers) astray in order to render their muscular powers entirely mechanical and obedient.” (W. Thompson: “An Inquiry into the Principles of the Distribution of Wealth.” London, 1824, p. 274.)

382:1 Die Kenntnisse, die Einsicht und der Wille, die der selbständige Bauer oder Handwerker, wenn auch auf kleinem Maßstab, entwickelt, wie der Wilde alle Kunst des Kriegs als persönliche List ausübt, sind jetzt nur noch für das Ganze der Werkstatt erheischt. Die geistigen Potenzen der Produktion erweitern ihren Maßstab auf der einen Seite, weil sie auf vielen Seiten verschwinden. Was die Teilarbeiter verlieren, konzentriert sich ihnen gegenüber im Kapital.⁶⁶ Es ist ein Produkt der manufakturmäßigen Teilung der Arbeit, ihnen die geistigen Potenzen des materiellen Produktionsprozesses als fremdes Eigentum und sie beherrschende Macht gegenüberzustellen. Dieser Scheidungsprozeß beginnt in der einfachen Kooperation, wo der Kapitalist den einzelnen Arbeitern gegenüber die Einheit und den Willen des gesellschaftlichen Arbeitskörpers vertritt. Er entwickelt sich in der Manufaktur, die den Arbeiter zum Teilarbeiter verstümmelt. Er vollendet sich in der großen Industrie, welche die Wissenschaft als selbständige Produktionspotenz von der Arbeit trennt und in den Dienst des Kapitals preßt.⁶⁷

⁶⁶ A. Ferguson, l.c. p. 281: „Der eine mag gewonnen haben, was der andere verloren hat.“

⁶⁷ „Der Mann des Wissens und der produktive Arbeiter sind weit voneinander getrennt, und die Wissenschaft, statt in der Hand des Arbeiters seine eignen Produktivkräfte für ihn selbst zu vermehren, hat sich fast überall ihm gegenübergestellt . . . Kenntnis wird ein Instrument, fähig, von der Arbeit getrennt und ihr entgegengesetzt zu werden.“ (W. Thompson, „An Inquiry into the Principles of the Distribution of Wealth“, London 1824, p. 274.)

↑ Increase of social at the expense of a decrease of the individual productive forces. The mental part of the production process, which is no longer required for the detail laborer but

14. Division of Labor and Manufactories

only for the aggregate laborer as a whole, are separated from the workers and appropriated by capital. This process will be completed in great industry.

⇓ How the division of labor *depends*, for its better functioning, on the ignorance of the workers.

In manufacture, in order to make the collective laborer, and through him capital, rich in social productive power, each laborer must be made poor in individual productive powers.

“Ignorance is the mother of industry as well as of superstition. Reflection and fancy are subject to err; but a habit of moving the hand or the foot is independent of either. Manufactures, accordingly, prosper most where the mind is least consulted, and where the workshop may ... be considered as an engine, the parts of which are men.”⁶⁸

As a matter of fact, some few manufacturers in the middle of the 18th century preferred, for certain operations that were trade secrets, to employ half-idiotic persons.⁶⁹

⁶⁸ A. Ferguson, l.c., p. 280.

⁶⁹ J. D. Tuckett: “A History of the Past and Present State of the Laboring Population.” Lond., 1846.

⇓ How the division of labor *causes* the crippling of body and mind. The quote of Garnier illustrates that the ruling class does not want to remedy this, since it depends on it.

“The understandings of the greater part of men,” says Adam Smith, “are necessarily formed by their ordinary employments. The man whose whole life is spent in performing a few simple operations ... has no occasion to exert his understanding ... He generally becomes as stupid and ignorant as it is possible for a human creature to become.”

After describing the dullness of the detail laborer he goes on:

“The uniformity of his stationary life naturally corrupts the courage of his mind ... It corrupts even the activity of his body and renders him incapable of exerting his strength with vigour and perseverance in any other employments than that to which he has been bred. His dexterity at his own particular trade seems in this manner to be acquired at the expense of his

383:1–3 In der Manufaktur ist die Bereicherung des Gesamtarbeiters und daher des Kapitals an gesellschaftlicher Produktivkraft bedingt durch die Verarmung des Arbeiters an individuellen Produktivkräften.

„Die Unwissenheit ist die Mutter der Industrie wie des Aberglaubens. Nachdenken und Einbildungskraft sind den Irrtum unterworfen; aber die Gewohnheit, den Fuß oder die Hand zu bewegen, hängt weder von dem einen noch von der andren ab. Manufakturen prosperieren also da am meisten, wo man am meisten sich des Geistes entschlägt, in der Art, daß die Werkstatt als eine Maschine betrachtet werden kann, deren Teile Menschen sind.“⁶⁸

In der Tat wandten einige Manufakturen in der Mitte des 18. Jahrhunderts für gewisse einfache Operationen, welche aber Fabrikgeheimnisse bildeten, mit Vorliebe halbe Idioten an.⁶⁹

⁶⁸ A. Ferguson, l.c. p. 280.

⁶⁹ J. D. Tuckett, „A History of the Past and Present State of the Labouring Population“, London 1846, v. I, p. 148.

383:4–6 „Der Geist der großen Mehrzahl der Menschen“, sagt A. Smith, „entwickelt sich notwendig aus und an ihren Alltagsverrichtungen. Ein Mensch, der sein ganzes Leben in der Verrichtung weniger einfacher Operationen verausgabt ... hat keine Gelegenheit, seinen Verstand zu üben ... Er wird im allgemeinen so stupid und unwissend, wie es für eine menschliche Kreatur möglich ist.“

Nachdem Smith den Stumpfsinn des Teilarbeiters geschildert, fährt er fort:

„Die Einförmigkeit seines stationären Lebens verdirbt natürlich auch den Mut seines Geistes ... Sie zerstört selbst die Energie seines Körpers und verunfähigt ihn, seine Kraft schwunghaft und ausdauernd anzuwenden, außer in der Detailbeschäftigung, wozu er herangezogen ist. Sein Geschick in seinem besondern Gewerke scheint so erworben auf Ko-

14.5. The Capitalist Character of Manufacture

intellectual, social, and martial virtues. But in every improved and civilised society, this is the state into which the laboring poor, that is, the great body of the people, must necessarily fall.”⁷⁰

⁷⁰ A. Smith: “Wealth of Nations,” Bk. v., ch. i, art. ii. Being a pupil of A. Ferguson who showed the disadvantageous effects of division of labor, Adam Smith was perfectly clear on this point. In the introduction to his work, where he *ex professo* praises division of labor, he indicates only in a cursory manner that it is the source of social inequalities. It is not till the 5th Book, on the Revenue of the State, that he reproduces Ferguson. In my “Misère de la Philosophie,” I have sufficiently explained the historical connexion between Ferguson, A. Smith, Lemontey, and Say, as regards their criticisms of Division of Labor, and have shown, for the first time, that Division of Labor as practised in manufactures, is a specific form of the capitalist mode of production.

For preventing the complete deterioration of the great mass of the people by division of labor, A. Smith recommends education of the people by the State, but prudently, and in homeopathic doses. G. Garnier, his French translator and commentator, who, under the first French Empire, quite naturally developed into a senator, quite as naturally opposes him on this point. Education of the masses, he urges, violates the first law of the division of labor, and with it

“our whole social system would be proscribed.” “Like all other divisions of labor,” he says, “that between hand labor and head labor⁷¹ is more pronounced and decided in proportion as society (he rightly uses this word, for capital, landed property and their State) becomes richer. This division of labor, like every other, is an effect of past, and a cause of future progress . . . ought the government then to work in opposition to this division of labor, and to hinder its natural course? Ought it to expend a part of the public money in the attempt to confound and blend together two classes of labor, which are striving after division and separation?”⁷²

sten seiner intellektuellen, sozialen und kriegerischen Tugenden. Aber in jeder industriellen und zivilisierten Gesellschaft ist dies der Zustand, worin der arbeitende Arme (the labouring poor), d.h. die große Masse des Volks notwendig verfallen muß.“⁷⁰

⁷⁰ A. Smith, „Wealth of Nations“, b. V, ch. I, art. II. Als Schüler A. Fergusons, der die nachteiligen Folgen der Teilung der Arbeit entwickelt hatte, war A. Smith über diesen Punkt durchaus klar. Im Eingang seines Werks, wo die Teilung der Arbeit *ex professo* gefeiert wird, deutet er sie nur vorübergehend als Quelle der gesellschaftlichen Ungleichheiten an. Erst im 5. Buch über das Staatseinkommen reproduziert er Ferguson. Ich habe in „Misère de la Philosophie“ das Nötige über das historische Verhältnis von Ferguson, A. Smith, Lemontey und Say in ihrer Kritik der Teilung der Arbeit gegeben und dort auch zuerst die manufakturmäßige Teilung der Arbeit als spezifische Form der kapitalistischen Produktionsweise dargestellt. (l.c. p. 122 sq.)

384:1–2 Um die aus der Teilung der Arbeit entspringende völlige Verkümmern der Volksmasse zu verhindern, empfiehlt A. Smith Volksunterricht von Staats wegen, wenn auch in vorsichtig homöopathischen Dosen. Konsequenter polemisiert dagegen sein französischer Übersetzer und Kommentator, G. Garnier, der sich unter dem ersten französischen Kaisertum naturgemäß zum Senator entpuppte. Volksunterricht verstoße wider die ersten Gesetze der Teilung der Arbeit und mit demselben

„proskribiere man unser ganzes Gesellschaftssystem“. „Wie alle andren Teilungen der Arbeit“, sagte er, „wird die zwischen Handarbeit und Verstandesarbeit⁷¹ ausgesprochner und entschiedner im Maße, wie die Gesellschaft“ (er wendet richtig diesen Ausdruck an für das Kapital, das Grundeigentum und ihren Staat) „reicher wird. Gleich jeder andren ist diese Teilung der Arbeit eine Wirkung vergangener und eine Ursache künftiger Fortschritte . . . Darf die Regierung denn dieser Teilung der Arbeit entgegenwirken und sie in ihrem naturgemäßen Gang aufhalten? Darf sie einen Teil der Staatseinnahme zum Versuch verwenden, zwei Klassen von Arbeit, die ihre Teilung und Trennung erstreben, zu verwirren und zu ver-

14. Division of Labor and Manufactories

⁷¹ Ferguson had already said, l.c., p. 281: “And thinking itself, in this age of separations, may become a peculiar craft.”

⁷² G. Garnier, vol. V. of his translation of A. Smith, pp. 4–5.

Concluding remarks pointing out the exploitative character of this kind of division of labor.

Some crippling of body and mind is inseparable even from division of labor in society as a whole. Since, however, manufacture carries this social separation of branches of labor much further, and also, by its peculiar division, attacks the individual at the very roots of his life, it is the first to afford the materials for, and to give a start to, industrial pathology.⁷³

Now a quote:

“To subdivide a man is to execute him, if he deserves the sentence, to assassinate him if he does not . . . The subdivision of labor is the assassination of a people.”⁷⁴

⁷³ Ramazzini, professor of practical medicine at Padua, published in 1713 his work “De morbis artificum,” which was translated into French 1781, reprinted 1841 in the “Encyclopédie des Sciences Médicales. 7me Dis. Auteurs Classiques.” The period of Modern Mechanical Industry has, of course, very much enlarged his catalogue of labor’s diseases. See “Hygiène physique et morale de l’ouvrier dans les grandes villes en général et dans la ville de Lyon en particulier. Par le Dr. A. L. Fonteret, Paris, 1858,” and “Die Krankheiten, welche verschiedenen Ständen, Altern und Geschlechtern eigenthümlich sind. 6 Vols. Ulm, 1860,” and others. In 1854 the Society of Arts appointed a Commission of Inquiry into industrial pathology. The list of documents collected by this commission is to be seen in the catalogue of the “Twickenham Economic Museum.” Very important are the official “Reports on Public Health.” See also Eduard Reich, M. D., “Ueber die Entartung des Menschen,” Erlangen, 1868.

⁷⁴ (D. Urquhart: “Familiar Words.” Lond.,

mischen?”⁷²

⁷¹ Ferguson sagt bereits l.c. p. 281: „Und das Denken selbst kann in diesem Zeitalter der Arbeitsteilungen zu einem besonderen Gewerbe werden.“

⁷² G. Garnier, t. V seiner Übersetzung, p. 4–5.

384:3–385:1 Eine gewisse geistige und körperliche Verkrüppelung ist unzertrennlich selbst von der Teilung der Arbeit im ganzen und großen der Gesellschaft. Da aber die Manufakturperiode diese gesellschaftliche Zerspaltung der Arbeitszweige viel weiter führt, andererseits erst mit der ihr eigentümlichen Teilung das Individuum an seiner Lebenswurzel ergreift, liefert sie auch zuerst das Material und den Anstoß zur industriellen Pathologie.⁷³

„Einen Menschen unterabteilen, heißt ihn hinrichten, wenn er das Todesurteil verdient, ihn meuchelmorden, wenn er es nicht verdient. Die Unterabteilung der Arbeit ist der Meuchelmord eines Volks.“⁷⁴

⁷³ Ramazzini, Professor der praktischen Medizin zu Padua, veröffentlichte 1713 sein Werk „De morbis artificum“, 1777 ins Französische übersetzt, wieder abgedruckt 1841 in der „Encyclopédie des Sciences Médicales. 7me Div. Auteurs Classiques“. Die Periode der großen Industrie hat seinen Katalog der Arbeiterkrankheiten natürlich sehr vermehrt. Siehe u.a. „Hygiène physique et morale de l’ouvrier dans les grandes villes en général, et dans la ville de Lyon en particulier“. Par le Dr. A. L. Fonteret, Paris 1858, und [R. H. Rohatzsch,] „Die Krankheiten, welche verschiedenen Ständen, Altern und Geschlechtern eigenthümlich sind“, 6 Bände, Ulm 1840. Im Jahre 1854 ernannte die Society of Arts eine Untersuchungskommission über industrielle Pathologie. Die Liste der von dieser Kommission gesammelten Dokumente findet man im Katalog des „Twickenham Economic Museum“. Sehr wichtig die offiziellen „Reports on Public Health“. Siehe auch Eduard Reich, M.D., „Ueber die Entartung des Menschen“, Erlangen 1868.

⁷⁴ „To subdivide a man is to execute him, if he

1855, p. 119.) Hegel held very heretical views on division of labor. In his “Rechtsphilosophie” he says: “By well educated men we understand in the first instance, those who can do everything that others do.”

deserves the sentence, to assassinate him, if he does not . . . the subdivision of labour is the assassination of a people.“ (D. Urquhart, „Familiar Words“, London 1855, p. 119.) Hegel hatte sehr ketzerische Ansichten über die Teilung der Arbeit. „Unter gebildeten Menschen kann man zunächst solche verstehen, die alles machen können, was andre tun“, sagt er in seiner Rechtsphilosophie.

14.5.c. [Division of Labor as a Means of Exploitation]

This is an insert which partly repeats things developed before. Characterization of division of labor in manufacture as a means of exploitation, contrast to earlier *social* division of labor.

⇓ Origin and persistence of manufacture.

Co-operation based on division of labor, in other words, manufacture, commences as a spontaneous formation. So soon as it attains some consistence and extension, it becomes the recognised methodical and systematic form of capitalist production.

385:2 Die auf Teilung der Arbeit beruhende Kooperation oder die Manufaktur ist in ihren Anfängen ein naturwüchsiges Gebild. Sobald sie einige Konsistenz und Breite des Daseins gewonnen, wird sie zur bewußten, planmäßigen und systematischen Form der kapitalistischen Produktionsweise.

⇑ From spontaneous to conscious, planned, and systematic.

The history of the manufactories strictly so called shows how their peculiar division of labor first acquires an appropriate form by experience, as it were behind the backs of the actors, and then, like the guild handicrafts, strives to hold fast to that form when once found, and here and there succeeds in keeping it for centuries. Any alteration in this form, except in trivial matters, is solely owing to a revolution in the instruments of labor.

Die Geschichte der eigentlichen Manufaktur zeigt, wie die ihr eigentümliche Teilung der Arbeit zunächst erfahrungsmäßig, gleichsam hinter dem Rücken der handelnden Personen, die sachgemäßen Formen gewinnt, dann aber, gleich dem zünftigen Handwerke, die einmal gefundene Form traditionell festzuhalten strebt und in einzelnen Fällen jahrhundertlang festhält. Ändert sich diese Form, so, außer in Nebendingen, immer nur infolge einer Revolution der Arbeitsinstrumente.

Instruments of labor are the disruptive ingredient.

Modern manufacture wherever it arises I do not here allude to modern industry based on machinery either finds the *disjecta membra poetarum* ready to hand, and only waiting to be collected together, as is the case in the manufacture of clothes in large towns, or it can easily apply the principle of division, simply by exclusively assigning the various operations of a handicraft (such as book-binding) to particular men. In such cases, a week's experience is enough to determine the pro-

Die moderne Manufaktur—ich spreche hier nicht von der auf Maschinerie beruhenden großen Industrie—findet entweder, wie z.B. die Kleidermanufaktur, in den großen Städten, wo sie entsteht, die *disjecta membra poetarum* bereits fertig vor und hat sie nur aus ihrer Zerstreuung zu sammeln, oder das Prinzip der Teilung liegt auf flacher Hand, indem einfach die verschiedenen Verrichtungen der handwerksmäßigen Produktion (z.B. beim Buchbinden) besondern Arbei-

14. Division of Labor and Manufactories

portion between the numbers of the hands necessary for the various functions.⁷⁵

tern ausschließlich angeeignet werden. Es kostet noch keine Woche Erfahrung, in solchen Fällen die Verhältniszahl zwischen den für jede Funktion nötigen Händen zu finden.⁷⁵

In other words, the capitalist's intellectual contribution is negligible.

⁷⁵ The simple belief in the inventive genius exercised a priori by the individual capitalist in division of labor, exists now-a-days only among German professors, of the stamp of Herr Roscher, who, to recompense the capitalist from whose Jovian head division of labor sprang ready formed, dedicates to him "various wages" (diverse Arbeitslöhne). The more or less extensive application of division of labor depends on length of purse, not on greatness of genius.

⁷⁵ Der gemüthliche Glaube an das Erfindungs-genie, das der einzelne Kapitalist in der Theilung der Arbeit a priori ausübe, findet sich nur noch bei deutschen Professoren, wie Herrn Roscher z.B., der dem Kapitalisten, aus dessen Jupiter-haupt die Theilung der Arbeit fertig hervorspringe, zum Dank „diverse Arbeitslöhne“ widmet. Die gröÙre oder geringre Anwendung der Theilung der Arbeit hängt von der Länge der Börse ab, nicht von der Größe des Genies.

⇓ Productive forces developed in manufacture are used for production of relative surplus-value, exploitation.

By decomposition of handicrafts, by specialisation of the instruments of labor, by the formation of detail laborers, and by grouping and combining the latter into a single mechanism, division of labor in manufacture creates a qualitative gradation, and a quantitative proportion in the social process of production; it consequently creates a definite organisation of the labor of society, and thereby develops at the same time new productive forces in the society. As a specific capitalist form of the social process of production—and under the given conditions, it could not develop under any other form than the capitalistic one—manufacture is but a particular method of begetting relative surplus-value, or of augmenting at the expense of the laborer the self-expansion of capital usually called social wealth, "Wealth of Nations," etc. It increases the social productive power of labor, not only for the benefit of the capitalist instead of for that of the laborer, but it does this by crippling the individual laborers. It creates new conditions for the lordship of capital over labor. If, therefore, on the one hand, it presents itself historically as a progress and as a necessary phase in the economic development of society, on the other hand, it is a refined and civilised method of exploitation.

386:1 Die manufakturmäßige Theilung der Arbeit schafft durch Analyse der handwerksmäßigen Tätigkeit, Spezifizierung der Arbeitsinstrumente, Bildung der Teilarbeiter, ihre Gruppierung und Kombination in einem Gesamtmechanismus die qualitative Gliederung und quantitative Proportionalität gesellschaftlicher Produktionsprozesse, also eine bestimmte Organisation gesellschaftlicher Arbeit und entwickelt damit zugleich neue, gesellschaftliche Produktivkraft der Arbeit. Als spezifisch kapitalistische Form des gesellschaftlichen Produktionsprozesses—und auf den vorgefunden Grundlagen konnte sie sich nicht anders als in der kapitalistischen Form entwickeln—ist sie nur eine besondere Methode, relativen Mehrwert zu erzeugen oder die Selbstverwertung des Kapitals—was man gesellschaftlichen Reichtum, „Wealth of Nations“ usw. nennt—auf Kosten der Arbeiter zu erhöhen. Sie entwickelt die gesellschaftliche Produktivkraft der Arbeit nicht nur für den Kapitalisten, statt für den Arbeiter, sondern durch die Verkrüppelung des individuellen Arbeiters. Sie produziert neue Bedingungen der Herrschaft des Kapitals über die Arbeit. Wenn sie daher einerseits als historischer Fortschritt und notwendiges Entwicklungsmoment im ökonomischen

mischen Bildungsprozeß der Gesellschaft erscheint, so andererseits als ein Mittel ziviler und raffinierter Exploitation.

Is Marx going to explain next what the alternative should be?

The period of the manufactories is also the origin of political economy:

Political Economy, which as an independent science, first sprang into being during the period of manufacture, views the social division of labor only from the standpoint of manufacture,⁷⁶ and sees in it only the means of producing more commodities with a given quantity of labor, and, consequently, of cheapening commodities and hurrying on the accumulation of capital.

⁷⁶ The older writers, like Petty and the anonymous author of "Advantages of the East India Trade," bring out the capitalist character of division of labor as applied in manufacture more than A. Smith does.

By contrast to the division of labor in the manufactories, the *social* division of labor in antiquity serves to improve the quality of product and capability of producer, not an instrument of exploitation!

In most strict contrast with this accentuation of quantity and exchange-value, is the attitude of the writers of classical antiquity, who hold exclusively by quality and use-value.⁷⁷ In consequence of the separation of the social branches of production, commodities are better made, the various bents and talents of men select a suitable field,⁷⁸ and without some restraint no important results can be obtained anywhere.⁷⁹ Hence both product and producer are improved by division of labor. If the growth of the quantity produced is occasionally mentioned, this is only done with reference to the greater abundance of use-values. There is not a word alluding to exchange-value or to the cheapening of commodities. This aspect, from the standpoint of use-value alone, is taken as well by Plato,⁸⁰ who treats division of labor as the foundation on which the division of society into classes is based, as by Xenophon,⁸¹ who with characteristic bourgeois instinct, approaches more nearly to division of labor within the workshop.

386:2/000 Die politische Ökonomie, die als eigne Wissenschaft erst in der Manufakturperiode aufkommt, betrachtet die gesellschaftliche Teilung der Arbeit überhaupt nur vom Standpunkt der manufakturmäßigen Teilung der Arbeit⁷⁶, als Mittel, mit demselben Quantum Arbeit mehr Ware zu produzieren, daher die Waren zu verwohlfeilern und die Akkumulation des Kapitals zu beschleunigen.

⁷⁶ Mehr als A. Smith fixieren ältere Schriftsteller, wie Petty, wie der anonyme Verfasser der „Advantages of the East-India Trade“ etc., den kapitalistischen Charakter der manufakturmäßigen Teilung der Arbeit.

Im strengsten Gegensatz zu dieser Akzentuierung der Quantität und des Tauschwerts halten sich die Schriftsteller des klassischen Altertums ausschließlich an Qualität und Gebrauchswert.⁷⁷ Infolge der Scheidung der gesellschaftlichen Produktionszweige werden die Waren besser gemacht, die verschiedenen Triebe und Talente der Menschen wählen sich entsprechende Wirkungssphären,⁷⁸ und ohne Beschränkung ist nirgendwo Bedeutendes zu leisten.⁷⁹ Also Produkt und Produzent werden verbessert durch die Teilung der Arbeit. Wird gelegentlich auch das Wachstum der Produktenmasse erwähnt, so nur mit Bezug auf die größere Fülle des Gebrauchswerts. Es wird mit keiner Silbe des Tauschwerts, der Verwohlfeilerung der Waren gedacht. Dieser Standpunkt des Gebrauchswerts herrscht sowohl bei Plato⁸⁰, der die Teilung der Arbeit als Grundlage der gesellschaftlichen Scheidung der Stände behandelt, als bei Xenophon⁸¹, der mit seinem charakteristisch bürgerlichen Instinkt schon der Teilung der Arbeit inner-

14. Division of Labor and Manufactories

Plato's Republic, in so far as division of labor is treated in it, as the formative principle of the State, is merely the Athenian idealisation of the Egyptian system of castes, Egypt having served as the model of an industrial country to many of his contemporaries also, amongst others to Isocrates,⁸² and it continued to have this importance to the Greeks of the Roman Empire.⁸³

⁷⁷ Amongst the moderns may be excepted a few writers of the 18th century, like Beccaria and James Harris, who with regard to division of labor almost entirely follow the ancients. Thus, Beccaria: "Ciascuno prova coll'esperienza, che applicando la mano e l'ingegno sempre allo stesso genere di opere e di prodotte, egli più facili, più abbondanti e migliori ne traca risultati, di quello che se ciascuno isolatamente le cose tutte a se necessarie soltanto facesse ... Dividendosi in tal maniera per la comune e privata utilità gli uomini in varie classi e condizioni." (Cesare Beccaria: "Elementi di Econ. Pubblica," ed. Custodi, Parte Moderna, t. xi, p. 29.) James Harris, afterwards Earl of Malmesbury, celebrated for the "Diaries" of his embassy at St. Petersburg, says in a note to his "Dialogue Concerning Happiness," Lond., 1741, reprinted afterwards in "Three Treatises, 3 Ed., Lond., 1772: "The whole argument to prove society natural (i.e., by division of employments) ... is taken from the second book of Plato's Republic."

⁷⁸ Thus, in the Odyssey xiv., 228, ἄλλος γὰρ τ' ἄλλοισιν ἄνθρωπος ἐπιτέρεται ἔργοις and Archilochus quoted by Sextus Empiricus ἄλλος ἄλλω ἐπ' ἔργῳ καρδίην ἰαίνεται in , [greek: ""].

⁷⁹ Πολλ' ἡπίστατο ἔργα, κακῶς δ' ἡπίστατο πάντα' Every Athenian considered himself superior as a producer of commodities to a Spartan; for the latter in time of war had men enough at his disposal but could not command money, as Thucydides makes Pericles say in the speech inciting the Athenians to the Peloponnesian war: "σωμασι τε ἐτοιμότεροι οἱ αὐτουργοὶ τῶν ἀνθρώπων ἢ χρήμασι πολεμεῖν" (Thuc.: Bk I. para. 141.) Nevertheless, even with regard to material production, αὐταρχεία, as opposed to

halb einer Werkstatt näher rückt. Platos Republik, soweit in ihr die Teilung der Arbeit als das gestaltende Prinzip des Staats entwickelt wird, ist nur atheniensische Idealisierung des ägyptischen Kastenwesens, wie Ägypten als industrielles Musterland auch andren seiner Zeitgenossen gilt, z.B. dem Isokrates⁸², und diese Bedeutung selbst noch für die Griechen der römischen Kaiserzeit behielt.⁸³

⁷⁷ Ausnahme unter den Modernen bilden einige Schriftsteller des 18. Jahrhunderts, die in bezug auf Teilung der Arbeit fast nur den Alten nachsprechen, wie Beccaria und James Harris. So Beccaria: „Jedem bewiest seine eigne Erfahrung, daß, wenn man Hand und Geist immer derselben Art von Arbeiten und Produkten zuwendet, man diese leichter, reichlicher und besser herstellt, als wenn jeder einzeln für sich das, was er benötigt, herstellen würde ... Auf diese Weise teilen sich die Menschen zum Nutzen der Allgemeinheit und zu ihrem eignen Vorteil in verschiedene Klassen und Stände.“ (Cesare Beccaria, „Elementi di Econ. Pubblica“, ed. Custodi, Part. Moderna, t. XI, p. 28.) James Harris, später Earl of Malmesbury, berührt durch die „Diaries“ über seine Gesandtschaft in Petersburg, sagt selbst in einer Note zu seinem „Dialogue concerning Happiness“, London 1741, später wieder abgedruckt in „Three Treatises etc.“, 3. ed., Lond. 1772: „Der ganze Beweis dafür, daß die Gesellschaft etwas Natürliches ist“ (nämlich durch die „Teilung der Beschäftigungen“), „ist dem zweiten Buch von Platos „Republik“ entnommen.“

⁷⁸ So in der Odyssee, XIV, 228: „Denn ein andrer Mann ergötzt sich auch an andren Arbeiten“ und Archilochus beim Sextus Empiricus: „Jeder erquickt seinen Sinn bei andrer Arbeit.“

⁷⁹ „Πολλ' ἡπίστατο ἔργα, κακῶς δ' ἡπίστατο πάντα“—Der Athener fühlte sich als Warenproduzent dem Spartaner überlegen, weil dieser im Krieg wohl über Menschen, nicht aber über Geld verfügen könne, wie Thukysides den Perikles sagen läßt in der Rede, worin er die Athener zum Peloponnesischen Krieg aufstachelt: „Mit ihren Körpern Krieg zu führen sind die Selbstwirtschaftenden eher bereit als mit Geld.“ (Thuk., I. I, c. 141.) Dennoch blieb ihr Ideal, auch in der materiellen Produktion, die

division of labor remained their ideal, 'παρ' ὧν γὰρ τὸ, εὖ, παρὰ τούτων καὶ τὸ αὐταρκες It should be mentioned here that at the date of the fall of the 30 Tyrants there were still not 5,000 Athenians without landed property.

⁸⁰ With Plato, division of labor within the community is a development from the multifarious requirements, and the limited capacities of individuals. The main point with him is, that the laborer must adapt himself to the work, not the work to the laborer; which latter is unavoidable, if he carries on several trades at once, thus making one or the other of them subordinate. Οὐ γὰρ ἐθέλει τὸ πραττόμενον τὴν τοῦ πράττοντος σχολὴν περιμένειν, ἀλλ' ἀνάγκη τὸν πράττοντα τῷ πραττομένῳ ἐπακολουθεῖν μὴ ἐν παρέργου μέρει. Ἐκ δὴ τούτων πλείω τε ἕκαστα γίγνεται καὶ καλλιον καὶ ῥᾶον, ὅταν εἷς ἐν κατὰ φύσιν καὶ ἐν καιρῷ σχολὴν τῶν ἄλλων ἄγων, πράττη. (Rep. I. 2. Ed. Baiter, Orelli, etc.) So in Thucydides, I.c., c. 142: "Seafaring is an art like any other, and cannot, as circumstances require, be carried on as a subsidiary occupation; nay, other subsidiary occupations cannot be carried on alongside of this one." If the work, says Plato, has to wait for the laborer, the critical point in the process is missed and the article spoiled, 'ἔργου κακρόν, διόλλυται' The same Platonic idea is found recurring in the protest of the English bleachers against the clause in the Factory Act that provides fixed mealtimes for all operatives. Their business cannot wait the convenience of the workmen, for "in the various operations of singeing, washing, bleaching, mangling, calendering, and dyeing, none of them can be stopped at a given moment without risk of damage . . . to enforce the same dinner hour for all the workpeople might occasionally subject valuable goods to the risk of danger by incomplete operations." *Le platonisme où va-t-il se nicher!*

⁸¹ Xenophon says, it is not only an honour to receive food from the table of the King of Persia, but such food is much tastier than other food. "And there is nothing wonderful in this, for as the other arts are brought to special perfection in

αὐταρχεία, die der Teilung der Arbeit gegenübersteht, „denn bei diesen gibt es Wohlstand, bei jenen aber auch die Unabhängigkeit“. Man muß dabei erwägen, daß es noch zur Zeit des Sturzes der 30 Tyrannen keine 5000 Athener ohne Grundeigentum gab.

⁸⁰ Plato entwickelt die Teilung der Arbeit innerhalb des Gemeinwesens aus der Vielseitigkeit der Bedürfnisse und der Einseitigkeit der Anlagen der Individuen. Haupt Gesichtspunkt bei ihm, daß der Arbeiter sich nach dem Werk richten müsse, nicht das Werk nach dem Arbeiter, was unvermeidlich, wenn er verschiedene Künste zugleich, also eine oder die andre als Nebenwerk treibe. „Denn die Arbeit will nicht warten auf die freie Zeit dessen, der sie macht, sondern der Arbeiter muß sich an die Arbeit halten, aber nicht in leichtfertiger Weise.—Dies ist notwendig.—Daraus folgt also, daß man mehr von allem verfertigt und sowohl schöner als auch leichter, wenn einer nur eine Sache macht, seiner natürlichen Begabung gemäß und zur richtigen Zeit, frei von andern Geschäften.“ („De Republica“, II, 2. ed., Baiter, Orelli etc.) Ähnlich bei Thukydides, I.c. c. 142: „Das Seewesen ist eine Kunst so sehr wie irgend etwas andres und kann nicht bei etwa vorkommenden Fällen als Nebenwerk betrieben werden, sondern vielmehr nichts andres neben ihm als Nebenwerk.“ Muß das Werk, sagt Plato, auf den Arbeiter warten, so wird oft der kritische Zeitpunkt der Produktion verpaßt und das Machwerk verdorben, „ἔργου κακρόν διόλλυται“. Dieselbe platonische Idee findet man wieder im Protest der englischen Bleichereibesitzer gegen die Klausel des Fabrikakts, die eine bestimmte Eßstunde für alle Arbeiter festsetzt. Ihr Geschäft könne sich nicht nach den Arbeitern richten, denn „von den verschiedenen Operationen des Absengens, Waschens, Bleichens, Mangels, Pressens und Färbens kann keine in einem bestimmten Augenblick ohne Gefahr der Schädigung abgebrochen werden . . . Das Erzwingen derselben Essensstunde für alle Arbeiter kann gelegentlich wertvolle Güter dadurch in Gefahr bringen, daß der Arbeitsprozeß nicht beendet wird.“ *Le platonisme où va-t-il se nicher!*

⁸¹ Xenophon erzählt, es sei nicht nur ehrenvoll, Speisen von der Tafel des Perserkönigs zu erhalten, sondern diese Speisen seien auch viel schmackhafter als andre. „Und dies ist nichts Wunderbares, denn wie die übrigen Künste in

14. Division of Labor and Manufactories

the great towns, so the royal food is prepared in a special way. For in the small towns the same man makes bedsteads, doors, ploughs, and tables: often, too, he builds houses into the bargain, and is quite content if he finds custom sufficient for his sustenance. It is altogether impossible for a man who does so many things to do them all well. But in the great towns, where each can find many buyers, one trade is sufficient to maintain the man who carries it on. Nay, there is often not even need of one complete trade, but one man makes shoes for men, another for women. Here and there one man gets a living by sewing, another by cutting out shoes; one does nothing but cut out clothes, another nothing but sew the pieces together. It follows necessarily then, that he who does the simplest kind of work, undoubtedly does it better than anyone else. So it is with the art of cooking.” (Xen. Cyrop. I. viii., c. 2.) Xenophon here lays stress exclusively upon the excellence to be attained in use-value, although he well knows that the gradations of the division of labor depend on the extent of the market.

⁸² He (Busiris) divided them all into special castes . . . commanded that the same individuals should always carry on the same trade, for he knew that they who change their occupations become skilled in none; but that those who constantly stick to one occupation bring it to the highest perfection. In truth, we shall also find that in relation to the arts and handicrafts, they have outstripped their rivals more than a master does a bungler; and the contrivances for maintaining the monarchy and the other institutions of their State are so admirable that the most celebrated philosophers who treat of this subject praise the constitution of the Egyptian State above all others. (Isocrates, Busiris, c. 8.)

⁸³ Cf. Diodorus Siculus.

den großen Städten besonders vervollkommen sind, ebenso werden die königlichen Speisen ganz eigens zubereitet. Denn in den kleinen Städten macht derselbe Bettstelle, Türe, Pflug, Tisch; oft baut er obendrein noch Häuser und ist zufrieden, wenn er selbst so eine für seinen Unterhalt ausreichende Kundschaft findet. Es ist rein unmöglich, daß ein Mensch, der so vielerlei treibt, alles gut mache. In den großen Städten aber, wo jeder einzelne viele Käufer findet, genügt auch ein Handwerk, um seinen Mann zu nähren. Ja oft gehört dazu nicht einmal ein ganzes Handwerk, sondern der eine macht Mannsschuhe, der andre Weiberschuhe. Hier und da lebt einer bloß vom Nähen, der andre vom Zuschneiden der Schuhe; der eine schneidet bloß Kleider zu, der andre setzt die Stücke nur zusammen. Notwendig ist es nun, daß der Verrichter der einfachsten Arbeit sie unbedingt auch am besten macht. Ebenso steht's mit der Kochkunst.“ (Xen., „Cyrop.“, I. VIII, c. 2.) Die zu erzielende Güte des Gebrauchswerts wird hier ausschließlich fixiert, obgleich schon Xenophon die Stufenleiter der Arbeitsteilung vom Umfang des Markts abhängig weiß.

⁸² „Er“ (Busiris) „teilte alle in besondere Kasten . . . befahl, daß immer die nämlichen die gleichen Geschäfte treiben sollten, weil er wußte, daß die, welche mit ihren Beschäftigungen wechseln, in keinem Geschäft gründlich werden; die aber, welche beständig bei denselben Beschäftigungen bleiben, jedes aufs vollendetste zustande bringen. Wirklich werden wir auch finden, daß sie in Beziehung auf Künste und Gewerbe ihre Rivalen mehr übertroffen haben als sonst der Meister den Stümper und in Beziehung auf die Einrichtung, wodurch sie die Königsherrschaft und übrige Staatsverfassung erhalten, so vortrefflich sind, daß die berühmten Philosophen, welche darüber zu sprechen unternehmen, die Staatsverfassung Ägyptens vor andren lobten.“ (Isokr., „Busiris“, c. 8.)

⁸³ cf. Diod. Sic.

14.5.d. [Limitations of Division of Labor from Point of View of Capital]

Division of labor has limitations which do not yet make it the most adequate form of capitalistic production, because it is still too much built on the basis of the earlier mode of production.

↓ Laborer: Since the skill of the laborer is still the basis of manufacture, resistance and

insubordination of the skilled laborers:

During the period of the manufactories proper, i.e., the period during which manufactories are the predominant form taken by capitalist production, many obstacles to the full development of the peculiar tendencies of manufacture are encountered. Although manufacture creates, as we have already seen, a simple separation of the laborers into skilled and unskilled, simultaneously with their hierarchic arrangement in classes, yet the number of the unskilled laborers, owing to the preponderating influence of the skilled, remains very limited. Although it adapts the detail operations to the various degrees of maturity, strength, and development of the living instruments of labor, thus conducing to exploitation of women and children, yet this tendency as a whole is wrecked on the habits and the resistance of the male laborers. Although the splitting up of handicrafts lowers the cost of forming the workman, and thereby lowers his value, yet for the more difficult detail work, a longer apprenticeship is necessary, and, even where it would be superfluous, is jealously insisted upon by the workmen. In England, for instance, we find the laws of apprenticeship, with their seven years' probation, in full force down to the end of the manufacturing period; and they are not thrown on one side till the advent of Modern Industry. Since handicraft skill is the foundation of manufacture, and since the mechanism of manufacture as a whole possesses no material skeleton independent of the laborers themselves, capital is constantly compelled to wrestle with the insubordination of the workmen.

↓ The following quote from Ure is testimony to these struggles:

"By the infirmity of human nature," says friend Ure, "it happens that the more skilful the workman, the more self-willed and intractable he is apt to become, and of course the less fit a component of a mechanical system in which ... he may do great damage to the whole."⁸⁴

⁸⁴ Ure, l.c., p. 20.

389:1–2 Während der eigentlichen Manufakturperiode, d.h. der Periode, worin die Manufaktur die herrschende Form der kapitalistischen Produktionsweise, stößt die volle Ausführung ihrer eignen Tendenzen auf vielseitige Hindernisse. Obgleich sie, wie wir sahen, neben der hierarchischen Gliederung der Arbeiter eine einfache Scheidung zwischen geschickten und ungeschickten Arbeitern schafft, bleibt die Zahl der letzteren durch den überwiegenden Einfluß der ersten sehr beschränkt. Obgleich sie die Sonderoperationen dem verschiedenen Grad von Reife, Kraft und Entwicklung ihrer lebendigen Arbeitsorgane anpaßt und daher zu produktiver Ausbeutung von Weibern und Kindern drängt, scheitert diese Tendenz im großen und ganzen an den Gewohnheiten und dem Widerstand der männlichen Arbeiter. Obgleich die Zersetzung der handwerksmäßigen Tätigkeit die Bildungskosten und daher den Wert der Arbeiter senkt, bleibt für schwierigere Detailarbeit eine längere Erlernungszeit nötig und wird auch da, wo sie vom Überfluß, eifersüchtig von den Arbeitern aufrechterhalten. Wir finden z.B. in England die laws of apprenticeship mit ihrer siebenjährigen Lernzeit bis zum Ende der Manufakturperiode in Vollkraft und erst von der großen Industrie über Haufen geworfen. Da das Handwerksge-
schick die Grundlage der Manufaktur bleibt und der in ihr funktionierende Gesamtmechanismus kein von den Arbeitern selbst unabhängiges objektives Skelett besitzt, ringt das Kapital beständig mit der Insubordination der Arbeiter.

„Die Schwäche der menschlichen Natur“, ruft Freund Ure aus, „ist so groß, daß der Arbeiter, je geschickter, desto eigenwilliger und schwieriger zu behandeln wird und folglich dem Gesamtmechanismus durch seine rappelköpfigen Launen schweren Schaden zufügt.“⁸⁴

⁸⁴ Ure, l.c. p. 20.

14. Division of Labor and Manufactories

Hence throughout the whole manufacturing period there runs the complaint of want of discipline among the workmen.⁸⁵ And had we not the testimony of contemporary writers, the simple facts, that during the period between the 16th century and the epoch of Modern Industry, capital failed to become the master of the whole disposable working-time of the manufacturing laborers, that manufactures are short-lived, and change their locality from one country to another with the emigrating or immigrating workmen, these facts would speak volumes. "Order must in one way or another be established," exclaims in 1770 the oft-cited author of the "Essay on Trade and Commerce." "Order," re-echoes Dr. Andrew Ure 66 years later, "Order" was wanting in manufacture based on "the scholastic dogma of division of labor," and "Arkwright created order."

390:1 Durch die ganze Manufakturperiode läuft daher die Klage über den Disziplinmangel der Arbeiter.⁸⁵ Und hätten wir nicht die Zeugnisse gleichzeitiger Schriftsteller, die einfachen Tatsachen, daß es vom 16. Jahrhundert bis zur Epoche der großen Industrie dem Kapital mißlingt, sich der ganzen disponiblen Arbeitszeit der Manufakturarbeiter zu bemächtigen, daß die Manufakturen kurzlebig sind und mit der Ein- oder Auswanderung der Arbeiter ihren Sitz in dem einen Land verlassen und in dem andren aufschlagen, würden Bibliotheken sprechen. „Ordnung muß auf die eine oder die andre Weise gestiftet werden“, ruft 1770 der wiederholt zitierte Verfasser des „Essay on Trade and Commerce“. Ordnung, hallt es 66 Jahre später zurück aus dem Mund des Dr. Andrew Ure, „Ordnung“ fehlte in der auf „dem scholastischen Dogma der Arbeit“ beruhenden Manufaktur, und „Arkwright schuf die Ordnung“.

Richard Arkwright, 1732–1792, inventor of spinning and carding machines, is often considered the founder of the modern factory system.

⁸⁵ This is more the case in England than in France, and more in France than in Holland.

⁸⁵ Das im Text Gesagte gilt viel mehr für England als für Frankreich und mehr für Frankreich als Holland.

Question 978 *Why is the manufacture based on the division of labor not yet the best form for capital to exploit labor? Why were the laborers in the manufactures rebellious?*

⇓ Technical basis too narrow to seize all production.

At the same time manufacture was unable, either to seize upon the production of society to its full extent, or to revolutionise that production to its very core. It towered up as an economic work of art, on the broad foundation of the town handicrafts, and of the rural domestic industries.

390:2 Zugleich konnte die Manufaktur die gesellschaftliche Produktion weder in ihrem ganzen Umfang ergreifen noch in ihrer Tiefe umwälzen. Sie gipfelte als ökonomisches Kunstwerk auf der breiten Grundlage des städtischen Handwerks und der ländlich häuslichen Industrie.

No mining, no heavy industry. Did blacksmiths work in manufactories?

At a given stage in its development, the narrow technical basis on which manufacture rested, came into conflict with requirements of production that were created by manufacture itself.

Ihre eigne enge technische Basis trat auf einem gewissen Entwicklungsgrad mit den von ihr selbst geschaffnen Produktionsbedürfnissen in Widerspruch.

But manufacture itself creates the way out of this impasse by producing—machinery.

One of its most finished creations was the workshop for the production of the instru-

390:3–5 Eins ihrer vollendetsten Gebilde war die Werkstatt zur Produktion der

14.5. The Capitalist Character of Manufacture

ments of labor themselves, including especially the complicated mechanical apparatus then already employed.

A machine-factory, says Ure, “displayed the division of labor in manifold gradations the file, the drill, the lathe, having each its different workman in the order of skill.” (p. 21.)

This workshop, the product of the division of labor in manufacture, produced in its turn—machines. It is they that sweep away the handicraftsman’s work as the regulating principle of social production.

Machinery has some benefits for laborers and for the capitalists.

Thus, on the one hand, the technical reason for the life-long annexation of the workman to a detail function is removed. On the other hand, the fetters that this same principle laid on the dominion of capital, fall away.

Arbeitsinstrumente selbst, und namentlich auch der bereits angewandten komplizierten mechanischen Apparate.

„Ein solches Atelier“, sagt Ure, „bot dem Auge die Teilung der Arbeit in ihren mannigfachen Abstufungen. Bohrer, Meißel, Drechselbank hatten jede ihre eignen Arbeiter, hierarchisch gegliedert nach dem Grad ihrer Geschicklichkeit.“

Dies Produkt der manufakturmäßigen Teilung der Arbeit produzierte seinerseits—Maschinen. Sie heben die handwerksmäßige Tätigkeit als das regelnde Prinzip der gesellschaftlichen Produktion auf.

So wird einerseits der technische Grund der lebenslangen Annexation des Arbeiters an eine Teilfunktion weggeräumt. Andererseits fallen die Schranken, welche dasselbe Prinzip der Herrschaft des Kapitals noch auferlegte.

Question 979 *What is specific capitalistic about the division of labor in manufacture?*

This, of course, is a fitting transition to the next chapter.

15. Machinery and Modern Industry

15.1. The Development of Machinery

The first long paragraph is an introduction to the whole chapter, not just the first section:

374:1–3 John Stuart Mill says in his “Principles of Political Economy”:

“It is questionable, if all the mechanical inventions yet made have lightened the day’s toil of any human being.”⁸⁶

391:1–3 John Stuart Mill sagt in seinen „Prinzipien der politischen Ökonomie“:

„Es ist fraglich, ob alle bisher gemachten mechanischen Erfindungen die Tagesmühe irgendeines menschlichen Wesens erleichtert haben.“⁸⁶

It is not the purpose of chapter Fifteen to decide whether machines help lighten the day’s work for any human being. On the contrary, according to Marx this is the wrong question to ask. Machines are wonderful labor-saving devices. But this does not mean they were introduced for the purpose of saving labor for people. Instead, they were introduced in order to increase exploitation.

Marx’s critique of Mill is twofold. (1) In the footnote ↓, he re-formulates the aphorism in order to add the class dimension which Mill had left out:

⁸⁶ Mill should have said, “OF ANY HUMAN BEING NOT FED BY OTHER PEOPLE’S LABOR,” for, without doubt, machinery has greatly increased the number of well-to-do idlers.

⁸⁶ „It is questionable, if all the mechanical inventions yet made have lightened the day’s toil of any human being.“ Mill hätte sagen sollen, „of any human being not fed by other people’s labor“, denn die Maschinerie hat unstreitig die Zahl der vornehmen Müßiggänger sehr vermehrt.

↑ Yes machines save labor, but not for the machine operators. Marx takes it as a fact that machinery increases the number of “well-to-do idlers”; more about this in 448:1 at the end of section 15.6.

↓ (2) In the main text, Marx criticizes Mill for asking the wrong question:

That is, however, by no means the aim of the capitalistic application of machinery. Like every other increase in the productiveness of labour, the purpose of machinery is to cheapen commodities, and, by shortening that portion of the working-day, in which the laborer works for himself, to lengthen the other portion that he gives, without an equivalent, to the capitalist.

Solches ist jedoch auch keineswegs der Zweck der kapitalistisch verwandten Maschinerie. Gleich jeder andren Entwicklung der Produktivkraft der Arbeit soll sie Waren verwohlfeilern und den Teil des Arbeitstags, den der Arbeiter für sich selbst braucht, verkürzen, um den andren Teil seines Arbeitstags, den er dem Kapitalisten umsonst gibt, zu verlängern.

↑ Marx names two purposes for the development of the productive powers: (1) to “cheapen” the commodities and (2) to increase surplus-value. Two remarks are necessary here.

(a) Marx does *not* say that the purpose is the increase in surplus-value, with the cheapening of commodities being the means to satisfy this purpose. Instead he places these two goals side by side. Both goals can be seen as the implication of value being an absence:

- It either has to be turned into a presence by absorbing living labor

- or it has to efface itself by quantitative diminution, i.e., labor-saving technical progress.

(b) Marx does not say the purpose of productivity increases is an increase in surplus-value, but he says this purpose is an increase in *relative* surplus-value. Does he imply with this that the capitalist have made the cheapening of the means of subsistence for the workers their explicit goal when they introduce technical progress? Presumably not, Marx refers here to his own analysis in chapter Twelve, 323:1/o: he knows that the competitive introduction of technical innovation increases relative surplus-value; the capitalists themselves do not have to know this.

↓ The production process of use-values in capitalism is at the same time the process of creating surplus-value. Clearly, machines are a means of production, i.e., they assist in the production of use-values. The above abbreviated argument showed that machines are also a means of production of surplus-value:

In short, it is a means for producing surplus-value.

Sie ist Mittel zur Produktion von Mehrwert.

↑ This must be understood not only in the “weak” sense that, since machines aid in production of use-values, and production of use-values is necessary for the creation of surplus-value, machines also indirectly aid in the production of surplus-value. It is to be understood in the stronger sense that machines directly enhance the process of creating surplus-value.

Exam Question 982 *What is the purpose of the introduction of machinery under capitalism?*

The question whether and how the capitalist application of machinery achieves this purpose, and what implications this process has for the laborer, will be developed in the present chapter. ↓ In order to determine the proper starting point for this inquiry, Marx looks at the commonalities and differences between machinery and the manufactories based on division of labor:

374:4 In manufacture, the revolution in the mode of production has labor-power as its point of origin, and in modern industry the instruments of labor.

391:4 Die Umwälzung der Produktionsweise nimmt in der Manufaktur die Arbeitskraft zum Ausgangspunkt, in der großen Industrie das Arbeitsmittel.

↑ Both were technical innovations driven by the profit motive, but the division of labor in the manufactories is a development of the laborer himself and his work process, while machinery is a development of his tools. Therefore machinery overcomes the limitations of the system of manufactories explained in . ↓ The question to be addressed in this first section is therefore:

Our first inquiry then is, how the instruments of labor are converted from tools into machines, or how a machine distinguishes itself from the implements of a handicraft?

Es ist also zunächst zu untersuchen, wodurch das Arbeitsmittel aus einem Werkzeug in eine Maschine verwandelt wird oder wodurch sich die Maschine vom Handwerksinstrument unterscheidet.

The “or,” as so often, connects two aspects of the same process: the first aspect sees it as historical forces at work, and the second aspect looks at the inner logic followed by these historical forces. “Distinguish itself” does not mean here “how machinery is special” but “which are the real characteristics differentiating hand tools from machinery.” Marx is therefore looking for the real definition of machinery. The real definition of machinery and the historical origin of capitalist machinery take up the first section.

15. Machinery and Modern Industry

Question 983 *How does a machine distinguish itself from the implements of a handicraft?*

↓ Marx concludes these preliminary remarks with an interesting methodological disclaimer:

We are only concerned here with the broad and general characteristics; for epochs in the history of society are no more separated from each other by hard and fast lines of demarcation, than are geological epochs.

Es handelt sich hier nur um große, allgemeine Charakterzüge, denn abstrakt strenge Grenzlinien scheiden ebensowenig die Epochen der Gesellschafts- wie der Erdgeschichte.

Große, allgemeine Charakterzüge is translated here as “broad and general characteristics.” It should not be translated as “striking,” as

the Moore-Aveling translation does. The basic regularities are likely to be enduring but, exactly because of their persistence, are

not necessarily perceived as striking.

15.1.a. [Difference between Tool and Machine]

Now it starts. Marx first looks at the capitalist production process as a labor process, and in section 15.2 he will discuss the valorization aspect of it. Marx’s first project is the development of a real definition of machinery. ↓ For this, he examines two common definitions of a machine from the literature:

374:5/o Mathematicians and mechanicians, and in this they are followed by a few English economists, call a tool a simple machine, and a machine a complex tool. They see no essential difference between tool and machine, and even give the name of machine to the simple mechanical powers, the lever, the inclined plane, the screw, the wedge, etc.⁸⁷

391:5/o Mathematiker und Mechaniker—und man findet dies hier und da von englischen Ökonomen wiederholt—erklären das Werkzeug für eine einfache Maschine und die Maschine für ein zusammengesetztes Werkzeug. Sie sehn hier keinen wesentlichen Unterschied und nennen sogar die einfachen mechanischen Potenzen, wie Hebel, schiefe Ebene, Schraube, Keil usw., Maschinen.⁸⁷

⁸⁷ See, for instance, Hutton: “Course of Mathematics.”

⁸⁷ Sieh z.B. Huttons „Course of Mathematics“.

Although it is undeniable that machines are composed of these simple mechanical elements, Marx rejects this explanation:

It is true, every machine is a combination of those simple powers, no matter how they may be disguised. From the economic standpoint however this explanation is useless, because it lacks the historical element.

In der Tat besteht jede Maschine aus jenen einfachen Potenzen, wie immer verkleidet und kombiniert. Vom ökonomischen Standpunkt jedoch taugt die Erklärung nichts, denn ihr fehlt das historische Element.

The engineering explanation is useless for an economist—because “it lacks the historical element,” i.e., it does not give the specific reasons that led to the development of machinery. A few paragraphs later, in 376:1, Marx gives an analysis in which the historical element is *not* lacking.

Exam Question 985 *Why is the definition that a machine is just a complex tool, and a tool a simple machine, not useful for an economist?*

↓ The next explanation cannot be dismissed as quickly for methodological reasons. It has some merit, but we will see later that it is still not quite correct. This definition recognizes

that machinery replaces the workers, but only the worker in his function as motive power, not the worker as the operator of the tools. Marx will deal at length with this distinction later in this section:

One also finds the following explanation of the difference between tool and machine: in the case of a tool, man is the motive power, while the motive power of a machine is something different from man, as, for instance, an animal, water, wind, and so on.⁸⁸

Andrerseits sucht man den Unterschied zwischen Werkzeug und Maschine darin, daß beim Werkzeug der Mensch die Bewegungskraft, bei der Maschine eine von der menschlichen verschiedene Naturkraft, wie Tier, Wasser, Wind usw.⁸⁸

Marx does not say here whether or to what extent he agrees with this definition. He sends mixed signals. On the one hand, footnote 88 says that the book containing this definition is “in many respects a laudable piece:”

⁸⁸ “From this point of view we may draw a sharp line of distinction between a tool and a machine: spades, hammers, chisels, etc., combinations of levers and of screws, in all of which, no matter how complicated they may be in other respects, man is the motive power, ... all this falls under the idea of a tool; but the plough, which is drawn by animal power, and wind-mills, etc., must be classed among machines.” (Wilhelm Schulz: “Die Bewegung der Produktion.” Zürich, 1843, p. 38.) In many respects a laudable piece.

⁸⁸ „Von diesem Gesichtspunkt aus läßt sich denn auch eine scharfe Grenze zwischen Werkzeug und Maschine ziehn: Spaten, Hammer, Meißel usw., Hebel- und Schraubenwerke, für welche, mögen sie übrigens noch so künstlich sein, der Mensch die bewegende Kraft ist ... dies alles fällt unter den Begriff des Werkzeugs; während der Pflug mit der ihn bewegenden Tierkraft, Wind- usw. Mühlen zu den Maschinen zu zählen sind.“ (Wilhelm Schulz, „Die Bewegung der Produktion“, Zürich 1843, p. 38.) Eine in mancher Hinsicht lobenswerte Schrift.

⇓ After these patronizing remark in the footnote that the author tries to do the right thing but not quite succeeds, the main text brings considerations making it questionable that this is the right definition:

According to this, a plough drawn by oxen, which is a contrivance common to the most different epochs, would be a machine, while Claussen’s circular loom, which, worked by a single laborer, weaves 96,000 picks per minute, would be a mere tool. Nay, this very loom, though a tool when worked by hand, would, if worked by steam, be a machine. And since the application of animal power is one of man’s earliest inventions, production by machinery would have preceded production by handicrafts.

Danach wäre ein mit Ochsen bespannter Pflug, der den verschiedensten Produktions-epochen angehört, eine Maschine, Claussens Circular Loom, der von der Hand eines einzigen Arbeiters bewegt, 96 000 Maschen in einer Minute verfertigt, ein bloßes Werkzeug. Ja, derselbe loom wäre Werkzeug, wenn mit der Hand, und Maschine, wenn mit Dampf bewegt. Da die Anwendung von Tierkraft eine der ältesten Erfindungen der Menschheit, ginge in der Tat die Maschinenproduktion der Handwerksproduktion voraus.

We will see later that the replacement of the human as a power source is not the real definition of machinery; its real definition is the replacement of the human as the one who holds and operates the tools that manipulate the object of labor.

Marx will also argue that, once the human as operator of tools has been replaced, also his replacement as a power source is imminent. The error of the present definition is therefore that it does not capture the *main* driving force leading to the industrial revolution, but uses a secondary criterion instead, which is a consequence of the action of this main driving force. At the end of the paragraph Marx hints at the correct definition of machinery, which he will

15. Machinery and Modern Industry

develop later in more detail:

When in 1735, John Wyatt brought out his spinning machine, and began the industrial revolution of the 18th century, not a word did he say about an ass driving it instead of a man, and yet this part fell to the ass. He described it as a machine “to spin without fingers.”⁸⁹

Als John Wyatt 1735 seine Spinnmaschine und mit ihr die industrielle Revolution des 18. Jahrhunderts ankündigte, erwähnte er mit keinem Wort, daß statt eines Menschen ein Esel die Maschine treibe, und dennoch fiel diese Rolle dem Esel zu. Eine Maschine, „um ohne Finger zu spinnen“, lautete sein Programm.⁸⁹

↑ We will see shortly that the criterion “to spin without fingers” resonates with Marx’s real definition of machinery.

Footnote 89 gives more historical details, leading to a general plea how important it would be to write a history of technology.

⁸⁹ Before his time, spinning machines, although very imperfect ones, had already been used, and Italy was probably the country of their first appearance. A critical history of technology would show how little any of the inventions of the 18th century are the work of a single individual. Hitherto there is no such book.

⁸⁹ Schon vor ihm wurden, wenn auch sehr unvollkommene, Maschinen zum Vorspinnen angewandt, wahrscheinlich zuerst in Italien. Eine kritische Geschichte der Technologie würde überhaupt nachweisen, wie wenig irgendeine Erfindung des 18. Jahrhunderts einem einzelnen Individuum gehört. Bisher existiert kein solches Werk.

↑ In the meanwhile such books have been written. An important book, pointing out some of the energy issues Marx overlooked, is [Wri10]. ↓ Marx compares this work with the work of Darwin:

Darwin has interested us in the history of Nature’s Technology, i.e., in the formation of the organs of plants and animals, which organs serve as instruments of production for sustaining life. Does not the history of the productive organs of man, of organs that are the material basis of all social organisation, deserve equal attention? And would not such a history be easier to compile, since, as Vico says, human history differs from natural history in this, that we have made the former, but not the latter?

Darwin hat das Interesse auf die Geschichte der natürlichen Technologie gelenkt, d.h. auf die Bildung der Pflanzen- und Tierorgane als Produktionsinstrumente für das Leben der Pflanzen und Tiere. Verdient die Bildungsgeschichte der produktiven Organe des Gesellschaftsmenschen, der materiellen Basis jeder besondern Gesellschaftsorganisation, nicht gleiche Aufmerksamkeit? Und wäre sie nicht leichter zu liefern, da, wie Vico sagt, die Menschengeschichte sich dadurch von der Naturgeschichte unterscheidet, daß wir die eine gemacht und die andre nicht gemacht haben?

Not only would such an inquiry be easier than Darwin’s work, it would also be extremely important for understanding society:

^{89 ctd} Technology discloses man’s mode of dealing with Nature, the process of production by which he sustains his life, and thereby also lays bare the mode of formation of his social relations, and of the mental conceptions that flow from them.

^{89 ctd} Die Technologie enthüllt das aktive Verhalten des Menschen zur Natur, den unmittelbaren Produktionsprozeß seines Lebens, damit auch seiner gesellschaftlichen Lebensverhältnisse und der ihnen entquellenden geistigen Vorstellungen.

↑ The central role assigned to the relations *in* production is also apparent in Marx’s wording in chapter One, 90:1–91:0.

15.1. The Development of Machinery

The second half of footnote 89 criticizes the abstract physicalist materialism in favor of the truly materialist and therefore scientific method. Marx switches abruptly from technology to religion in order to give an Achilles heel critique: even in religion a materialist approach is necessary, one which not only deciphers the content of the historical forms but also explains, on the basis of the material conditions of the time, why this content takes this form:

^{89 ctd} Even any history of religion, which fails to take account of this material basis, is uncritical. It is indeed much easier to discover by analysis the earthly core of the misty creations of religion, than, conversely, it is, to develop from the actual relations of life the corresponding celestialized forms of those relations. The latter method is the only materialistic, and therefore the only scientific one.

^{89 ctd} Selbst alle Religionsgeschichte, die von dieser materiellen Basis abstrahiert, ist—unkritisch. Es ist in der Tat viel leichter, durch Analyse den irdischen Kern der religiösen Nebelbildungen zu finden, als umgekehrt, aus den jetzmaligen wirklichen Lebensverhältnissen ihre verhimmelten Formen zu entwickeln. Die letztere ist die einzig materialistische und daher wissenschaftliche Methode.

Question 986 Which approach to religion is in Marx's view uncritical, and which approach, used much more rarely, is the only scientific one? What does this analogy about religion say about how machinery should be investigated?

⇓ Marx concludes with an ad hominem critique which in modern times would no longer be considered legitimate:

The weak points in the abstract materialism of natural science, a materialism that excludes history and its process, are at once evident from the abstract and ideological conceptions of its spokespeople, whenever they venture beyond the bounds of their own speciality.

Die Mängel des abstrakt naturwissenschaftlichen Materialismus, der den geschichtlichen Prozeß ausschließt, ersieht man schon aus den abstrakten und ideologischen Vorstellungen seiner Wortführer, sobald sie sich über ihre Spezialität hinauswagen.

15.1.b. [The real definition of machinery]

Now Marx begins his own analysis of what a machine is and how it differs from a handicraft tool. In order to arrive at a real definition of the machine, he begins not with the individual machine but with the totality, the “machine system.”

Question 987 In order to develop his real definition of a machine, Marx does not look at individual machines but at a typical machine system of his time. Why?

Marx takes a careful look at a typical machine system of his time, in order to find clues about the essential character of the machines. One might say he visits actual machines in their own habitat, the machine system, and listens carefully what these machine themselves tell him about their origin. Marx does not take for granted what he deciphers; immediately after giving his interpretation of what the machine tells him, he brings a number of arguments, mostly historical, confirming that he has indeed found the real definition of the machine. This whole procedure demonstrates what he meant, in footnote 89, with an archeology-like critical history of technology. After distilling the real definition of the machine from this empirical evidence, he will use this definition to reconstruct the machine in his mind, and he will return to a theoretically better grounded understanding of the machine system in 381:1.

15. Machinery and Modern Industry

↓ If you look at the machine system empirically, even if you are not armed with a deeper understanding of its structure, it is nevertheless evident that such a machine system can usually be divided into three parts, two of which are subsidiary to the third part, the so-called working machine:

376:1 All fully developed machinery consists of three essentially different parts, the motor mechanism, the transmitting mechanism, and finally the tool or working machine. The motor mechanism is that which puts the whole in motion. It either generates its own motive power, like the steam-engine, the caloric engine, the electromagnetic machine, etc., or it receives its impulse from some already existing natural force, like the water-wheel from a head of water, the wind-mill from wind, etc. The transmitting mechanism, composed of fly-wheels, shafting, toothed wheels, pullies, straps, ropes, bands, pinions, and gearing of the most varied kinds, regulates the motion, changes its form, where necessary, as for instance, from linear to circular, and divides and distributes it among the working machines.

393:1 Alle entwickelte Maschinerie besteht aus drei wesentlich verschiedenen Teilen, der Bewegungsmaschine, dem Transmissionsmechanismus, endlich der Werkzeugmaschine oder Arbeitsmaschine. Die Bewegungsmaschine wirkt als Triebkraft des ganzen Mechanismus. Sie erzeugt ihre eigne Bewegungskraft, wie die Dampfmaschine, kalorische Maschine, elektromagnetische Maschine usw., oder sie empfängt den Anstoß von einer schon fertigen Naturkraft außer ihr, wie das Wasserrad vom Wassergefäll, der Windflügel vom Wind usw. Der Transmissionsmechanismus, zusammengesetzt aus Schwungrädern, Treibwellen, Zahnradern, Kreiselradern, Schäften, Schnüren, Riemen, Zwischengeschirr und Vorgelege der verschiedensten Art, regelt die Bewegung, verwandelt, wo es nötig, ihre Form, z.B. aus einer perpendikulären in eine kreisförmige, verteilt und überträgt sie auf die Werkzeugmaschinerie.

Factories at Marx's time had one huge motor (typically a steam engine) which drove many machines through an intricate mechanical transmission mechanism. Today, this transmission of power is usually less conspicuous using a hydraulic or compressed air system. Also, in many cases, cheap electric power has made a central driving motor unnecessary: the "prime mover" has been replaced by an electric power plant, leather belts have been replaced by transmission wires, and every machine has several electric motors built in. [Wri10, p. where?] comments on the introduction of electric motors into production.

Prime mover and transmission mechanism play a subordinate role to what Marx calls the "working machines."

These two first parts of the whole mechanism exist solely for putting the working machines in motion, by means of which motion the working machine seizes the object of labor and modifies it as desired.

Beide Teile des Mechanismus sind nur vorhanden, um der Werkzeugmaschine die Bewegung mitzuteilen, wodurch sie den Arbeitsgegenstand anpackt und zweckgemäß verändert.

↓ Marx asserts that this third part, the working machine, is the significant part not only historically but also in the mechanization of new industries:

The tool machine or working machine is that part of the machinery with which the industrial revolution of the 18th century started. And to this day it constantly serves as such a starting-point, whenever a handicraft, or a

Dieser Teil der Maschinerie, die Werkzeugmaschine, ist es, wovon die industrielle Revolution im 18. Jahrhundert ausgeht. Sie bildet noch jeden Tag von neuem den Ausgangspunkt, sooft Handwerks-

manufacture, is turned into an industry carried on by machinery.

betrieb oder Manufakturbetrieb in Maschinenbetrieb übergeht.

↑ This last sentence is analogous to Marx's statement about capital in money form at the beginning of chapter Four, 157:3: money capital is not only historically the first form of capital, but also nowadays every startup capital begins in the form of money.

Question 988 *Enumerate the three essentially different parts of any fully developed machinery system. Which of these three parts is considered by Marx to be the main part, and why?*

↓ A closer look at the above-defined working machine proper shows that, at least at Marx's time, the familiar handicraft tools are still recognizable in it. This is the evidence on which Marx will base his real definition of the machine a little later in the same paragraph. Given the importance of the conclusion he is going to draw, he proceeds slowly and carefully, with many examples:

376:2/o On a closer examination of the working machine proper, we find in it, as a general rule, though often, no doubt, under very altered forms, the apparatus and tools used by the handicraftsman or manufacturing workman; with this difference, that instead of being human implements, they are the implements of a mechanism, or mechanical implements. Either the entire machine is only a more or less altered mechanical edition of the old handicraft tool, as, for instance, the power-loom,⁹⁰ or the working parts fitted in the frame of the machine are old acquaintances, as spindles are in a mule, needles in a stocking-loom, saws in a sawing-machine, and knives in a chopping machine.

393:2/o Sehn wir uns nun die Werkzeugmaschine oder eigentliche Arbeitsmaschine näher an, so erscheinen im großen und ganzen, wenn auch oft in sehr modifizierter Form, die Apparate und Werkzeuge wieder, womit der Handwerker und Manufakturarbeiter arbeitet, aber statt als Werkzeuge des Menschen jetzt als Werkzeuge eines Mechanismus oder als mechanische. Entweder ist die ganze Maschine nur eine mehr oder minder veränderte mechanische Ausgabe des alten Handwerksinstruments, wie bei dem mechanischen Webstuhl,⁹⁰ oder die am Gerüst der Arbeitsmaschine angebrachten tätigen Organe sind alte Bekannte, wie Spindeln bei der Spinnmaschine, Nadeln beim Strumpfwirkerstuhl, Sägeblätter bei der Sägemaschine, Messer bei der Zerkhackmaschine usw.

⁹⁰ Especially in the original form of the power-loom, we recognise, at the first glance, the ancient loom. In its modern form, the power-loom has undergone essential alterations.

⁹⁰ Namentlich in der ursprünglichen Form des mechanischen Webstuhls erkennt man den alten Webstuhl auf den ersten Blick wieder. Wesentlich verändert erscheint er in seiner modernen Form.

↑ The working machine consists of tools interacting with the object of labor (which, at least in the beginning, are similar to the handicraft implements), and the mechanism holding the tools. ↓ The distinction between tools and the apparatus holding the tools is not only apparent in the machine itself but at Marx's time it was also apparent in the production process producing the machine.

The distinction between these tools and the body proper of the machine, exists from their very birth; for they continue for the most part to be produced by handicraft, or

Der Unterschied dieser Werkzeuge von dem eigentlichen Körper der Arbeitsmaschine erstreckt sich bis auf ihre Geburt. Sie werden nämlich immer noch größtenteils hand-

15. Machinery and Modern Industry

by manufacture, and are afterwards fitted into the body of the machine, which is the product of machinery.⁹¹

werksmäßig oder manufakturmäßig produziert und später erst an den maschinenmäßig produzierten Körper der Arbeitsmaschine befestigt.⁹¹

Footnote 91 makes the correction that this latter difference is apparently fading away with the further development of machinery:

⁹¹ It is only during the last 15 years (i.e., since about 1850), that a constantly increasing portion of these machine tools have been made in England by machinery, although it was not done by the same firms which make the machines themselves. Instances of machines for the fabrication of these mechanical tools are the automatic bobbin-making engine, the cardsetting engine, shuttle-making machines, and machines for forging mule and throstle spindles.

⁹¹ Erst seit ungefähr 1850 wird ein stets wachsender Teil der Werkzeuge der Arbeitsmaschinen maschinenmäßig in England fabriziert, obgleich nicht von denselben Fabrikanten welche die Maschinen selbst machen. Maschinen zur Fabrikation solcher mechanischen Werkzeuge sind z.B. die automatic bobbin-making engine, card-setting engine, Maschinen zum Machen der Weberlitzten, Maschinen zum Schmieden von mule und throstle Spindeln.

↓ Guided by this closer look at the working machine, Marx arrives at the following “real definition” of the machine: the machine is a mechanism taking over the worker’s manipulation of the object of labor.

The machine proper is therefore a mechanism that, when the appropriate motive power is fed into it, performs with its tools the same operations that were formerly done by the workman with similar tools.

Die Werkzeugmaschine ist also ein Mechanismus, der nach Mitteilung der entsprechenden Bewegung mit seinen Werkzeugen dieselben Operationen verrichtet, welche früher der Arbeiter mit ähnlichen Werkzeugen verrichtete.

↑ Note the historical element in this definition: the working machine performs operations formerly done by workers. ↓ Apparently responding to 374:5/o, Marx adds that it does not matter here whether or not the motive force is human. The origin of the motive power does not change the essence of what Marx is discussing here.

Whether the motive power is derived from man, or from some other machine, makes no difference in this respect. From the moment that the tool proper is taken from man, and fitted into a mechanism, it is machine and no longer a mere implement. The difference strikes one at once, even in those cases where man himself continues to be the prime mover.

Ob die Triebkraft nun vom Menschen ausgeht oder selbst wieder von einer Maschine, ändert am Wesen der Sache nichts. Nach Übertragung des eigentlichen Werkzeugs vom Menschen auf einen Mechanismus tritt eine Maschine an die Stelle eines bloßen Werkzeugs. Der Unterschied springt sofort ins Auge, auch wenn der Mensch selbst noch der erste Motor bleibt.

↑ A first test that the above is indeed the “real definition” of machinery is that it will not be confused or made ambiguous by secondary factors. Even if humans remain the motive force, the difference between tool and machine is still clearly discernible.

Question 991 *How does a machine differ from a hand tool?*

Also the historical development of many of the machines available at Marx’s time shows that the problem needing a solution was not an insufficient supply of power, but the limited number of tools which a human can handle at the same time.

The number of implements that he himself can use simultaneously, is limited by the

Die Anzahl von Arbeitsinstrumenten, womit er gleichzeitig wirken kann, ist durch

number of his own natural instruments of production, by the number of his bodily organs. In Germany, they tried at first to make one spinner work two spinning-wheels, that is, to work simultaneously with both hands and both feet. This was too strenuous. Later, a treddle spinning-wheel with two spindles was invented, but adepts in spinning, who could spin two threads at once, were almost as scarce as two-headed men. The Jenny, on the other hand, even at its very birth, spun with 12–18 spindles, and the stocking-loom knits with many thousand needles at once. The number of tools that a machine can bring into play simultaneously is from the very first emancipated from the organic limits that hedge in the tools of a handicraftsman.

die Anzahl seiner natürlichen Produktionsinstrumente, seiner eignen körperlichen Organe, beschränkt. Man versuchte in Deutschland erst einen Spinner zwei Spinnräder treten, ihn also gleichzeitig mit zwei Händen und zwei Füßen arbeiten zu lassen. Dies war zu anstrengend. Später erfand man ein Tretpinnrad mit zwei Spindeln, aber die Spinnvirtuosen, die zwei Fäden gleichzeitig spinnen konnten, waren fast so selten als zweiköpfige Menschen. Die Jenny spinnt dagegen von vornherein mit 12–18 Spindeln, der Strumpfwirkerstuhl strickt mit viel 1000 Nadeln auf einmal usw. Die Anzahl der Werkzeuge, womit dieselbe Werkzeugmaschine gleichzeitig spielt, ist von vornherein emanzipiert von der organischen Schranke, wodurch das Handwerkszeug eines Arbeiters beengt wird.

↑ This last sentence is important: a machine, even one that is driven by human power, overcomes the limitation that a human, with his or her two arms and legs, can only operate a limited number of tools.

The next paragraph brings several specific examples all of which show that the essential driving moment in the development of machinery was not the replacement of human motive power, but the multiplication of the tools. ↓ First example: with those tools where the exercise of power was separable from the direction of the activity, the direction of the activity often was mechanized first, while the exercise of power still remained with the human operator:

377:1/oo In many manual implements the distinction between man as mere motive power, and man as the workman or operator properly so called, is brought into striking contrast. For instance, the foot is merely the prime mover of the spinning-wheel, while the hand, working with the spindle, and drawing and twisting, performs the real operation of spinning. It is this last part of the handicraftsman's implement that is first seized upon by the industrial revolution, leaving to the workman, in addition to his new labor of watching the machine with his eyes and correcting its mistakes with his hands, the merely mechanical part of being the moving power.

394:1/oo An vielem Handwerkszeug besitzt der Unterschied zwischen dem Menschen als bloßer Triebkraft und als Arbeiter mit dem eigentlichen Operateur eine sinnlich besonderte Existenz. Z.B. beim Spinnrad wirkt der Fuß nur als Triebkraft, während die Hand, die an der Spindel arbeitet, zupft und dreht, die eigentliche Spinnoperation verrichtet. Grade diesen letzten Teil des Handwerksinstruments ergreift die industrielle Revolution zuerst und überläßt dem Menschen, neben der neuen Arbeit, die Maschine mit seinem Auge zu überwachen und ihre Irrtümer mit seiner Hand zu verbessern, zunächst noch die rein mechanische Rolle der Triebkraft.

The next group of examples discusses tools which by their nature require so little direction that the main task of humans was to supply power.

On the other hand, implements, in regard to which man has always acted as a simple

Werkzeuge dagegen, auf die der Mensch von vornherein nur als einfache Triebkraft

15. Machinery and Modern Industry

motive power, as, for instance, by turning the crank of a mill,⁹² by pumping, by moving up and down the arm of a bellows, by pounding with a mortar, etc., it is true that such implements are the first to call for the application of animals, water⁹³ and wind as motive powers.

↑ Although they are the first to call forth the application of non-human motive power, Marx will say next that these early machines remained isolated and did *not* lead to the development of machine technology. Before we get to this, let's look at footnotes 92 and 93. They are digressions commenting on the early replacement of human power by other sources. ↓ Regarding the replacement of human power by animals Marx says that animals were often treated better than humans.

⁹² Moses says: "Thou shalt not muzzle the ox that treads the corn." The Christian philanthropists of Germany, on the contrary, fastened a wooden board round the necks of the serfs, whom they used as a motive power for grinding, in order to prevent them from putting flour into their mouths with their hands.

↓ Footnote 93 gives some anecdotes about the early use of wind as motive power:

⁹³ It was partly the want of streams with a good fall on them, and partly their battles with superabundance of water in other respects, that compelled the Dutch to resort to wind as a motive power. The wind-mill itself they got from Germany, where its invention was the origin of a pretty squabble between the nobles, the priests, and the emperor, as to which of those three the wind "belonged." The air makes bondage, was the cry in Germany, at the same time that the wind was making Holland free. What it reduced to bondage in this case, was not the Dutchman, but the land for the Dutchman. In 1836, 12,000 windmills of 6,000 horse-power were still employed in Holland, to prevent two-thirds of the land from being reconverted into morasses.

↓ In the main text, the next sentence contains the "but" (*aber*) corresponding to the "it is true" (*zwar*) above:

Here and there, long before the period of manufacture, and also, to some extent, during that period, these implements pass over into machines, but without creating any revolution in the mode of production.

↑ Marx says two things about the tools where human intervention has the main purpose of supplying power:

- They were the first to be powered by a non-human source of power and in this way "stretched" to be machines in a non-mechanized environment, some of them long before the manufacturing period.

wirkt, wie z.B. beim Drehn der Kurbel einer Mühle,⁹² bei[m] Pumpen, beim Auf- und Abbewegen der Arme eines Blasebalgs, beim Stoßen eines Mörsers etc., rufen zwar zuerst die Anwendung von Tieren, Wasser, Wind⁹³ als Bewegungskräften hervor.

⁹² Moses von Ägypten sagt: „Du sollst dem Ochsen, der drischt, nicht das Maul verbinden.“ Die christlich germanischen Philanthropen legten dagegen dem Leibeignen, den sie als Triebkraft zum Mahlen verwandten, eine große hölzerne Scheibe um den Hals, damit er kein Mehl mit der Hand zum Mund bringen könne.

⁹³ Teils Mangel an lebendigem Wassergefäll, teils Kampf gegen sonstigen Wasserüberfluß zwangen die Holländer zur Anwendung des Winds als Triebkraft. Die Windmühle selbst erhielten sie aus Deutschland, wo diese Erfindung einen artigen Kampf zwischen Adel, Pfaffen und Kaiser hervorrief, wem denn von den drei der Wind „gehöre“. Luft macht eigen, hieß es in Deutschland, während der Wind Holland frei macht. Was er hier eigen machte, war nicht der Holländer, sondern der Grund und Boden für den Holländer. Noch 1836 wurden 12 000 Windmühlen von 6000 Pferdekraft in Holland verwandt, um zwei Dritteile des Lands vor Rückverwandlung in Morast zu schützen.

Sie recken sich, teilweise innerhalb, sporadisch schon lange vor der Manufakturperiode zu Maschinen, aber sie revolutionieren die Produktionsweise nicht.

- Their conversion into machines did not cause the industrial revolution.

⇓ Two examples of such early machines: pumps in Holland, blacksmith's bellows in England

It becomes evident, in the period of Modern Industry, that these implements, even under their form of manual tools, are already machines. For instance, the pumps with which the Dutch, in 1836–7, emptied the Lake of Harlem, were constructed on the principle of ordinary pumps; the only difference being, that their pistons were driven by cyclopean steam-engines, instead of by men. The common and very imperfect bellows of the blacksmith is, in England, occasionally converted into a blowing-engine, by connecting its arm with a steam-engine.

Daß sie selbst in ihrer handwerksmäßigen Form bereits Maschinen sind, zeigt sich in der Periode der großen Industrie. Die Pumpen z.B., womit die Holländer 1836/37 den See von Harlem auspumpten, waren nach dem Prinzip gewöhnlicher Pumpen konstruiert, nur daß zyklische Dampfmaschinen statt der Menschenhände ihre Kolben trieben. Der gewöhnliche und sehr unvollkommene Blasbalg des Grobschmieds wird noch zuweilen in England durch bloße Verbindung seines Arms mit einer Dampfmaschine in eine mechanische Luftpumpe verwandelt.

⇑ Marx does not tell us where these cyclopean steam engines got their fuel from. ⇓ Marx's last example is the steam engine itself: it did not cause the industrial revolution either, but conversely, the industrial revolution required a revolutionized steam engine.

The steam-engine itself, such as it was at its invention, during the manufacturing period at the close of the 17th century, and such as it continued to be down to 1780,⁹⁴ did not give rise to any industrial revolution. It was, on the contrary, the invention of machines that made a revolution in the form of steam-engines necessary.

Die Dampfmaschine selbst, wie sie Ende des 17. Jahrhunderts während der Manufakturperiode erfunden ward und bis zum Anfang der 80er Jahre des 18. Jahrhunderts fortexistierte,⁹⁴ rief keine industrielle Revolution hervor. Es war vielmehr umgekehrt die Schöpfung der Werkzeugmaschinen, welche die revolutionierte Dampfmaschine notwendig machte.

⁹⁴ It was, indeed, very much improved by Watt's first so-called single acting engine; but, in this form, it continued to be a mere machine for raising water, and the liquor from salt mines.

⁹⁴ Sie wurde zwar schon sehr verbessert durch Watts erste, sogenannte einfach wirkende Dampfmaschine, blieb aber in dieser Form bloße Hebemaschine für Wasser und Salzsole.

Question 992 *Is the steam engine the origin of the industrial revolution?*

⇓ Marx uses this occasion to explain why the replacement of human power with non-human power does not lag far behind the introduction of machinery, although the power source is not the differentia specifica (Marx does not use this word here although it would be appropriate) of machinery. The reason is that human power very quickly becomes too limited to drive the many tools the machine is holding:

As soon as man, instead of working with an implement on the object of his labor, becomes merely the motive power of an implement-machine, it is a mere accident that motive power takes the disguise of human muscle; and it may equally well take the form of wind, water or steam. Of course,

Sobald der Mensch, statt mit dem Werkzeug auf den Arbeitsgegenstand, nur noch als Triebkraft auf eine Werkzeugmaschine wirkt, wird die Verkleidung der Triebkraft in menschliche Muskel zufällig und kann Wind, Wasser, Dampf usw. an die Stelle treten. Dies schließt natürlich nicht aus,

15. Machinery and Modern Industry

this does not prevent such a change of form from producing great technical alterations in the mechanism that was originally constructed to be driven by man alone. Now-a-days, all machines that have their way to make, such as sewing-machines, bread-making machines, etc., are, unless from their very nature their use on a small scale is excluded, constructed to be driven both by human and by purely mechanical motive power.

daß solcher Wechsel oft große technische Änderungen des ursprünglich für menschliche Treibkraft allein konstruierten Mechanismus bedingt. Heutzutage werden alle Maschinen, die sich erst Bahn brechen müssen, wie Nähmaschinen, Brotbereitungsmaschinen usw., wenn sie den kleinen Maßstab nicht von vornherein durch ihre Bestimmung ausschließen, für menschliche und rein mechanische Treibkraft zugleich konstruiert.

15.1.c. [Development of the Machine System]

After this confirmation that the real definition of a working machine in 376:2/o is correct, Marx now proceeds to *use* this definition. ↓ He begins with a recapitulation of the definition itself, which also recapitulates how the machinery combines one or more working machines with a power source.

379:1 The machine which is the starting-point of the industrial revolution supersedes the workman, who handles a single tool, by a mechanism operating with a number of similar tools, and set in motion by a single motive power, whatever the form of that power may be.⁹⁵

396:1 Die Maschine, wovon die industrielle Revolution ausgeht, ersetzt den Arbeiter, der ein einzelnes Werkzeug handhabt, durch einen Mechanismus, der mit einer Masse derselben oder gleichartiger Werkzeuge auf einmal operiert und von einer einzigen Triebkraft, welches immer ihre Form, bewegt wird.⁹⁵

Marx's definition leans on Babbage:

⁹⁵ "The union of all these simple instruments, set in motion by a single motor, constitutes a machine." (Babbage, l.c.)

⁹⁵ „Die Vereinigung aller dieser einfachen Instrumente, durch einen einzigen Motor in Bewegung gesetzt, bildet eine Maschine.“ (Babbage, l.c. [p. 136.]

Once this definition is worked out, Marx demonstrates that this definition gives us the categories to understand the historical evolution of machinery. Marx traces the development through which the machines as defined here necessarily become the elements in a bigger machine *system*.

Here we have the machine, but only as an elementary factor of production by machinery.

Hier haben wir die Maschine, aber erst als einfaches Element der maschinenmäßigen Produktion.

This evolution into a machine system goes through three phases: (a) The individual machines require a stronger motive power, which leads to the development of a prime mover outside the working machine transferring motive power through the transmission mechanism. (b) This motive power acts back on the machines by linking many equal machines together. (c) These machines differentiate themselves and develop a division of labor in a machine system.

(a) The first step after the transition from hand implements to machine (in which the tools were no longer operated by humans) was, as already remarked in 377:1/oo, the replacement of humans also as motive power. ↓ The increasing size of the machines made this replacement necessary:

379:2–381:0 Increase in the size of the machine, and in the number of its working tools, calls for a more massive mechanism to drive it; and this mechanism requires, in order to overcome its resistance, a mightier moving power than that of man, apart from the fact that man is a very imperfect instrument for producing uniform continued motion.

396:2/oo Die Erweiterung des Umfangs der Arbeitsmaschine und der Zahl ihrer gleichzeitig operierenden Werkzeuge bedingt einen massenhafteren Bewegungsmechanismus, und dieser Mechanismus zur Überwältigung seines eignen Widerstands eine mächtigere Triebkraft als die menschliche, abgesehen davon, daß der Mensch ein sehr unvollkommenes Produktionsinstrument gleichförmiger und kontinuierlicher Bewegung ist.

↓ Since the handling of the tools was separated from the transmission of power and had become part of the machine, the transition to non-human power had become possible.

Since the human is acting now simply as a motor, since a machine has taken the place of his tool, it is possible to replace him by natural forces.

Vorausgesetzt, daß er nur noch als einfache Triebkraft wirkt, also an die Stelle seines Werkzeugs eine Werkzeugmaschine getreten ist, können Naturkräfte ihn jetzt auch als Triebkraft ersetzen.

Now a description of the powers which replaced the humans: horses, water, wind, steam engine. ↓ First the horse:

Of all the great motors handed down from the manufacturing period, horse-power is the worst, partly because a horse has a head of his own, partly because he is costly, and the extent to which he is applicable in factories is very restricted.⁹⁶ Nevertheless the horse was extensively used during the infancy of Modern Industry. This is proved, as well by the complaints of contemporary agriculturists, as by the term “horse-power,” which has survived to this day as an expression for mechanical force.

Von allen aus der Manufakturperiode überlieferten großen Bewegungskräften war die Pferdekraft die schlechteste, teils weil ein Pferd seinen eignen Kopf hat, teils wegen seiner Kostspieligkeit und des beschränkten Umfangs, worin es in Fabriken allein anwendbar ist.⁹⁶ Dennoch wurde das Pferd häufig während der Kinderzeit der großen Industrie angewandt, wie außer dem Jammer gleichzeitiger Agronomen schon der bis heute überlieferte Ausdruck der mechanischen Kraft in Pferdekraft bezeugt.

⁹⁶ In January, 1861, John C. Morton read before the Society of Arts a paper on “The forces employed in agriculture.” He there states: “Every improvement that furthers the uniformity of the land makes the steam-engine more and more applicable to the production of pure mechanical force ... Horse-power is requisite wherever crooked fences and other obstructions prevent uniform action. These obstructions are vanishing day by day. For operations that demand more exercise of will than actual force, the only power applicable is that controlled every instant by the human mind—in other words, man-power.” Mr. Morton then reduces steam-power, horse-power, and man-power, to the unit in general use for steam-engines, namely, the

⁹⁶ John C. Morton verlas Dezember 1859 in der Society of Arts einen Aufsatz über „die in der Agrikultur angewandten Kräfte“. Es heißt darin u.a.: „Jede Verbeßrung, welche die Gleichförmigkeit des Bodens fördert, macht die Dampfmaschine zur Erzeugung rein mechanischer Kraft anwendbarer ... Pferdekraft wird erheischt, wo krumme Hecken und andre Hindernisse gleichförmige Aktion verhindern. Diese Hindernisse schwinden täglich mehr. In Operationen, die mehr Ausübung des Willens und weniger wirkliche Kraft erfordern, ist die durch den menschlichen Geist von Minute zu Minute gelenkte Kraft, also Menschenkraft, allein anwendbar.“ Herr Morton reduziert dann Dampfkraft, Pferdekraft und Menschenkraft auf die bei Dampfmaschi-

15. Machinery and Modern Industry

force required to raise 33,000 lbs. one foot in one minute, and reckons the cost of one horse-power from a steam-engine to be 3d., and from a horse to be 5 1/2 d. per hour. Further, if a horse must fully maintain its health, it can work no more than 8 hours a day. Three at the least out of every seven horses used on tillage land during the year can be dispensed with by using steam-power, at an expense not greater than that which, the horses dispensed with, would cost during the 3 or 4 months in which alone they can be used effectively. Lastly, steam-power, in those agricultural operations in which it can be employed, improves, in comparison with horse-power, the quality of the work. To do the work of a steam-engine would require 66 men, at a total cost of 15s. an hour, and to do the work of a horse, 32 men, at a total cost of 8s. an hour.

nen gewöhnliche Maßeinheit, nämlich die Kraft, 33 000 Pfund in der Minute um einen Fuß zu heben, und berechnet die Kosten einer Dampfpferdekraft bei der Dampfmaschine auf 3 d. und beim Pferde auf 5 1/2 d. per Stunde. Ferner kann das Pferd bei voller Erhaltung seiner Gesundheit nur 8 Stunden täglich angewandt werden. Durch Dampfkraft können mindestens 3 von je 7 Pferden auf bebautem Land während des ganzen Jahrs erspart werden, zu einem Kostenpreis, nicht größer als dem der entlassenen Pferde während der 3 oder 4 Monate, wo sie allein wirklich vernutzt werden. In den Agrikulturoperationen, worin die Dampfkraft angewandt werden kann, verbessert sie endlich, verglichen mit der Pferdekraft, die Qualität des Machwerks. Um das Werk der Dampfmaschine zu verrichten, müßten 66 Arbeiter per Stunde zu zusammen 15 sh., und um das der Pferde zu verrichten, 32 Mann zu zusammen 8 sh. per Stunde angewandt werden.

↓ Now a brief mention of the other motive powers available:

Wind was too inconstant and uncontrollable, and besides, in England, the birthplace of Modern Industry, the use of water-power preponderated even during the manufacturing period.

Der Wind war zu unstet und unkontrollierbar, und die Anwendung der Wasserkraft überwog außerdem in England, dem Geburtsort der großen Industrie, schon während der Manufakturperiode.

↓ Hydro power was used for flour mills. Embedded in this discussion of the motive powers of flour mills Marx makes a side remark about the development of science stimulated by the development of machinery.

In the 17th century attempts had already been made to turn two pairs of millstones with a single water-wheel. But the increased size of the gearing was too much for the water-power, which had now become insufficient, and this was one of the circumstances that led to a more accurate investigation of the laws of friction. In the same way the irregularity caused by the motive power in mills that were put in motion by pushing and pulling a lever, led to the theory, and the application, of the fly-wheel, which afterwards plays so important a part in Modern Industry.⁹⁷ In this way, during the manufacturing period, were developed the first scientific and technical elements of Modern Mechanical Industry.

Man hatte bereits im 17. Jahrhundert versucht, zwei Läufer und also auch zwei Mahlgänge mit einem Wasserrad in Bewegung zu setzen. Der geschwollne Umfang des Transmissionsmechanismus geriet aber jetzt in Konflikt mit der nun unzureichenden Wasserkraft, und dies ist einer der Umstände, der zur genauern Untersuchung der Reibungsgesetze trieb. Ebenso führte das ungleichförmige Wirken der Bewegungskraft bei Mühlen, die durch Stoßen und Ziehen mit Schwengeln in Bewegung gesetzt wurden, auf die Theorie und Anwendung des Schwungrads,⁹⁷ das später eine so wichtige Rolle in der großen Industrie spielt. In dieser Art entwickelte die Manufakturperiode die ersten wissenschaftlichen und technischen Elemente der großen Industrie.

⁹⁷ Faulhaber, 1625; De Cous, 1688.

⁹⁷ Faulhaber, 1625; De Cous, 1688.

↓ Back to the discussion of motive powers. The deficiencies of water power were over-

come by steam power.

Arkwright's throstle-spinning mill was from the very first turned by water. But for all that, the use of water, as the predominant motive power, was beset with difficulties. It could not be increased at will, it failed at certain seasons of the year, and, above all, it was purely local.⁹⁸

⁹⁸ The modern turbine frees the industrial exploitation of water-power from many of its former fetters.

↑ Marx remarks that water and wind are "purely local" but does not explain why. Wind, hydro energy, and also biomass, which Marx does not mention at all, being derivatives of solar energy in the present or near past, are local and dispersed by their nature, because solar energy is dispersed.

↓ This dispersion and irregularity of water power was overcome by the cheap and concentrated energy of fossil fuels (coal) made usable by the steam engine. Marx is not aware how significant the bonanza of this cheap, concentrated, and dispatchable source of energy is.

In the Communist Manifesto, Marx and Engels write: "The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's force to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalization of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labor?" The puts too much emphasis on the *technology* (social labor) and overlooks how significant the sudden availability of cheap energy is for the phenomena here described.

Not till the invention of Watt's second and so-called double-acting steam-engine, was a prime mover found, that begot its own force by the consumption of coal and water, whose power was entirely under man's control, that was mobile and a means of locomotion, that was urban and not, like the waterwheel, rural, that permitted production to be concentrated in towns instead of, like the water-wheels, being scattered up and down the country,⁹⁹ that was of universal technical application, and, relatively speaking, little affected in its choice of residence by local circumstances.

The footnote emphasizes that only fossil fuels allowed the machines to come together in an urban system:

⁹⁹ "In the early days of textile manufactures, the locality of the factory depended upon the existence of a stream having a sufficient fall to turn

Arkwrights Throstlesspinnerei wurde von vornherein mit Wasser getrieben. Indes war auch der Gebrauch der Wasserkraft als herrschender Triebkraft mit erschwerenden Umständen verbunden. Sie konnte nicht beliebig erhöht und ihrem Mangel nicht abgeholfen werden, sie versagte zuweilen und war vor allem rein lokaler Natur.⁹⁸

⁹⁸ Die moderne Erfindung der Turbinen befreit die industrielle Ausbeutung der Wasserkraft von vielen frühern Schranken.

Erst mit Watts zweiter, sog. doppelt wirkender Dampfmaschine war ein erster Motor gefunden, der seine Bewegungskraft selbst erzeugt aus der Verspeisung von Kohlen und Wasser, dessen Kraftpotenz ganz unter menschlicher Kontrolle steht, der mobil und ein Mittel der Lokomotion, städtisch und nicht gleich dem Wasserrad ländlich, die Konzentration der Produktion in Städten erlaubt, statt sie wie das Wasserrad über das Land zu zerstreuen,⁹⁹ universell in seiner technologischen Anwendung, in seiner Residenz verhältnismäßig wenig durch lokale Umstände bedingt.

⁹⁹ „In der Frühzeit der Textilmanufaktur war der Standort der Fabrik von der Existenz eines Wasserlaufs abhängig, der genügend Gefälle hat-

15. Machinery and Modern Industry

a water-wheel; and, although the establishment of the water-mills was the commencement of the breaking up of the domestic system of manufacture, yet the mills necessarily situated upon streams, and frequently at considerable distances the one from the other, formed part of a rural, rather than an urban system; and it was not until the introduction of the steam-power as a substitute for the stream that factories were congregated in towns, and localities where the coal and water required for the production of steam were found in sufficient quantities. The steam-engine is the parent of manufacturing towns.” (A. Redgrave in “Reports of the Insp. of Fact., 30th April, 1860,” p. 36.)

Watt’s invention was not a machine for a particular purpose but a “general agent.” Marx will say more about this in 379:2–381:0.

The greatness of Watt’s genius showed itself in the specification of the patent that he took out in April, 1784. In that specification his steam-engine is described, not as an invention for a specific purpose, but as an agent universally applicable in Mechanical Industry. In it he points out applications, many of which, as for instance, the steam-hammer, were not introduced till half a century later. Nevertheless he doubted the use of steam-engines in navigation. His successors, Boulton and Watt, sent to the exhibition of 1851 steam-engines of colossal size for ocean steamers.

↑ A modern example for a “general agent” would perhaps be the smart grid. Like Watt’s engine it is not a tool for just one particular purpose but it leads to a paradigm shift in the consumption and production of energy.

↓ (b) After discussing how the development of machinery affected the development of motive power, Marx looks now at the opposite effect: how the development of motive power acts back on the machinery. Since the newly developed more powerful motive power can drive many machines at once, the *machine system* is born. This in turn leads to the development of the transmission apparatus, the third aspect of the machine system, which was the starting point for Marx’s real definition of the machine:

381:1 As soon as tools had been converted from being manual implements of man into implements of a mechanical apparatus, of a machine, the motive mechanism also acquired an independent form, entirely emancipated from the restraints of human strength. Thereupon the individual ma-

te, um ein Wasserrad zu drehen; und obwohl nun die Einrichtung der Wassermühlen den Beginn der Auflösung des Systems der Hausindustrie bedeutete, stellten die Mühlen, die notwendigerweise an Wasserläufen gelegen sein mußten und häufig in beträchtlicher Entfernung voneinander standen, eher einen Teil eines ländlichen als eines städtischen Systems dar; erst durch die Einführung der Dampfkraft als Ersatz für den Wasserlauf wurden die Fabriken in Städten und an Orten zusammengedrängt, wo Kohle und Wasser, die zur Dampferzeugung benötigt wurden, in ausreichender Menge vorhanden waren. Die Dampfmaschine ist die Mutter der Industriestädte.“ (A. Redgrave in „Reports of the Insp. of Fact. 30th April 1860“, p. 36.)

Das große Genie Watts zeigt sich in der Spezifikation des Patents, das er April 1784 nahm, und worin seine Dampfmaschine nicht als eine Erfindung zu besondern Zwecken, sondern als allgemeiner Agent der großen Industrie geschildert wird. Er deutet hier Anwendungen an, wovon manche, wie z.B. der Dampfhammer, mehr als ein halbes Jahrhundert später erst eingeführt wurden. Jedoch bezweifelte er die Anwendbarkeit der Dampfmaschine auf Seeschifffahrt. Seine Nachfolger, Boulton und Watt, stellten 1851 die kolossalste Dampfmaschine für Ocean steamers auf der Londoner Industrieausstellung aus.

398:1/o Nachdem erst die Werkzeuge aus Werkzeugen des menschlichen Organismus in Werkzeuge eines mechanischen Apparats, der Werkzeugmaschine, verwandelt, erhielt nun auch die Bewegungsmaschine eine selbständige, von den Schranken menschlicher Kraft völlig emanzipierte Form. Da-

chine, that we have hitherto been considering, sinks into a mere factor in production by machinery. One motive mechanism was now able to drive many machines at once. The motive mechanism grows with the number of the machines that are turned simultaneously, and the transmitting mechanism becomes a wide-spreading apparatus.

mit sinkt die einzelne Werkzeugmaschine, die wir bisher betrachtet, zu einem bloßen Element der maschinenmäßigen Produktion herab. Eine Bewegungsmaschine konnte jetzt viele Arbeitsmaschinen gleichzeitig treiben. Mit der Anzahl der gleichzeitig bewegten Arbeitsmaschinen wächst die Bewegungsmaschine und dehnt sich der Transmissionsmechanismus zu einem weitläufigen Apparat aus.

Question 993 *Why did the single working or tool machine develop into a whole system of machinery?*

(c) Now let's look what is at the other end of this transmission system. It is not yet a machine system, initially it simply the summation of many equal work machines.

381:2 We now proceed to distinguish the co-operation of a number of machines of one kind from a complex system of machinery.

399:1 Es ist nun zweierlei zu unterscheiden, Kooperation vieler gleichartiger Maschinen und Maschinensystem.

↑ If co-operation of many equal machines corresponds to what Marx calls Simple Co-operation, the machine system proper corresponds to division of labor—but without the limitations of the division of labor based on handicrafts. ↓ What comes now is not a comparison but the description of a development. Marx begins with a system consisting of many machines where each individual machine processes the object of labor from beginning to end, with all machines being only part of the same organism because they are driven by the same prime mover, and then from there the development to the machine system proper where each object of labor is worked on in turn by several machines. He starts with describing one individual machine in order to emphasize that one machine produces the product from beginning to end:

381:3/o In the one case, the product is entirely made by a single machine, which performs all the various operations previously done by one handicraftsman with his tool; as, for instance, by a weaver with his loom; or by several handicraftsman successively, either separately or as members of a system of Manufacture.¹⁰⁰

399:2/o In dem einen Fall wird das ganze Machwerk von derselben Arbeitsmaschine verrichtet. Sie führt alle die verschiedenen Operationen aus, welche ein Handwerker mit seinem Werkzeug, z.B. der Weber mit seinem Webstuhl, verrichtete oder welche Handwerker mit verschiedenen Werkzeugen, sei es selbständig oder als Glieder einer Manufaktur, der Reihe nach ausführten.¹⁰⁰

↓ The footnote argues against the hypothesis that machinery first takes over those operations which had been simplified by the division of labor.

¹⁰⁰ From the standpoint of division of labor in Manufacture, weaving was not simple, but, on the contrary, complicated manual labor; and consequently the power-loom is a machine that does very complicated work. It is altogether erroneous to imagine that modern machinery originally took over those operations which had been simplified by division of labor. Spinning and

¹⁰⁰ Vom Standpunkt der manufakturmäßigen Teilung war Weben keine einfache, sondern vielmehr eine komplizierte handwerksmäßige Arbeit, und so ist der mechanische Webstuhl eine Maschine, die sehr Mannigfaltiges verrichtet. Es ist überhaupt eine falsche Vorstellung, daß die moderne Maschinerie sich ursprünglich solcher Operationen bemächtigt, welche die manu-

15. Machinery and Modern Industry

weaving were, during the manufacturing period, split into new species, and the implements were specialized and improved; but the labor itself was in no way divided and retained its handicraft character. It is not the labor, but the instrument of labor, that serve as the starting-point of the machine.

fakturmäßige Teilung der Arbeit vereinfacht hatte. Spinnen und Weben wurden während der Manufakturperiode in neue Arten gesondert und ihre Werkzeugen verbessert und variiert, aber der Arbeitsprozeß selbst, in keiner Weise geteilt, blieb handwerksmäßig. Es ist nicht die Arbeit, sondern das Arbeitsmittel, wovon die Maschine ausgeht.

Question 994 *Did machinery first seize those labor processes which had been simplified in the manufactures? On what grounds does Marx, in footnote 100 to 500/o, dismiss this hypothesis as an “imagination”?*

Now back to the main text. A machine making envelopes is an example of *one* machine performing *all* steps of the production process:

For example, in the manufacture of envelopes, one man folded the paper with the folder, another laid on the gum, a third turned the flap over, on which the device is impressed, a fourth embossed the device, and so on; and for each of these operations the envelope had to change hands. One single envelope machine now performs all these operations at once, and makes more than 3,000 envelopes in an hour. In the London exhibition of 1862, there was an American machine for making paper cornets. It cut the paper, pasted, folded, and finished 300 in a minute. Here, the whole process, which, when carried on as Manufacture, was split up into, and carried out by, a series of operations, is completed by a single machine, working a combination of various tools.

Z.B. in der modernen Manufaktur von Briefkuverts faltete ein Arbeiter das Papier mit dem Falzbein, ein anderer legte den Gummi auf, ein dritter schlug die Klappe um, auf welche die Devise aufgedrückt wird, ein vierter bossierte die Devise usw., und bei jeder dieser Teiloperationen mußte jede einzelne Enveloppe die Hände wechseln. Eine einzige Enveloppemaschine verrichtet alle diese Operationen auf einen Schlag und macht 3000 und mehr Enveloppes in einer Stunde. Eine auf der Londoner Industrieausstellung von 1862 ausgestellte amerikanische Maschine zur Bereitung von Papiertüten schneidet das Papier, kleistert, faltet und vollendet 300 Stück per Minute. Der innerhalb der Manufaktur geteilte und in einer Reihenfolge ausgeführte Gesamtprozeß wird hier von einer Arbeitsmaschine vollbracht, die durch Kombination verschiedener Werkzeuge wirkt.

↑ The emphasis is on *one*; the entire production process is done by *one* machine.

Question 995 *Term Paper Group Registration*

Question 996 *Why is it the instrument of labor, and not the labor, that serves as the starting-point of the machine?*

↓ Factories, at the beginning, were simply the addition of many of these machines in the same premises:

Now, whether such a machine be merely a reproduction of a complicated manual implement, or a combination of various simple implements specialized by Manufacture, in either case, in the factory, *i.e.*, in the

Ob nun eine solche Arbeitsmaschine nur mechanische Wiedergeburt eines komplizierteren Handwerkszeuges sei oder Kombination verschiedenartiger, manufakturmäßig partikularisierter einfacher Instrumente—in

workshop in which machinery alone is used, we meet again with simple co-operation; and, leaving the workman out of consideration for the moment, this co-operation presents itself to us, in the first instance, as the conglomeration in one place of similar and simultaneously acting machines. Thus, a weaving factory is constituted of a number of power-looms, working side by side, and a sewing factory of a number of sewing-machines all in the same building.

↓ The only element where they were from the beginning more than an addition (at Marx's time) was the shared prime mover from which they received their motive power.

But there is here a technical oneness in the whole system, owing to all the machines receiving their impulse simultaneously, and in an equal degree, from the pulsations of the common prime mover, by the intermediary of the transmitting mechanism; and this mechanism, to a certain extent, is also common to them all, since only particular ramifications of it branch off to each machine. Just as a number of tools, then, form the organs of a machine, so a number of machines of one kind constitute the organs of the motive mechanism.

↑ This is the beginning of an integration ↓ which is deepened in the machine system in the true sense of the word:

382:1/oo A system of machinery in the true sense of the word, however, does not take the place of these independent machines, until the object of labor goes through a connected series of detail processes, that are carried out by a chain of machines of various kinds, the one supplementing the other. Here we have again the co-operation by division of labor that characterizes Manufacture; only now, it is a combination of detail machines. The special tools of the various detail workmen, such as those of the beaters, cambers, spinners, etc., in the woollen manufacture, are now transformed into the tools of specialized machines, each machine constituting a special organ, with a special function, in the system. In those branches of industry in which the machinery system is first introduced, Manufacture itself furnishes, in a general way, the natural

der Fabrik, d.h. in der auf Maschinenbetrieb gegründeten Werkstatt, erscheint jedesmal die einfache Kooperation wieder, und zwar zunächst (wir sehn hier vom Arbeiter ab) als räumliche Konglomeration gleichartiger und gleichzeitig zusammenwirkender Arbeitsmaschinen. So wird eine Webfabrik durch das Nebeneinander vieler mechanischen Webstühle und eine Nähfabrik durch das Nebeneinander vieler Nähmaschinen in demselben Arbeitsgebäude gebildet.

Aber es existiert hier eine technische Einheit, indem die vielen gleichartigen Arbeitsmaschinen gleichzeitig und gleichmäßig ihren Impuls empfangen vom Herzschlag des gemeinsamen ersten Motors, auf sie übertragen durch den Transmissionsmechanismus, der ihnen auch teilweise gemeinsam ist, indem sich nur besondere Ausläufe davon für jede einzelne Werkzeugmaschine verästeln. Ganz wie viele Werkzeuge die Organe einer Arbeitsmaschine, bilden viele Arbeitsmaschinen jetzt nur noch gleichartige Organe desselben Bewegungsmechanismus.

400:1/oo Ein eigentliches Maschinensystem tritt aber erst an die Stelle der einzelnen selbständigen Maschine, wo der Arbeitsgegenstand eine zusammenhängende Reihe verschiedener Stufenprozesse durchläuft, die von einer Kette verschiedenartiger, aber einander ergänzender Werkzeugmaschinen ausgeführt werden. Hier erscheint die der Manufaktur eigentümliche Kooperation durch Teilung der Arbeit wieder, aber jetzt als Kombination von Teilarbeitsmaschinen. Die spezifischen Werkzeuge der verschiedenen Teilarbeiter, in der Wollmanufaktur z.B. der Wollschläger, Wollkammer, Wollscherer, Wollspinner usw., verwandeln sich jetzt in die Werkzeuge spezifizierter Arbeitsmaschinen, von denen jede ein besonderes Organ für eine besondere Funktion im System des kombinierten Werkzeugmechanismus bildet. Die Manufaktur selbst liefert dem

15. Machinery and Modern Industry

basis for the division, and consequent organisation, of the process of production.¹⁰¹

Maschinensystem in den Zweigen, worin es zuerst eingeführt wird, im großen und ganzen die naturwüchsige Grundlage der Teilung und daher der Organisation des Produktionsprozesses.¹⁰¹

↑ The principles of the division of labor were inherited from the manufactories. ↓ The footnote says generally how different branches of industry learn from each other.

¹⁰¹ Before the epoch of Mechanical Industry, the wool manufacture was the predominating manufacture in England. Hence it was in this industry that, in the first half of the 18th century, the most experiments were made. Cotton, which required less careful preparation for its treatment by machinery, derived the benefit of the experience gained on wool, just as afterwards the manipulation of wool by machinery was developed on the lines of cotton-spinning and weaving by machinery. It was only during the 10 years immediately preceding 1866, that isolated details of the wool manufacture, such as woolcombing, were incorporated in the factory system. "The application of power to the process of combing wool ... extensively in operation since the introduction of the combingmachine, especially Lister's ... undoubtedly had the effect of throwing a very large number of men out of work. Wool was formerly combed by hand, most frequently in the cottage of the comber. It is now very generally combed in the factory, and hand-labor is superseded, except in some particular kinds of work, in which hand-combed wool is still preferred. Many of the hand-combers found employment in the factories, but the produce of the hand-combers bears so small a proportion to that of the machine, that the employment of a very large number of combers has passed away." ("Rep. of Insp. of Fact. for 31st Oct., 1856," p. 16.)

¹⁰¹ Vor der Epoche der großen Industrie war die Wollmanufaktur die herrschende Manufaktur Englands. In ihr wurden daher während der ersten Hälfte des 18. Jahrhunderts die meisten Experimente gemacht. Der Baumwolle, deren mechanische Verarbeitung minder mühevoller Vorbereitungen erfordert, kamen die an der Schafwolle gemachten Erfahrungen zugute, wie später umgekehrt die mechanische Wollindustrie sich auf Grundlage der mechanischen Baumwollspinnerei und Weberei entwickelt. Einzelne Elemente der Wollmanufaktur sind erst seit den letzten Jahrzehnten dem Fabrikssystem einverleibt worden, z.B. das Wollkämmen. „Die Anwendung mechanischer Kraft auf den Prozeß des Wollkämmens ... , die seit der Einführung der „Kämmaschine“, speziell der Listerschen, in großem Ausmaß erfolgt ... , hatte unzweifelhaft die Wirkung, daß eine große Anzahl von Arbeitern aus der Arbeit geworfen wurde. Wolle wurde vorher mit der Hand gekämmt, zumeist in der Cottage des Kämmers. Jetzt wird sie ganz allgemein in der Fabrik gekämmt, und Handarbeit ist, abgesehen von einigen besonderen Arten von Arbeit, bei denen handgekämmte Wolle noch vorgezogen wird, verdrängt worden. Viele von den Handkämmern fanden Arbeit in den Fabriken, aber das Arbeitsprodukt des Handkammers ist im Verhältnis zu dem der Maschine so klein, daß eine sehr große Zahl von Kämmern ohne Beschäftigung geblieben ist.“ „Rep. of Insp. of Fact. for 31st Oct. 1856“, p. 16.)

↓ One big difference between the system in the manufactories and these fully mechanized systems is that the stages in this system are no longer tied to human capabilities. The process is no longer subjective:

Nevertheless an essential difference at once manifests itself. In Manufacture it is the workmen who, with their manual implements, must, either singly or in groups, carry on each particular detail process. If, on the one hand, the workman becomes adapted to the process, on the other, the process was previously made suitable to the

Indes tritt sofort ein wesentlicher Unterschied ein. In der Manufaktur müssen Arbeiter, vereinzelt oder in Gruppen, jeden besonderen Teilprozeß mit ihrem Handwerkszeug ausführen. Wird der Arbeiter dem Prozeß angeeignet, so ist aber auch vorher der Prozeß dem Arbeiter angepaßt. Dies subjektive Prinzip der Teilung fällt weg für

workman. This subjective principle of the division of labor no longer exists in production by machinery. Here, the process as a whole is examined objectively, in itself, that is to say, without regard to the question of its execution by human hands, it is analysed into its constituent phases; and the problem, how to execute each detail process, and bind them all into a whole, is solved by the aid of machines, chemistry, etc.¹⁰² But, of course, in this case also, theory must be perfected by accumulated experience on a large scale. Each detail machine supplies raw material to the machine next in order; and since they are all working at the same time, the product is always going through the various stages of its fabrication, and is also constantly in a state of transition, from one phase to another. Just as in Manufacture, the direct co-operation of the detail laborers establishes a numerical proportion between the special groups, so in an organised system of machinery, where one detail machine is constantly kept employed by another, a fixed relation is established between their numbers, their size, and their speed.

¹⁰² "The principle of the factory system, then, is to substitute ... the partition of a process into its essential constituents, for the division or graduation of labour among artisans." (Andrew Ure: "The Philosophy of Manufactures," Lond., 1835, p. 20.)

↑ The processes must be adjusted so that their quantitative throughput fits together. ↓ The removal of the human element from this system allows the processes to become more and more continuous:

The collective machine, now an organised system of various kinds of single machines, and of groups of single machines, becomes more and more perfect, the more the process as a whole becomes a continuous one, i.e., the less the raw material is interrupted in its passage from its first phase to its last; in other words, the more its passage from one phase to another is effected, not by the hand of man, but by the machinery itself. In Manufacture the isolation of each detail process is a condition imposed by the nature of division of labor, but in the fully developed

die maschinenartige Produktion. Der Gesamtprozeß wird hier objektiv, an und für sich betrachtet, in seine konstituierenden Phasen analysiert, und das Problem, jeden Teilprozeß auszuführen und die verschiedenen Teilprozesse zu verbinden, durch technischen Anwendung der Mechanik, Chemie usw. gelöst,¹⁰² wobei natürlich nach wie vor die theoretische Konzeption durch gehäufte praktische Erfahrung auf großer Stufenleiter vervollkommenet werden muß. Jede Teilmaschine liefert der zunächst folgenden ihr Rohmaterial, und da sie alle gleichzeitig wirken, befindet sich das Produkt ebenso fortwährend auf den verschiedenen Stufen seines Bildungsprozesses, wie im Übergang aus einer Produktionsphase in die andre. Wie in der Manufaktur die unmittelbare Kooperation der Teilarbeiter bestimmte Verhältniszahlen zwischen den besondern Arbeitergruppen schafft, so in dem gegliederten Maschinensystem die beständige Beschäftigung der Teilmaschinen durch einander ein bestimmtes Verhältnis zwischen ihrer Anzahl, ihrem Umfang und ihrer Geschwindigkeit.

¹⁰² „Das Prinzip des Fabriksystems besteht also darin ... die Teilung des Arbeitsprozesses in seine wesentlichen Bestandteile an die Stelle der Verteilung oder Abstufung der Arbeit unter die einzelnen Handwerker zu setzen.“ (Ure, l.c. p. 20.)

Die kombinierte Arbeitsmaschine, jetzt ein gegliedertes System von verschiedenartigen einzelnen Arbeitsmaschinen und von Gruppen derselben, ist um so vollkommener, je kontinuierlicher ihr Gesamtprozeß, d.h. mit je weniger Unterbrechung das Rohmaterial von seiner ersten Phase zu seiner letzten übergeht, je mehr also statt der Menschenhand der Mechanismus selbst es von einer Produktionsphase in die andre fördert. Wenn in der Manufaktur die Isolierung der Sonderprozesse ein durch die Teilung der Arbeit selbst gegebenes Prinzip

15. Machinery and Modern Industry

factory the continuity of those processes is, on the contrary, imperative.

↑ Marx deepens here the opposition between manufactory division of labor and machinery: not only development of the labor process versus development of the instrument of labor, but also isolation of the particular processes versus their continuity. ↓ The whole of these parts, integrated by its dependence on the prime mover, is the automaton. But the human element re-enters in the need for human control:

384:1 A system of machinery, whether it reposes on the mere co-operation of similar machines, as in weaving, or on a combination of different machines, as in spinning, constitutes in itself a huge automaton, whenever it is driven by a self-acting prime mover. But although the factory as a whole be driven by its steam-engine, yet either some of the individual machines may require the aid of the workman for some of their movements (such aid was necessary for the running in of the mule carriage, before the invention of the self-acting mule, and is still necessary in fine-spinning mills); or, to enable a machine to do its work, certain parts of it may require to be handled by the workman like a manual tool; this was the case in machine-makers' workshops, before the conversion of the slide rest into a self-actor. As soon as a machine executes, without man's help, all the movements requisite to elaborate the raw material, needing only attendance from him, we have an automatic system of machinery, and one that is susceptible of constant improvement in its details. Such improvements as the apparatus that stops a drawing frame, whenever a sliver breaks, and the self-acting stop, that stops the power-loom so soon as the shuttle bobbin is emptied of weft, are quite modern inventions.

ist, so herrscht dagegen in der entwickelten Fabrik die Kontinuität der Sonderprozesse.

401:1/o Ein System der Maschinerie, beruhe es nun auf bloßer Kooperation gleichartiger Arbeitsmaschinen, wie in der Weberei, oder auf einer Kombination verschiedenartiger, wie in der Spinnerei, bildet an und für sich einen großen Automaten, sobald es von einem sich selbst bewegenden ersten Motor getrieben wird. Indes kann das Gesamtsystem z.B. von der Dampfmaschine getrieben werden, obgleich entweder einzelne Werkzeugmaschinen für gewisse Bewegungen noch den Arbeiter brauchen, wie die zum Einfahren der Mule nötige Bewegung vor der Einführung der selfacting mule und immer noch bei Feinspinnerei, oder aber bestimmte Teile der Maschine zur Verrichtung ihres Werks gleich einem Werkzeug vom Arbeiter gelenkt werden müssen, wie beim Maschinenbau vor der Verwandlung des slide rest (ein Drehapparat) in einen selfactor. Sobald die Arbeitsmaschine alle zur Bearbeitung des Rohstoffs nötigen Bewegungen ohne menschliche Beihilfe verrichtet und nur noch menschlicher Nachhilfe bedarf, haben wir ein automatisches System der Maschinerie, das indes beständiger Ausarbeitung im Detail fähig ist. So sind z.B. der Apparat, der die Spinnmaschine von selbst stillsetzt, sobald ein einzelner Faden reißt, und der selfacting stop, der den verbesserten Dampfwebstuhl stillsetzt, sobald der Spule des Weberschiffs der Einschlagsfaden ausgeht, ganz moderne Erfindungen.

Why the paper industry is such a good example:

As an example, both of continuity of production, and of the carrying out of the automatic principle, we may take a modern paper mill. In the paper industry generally, we may advantageously study in detail not only the distinctions between modes of produc-

Als Beispiel sowohl der Kontinuität der Produktion als der Durchführung des automatischen Prinzips kann die moderne Papierfabrik gelten. An der Papierproduktion kann überhaupt der Unterschied verschiedener Produktionsweisen, auf Basis verschied-

tion based on different means of production, but also the connexion of the social conditions of production with those modes: for the old German paper-making furnishes us with a sample of handicraft production; that of Holland in the 17th and of France in the 18th century with a sample of manufacturing in the strict sense; and that of modern England with a sample of automatic fabrication of this article. Besides these, there still exist, in India and China, two distinct antique Asiatic forms of the same industry.

ner Produktionsmittel, wie der Zusammenhang der gesellschaftlichen Produktionsverhältnisse mit diesen Produktionsweisen, im einzelnen vorteilhaft studiert werden, da uns die ältere deutsche Papiermacherei Muster der handwerksmäßigen Produktion, Holland im 17. und Frankreich im 18. Jahrhundert Muster der eigentlichen Manufaktur und das moderne England Muster der automatischen Fabrikation in diesem Zweig liefern, außerdem in China und Indien noch zwei verschiedene altasiatische Formen derselben Industrie existieren.

↓ At the end a description of a fully-developed machine system at Marx's time:

384:2/o An organised system of machines, to which motion is communicated by the transmitting mechanism from a central automaton, is the most developed form of production by machinery. Here we have, in the place of the isolated machine, a mechanical monster whose body fills whole factories, and whose demon power, at first veiled under the slow and measured motions of his giant limbs, at length breaks out into the fast and furious whirl of his countless working organs.

402:1 Als gegliedertes System von Arbeitsmaschinen, die ihre Bewegung nur vermittelt der Transmissionsmaschinerie von einem zentralen Automaten empfangen, besitzt der Maschinenbetrieb seine entwickeltste Gestalt. An die Stelle der einzelnen Maschine tritt hier ein mechanisches Ungeheuer, dessen Leib ganze Fabrikgebäude füllt und dessen dämonische Kraft, erst versteckt durch die fast feierlich gemeßene Bewegung seiner Riesenglieder, im fieberhaft tollenden Wirbeltanz seiner zahllosen eigentlichen Arbeitsorgane ausbricht.

15.1.d. [Development of Industries Producing Machines, Demand for Machines, Transportation and Communication]

Each such system of machines must itself be produced. This necessity generates additional developmental impulses not only for the machine systems themselves, but for the economy in which these machine systems are embedded.

Of course, the first machines were not produced by specialists who would only produce machines, but by workers who had obtained their skills from producing other things in artisan workshops or manufactures.

↓ The very first sentence here is an echo of 52:4/o:

385:1/o There were mules and steam-engines before there were any laborers, whose exclusive occupation it was to make mules and steam-engines; just as men wore clothes before there were such people as tailors. The inventions of Vaucanson, Arkwright, Watt, and others, were, however, practicable, only because those inventors found, ready to hand, a considerable num-

402:2/oo Es gab Mules, Dampfmaschinen usw., bevor es Arbeiter gab, deren ausschließliches Geschäft es war, Dampfmaschinen, Mules usw. zu machen, ganz wie der Mensch Kleider trug, bevor es Schneider gab. Die Erfindungen von Vaucanson, Arkwright, Watt usw. waren jedoch nur ausführbar, weil jene Erfinder ein von der Manufakturperiode fertig geliefertes und be-

15. Machinery and Modern Industry

ber of skilled mechanical workmen, placed at their disposal by the manufacturing period. Some of these workmen were independent handicraftsmen of various trades, others were grouped together in manufactures, in which, as before-mentioned, division of labor was strictly carried out.

This dependence of machinery on handicraft labor and manufactories (manual division of labor) is a contradiction. It first leads to changes in the manufactories themselves.

As inventions increased in number, and the demand for the newly discovered machines grew larger, the machine-making industry split up, more and more, into numerous independent branches, and division of labor in these manufactures was more and more developed. Here, then, we see in Manufacture the immediate technical foundation of Modern Industry. Manufacture produced the machinery, by means of which Modern Industry abolished the handicraft and manufacturing systems in those spheres of production that it first seized upon.

But these changes are not enough; manual division of labor is too narrow a basis for machinery and must eventually be abolished.

The factory system was therefore raised, in the natural course of things, on an inadequate foundation. When the system attained to a certain degree of development, it had to root up this ready-made foundation, which in the meantime had been elaborated on the old lines, and to build up for itself a basis that should correspond to its methods of production. Just as the individual machine retains a dwarfish character, so long as it is worked by the power of man alone, and just as no system of machinery could be properly developed before the steam-engine took the place of the earlier motive powers, animals, wind, and even water; so, too, Modern Industry was crippled in its complete development, so long as its characteristic instrument of production, the machine, owed its existence to personal strength and personal skill, and depended on the muscular development, the keenness of sight, and the cunning of hand, with which the detail workmen in manufactures, and the manual la-

trächtliches Quantum geschickter mechanischer Arbeiter vorhanden. Ein Teil dieser Arbeiter bestand aus selbständigen Handwerkern verschiedener Profession, ein anderer Teil war in Manufakturen vereinigt, worin, wie früher erwähnt, die Teilung der Arbeit mit besondrer Strenge waltete.

Mit der Zunahme der Erfindungen und der wachsenden Nachfrage nach den neu erfundenen Maschinen entwickelte sich mehr und mehr einerseits die Sondrung der Maschinenfabrikation in mannigfaltige selbständige Zweige, andererseits die Teilung der Arbeit im Innern der maschinenbauenden Manufakturen. Wir erblicken hier also in der Manufaktur die unmittelbare technische Grundlage der großen Industrie. Jene produzierte die Maschinerie, womit diese in den Produktionssphären, die sie zunächst ergriff, den handwerks- und manufakturmäßigen Betrieb aufhob.

Der Maschinenbetrieb erhob sich also naturwüchsig auf einer ihm unangemeßenen materiellen Grundlage. Auf einem gewissen Entwicklungsgrad mußte er diese erst fertig vorgefundne und dann in ihrer alten Form weiter ausgearbeitete Grundlage selbst umwälzen und sich eine seiner eignen Produktionsweise entsprechende neue Basis schaffen. Wie die einzelne Maschine zwergmäßig bleibt, solange sie nur durch Menschen bewegt wird, wie das Maschinensystem sich nicht frei entwickeln konnte, bevor an die Stelle der vorgefundenen Triebkräfte—Tier, Wind und selbst Wasser—die Dampfmaschine trat, ebenso war die große Industrie in ihrer ganzen Entwicklung gelähmt, solange ihr charakteristisches Produktionsmittel, die Maschine selbst, persönlicher Kraft und persönlichem Geschick seine Existenz verdankte, also abhing von der Muskelentwicklung, der Schärfe des Blicks und der Virtuosität der Hand, womit der Teilarbeiter in der Manu-

borers in handicrafts, wielded their dwarfish implements’.

faktur und der Handwerker außerhalb derselben ihr Zwerginstrument führten.

↑ In this last overlong sentence, Marx already identifies the concrete element which held the development back: the human element, which was increasingly removed from the mechanized labor process itself, still lingered in the production process of the machinery. (Marx also mentions the steam engine, without showing awareness that he is really talking about the fossil fuel bonanza.) ↓ The incoherent lingering of the human element makes itself felt in the following manner:

Thus, apart from the dearness of the machines made in this way, a circumstance that is ever present to the mind of the capitalist, the expansion of industries carried on by means of machinery, and the invasion by machinery of fresh branches of production, were dependent on the growth of a class of workmen, who, owing to the almost artistic nature of their employment, could increase their numbers only gradually, and not by leaps and bounds.

Abgesehn von der Verteuerung der Maschinen infolge dieser Ursprungsweise—ein Umstand, welcher das Kapital als bewußtes Motiv beherrscht—blieb so die Ausdehnung der bereits maschinenmäßig betriebenen Industrie und das Eindringen der Maschinerie in neue Produktionszweige rein bedingt durch das Wachstum einer Arbeiterkategorie, die wegen der halbkünstlerischen Natur ihres Geschäfts nur allmählich und nicht sprungweis vermehrt werden konnte.

↑ Two things were hindering the extension of machinery. One was: machines built by hand were too expensive. This obstacle imposed itself on capital as a conscious motive, capitalists were aware of this and this impeded their will to expand. The other obstacle worked more in the background, automatically, namely the number of workers skilled enough to produce machines could be increased only gradually, because these skills were almost an art. (Parallels to computer programming in recent decades.)

↓ But this is only the economic side of it. The basis is also too narrow technologically:

But besides this, at a certain stage of its development, Modern Industry became technologically incompatible with the basis furnished for it by handicraft and Manufacture. The increasing size of the prime movers, of the transmitting mechanism, and of the machines proper, the greater complication, multiformity and regularity of the details of these machines, as they more and more departed from the model of those originally made by manual labor, and acquired a form, untrammelled except by the conditions under which they worked,¹⁰³ the perfecting of the automatic system, and the use, every day more unavoidable, of a more refractory material, such as iron instead of wood—the solution of all these problems, which sprang up by the force of circumstances, everywhere met with a stumbling-block in the personal restrictions, which even the collective laborer of Manufacture could not break

Aber auf einer gewissen Entwicklungsstufe geriet die große Industrie auch technisch in Widerstreit mit ihrer handwerks- und manufakturmäßigen Unterlage. Ausreckung des Umfangs der Bewegungsmaschinen, des Transmissionsmechanismus und der Werkzeugmaschinen, größere Komplikation, Mannigfaltigkeit und strengere Regelmäßigkeit ihrer Bestandteile, im Maße wie die Werkzeugmaschine sich von dem handwerksmäßigen Modell, das ihren Bau ursprünglich beherrscht, losriß und eine freie, nur durch ihre mechanische Aufgabe bestimmte Gestalt erhielt,¹⁰³ Ausbildung des automatischen Systems und stets unvermeidlichere Anwendung von schwer zu bewältigendem Material, z.B. Eisen statt Holz—die Lösung aller dieser naturwüchsigen entspringenden Aufgaben stieß überall auf die persönlichen Schranken, die auch das in der Manufaktur kombinierte Arbeiterperso-

15. Machinery and Modern Industry

through, except to a limited extent. Such machines as the modern hydraulic press, the modern power-loom, and the modern carding engine, could never have been furnished by Manufacture.

Here again Marx comments on it how these obstacles impose themselves: by spontaneously arising tasks and problems.

¹⁰³ The power-loom was at first made chiefly of wood; in its improved modern form it is made of iron. To what an extent the old forms of the instruments of production influenced their new forms at first starting, is shown by, amongst other things, the most superficial comparison of the present power-loom with the old one, of the modern blowing apparatus of a blast-furnace with the first inefficient mechanical reproduction of the ordinary bellows, and perhaps more strikingly than in any other way, by the attempts before the invention of the present locomotive, to construct a locomotive that actually had two feet, which after the fashion of a horse, it raised alternately from the ground. It is only after considerable development of the science of mechanics, and accumulated practical experience, that the form of a machine becomes settled entirely in accordance with mechanical principles, and emancipated from the traditional form of the tool that gave rise to it.

Not only from the side of production but also from the utilization of machinery: machinery necessarily spreads from one branch of production to another.

386:1/o A radical change in the mode of production in one sphere of industry involves a similar change in other spheres. This happens at first in such branches of industry as are connected together by being separate phases of a process, and yet are isolated by the social division of labor, in such a way, that each of them produces an independent commodity. Thus spinning by machinery made weaving by machinery a necessity, and both together made the mechanical and chemical revolution that took place in bleaching, printing, and dyeing, imperative. So too, on the other hand, the revolution in cotton-spinning called forth the invention of the gin, for separating the seeds from the cotton fibre; it was only by means of this invention, that the production of cot-

nal nur dem Grad, nicht dem Wesen nach durchbricht. Maschinen z.B. wie die moderne Druckerpresse, der moderne Dampfwebstuhl und die moderne Kardiermaschine, konnten nicht von der Manufaktur geliefert werden.

¹⁰³ Der mechanische Webstuhl in seiner ersten Form besteht hauptsächlich aus Holz, der verbesserte, moderne, aus Eisen. Wie sehr im Anfang die alte Form des Produktionsmittels seine neue Form beherrscht, zeigt u.a. die oberflächlichste Vergleichung des modernen Dampfwebstuhls mit dem alten, der modernen Blasinstrumente in Eisengießereien mit der ersten unbehilflichen mechanischen Wiedergeburt des gewöhnlichen Blasbalgs, und vielleicht schlagender als alles andre eine vor der Erfindung der jetzigen Lokomotiven versuchte Lokomotive, die in der Tat zwei Füße hatte, welche sie abwechselnd wie ein Pferd aufhob. Erst nach weiterer Entwicklung der Mechanik und gehäufte praktischer Erfahrung wird die Form gänzlich durch das mechanische Prinzip bestimmt und daher gänzlich emanzipiert von der überlieferten Körperform des Werkzeugs, das sich zur Maschine entpuppt.

404:1/o Die Umwälzung der Produktionsweise in einer Sphäre der Industrie bedingt ihre Umwälzung in der andren. Es gilt dies zunächst für solche Industriezweige, welche zwar durch die gesellschaftliche Teilung der Arbeit isoliert sind, so daß jeder derselben eine selbständige Ware produziert, sich aber dennoch als Phasen eines Gesamtprozesses verschlingen. So machte die Maschinenspinnerei Maschinenweberei nötig und beide zusammen die mechanisch-chemische Revolution in der Bleicherei, Druckerei und Färberei. So rief andererseits die Revolution in der Baumwollspinnerei die Erfindung des gin zur Trennung der Baumwollfaser vom Samen hervor, womit erst die Baumwollproduktion auf dem nun erheischten großen Maßstab möglich

ton became possible on the enormous scale at present required.¹⁰⁴

¹⁰⁴ Eli Whitney's cotton gin had until very recent times undergone less essential changes than any other machine of the 18th century. It is only during the last decade (i.e., since 1856) that another American, Mr. Emery, of Albany, New York, has rendered Whitney's gin antiquated by an improvement as simple as it is effective.

ward.¹⁰⁴

¹⁰⁴ Des Yankee Eli Whitney cottongin war bis zur neuesten Zeit im wesentlichen weniger verändert worden als irgendeine andre Maschine des 18. Jahrhunderts. Erst in den letzten Decennien (vor 1867) hat ein anderer Amerikaner, Herr Emery von Albany, New York, Whitneys Maschine durch eine ebenso einfache als wirksame Verbeßrung antiquiert.

↓ The volume and speed of machine production also calls for improved means of transport and communication.

But more especially, the revolution in the modes of production of industry and agriculture made necessary a revolution in the general conditions of the social process of production, i.e., in the means of communication and of transport. In a society whose pivot, to use an expression of Fourier, was agriculture on a small scale, with its subsidiary domestic industries, and the urban handicrafts, the means of communication and transport were so utterly inadequate to the productive requirements of the manufacturing period, with its extended division of social labor, its concentration of the instruments of labor, and of the workmen, and its colonial markets, that they became in fact revolutionised. In the same way the means of communication and transport handed down from the manufacturing period soon became unbearable trammels on Modern Industry, with its feverish haste of production, its enormous extent, its constant flinging of capital and labor from one sphere of production into another, and its newly-created connexions with the markets of the whole world. Hence, apart from the radical changes introduced in the construction of sailing vessels, the means of communication and transport became gradually adapted to the modes of production of mechanical industry, by the creation of a system of river steamers, railways, ocean steamers, and telegraphs. But the 'huge masses of iron that had now to be forged, to be welded, to be cut, to be bored, and to be shaped, demanded, on their part, cyclopean

Die Revolution in der Produktionsweise der Industrie und Agrikultur ernöthigte namentlich aber auch eine Revolution in den allgemeinen Bedingungen des gesellschaftlichen Produktionsprozesses, d.h. den Kommunikations- und Transportmitteln. Wie die Kommunikations- und Transportmittel einer Gesellschaft, deren Pivot, um mich eines Ausdrucks Fouriers zu bedienen, die kleine Agrikultur mit ihrer häuslichen Nebenindustrie und das städtische Handwerk waren, den Produktionsbedürfnissen der Manufakturperiode mit ihrer erweiterten Theilung der gesellschaftlichen Arbeit, ihrer Konzentration von Arbeitsmitteln und Arbeitern und ihren Kolonialmärkten durchaus nicht mehr genügen konnten, daher auch in der That umgewälzt wurden, so verwandelten sich die von der Manufakturperiode überlieferten Transport- und Kommunikationsmittel bald in unerträgliche Hemmschuhe für die große Industrie mit ihrer fieberhaften Geschwindigkeit der Produktion, ihrer massenhaften Stufenleiter, ihrem beständigen Werfen von Kapital- und Arbeitermassen aus einer Produktionssphäre in die andre und ihren neugeschaffnen weltmarktlichen Zusammenhängen. Abgesehn von ganz umgewälztem Segelschiffbau, wurde das Kommunikations- und Transportwesen daher allmählich durch ein System von Flußdampfschiffen, Eisenbahnen, ozeanischen Dampfschiffen und Telegraphen der Produktionsweise der großen Industrie angepaßt. Die furchtbaren Eisenmassen aber, die jetzt zu schmieden, zu schweißen, zu

15. Machinery and Modern Industry

machines, for the construction of which the methods of the manufacturing period were utterly inadequate.

schneiden, zu bohren und zu formen waren, erforderten ihrerseits zyklische Maschinen, deren Schöpfung der manufakturmäßige Maschinenbau versagte.

↑ Extension and regularization of transport was already necessary for specialization, see [Wri10, p. 30:2–32]. Did Marx say that in chapter Fourteen? Among the infrastructure requirements Marx should also have mentioned the availability of energy.

This contradiction requires machinery to be produced by machinery. Only then can machinery “stand on its own feet”. Today we see a similar situation in computer programming: only after computers learn to program computers, instead of people having to do this, will computers truly stand on their own feet.

387:1/o Modern Industry had therefore itself to take in hand the machine, its characteristic instrument of production, and to construct machines by machines. It was not till it did this, that it built up for itself a fitting technical foundation, and stood on its own feet. Machinery, simultaneously with the increasing use of it, in the first decades of this century, appropriated, by degrees, the fabrication of machines proper. But it was only during the decade preceding 1866, that the construction of railways and ocean steamers on a stupendous scale called into existence the cyclopean machines now employed in the construction of prime movers.

405:1 Die große Industrie mußte sich also ihres charakteristischen Produktionsmittels, der Maschine selbst, bemächtigen und Maschinen durch Maschinen produzieren. So erst schuf sie ihre adäquate technische Unterlage und stellte sich auf ihre eignen Füße. Mit dem wachsenden Maschinenbetrieb in den ersten Dezennien des 19. Jahrhunderts bemächtigte sich die Maschinerie in der Tat allmählich der Fabrikation der Werkzeugmaschinen. Jedoch erst während der letztverfloßnen Dezennien riefen ungeheurer Eisenbahnbau und ozeanische Dampfschiffahrt die zur Konstruktion von ersten Motoren angewandten zyklischen Maschinen ins Leben.

Question 997 *Why did the introduction of machinery soon require machines to be produced by machines?*

Technical conditions to make this possible:

388:1–2 The most essential condition to the production of machines by machines was a prime mover capable of exerting any amount of force, and yet under perfect control. Such a condition was already supplied by the steam-engine.

405:2–406:1 Die wesentlichste Produktionsbedingung für die Fabrikation von Maschinen durch Maschinen war eine jeder Kraftpotenz fähige und doch zugleich ganz kontrollierbare Bewegungsmaschine. Sie existierte bereits in der Dampfmaschine.

↑ The steam-engine alone is not enough; you also need a source of abundant and concentrated energy. Marx does not seem to be aware of this.

But at the same time it was necessary to produce the geometrically accurate straight lines, planes, circles, cylinders, cones, and spheres, required in the detail parts of the machines. This problem Henry Maudsley solved in the first decade of this century by the invention of the slide rest, a tool that was soon made automatic, and in a mod-

Aber es galt zugleich die für die einzelnen Maschinenteile nötigen streng geometrischen Formen wie Linie, Ebene, Kreis, Zylinder, Kegel und Kugel maschinenmäßig zu produzieren. Dies Problem löste Henry Maudslay im ersten Dezennium des 19. Jahrhunderts durch die Erfindung des slidere, der bald automatisch gemacht und in

ified form was applied to other constructive machines besides the lathe, for which it was originally intended. This mechanical appliance replaces, not some particular tool, but the hand itself, which produces a given form by holding and guiding the cutting tool along the iron or other material operated upon. Thus it became possible to produce the forms of the individual parts of machinery

modifizierter Form von der Drechselbank, wofür er zuerst bestimmt war, auf andre Konstruktionsmaschinen übertragen wurde. Diese mechanische Vorrichtung ersetzt nicht irgendein besondres Werkzeug, sondern die menschliche Hand selbst, die eine bestimmte Form hervorbringt, durch Vorhalten Anpassen und Richtung der Schärfe von Schneideinstrumenten usw. gegen oder über das Arbeitsmaterial, z.B. Eisen. So gelang es, die geometrischen Formen der einzelnen Maschinenteile

“with a degree of ease, accuracy, and speed, that no accumulated experience of the hand of the most skilled workman could give.”¹⁰⁵

„mit einem Grad von Leichtigkeit, Genauigkeit und Raschheit zu produzieren, den keine gehäufte Erfahrung der Hand des geschicktesten Arbeiters verleihen konnte“.¹⁰⁵

¹⁰⁵ „The Industry of Nations,” Lond., 1855, Part II., p. 239. This work also remarks: ‘Simple and outwardly unimportant as this appendage to lathes may appear, it is not, we believe, averring too much to state, that its influence in improving and extending the use of machinery has been as great as that produced by Watt’s improvements of the steam-engine itself. Its introduction went at once to perfect all machinery, to cheapen it, and to stimulate invention and improvement.’

¹⁰⁵ „The Industry of Nations“, Lond. 1855, Part II., p. 239. Es heißt ebendasselbst: „So einfach und äußerlich unbedeutend, wie dieses Zubehör zur Drehbank erscheinen mag, glauben wir doch nicht zu viel zu behaupten, wenn wir feststellen, daß sein Einfluß auf die bessere und ausgedehntere Verwendung von Maschinen ebenso groß gewesen ist wie der, den Watts Verbesserungen der Dampfmaschine hervorgerufen haben. Seine Einführung hatte sofort eine Vervollkommenung und Verbilligung aller Maschinen zur Folge und trieb zu weiteren Erfindungen und Verbesserungen.“

388:3/o If we now fix our attention on that portion of the machinery employed in the construction of machines, which constitutes the operating tool, we find the manual implements re-appearing, but on a cyclopean scale. The operating part of the boring machine is an immense drill driven by a steam-engine; without this machine, on the other hand, the cylinders of large steam-engines and of hydraulic presses could not be made. The mechanical lathe is only a cyclopean reproduction of the ordinary foot-lathe; the planing machine, an iron carpenter, that works on iron with the same tools that the human carpenter employs on wood; the instrument that, on the London wharves, cuts the veneers, is a gigantic razor; the tool of the shearing machine, which shears iron as easily as a tailor’s scissors cut cloth, is

406:2/o Betrachten wir nun den Teil der zum Maschinenbau angewandten Maschinerie, der die eigentliche Werkzeugmaschine bildet, so erscheint das handwerksmäßige Instrument wieder, aber in zyklonischem Umfang. Der Operateur der Bohrmaschine z.B. ist ein ungeheurer Bohrer, der durch eine Dampfmaschine getrieben wird und ohne den umgekehrt die Zylinder großer Dampfmaschinen und hydraulischer Pressen nicht produziert werden könnten. Die mechanische Drechselbank ist die zyklonische Wiedergeburt der gewöhnlichen Fußdrechselbank, die Hobelmaschine ein eiserner Zimmermann, der mit denselben Werkzeugen in Eisen arbeitet, womit der Zimmermann in Holz; das Werkzeug, welches in den Londoner Schiffswerften das Furnierwerk schneidet, ist ein riesenartiges Rasierrmesser, das

15. Machinery and Modern Industry

a monster pair of scissors; and the steam-hammer works with an ordinary hammer head, but of such a weight that not Thor himself could wield it.¹⁰⁶ These steam-hammers are an invention of Nasmyth, and there is one that weighs over 6 tons and strikes with a vertical fall of 7 feet, on an anvil weighing 36 tons. It is mere child's-play for it to crush a block of granite into powder, yet it is no less capable of driving, with a succession of light taps, a nail into a piece of soft wood.¹⁰⁷

¹⁰⁶ One of these machines, used for forging paddle-wheel shafts in London, is called "Thor." It forges a shaft of 16 1/2 tons with as much ease as a blacksmith forges a horseshoe.

¹⁰⁷ Wood-working machines that are also capable of being employed on a small scale are mostly American inventions.

Summary conclusion of the whole section which now stresses more the differences than the common features of hand tools and machinery. Co-operation *technical* necessity!

389:1 The implements of labor, in the form of machinery, necessitate the substitution of natural forces for human force, and the conscious application of science, instead of rule of thumb. In Manufacture, the organisation of the social labor-process is purely subjective; it is a combination of detail laborers; in its machinery system, Modern Industry has a productive organism that is purely objective, in which the laborer becomes a mere appendage to an already existing material condition of production. In simple co-operation, and even in that founded on division of labor, the suppression of the isolated, by the collective, workman still appears to be more or less accidental. Machinery, with a few exceptions to be mentioned later, operates only by means of associated labor, or labor in common. Hence the co-operative character of the labor-process is, in the latter case, a technical necessity dictated by the instrument of labor itself.

Werkzeug der Schermaschine, welche Eisen schneidet, wie die Schneiderschere Tuch, eine Monsterschere, und der Dampfhammer operiert mit einem gewöhnlichen Hammerkopf, aber von solchem Gewicht, daß Thor selbst ihn nicht schwingen könnte.¹⁰⁶ Einer dieser Dampfhammer z.B., die eine Erfindung von Nasmyth sind, wiegt über 6 Tonnen und stürzt mit einem perpendicularen Fall von 7 Fuß auf einen Amboß von 36 Tonnen Gewicht. Er pulverisiert spielend einen Granitblock und ist nicht minder fähig, einen Nagel in weiches Holz mit einer Aufeinanderfolge leiser Schläge einzutreiben.¹⁰⁷

¹⁰⁶ Eine dieser Maschinen in London zum Schmieden von paddle-wheel shafts führt den Namen „Thor“. Sie schmiedet einen Schaft von 16 1/2 Tonnen Gewicht mit derselben Leichtigkeit, wie der Schmied ein Hufeisen.

¹⁰⁷ Die in Holz arbeitenden Maschinen, die auch kleinem Maßstab angewandt werden können, sind meist amerikanische Erfindung.

407:1 Als Maschinerie erhält das Arbeitsmittel eine materielle Existenzweise, welche Ersetzung der Menschenkraft durch Naturkräfte und erfahrungsmäßiger Routine durch bewußte Anwendung der Naturwissenschaft bedingt. In der Manufaktur ist die Gliederung des gesellschaftlichen Arbeitsprozesses rein subjektiv, Kombination von Teilarbeitern; im Maschinensystem besitzt die große Industrie einen ganz objektiven Produktionsorganismus, den der Arbeiter als fertige materielle Produktionsbedingung vorfindet. In der einfachen und selbst in der durch Teilung der Arbeit spezifizierten Kooperation erscheint die Verdrängung des vereinzelt Arbeiters durch den vergesellschafteten immer noch mehr oder minder zufällig. Die Maschinerie, mit einigen später zu erwähnenden Ausnahmen, funktioniert nur in der Hand unmittelbar vergesellschafteter oder gemeinsamer Arbeit. Der kooperative Charakter des Arbeitsprozesses wird jetzt also durch die Natur des

Arbeitsmittels selbst diktierter technischer Notwendigkeit.

↑ In this section, Marx described the evolution of machinery as the exercise of the forces which he identified at the beginning as the driving forces for the development of machinery. The replacement of the worker was the starting point, and the development is only finished after also the production of machinery itself is mechanized.

15.2. The Value Transferred by the Machinery to the Product

Since machines have the purpose to replace the laborer in the production process, does this mean that machines also take over the role of the laborer in the valorization process, namely, incorporate new value in the product? The answer is

- the machine transfers its own value but does not create new value.
- total value decreases but the proportion of the value transferred by constant capital increases
- in capitalism, labor saving machinery is often not introduced because the capitalist does not have to pay all labor.

15.2.a. [Machines transfer value but do not create value]

Marx begins with a description how machines increase productivity: Whenever there is a real effect, there must be a real mechanism producing this effect. Marx's aim is to trace this mechanism.

389:2/o We saw that the productive powers resulting from co-operation and division of labor cost capital nothing. They are natural forces of social labor.

407:2/o Man sah, daß die aus Kooperation und Teilung der Arbeit entspringenden Produktivkräfte dem Kapital nichts kosten. Sie sind Naturkräfte der gesellschaftlichen Arbeit.

There are other natural forces which cost nothing either, namely the forces of physics, chemistry, biology.

So also physical forces, like steam, water, etc., when appropriated to productive processes, cost nothing. But just as a man requires lungs to breathe with, so he requires something that is work of man's hand, in order to consume physical forces productively. A water-wheel is necessary to exploit the force of water, and a steam-engine to exploit the elasticity of steam.

Naturkräfte, wie Dampf, Wasser usw., die zu produktiven Prozessen angeeignet werden, kosten ebenfalls nichts. Wie aber der Mensch eine Lunge zum Atmen braucht, braucht er ein „Gebild von Menschenhand“, um Naturkräfte produktiv zu konsumieren. Ein Wasserrad ist nötig, um die Bewegungskraft des Wassers, eine Dampfmaschine, um die Elastizität des Dampfes auszubeuten.

↓ Now Marx adds a third force to the collection. It is a social force, and its discovery costs labor. But once it is discovered, its application does not degrade it and use it up.

And the same thing that holds for the natural forces also holds for science. Once discovered, the law of the deviation of the mag-

Wie mit den Naturkräften verhält es sich mit der Wissenschaft. Einmal entdeckt, kostet das Gesetz über die Abweichung der

15. Machinery and Modern Industry

netic needle in the field of an electric current, or the law of the magnetisation of iron, around which an electric current circulates, cost never a penny.¹⁰⁸ But the exploitation of these laws for the purposes of telegraphy, etc., necessitates a costly and extensive apparatus.

Magnetnadel im Wirkungskreise eines elektrischen Stroms oder über Erzeugung von Magnetismus im Eisen, um das ein elektrischer Strom kreist, keinen Deut.¹⁰⁸ Aber zur Ausbeutung dieser Gesetze für Telegraphie usw. bedarf es eines sehr kostspieligen und weitläufigen Apparats.

The sentence “and what is true for the natural forces is also true for science” is present (in German) in MEW 23, but it is not present in MEGA II/9, 337:1 (which is a

reproduction of the original English translation). MECW gives this sentence as an editorial footnote. The Vintage translation omits it altogether. But the

German counterpart of this sentence is present in the 2nd edition already (according to MEGA).

Question 998 *Test Submission for Private Grades*

Question 999 *Test Submission for Public Grades*

Question 1000 *How does machinery increase the productiveness of labor?*

Question 1001 *In 508:2/o, Marx distinguishes the productive forces of nature from those of science. Is this justified?*

↑ Nothing about non-renewable resources, especially energy. ↓ The footnote introduces an interesting concept of capitalist exploitation of science, parallel to the capitalist exploitation of labor.

¹⁰⁸ Science, generally speaking, costs the capitalist nothing, a fact that by no means hinders him from exploiting it. The science of others is as much annexed by capital as the labor of others.

¹⁰⁸ Die Wissenschaft kostet dem Kapitalisten überhaupt „nichts“, was ihn durchaus nicht hindert, sie zu exploitiern. Die „fremde“ Wissenschaft wird dem Kapital einverleibt wie fremde Arbeit.

↓ Now a joke about the stupidity of capitalists.

Capitalistic appropriation and personal appropriation, whether of science or of material wealth, are, however, totally different things. Dr. Ure himself deplores the gross ignorance of mechanical science existing among his dear machinery-exploiting manufacturers, and Liebig can tell us about the astounding ignorance of chemistry displayed by English chemical manufacturers.

„Kapitalistische“ Aneignung und „persönliche“ Aneignung, sei es von Wissenschaft, sei es von materiellem Reichtum, sind aber ganz und gar disparate Dinge. Dr. Ure selbst bejammerte die grobe Unbekanntheit seiner lieben, Maschinen exploitierenden Fabrikanten mit der Mechanik, und Liebig weiß von der haarsträubenden Unwissenheit der englischen chemischen Fabrikanten in der Chemie zu erzählen.

Moore-Aveling (according to MECW) has: “Liebig can a tale

unfold about the astounding ignorance of chemistry.” This

sentence does not make sense, we follow here the Fowkes translation.

Question 1002 *What is the difference between “capitalist” and “personal” appropriation of science?*

15.2. The Value Transferred by the Machinery to the Product

Vessel. FIXME

All this does not have to do much with labor. Now Marx makes a connection with labor. Marx begins to explain how machines take advantage of natural forces and of science. Machinery is the vessel allowing the capitalist to capture the productive forces yielded without cost by co-operation, the natural forces, and science.

The machine, as we have seen, does not drive out the tool. Rather does the tool expand and multiply, changing from a dwarf implement of the human organism to the implement of a mechanism created by man. Capital now sets the laborer to work, not with a manual tool, but with a machine which itself handles the tools.

Durch die Maschine wird, wie wir sahen, das Werkzeug nicht verdrängt. Aus einem Zwergwerkzeug des menschlichen Organismus reckt es sich in Umfang und Anzahl zum Werkzeug eines vom Menschen geschaffnen Mechanismus. Statt mit dem Handwerkszeug, läßt das Kapital den Arbeiter jetzt mit einer Maschine arbeiten, die ihre Werkzeuge selbst führt.

↓ Although the productivity of the laborer using the machine is multiplied, it is not clear whether the total labor input declines, since machines themselves contain much more labor than hand tools.

Although, therefore, it is clear at the first glance that, by incorporating both stupendous physical forces, and the natural sciences, with the process of production, Modern Industry raises the productiveness of labor to an extraordinary degree, it is by no means equally clear, that this increased productive force is not, on the other hand, purchased by an increased expenditure of labor. Machinery, like every other component of constant capital, creates no new value, but yields up its own value to the product that it serves to beget. In so far as the machine has value, and, in consequence, parts with value to the product, it forms an element in the value of that product. Instead of being cheapened, the product is made dearer in proportion to the value of the machine. And it is clear as noon-day, that machines and systems of machinery, the characteristic instruments of labor of Modern Industry, are incomparably more loaded with value than the implements used in handicrafts and manufactures.

Wenn es daher auf den ersten Blick klar ist, daß die große Industrie durch Einverleibung ungeheurer Naturkräfte und der Naturwissenschaft in den Produktionsprozeß die Produktivität der Arbeit außerordentlich steigern muß, ist es keineswegs ebenso klar, daß diese gesteigerte Produktivkraft nicht durch vermehrte Arbeitsausgabe auf der andren Seite erkaufte wird. Gleich jedem andren Bestandteil des konstanten Kapitals schafft die Maschinerie keinen Wert, gibt aber ihren eignen Wert an das Produkt ab, zu dessen Erzeugung sie dient. Soweit die Wert hat und daher Wert auf das Produkt überträgt, bildet sie einen Wertbestandteil desselben. Statt es zu verwohlfeilern, verteuert sie es im Verhältnis zu ihrem eignen Wert. Und es ist handgreiflich, daß Maschine und systematisch entwickelte Maschinerie, das charakteristische Arbeitsmittel der großen Industrie, unverhältnismäßig an Wert schwillt, verglichen mit den Arbeitsmitteln des Handwerks- und Manufakturbetriebs.

↑ Although machinery allows to harness natural forces, there is no a priori reason why this use of machinery decreases the labor content of the product: direct labor diminishes only at the expense of increased past labor. ↓ In the next paragraph Marx brings four arguments why the overall expenditure of labor decreases.

(1) Although big machines must be present in the labor process, they enter the valorization process only piecemeal.

15. Machinery and Modern Industry

390:1/o In the first place, it must be observed that the machinery, while always entering as a whole into the labor-process, enters into the value-begetting process only by bits. It never adds more value than it loses, on an average, by wear and tear. Hence there is a great difference between the value of a machine, and the value transferred in a given time by that machine to the product.

408:1/o Es ist nun zunächst zu bemerken, daß die Maschinerie stets ganz in den Arbeitsprozeß und immer nur teilweise in den Verwertungsprozeß eingeht. Sie setzt nie mehr Wert zu, als sie im Durchschnitt durch ihre Abnutzung verliert. Es findet also große Differenz statt zwischen dem Wert der Maschinen und dem periodisch von ihr auf das Produkt übertragenen Wertteil. Es findet eine große Differenz statt zwischen der Maschine als wertbildendem und als produktbildendem Element.

↓ (2) This difference rises with the useful length of life of the machine (and machines live longer).

The longer the life of the machine in the labor-process, the greater is that difference.

Je größer die Periode, während welcher dieselbe Maschinerie wiederholt in demselben Arbeitsprozeß dient, desto größer jene Differenz.

↓ (3) This difference also rises because machines use scientific principles.

It is true, no doubt, as we have already seen, that every instrument of labor enters as a whole into the labor-process, and only piece-meal, proportionally to its average daily loss by wear and tear, into the value-begetting process. But this difference between the instrument as a whole and its daily wear and tear is much greater in a machine than in a tool, because the machine, being made from more durable material, has a longer life; because its employment, being regulated by strictly scientific laws, allows of greater economy in the wear and tear of its parts, and in the materials it consumes; and lastly, because its field of production is incomparably larger than that of a tool.

Allerdings haben wir gesehen, daß jedes eigentliche Arbeitsmittel oder Produktionsinstrument immer ganz in den Arbeitsprozeß und stets nur stückweis, im Verhältnis zu seinem täglichen Durchschnittverschleiß, in den Verwertungsprozeß eingeht. Diese Differenz jedoch zwischen Benutzung und Abnutzung ist viel größer bei der Maschinerie als bei dem Werkzeug, weil sie, aus dauerhafterem Material gebaut, länger lebt, weil ihre Anwendung, durch streng wissenschaftliche Gesetze geregelt, größere Ökonomie in der Verausgabung ihrer Bestandteile und ihrer Konsumtionsmittel ermöglicht, und endlich, weil ihr Produktionsfeld unverhältnismäßig größer ist als das des Werkzeugs.

↑ (4) The end of the last sentence had a fourth reason: machines produce many more products.

↓ Marx sums this up as follows: machines are a productive power that costs nothing, namely, humankind has learned to make its own past labor as effective for their purposes as natural forces.

After making allowance, both in the case of the machine and of the tool, for their average daily cost, that is for the value they transmit to the product by their average daily wear and tear, and for their consumption of auxiliary substance, such as oil, coal, and so

Ziehn wir von beiden, von Maschinerie und Werkzeug, ihre täglichen Durchschnittskosten ab oder den Wertbestandteil, den sie durch täglichen Durchschnittverschleiß und den Konsum von Hilfsstoffen, wie Öl, Kohlen usw., dem Produkt zusetzen, so

15.2. The Value Transferred by the Machinery to the Product

on, they each do their work gratuitously, just like the forces furnished by Nature without the help of man. The greater the productive power of the machinery compared with that of the tool, the greater is the extent of its gratuitous service compared with that of the tool.

↓ Important Historical Perspective:

In Modern Industry man succeeded for the first time in making the product of his past labor work on a large scale gratuitously, like the forces of Nature.¹⁰⁹

wirken sie umsonst, ganz wie ohne Zutun menschlicher Arbeit vorhandne Naturkräfte. Um soviel größer der produktive Wirkungsumfang der Maschinerie als der des Werkzeugs, um soviel größer ist der Umfang ihres unentgeltlichen Dienstes, verglichen mit dem des Werkzeugs.

Erst in der großen Industrie lernt der Mensch, das Produkt seiner vergangen, bereits gegenständlichen Arbeit auf großem Maßstab gleich einer Naturkraft umsonst wirken zu lassen.¹⁰⁹

↓ Footnote: Ricardo says this too, even overstates it:

¹⁰⁹ Ricardo lays such stress on this effect of machinery (of which, in other connexions, he takes no more notice than he does of the general distinction between the labor process and the process of creating surplus-value), that he occasionally loses sight of the value given up by machines to the product, and puts machines on the same footing as natural forces. Thus “Adam Smith nowhere undervalues the services which the natural agents and machinery perform for us, but he very justly distinguishes the nature of the value which they add to commodities . . . as they perform their work gratuitously, the assistance which they afford us, adds nothing to value in exchange.” (Ric., l.c., pp. 336, 337.) This observation of Ricardo is of course correct in so far as it is directed against J. B. Say, who imagines that machines render the “service” of creating value which forms a part of “profits.”

¹⁰⁹ Ricardo faßt diese, übrigens von ihm ebensowenig wie der allgemeine Unterschied zwischen Arbeitsprozeß und Verwertungsprozeß entwickelte Wirkung der Maschinen manchmal so vorzugsweise ins Auge, daß er gelegentlich den Wertbestandteil vergißt, den Maschinen an das Produkt abgeben, und sie ganz und gar mit den Naturkräften zusammenwirft. So z.B. „Adam Smith unterschätzt nirgends die Dienste, die Naturkräfte und Maschinerie uns leisten, aber er unterscheidet sehr richtig die Natur des Wertes, den sie den Waren zusetzen . . . da sie ihre Arbeit kostenlos tun, setzt ihr uns geleisteter Beistand dem Tauschwert nichts zu“. (Ricardo, l.c. p. 336, 337.) Ricardos Bemerkung ist natürlich richtig gegen J.B. Say, der sich vorfaselt, die Maschinen leisteten den „Dienst“, Wert zu schaffen, der Teil des „Profits“ bilde.

↓ After this economy in the transfer of value by each individual machine, Marx discusses now the economy of the machine *system*. Here we find again the economy of constant capital, which we know from the co-operation chapter. These savings are multiplied because the jointly used conditions of the labor-process include the motor and transmission mechanisms.

391:1 In treating of Co-operation and Manufacture, it was shown that certain general factors of production, such as buildings, are, in comparison with the scattered means of production of the isolated workman, economised by being consumed in common, and that they therefore make the product cheaper. In a system of machinery, not only is the framework of the machine consumed in common by its numerous operating implements, but the prime mover, together with a part of the transmitting mech-

409:1 Es ergab sich bei Betrachtung der Kooperation und Manufaktur, daß gewisse allgemeine Produktionsbedingungen, wie Baulichkeiten usw., im Vergleich mit den zersplitterten Produktionsbedingungen einzelner Arbeiter durch den gemeinsamen Konsum ökonomisiert werden, daher das Produkt weniger verteuern. Bei der Maschinerie wird nicht nur der Körper einer Arbeitsmaschine von ihren vielen Werkzeugen, sondern dieselbe Bewegungsmaschine nebst einem Teil des Transmissionsme-

15. Machinery and Modern Industry

anism, is consumed in common by the numerous operative machines.

chanismus von vielen Arbeitsmaschinen gemeinsam verbraucht.

Question 1003 *Why does machinery cheapen the product even though machines are much more expensive than manual tools? How do you measure the labor saved by machines?*

↓ Marx introduces speed here, which in the non-mechanized modes of production was not a parameter that could be controlled:

392:1–3 Given the difference between the value of the machinery, and the value transferred by it in a day to the product, the extent to which this latter value makes the product dearer, depends in the first instance, upon the size of the product; so to say, upon its area. Mr. Baynes, of Blackburn, in a lecture published in 1858, estimates that

“each real mechanical horse-power^{109a} will drive 450 self-acting mule spindles, with preparation, or 200 throstle spindles, or 15 looms for 40 inch cloth with the appliances for warping, sizing, etc.”

In the first case, it is the day's produce of 450 mule spindles, in the second, of 200 throstle spindles, in the third, of 15 power-looms, over which the daily cost of one horse-power, and the wear and tear of the machinery set in motion by that power, are spread; so that only a very minute value is transferred by such wear and tear to a pound of yarn or a yard of cloth. The same is the case with the steam-hammer mentioned above. Since its daily wear and tear, its coal-consumption, etc., are spread over the stupendous masses of iron hammered by it in a day, only a small value is added to a hundred weight of iron; but that value would be very great, if the cyclopean instrument were employed in driving in nails.

Now a footnote by Engels about the changing definition of horse-power:

^{109a} A horse-power is equal to a force of 33,000 foot-pounds per minute, i.e., to a force that raises 33,000 pounds one foot in a minute, or one pound 33,000 feet. This is the horse power meant in the text. In ordinary language, and also here and there in quotations in this work, a distinction is drawn between the “nominal” and the “commercial” or “indicated” horse-power of

409:2–410:2 Gegeben die Differenz zwischen dem Wert der Maschinerie und dem auf ihr Tagesprodukt übertragenen Wertteil, hängt der Grad, worin dieser Wertteil das Produkt verteuert, zunächst vom Umfang des Produkts ab, gleichsam von seiner Oberfläche. Herr Baynes aus Blackburn schätzt in einer 1857 veröffentlichten Vorlesung, daß

„jede reale^{109a} mechanische Pferdekraft 450 selfacting Mulespindeln nebst Vorgeschirr treibt oder 200 Throstlespindeln oder 15 Webstühle für 40 inch cloth nebst den Vorrichtungen zum Aufziehen der Kette, Schlichten usw.“

Es ist im ersten Fall das Tagesprodukt von 450 Mulespindeln, im zweiten von 200 Throstlespindeln, im dritten von 15 mechanischen Webstühlen, worüber sich die täglichen Kosten einer Dampfpferdekraft und der Verschleiß der von ihr in Bewegung gesetzten Maschinerie verteilen, so daß hierdurch auf eine Unze Garn oder eine Elle Geweb nur ein winziger Wertteil übertragen wird. Ebenso im obigen Beispiel mit dem Dampfhammer. Da sich sein täglicher Verschleiß, Kohlenkonsum usw. verteilen auf die furchtbaren Eisenmassen, die er täglich hämmert, hängt sich jedem Zentner Eisen nur ein geringer Wertteil an, der sehr groß wäre, sollte das zyklische Instrument kleine Nägel eintreiben.

^{109a} {Note zur 3. Aufl.—Eine „Pferdekraft“ ist gleich der Kraft von 33 000 Fußpfund in der Minute, d.h. der Kraft, die 33 000 Pfund in der Minute um 1 Fuß (englisch) hebt oder 1 Pfund um 33 000 Fuß. Dies ist die oben gemeinte Pferdekraft. In der gewöhnlichen Geschäftssprache und auch hie und da in Zitaten dieses Buchs wird aber unterschieden zwischen „nominellen“

15.2. The Value Transferred by the Machinery to the Product

the same engine. The old or nominal horse-power is calculated exclusively from the length of piston-stroke, and the diameter of the cylinder, and leaves pressure of steam and piston speed out of consideration. It expresses practically this: This engine would be one of 50 horse-power, if it were driven with the same low pressure of steam, and the same slow piston speed, as in the days of Boulton and Watt. But the two latter factors have increased enormously since those days. In order to measure the mechanical force exerted today by an engine, an indicator has been invented which shows the pressure of the steam in the cylinder. The piston speed is easily ascertained. Thus the "indicated" or "commercial" horse-power of an engine is expressed by a mathematical formula, involving diameter of cylinder, length of stroke, piston speed, and steam pressure, simultaneously, and showing what multiple of 33,000 pounds is really raised by the engine in a minute. Hence, one "nominal" horse-power may exert three, four, or even five "indicated" or "real" horse-powers. This observation is made for the purpose of explaining various citations in the subsequent pages.—F. E.

und „kommerziellen“ oder „indizierten“ Pferdekraften derselben Maschine. Die alte oder nominelle Pferdekraft wird berechnet ausschließlich aus Kolbenhub und Zylinderdurchmesser und läßt Dampfdruck und Kolbengeschwindigkeit ganz außer Berücksichtigung. D.h., faktisch sagt sie aus: Diese Dampfmaschine hat z.B. 50 Pferdekraft, wenn sie mit demselben schwachen Dampfdruck und derselben geringen Kolbengeschwindigkeit getrieben wird wie zur Zeit von Boulton und Watt. Letztere beiden Faktoren sind aber seitdem enorm gewachsen. Um die von einer Maschine heute wirklich gelieferte mechanische Kraft zu messen, wurde der Indikator erfunden, der den Dampfdruck anzeigt. Die Kolbengeschwindigkeit läßt sich leicht feststellen. So ist das Maß der „indizierten“ oder „kommerziellen“ Pferdekraft einer Maschine eine mathematische Formel, welche Zylinderdurchmesser, Höhe des Kolbenhubs, Kolbengeschwindigkeit und Dampfdruck gleichzeitig berücksichtigt und damit anzeigt, wievielfach die Maschine in der Minute 33000 Fußpfund wirklich leistet. Eine nominelle Pferdekraft kann daher in Wirklichkeit drei, vier, selbst fünf indizierte oder wirkliche Pferdekraften leisten. Dies zur Erklärung verschiedener späterer Zitate.—F.E.}

↓ The scale of production is size times speed, and speed has been increasing greatly:

392:4/o Given a machine's capacity for work, that is, the number of its operating tools, or, where it is a question of force, their mass, the amount of its product will depend on the velocity of its working parts, on the speed, for instance, of the spindles, or on the number of blows given by the hammer in a minute. Many of these colossal hammers strike seventy times in a minute, and Ryder's patent machine for forging spindles with small hammers gives as many as 700 strokes per minute.

410:3/o Den Wirkungskreis der Arbeitsmaschine, also die Anzahl ihrer Werkzeuge, oder, wo es sich um Kraft handelt, deren Umfang gegeben, wird die Produktenmasse von der Geschwindigkeit abhängen, womit sie operiert, also z.B. von der Geschwindigkeit, womit sich die Spindel dreht, oder der Anzahl Schläge, die der Hammer in einer Minute austeilt. Manche jener kolossalen Hämmer geben 70 Schläge, Ryders Schmiedepatentmaschine, die Dampfhammer in kleineren Dimensionen zum Schmieden von Spindeln anwendet, 700 Schläge in einer Minute.

Another systemic factor is the value of the machine itself, which is diminished in the production of machines by machines.

393:1 Given the rate at which machinery transfers its value to the product, the amount of value so transferred depends on the total value of the machinery.¹¹⁰ The less labor it contains, the less value it imparts to the product. The less value it gives up, so

411:1 Die Proportion gegeben, worin die Maschinerie Wert auf das Produkt überträgt, hängt die Größe dieses Wertteils von ihrer eignen Wertgröße ab.¹¹⁰ Je weniger Arbeit sie selbst enthält, desto weniger Wert setzt sie dem Produkt zu. Je weniger Wert ab-

15. Machinery and Modern Industry

much the more productive it is, and so much the more its services approximate to those of natural forces.

↑ That was an interesting remark about natural forces. Again the quantitative limits of energy are not an issue for Marx.

But the production of machinery by machinery lessens its value relatively to its extension and efficacy.

gebend, desto produktiver ist sie und desto mehr nähert sich ihr Dienst dem der Naturkräfte.

Die Produktion der Maschinerie durch Maschinerie verringert aber ihren Wert, verhältnismäßig zu ihrer Ausdehnung und Wirkung.

Side remark that machines do not transfer interest costs to the product:

¹¹⁰ The reader who is imbued with capitalist notions will naturally miss here the “interest” that the machine, in proportion to its capital value, adds to the product. It is, however, easily seen that since a machine no more creates new value than any other part of constant capital, it cannot add any value under the name of “interest.” It is also evident that here, where we are treating of the production of surplus-value, we cannot assume *a priori* the existence of any part of that value under the name of interest. The capitalist mode of calculating, which appears, *prima facie*, absurd and repugnant to the laws of the creation of value, will be explained in the third book of this work.

¹¹⁰ Der in kapitalistischen Vorstellungen befangene Leser vermißt hier natürlich den „Zins“, den die Maschine, pro rata ihres Kapitalwerts, dem Produkt zusetzt. Es ist jedoch leicht einzusehen, daß die Maschine, da sie so wenig als irgendein anderer Bestandteil des konstanten Kapitals Neuwert erzeugt, keinen solchen unter dem Namen „Zins“ zusetzen kann. Es ist ferner klar, daß hier, wo es sich um die Produktion des Mehrwerts handelt, kein Teil desselben unter dem Namen „Zins“ *a priori* vorausgesetzt werden kann. Die kapitalistische Rechnungsweise, die *prima facie* abgeschmackt und den Gesetzen der Wertbildung widersprechend scheint, findet im Dritten Buch dieser Schrift ihre Erklärung.

↑ This was a fleeting reference to the prices of production. ↓ Finally Marx also looks at the empirical evidence, and this leads him to formulate a new law:

15.2.b. [Value Part Transferred from Means of Labor Falls Absolutely but Increases Relatively]

393:2 An analysis and comparison of the prices of commodities produced by handicrafts or manufactures, and of the prices of the same commodities produced by machinery, shows generally, that, in the product of machinery, the value due to the instruments of labor increases relatively, but decreases absolutely. In other words, its absolute amount decreases, but its amount, relatively to the total value of the product, of a pound of yarn, for instance, increases.¹¹¹

411:2 Eine vergleichende Analyse der Preise handwerks- oder manufakturmäßig produzierter Waren und der Preise derselben Waren als Maschinenprodukt ergibt im allgemeinen das Resultat, daß beim Maschinenprodukt der dem Arbeitsmittel geschuldete Wertbestandteil relativ wächst, aber absolut abnimmt. Das heißt, seine absolute Größe nimmt ab, aber seine Größe im Verhältnis zum Gesamtwert des Produkts, z.B. eines Pfundes Garns, nimmt zu.¹¹¹

↑ Marx will refer to these same empirical findings also in chapter Twenty-Five, 617:4/o.

This theorem here looks like a general principle governing technical progress: labor can be shortened only by transferring relatively more to the means of labor.

↓ Footnote 111 gives a counterexample where the value part falls even relatively:

¹¹¹ This portion of value which is added by the machinery, decreases both absolutely and relatively, when the machinery does away with

¹¹¹ Dieser von der Maschine zugesetzte Wertbestandteil fällt absolut und relativ, wo sie Pferde verdrängt, überhaupt Arbeitstiere, die nur als Be-

15.2. The Value Transferred by the Machinery to the Product

horses and other animals that are employed as mere moving forces, and not as machines for changing the form of matter. It may here be incidentally observed, that Descartes, in defining animals as mere machines, saw with eyes of the manufacturing period, while to eyes of the middle ages, animals were assistants to man, as they were later to Von Haller in his “Restauration der Staatswissenschaften.” That Descartes, like Bacon, anticipated an alteration in the form of production, and the practical subjugation of Nature by Man, as a result of the altered methods of thought, is plain from his “Discours de la Méthode.” He there says: “If est possible (by the methods he introduced in philosophy) de parvenir i des connaissances fort utiles i la vie, et qu’au lieu de cette philosophic speculative qu’on enseigne dans les écoles, on en peut trouver une pratique, par laquelle, connaissant la force et les actions du feu, de l’eau, de l’air, des astres, et de tons les autres corps qui nous environnent, aussi distinctement que nous connaissons les divers métiers de nos artisans, nous les pourrions employer en même façon à tous les usages auxquels ils sont propres, et ainsi nous rendre comme maîtres et possesseurs de la nature” and thus “contribuer au perfectionnement de la vie humaine.” In the preface to Sir Dudley North’s “Discourses upon Trade” (1691) it is stated, that Descartes’ method had begun to free Political Economy from the old fables and superstitious notions of gold, trade, etc. On the whole, however, the early English economists sided with Bacon and Hobbes as their philosophers; while, at a later period, the philosopher κατ’ ἐξοχήν of Political Economy in England, France, and Italy, was Locke.

wegungskraft, nicht als Stoffwechselmaschinen benutzt werden. Nebenbei bemerkt, Descartes mit seiner Definition der Tiere als bloßer Maschinen sieht mit den Augen der Manufakturperiode im Unterschied zum Mittelalter, dem das Tier als Gehilfe des Menschen galt, wie später wieder dem Herrn v. Haller in seiner „Restauration der Staatswissenschaften“. Daß Descartes ebenso wie Bacon eine veränderte Gestalt der Produktion und praktische Beherrschung der Natur durch den Menschen als Resultat der veränderten Denkmethode betrachtete, zeigt sein „Discours de la Méthode“, wo es u.a. heißt: „Es ist möglich“ (durch die von ihm in die Philosophie eingeführte Methode), „zu Kenntnissen zu gelangen, die für das Leben sehr nützlich sind, und an Stelle jener spekulativen Philosophie, die man in den Schulen lehrt, eine praktische Philosophie zu finden, durch die wir die Kräfte und die Wirksamkeit des Feuers, des Wassers, der Luft, der Gestirne und aller anderen uns umgebenden Körper—indem wir sie ebenso genau kennen wie die verschiedenen Gewerbe unserer Handwerker—auch ebenso zu all den Gebrauchszwecken verwenden könnten für die sie geeignet sind, und uns so zu Meistern und Besitzern der Natur machen können“, und so „zur Vervollkommenung des menschlichen Lebens beitragen.“ In der Vorrede zu Sir Dudley Norths, „Discourses upon Trade“ (1691) heißt es, die Methode des Descartes, auf die politische Ökonomie angewandt, habe sie von alten Märchen und abergläubischen Vorstellungen über Geld, Handel usw. zu befreien angefangen. Im Durchschnitt schließen sich jedoch die englischen Ökonomen der frühern Zeit an Bacon und Hobbes als ihre Philosophen an, während Locke später „der Philosoph“ κατ’ ἐξοχήν der politischen Ökonomie für England, Frankreich und Italien ward.

↑ Marx should have said something critical here about this mechanistic world view.

Question 1004 Which view is more correct: the medieval point of view to see animals as companions of humans, or the enlightenment view to see animals as machines?

↓ After taking a negative approach, which shows how little value the machine transfers to the product, Marx takes now a positive approach how to compute the productivity of machines in terms of value: by comparing the labor replaced by the machine with the labor necessary to produce the machine itself.

394:1/o It is evident that whenever it costs as much labor to produce a machine as is saved by the employment of that machine, there is nothing but a transposition of labor;

412:1/o Es ist klar, daß bloßes Deplacement der Arbeit stattfindet, also die Gesamtsumme der zur Produktion einer Ware erforderlichen Arbeit nicht vermindert oder

15. Machinery and Modern Industry

consequently the total labor required to produce a commodity is not lessened or the productiveness of labor is not increased. It is clear, however, that the difference between the labor a machine costs, and the labor it saves, in other words, that the degree of its productiveness does not depend on the difference between its own value and the value of the implement it replaces. As long as the labor spent on a machine, and consequently the portion of its value added to the product, remains smaller than the value added by the workman to the product with his tool, there is always a difference of labor saved in favour of the machine. The productiveness of a machine is therefore measured by the human labor-power it replaces.

↑ The use of the machines increases productivity if the labor which it costs is less than the labor it replaces. ↓ Now Marx brings four examples, three of which are documented in the literature. (1) Spinning:

According to Mr. Baynes, 2 operatives are required for the 450 mule spindles, inclusive of preparation machinery,¹¹² that are driven by one-horse power; each self-acting mule spindle, working ten hours, produces 13 ounces of yarn (average number of thickness); consequently 2 1/2 operatives spin weekly 365 5/8 lbs. of yarn. Hence, leaving waste on one side, 366 lbs. of cotton absorb, during their conversion into yarn, only 150 hours' labor, or fifteen days' labor of ten hours each. But with a spinning-wheel, supposing the hand-spinner to produce thirteen ounces of yarn in sixty hours, the same weight of cotton would absorb 2,700 days' labor of ten hours each, or 27,000 hours' labor.¹¹³

¹¹² According to the annual report (Oct 1863) of the Essen Chamber of Commerce, there was produced in 1862, at the cast-steel works of Krupp, with its 161 furnaces, thirty-two steam-engines (in the year 1800 this was about the number of all the steam-engines working in Manchester), and fourteen steam-hammers (representing in all 1,236 horse-power) forty-nine forges, 203 tool-machines, and about 2,400 workmen—thirteen million pounds of cast steel. Here there

die Produktivkraft der Arbeit nicht vermehrt wird, wenn die Produktion einer Maschine so viel Arbeit kostet, als ihre Anwendung erspart. Die Differenz jedoch zwischen der Arbeit, die sie kostet, und der Arbeit, die sie erspart, oder der Grad ihrer Produktivität hängt offenbar nicht ab von der Differenz zwischen ihrem eignen Wert und dem Wert des von ihr ersetzten Werkzeugs. Die Differenz dauert so lange, als die Arbeitskosten der Maschine und daher der von ihr dem Produkt zugesetzte Wertteil kleiner bleiben als der Wert, den der Arbeiter mit seinem Werkzeug dem Arbeitsgegenstand zusetzen würde. Die Produktivität der Maschinen mißt sich daher an dem Grad, worin sie menschliche Arbeitskraft ersetzt.

Nach Herrn Baynes kommen auf 450 Mulespindeln nebst Vormaschinerie, die von einer Dampfpferdekraft getrieben werden, 2 1/2 Arbeiter¹¹² und werden mit jeder self-acting mule spindle bei zehnstündigem Arbeitstag 13 Unzen Garn (Durchschnittszahl), also wöchentlich 365 5/8 Pfund Garn von 2 1/2 Arbeitern gesponnen. Bei ihrer Verwandlung in Garn absorbieren ungefähr 366 Pfund Baumwolle (wir sehen der Vereinfachung halber vom Abfall ab) also nur 150 Arbeitsstunden oder 15 zehnstündige Arbeitstage, während mit dem Spinnrad, wenn der Handspinner 13 Unzen Garn in 60 Stunden liefert, dasselbe Quantum Baumwolle 2700 Arbeitstage von 10 Stunden oder 27 000 Arbeitsstunden absorbieren würde.¹¹³

¹¹² Nach einem Jahresbericht der Handelskammer zu Essen (Okt. 1863) produzierte 1862 die Kruppsche Gußstahlfabrik mittelst 161 Schmelz-, Glüh- und Zementöfen, 32 Dampfmaschinen (im Jahr 1800 war das ungefähr die Gesamtzahl der in Manchester angewandten Dampfmaschinen) und 14 Dampfhämmer, welche zusammen 1236 Pferdekraft repräsentieren, 49 Schmiedessen, 203 Werkzeugmaschinen und zirka 2400 Arbeiter—13 Millionen Pfund Gußstahl. Hier

15.2. The Value Transferred by the Machinery to the Product

are not two workmen to each horse-power.

¹¹³ Babbage estimates that in Java the spinning labor alone adds 117% to the value of the cotton. At the same period (1832) the total value added to the cotton by machinery and labor in the fine-spinning industry, amounted to about 33% of the value of the cotton. (“On the Economy of Machinery,” pp. 165, 166.)

↑ Modern data about numbers and horse powers of steam engines in [Wri10, p. 46:1], his source is [Mus76]. ↓ (2) Calico printing:

Where blockprinting, the old method of printing calico by hand, has been superseded by machine printing, a single machine prints, with the aid of one man or boy, as much calico of four colors in one hour, as it formerly took 200 men to do.¹¹⁴

¹¹⁴ Machine printing also economises colour.

↓ (3) Separating the cotton from the seeds (carding):

Before Eli Whitney invented the cotton gin in 1793, the separation of the seed from a pound of cotton cost an average day’s labor. By means of his invention one negress was enabled to clean 100 lbs. daily; and since then, the efficacy of the gin has been considerably increased. A pound of cotton wool, previously costing 50 cents to produce, included after that invention more unpaid labor, and was consequently sold with greater profit, at 10 cents. In India they employ for separating the wool from the seed, an instrument, half machine, half tool, called a churka; with this one man and a woman can clean 28 lbs. daily. With the churka invented some years ago by Dr. Forbes, one man and a boy produce 250 lbs. daily. If oxen, steam, or water, be used for driving it, only a few boys and girls as feeders are required. Sixteen of these machines driven by oxen do as much work in a day as formerly 750 people did on an average.¹¹⁵

¹¹⁵ See Paper read by Dr. Watson, Reporter on Products to the Government of India, before the Society of Arts, 17th April, 1860.

noch nicht 2 Arbeiter auf 1 Pferdekraft.

¹¹³ Babbage berechnet, daß in Java 117% dem Baumwollwert fast nur durch die Spinnarbeit zugesetzt werden. Zur selben Zeit (1832) betrug in England der Gesamtwert, den Maschinerie und Arbeit der Baumwolle bei der Feinspinnerei zusetzten, ungefähr 33% auf den Wert des Rohmaterials. „On the Economy of Machinery“, p. 165, 166.)

Wo die alte Methode des blockprinting oder der Handkattundruckerei durch Maschinendruck verdrängt ist, druckt eine einzige Maschine mit dem Beistand eines Mannes oder Jungen so viel vierfarbigen Kattun in einer Stunde wie früher 200 Männer.¹¹⁴

¹¹⁴ Beim Maschinendruck außerdem Farbe erspart.

Bevor Eli Whitney 1793 den cottongin erfand, kostete die Trennung eines Pfundes Baumwolle vom Samen einen Durchschnittsarbeitsstag. Infolge seiner Erfindung konnten täglich 100 Pfd. Baumwolle von einer Negerin gewonnen werden und die Wirksamkeit des gin ward seitdem noch bedeutend erhöht. Ein Pfund Baumwollfaser, früher zu 50 Cents produziert, wird später mit größerem Profit, d.h. mit Einschluß von mehr unbezahlter Arbeit, zu 10 Cents verkauft. In Indien wendet man zur Trennung der Faser vom Samen ein halbmaschinenartiges Instrument an, die Churka, womit ein Mann und eine Frau täglich 28 Pfd. reinigen. Mit der von Dr. Forbes vor einigen Jahren erfundenen Churka produzieren 1 Mann und 1 Junge täglich 250 Pf.; wo Ochsen, Dampf oder Wasser als Triebkräfte gebraucht werden, sind nur wenige Jungen und Mädchen als feeders (Handlanger des Materials für die Maschine) erheischt. Sechzehn dieser Maschinen, mit Ochsen getrieben, verrichten täglich das frühere Durchschnittstagewerk von 750 Leuten.¹¹⁵

¹¹⁵ Vgl. „Paper read by Dr. Watson, Reporter on Products to the Government of India, before the Society of Arts“, 17. April 1860.

15.2.c. [Capitalism Inhibits Labor-Saving Innovation]

↓ (4) Steam-plough. Marx revisits the data given earlier in footnote 96 to paragraph 379:2–381:0. Using this example he makes a new point: the amount of labor replaced by the machine is much larger than the cost savings realized by the capitalist, since not all labor is paid labor.

395:1/o As already stated, a steam-plough does as much work in one hour at a cost of three-pence, as 66 men at a cost of 15 shillings. I return to this example in order to clear up an erroneous notion. The 15 shillings are by no means the expression in money of all the labor expended in one hour by the 66 men. If the ratio of surplus-labor to necessary labor were 100%, these 66 men would produce in one hour a value of 30 shillings, although their wages, 15 shillings, represent only their labor for half an hour. Suppose, then, a machine cost as much as the wages for a year of the 150 men it displaces, say £3,000; this £3,000 is by no means the expression in money of the labor added to the object produced by these 150 men before the introduction of the machine, but only of that portion of their year's labor which was expended for themselves and represented by their wages. On the other hand, the £3,000, the money-value of the machine, expresses all the labor expended on its production, no matter in what proportion this labor constitutes wages for the workman, and surplus-value for the capitalist. Therefore, though a machine cost as much as the labor-power displaced by it costs, yet the labor materialised in it is even then much less than the living labor it replaces.¹¹⁶

¹¹⁶ "These mute agents (machines) are always the produce of much less labor than that which they displace, even when they are of the same money-value." (Ricardo, *l.c.*, p. 40.)

413:1/o Wie bereits erwähnt, verrichtet die Dampfmaschine, beim Dampfpflug, in einer Stunde zu 3 d. oder 1/4 sh. so viel Werk wie 66 Menschen zu 15 sh. per Stunde. Ich komme auf dieses Beispiel zurück gegen eine falsche Vorstellung. Die 15 sh. sind nämlich keineswegs der Ausdruck der während einer Stunde von den 66 Menschen zugefügten Arbeit. War das Verhältnis von Mehrarbeit zu notwendiger Arbeit 100%, so produzierten diese 66 Arbeiter per Stunde einen Wert von 30 sh., obgleich sich nur 33 Stunden in einem Äquivalent für sie selbst, d.h. im Arbeitslohn von 15 sh. darstellen. Gesetzt also, eine Maschine koste ebensoviel als der Jahreslohn von 150 durch sie verdrängten Arbeitern, sage 3000 Pfd.St., so sind 3000 Pfd.St. keineswegs der Geldausdruck der von 150 Arbeitern gelieferten und dem Arbeitsgegenstand zugesetzten Arbeit, sondern nur des Teils ihrer Jahresarbeit, der sich für sie selbst in Arbeitslohn darstellt. Dagegen drückt der Geldwert der Maschine von 3000 Pfd.St. alle während ihrer Produktion verausgabte Arbeit aus, in welchem Verhältnis immer diese Arbeit Arbeitslohn für den Arbeiter und Mehrwert für den Kapitalisten bilde. Kostet die Maschine also ebensoviel als die von ihr ersetzte Arbeitskraft, so ist die in ihr selbst vergegenständlichte Arbeit stets viel kleiner als die von ihr ersetzte lebendige Arbeit.¹¹⁶

¹¹⁶ „Diese stummen Agenten“ (die Maschinen) „sind immer das Produkt von viel weniger Arbeit als jene, die sie verdrängen, selbst dann, wenn sie gleichen Geldwert haben.“ (Ricardo, *l.c.* p. 40.)

↑ 150 men, annual wage £ 20, one man year = £ 40. 150 man years is £3000v + £3000s = £6000.

The point made under example (4) is not only a method of calculation, but this prohibits the application of labor-saving machines and leads to shameless waste of labor:

396:1/o The use of machinery for the ex-

414:1/oo Ausschließlich als Mittel zur

15.2. The Value Transferred by the Machinery to the Product

clusive purpose of cheapening the product, is limited in this way, that less labor must be expended in producing the machinery than is displaced by the employment of that machinery. For the capitalist, however, this use is still more limited. Instead of paying for the labor, he only pays the value of the labor-power employed; therefore, the limit to his using a machine is fixed by the difference between the value of the machine and the value of the labor-power replaced by it.

Verwohlfeilerung des Produkts betrachtet, ist die Grenze für den Gebrauch der Maschinerie darin gegeben, daß ihre eigne Produktion weniger Arbeit kostet, als ihre Anwendung Arbeit ersetzt. Für das Kapital jedoch drückt sich diese Grenze enger aus. Da es nicht die angewandte Arbeit zahlt, sondern den Wert der angewandten Arbeitskraft, wird ihm der Maschinengebrauch begrenzt durch die Differenz zwischen dem Maschinenwert und dem Wert der von ihr ersetzten Arbeitskraft.

Since the low-wage limit to the introduction of labor-saving machines is social, not technological, it can be different in different countries. Counteracts the negative implications of the law of one price.

Question 1005 *How does capitalism restrict the use of labor-saving machines?*

Since the division of the day's work into necessary and surplus-labor differs in different countries, and even in the same country at different periods, or in different branches of industry; and further, since the actual wage of the laborer at one time sinks below the value of his labor-power, at another rises above it, it is possible for the difference between the price of the machinery and the price of the labor-power replaced by that machinery to vary very much, although the difference between the quantity of labor requisite to produce the machine and the total quantity replaced by it, remain constant.^{116a} But it is the former difference alone that determines the cost, to the capitalist, of producing a commodity, and, through the pressure of competition, influences his action. Hence the invention now-a-days of machines in England that are employed only in North America; just as in the sixteenth and seventeenth centuries, machines were invented in Germany to be used only in Holland, and just as many a French invention of the eighteenth century was exploited in England alone. In the older countries, machinery, when employed in some branches of industry, creates such a redundancy of labor in other branches that in these latter the fall of wages below the value of labor-power

Da die Teilung des Arbeitstags in notwendige Arbeit und Mehrarbeit in verschiedenen Ländern verschieden ist, ebenso in demselben Lande zu verschiedenen Perioden oder während derselben Periode in verschiedenen Geschäftszweigen; da ferner der wirkliche Lohn des Arbeiters bald unter den Wert seiner Arbeitskraft sinkt, bald über ihn steigt, kann die Differenz zwischen dem Preise der Maschinerie und dem Preise der von ihr zu ersetzenden Arbeitskraft sehr variieren, wenn auch die Differenz zwischen dem zur Produktion der Maschine nötigen Arbeitsquantum und dem Gesamtquantum der von ihr ersetzten Arbeit dieselbe bleibt.^{116a} Es ist aber nur die erstere Differenz, welche die Produktionskosten der Ware für den Kapitalisten selbst bestimmt und ihn durch die Zwangsgesetze der Konkurrenz beeinflußt. Es werden daher heute Maschinen in England erfunden, die nur in Nordamerika angewandt werden, wie Deutschland im 16. und 17. Jahrhundert Maschinen erfand, die nur Holland anwandte, und wie manche französische Erfindung des 18. Jahrhunderts nur in England ausgebeutet ward. Die Maschine selbst produziert in älter entwickelten Ländern durch ihre Anwendung auf einige Geschäftszweige in andren Zweigen solchen Arbeitsüberfluß (redundancy of labour,

15. Machinery and Modern Industry

impedes the use of machinery, and, from the standpoint of the capitalist, whose profit comes, not from a diminution of the labor employed, but of the labor paid for, renders that use superfluous and often impossible.

^{116a} Hence in a communistic society there would be a very different scope for the employment of machinery than there can be in a bourgeois society.

Fights for higher wages and shorter hours led to the introduction of machinery.

In some branches of the woollen manufacture in England the employment of children has during recent years been considerably diminished, and in some cases has been entirely abolished. Why? Because the Factory Acts made two sets of children necessary, one working six hours, the other four, or each working five hours. But the parents refused to sell the "half-timers" cheaper than the "full-timers." Hence the substitution of machinery for the "half-timers."¹¹⁷

¹¹⁷ "Employers of labor would not unnecessarily retain two sets of children under thirteen ... In fact one class of manufacturers, the spinners of woollen yarn, now rarely employ children under thirteen years of age, i.e., half-timers. They have introduced improved and new machinery of various kinds, which altogether supersedes the employment of children (i.e., under 13 years); f.i., I will mention one process as an illustration of this diminution in the number of children, wherein by the addition of an apparatus, called a piecing machine, to existing machines, the work of six or four half-timers, according to the peculiarity of each machine, can be performed by one young person (over 13 years) ... the half-time system 'stimulated' the invention of the piecing machine." (Reports of Insp. of Fact. for 31st Oct., 1858.)

⇓ Mining:

Before the labor of women and of children under 10 years of age was forbidden in mines, capitalists considered the employment of naked women and girls, often in

sagt Ricardo), daß hier der Fall des Arbeitslohns unter den Wert der Arbeitskraft den Gebrauch der Maschinerie verhindert und ihn vom Standpunkt des Kapitals, dessen Gewinn ohnehin aus der Verminderung nicht der angewandten, sondern der bezahlten Arbeit entspringt, überflüssig, oft unmöglich macht.

^{116a} Note zur 2. Ausgabe. In einer kommunistischen Gesellschaft hätte daher die Maschinerie einen ganz andren Spielraum als in der bürgerlichen Gesellschaft.

In einigen Zweigen der englischen Wollmanufaktur ist während der letzten Jahre die Kinderarbeit sehr vermindert, hier und da fast verdrängt worden. Warum? Der Fabrikakt ernötigte eine doppelte Kinderreihe, von denen je eine 6, die andre 4 Stunden, oder jede nur 5 Stunden arbeitet. Die Eltern wollten aber die half-times (Halbzeitler) nicht wohlfeiler verkaufen als früher die full-times (Vollzeitler). Daher Ersetzung der half-times durh Maschinerie.¹¹⁷

¹¹⁷ „Die Anwender der Arbeit wollen nicht unnötig zwei Schichten von Kindern unter dreizehn in Dienst nehmen ... Eine Gruppe von Fabrikanten, die Spinner von Wollgarn, verwendet tatsächlich heute selten Kinder unter dreizehn Jahren, d.h. Halbzeitler. Sie haben verbesserte und neue Maschinen verschiedener Art eingeführt, durch die eine Verwendung von Kindern“ (d.h. unter 13 J.) „ganz überflüssig wurde; als Beispiel will ich zur Illustration für diese Verminderung der Zahl der Kinder einen Arbeitsprozeß erwähnen, bei dem an die bestehenden Maschinen ein Apparat, genannt Anstückmaschine, angeschlossen wurde, durch den die Arbeit von sechs oder vier Halbzeitlern, je nach der Beschaffenheit der einzelnen Maschine, von einer jugendlichen Person“ (über 13 J.) „geleistet werden kann ... Das Halbzeitsystem“ stimulierte „die Erfindung der Anstückmaschine.“ („Reports of Insp. of Fact. for 31st Oct. 1858“, [p. 42, 43].)

Vor dem Verbot der Arbeit von Weibern und Kindern (unter 10 Jahren) in Minen fand das Kapital die Methode, nackte Weiber und Mädchen, oft mit Männern zusam-

15.3. Proximate Effects of Machinery on the Worker

company with men, so far sanctioned by their moral code, and especially by their ledgers, that it was only after the passing of the Act that they had recourse to machinery.

↓ Stone-breaking:

The Yankees have invented a stone-breaking machine. The English do not make use of it, because the “wretch” (“Wretch” is the recognised term in English Political Economy for the agricultural laborer) who does this work gets paid for such a small portion of his labor, that machinery would increase the cost of production to the capitalist./fn36

¹¹⁸ “Machinery . . . can frequently not be employed until labor (he means wages) rises.” (Ricardo, l.c., p. 479.)

mengebunden in Kohlen- und andren Minen zu vernutzen, so übereinstimmend mit seinem Moralkodex und namentlich auch seinem Hauptbuch, daß es erst nach dem Verbot zur Maschinerie griff.

Die Yankees haben Maschinen zum Steinklopfen erfunden. Die Engländer wenden sie nicht an, weil der „Elende“ („wretch“ ist Kunstaussdruck der englischen politischen Ökonomie für den Agrikulturarbeiter), der diese Arbeit verrichtet, einen so geringen Teil seiner Arbeit bezahlt erhält, daß Maschinerie die Produktion für den Kapitalisten verteuern würde.¹¹⁸

¹¹⁸ „Maschinerie . . . kann häufig solange nicht verwendet werden, solange die Arbeit“ (er meint Lohn) „nicht steigt.“ (Ricardo, l.c. p. 479.)

Question 1006 *Why did high wages and advanced technology historically go together in the USA?*

↓ Women to haul canal boats:

In England women are still occasionally used instead of horses for hauling canal boats./fn37 because the labor required to produce horses and machines is an accurately known quantity, while that required to maintain the women of the surplus-population is too little to be accounted for.

¹¹⁹ See “Report of the Social Science Congress, at Edinburgh.” Oct., 1863.

Summary:

Hence nowhere do we find a more shameful squandering of human labor-power for the most despicable purposes than in England, the land of machinery.

In England werden gelegentlich statt der Pferde immer noch Weiber zum Ziehn usw. bei den Kanalbooten verwandt,¹¹⁹ weil die zur Produktion von Pferden und Maschinen erheischte Arbeit ein mathematisch gegebenes Quantum, die zur Erhaltung von Weibern der Surpluspopulation dagegen unter aller Berechnung steht.

¹¹⁹ Sieh „Report of the Social Science Congress at Edinburgh. Octob. 1863“.

Man findet daher nirgendwo schamlosere Verschwendung von Menschenkraft für Lumpereien, als gerade in England, dem Land der Maschinen.

Question 1007 *Why could one, at Marx’ times, find nowhere “a more shameful squandering of human labor-power for the most despicable purposes than in England, the land of machinery”? (p. 515:1/oo.)*

15.3. Proximate Effects of Machinery on the Worker

The first paragraph gives a brief orientation where we are in the chapter.

15. Machinery and Modern Industry

397:1/o The starting-point of Modern Industry is, as we have shown, the revolution in the instruments of labor, and this revolution attains its most highly developed form in the organized system of machinery in a factory. Before we inquire how human material is incorporated with this objective organism, let us consider some general effects of this revolution on the laborer himself.

416:1 Den Ausgangspunkt der großen Industrie bildet, wie gezeigt, die Revolution des Arbeitsmittels, und das umgewälzte Arbeitsmittel erhält seine meist entwickelte Gestalt im gegliederten Maschinensystem der Fabrik. Bevor wir zusehn, wie diesem objektiven Organismus Menschenmaterial einverleibt wird, betrachten wir einige allgemeine Rückwirkungen jener Revolution auf den Arbeiter selbst.

↑ This section here discusses the *general* effects of the introduction of machinery on the workers. The relation between worker and machinery in the work-process itself will be discussed in section 4.

↓ Is machinery, a means introduced to replace the worker, successful at replacing workers? The answer is yes, namely, it replaces able-bodied and highly skilled male workers with women and children.

15.3.a. Appropriation of Supplementary Labor-Power by Capital. The Employment of Women and Children

Instead of decreasing the demand for labor, the first effect of machinery is to *increase* the supply of exploitable workers under capitalism. How? Women and children are now able to do the lighter machine labor.

398:1 In so far as machinery dispenses with muscular power, it becomes a means of employing laborers of slight muscular strength, and those whose bodily development is incomplete, but whose limbs are all the more supple. The labor of women and children was, therefore, the first thing sought for by capitalists who used machinery. That mighty substitute for labor and laborers turned into a means for increasing the number of wage-laborers by enrolling, under the direct sway of capital, every member of the workman's family, without distinction of age or sex. Compulsory work for the capitalist usurped the place, not only of the children's play, but also of free labor at home within moderate limits for the support of the family.¹²⁰

416:2 Sofern die Maschinerie Muskelkraft entbehrlich macht, wird sie zum Mittel, Arbeiter ohne Muskelkraft oder von unreifer Körperentwicklung, aber größerer Geschmeidigkeit der Glieder anzuwenden. Weiber- und Kinderarbeit war daher das erste Wort der kapitalistischen Anwendung der Maschinerie! Dies gewaltige Ersatzmittel von Arbeit und Arbeitern verwandelte sich damit sofort in ein Mittel, die Zahl der Lohnarbeiter zu vermehren durch Einreihung aller Mitglieder der Arbeiterfamilie, ohne Unterschied von Geschlecht und Alter, unter die unmittelbare Botmäßigkeit des Kapitals. Die Zwangsarbeit für den Kapitalisten usurpierte nicht nur die Stelle des Kinderspiels, sondern auch der freien Arbeit im häuslichen Kreis, innerhalb sittlicher Schranke, für die Familie selbst.¹²⁰

Question 1008 *How does machinery, since it saves labor, increase the exploitable workforce under capitalism?*

In the following, Marx will enumerate five consequences of the employment of children: it lowers wages, children are traded as slaves, infant mortality surges, children are deprived

15.3. Proximate Effects of Machinery on the Worker

of schooling, and the resistance of the male workers is broken. ↓ Footnote 120 already anticipates some of these consequences.

¹²⁰ Dr. Edward Smith, during the cotton crisis caused by the American Civil War, was sent by the English Government to Lancashire, Cheshire, and other places, to report on the sanitary condition of the cotton operatives. He reported, that from a hygienic point of view, and apart from the banishment of the operatives from the factory atmosphere, the crisis had several advantages. The women now had sufficient leisure to give their infants the breast, instead of poisoning them with "Godfrey's cordial." They had time to learn to cook. Unfortunately the acquisition of this art occurred at a time when they had nothing to cook. But from this we see how capital, for the purposes of its self-expansion, has usurped the labor necessary in the home of the family. This crisis was also utilised to teach sewing to the daughters of the workmen in sewing schools. An American revolution and a universal crisis are necessary so that the working girls, who spin for the whole world, can learn to sew!

¹²⁰ Dr. Edward Smith wurde während der den Amerikanischen Bürgerkrieg begleitenden Baumwollkrise von der englischen Regierung nach Lancashire, Cheshire usw. geschickt, zur Berichterstattung über den Gesundheitszustand der Baumwollarbeiter. Er berichtet u.a.: Hygienisch habe die Krise, abgesehen von der Verbannung der Arbeiter aus der Fabrikatmosphäre, vielerlei andre Vorteile. Die Arbeiterfrauen fänden jetzt die nötige Muße, ihren Kindern die Brust zu reichen, statt sie mit Godfrey's Cordial (einem Opiat) zu vergiften. Sie hätten die Zeit gewonnen, kochen zu lernen. Unglücklicherweise fiel diese Kochkunst in einen Augenblick, wo sie nichts zu essen hatten. Aber man sieht, wie das Kapital die für die Konsumtion nötige Familienarbeit usurpiert hat zu seiner Selbstverwertung. Ebenso wurde die Krise benutzt, um in eignen Schulen die Töchter der Arbeiter nähen zu lehren. Eine amerikanische Revolution und eine Weltkrise erheischt, damit die Arbeitermädchen, die für die ganze Welt spinnen, nähen lernen!

↓ (1) Lowering of wages and increase in the degree of exploitation, because more members of the same family are working.

398:2/o The value of labor-power was determined, not only by the labor-time necessary to maintain the individual adult laborer, but also by that necessary to maintain his family. Machinery, by throwing every member of that family on to the labor-market, spreads the value of the man's labor-power over his whole family. It thus depreciates his labor-power. To purchase the labor-power of a family of four workers may, perhaps, cost more than it formerly did to purchase the labor-power of the head of the family, but, in return, four days' labor takes the place of one, and their price falls in proportion to the excess of the surplus-labor of four over the surplus-labor of one. In order that the family may live, four people must now, not only labor, but expend surplus-labor for the capitalist. Thus we see, that machinery, while augmenting the human material that forms the principal object of capital's exploiting power,¹²¹ at the same time raises the degree of exploitation.

417:1 Der Wert der Arbeitskraft war bestimmt nicht nur durch die zur Erhaltung des individuellen erwachsenen Arbeiters, sondern durch die zur Erhaltung der Arbeiterfamilie nötige Arbeitszeit. Indem die Maschinerie alle Glieder der Arbeiterfamilie auf den Arbeitsmarkt wirft, verteilt sie den Wert der Arbeitskraft des Mannes über seine ganze Familie. Sie entwertet daher seine Arbeitskraft. Der Ankauf der in 4 Arbeitskräfte z.B. parzellierten Familie kostet vielleicht mehr als früher der Ankauf der Arbeitskraft des Familienhaupts, aber dafür treten 4 Arbeitstage an die Stelle von einem, und ihr Preis fällt im Verhältnis zum Überschuß der Mehrarbeit der vier über die Mehrarbeit des einen. Vier müssen nun nicht nur Arbeit, sondern Mehrarbeit für das Kapital liefern, damit eine Familie lebe. So erweitert die Maschinerie von vornherin mit dem menschlichen Exploitationsmaterial, dem eigensten Ausbeutungsfeld des Kapitals,¹²¹ zugleich den Exploitationsgrad.

15. Machinery and Modern Industry

↑ Even if the total wage received by the family increases, they have to work longer for it, i.e., the price of labor falls.

¹²¹ “The numerical increase of laborers has been great, through the growing substitution of female for male, and above all, of childish for adult labor. Three girls of 13, at wages of from 6 shillings to 8 shillings a week, have replaced the one man of mature age, of wages varying from 18 shillings to 45 shillings.” (Th. de Quincey: “The Logic of Political Econ.,” London, 1844. Note to p. 147.) Since certain family functions, such as nursing and suckling children, cannot be entirely suppressed, the mothers confiscated by capital, must try substitutes of some sort. Domestic work, such as sewing and mending, must be replaced by the purchase of ready-made articles. Hence, the diminished expenditure of labor in the house is accompanied by an increased expenditure of money. The cost of keeping the family increases, and balances the greater income.

¹²¹ „Die Zahl der Arbeiter hat sehr zugenommen, weil man immer mehr Männer durch Frauenarbeit und vor allem Erwachsenen- durch Kinderarbeit ersetzt. Drei Mädchen im Alter von 13 Jahren mit Löhnen von 6 bis 8 sh. die Woche haben einen Mann reifen Alters mit einem Lohn von 18 bis 45 sh. verdrängt.“ (Th. de Quincey, „The Logic of Politic. Econ.“, Lond. 1844, Note zu p. 147.) Da gewisse Funktionen der Familie, z.B. Warten und Säugen der Kinder usw., nicht ganz unterdrückt werden können, müssen die vom Kapital konfiszierten Familienmütter mehr oder minder Stellvertreter dinge. Die Arbeiten, welche der Familienkonsum erheischt, wie Nähen, Flicken usw., müssen durch Kauf fertiger Waren ersetzt werden. Der verminderten Ausgabe von häuslicher Arbeit entspricht also vermehrte Geldausgabe. Die Produktionskosten der Arbeiterfamilie wachsen daher und gleichen die Mehreinnahme aus.

↓ With much of household production contracted out and/or replaced by purchased goods, it is not possible to be as economical as a home maker:

In addition to this, economy and judgment in the consumption and preparation of the means of subsistence becomes impossible.

Es kommt hinzu, daß Ökonomie und Zweckmäßigkeit in Vernutzung und Bereitung der Lebensmittel unmöglich werden.

↓ None of this discussed in books on Political Economy but documented in reports of factory inspectors.

Abundant material relating to these facts, about which official Political Economy remains silent, is to be found in the Reports of the Inspectors of Factories, of the Children’s Employment Commission, and more especially in the Reports on Public Health.

Über diese von der offiziellen politischen Ökonomie verheimlichten Tatsachen findet man reichliches Material in den „Reports“ der Fabrikinspektoren, der „Children’s Employment Commission“ und namentlich auch den „Reports on Public health“.

The word *verheimlicht* means it is a deliberate omission.

↓ (2) The formal mediation of the capital relation, i.e., the contract between laborer and capitalist, is overturned. Since the children do not have full rights, slave-dealership with children.

399:1–401:0 Machinery also revolutionizes out and out the formal mediation of the capital relation, i.e., the contract between laborer and capitalist. Taking the exchange of commodities as our basis, our first assumption was that capitalist and laborer met as free persons, as independent owners of

417:2–419:0 Sie revolutioniert ebenso von Grund aus die formelle Vermittlung des Kapitalverhältnisses, den Kontrakt zwischen Arbeiter und Kapitalist. Auf Grundlage des Warenaustausches war es erste Voraussetzung, daß sich Kapitalist und Arbeiter als freie Personen, als unabhängige Waren-

15.3. Proximate Effects of Machinery on the Worker

commodities; the one possessing money and means of production, the other labor-power. But now the capitalist buys children and young persons under age. Previously, the workman sold his own labor-power, which he disposed of nominally as a free agent. Now he sells wife and child. He has become a slave-dealer.¹²²

¹²² In striking contrast with the great fact, that the shortening of the hours of labor of women and children in English factories was exacted from capital by the male operatives, we find in the latest reports of the Children's Employment Commission traits of the operative parents in relation to the traffic in children, that are truly revolting and thoroughly like slave-dealing. But the Pharisee of a capitalist, as may be seen from the same reports, denounces this brutality which he himself creates, perpetuates, and exploits, and which he moreover baptises "freedom of labor." "Infant labor has been called into aid . . . even to work for their own daily bread. Without strength to endure such disproportionate toil, without instruction to guide their future life, they have been thrown into a situation physically and morally polluted. The Jewish historian has remarked upon the overthrow of Jerusalem by Titus that it was no wonder it should have been destroyed, with such a signal destruction, when an inhuman mother sacrificed her own offspring to satisfy the cravings of absolute hunger." ("Public Economy Concentrated." Carlisle, 1833, p. 66.)

⇓ Help-wanted ad for child labor:

The demand for children's labor often resembles in form the inquiries for negro slaves, such as were formerly to be read among the advertisements in American journals.

"My attention," says an English factory inspector, "was drawn to an advertisement in the local paper of one of the most important manufacturing towns of my district, of which the following is a copy: Wanted, 12 to 20 young persons, not younger than what can pass for 13 years. Wages, 4 shillings a week.] Apply etc."¹²³

besitzer, der eine Besitzer von Geld und Produktionsmitteln, der andre Besitzer von Arbeitskraft, gegenübertraten. Aber jetzt kauft das Kapital Unmündige oder Halbmündige. Der Arbeiter verkaufte früher seine eigne Arbeitskraft, worüber er als formell freie Person verfügte. Er verkauft jetzt Weib und Kind. Er wird Sklavenhändler.¹²²

¹²² Im Kontrast zur großen Tatsache, daß die Beschränkung der Weiber- und Kinderarbeit in den englischen Fabriken von den erwachsenen männlichen Arbeitern dem Kapital aberobert wurde, findet man noch in den jüngsten Berichten der „Children's Employment Commission“ wahrhaft empörende und durchaus sklavenhändlerische Züge der Arbeitereltern mit Bezug auf den Kinderschacher. Der kapitalistische Pharisee aber, wie man aus denselben „Reports“ sehn kann, denunziert diese von ihm selbst geschaffne, verewigte und exploitierte Bestialität, die er sonst „Freiheit der Arbeit“ tauft. „Arbeit von kleinen Kindern wurde zu Hilfe genommen . . . sogar um für ihr eigen täglich Brot zu arbeiten. Ohne die Kraft, eine so über alles Maß schwere Arbeit zu ertragen, ohne Belehrung, die ihrer künftigen Lebensführung zustatten käme, wurden sie in eine physisch und moralisch verseuchte Umgebung hineingestoßen. Der jüdische Historiker hat über die Zerstörung Jerusalems durch Titus die Bemerkung gemacht, es sei kein Wunder gewesen, daß die Stadt vernichtet, ja so völlig vernichtet worden sei, wenn eine unmenschliche Mutter ihren eigenen Sprößling opferte, um die Gier hemmungslosen Hungers zu stillen.“ „Public Economy Concentrated“, Carlisle 1833, p. 66.)

Die Nachfrage nach Kinderarbeit gleicht oft auch in der Form der Nachfrage nach Negerklaven, wie man sie in amerikanischen Zeitungsinseraten zu lesen gewohnt war.

„Meine Aufmerksamkeit“, sagt z.B. ein englischer Fabrikinspektor, „wurde gelenkt auf eine Annonce in dem Lokalblatt einer der bedeutendsten Manufakturstädte meines Distrikts, wovon folgendes die Kopie: Gebraucht 12 bis 20 Jungen, nicht jünger, als was für 13 Jahre passieren kann. Lohn 4 sh. per Woche. Anzufragen etc.“¹²³

15. Machinery and Modern Industry

The phrase “what can pass for 13 years,” has reference to the fact, that by the Factory Act, children under 13 years may work only 6 hours. A surgeon officially appointed must certify their age. The manufacturer, therefore, asks for children who look as if they we’re already 13 years old.

¹²³ A. Redgrave in “Reports of Insp. of Fact. for 31st October, 1858,” pp. 40, 41.

↓ Fraud by “certifying surgeons” statistically revealed.

The decrease, often by leaps and bounds, in the number of children under 13 years employed in factories, a decrease that is shown in an astonishing manner by the English statistics of the last 20 years, was for the most part, according to the evidence of the factory inspectors themselves, the work of the certifying surgeons, who overstated the age of the children, agreeably to the capitalist’s greed for exploitation, and the sordid trafficking needs of the parents.

↓ Open market place for children:

In the notorious district of Bethnal Green, a public market is held every Monday and Tuesday morning, where children of both sexes from 9 years of age upwards, hire themselves out to the silk manufacturers. “The usual terms are 1 s. 8 d. a week (this belongs to the parents) and ‘2d. for myself and tea.’ The contract is binding only for the week. The scene and language while this market is going on are quite disgraceful.”¹²⁴ It still occurs in England, that women “take children from the workhouse and let any one have them out for 2s. 6d. a week.”¹²⁵ In spite of legislation, the number of boys sold in Great Britain by their parents to act as live chimney-sweeping machines (although there exist plenty of machines to replace them) exceeds 2,000.¹²⁶

¹²⁴ “Children’s Employment Commission, Fifth Report,” London, 1866, p. 81, n. 31. {Added in the 4th German edition.—The Beth-

Die Phrase „was für 13 Jahre passieren kann“ bezieht sich darauf, daß nach dem Factory Act Kinder unter 13 Jahren nur 6 Stunden arbeiten dürfen. Ein amtlich qualifizierter Arzt (certifying surgeon) muß das Alter bescheinigen. Der Fabrikant verlangt also Jungen, die so aussehen, als ob sie schon dreizehnjährig.

¹²³ A. Redgrave in „Reports of Insp. of Fact. for 31st October 1858“, p. 40, 41.

Die manchmal sprungweise Abnahme in der Anzahl der von Fabrikanten beschäftigten Kinder unter 13 Jahren, überraschend in der englischen Statistik der letzten 20 Jahre, war nach Aussage der Fabrikinspektoren selbst größtenteils das Werk von certifying surgeons, welche das Kindesalter der Exploitationslust der Kapitalisten und dem Schacherbedürfnis der Eltern gemäß verschoben.

In dem berüchtigten Londoner Distrikt von Bethnal Green wird jeden Montag und Dienstag morgen offener Markt gehalten, worin Kinder beiderlei Geschlechts vom 9. Jahre an sich selbst an die Londoner Seidenmanufakturen vermieten. „Die gewöhnlichen Bedingungen sind 1 sh. 8 d. die Woche (die den Eltern gehören) und 2 d. für mich selbst nebst Tee.“ Die Kontrakte gelten nur für die Woche. Die Szenen und die Sprache während der Dauer dieses Markts sind wahrhaft empörend.¹²⁴ Es kommt immer noch in England vor, daß Weiber „Jungen vom Workhouse nehmen und sie jedem beliebigen Käufer für 2 sh. 6 d. wöchentlich vermieten“.¹²⁵ Trotz der Gesetzgebung werden immer noch mindestens 2000 Jungen in Großbritannien als lebendige Schornsteinfegermaschinen (obgleich Maschinen zu ihrem Ersatz existieren) von ihren eignen Eltern verkauft.¹²⁶

¹²⁴ „Children’s Employment Commission, V. Report“, London 1866, p. 81, n. 31. { Zur 4. Aufl.—Die Seidenindustrie von Bethnal Green

15.3. Proximate Effects of Machinery on the Worker

nal Green silk industry is now almost destroyed.—
F. E.}

¹²⁵ “Children’s Employment Commission,
Third Report,” London, 1864, p. 53, n. 15.

¹²⁶ *I.c.*, Fifth Report, p. 22, n. 137.

↓ Since the wage labor transaction has lost here even the semblance of a transaction between free persons, the state has a legal pretext to intervene:

The revolution effected by machinery in the juridical relations between the buyer and the seller of labor-power, causing the transaction as a whole to lose the appearance of a contract between free persons, afforded the English Parliament an excuse, founded on juridical principles, for the interference of the state with factories. Whenever the law limits the labor of children to 6 hours in industries not before interfered with, the complaints of the manufacturers are always renewed. They allege that numbers of the parents withdraw their children from the industry brought under the Act, in order to sell them where “freedom of labor” still rules, i.e., where children under 13 years are compelled to work like grown-up people, and therefore can be got rid of at a higher price.

↓ The following thought was also given in Chapter Ten:

But since capital is by nature a leveller, since it exacts in every sphere of production equality in the conditions of the exploitation of labor, the limitation by law of children’s labor, in one branch of industry, becomes the cause of its limitation in others.

↓ (3) Enormous infant mortality because the women have to work:

401:1–403:1 We have already alluded to the physical deterioration as well of the children and young-persons as of the women, whom machinery, first directly in the factories that shoot up on its basis, and then indirectly in all the remaining branches of industry, subjects to the exploitation of capital. In this place, therefore, we dwell only on one point, the enormous mortality, during the first few years of their life, of the children of the operatives. In sixteen of the registration districts into which England is divided, there are, for every 100,000 children alive under the age of one year, only

ist jetzt fast vernichtet.—F. E.}

¹²⁵ „Child. Employm. Comm., III. Report“, Lond. 1864, p. 53, n. 15.

¹²⁶ *I.c.*, „V. Report“, p. XXII, n. 137.

Die von der Maschinerie bewirkte Revolution im Rechtsverhältnis zwischen Käufer und Verkäufer der Arbeitskraft, so daß die ganze Transaktion selbst den Schein eines Kontrakts zwischen freien Personen verliert, bot dem englischen Parlament später den juristischen Entschuldigungsgrund für Staatseinmischung in das Fabrikwesen. Sooft das Fabrikgesetz die Kinderarbeit in bisher unangefochtenen Industriezweigen auf 6 Stunden beschränkt, ertönt stets neu der Fabrikantenjammer: ein Teil der Eltern entziehe die Kinder nun der gemäßregelten Industrie, um sie in solche zu verkaufen, wo noch „Freiheit der Arbeit“ herrscht, d.h., wo Kinder unter 13 Jahren gezwungen werden, wie Erwachsene zu arbeiten, also auch teurer loszuschlagen sind.

Da aber das Kapital von Natur ein Leveller ist, d.h. in allen Produktionssphären Gleichheit der Exploitationsbedingungen der Arbeit als sein angeborenes Menschenrecht verlangt, wird die legale Beschränkung der Kinderarbeit in einem Industriezweig Ursache ihrer Beschränkung in dem andren.

419:1–421:4 Bereits früher wurde der physische Verderb der Kinder und jungen Personen angedeutet, wie der Arbeiterweiber, welche die Maschinerie erst direkt in den auf ihrer Grundlage aufschießenden Fabriken und dann indirekt in allen übrigen Industriezweigen der Exploitation des Kapitals unterwirft. Hier verweilen wir daher nur bei einem Punkt, der ungeheuren Sterblichkeit von Arbeiterkindern in ihren ersten Lebensjahren. In England gibt es 16 Registrationsdistrikte, wo im jährlichen Durchschnitt auf 100 000 lebende Kinder unter einem Jahr nur 9085 Todesfälle (in einem

15. Machinery and Modern Industry

9,000 deaths in a year on an average (in one district only 7,047); in 24 districts the deaths are over 10,000, but under 11,000; in 39 districts, over 11,000, but under 12,000; in 48 districts over 12,000, but under 13,000; in 22 districts over 20,000; in 25 districts over 21,000; in 17 over 22,000; in 11 over 23,000; in Hoo, Wolverhampton, Ashton-under-Lyne, and Preston, over 24,000; in Nottingham, Stockport, and Bradford, over 25,000; in Wisbeach, 16,000; and in Manchester, 26,125.¹²⁷ As was shown by an official medical inquiry in the year 1861, the high death-rates are, apart from local causes, principally due to the employment of the mothers away from their homes, and to the neglect and maltreatment, consequent on her absence, such as, amongst others, insufficient nourishment, unsuitable food, and dosing with opiates; besides this, there arises an unnatural estrangement between mother and child, and as a consequence intentional starving and poisoning of the children.¹²⁸

¹²⁷ „Sixth Report on Public Health,” Lond., 1864, p. 34.

¹²⁸ „It (the inquiry of 1861) ... showed, moreover, that while, with the described circumstances, infants perish under the neglect and mismanagement which their mothers' occupations imply, the mothers become to a grievous extent denaturalised towards their offspring—commonly not troubling themselves much at the death, and even sometimes ... taking direct measures to insure it.” (l.c.)

⇓ Agricultural districts have least mortality:

In those agricultural districts, “where a minimum in the employment of women exists, the death-rate is on the other hand very low.”¹²⁹

¹²⁹ l.c., p. 454.

⇓ Unexpected outlier explained:

The Inquiry Commission of 1861 led, however, to the unexpected result, that in some purely agricultural districts bordering on the North Sea, the death-rate of children un-

Distrikt nur 7047) kommen, in 24 Distrikten über 10 000, aber unter 11 000, in 39 Distrikten über 11 000, aber unter 12 000, in 48 Distrikten über 12 000, aber unter 13 000, in 22 Distrikten über 20 000, in 25 Distrikten über 21 000, in 17 über 22 000, in 11 über 23 000, in Hoo, Wolverhampton, Ashton-under-Lyne und Preston über 24 000, in Nottingham, Stockport und Bradford über 25 000, in Wisbeach 26 001 und in Manchester 26 125.¹²⁷ Wie eine offizielle ärztliche Untersuchung im Jahre 1861 nachwies, sind, von Lokalumständen abgesehen, die hohen Sterblichkeitsraten vorzugsweise der außerhäuslichen Beschäftigung der Mütter geschuldet und der daher entspringenden Vernachlässigung und Mißhandlung der Kinder, u.a. unpassender Nahrung, Mangel an Nahrung, Fütterung mit Opiaten usw., dazu die unnatürliche Entfremdung der Mütter gegen ihre Kinder, im Gefolge davon absichtliche Aushungerung und Vergiftung.¹²⁸

¹²⁷ „Sixth Report on Public Health“, Lond. 1864, p. 34.

¹²⁸ „Sie“ (die Untersuchung von 1861) „... zeigte überdies, daß, während unter den beschriebenen Umständen die Kleinkinder an der Vernachlässigung und schlechten Behandlung zugrunde gehen, die durch die Arbeit ihrer Mütter bedingt sind, die Mütter in erschreckendem Ausmaß die natürlichen Regungen gegenüber ihren Sprößlingen verlieren—gewöhnlich kümmert sie deren Tod nicht sehr, und manchmal ... ergreifen sie direkte Maßnahmen, um ihn herbeizuführen.“ (l.c.)

In solchen Agrikulturdistrikten, „wo ein Minimum weiblicher Beschäftigung existiert, ist dagegen die Sterblichkeitsrate am niedrigsten“¹²⁹.

¹²⁹ l.c. p. 454.

Die Untersuchungskommission von 1861 ergab jedoch das unerwartete Resultat, daß in einigen an der Nordsee gelegenen rein ackerbauenden Distrikten die Sterblich-

15.3. Proximate Effects of Machinery on the Worker

der one year old almost equalled that of the worst factory districts. Dr. Julian Hunter was therefore commissioned to investigate this phenomenon on the spot. His report is incorporated with the "Sixth Report on Public Health."¹³⁰ Up to that time it was supposed, that the children were decimated by malaria, and other diseases peculiar to low-lying and marshy districts. But the inquiry showed the very opposite, namely,

that the same cause which drove away malaria, the conversion of the land, from a morass in winter and a scanty pasture in summer, into fruitful corn land, created the exceptional death-rate of the infants.¹³¹

The 70 medical men, whom Dr. Hunter examined in that district, were "wonderfully in accord" on this point. In fact, the revolution in the mode of cultivation had led to the introduction of the industrial system.

"Married women, who work in gangs along with boys and girls, are, for a stipulated sum of money, placed at the disposal of the farmer, by a man called the 'undertaker', who contracts for the whole gang. These gangs will sometimes travel many miles from their own village; they are to be met morning and evening on the roads, dressed in short petticoats, with suitable coats and boots, and sometimes trousers, looking wonderfully strong and healthy, but tainted with a customary immorality and heedless of the fatal results which their love of this busy and independent life is bringing on their unfortunate offspring who are pining at home."¹³²

↑ The women liked this active and independent life.

¹³⁰ I.c., pp. 454–463. "Report by Dr. Henry Julian Hunter on the excessive mortality of infants in some rural districts of England."

¹³¹ I.c., p. 35 and pp. 455, 456.

¹³² I.c., p. 456.

Every phenomenon of the factory districts is here reproduced, including, but to a greater extent, ill-disguised infanticide, and dosing children with opiates.¹³³

keitsrate von Kindern unter einem Jahr fast die der verrufensten Fabrikdistrikte erreichte. Dr. Julian Hunter wurde daher beauftragt, dies Phänomen an Ort und Stelle zu erforschen. Sein Bericht ist dem „VI. Report on Public Health“ einverleibt.¹³⁰ Man hatte bisher vermutet, Malaria und andre, niedrig gelegenen und sumpfigen Landstrecken eigentümliche Krankheiten dezimierten die Kinder. Die Untersuchung ergab das grade Gegenteil, nämlich,

„daß dieselbe Ursache, welche die Malaria vertrieb, nämlich die Verwandlung des Bodens aus Morast im Winter und dürrtlicher Weide im Sommer in fruchtbares Kornland, die außerordentliche Todesrate der Säuglinge schuf.“¹³¹

Die 70 ärztlichen Praktiker, die Dr. Hunter in jenen Distrikten verhörte, waren „wunderbar einstimmig“ über diesen Punkt. Mit der Revolution der Bodenkultur wurde nämlich das industrielle System eingeführt.

„Verheiratete Weiber, die in Banden mit Mädchen und Jungen zusammen arbeiten, werden dem Pächter von einem Manne, welcher der „Gangmeister“ heißt und die Banden im ganzen mietet, für eine bestimmte Summe zur Verfügung gestellt. Diese Banden wandern oft viele Meilen von ihren Dörfern weg, man trifft sie morgens und abends auf den Landstraßen, die Weiber bekleidet mit kurzen Unterröcken und entsprechenden Röcken und Stiefeln und manchmal Hosen, sehr kräftig und gesund von Aussehn, aber verdorben durch gewohnheitsmäßige Liederlichkeit und rücksichtslos gegen die unheilvollen Folgen, welche ihre Vorliebe für diese tätige und unabhängige Lebensart auf ihre Sprößlinge wälzt, die zu Haus verkümmern.“¹³²

¹³⁰ I.c. p. 454–462. „Reports by Dr. Henry Julian Hunter on the excessive mortality of infants in some rural districts of England.“

¹³¹ I.c. p. 35 u. p. 455, 456.

¹³² I.c. p. 456.

Alle Phänomene der Fabrikdistrikte reproduzieren sich hier, in noch höherem Grad versteckter Kindermord und Behandlung der Kinder mit Opiaten.¹³³

15. Machinery and Modern Industry

¹³³ In the agricultural as well as in the factory districts the consumption of opium among the grown-up laborers, both male and female, is extending daily. "To push the sale of opiate ... is the great aim of some enterprising wholesale merchants. By druggists it is considered the leading article." (l.c., p. 459.) Infants that take opiates "shrank up into little old men," or "wizened like little monkeys." (l.c., p. 460.) We here see how India and China avenged themselves on England.

"My knowledge of such evils," says Dr. Simon, the medical officer of the Privy Council and editor in chief of the Reports on Public Health, "may excuse the profound misgiving with which I regard any large industrial employment of adult women."¹³⁴ "Happy indeed," exclaims Mr. Baker, the factory inspector, in his official report, "happy indeed will it be for the manufacturing districts of England, when every married woman having a family is prohibited from working in any textile works at all."¹³⁵

¹³⁴ l.c., p. 37.

¹³⁵ "Rep. of Insp. of Fact. for 31st Oct., 1862," p. 59. Mr. Baker was formerly a doctor.

(4) Intellectual desolation; although schools were required by law, the laws were carelessly written and did not ensure the children were really taught something.

403:2–405:2 The moral degradation caused by the capitalistic exploitation of women and children has been so exhaustively depicted by F. Engels in his "Lage der Arbeitenden Klasse Englands," and other writers, that I need only mention the subject in this place.

↓ Marx distinguishes intellectual desolation (a spoiled mind) from a fallow mind.

But the intellectual desolation artificially produced by converting immature human beings into mere machines for the fabrication of surplus-value, a state of mind clearly distinguishable from that natural ignorance which keeps the mind fallow without destroying its capacity for development, its natural fertility, this desolation finally compelled even the English Parliament to make elementary education a compulsory condi-

¹³³ Wie in den englischen Fabrikdistrikten, so dehnt sich auch in den Agrikulturdistrikten der Opiumkonsum unter den erwachsenen Arbeitern und Arbeiterinnen täglich aus. „Den Verkauf von Opiaten voranzutreiben ... ist das große Ziel einiger unternehmender Großhändler. Von Drogi- sten werden sie als der gangbarste Artikel angesehen.“ (l.c. p. 459.) Säuglinge, die Opiate emp- fingen, „verrumpelten in kleine alte Männchen oder verschrumpfen zu kleinen Affen“. (l.c. p. 460.) Man sieht, wie Indien und China sich an England rächen.

„Meine Kenntnis der von ihr erzeugten Übel“, sagt Dr. Simon, der ärztliche Beamte des eng- lischen Privy-Council und Redakteur en chef der Berichte über „Public Health“, „muß den tiefen Abscheu entschuldigen, womit ich je- de umfassende industrielle Beschäftigung er- wachsener Weiber betrachte.“¹³⁴ „Es wird“, ruft Fabrikinspektor R. Baker in einem offi- ziellen Bericht aus, „es wird in der Tat ein Glück für die Manufakturdistrikte Englands sein, wenn jeder verheirateten Frau, die Fami- lie hat, verboten wird, in irgendeiner Fabrik zu arbeiten.“¹³⁵

¹³⁴ l.c. p. 37.

¹³⁵ „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 59. Dieser Fabrikinspektor war früher Arzt.

421:5–425:0 Die aus der kapitalistischen Exploitation der Weiber- und Kinderarbeit entspringende moralische Verkümmrung ist von F. Engels in seiner „Lage der arbei- tenden Klasse Englands“ und von andren Schriftstellern so erschöpfend dargestellt worden, daß ich hier nur daran erinnere.

Die intellektuelle Verödung aber, künstlich produziert durch die Verwandlung unreifer Menschen in bloße Maschinen zur Fabrika- tion von Mehrwert und sehr zu unterschei- den von jener naturwüchsigen Unwissen- heit, welche den Geist in Brache legt ohne Verderb seiner Entwicklungsfähigkeit, sei- ner natürlichen Fruchtbarkeit selbst, zwang endlich sogar das englische Parlament in al- len dem Fabrikgesetz unterworfenen Indu-

15.3. Proximate Effects of Machinery on the Worker

tion to the “productive” employment of children under 14 years, in every industry subject to the Factory Acts.

strien, den Elementarunterricht zur gesetzlichen Bedingung für den „produktiven“ Verbrauch von Kindern unter 14 Jahren zu machen.

↓ How capital avoided the legislation requiring schooling for the children:

The spirit of capitalist production stands out clearly in the ludicrous wording of the so-called education clauses in the Factory Acts, in the absence of an administrative machinery, an absence that again makes the compulsion illusory, in the opposition of the manufacturers themselves to these education clauses, and in the tricks and dodges they put in practice for evading them.

Der Geist der kapitalistischen Produktion leuchtete hell aus der liederlichen Redaktion der sog. Erziehungsklauseln der Fabrikakte, aus dem Mangel administrativer Maschinerie, wodurch dieser Zwangsunterricht größtenteils wieder illusorisch wird, aus der Fabrikantenopposition selbst gegen dies Unterrichtsgesetz und aus ihren praktischen Kniffen und Schlichen zu seiner Umgehung.

“For this the legislature is alone to blame, by having passed a delusive law, which, while it would seem to provide that the children employed in factories shall be *educated*, contains no enactment by which that professed end can be secured. It provides nothing more than that the children shall on certain days of the week, and for a certain number of hours (three) in each day, be inclosed within the four walls of a place called a school, and that the employer of the child shall receive weekly a certificate to that effect signed by a person designated by the subscriber as a schoolmaster or schoolmistress.”¹³⁶

„Die Gesetzgebung allein ist zu tadeln, weil sie ein Truggesetz (delusive law) erlassen hat, das unter dem Schein, für die Erziehung der Kinder zu sorgen, keine einzige Bestimmung enthält, wodurch dieser vorgeschützte Zweck gesichert werden kann. Es bestimmt nichts, außer daß die Kinder für eine bestimmte Stundenzahl“ (3 Stunden) „per Tag innerhalb der vier Wände eines Platzes, Schule benamst, eingeschlossen werden sollen und daß der Anwender des Kindes hierüber wöchentlich ein Zertifikat von einer Person erhalten muß, die sich als Schullehrer oder Schullehrerin mit ihrem Namen unterzeichnet.“¹³⁶

¹³⁶ L. Horner in “Reports of Insp. of Fact. for 30th June, 1857,” p. 17.

¹³⁶ Leonard Horner in „Reports of Insp. of Fact. for 30th April 1857“, p. 17.

This has a history. The conditions prior to the 1844 Act were not mitigated, only legalized by the Act.

Previous to the passing of the amended Factory Act, 1844, it happened, not unfrequently, that the certificates of attendance at school were signed by the schoolmaster or schoolmistress with a cross, as they themselves were unable to write.

Vor dem Erlaß des amendierten Fabrikakts von 1844 waren Schulbesuchszertifikate nicht selten, die von Schulmeister oder Schulmeisterin mit einem Kreuz unterzeichnet wurden, da letztere selbst nicht schreiben konnten.

“On one occasion, on visiting a place called a school, from which certificates of school attendance, had issued, I was so struck with the ignorance of the master, that I said to him: ‘Pray, sir, can you read?’ His reply was: ‘Aye, summat!’ and as a justification of his right to grant certificates, he added: ‘At any rate, I am before my scholars.’

„Beim Besuch, den ich einer solchen Zertifikate ausstellenden Schule abstattete, war ich so betroffen von der Unwissenheit des Schulmeisters, daß ich zu ihm sagte: ‚Bitte, mein Herr, können Sie lesen?‘ Seine Antwort war: ‚Ih jeh, Ebbes (summat).‘ Zu seiner Rechtfertigung fügte er hinzu: ‚Jedenfalls stehe ich vor meinen Schülern.‘“

The inspectors, when the Bill of 1844 was in preparation, did not fail to represent the disgraceful state of the places called schools,

Während der Vorbereitung des Akts von 1844 denunzierten die Fabrikinspektoren den schmachvollen Zustand der Plätze, Schu-

15. Machinery and Modern Industry

certificates from which they were obliged to admit as a compliance with the laws, but they were successful only in obtaining thus much, that since the passing of the Act of 1844,

“the figures in the school certificate must be filled up in the handwriting of the schoolmaster, who must also sign his Christian and surname in full.”¹³⁷

¹³⁷ L. Horner in “Rep. of Insp. of Fact. for 31st Oct., 1855,” pp. 18, 19.

Sir John Kincaid, factory inspector for Scotland, relates experiences of the same kind.

“The first school we visited was kept by a Mrs. Ann Killin. Upon asking her to spell her name, she straightway made a mistake, by beginning with the letter C, but correcting herself immediately, she said her name began with a K. On looking at her signature, however, in the school certificate books, I noticed that she spelt it in various ways, while her handwriting left no doubt as to her unfitness to teach. She herself also acknowledged that she could not keep the registre ... In a second school I found the schoolroom 15 feet long, and 10 feet wide, and counted in this space 75 children, who were gobbling something unintelligible.”¹³⁸ But it is not only in the miserable places above referred to that the children obtain certificates of school attendance without having received instruction of any value, for in many schools where there is a competent teacher, his efforts are of little avail from the distracting crowd of children of all ages, from infants of 3 years old and upwards; his livelihood, miserable at the best, depending on the pence received from the greatest number of children whom it is possible to cram into the space. To this is to be added scanty school furniture, deficiency of books, and other materials for teaching, and the depressing effect upon the poor children themselves of a close, noisome atmosphere. I have been in many such schools, where I have seen rows of children doing absolutely nothing; and this is certified as school attendance, and, in statistical returns, such children are set down as being educated.”¹³⁹

len benamst, deren Zertifikate sie als zu Gesetz vollgültig zulassen mußten. Alles was sie durchsetzten, war, daß seit 1844

„die Zahlen im Schulzertifikat in der Handschrift des Schulmeisters ausgefüllt, ditto sein Vor- und Zuname von ihm selbst unterschrieben sein müssen“.¹³⁷

¹³⁷ id. in „Reports of Insp. of Fact. for 31st Oct. 1855“, p. 18, 19.

Sir John Kincaid, Fabrikinspektor für Schottland, erzählt von ähnlichen amtlichen Erfahrungen.

„Die erste Schule, die wir besuchten, wurde von einer Mrs. Ann Killin gehalten. Auf meine Aufforderung, ihren Namen zu buchstabieren, machte sie gleich einen Schnitzer, indem sie mit dem Buchstaben C begann, aber sich sofort korrigierend sagte, ihr Name fange mit K an. Bei Ansicht ihrer Unterschrift in den Schulzertifikatbüchern bemerkte ich jedoch, daß sie ihn verschiedenartig buchstabierte, während die Handschrift keinen Zweifel über ihre Lehrunfähigkeit ließ. Auch gab sie selbst zu, sie könne das Register nicht führen ... In einer zweiten Schule fand ich das Schulzimmer 15 Fuß lang und 10 Fuß breit und zählte in diesem Raum 75 Kinder, die etwas Unverständliches herquiekten.“¹³⁸ „Es sind jedoch nicht nur solche Jammerhöhlen, worin die Kinder Schulzertifikate, aber keinen Unterricht erhalten, denn in vielen Schulen, wo der Lehrer kompetent ist, scheitern seine Bemühungen fast ganz an dem sinnverwirrenden Knäuel von Kindern aller Alter, aufwärts von Dreijährigen. Sein Auskommen, elend im besten Fall, hängt ganz von der Zahl der Pence ab, empfangen von der größten Anzahl Kinder, die es möglich ist, in ein Zimmer zu stopfen. Dazu kommt spärliche Schulmöblierung, Mangel an Büchern und andrem Lehrmaterial und die niederschlagende Wirkung einer beunruhigenden und ekelhaften Luft auf die armen Kinder selbst. Ich war in vielen solchen Schulen, wo ich ganze Reihen Kinder sah, die absolut nichts taten; und dies wird als Schulbesuch bescheinigt, und solche Kinder figurieren in der offiziellen Statistik als erzogen (educated).“¹³⁹

15.3. Proximate Effects of Machinery on the Worker

¹³⁸ Sir John Kincaid in "Rep. of Insp. of Fact. for 31st Oct., 1858," pp. 31, 32.

¹³⁹ L. Horner in "Reports, etc., for 31st Oct., 1857," pp. 17, 18.

In Scotland the manufacturers try all they can to do without the children that are obliged to attend school.

"It requires no further argument to prove that the educational clauses of the Factory Act, being held in such disfavour among mill-owners, tend in a great measure to exclude that class of children alike from the employment and the benefit of education contemplated by this Act."¹⁴⁰

¹⁴⁰ Sir J. Kincaid in "Reports, etc., 31st Oct., 1856," p. 66.

⇓ Conditions under a different Act:

Horribly grotesque does this appear in print works, which are regulated by a special Act. By that Act,

"every child, before being employed in a print work must have attended school for at least 30 days, and not less than 150 hours, during the six months immediately preceding such first day of employment, and during the continuance of its employment in the print works, it must attend for a like period of 30 days, and 150 hours during every successive period of six months ... The attendance at school must be between 8 a.m. and 6 p.m. No attendance of less than 2 1/2 hours, nor more than 5 hours on any one day, shall be reckoned as part of the 150 hours. Under ordinary circumstances the children attend school morning and afternoon for 30 days, for at least 5 hours each day, and upon the expiration of the 30 days, the statutory total of 150 hours having been attained, having, in their language, made up their book, they return to the print work, where they continue until the six months have expired, when another instalment of school attendance becomes due, and they again seek the school until the book is again made up ... Many boys having attended school for the required number of hours, when they return to school after the expiration of their six months' work in the print work, are in the same condition as when they first attended school as print-work boys, that they have lost all they gained by

¹³⁸ Sir John Kincaid in „Reports of Insp. of Fact. for 31st Oct. 1858“, p. 31, 32.

¹³⁹ Leonard Horner in „Reports etc. for 30th Apr. 1857“, p. 17, 18.

In Schottland suchen die Fabrikanten dem Schulbesuch unterworfen Kinder möglichst auszuschließen.

„Dies genügt, um die große Mißgunst der Fabrikanten gegen die Erziehungsklauseln zu beweisen.“¹⁴⁰

¹⁴⁰ Sir J. Kincaid [in] „Rep. Insp. Fact. 31st Oct. 1856“, p. 66.

Grotesk-entsetzlich erscheint dies in den Kattun- usw. Druckereien, die durch ein eigenes Fabrikgesetz geregelt sind. Nach den Bestimmungen des Gesetzes

„muß jedes Kind, bevor es in einer solchen Druckerei beschäftigt wird, Schule besucht haben für mindestens 30 Tage und nicht weniger als 150 Stunden während der 6 Monate, die dem ersten Tag seiner Beschäftigung unmittelbar vorhergehen. Während der Fortdauer seiner Beschäftigung in der Druckerei muß es Schule besuchen ebenfalls für eine Periode von 30 Tagen und 150 Stunden während jeder Wechselperiode von 6 Monaten ... Der Schulbesuch muß zwischen 8 Uhr morgens und 6 Uhr nachmittags stattfinden. Kein Besuch von weniger als 2 1/2 oder mehr als 5 Stunden an demselben Tag soll als Teil der 150 Stunden gezählt werden. Unter gewöhnlichen Umständen besuchen die Kinder die Schule vormittags und nachmittags für 30 Tage, 5 Stunden per Tag, und nach Ablauf der 30 Tage, wenn die statutenmäßige Gesamtsumme von 150 Stunden erreicht ist, wenn sie, in ihrer eignen Sprache zu reden, ihr Buch abgemacht haben, kehren sie zur Druckerei zurück, wo sie wieder 6 Monate bleiben, bis ein anderer Abschlagstermin des Schulbesuchs fällig wird, und dann bleiben sie wieder in der Schule, bis das Buch wieder abgemacht ist ... Sehr viele Jungen, welche die Schule während der vorschrittmäßigen 150 Stunden besuchen, sind bei ihrer Rückkehr aus dem sechsmonatlichen

15. Machinery and Modern Industry

their previous school attendance ... In other print works the children's attendance at school is made to depend altogether upon the exigencies of the work in the establishment. The requisite number of hours is made up each six months, by instalments consisting of from 3 to 5 hours at a time, spreading over, perhaps, the whole six months ... For instance, the attendance on one day might be from 8 to 11 a.m., on another day from 1 p.m. to 4 p.m., and the child might not appear at school again for several days, when it would attend from 3 p.m. to 6 p.m.; then it might attend for 3 or 4 days consecutively, or for a week, then it would not appear in school for 3 weeks or a month, after that upon some odd days at some odd hours when the operative who employed it chose to spare it; and thus the child was, as it were, buffeted from school to work, from work to school, until the tale of 150 hours was told."¹⁴¹

Aufenthalt in der Druckerei gradeso weit wie im Anfang ... Sie haben natürlich alles wieder verloren, was sie durch den früheren Schulbesuch gewonnen hatten. In anderen Kattundruckereien wird der Schulbesuch ganz und gar abhängig gemacht von den Geschäftsbedürfnissen der Fabrik. Die erforderliche Stundenzahl wird vollgemacht während jeder sechsmonatlichen Periode durch Abschlagszahlungen von 3 bis 5 Stunden auf einmal, die vielleicht über 6 Monate zerstreut sind. Z.B. an einem Tage wird die Schule besucht von 8 bis 11 Uhr morgens, an einem andren Tage von 1 bis 4 Uhr nachmittags, und nachdem das Kind dann wieder für eine Reihe Tage weggeblieben, kommt es plötzlich wieder von 3 bis 6 Uhr nachmittags; dann erscheint es vielleicht für 3 oder 4 Tage hintereinander, oder für eine Woche, verschwindet dann wieder für 3 Wochen oder einen ganzen Monat und kehrt zurück an einigen Abfallstagen für einige Sparstunden, wenn seine Anwender seiner zufällig nicht bedürfen; und so wird das Kind sozusagen hin und her gepufft (buffeted) von der Schule in die Fabrik, von der Fabrik in die Schule, bis die Summe der 150 Stunden abgezählt ist."¹⁴¹

¹⁴¹ A. Redgrave in "Rep. of Insp. of Fact., 31st. Oct., 1857," pp. 41–42. In those industries where the Factory Act proper (not the Print Works Act referred to in the text) has been in force for some time, the obstacles in the way of the education clauses have, in recent years, been overcome. In industries not under the Act, the views of Mr. J. Geddes, a glass manufacturer, still extensively prevail. He informed Mr. White, one of the Inquiry Commissioners: "As far as I can see, the greater amount of education which a part of the working-class has enjoyed for some years past is an evil. It is dangerous, because it makes them independent." ("Children's Empl. Comm., Fourth Report," Lond., 1865, p. 253.)

¹⁴¹ A. Redgrave in „Reports of Insp. of Fact. for 31st Oct. 1857“, p. 41–43. In den englischen Industriezweigen, wo der eigentliche Fabrikakt (nicht der zuletzt im Text angeführte Print Work's Act) seit längerer Zeit herrscht, sind die Hindernisse gegen die Erziehungsklauseln in den letzten Jahren einigermaßen überwältigt worden. In den nicht dem Farbrückgesetz unterworfenen Industrien herrschen noch sehr die Ansichten des Glasfabrikanten J. Geddes, der den Untersuchungskommissär White dahin belehrt: „Soviel ich sehn kann, ist das größte Quantum Erziehung, welches ein Teil der Arbeiterklasse seit den letzten Jahren genoß, vom Übel. Es ist gefährlich, indem es sie zu unabhängig macht.“ „Children's Empl. Commission, IV. Report“, London 1865, p. 253.)

↓ (5) Marx concludes with an important side effect of these moral outrages: the resistance of the male worker is broken.

405:3 By the excessive addition of women and children to the ranks of the workers, machinery at last breaks down the resistance which the male operatives in the manufacturing period continued to oppose to the

424:1 Durch den überwiegenden Zusatz von Kindern und Weibern zum kombinierten Arbeitspersonal bricht die Maschinerie endlich den Widerstand, den der männliche Arbeiter in der Manufaktur der Despotie des

15.3. Proximate Effects of Machinery on the Worker

despotism of capital.¹⁴²

¹⁴² “Mr. E., a manufacturer ... informed me that he employed females exclusively at his power-looms ... gives a decided preference to married females, especially those who have families at home dependent on them for support; they are attentive, docile, more so than unmarried females, and are compelled to use their utmost exertions to procure the necessities of life. Thus are the virtues, the peculiar virtues of the female character to be perverted to her injury—thus all that is most dutiful and tender in her nature is made a means of her bondage and suffering.” (Ten Hours’ Factory Bill. The Speech of Lord Ashley, March 15th, Lond., 1844, p. 20.)

Kapitals noch entgegengesetzte.¹⁴²

¹⁴² „Herr E., ein Fabrikant, unterrichtete mich, daß er ausschließlich Weiber bei seinen mechanischen Webstühlen beschäftigt; er gebe verheirateten Weibern den Vorzug, besonders solchen mit Familie zu Hause, die von ihnen für den Unterhalt abhängt; sie sind viel aufmerksamer und gelehriger als unverheiratete und zur äußersten Anstrengung ihrer Kräfte gezwungen, um die notwendigen Lebensmittel beizuschaffen. So werden die Tugenden, die eigentümlichen Tugenden des weiblichen Charakters, zu seinem Schaden verkehrt—so wird alles Sittliche und Zarte ihrer Natur zum Mittel ihrer Sklaverei und ihres Leidens gemacht.“ „Ten Hours’ Factory Bill. The Speech of Lord Ashley, 15th March“, London 1844, p. 20.)

Question 1009 *What effects did the employment of women and children have on the value of labor-power, the nature of the contract between capitalists and laborer, public health, the intellectual development of the working class, and its powers to resist the onslaughts of the capitalists?*

15.3.b. Prolongation of the Working-Day.

There is again a paradoxical effect, as in (15.3.a). Machinery, while increasing productiveness of labor (and thus shortening the time to produce use-values) produces under capitalism the most powerful means to prolong the working-day. This is a different effect than that in (15.3.a). In (15.3.a), the labor-savings referred to the decreased input of labor, while now we speak of the increased output of the product.

If machinery be the most powerful means for increasing the productiveness of labor—i.e., for shortening the working-time required in the production of a commodity, it becomes in the hands of capital the most powerful means, in those industries first invaded by it, for lengthening the working-day beyond all bounds set by human nature. It creates, on the one hand, new conditions by which capital is enabled to give free scope to this its constant tendency, and on the other hand, new motives with which to whet capital’s appetite for the labor of others.

425:1 Wenn die Maschinerie das gewaltigste Mittel ist, die Produktivität der Arbeit zu steigern, d.h. die zur Produktion einer Ware nötige Arbeitszeit zu verkürzen, wird sie als Träger des Kapitals zunächst in den unmittelbar von ihr ergriffenen Industrien zum gewaltigsten Mittel, den Arbeitstag über jede naturgemäße Schranke hinaus zu verlängern. Sie schafft einerseits neue Bedingungen, welche das Kapital befähigen, dieser seiner beständigen Tendenz die Zügel frei schießen zu lassen, andererseits neue Motive zur Wetzung seines Heißhunger nach fremder Arbeit.

↑ Machinery creates both new motives for capital and the conditions which enable it to prolong the working-day.

↓ Description of the new *motives*. (1) Machines want to be kept in motion perpetually.

406:2 In the first place, in the form of machinery, the implements of labor become au-

425:2 Zunächst verselbständigt sich in der Maschinerie die Bewegung und Werkstätigkeit.

15. Machinery and Modern Industry

tomatic, things moving and working independent of the workman. They are thenceforth an industrial *perpetuum mobile*, that would go on producing forever, did it not meet with certain natural obstructions in the weak bodies and the strong wills of its human attendants. The automaton, as capital, and because it is capital, is endowed, in the person of the capitalist, with intelligence and will; it is therefore animated by the longing to reduce to a minimum the resistance offered by that repellent yet elastic natural barrier, man.¹⁴³

¹⁴³ "Since the general introduction of machinery, human nature has been forced far beyond its average strength." (Rob. Owen: "Observations on the Effects of the Manufacturing System," 2nd Ed., London, 1817.)

This resistance is moreover lessened by the apparent lightness of machine work, and by the more pliant and docile character of the women and children employed on it.¹⁴⁴

↓ Interesting philosophical critique of the "English" way of thinking:

¹⁴⁴ The English, who have a tendency to look upon the earliest form of appearance of a thing as the cause of its existence, are in the habit of attributing the long hours of work in factories to the extensive kidnapping of children, practised by capitalists in the infancy of the factory system, on workhouses and orphanages, by means of which robbery, unresisting material for exploitation was procured. Thus, for instance, Ficiden, himself a manufacturer, says: "It is evident that the long hours of work were brought about by the circumstance of so great a number of destitute children being supplied from different parts of the country, that the masters were independent of the hands, and that having once established the custom by means of the miserable materials they had procured in this way, they could impose it on their neighbours with the greater facility." (J. Ficiden: "The Curse of the Factory System," Lond., 1836, p. I 1.) With reference to the labor of women, Saunders, the factory inspector, says in his report of 1844: "Amongst the female operatives there are some women who, for many weeks in succession, except for a few days, are employed from 6 a.m. till midnight, with less than 2 hours for meals, so that on 5 days of the

keit des Arbeitsmittels gegenüber dem Arbeiter. Es wird an und für sich ein industrielles Perpetuum mobile, das ununterbrochen fortproduzieren würde, stieße es nicht auf gewisse Naturschranken in seinen menschlichen Gehilfen: ihre Körperschwäche und ihren Eigenwillen. Als Kapital, und als solches besitzt der Automat im Kapitalisten Bewußtsein und Willen, ist es daher mit dem Trieb begeistert, die widerstrebende, aber elastische menschliche Naturschranke auf den Minimalwiderstand einzuzwängen.¹⁴³

¹⁴³ „Seit der allgemeinen Einführung von kostspieligen Maschinen ist die menschliche Natur weit über ihre durchschnittliche Kraft beansprucht worden.“ (Robert Owen, „Observations on the effects of the manufacturing system“, 2nd ed., London 1817, [p. 16].)

Dieser ist ohnehin vermindert durch die scheinbare Leichtigkeit der Arbeit an der Maschine und das füg- und biegsamere Weiber- und Kinderelement.¹⁴⁴

¹⁴⁴ Die Engländer, die gern die erste empirische Erscheinungsform einer Sache als ihren Grund betrachten, geben oft den großen herodischen Kinderraub, den das Kapital in den Anfängen des Fabriksystems an den Armen- und Waisenhäusern verübte und wodurch es sich ein ganz willenloses Menschenmaterial einverleibte, als Grund der langen Arbeitszeit in den Fabriken an. So z.B. Fielden, selbst englischer Fabrikant: „Es ist klar, daß die lange Arbeitszeit durch den Umstand herbeigeführt wurde, daß man eine so große Anzahl verlassener Kinder aus verschiedenen Teilen des Landes bekommen hat, so daß die Fabrikherren von den Arbeitern unabhängig waren und sie, nachdem sie erst einmal mit Hilfe des auf diese Weise aufgetriebenen armseligen Menschenmaterials die lange Arbeitszeit zur Gewohnheit gemacht hatten, diese auch ihren Nachbarn leichter aufzwingen konnten.“ (J. Fielden, „The Curse of the Factory System“, Lond. 1836, p. 11.) Mit Bezug auf Weiberarbeit sagt Fabrikinspektor Saunders im Fabrikbericht von 1844: „Unter den Arbeiterinnen gibt es Frauen, die hintereinander für viele Wochen, mit Ausfall nur weniger Tage, von 6 Uhr morgens bis 12 Uhr nachts beschäftigt werden, mit weniger als

15.3. Proximate Effects of Machinery on the Worker

week they have only 6 hours left out of the 24, for going to and from their homes and resting in bed.”

2 Stunden für Mahlzeiten, so daß ihnen für 5 Tage in der Woche von den 24 Tagesstunden nur 6 bleiben, um von und nach Haus zu gehn und im Bett auszuruhen.“

(2) The investment into machines wants to be recovered as quickly as possible.

407:1 The productiveness of machinery is, as we saw, inversely proportional to the value transferred by it to the product. The longer the life of the machine, the greater is the mass of the products over which the value transmitted by the machine is spread, and the less is the portion of that value added to each single commodity. The active life-time of a machine is, however, clearly dependent on the length of the working-day, or on the duration of the daily labor-process multiplied by the number of days for which the process is carried on.

426:1 Die Produktivität der Maschinerie steht, wie wir sahen, in umgekehrtem Verhältnis zur Größe des von ihr auf das Machwerk übertragenen Wertbestandteils. Je länger die Periode, worin sie funktioniert, desto größer die Produktenmasse, worüber sich der von ihr zugesetzte Wert verteilt, und desto kleiner der Wertteil, den sie der einzelnen Ware zufügt. Die aktive Lebensperiode der Maschinerie ist aber offenbar bestimmt durch die Länge des Arbeitstags oder die Dauer des täglichen Arbeitsprozesses, multipliziert mit der Anzahl Tage, worin er sich wiederholt.

407:2 The wear and tear of a machine is not exactly proportional to its working-time. And even if it were so, a machine working 16 hours daily for 7 1/2 years, covers as long a working period as, and transmits to the total product no more value than, the same machine would if it worked only 8 hours daily for 15 years. But in the first case the value of the machine would be reproduced twice as quickly as in the latter, and the capitalist would, by this use of the machine, absorb in 7 1/2 years as much surplus-value as in the second case he would in 15.

426:2 Der Maschinenverschleiß entspricht keineswegs exakt mathematisch ihrer Benutzungszeit. Und selbst dies vorausgesetzt, umfaßt eine Maschine, die während 7 1/2 Jahren täglich 16 Stunden dient, eine ebenso große Produktionsperiode und setzt dem Gesamtprodukt nicht mehr Wert zu als dieselbe Maschine, die während 15 Jahren nur 8 Stunden täglich dient. Im erstren Fall aber wäre der Maschinenwert doppelt so rasch reproduziert als im letzteren und der Kapitalist hätte vermittelst derselben in 7 1/2 Jahren so viel Mehrarbeit eingeschluckt als sonst in 15.

(3) Danger of obsolescence requires quick utilization of the machinery.

407:3 The material wear and tear of a machine is of two kinds. The one arises from use, as coins wear away by circulating, the other from non-use, as a sword rusts when left in its scabbard. The latter kind is due to the elements. The former is more or less directly proportional, the latter to a certain extent inversely proportional, to the use of the machine.¹⁴⁵

426:3 Der materielle Verschleiß der Maschine ist doppelt. Der eine entspringt aus ihrem Gebrauch, wie Geldstücke durch Zirkulation verschleifen, der andre aus ihrem Nichtgebrauch, wie ein untätig Schwert in der Scheide verrostet. Es ist dies ihr Verzehr durch die Elemente. Der Verschleiß erster Art steht mehr oder minder in direktem Verhältnis, der letztere zu gewissem Grad in umgekehrtem Verhältnis zu ihrem Gebrauch.¹⁴⁵

¹⁴⁵ “Occasion . . . injury to the delicate moving parts of metallic mechanism by inaction.” (Ure, l.c., p. 281.)

¹⁴⁵ „Der Anlaß . . . zur Schädigung der empfindlichen beweglichen Teile des metallenen Mechanismus kann im Stillstand liegen.“ (Ure, l.c.)

15. Machinery and Modern Industry

407:4/o But in addition to the material wear and tear, a machine also undergoes, what we may call a moral depreciation. It loses exchange-value, either by machines of the same sort being produced cheaper than it, or by better machines entering into competition with it.¹⁴⁶ In both cases, be the machine ever so young and full of life, its value is no longer determined by the labor actually materialised in it, but by the labor-time requisite to reproduce either it or the better machine. It has, therefore, lost value more or less. The shorter the period taken to reproduce its total value, the less is the danger of moral depreciation; and the longer the working-day, the shorter is that period. When machinery is first introduced into an industry, new methods of reproducing it more cheaply follow blow upon blow,¹⁴⁷ and so do improvements, that not only affect individual parts and details of the machine, but its entire build. It is, therefore, in the early days of the life of machinery that this special incentive to the prolongation of the working-day makes itself felt most acutely.¹⁴⁸

¹⁴⁶ The Manchester Spinner (*Times*, 26th Nov., 1862) before referred to says in relation to this subject: "It (namely, the "allowance for deterioration of machinery") is also intended to cover the loss which is constantly arising from the superseding of machines before they are worn out, by others of a new and better construction."

¹⁴⁷ "It has been estimated, roughly, that the first individual of a newly-invented machine will cost about five times as much as the construction of the second." (Babbage, l.c., p. 349.)

¹⁴⁸ "The improvements which took place not long ago in frames for making patent net were so great that a machine in good repair which had cost £1,200, sold a few years after for £60 ... improvements succeeded each other so rapidly,

p. 281.)

426:4/o Neben dem materiellen unterliegt die Maschine aber auch einem sogenannten moralischen Verschleiß. Sie verliert Tauschwert im Maße, worin entweder Maschinen derselben Konstruktion wohlfeiler reproduziert werden können oder bessere Maschinen konkurrierend neben sie treten.¹⁴⁶ In beiden Fällen ist ihr Wert, so jung und lebenskräftig sie sonst noch sein mag, nicht mehr bestimmt durch die tatsächlich in ihr selbst vergegenständlichte, sondern durch die zu ihrer eignen Reproduktion oder zur Reproduktion der besseren Maschine notwendige Arbeitszeit. Sie ist daher mehr oder minder entwertet. Je kürzer die Periode, worin ihr Gesamtwert reproduziert wird, desto geringer die Gefahr des moralischen Verschleißes, und je länger der Arbeitstag, um so kürzer jene Periode. Bei der ersten Einführung der Maschinerie in irgendeinen Produktionszweig folgen Schlag auf Schlag neue Methoden zu ihrer wohlfeilern Reproduktion¹⁴⁷ und Verbesserungen, die nicht nur einzelne Teile oder Apparate, sondern ihre ganze Konstruktion ergreifen. In ihrer ersten Lebensperiode wirkt daher dies besondere Motiv zur Verlängerung des Arbeitstags am akutesten.¹⁴⁸

¹⁴⁶ Der schon früher erwähnte „Manchester Spinner“ (*„Times“*, 26. Nov. 1862) zählt unter den Kosten der Maschinerie auf: „Er“ (nämlich der „Abzug für Verschleiß der Maschinerie“) „hat auch den Zweck, den Verlust zu decken, der fortgesetzt dadurch entsteht, daß Maschinen, bevor sie verschlissen sind, durch andre von neuer und besserer Konstruktion außer Gebrauch gesetzt werden.“

¹⁴⁷ „Man schätzt im großen, daß eine einzige Maschine nach einem neuen Modell zu konstruieren fünfmal soviel kostet als die Rekonstruktion derselben Maschine nach demselben Modell.“ (Babbage, l.c. p. 211, 212.)

¹⁴⁸ „Seit einigen Jahren sind so bedeutende und zahlreiche Verbesserungen in der Tüllfabrikation gemacht worden, daß eine gut erhaltene Maschine zum ursprünglichen Kostenpreis von 1200 Pfd.St. einige Jahre später zu 60 Pfd.St. ver-

15.3. Proximate Effects of Machinery on the Worker

that machines which had never been finished were abandoned in the hands of their makers, because new improvements had superseded their utility.” (Babbage, l. c., p. 233.) In these stormy, go-ahead times, therefore, the textile manufacturers soon extended the working-day, by means of double sets of hands, from the original 8 hours to 24.

kaufte wurde ... Die Verbesserungen folgten sich mit solcher Geschwindigkeit, daß Maschinen unvollendet in der Hand ihrer Bauer blieben, weil sie durch glücklichere Erfindungen bereits veraltet waren.“ In dieser Sturm- und Drangperiode dehnten daher die Tüllfabrikanten bald die ursprüngliche Arbeitszeit von 8 Stunden mit doppelter Mannschaft auf 24 Stunden aus. (l.c. p. 233.)

(4) A longer workday requires diminished fixed capital outlay per product:

408:1/o Given the length of the working-day, all other circumstances remaining the same, the exploitation of double the number of workmen demands, not only a doubling of that part of constant capital which is invested in machinery and buildings, but also of that part which is laid out in raw material and auxiliary substances. The lengthening of the working-day, on the other hand, allows of production on an extended scale without any alteration in the amount of capital laid out on machinery and buildings.¹⁴⁹ Not only is there, therefore, an increase of surplus-value, but the outlay necessary to obtain it diminishes. It is true that this takes place, more or less, with every lengthening of the working-day; but in the case under consideration, the change is more marked, because the capital converted into the instruments of labor preponderates to a greater degree.¹⁵⁰ The development of the factory system fixes a constantly increasing portion of the capital in a form, in which, on the one hand, its value is capable of continual self-expansion, and in which, on the other hand, it loses both use-value and exchange-value whenever it loses contact with living labor.

427:1–428:2 Unter sonst gleichbleibenden Umständen und bei gegebenem Arbeitstag erheischt Exploitation verdoppelter Arbeiteranzahl ebensoviel Verdopplung des in Maschinerie und Baulichkeiten ausgelegten Teils des konstanten Kapitals als des in Rohmaterial, Hilfsstoffen usw. ausgelegten. Mit verlängertem Arbeitstag dehnt sich die Stufenleiter der Produktion, während der in Maschinerie und Baulichkeiten ausgelegte Kapitalteil unverändert bleibt.¹⁴⁹ Nicht nur der Mehrwert wächst daher, sondern die zur Ausbeutung desselben notwendigen Auslagen nehmen ab. Zwar findet dies auch sonst mehr oder minder bei aller Verlängerung des Arbeitstags statt, fällt aber hier entscheidender ins Gewicht, weil der in Arbeitsmittel verwandelte Kapitalteil überhaupt mehr ins Gewicht fällt.¹⁵⁰ Die Entwicklung des Maschinenbetriebs bindet nämlich einen stets wachsenden Bestandteil des Kapitals in eine Form, worin es einerseits fortwährend verwertbar ist, andererseits Gebrauchswert und Tauschwert verliert, sobald sein Kontakt mit der lebendigen Arbeit unterbrochen wird. „Wenn“, belehrte Herr Ashworth, ein englischer Baumwollmagnat, den Professor Nassau W. Senior,

“When a laborer,” said Mr. Ashworth, a cotton magnate, to Professor Nassau W. Senior, “lays down his spade, he renders useless, for that period, a capital worth eighteen-pence. When one of our people leaves the mill, he renders useless a capital that has cost £100,000.”¹⁵¹

Only fancy! making “useless” for a single moment, a capital that has cost £100,000! It is, in truth, monstrous, that a single one of our people should ever leave the factory!

„wenn ein Ackersmann seinen Spaten niederlegt, macht er für diese Periode ein Kapital von 18 d. nutzlos. Wenn einer von unsren Leuten“ (d.h. den Fabrikarbeitern) „die Fabrik verläßt, macht er ein Kapital nutzlos, das 100 000 Pfd.St. gekostet hat.“¹⁵¹

Man denke nur! Ein Kapital, das 100 000 Pfd.St. gekostet hat, auch nur für einen Augenblick „nutzlos“ zu machen! Es ist in der Tat himmelschreiend, daß einer unsrer Leu-

15. Machinery and Modern Industry

The increased use of machinery, as Senior after the instruction he received from Ashworth clearly perceives, makes a constantly increasing lengthening of the working-day “desirable.”¹⁵²

¹⁴⁹ “It is self-evident, that, amid the ebbings and flowings of the markets and the alternate expansions and contractions of demand, occasions will constantly recur, in which the manufacturer may employ additional floating capital without employing additional fixed capital ... if additional quantities of raw material can be worked up without incurring an additional expense for buildings and machinery.” (R. Torrens: “On Wages and Combination.” London, 1834, p. 64.)

¹⁵⁰ This circumstance is mentioned only for the sake of completeness, for I shall not consider the rate of profit, i.e., the ratio of the surplus-value to the total capital advanced, until I come to the third book.

¹⁵¹ Senior, “Letters on the Factory Act.” London, 1837, pp. 13, 14.

Senior’s original says 100 £ instead of 100 000 £.

¹⁵² “The great proportion of fixed to circulating capital ... makes long hours of work desirable.” With the increased use of machinery, etc., “the motives to long hours of work will become greater, as the only means by which a large proportion of fixed capital can be made profitable.” (l.c., pp. 11–13.) “There are certain expenses upon a mill which go on in the same proportion whether the mill be running short or full time, as, for instance, rent rates, and taxes, insurance against fire, wages of several permanent servants, deterioration of machinery, with various other charges upon a manufacturing establishment, the proportion of which to profits increases as the production decreases.” (“Rep. of Insp. of Fact. for 31st Oct., 1862,” p. 19.)

te überhaupt jemals die Fabrik verläßt! Der wachsende Umfang der Maschinerie macht, wie der von Ashworth belehrte Senior ein- sieht, eine stets wachsende Verlängerung des Arbeitstags „wünschenswert“.¹⁵²

¹⁴⁹ „Es ist selbstverständlich, daß mit der Eb- be und Flut des Marktes und dem abwechselnden Wachsen und Schrumpfen der Nachfrage die Gelegenheiten ständig wiederkehren werden, wo der Fabrikant zusätzliches zirkulierendes Kapi- tal anwenden kann, ohne zusätzliches fixes Ka- pital zu verwenden ... wenn zusätzliche Men- gen an Rohmaterial ohne zusätzliche Ausgaben für Gebäude und Maschinerie verarbeitet werden können.“ (R. Torrens, „On Wages and Combina- tion“, Lond. 1834, p. 64.)

¹⁵⁰ Der im Text erwähnte Umstand ist nur der Vollständigkeit wegen erwähnt, da ich erst im Dritten Buch die Profitrate, d.h. das Verhältnis des Mehrwerts zum vorgeschossenen Gesamtkapi- tal, behandle.

¹⁵¹ „When a labourer“, said Mr. Ashworth, „lays down his spade, he renders useless, for that period, a capital worth 18 d. When one of our people leaves the mill, he renders useless a capi- tal that has cost 100 000 pounds.“ (Senior, „Let- ters on the Factory Act“, Lond. 1837, p. 14.)

¹⁵² „Das große Übergewicht des fixen im Ver- hältnis zum zirkulierenden Kapital ... macht lan- ge Arbeitszeit wünschenswert.“ Mit dem wach- senden Umfang der Maschinerie usw. „wird der Antrieb zur Verlängerung der Arbeitszeit stärker, da dies das einzige Mittel ist, eine große Mas- se fixen Kapitals profitabel zu machen“. (l.c. p. 11–14.) Es gibt verschiedene Auslagen bei ei- ner Fabrik, welche konstant bleiben, ob die Fa- brik mehr oder weniger Zeit arbeite, z.B. Ren- te für die Baulichkeiten, lokale und allgemeine Steuern, Feuerversicherung, Arbeitslohn für ver- schiedene permanente Arbeiter. Verschlechterung der Maschinerie nebst verschiedenen andern La- sten, deren Proportion zum Profit im selben Ver- hältnis abnimmt, wie der Umfang der Produktion zunimmt.“ („Reports of the Insp. of Fact. for 31st Oct. 1862“, p. 19.)

(5) Here is another reason why machinery prolongs the labor day: The capitalist has to hurry to take advantage of transitory extra surplus-value.

409:1 Machinery produces relative surplus- value; not only by directly depreciating the value of labor-power, and by indirectly

428:3/o Die Maschine produziert relati- ven Mehrwert, nicht nur, indem sie die Ar- beitskraft direkt entwertet und dieselbe indi-

15.3. Proximate Effects of Machinery on the Worker

cheapening the same through cheapening the commodities that enter into its reproduction, but also, when it is first introduced sporadically into an industry, by converting the labor employed by the owner of that machinery, into labor of a higher degree and greater efficacy, by raising the social value of the article produced above its individual value, and thus enabling the capitalist to replace the value of a day's labor-power by a smaller portion of the value of a day's product.

rekt durch Verwohlfeilerung der in ihre Reproduktion eingehenden Waren verwohlfeilert, sondern auch, indem sie bei ihrer ersten sporadischen Einführung die vom Maschinenbesitzer verwandte Arbeit in potenzierte Arbeit verwandelt, den gesellschaftlichen Wert des Maschinenprodukts über seinen individuellen Wert erhöht und den Kapitalisten so befähigt, mit geringem Wertteil des Tagesprodukts den Tageswert der Arbeitskraft zu ersetzen.

Wertteil des Tagesprodukts = Teil des Wertes des Tagesprodukts.

↑ This is a summary of what Marx already says in chapter Twelve in 323:1/o.

↓ Footnote 3a to 323:1/o is a good illustration how the capitalist can replace the daily value of the labor-power with a smaller part of the value of the daily product.

During this transition period, when the use of machinery is a sort of monopoly, the profits are therefore exceptional, and the capitalist endeavours to exploit thoroughly "the sunny time of this his first love," by prolonging the working-day as much as possible. The magnitude of the profit whets his appetite for more profit.

Während dieser Übergangsperiode, worin der Maschinenbetrieb eine Art Monopol bleibt, sind daher die Gewinne außerordentlich, und der Kapitalist sucht diese „erste Zeit der jungen Liebe“ gründlichst auszunutzen durch möglichste Verlängerung des Arbeitstags. Die Größe des Gewinns wetzt den Heißhunger nach mehr Gewinn.

(6) However the mechanism generating this additional motive fizzles out again, and the dominant tendency of machinery is to lower the rate of profits, instead of raising it. This fall in the rate of profits is another reason to lengthen the workday.

409:2/o As the use of machinery becomes more general in a particular industry, the social value of the product sinks down to its individual value, and the law that surplus-value does not arise from the labor-power that has been replaced by the machinery, but from the labor-power actually employed in working with the machinery, asserts itself. Surplus-value arises from variable capital alone, and we saw that the amount of surplus-value depends on two factors, viz., the rate of surplus-value and the number of the workmen simultaneously employed. Given the length of the working-day, the rate of surplus-value is determined by the relative duration of the necessary labor and of the surplus-labor in a day. The number of the laborers simultaneously employed depends, on its side, on the ratio of the vari-

429:1/o Mit der Verallgemeinerung der Maschinerie im selben Produktionszweig sinkt der gesellschaftliche Wert des Maschinenprodukts auf seinen individuellen Wert und macht sich das Gesetz geltend, daß der Mehrwert nicht aus den Arbeitskräften entspringt, welche der Kapitalist durch die Maschine ersetzt hat, sondern umgekehrt aus den Arbeitskräften, welche er an ihr beschäftigt. Der Mehrwert entspringt nur aus dem variablen Teil des Kapitals, und wir sahen, daß die Masse des Mehrwerts durch zwei Faktoren bestimmt ist, die Rate des Mehrwerts und die Anzahl der gleichzeitig beschäftigten Arbeiter. Bei gegebener Länge des Arbeitstags wird die Rate des Mehrwerts bestimmt durch das Verhältnis, worin der Arbeitstag in notwendige Arbeit und Mehrarbeit zerfällt. Die Anzahl der

15. Machinery and Modern Industry

able to the constant capital. Now, however much the use of machinery may increase the surplus-labor at the expense of the necessary labor by heightening the productiveness of labor, it is clear that it attains this result, only by diminishing the number of workmen employed by a given amount of capital. It converts what was formerly variable capital, invested in labor-power, into machinery which, being constant capital, does not produce surplus-value. It is impossible, for instance, to squeeze as much surplus-value out of 2 as out of 24 laborers. If each of these 24 men gives only one hour of surplus-labor in 12, the 24 men give together 24 hours of surplus-labor, while 24 hours is the total labor of the two men. Hence, the application of machinery to the production of surplus-value implies a contradiction which is immanent in it, since of the two factors of the surplus-value created by a given amount of capital, one, the rate of surplus-value, cannot be increased, except by diminishing the other, the number of workmen. This contradiction comes to light, as soon as by the general employment of machinery in a given industry, the value of the machine-produced commodity regulates the value of all commodities of the same sort; and it is this contradiction, that in its turn, drives the capitalist, without his being conscious of the fact,¹⁵³ to excessive lengthening of the working-day, in order that he may compensate the decrease in the relative number of laborers exploited, by an increase not only of the relative, but of the absolute surplus-labor.

¹⁵³ Why it is, that the capitalist, and also the political economists who are imbued with his views, are unconscious of this immanent contradiction, will appear from the first part of the third book.

gleichzeitig beschäftigten Arbeiter hängt ihrerseits ab von dem Verhältnis des variablen Kapitalteils zum konstanten. Es ist nun klar, daß der Maschinenbetrieb, wie er immer durch Steigerung der Produktivkraft der Arbeit die Mehrarbeit auf Kosten der notwendigen Arbeit ausdehne, dies Resultat nur hervorbringt, indem er die Anzahl der von einem gegebenen Kapital beschäftigten Arbeiter vermindert. Er verwandelt einen Teil des Kapitals, der früher variabel war, d.h. sich in lebendige Arbeitskraft umsetzte, in Maschinerie, also in konstantes Kapital, das keinen Mehrwert produziert. Es ist unmöglich, z.B. aus zwei Arbeitern so viel Mehrwert auszupressen als aus 24. Wenn jeder der 24 Arbeiter auf 12 Stunden nur eine Stunde Mehrarbeit liefert, liefern sie zusammen 24 Stunden Mehrarbeit, während die Gesamtarbeit der zwei Arbeiter nur 24 Stunden beträgt. Es liegt also in der Anwendung der Maschinerie zur Produktion von Mehrwert ein immanenter Widerspruch, indem sie von den beiden Faktoren des Mehrwerts, den ein Kapital von gegebener Größe liefert, den einen Faktor, die Rate des Mehrwerts, nur dadurch vergrößert, daß sie den andren Faktor, die Arbeiterzahl, verkleinert. Dieser immanente Widerspruch tritt hervor, sobald mit der Verallgemeinerung der Maschinerie in einem Industriezweig der Wert der maschinenmäßig produzierten Ware zum regelnden gesellschaftlichen Wert aller Waren derselben Art wird, und es ist dieser Widerspruch, der wiederum das Kapital, ohne daß es sich dessen bewußt wäre,¹⁵³ zur gewaltsamsten Verlängerung des Arbeitstags treibt, um die Abnahme in der verhältnismäßigen Anzahl der exploitierten Arbeiter durch Zunahme nicht nur der relativen, sondern auch absoluten Mehrarbeit zu kompensieren.

¹⁵³ Warum dieser immanente Widerspruch dem einzelnen Kapitalisten und daher auch der in seinen Anschauungen befangenen politischen Ökonomie nicht zum Bewußtsein kommt, wird man aus den ersten Abschnitten des Dritten Buchs ersehen.

15.3. Proximate Effects of Machinery on the Worker

Question 1010 Give the several reasons why machinery makes it desirable for capital to prolong the working-day and introduce shiftwork. One of the reasons is the immanent contradiction in the application of machinery to the production of surplus-value. Explain.

Machinery also creates the conditions enabling capital to pursue these motives because of overpopulation in two ways: a) increase of employable workforce, b) displacement of existing laborers by machinery.

410:1/oo If, then, the capitalistic employment of machinery, on the one hand, supplies new and powerful motives to an excessive lengthening of the working-day, and radically changes, as well the methods of labor, as also the character of the social working organism, in such a manner as to break down all opposition to this tendency, on the other hand it produces, partly by opening out to the capitalist new strata of the working-class, previously inaccessible to him, partly by setting free the laborers it supplants, a surplus working population,¹⁵⁴ which is compelled to submit to the dictation of capital. Hence that remarkable phenomenon in the history of Modern Industry, that machinery sweeps away every moral and natural restriction on the length of the working-day. Hence, too, the economic paradox, that the most powerful instrument for shortening labor-time, becomes the most unfailing means for placing every moment of the laborer's time and that of his family, at the disposal of the capitalist for the purpose of expanding the value of his capital.

¹⁵⁴ It is one of the great merits of Ricardo to have seen in machinery not only the means of producing commodities, but of creating a "redundant population."

At the end, this capitalist reality is contrasted with the potential of machines already envisioned by Aristotle:

"If," dreamed Aristotle, the greatest thinker of antiquity,

"if every tool, when summoned, or even of its own accord, could do the work that befits it, just as the creations of Daedalus moved of themselves, or the tripods of Hephaestus went of their own accord to their sacred work, if the weavers' shuttles were to weave of themselves, then there would be no need either of apprentices for the master workers, or of slaves for the lords."¹⁵⁵

430:1–431:0 Wenn also die kapitalistische Anwendung der Maschinerie einerseits neue mächtige Motive zur maßlosen Verlängerung des Arbeitstags schafft und die Arbeitsweise selbst wie den Charakter des gesellschaftlichen Arbeitskörpers in einer Art umwälzt, die den Widerstand gegen diese Tendenz bricht, produziert sie andererseits, teils durch Einstellung dem Kapital früher unzugänglicher Schichten der Arbeiterklasse, teils durch Freisetzung der von der Maschine verdrängten Arbeiter, eine überflüssige Arbeiterpopulation¹⁵⁴, die sich das Gesetz vom Kapital diktieren lassen muß. Daher das merkwürdige Phänomen in der Geschichte der modernen Industrie, daß die Maschine alle sittlichen und natürlichen Schranken des Arbeitstags über den Haufen wirft. Daher das ökonomische Paradoxon, daß das gewaltigste Mittel zur Verkürzung der Arbeitszeit in das unfehlbarste Mittel umschlägt, alle Lebenszeit des Arbeiters und seiner Familie in disponible Arbeitszeit für die Verwertung des Kapitals zu verwandeln.

¹⁵⁴ Es ist eins der großen Verdienste Ricardos, die Maschinerie nicht nur als Produktionsmittel von Waren, sondern auch von „redundant population“ begriffen zu haben.

„Wenn“, träumte Aristoteles, der größte Denker des Altertums,

„wenn jedes Werkzeug auf Geheiß, oder auch voraussahnend, das ihm zukommende Werk verrichten könnte, wie des Dädalus Kunstwerke sich von selbst bewegten oder die Dreifüße des Hephästos aus eigenem Antrieb an die heilige Arbeit gingen, wenn so die Weberschiffe von selbst webten, so bedürfte es weder für den Werkmeister der Gehilfen noch für die Herrn der Sklaven.“¹⁵⁵

15. Machinery and Modern Industry

¹⁵⁵ F. Biese. "Die Philosophie des Aristoteles," Vol. 2. Berlin, 1842, p. 408.

Another example is Antipatros:

And Antipatros, a Greek poet of the time of Cicero, hailed the invention of the water-wheel for grinding corn, an invention that is the elementary form of all machinery, as the giver of freedom to female slaves, and the bringer back of the golden age.¹⁵⁶

¹⁵⁶ I give below the translation of this poem by Stolberg, because it brings into relief, quite in the spirit of former quotations referring to division of labor, the antithesis between the views of the ancients and the moderns.

^{156 ctd} "Spare the hand that grinds the corn,
Oh, miller girls, and softly sleep.
Let Chanticleer announce the morn in vain!
Deo has commanded the work of the girls to
be done by the Nymphs,
and now they skip lightly over the wheels,
so that the shaken axles revolve with their
spokes
and pull round the load of the revolving
stones.
Let us live the life of our fathers, and let us
rest from work
and enjoy the gifts that the Goddess sends us."

^{156 ctd} "Gedichte aus dem Griechischen übersetzt von Christian Graf zu Stolberg", Hamburg 1782.)

Back to capitalism.

Oh! those heathens! They understood, as the learned Bastiat, and before him the still wiser MacCulloch have discovered, nothing of Political Economy and Christianity. They did not, for example, comprehend that machinery is the surest means of lengthening the working-day. They perhaps excused the slavery of one on the ground that it was a means to the full development of another. But to preach slavery of the masses, in order that a few crude and half-educated parvenus, might become "eminent spinners," "extensive sausage-makers," and "influential shoe-

¹⁵⁵ F. Biese, „Die Philosophie des Aristoteles“, Zeiter Band, Berlin 1842, p. 408.

Und Antipatros, ein griechischer Dichter aus der Zeit des Cicero, begrüßte die Erfindung der Wassermühle zum Mahlen des Getreides, diese Elementarform aller produktiven Maschinerie, als Befreierin der Sklavinnen und Herstellerin des goldenen Zeitalters!¹⁵⁶

¹⁵⁶ Ich gebe hier die Stolbergsche Übersetzung des Gedichts, weil es ganz so wie die früheren Zitate über Teilung der Arbeit den Gegensatz der antiken Anschauung zur modernen charakterisiert.

^{156 ctd} „Schonet der mahlenden Hand, o Mül-
rinnen, und schlafet
Sanft! es verkünde der Hahn euch den Morgen
umsonst!
Däo hat die Arbeit der Mädchen den Nym-
phen befohlen,
Und itzt hüpfen sie leicht über die Räder da-
hin,
Daß die erschütterten Achsen mit ihren Spei-
chen sich wälzen,
Und im Kreise die Last drehen des wälzenden
Steins.
Laßt uns Leben das Leben der Väter, und laßt
uns der Gaben
Arbeitslos uns freuen, welche die Göttin uns
schenkt.“

^{156 ctd} „Gedichte aus dem Griechischen über-
setzt von Christian Graf zu Stolberg“, Hamburg
1782.)

„Die Heiden, ja die Heiden!“ Sie begriffen, wie der gescheite Bastiat entdeckt hat, und schon vor ihm der noch klügere MacCulloch, nichts von politischer Ökonomie und Christentum. Sie begriffen u.a. nicht, daß die Maschine das probateste Mittel zur Verlängerung des Arbeitstags ist. Sie entschuldig-
ten etwa die Sklaverei des einen als Mittel zur vollen menschlichen Entwicklung des andren. Aber Sklaverei der Massen predigen, um einige rohe oder halbgebildete Parvenüs zu „eminent spinners“, „extensive sausage makers“ und „influential shoe black

15.3. Proximate Effects of Machinery on the Worker

black dealers,” to do this, they lacked the bump of Christianity.

dealers“ zu machen, dazu fehlte ihnen das spezifisch christliche Organ.

↑ Interesting contrast between necessary and unnecessary slavery.

Question 1011 Compare the thought of Greek philosophers about division of labor (quoted in the last chapter, “division of labor and manufacture,”) and machinery (quoted in this chapter) with capitalistic practice.

15.3.c. Intensification of Labor

This subsection begins with an interesting nutshell-summary of chapter Ten:

412:1 The immoderate lengthening of the working-day, produced by machinery in the hands of capital, leads to a reaction on the part of society, the very sources of whose life are menaced; and, thence, to a normal working-day whose length is fixed by law.

431:1 Die maßlose Verlängerung des Arbeitstags, welche die Maschinerie in der Hand des Kapitals produziert, führt, wie wir sahen, später eine Reaktion der in ihrer Lebenswurzel bedrohten Gesellschaft herbei und damit einen gesetzlich beschränkten Normalarbeitstag.

↓ Only after the length of the working-day was limited did labor turn from an extensive to an intensive magnitude.

Thenceforth a phenomenon that we have already met with, namely, the intensification of labor, develops into great importance. Our analysis of absolute surplus-value had reference primarily to the extension or duration of the labor, its intensity being assumed as given. We now proceed to consider the substitution of a more intensified labor for labor of more extensive duration, and the degree of the former.

Auf Grundlage des letzteren entwickelt sich ein Phänomen, das uns schon früher begegnete, zu entscheidender Wichtigkeit—nämlich die Intensifikation der Arbeit. Bei der Analyse des absoluten Mehrwerts handelte es sich zunächst um die extensive Größe der Arbeit, während der Grad ihrer Intensität als gegeben vorausgesetzt war. Wir haben jetzt den Umschlag der extensiven Größe in intensive oder Gradgröße zu betrachten.

Question 1012 Discuss the dialectics between length and intensity of the working-day.

↓ As machinery progresses technologically, speed and intensity of the labor process increase.

412:2/o It is self-evident, that in proportion as the use of machinery spreads, and the experience of a special class of workmen habituated to machinery accumulates, the rapidity and intensity of labor increase as a natural consequence. Thus in England, during half a century, lengthening of the working-day went hand in hand with increasing intensity of factory labor.

431:2/oo Es ist selbstverständlich, daß mit dem Fortschritt des Maschinenwesens und der gehäuften Erfahrung einer eignen Klasse von Maschinenarbeitern die Geschwindigkeit und damit die Intensität der Arbeit naturwüchsig zunehmen. So geht in England während eines halben Jahrhunderts die Verlängerung des Arbeitstags Hand in Hand mit der wachsenden Intensität der Fabrikarbeit.

↓ However the intensification of labor has its limits.

Nevertheless the reader will clearly see, that where we have labor, not carried on by fits

Indes begreift man, daß bei einer Arbeit, wo es sich nicht um vorübergehende Par-

15. Machinery and Modern Industry

and starts, but repeated day after day with unvarying uniformity, a nodal point must inevitably be reached, where extension of the working-day and intensity of the labor mutually exclude one another, in such a way that lengthening of the working-day becomes compatible only with a lower degree of intensity, and a higher degree of intensity, only with a shortening of the working-day. So soon as the gradually surging revolt of the working-class compelled Parliament to shorten compulsorily the hours of labor, and to begin by imposing a normal working-day on factories proper, so soon consequently as an increased production of surplus-value by the prolongation of the working-day was once for all put a stop to, from that moment capital threw itself with all its might and full awareness into the production of relative surplus-value, by hastening on the further improvement of machinery.

↑ With full awareness! ↓ After the limitation of the working-day, relative surplus-value changes its nature. Now relative surplus-value is generated no longer only by increases in productivity, but also by increases in intensity.

At the same time a change took place in the nature of relative surplus-value. Generally speaking, the mode of producing relative surplus-value consists in raising the productive power of the workman, so as to enable him to produce more in a given time with the same expenditure of labor. Labor-time continues to transmit as before the same value to the total product, but this unchanged amount of exchange-value is spread over more use-value; hence the value of each individual commodity sinks.

↑ This is how relative surplus-value has been generated until now. ↓ But after the limitation of the working-day relative surplus-value is generated in a different way:

Otherwise, however, so soon as the compulsory shortening of the hours of labor, alongside with the immense impetus it gives to the development of productive power and to economy in the means of production, imposes on the workman increased expenditure of labor in a given time, heightened tension of labor-power, and closer filling up

oxysmen handelt, sondern um tagaus, tagein wiederholte, regelmäßige Gleichförmigkeit, ein Knotenpunkt eintreten muß, wo Ausdehnung des Arbeitstags und Intensität der Arbeit einander ausschließen, so daß die Verlängerung des Arbeitstags nur mit schwächerem Intensitätsgrad der Arbeit und umgekehrt ein erhöhter Intensitätsgrad nur mit Verkürzung des Arbeitstags verträglich bleibt. Sobald die allmählich anschwellende Empörung der Arbeiterklasse den Staat zwang, die Arbeitszeit gewaltsam zu verkürzen und zunächst der eigentlichen Fabrik einen Normalarbeitstag zu diktieren, von diesem Augenblick also, wo gesteigerte Produktion von Mehrwert durch Verlängerung des Arbeitstags ein für allemal abgeschnitten war, warf sich das Kapital mit aller Macht und vollem Bewußtsein auf die Produktion von relativem Mehrwert durch beschleunigte Entwicklung des Maschinensystems.

Gleichzeitig tritt eine Änderung in dem Charakter des relativen Mehrwerts ein. Im allgemeinen besteht die Produktionsmethode des relativen Mehrwerts darin, durch gesteigerte Produktivkraft der Arbeit den Arbeiter zu befähigen, mit derselben Arbeitsausgabe in derselben Zeit mehr zu produzieren. Dieselbe Arbeitszeit setzt nach wie vor dem Gesamtprodukt denselben Wert zu, obgleich dieser unveränderte Tauschwert sich jetzt in mehr Gebrauchswerten darstellt und daher der Wert der einzelnen Ware sinkt.

Anders jedoch, sobald die gewaltsame Verkürzung des Arbeitstags mit dem ungeheuren Anstoß, den sie der Entwicklung der Produktivkraft und der Ökonomisierung der Produktionsbedingungen gibt, zugleich vergrößerte Arbeitsausgabe in derselben Zeit, erhöhte Anspannung der Arbeitskraft, dichtere Ausfüllung der Poren der Arbeitszeit,

15.3. Proximate Effects of Machinery on the Worker

of the pores of the working-day, i.e., condensation of labor to a degree that is attainable only within the limits of the shortened working-day.

↑ Increases in productivity were accompanied by other efficiency measures: better economizing of constant capital and intensification of labor. The intensity of labor reached a degree which would have been unsustainable with the previous longer workday. I.e., the nodal point from 412:2/o was reached where “extension of the working-day and intensity of the labor mutually exclude one another.” ↓ From this point on, the more intense labor is recognized as labor producing more value.

This condensation of a greater mass of labor into a given period thenceforward counts for what it really is, a greater quantity of labor. In addition to a measure of its extension, i.e., duration, labor now acquires a measure of its intensity or of the degree of its condensation or density.¹⁵⁷ The denser hour of the ten hours’ working-day contains more labor, i.e., expended labor-power, than the more porous hour of the twelve hours’ working-day. The product therefore of one of the former hours has as much or more value than has the product of 1 1/5 of the latter hours.

↑ Since every hour of labor produces now more value, the necessary labor is produced in a shorter time, even if the value of labor-power remains constant. ↓ This effect takes place in addition to the other effect, that higher productivity lowers the value of the labor-power.

Apart from the increased yield of relative surplus-value through the heightened productiveness of labor, the same mass of value is now produced for the capitalist say by 3 1/3 hours of surplus-labor, and 6 2/3 hours of necessary labor, as was previously produced by four hours of surplus-labor and eight hours of necessary labor.

↑ In this example, the value of labor-power remains constant, but due to intensification of labor, this value is produced in a shorter time.

↓ Footnote 157 discusses the differences in intensity which arise spontaneously, not as a consequence of catching-up after the limitation of the workday? Marx makes two points: (1) these differences are compensated by other minor circumstances. (2) these differences in intensity do not result in more or less value per hour unless intensity gets to high that it requires a shortening of the labor-day.

¹⁵⁷ There are, of course, always differences, in the intensities of the labor in various industries. But these differences are, as Adam Smith has shown, compensated to a partial extent by minor circumstances, peculiar to each sort of labor. Labor-time, as a measure of value, is not, however, affected in this case, except in so far as

d.h. Kondensation der Arbeit dem Arbeiter zu einem Grad aufzwingt, der nur innerhalb des verkürzten Arbeitstags erreichbar ist.

Diese Zusammenpressung einer größeren Masse Arbeit in eine gegebene Zeitperiode zählt jetzt als was sie ist, als größtes Arbeitsquantum. Neben das Maß der Arbeitszeit als „ausgedehnter Größe“ tritt jetzt das Maß ihres Verdichtungsgrads.¹⁵⁷ Die intensivere Stunde des zehnstündigen Arbeitstags enthält jetzt so viel oder mehr Arbeit, d.h. verausgabte Arbeitskraft, als die porösere Stunde des zwölfstündigen Arbeitstags. Ihr Produkt hat daher so viel oder mehr Wert als das der poröseren 1 1/5 Stunden.

Abgesehn von der Erhöhung des relativen Mehrwerts durch die gesteigerte Produktivkraft der Arbeit, liefern jetzt z.B. 3 1/3 Stunden Mehrarbeit auf 6 2/3 Stunden notwendiger Arbeit dem Kapitalisten dieselbe Wertmasse wie vorher 4 Stunden Mehrarbeit auf 8 Stunden notwendiger Arbeit.

¹⁵⁷ Es finden natürlich überhaupt Unterschiede in der Intensität der Arbeiten verschiedener Produktionszweige statt. Diese kompensieren sich, wie schon A. Smith gezeigt hat, zum Teil durch jeder Arbeitsart eigne Nebenumstände. Einwirkung auf die Arbeitszeit als Wertmaß findet aber auch hier nur statt, soweit intensive und

15. Machinery and Modern Industry

the duration of labor, and the degree of its intensity, are two antithetical and mutually exclusive expressions for one and the same quantity of labor.

↓ The rule that the worker has to be at the workplace for 10 hours a day is easy to enforce. It is much less easy to force him or her to work at some elevated intensity. How is this done?

413:1 We now come to the question: How is the labor intensified?

413:2–414:1 The first effect of shortening the working-day results from the self-evident law, that the efficiency of labor-power is in an inverse ratio to the duration of its expenditure. Hence, within certain limits what is lost by shortening the duration is gained by the increasing tension of labor-power. That the workman moreover really does expend more labor-power, is ensured by the mode in which the capitalist pays him.¹⁵⁸ In those industries, such as potteries, where machinery plays little or no part, the introduction of the Factory Acts has strikingly shown that the mere shortening of the working-day increases to a wonderful degree the regularity, uniformity, order, continuity, and energy of the labor.¹⁵⁹ It seemed, however, doubtful whether this effect was produced in the factory proper, where the dependence of the workman on the continuous and uniform motion of the machinery had already created the strictest discipline. Hence, when in 1844 the reduction of the working-day to less than twelve hours was being debated, the masters almost unanimously declared

“that their overlookers in the different rooms took good care that the hands lost no time,” that “the extent of vigilance and attention on the part of the workmen was hardly capable of being increased,” and, therefore, that the speed of the machinery and other conditions remaining unaltered, “to expect in a well-managed factory any important result from increased attention of the workmen was an absurdity.”¹⁶⁰

¹⁵⁸ Especially by piece-work, a form we shall

extensive Größe sich als entgegengesetzte und einander ausschließende Ausdrücke desselben Arbeitsquantums darstellen.

433:1 Es fragt sich nun, wie wird die Arbeit intensiviert?

433:2–3 Die erste Wirkung des verkürzten Arbeitstags beruht auf dem selbstverständlichen Gesetz, daß die Wirkungsfähigkeit der Arbeitskraft im umgekehrten Verhältnis zu ihrer Wirkungszeit steht. Es wird daher, innerhalb gewisser Grenzen, am Grad der Kraftäußerung gewonnen, was an ihrer Dauer verlorenght. Daß der Arbeiter aber auch wirklich mehr Arbeitskraft flüssig macht, dafür sorgt das Kapital durch die Methode der Zahlung.¹⁵⁸ In Manufakturen, der Töpferei z.B., wo die Maschinerie keine oder unbedeutende Rolle spielt, hat die Einführung des Fabrikgesetzes schlagend bewiesen, daß bloße Verkürzung des Arbeitstags die Regelmäßigkeit, Gleichförmigkeit, Ordnung, Kontinuität und Energie der Arbeit wundervoll erhöht.¹⁵⁹ Diese Wirkung schien jedoch zweifelhaft in der eigentlichen Fabrik, weil die Abhängigkeit des Arbeiters von der kontinuierlichen und gleichförmigen Bewegung der Maschine hier längst die strengste Disziplin geschaffen hatte. Als daher 1844 die Herabsetzung des Arbeitstags unter 12 Stunden verhandelt ward, erklärten die Fabrikanten fast einstimmig,

„ihre Aufseher paßten in den verschiedenen Arbeitsräumen auf, daß die Hände keine Zeit verlören“, „der Grad der Wachsamkeit und Aufmerksamkeit auf seiten der Arbeiter (the extent of vigilance and attention on the part of the workmen) sei kaum steigerungsfähig“, und alle andren Umstände, wie Gang der Maschinerie usw. als gleichbleibend vorausgesetzt, „sei es daher Unsinn, in wohlgeführten Fabriken von der gesteigerten Aufmerksamkeit usw. der Arbeiter irgendein erkleckliches Resultat zu erwarten“.¹⁶⁰

¹⁵⁸ Namentlich durch den Stücklohn, eine

¹⁵⁹ See "Rep. of Insp. of Fact. for 31st October, 1865."

¹⁶⁰ Rep. of Insp. of Fact. for 1844 and the quarter ending 30th April, 1845, pp. 20–21.

↑ Would shorter hours bring an increase in intensity in mechanized industry, where the intensity was already very high, controlled by supervision and prescribed by the machinery itself? ↓ To the surprise of the capitalists, yes it did.

This assertion was contradicted by experiments. Mr. Robert Gardner reduced the hours of labor in his two large factories at Preston, on and after the 20th April, 1844, from twelve to eleven hours a day. The result of about a year's working was that

"the same amount of product for the same cost was received, and the workpeople as a whole earned in eleven hours as much wages as they did before in twelve."¹⁶¹

I pass over the experiments made in the spinning and carding rooms, because they were accompanied by an increase of 2% in the speed of the machines. But in the weaving department, where, moreover, many sorts of figured fancy articles were woven, there was not the slightest alteration in the conditions of the work. The result was:

"From 6th January to 20th April, 1844, with a twelve hours' day, average weekly wages of each hand 10 s. 1 1/2 d., from 20th April to 29th June, 1844, with day of eleven hours, average weekly wages 10 s. 3 1/2 d."¹⁶²

¹⁶¹ l.c., p. 19. Since the wages for piece-work were unaltered, the weekly wages depended on the quantity produced.

¹⁶² l.c., p. 20.

↓ Win-win situation for both workers and capitalists:

Here we have more produced in eleven hours than previously in twelve, and entirely in consequence of more steady application and economy of time by the workpeople. While they got the same wages and gained one hour of spare time, the capitalist got the same amount produced and saved the cost of coal, gas, and other such items, for one hour.

Form, die im sechsten Abschnitt entwickelt wird.

¹⁵⁹ Siehe „Reports of Insp. of Fact. for 31st Oct. 1865“.

¹⁶⁰ „Reports of Insp. of Fact. for 1844 and the quarter ending 30th April 1845“, p. 20, 21.

433:4–434:3 Diese Behauptung ward durch Experimente widerlegt. Herr R. Gardner ließ in seinen zwei großen Fabriken zu Preston vom 20. April 1844 anstatt 12 nur noch 11 Stunden per Tag arbeiten. Nach ungefähr Jahresfrist ergab sich das Resultat, daß

„dasselbe Quantum Produkt zu denselben Kosten erhalten ward, und sämtliche Arbeiter in 11 Stunden ebensoviel Arbeitslohn verdienten, wie früher in 12“.¹⁶¹

Ich übergehe hier die Experimente in den Spinn- und Kardierräumen, weil sie mit Zunahme in der Geschwindigkeit der Maschinerie (um 2%) verbunden waren. In dem Webedepartement dagegen, wo zudem sehr verschiedene Sorten leichter, figurenhaltiger Phantasieartikel gewebt wurden, fand durchaus keine Änderung in den objektiven Produktionsbedingungen statt. Das Resultat war:

„Vom 6. Januar bis 20. April 1844, mit zwölfstündigem Arbeitstag, wöchentlicher Durchschnittslohn jedes Arbeiters 10 sh. 1 1/2 d., vom 20. April bis 29. Juni 1844, mit elfstündigem Arbeitstag, wöchentlicher Durchschnittslohn 10 sh. 3 1/2 d.“¹⁶²

¹⁶¹ l.c. p. 19. Da der Stücklohn derselbe blieb, hing die Höhe des Wochenlohns vom Quantum des Produkts ab.

¹⁶² l.c. p. 20.

434:4 Es wurde hier in 11 Stunden mehr produziert als früher in 12, ausschließlich infolge größerer gleichmäßiger Ausdauer der Arbeiter und Ökonomie ihrer Zeit. Während sie denselben Lohn empfangen und 1 Stunde freie Zeit gewannen, erhielt der Kapitalist dieselbe Produktenmasse und sparte Verausgabung von Kohle, Gas usw. für eine

15. Machinery and Modern Industry

Similar experiments, and with the like success, were carried out in the mills of Messrs. Horrocks and Jacson.¹⁶³

⇓ Why did shorter hours have such a powerful effect intensifying the labor? Workers have a much better attitude.

¹⁶³ The moral element played an important part in the above experiments. The workpeople told the factory inspector: "We work with more spirit, we have the reward ever before us of getting away sooner at night, and one active and cheerful spirit pervades the whole mill, from the youngest piecer to the oldest hand, and we can greatly help each other." (l.c., p. 21.)

Stunde. Ähnliche Experimente wurden mit gleichem Erfolg in den Fabriken der Herren Horrocks und Jacson ausgeführt.¹⁶³

¹⁶³ l.c. p. 21. Das moralische Element spielte bedeutende Rolle in den oben erwähnten Experimenten. „Wir“, erklärten die Arbeiter dem Fabrikinspektor, „wir arbeiten munterer, wir denken ständig an die Belohnung, abends früher wegzukommen, und ein tatkräftiger und freudiger Geist durchdringt die ganze Fabrik, vom jüngsten Anstücker bis zum ältesten Arbeiter, und wir können einander viel bei der Arbeit helfen.“ (l.c.)

↑ But such enthusiasm can only be temporary. ⇓ In order to actualize the increases in intensity made possible by the shortening of the workday, machinery is the main factor forcing the workers to work harder. But also the wage structure is such that it elicits maximum efforts and longest hours from the workers, as will be discussed in the Piece Wage Chapter starting with .

415:2 The shortening of the hours of labor creates, to begin with, the subjective conditions for the condensation of labor, by enabling the workman to exert more strength in a given time. So soon as that shortening becomes compulsory, machinery becomes in the hands of capital the objective means, systematically employed for squeezing out more labor in a given time. This is effected in two ways: by increasing the speed of the machinery, and by giving the workman more machinery to tent.

434:5/o Sobald die Verkürzung des Arbeitstags, welche zunächst die subjektive Bedingung der Kondensation der Arbeit schafft, nämlich die Fähigkeit des Arbeiters, mehr Kraft in gegebener Zeit flüssig zu machen, zwangsgesetzlich wird, wird die Maschine in der Hand des Kapitals zum objektiven und systematisch angewandten Mittel, mehr Arbeit in derselben Zeit zu erpressen. Es geschieht dies in doppelter Weise: durch erhöhte Geschwindigkeit der Maschinen und erweiterten Umfang der von demselben Arbeiter zu überwachenden Maschinerie oder seines Arbeitsfeldes.

⇓ Improvement of the machines is both the condition enabling the capitalist to squeeze more labor out of the workers, and at the same time a result of the intensified labor.

Improved construction of the machinery is necessary, partly because without it greater pressure cannot be put on the workman, and partly because the shortened hours of labor force the capitalist to exercise the strictest watch over the cost of production. The improvements in the steam-engine have increased the piston speed, and at the same time have made it possible, by means of a greater economy of power, to drive with the same or even a smaller consumption of coal more machinery with the same engine. The improvements in the transmitting mecha-

Verbesserte Konstruktion der Maschine ist teils notwendig zur Ausübung des größten Drucks auf den Arbeiter, teils begleitet sie von selbst die Intensifikation der Arbeit, weil die Schranke des Arbeitstags den Kapitalisten zu strengstem Haushalt der Produktionskosten zwingt. Die Verbesserung der Dampfmaschine erhöht die Anzahl ihrer Kolbensschläge in einer Minute und erlaubt zugleich, durch größere Kraftersparung einen umfangreichen Mechanismus mit demselben Motor zu treiben, bei gleichbleibendem oder selbst fallendem Kohlen-

15.3. Proximate Effects of Machinery on the Worker

nism have lessened friction, and, what so strikingly distinguishes modern from the older machinery, have reduced the diameter and weight of the shafting to a constantly decreasing minimum. Finally, the improvements in the operative machines have, while reducing their size, increased their speed and efficiency, as in the modern power-loom; or, while increasing the size of their framework, have also increased the extent and number of their working parts, as in spinning-mules, or have added to the speed of these working parts by imperceptible alterations of detail, such as those which ten years ago increased the speed of the spindles in self-acting mules by one-fifth.

verzehr. Die Verbesserung des Transmissionsmechanismus vermindert die Reibung und, was die moderne Maschinerie so augenfällig vor der älteren auszeichnet, reduziert Durchmesser und Gewicht der großen und kleinen Wellenbäume auf ein stets fallendes Minimum. Die Verbesserungen der Arbeitsmaschinerie endlich vermindern bei erhöhter Geschwindigkeit und ausgedehnterer Wirkung ihren Umfang, wie beim modernen Dampfwebstuhl, oder vergrößern mit dem Rumpf Umfang und Zahl der von ihr geführten Werkzeuge, wie bei der Spinnmaschine, oder vermehren die Beweglichkeit dieser Werkzeuge durch unscheinbare Detailveränderungen, wie derartig bei der selfacting mule in der Mitte der fünfziger Jahre die Geschwindigkeit der Spindeln um 1/5 gesteigert wurde.

↑ Improvement of machinery made it faster and easier to handle. ↓ All this had amazing effects on productivity:

415:2–416:1 The reduction of the working-day to 12 hours dates in England from 1832. In 1836 a manufacturer stated:

“The labor now undergone in the factories is much greater than it used to be ... compared with thirty or forty years ago ... owing to the greater attention and activity required by the greatly increased speed which is given to the machinery.”¹⁶⁴

¹⁶⁴ John Fielden, l.c., p. 32.

In the year 1844, Lord Ashley, now Lord Shaftesbury, made in the House of Commons the following statements, supported by documentary evidence:

“The labor performed by those engaged in the processes of manufacture, is three times as great as in the beginning of such operations. Machinery has executed, no doubt, the work that would demand the sinews of millions of men; but it has also prodigiously multiplied the labor of those who are governed by its fearful movements ... In 1815, the labor of following a pair of mules spinning cotton of No. 40—reckoning 12 hours to the working-day—involved a necessity of walking 8 miles. In 1832, the distance travelled in following a pair of mules, spinning cotton yarn of the same

435:1–2 Die Verkürzung des Arbeitstags auf 12 Stunden datiert in England von 1832. Schon 1836 erklärte ein englischer Fabrikant:

„Verglichen mit früher ist die Arbeit, die in den Fabriken zu verrichten, sehr gewachsen, infolge der größten Aufmerksamkeit und Tätigkeit, welche die bedeutend vermehrte Geschwindigkeit der Maschinerie vom Arbeiter erheischt.“¹⁶⁴

¹⁶⁴ John Fielden, l.c. p. 32.

435:3–436:0 Im Jahr 1844 machte Lord Ashley, jetzt Graf Shaftesbury, folgende dokumentarisch belegte Aufstellungen im Hause der Gemeinen:

„Die Arbeit der in den Fabrikprozessen Beschäftigten ist jetzt dreimal so groß, als bei der Einführung solcher Operationen. Die Maschinerie hat zweifelsohne ein Werk verrichtet, welches die Sehnen und Muskeln von Millionen Menschen ersetzt, aber sie hat auch erstaunlich (prodigiously) die Arbeit der durch ihre furchtbare Bewegung beherrschten Menschen vermehrt ... Die Arbeit, einem Paar Mules während 12 Stunden auf und ab zu folgen, zum Spinnen von Garn Nr. 40, schloß im Jahre 1815 das Durchlaufen einer Distanz von 8 Meilen ein. Im Jahre 1832 betrug die im Ge-

15. Machinery and Modern Industry

number, was 20 miles, and frequently more. In 1825 the spinner put up daily, on each of these mules, 820 stretches, making a total of 1,640 stretches in the course of the day. In 1832, the spinner put up on each mule 2,200 stretches, making a total of 4,400. In 1844, 2,400 stretches, making a total of 4,800; and in some cases the amount of labor required is even still greater ... I have another document sent to me in 1842, stating that the labor is progressively increasing—increasing not only because the distance to be travelled is greater, but because the quantity of goods produced is multiplied, while the hands are fewer in proportion than before; and, moreover, because an inferior species of cotton is now often spun, which it is more difficult to work ... In the carding-room there has also been a great increase of labor. One person there does the work formerly divided between two. In the weaving-room, where a vast number of persons are employed, and principally females ... the labor has increased within the last few years fully 10 per cent., owing to the increased speed of the machinery in spinning. In 1838, the number of hanks spun per week was 18,000, in 1843 it amounted to 21,000. In 1819, the number of picks in power-loom-weaving per minute was 60—in 1842 it was 140, showing a vast increase of labor.”¹⁶⁵

folge eines Mulepaars, zum Spinnen derselben Nummer, während 12 Stunden zu durchreisende Distanz 20 Meilen und oft mehr. Im Jahre 1825 hatte der Spinner während 12 Stunden 820 Auszüge an jeder Mule zu machen, was eine Gesamtsumme von 1640 für 12 Stunden ergab. Im Jahre 1832 hatte der Spinner während seines zwölfstündigen Arbeitstags an jeder Mule 2200 Auszüge zu machen, zusammen 4400, im Jahre 1844 an jeder Mule 2400, zusammen 4800; und in einigen Fällen ist die erheischte Arbeitsmasse (amount of labour) noch größer ... Ich habe hier ein andres Dokument von 1842 in der Hand, worin nachgewiesen wird, daß die Arbeit progressiv zunimmt, nicht nur, weil eine größere Entfernung zu durchreisen ist, sondern weil die Quantität der produzierten Waren sich vermehrt, während die Händezahl proportionell abnimmt; und ferner, weil nun oft schlechtere Baumwolle gesponnen wird, die mehr Arbeit erfordert ... Im Kardierraum hat auch große Zunahme der Arbeit stattgefunden. Eine Person tut jetzt die Arbeit, die früher zwischen zwei verteilt war ... In der Weberei, worin eine große Anzahl Personen, meist weiblichen Geschlechts, beschäftigt ist, ist die Arbeit während der letzten Jahre um volle 10% gewachsen, infolge der vermehrten Geschwindigkeit der Maschinerie. Im Jahre 1838 war die Zahl der hanks, die wöchentlich gesponnen wurde, 18 000, im Jahre 1843 belief sie sich auf 21 000. Im Jahr 1819 war die Zahl der picks beim Dampfwebstuhl 60 per Minute, im Jahre 1842 betrug sie 140, was einen großen Zuwachs von Arbeit anzeigt.“¹⁶⁵

¹⁶⁵ Lord Ashley, l.c., pp. 6–9, *passim*.

¹⁶⁵ Lord Ashley, l.c. p. 6–9 *passim*.

⇓ The 12-hour act resulted in such remarkable increase in intensity, that the capitalists, and even Factory Inspector Horner, thought that the 10-hour day would not be able to bring additional improvements.

In the face of this remarkable intensity of labor which had already been reached in 1844 under the Twelve Hours' Act, there appeared to be a justification for the assertion made at that time by the English manufacturers, that any further progress in that direction was impossible, and therefore that every further reduction of the hours of labor meant a lessened production. The apparent correctness of their reasons will be

436:1–2 Angesichts dieser merkwürdigen Intensität, welche die Arbeit unter der Herrschaft des Zwölfstundengesetzes bereits 1844 erreicht hatte, schien damals die Erklärung der englischen Fabrikanten berechtigt, jeder weitere Fortschritt in dieser Richtung sei unmöglich, daher jede weitere Abnahme der Arbeitszeit identisch mit Abnahme der Produktion. Die scheinbare Richtigkeit ihres Rasonnements wird am

15.3. Proximate Effects of Machinery on the Worker

best shown by the following contemporary statement by Leonard Horner, the factory inspector, their ever watchful censor.

“Now, as the quantity produced must, in the main, be regulated by the speed of the machinery, it must be the interest of the mill-owner to drive it at the utmost rate of speed consistent with these following conditions, viz., the preservation of the machinery from too rapid deterioration; the preservation of the quality of the article manufactured; and the capability of the workman to follow the motion without a greater exertion than he can sustain for a constancy. One of the most important problems, therefore, which the owner of a factory has to solve is to find out the maximum speed at which he can run, with a due regard to the above conditions. It frequently happens that he finds he has gone too fast, that breakages and bad work more than counterbalance the increased speed, and that he is obliged to slacken his pace. I therefore concluded, that as an active and intelligent mill-owner would find out the safe maximum, it would not be possible to produce as much in eleven hours as in twelve. I further assumed that the operative paid by piecework, would exert himself to the utmost consistent with the power of continuing at the same rate.”¹⁶⁶

¹⁶⁶ Rep. of Insp. of Fact. for Quarter ending 30th September, 1844, and from 1st October, 1844, to 30th April, 1845, p. 20.

Horner, therefore, came to the conclusion, despite the experiments of Gardner and others, that a reduction of the working-hours below twelve would necessarily diminish production.¹⁶⁷ He himself, ten years later, cites his opinion of 1845 in proof of how much he under-estimated in that year the elasticity of machinery, and of man’s labor-power, both of which are simultaneously stretched to an extreme by the compulsory shortening of the working-day.

¹⁶⁷ I.c., p. 22.

⇓ After introduction of the ten-hour day, it turned out that, despite these pessimistic forecasts, a further intensification was possible:

417:2–3 We now come to the period that follows the introduction of the Ten Hours’ Act in 1847 into the English cotton,

besten bewiesen durch folgende gleichzeitige Äußerung ihres rastlosen Zensors, des Fabrikinspektors Leonard Horner:

„Da die produzierte Quantität hauptsächlich geregelt wird durch die Geschwindigkeit der Maschinerie, muß es das Interesse des Fabrikanten sein, sie mit dem äußersten Geschwindigkeitsgrad zu treiben, der mit folgenden Bedingungen vereinbar ist: Bewahrung der Maschinerie vor zu raschem Verderb, Erhaltung der Qualität des fabrizierten Artikels, und Fähigkeit des Arbeiters, der Bewegung zu folgen ohne größere Anstrengung, als er kontinuierlich leisten kann. Es ereignet sich oft, daß der Fabrikant in seiner Hast die Bewegung zu sehr beschleunigt. Brüche und schlechtes Machwerk wiegen dann die Geschwindigkeit mehr als auf, und er ist gezwungen, den Gang der Maschinerie zu mäßigen. Da ein aktiver und einsichtsvoller Fabrikant das erreichbare Maximum ausfindet, schloß ich, daß es unmöglich ist, in 11 Stunden so viel zu produzieren als in 12. Ich nahm außerdem an, daß der per Stücklohn bezahlte Arbeiter sich aufs äußerste austrenkt, soweit er denselben Arbeitsgrad kontinuierlich aushalten kann.“¹⁶⁶

¹⁶⁶ „Reports of Insp. of Fact. to 30th April 1845“, p. 20.

436:3/o Horner schloß daher, trotz der Experimente von Gardner usw., daß eine weitere Herabsetzung des Arbeitstages unter 12 Stunden die Quantität des Produkts vermindern müsse.¹⁶⁷ Er selbst zitiert 10 Jahre später sein Bedenken von 1845 zum Beweis, wie wenig er damals noch die Elastizität der Maschinerie und der menschlichen Arbeitskraft begriff, die beide gleichmäßig durch die zwangsweise Verkürzung des Arbeitstags aufs höchste gespannt werden.

¹⁶⁷ I.c. p. 22.

437:1–2 Kommen wir nun zur Periode nach 1847, seit Einführung des Zehnstundengesetzes in die englischen Baumwoll-,

15. Machinery and Modern Industry

woollen, silk, and flax mills.

“The speed of the spindles has increased upon throstles 500, and upon mules 1,000 revolutions a minute, i.e., the speed of the throstle spindle, which in 1839 was 4,500 times a minute, is now (1862) 5,000; and of the mule spindle, that was 5,000, is now 6,000 times a minute, amounting in the former case to one-tenth, and in the second case to one-fifth additional increase.”¹⁶⁸

¹⁶⁸ “Rep. of Insp. of Fact. for 31st October, 1862,” p. 62.

James Nasmyth, the eminent civil engineer of Patricroft, near Manchester, explained in a letter to Leonard Horner, written in 1852, the nature of the improvements in the steam-engine that had been made between the years 1848 and 1852. After remarking that the horse-power of steam-engines, being always estimated in the official returns according to the power of similar engines in 1828,¹⁶⁹ is only nominal, and can serve only as an index of their real power, he goes on to say:

“I am confident that from the same weight of steam-engine machinery, we are now obtaining at least 50 per cent. more duty or work performed on the average, and that in many cases the identical steam-engines which in the days of the restricted speed of 220 feet per minute, yielded 50 horsepower, are now yielding upwards of 100 ...” “The modern steam-engine of 100 horse-power is capable of being driven at a much greater force than formerly, arising from improvements in its construction, the capacity and construction of the boilers, etc. ...” “Although the same number of hands are employed in proportion to the horse-power as at former periods, there are fewer hands employed in proportion to the machinery.”¹⁷⁰

“In the year 1850, the factories of the United Kingdom employed 134,217 nominal horse-power to give motion to 25,638,716 spindles and 301,445 looms. The number of spindles and looms in 1856 was respectively

Woll-, Seiden- und Flachsfabriken.

„Die Geschwindigkeit der Spindeln ist auf Throstles um 500, auf Mules um 1000 Drehungen in einer Minute gewachsen, d.h. die Geschwindigkeit der Throstlespindel, die 1839 4500 Drehungen in einer Minute zählte, beträgt nun“ (1862) „5000, und die der Mulespindel, die 5000 zählte, beträgt jetzt 6000 in der Minute; dies beläuft sich im ersten Fall auf 1/10 und im zweiten auf 1/6 zusätzlicher Geschwindigkeit.“¹⁶⁸

¹⁶⁸ „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 62.

437:3–438:2 Jas. Nasmyth, der berühmte Zivilingenieur von Patricroft, bei Manchester, setzte 1852 in einem Brief an Leonard Horner die von 1848–1852 gemachten Verbesserungen in der Dampfmaschine auseinander. Nachdem er bemerkt, daß die Dampfpferdekraft, in der offiziellen Fabrikstatistik fortwährend geschätzt nach ihrer Wirkung im Jahr 1828,¹⁶⁹ nur noch nominell ist und nur als Index der wirklichen Kraft dienen kann, sagt er u.a.:

„Es unterliegt keinem Zweifel, daß Dampfmaschine von demselben Gewicht, oft dieselben identischen Maschinen, an denen nur die modernen Verbeßrungen angebracht sind, im Durchschnitt 50% mehr Werk als früher verrichten und daß in vielen Fällen dieselben identischen Dampfmaschinen, die in den Tagen der beschränkten Geschwindigkeit von 220 Fuß per Minute 50 Pferdekraft lieferten, heute, mit vermindertem Kohlenkonsum, über 100 liefern ... Die moderne Dampfmaschine von derselben nominellen Pferdekraft wird mit größerer Gewalt als früher getrieben, infolge der Verbeßrungen in ihrer Konstruktion, vermindertem Umfang und Bau der Dampfkessel usw. ... Obgleich daher dieselbe Händezahl wie früher im Verhältnis zur nominellen Pferdekraft beschäftigt wird, werden weniger Hände verwandt im Verhältnis zur Arbeitsmaschine.“¹⁷⁰

Im Jahre 1850 verwandten die Fabriken des Vereinigten Königreichs 134 217 nominelle Pferdekraft zur Bewegung von 25 638 716 Spindeln und 301 445 Webstühlen. Im Jahr 1856 betrug die Zahl der Spindeln und Webstühle

15.3. Proximate Effects of Machinery on the Worker

33,503,580 of the former, and 369,205 of the latter, which, reckoning the force of the nominal horse-power required to be the same as in 1850, would require a force equal to 175,000 horses, but the actual power given in the return for 1856 is 161,435, less by above 10,000 horses than, calculating upon the basis of the return of 1850, the factories ought to have required in 1856.”¹⁷¹

“The facts thus brought out by the Return (of 1856) appear to be that the factory system is increasing rapidly; that although the same number of hands are employed in proportion to the horse-power as at former periods, there are fewer hands employed in proportion to the machinery; that the steam-engine is enabled to drive an increased weight of machinery by economy of force and other methods, and that an increased quantity of work can be turned off by improvements in machinery, and in methods of manufacture, by increase of speed of the machinery, and by a variety of other causes.”¹⁷² “The great improvements made in machines of every kind have raised their productive power very much. Without any doubt, the shortening of the hours of labor ... gave the impulse to these improvements. The latter, combined with the more intense strain on the workman, have had the effect, that at least as much is produced in the shortened (by two hours or one-sixth) working-day as was previously produced during the longer one.”¹⁷³

¹⁶⁹ This was altered in the “Parliamentary Return” of 1862. In it the actual horse-power of the modern steam engines and water wheels appears in place of the nominal. The doubling spindles, too, are no longer included in the spinning spindles (as was the case in the “Returns” of 1839, 1850, and 1856); further, in the case of woollen mills, the number of “gigs” is added, a distinction made between jute and hemp mills on the one hand and flax mills on the other, and finally stocking-weaving is for the first time inserted in the report.

¹⁷⁰ “Rep. of Insp. of Fact. for 31st October, 1856,” pp. 13–14, 20 and 1852, p. 23.

¹⁷¹ I.c., pp. 14–15.

¹⁷² I.c., p. 20.

¹⁷³ “Reports, etc., for 31st October, 1858,”

respektive 33 503 580 und 369 205. Wäre die erheischte Pferdekraft dieselbe geblieben wie 1850, so waren 1856: 175 000 Pferdekraft nötig. Sie betrug aber nach dem offiziellen Ausweis nur 161 435, also über 10 000 Pferdekraft weniger, als wenn man nach der Basis von 1850 rechnet.¹⁷¹

„Die durch den letzten Return von 1856“ (offizielle Statistik) „festgestellten Tatsachen sind, daß das Fabrikssystem reißend rasch um sich greift, die Zahl der Hände im Verhältnis zur Maschinerie abgenommen hat, die Dampfmaschine durch Ökonomie der Kraft und andre Methoden ein größeres Maschinengewicht treibt und ein vermehrtes Quantum Machwerk erzielt wird infolge verbesserter Arbeitsmaschinen, veränderter Methoden der Fabrikation, erhöhter Geschwindigkeit der Maschinerie und vieler anderer Ursachen.“¹⁷² „Die großen in Maschinen jeder Art eingeführten Verbesserungen haben deren Produktivkraft sehr gesteigert. Ohne allen Zweifel gab die Verkürzung des Arbeitstags ... den Stachel zu diesen Verbesserungen. Letztere und die intensivere Anstrengung des Arbeiters bewirkten, daß wenigstens ebensoviel Machwerk in dem“ (um zwei Stunden oder 1/6) „verkürzten Arbeitstag als früher während des längeren geliefert wird.“¹⁷³

¹⁶⁹ Dies hat sich geändert mit dem „Parliamentary Return“ von 1862. Hier tritt die wirkliche Dampfperdekraft der modernen Dampfmaschinen und Wasserräder an die Stelle der nominellen (s. Note 109a, S. 352). Auch sind die Dublierspindeln nicht mehr zusammengeworfen mit den eigentlichen Spinnspindeln (wie in den „Returns“ von 1839, 1850 und 1856); ferner ist für die Wollfabriken die Zahl der „gigs“ hinzugefügt, Scheidung eingeführt zwischen Jute- und Hanffabriken einerseits, Flachsfabriken andererseits, endlich zum ersten Mal die Strumpfwirkelei in den Bericht aufgenommen.

15. Machinery and Modern Industry

p. 10. Compare "Reports, etc., for 30th April, 1860," p. 30, sqq.

⇓ This intensification of labor increased profits and therefore the growth rate of the industry:

418:3 One fact is sufficient to show how greatly the wealth of the manufacturers increased along with the more intense exploitation of labor-power. From 1838 to 1850, the average proportional increase in English cotton and other factories was 32%, while from 1850 to 1856 it amounted to 86%.

418:4/o But however great the progress of English industry had been during the 8 years from 1848 to 1856 under the influence of a working-day of 10 hours, it was far surpassed during the next period of 6 years from 1856 to 1862. In silk factories, for instance, there were in 1856, spindles 1,093,799; in 1862, 1,388,544; in 1856, looms 9,260; in 1862, 10,709. But the number of operatives was, in 1856, 56,131; in 1862, 52,429. The increase in the spindles was therefore 26.9% and in the looms 15.6%, while the number of the operatives decreased 7%. In the year 1850 there were employed in worsted mills 875,830 spindles; in 1856, 1,324,549 (increase 51.2%), and in 1862, 1,289,172 (decrease 2.7%). But if we deduct the doubling spindles that figure in the numbers for 1856, but not in those for 1862, it will be found that after 1856 the number of spindles remained nearly stationary. On the other hand, after 1850, the speed of the spindles and looms was in many cases doubled. The number of power-loom in worsted mills was, in 1850, 32,617; in 1856, 38,956; in 1862, 43,048. The number of the operatives was, in 1850, 79,737; in 1856, 87,794; in 1862, 86,063; included in these, however, the children under 14 years of age were, in 1850, 9,956; in 1856, 11,228; in 1862, 13,178. In spite, therefore, of the greatly increased number of looms in 1862, compared with 1856, the total number of the workpeople employed decreased, and that of the children exploited

Vgl. „Reports etc. for 30th April 1860“, p. 30 sqq.

438:3 Wie die Bereicherung der Fabrikanten mit der intensiven Ausbeutung der Arbeitskraft zunahm, beweist schon der Umstand, daß das durchschnittliche Wachstum der englischen Baumwollens- usw. -Fabriken von 1838 bis 1850 pro Jahr 32, von 1850 bis 1856 dagegen 86 jährlich betrug.

438:4/o So groß in den 8 Jahren 1848 bis 1856, unter der Herrschaft des zehnstündigen Arbeitstags, der Fortschritt der englischen Industrie, wurde er wieder weit überflügelt in der folgenden sechsjährigen Periode von 1856 bis 1862. In der Seidenfabrik z.B. 1856: Spindeln 1093 799, 1862: 1388 544; 1856: Webstühle 9260 und 1862: 10 709. Dagegen 1856: Arbeiteranzahl 56 137 und 1862: 52 429. Dies ergibt Zunahme der Spindelzahl 26,9% und der Webstühle 15,6% mit gleichzeitiger Abnahme der Arbeiteranzahl um 7%. Im Jahre 1850 wurden in der Worsted-Fabrik angewandt 875 830 Spindeln, 1856: 1324 549 (Zunahme von 51,2%) und 1862: 1289 172 (Abnahme von 2,7%). Zählt man aber die Dublierspindeln ab, die in der Aufzählung für das Jahr 1856, aber nicht für 1862 figurieren, so blieb die Anzahl der Spindeln seit 1856 ziemlich stationär. Dagegen ward seit 1850 in vielen Fällen die Geschwindigkeit der Spindeln und Webstühle verdoppelt. Die Zahl der Dampfwebstühle in der Worsted-Fabrik 1850: 32 617, 1856: 38 956 und 1862: 43 048. Es waren dabei beschäftigt 1850: 79 737 Personen, 1856: 87 794 und 1862: 86 063, aber davon Kinder unter 14 Jahren 1850: 9 956, 1856: 11 228 und 1862: 13 178. Trotz sehr vermehrter Anzahl der Webstühle, 1862 verglichen mit 1856, nahm also die Gesamtzahl der beschäftigten Arbeit ab, die der exploitierten Kinder zu.¹⁷⁴

15.3. Proximate Effects of Machinery on the Worker

increased.¹⁷⁴

¹⁷⁴ "Reports of Insp. of Fact. for 31st Oct., 1862," pp. 100 and 130.

↓ Further indirect proof of the intensification are the protests of the workers themselves:

419:1–2 On the 27th April, 1863, Mr. Ferrand said in the House of Commons:

"I have been informed by delegates from 16 districts of Lancashire and Cheshire, in whose behalf I speak, that the work in the factories is, in consequence of the improvements in machinery, constantly on the increase. Instead of as formerly one person with two helps tenting two looms, one person now tents three looms without helps, and it is no uncommon thing for one person to tent four. Twelve hours' work, as is evident from the facts adduced, is now compressed into less than 10 hours. It is therefore self-evident, to what an enormous extent the toil of the factory operative has increased during the last 10 years."¹⁷⁵

¹⁷⁵ On 2 modern power-loom a weaver now makes in a week of 60 hours 26 pieces of certain quality, length, and breadth; while on the old power-loom he could make no more than 4 such pieces. The cost of weaving a piece of such cloth had already soon after 1850 fallen from 2s. 9d. to 5 1/8 d.

(addition to 2nd edition:) "Thirty years ago" (1841) "one spinner with three placers was not required to attend to more than one pair of mules with 300–324 spindles. At the present time (1871) he has to mind with the help of 5 piecers 2,200 spindles, and produces not less than seven times as much yarn as in 1841." (Alex. Redgrave, Factory Inspector, in the *Journal of Arts*, 5th January, 1872.)

↓ These productivity increases came at the cost of an intensification of labor which is injurious to the health of the workers:

420:1–2 Although, therefore, the Factory Inspectors unceasingly and with justice, commend the results of the Acts of 1844 and 1850, yet they admit that the shortening of the hours of labor has already called forth such an intensification of the labor as is injurious to the health of the workman and to his capacity for work.

"In most of the cotton, worsted, and silk mills, an exhausting state of excitement necessary

¹⁷⁴ „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 100, 103, 129, 130.

439:1–2 Am 27. April 1863 erklärte das Parlamentsmitglied Ferrand im Unterhause:

„Arbeiterdelegierte von 16 Distrikten von Lancashire und Cheshire, in deren Auftrag ich spreche, haben mir mitgeteilt, daß die Arbeit in den Fabriken infolge der Verbesserung der Maschinerie beständig wachse. Statt daß früher eine Person mit Gehilfen zwei Webstühle bediente, bedient sie jetzt drei ohne Gehilfen, und es ist gar nichts Ungewöhnliches, daß eine Person ihrer vier bedient usw. Zwölf Stunden Arbeit, wie aus den mitgeteilten Tatsachen hervorgeht, werden jetzt in weniger als 10 Arbeitsstunden gepreßt. Es ist daher selbstverständlich, in welchem ungeheuren Umfang die Mühen der Fabrikarbeiter sich seit den letzten Jahren vermehrt haben.“¹⁷⁵

¹⁷⁵ Mit dem modernen Dampfwebstuhl fabriziert ein Weber jetzt in 60 Stunden per Woche auf 2 Stühlen 26 Stück einer gewissen Art von bestimmter Länge und Breite, wovon er auf dem alten Dampfwebstuhl nur 4 fabrizieren konnte. Die Webkosten eines solchen Stücks waren schon Anfang der 1850er Jahre von 2 sh. 9 d. auf 5 1/8 d. gefallen.

Zusatz zur 2. Ausgabe. „Vor 30 Jahren“ (1841) „verlangte man von einem Baumwollgarnspinner mit 3 Gehilfen nur die Überwachung eines Mulepaars mit 300 bis 324 Spindeln. Mit 5 Gehilfen hat er jetzt“ (Ende 1871) „Mules zu überwachen, deren Spindelzahl 2200 beträgt, und produziert mindestens siebenmal mehr Garn als 1841.“ (Alexander Redgrave, Fabrikinspektor, in „*Journal of the Soc. of Arts*“, Jan. 5. 1872.)

439:3–440:1 Obgleich daher die Fabrikinspektoren die günstigen Resultate der Fabrikgesetze von 1844 und 1850 unermüdlich und mit vollem Recht lobpreisen, gestehn sie doch, daß die Verkürzung des Arbeitstags bereits eine die Gesundheit der Arbeiter, also die Arbeitskraft selbst zerstörende Intensität der Arbeit hervorgerufen habe.

„In den meisten Baumwoll-, Worsted- und Seidenfabriken scheint der erschöpfende Zu-

15. Machinery and Modern Industry

to enable the workers satisfactorily to mind the machinery, the motion of which has been greatly accelerated within the last few years, seems to me not unlikely to be one of the causes of that excess of mortality from lung disease, which Dr. Greenhow has pointed out in his recent report on this subject.”¹⁷⁶

¹⁷⁶ “Rep. of Insp. of Fact. for 31st Oct., 1861,” pp. 25, 26.

↓ The next step must therefore be a renewed reduction of working hours.

There cannot be the slightest doubt that the tendency that urges capital, so soon as a prolongation of the hours of labor is once for all forbidden, to compensate itself, by a systematic heightening of the intensity of labor, and to convert every improvement in machinery into a more perfect means of exhausting the workman, must soon lead to a state of things in which a reduction of the hours of labor will again be inevitable.¹⁷⁷ On the other hand, the rapid advance of English industry between 1848 and the present time, under the influence of a day of 10 hours, surpasses the advance made between 1833 and 1847, when the day was 12 hours long, by far more than the latter surpasses the advance made during the half century after the first introduction of the factory system, when the working-day was without limits.¹⁷⁸

¹⁷⁷ The agitation for a working-day of 8 hours has now (1867) begun in Lancashire among the factory operatives.

¹⁷⁸ The following few figures indicate the increase in the “factories” of the United Kingdom since 1848: See the Blue books “Statistical Abstract of the United Kingdom,” Nos. 8 and 13, Lond., 1861 and 1866. In Lancashire the number of mills increased only 4 per cent. between 1839 and 1850; 19 per cent. between 1850 and 1856; and 33 per cent. between 1856 and 1862; while the persons employed in them during each of the above periods of 11 years increased absolutely, but diminished relatively. (See “Rep. of Insp. of Fact., for 31st Oct., 1862,” p. 63.) The cotton trade preponderates in Lancashire. We may form an idea of the stupendous nature of the cotton trade in that district when we consider that, of the gross number of textile factories in

stand von Aufregung, nötig für die Arbeit an der Maschinerie, deren Bewegung in den letzten Jahren so außerordentlich beschleunigt worden ist, eine der Ursachen des Überschusses der Sterblichkeit an Lungenkrankheiten, den Dr. Greenhow in seinem jüngsten bewundernswerten Bericht nachgewiesen hat.“¹⁷⁶

¹⁷⁶ „Reports of Insp. of Fact. for 31st Oct. 1861“, p. 25, 26.

440:2 Es unterliegt nicht dem geringsten Zweifel, daß die Tendenz des Kapitals, sobald ihm Verlängerung des Arbeitstags ein für allemal durch das Gesetz abgeschnitten ist, sich durch systematische Steigerung des Intensitätsgrads der Arbeit gütlich zu tun und jede Verbeßrung der Maschinerie in ein Mittel zu größerer Aussaugung der Arbeitskraft zu verkehren, bald wieder zu einem Wendepunkt treiben muß, wo abermalige Abnahme der Arbeitsstunden unvermeidlich wird.¹⁷⁷ Andererseits überflügelt der Sturm marsch der englischen Industrie von 1848 bis zur Gegenwart, d.h. während der Periode des zehnstündigen Arbeitstags, noch weit mehr die Zeit von 1833 bis 1837, d.h. die Periode des zwölfstündigen Arbeitstags, als letztere das halbe Jahrhundert seit Einführung des Fabriksystems, d.h. die Periode des unbeschränkten Arbeitstags.¹⁷⁸

¹⁷⁷ Die Achtstundenagitation hat jetzt (1867) in Lancashire unter den Fabrikarbeitern begonnen.

¹⁷⁸ Folgende wenige Zahlen zeigen den Fortschritt der eigentlichen „Factories“ im U[nited] Kingd[om] seit 1848: (see Table ??) (Sich die Blaubücher: „Statistical Abstract for the U. Kingd.“, Nr. 8 und Nr. 13, Lond. 1861 und 1866.) In Lancashire vermehrten sich die Fabriken zwischen 1839 und 1850 nur um 4%, zwischen 1850 und 1856 um 19%, zwischen 1856 und 1862 um 33%, während in beiden elfjährigen Perioden die Zahl der beschäftigten Personen absolut zunahm, relativ fiel. Cf. „Reports of Fact. for 31st Oct. 1862“, p. 63. In Lancashire herrscht die Baumwollfabrik vor. Welchen proportionellen Raum sie aber in der Fabrikation von Garn und Gewebe überhaupt einnimmt, sieht man daraus, daß auf sie allein von allen derartigen Fa-

the United Kingdom, it absorbs 45.2 per cent., of the spindles 83.3 per cent., of the power-loom 81.4 per cent., of the mechanical horse-power 72.6 per cent., and of the total number of persons employed 58.2 per cent. (l.c., pp. 62–63.)

briken in England, Wales, Schottland und Irland 45,2% fallen, von allen Spindeln 83,3%, von allen Dampfwebstühlen 81,4%, von aller sie bewegenden Dampfpferdekraft 72,6% und von der Gesamtzahl der beschäftigten Personen 58,2%. (l.c. p. 62, 73.)

15.4. The Factory

Questions about Section 4:

Question 1013 *In the capitalistic factory the division of labor has proceeded to the point where the very components of the labor process are separated. Discuss this statement.*

↓ The first paragraph gives a brief orientation where we are in the course of the analysis.

420:4/o At the commencement of this chapter we considered that which we may call the body of the factory, i.e., machinery organised into a system.

441:1 Wir betrachteten im Beginn dieses Kapitels den Leib der Fabrik, die Gliederung des Maschinensystems.

Question 1014 *Wasn't the factory already discussed in the section about the machine system? What else is there to discuss?*

We then saw how machinery, by annexing the labor of women and children, augments the number of human beings who form the material for capitalistic exploitation, how it confiscates the whole of the workman's disposable time, by immoderate extension of the hours of labor, and how finally its progress, which allows of enormous increase of production in shorter and shorter periods, serves as a means of systematically getting more work done in a shorter time, or of exploiting labor-power more intensely.

Wir sahen dann, wie die Maschinerie das menschliche Exploitationsmaterial des Kapitals vermehrt durch Aneignung der Weiber- und Kinderarbeit, wie sie ganze Lebenszeit des Arbeiters konfisziert durch maßlose Ausdehnung des Arbeitstags und wie ihr Fortschritt, der ein ungeheuer wachsendes Produkt in stets kürzerer Zeit zu liefern erlaubt, endlich als systematisches Mittel dient, in jedem Zeitmoment mehr Arbeit flüssig zu machen oder die Arbeitskraft stets intensiver auszubeuten.

His own subsections 15.3.a–15.3.c

We now turn to the factory as a whole, and that in its most perfect form.

Wir wenden uns nun zum Fabrikganzen, und zwar in seiner ausgebildetsten Gestalt.

15.4.a. [Definition of the Factory]

↓ Marx begins with two different definitions of the factory by the same author:

421:1–2 Dr. Ure, the Pindar of the automatic factory, describes it, on the one hand, as

“Combined co-operation of many orders of workpeople, adult and young, in tending with assiduous skill, a system of productive machines, continuously impelled by a central

441:2–5 Dr. Ure, der Pindar der automatischen Fabrik, beschreibt sie einerseits als

„Kooperation verschiedener Klassen von Arbeitern, erwachsenen und nicht erwachsenen, die mit Gewandtheit und Fleiß ein System produktiver Maschinerie überwachen, das unun-

15. Machinery and Modern Industry

power" (the prime mover);	terbrochen durch eine Zentralkraft (den ersten Motor) in Tätigkeit gesetzt wird",
on the other hand, as	andererseits als
"a vast automaton, composed of various mechanical and intellectual organs, acting in uninterrupted concert for the production of a common object, all of them being subordinate to a self-regulated moving force."	„einen ungeheuren Automaten, zusammengesetzt aus zahllosen mechanischen und selbstbewußten Organen, die im Einverständnis und ohne Unterbrechung wirken, um einen und denselben Gegenstand zu produzieren, so daß alle diese Organe einer Bewegungskraft untergeordnet sind, die sich von selbst bewegt“.

↑ The “intellectual (*selbstbewußte*) organs” are, of course, those of the workers in the system. ↓ These two descriptions are by no means identical.

These two descriptions are far from being identical. In one, the collective laborer, or social body of labor, appears as the dominant subject, and the mechanical automaton as the object; in the other, the automaton itself is the subject, and the workmen are merely conscious organs, subordinated to the central moving-power, alongside the unconscious organs of the automaton.

442:1–2 Diese beiden Ausdrücke sind keineswegs identisch. In dem einen erscheint der kombinierte Gesamtarbeiter oder gesellschaftliche Arbeitskörper als übergreifendes Subjekt und der mechanische Automat als Objekt; in dem andren ist der Automat selbst das Subjekt, und die Arbeiter sind nur als bewußte Organe seinen bewußtlosen Organen beigeordnet und mit denselben der zentralen Bewegungskraft untergeordnet.

The discrepancy between these definitions illustrates what distinguishes the capitalistic factory from application of machinery in general.

The first description is applicable to every possible employment of machinery on a large scale, the second is characteristic of its use by capital, and therefore of the modern factory system. Ure prefers therefore, to describe the central machine, from which the motion comes, not only as an automaton, but as an autocrat.

Der erstere Ausdruck gilt von jeder möglichen Anwendung der Maschinerie im großen, der andre charakterisiert ihre kapitalistische Anwendung und daher das moderne Fabrikssystem. Ure liebt es daher auch, die Zentralmaschine, von der die Bewegung ausgeht, nicht nur als Automat, sondern als Autokrat darzustellen.

“In these spacious halls the benignant power of steam summons around him his myriads of willing menials.”¹⁷⁹

„In diesen großen Werkstätten versammelt die wohlthätige Macht des Dampfes ihre Myriaden von Untertanen um sich.“¹⁷⁹

¹⁷⁹ Ure, l.c., p. 18.

¹⁷⁹ Ure, l.c. p. 18.

Question 1015 *What distinguishes the capitalistic factory from applications of machinery in general?*

After these definitions from the literature, which show the relations between the components that make up a factory, Marx himself now discusses those components separately.

15.4.b. [Division of Labor in the Factory]

This central subdivision of section 4 discusses the specialization of the labors, the division of labor, and the organization of the laborers. However the logical structure of the subdivision is not worked out well. I think one key to understanding it is the distinction between the specialization of labor and the division of labor. The development of the mode of production

gives rise to a certain specialization of the labors that have to be performed. But given this specialization, it is still another question whether each of these specialized tasks is assigned to a different individual, or whether the same individual performs the different specialized tasks in turn. In his discussion of the division of labor, Marx certainly had in mind that there is quite a difference between the division of labor and the separation of the very elements that make up labor, such as, mental and physical, nerves and muscle. Marx spelled this out in Resultate, I should find the quote and bring it here! Machinery supersedes the former, but creates the latter. The quote does not apply directly because it talks about the social division of labor mediated by money. This disintegration of the labor process probably comes from the fact that machinery analyzes the production process objectively, but Marx never makes this connection. As I said, there is a lot in this subdivision, but we have to make the connections ourselves.

Technical basis provided by the machinery for the division of labor (division of labor from the side of machinery).

In the factory, a division of labor like in the manufactories (and the corresponding hierarchy of workers) is no longer a technical necessity (technische Basis ist aufgehoben). The different partial laborers no longer require long years to learn their skills. Instead, equalization of labors. This is potentially a great progress, as Marx wrote in Poverty of Philosophy.

In Poverty of Philosophy ([mecw]) he quotes Ure as follows: (We do not bring the whole quote, which is composed of several places from Ure with “...” in between; by the way, immediately preceding the place we bring Marx had the quote also given in footnote 182 to paragraph 423:2/o): “Aber nach dem Prinzip der *Gleichmachung* oder dem automatischen System werden die Fähigkeiten des Arbeiters nur einer angenehmen Übung unterworfen etc. ... Da seine Tätigkeit darin besteht, die Arbeit eines wohlgeordneten Mechanismus zu überwachen, kann er sie in kurzer Zeit erlernen; indem er seine Leistungen von einer Maschine auf die andere überträgt, wechselt er seine Tätigkeit und entwickelt er seine Ideen, indem er über die allgemeinen Kombinationen nachdenkt, welche aus seiner und seiner Kollegen Arbeit resultieren.” 1/2 page later, Marx says it once more in his own words: “Was die Teilung der Arbeit in der mechanischen Fabrik kennzeichnet, ist, daß sie jeden Spezialcharakter verloren hat. Aber von dem Augenblick an, wo jede besondere Entwicklung aufhört, macht sich das Bedürfnis nach Universalität, das Bestreben nach einer allseitigen Entwicklung des Individuums fühlbar. Die automatische Fabrik beseitigt die Spezialisten und den Fachidiotismus.” ([mecw]) (See also the very good quote about Fachidioten immediately before this paragraph.) Note that there is still division of labor, but there is no longer specialization! Also the last half sentence in the paragraph in CI currently under discussion, about the natural differences of age and sex, seems to describe a potential progress: Everyone can do the work that best suits his age, sex, bodily stature, etc.

422:1/o Along with the tool, the skill of the workman in handling it passes over to the machine. The capabilities of the tool are emancipated from the restraints that are inseparable from human labor-power. Thereby the technical foundation on which is based the division of labor in Manufacture, is swept away. Hence, in the place of the hierarchy of specialized workmen that characterises manufacture, there steps, in the automatic factory, a tendency to equalise

442:3 Mit dem Arbeitswerkzeug geht auch die Virtuosität in seiner Führung vom Arbeiter auf die Maschine über. Die Leistungsfähigkeit des Werkzeugs ist emanzipiert von den persönlichen Schranken menschlicher Arbeitskraft. Damit ist die technische Grundlage aufgehoben, worauf die Teilung der Arbeit in der Manufaktur beruht. An die Stelle der sie charakterisierenden Hierarchie der spezialisierten Arbeiter tritt daher in der automatischen Fabrik

15. Machinery and Modern Industry

and reduce to one and the same level every kind of work that has to be done by the minders of the machines;¹⁸⁰ in the place of the artificially produced differentiations of the detail workmen, step the natural differences of age and sex.

¹⁸⁰ Ure, l.c., p. 31. See Karl Marx, l.c., pp. 140–141.

For what kind of specialization, division of labor, is machinery the technical basis? The last sentence of the paragraph gives the answer: “Diese Teilung der Arbeit ist rein technisch.”

423:1 So far as division of labor reappears in the factory, it is primarily a distribution of the workmen among the specialized machines; and of masses of workmen, not however organised into groups, among the various departments of the factory, in each of which they work at a number of similar machines placed together; their co-operation, therefore, is only simple. The organised group, peculiar to manufacture, is replaced by the connexion between the head workman and his few assistants.

die Tendenz der Gleichmachung oder Nivellierung der Arbeiten, welche die Gehilfen der Maschinerie zu verrichten haben,¹⁸⁰ an die Stelle der künstlich erzeugten Unterschiede der Teilarbeiter treten vorwiegend die natürlichen Unterschiede des Alters und Geschlechts.

¹⁸⁰ l.c. p. 20. Vgl. Karl Marx, „Misère etc.“, p. 140, 141.

442:4/o Soweit in der automatischen Fabrik die Teilung der Arbeit wiedererscheint, ist sie zunächst Verteilung von Arbeitern unter die spezialisierten Maschinen und von Arbeitermassen, die jedoch keine gegliederten Gruppen bilden, unter die verschiedenen Departements der Fabrik, so sie an nebeneinander gereihten gleichartigen Werkzeugmaschinen arbeiten, also nur einfache Kooperation unter ihnen stattfindet. Die gegliederte Gruppe der Manufaktur ist ersetzt durch den Zusammenhang des Hauptarbeiters mit wenigen Gehilfen.

↑ The above two-entence passage—which, by the way, is a separate paragraph in French—seems to say: There is division of labor between the departments (each department operating one kind of special machines, but several copies of it), and simple co-operation within each department. ↓ Next Marx discusses the essential division (wesentliche Scheidung) of labors into three categories called forth by the machines: (a) Workers who are actually employed on the machine, (b) feeders and helpers, and (c) engineers.

The essential division is, into workmen who are actually employed on the machines (among whom are included a few who look after the engine), and into mere attendants (almost exclusively children) of these workmen. Among the attendants are reckoned more or less all “Feeders” who supply the machines with the material to be worked. In addition to these two principal classes, there is a numerically unimportant class of persons, whose occupation it is to look after the whole of the machinery and repair it from time to time; such as engineers, mechanics, joiners, etc. This is a superior class of workmen, some of them scientifically educated, others brought up to a trade; it is distinct from the factory operative class, and

Die wesentliche Scheidung ist die von Arbeitern, die wirklich an den Werkzeugmaschinen beschäftigt sind (es kommen hierzu einige Arbeiter zur Bewachung, resp. Fütterung der Bewegungsmaschine), und von bloßen Handlangern (fast ausschließlich Kinder) dieser Maschinenarbeiter. Zu den Handlangern zählen mehr oder minder alle „Feeders“ (die den Maschinen bloß Arbeitsstoff darreichen). Neben diese Hauptklassen tritt ein numerisch unbedeutendes Personal, das mit der Kontrolle der gesamten Maschinerie und ihrer beständigen Reparatur beschäftigt ist, wie Ingenieure, Mechaniker, Schreiner usw. Es ist eine höhere, teils wissenschaftlich gebildete, teils handwerksmäßige Arbeiterklasse, außerhalb des

merely aggregated to it.¹⁸¹

Kreises der Fabrikarbeiter und ihnen nur aggregiert.¹⁸¹

⇓ Interesting footnote about statistical fraud:

¹⁸¹ It looks very like intentional misleading by statistics (which misleading it would be possible to prove in detail in other cases too), when the English factory legislation excludes from its operation the class of laborers last mentioned in the text, while the parliamentary returns expressly include in the category of factory operatives, not only engineers, mechanics, etc., but also managers, salesmen, messengers, warehousemen, packers, etc., in short everybody, except the owner of the factory himself.

¹⁸¹ Es ist charakteristisch für die Absicht des statistischen Betrugs, die auch sonst noch im Detail nachweisbar wäre, wenn die englische Fabrikgesetzgebung die zuletzt im Text erwähnten Arbeiter ausdrücklich als Nicht-Fabrikarbeiter von ihrem Wirkungskreis ausschließt, andererseits die vom Parlament veröffentlichten „Returns“ ebenso ausdrücklich nicht nur Ingenieure, Mechaniker usw., sondern auch Fabrikdirigenten, Kommis, Ausläufer, Lageraufseher, Verpacker usw., kurz alle Leute, mit Ausschluß des Fabrikeigentümers selbst, in die Kategorie der Fabrikarbeiter einschließen.

This division of labor is purely technical.

Diese Teilung der Arbeit ist rein technisch.

I.e., this division of labor does not come from the social relations, not from who controls the means of production, but from the technology of the means of production themselves.

Question 1016 *Why did factory legislation exclude engineers and mechanics from the definition of factory workers, while the “returns” published by parliament included them?*

⇓ Qualification required from the worker to do machine labor (division of labor from the side of labor).

The first and second category of these workers looked at in more detail. (Third is outside the factory operative class and therefore not discussed). The first requires getting used to machinery at an early age, but does *not* require that the same workers performs the same functions all their lives. (Is this an elaboration of what had been called before: the technical foundation of which is based the division of labor in manufacture, is swept away (aufgehoben) in 422:1/o).

423:2/o To work at a machine, the workman should be taught from childhood, in order that he may learn to adapt his own movements to the uniform and unceasing motion of an automaton. When the machinery, as a whole, forms a system of manifold machines, working simultaneously and in concert, the co-operation based upon it, requires the distribution of various groups of workmen among the different kinds of machines. But the employment of machinery does away with the necessity of crystallising this distribution after the manner of the manufactories, by the permanent annexation of a particular worker to a particular function.¹⁸² Since the motion of the whole system does not proceed from the workman, but from the machinery, a change of persons can take

443:1/o Alle Arbeit an der Maschine erfordert frühzeitige Anlernung des Arbeiters, damit er seine eigne Bewegung der gleichförmig kontinuierlichen Bewegung eines Automaten anpassen lerne. Soweit die Gesamtmaschinerie selbst ein System mannigfacher, gleichzeitig wirkender und kombinierter Maschinen bildet, erfordert auch die auf ihr beruhende Kooperation eine Verteilung verschiedenartiger Arbeitergruppen unter die verschiedenartigen Maschinen. Aber der Maschinenbetrieb hebt die Notwendigkeit auf, diese Verteilung manufakturmäßig zu befestigen durch fortwährende Aneignung derselben Arbeiter an dieselbe Funktion.¹⁸² Da die Gesamtbewegung der Fabrik nicht vom Arbeiter ausgeht, sondern von der Maschine, kann fortwährender

15. Machinery and Modern Industry

place at any time without an interruption of the work. The most striking proof of this is afforded by the *relays system*, put into operation by the manufacturers during their revolt from 1848–1850. Lastly, the quickness with which machine work is learnt by young people, does away with the necessity of bringing up for exclusive employment by machinery, a special class of operatives.¹⁸³

¹⁸² Ure grants this. He says, “in case of need,” the workmen can be moved at the will of the manager from one machine to another, and he triumphantly exclaims: “Such a change is in flat contradiction with the old routine, that divides the labor, and to one workman assigns the task of fashioning the head of a needle, to another the sharpening of the point.” He had much better have asked himself, why this “old routine” is departed from in the automatic factory, only “in case of need.”

¹⁸³ When distress is very great, as, for instance, during the American Civil War, the factory operative is now and then set by the Bourgeois to do the roughest of work, such as road-making, etc. The English “ateliers nationaux” of 1862 and the following years, established for the benefit of the destitute cotton operatives, differ from the French of 1848 in this, that in the latter the workmen had to do unproductive work at the expense of the state, in the former they had to do productive municipal work to the advantage of the bourgeois, and that, too, cheaper than the regular workmen, with whom they were thus thrown into competition. “The physical appearance of the cotton operatives is unquestionably improved. This I attribute ... as to the men, to outdoor labor on public works.” (“Rep. of Insp. of Fact., 31st Oct., 1863,” p. 59.) The writer here alludes to the Preston factory operatives, who were employed on Preston Moor.

⇓ Second category is completely simple.

With regard to the work of the mere attendants, it can, to some extent, be replaced in the mill by machines,¹⁸⁴ and owing to its extreme simplicity, it allows of a rapid and constant change of the individuals burdened

Personenwechsel stattfinden ohne Unterbrechung des Arbeitsprozesses. Den schlagendsten Beweis hierzu liefert das während der englischen Fabrikantenrevolte von 1848–1850 ins Werk gesetzte Relaisystem. Die Geschwindigkeit endlich, womit die Arbeit an der Maschine im jugendlichen Alter erlernt wird, beseitigt ebenso die Notwendigkeit, eine besondere Klasse Arbeiter ausschließlich zu Maschinenarbeitern heranzuziehen.¹⁸³

¹⁸² Ure gibt dies zu. Er sagt, daß die Arbeiter „im Notfall nach dem Willen des Dirigenten von einer Maschine zur andren versetzt werden können“, und ruft triumphierend aus: „Dergleichen Wechsel steht im offenen Widerspruch mit der alten Routine, die die Arbeit teilt und dem einen Arbeiter die Aufgabe zuweist, den Kopf einer Stecknadel zu fassonieren, dem andren, ihre Spitze zu schleifen.“ Er hätte sich vielmehr fragen sollen, warum diese „alte Routine“ in der automatischen Fabrik nur im „Notfall“ verlassen wird.

¹⁸³ Wenn Not an Mann ist, wie z.B. während des Amerikanischen Bürgerkriegs, wird der Fabrikarbeiter ausnahmsweise vom Bourgeois zu den gröbsten Arbeiten, wie Straßenbau usw., verwandt. Die englischen „ateliers nationaux“ des Jahres 1862 u. folg. für die beschäftigungslosen Baumwollarbeiter unterschieden sich dadurch von den französischen von 1848, daß in diesen der Arbeiter auf Kosten des Staats unproduktive Arbeiten, in jenen zum Vorteil des Bourgeois produktive städtische Arbeiten, und zwar wohlfeiler als die regelmäßigen Arbeiter, mit denen er so in Konkurrenz geworfen ward, zu verrichten hatte. „Das körperliche Aussehen der Baumwollarbeiter ist zweifellos besser geworden. Das führe ich ..., woweit es sich um die Männer handelt, auf die Beschäftigung im Freien bei öffentlichen Arbeiten zurück.“ (Es handelt sich hier von den Preston-Fabrikarbeitern, die am „Preston Moor“ beschäftigt wurden.) „Rep. of Insp. of Fact. Oct. 1863“, p. 59.)

Die Dienste der bloßen Handlanger aber sind in der Fabrik teils durch Maschinen ersetzbar,¹⁸⁴ teils erlauben sie wegen ihrer völligen Einfachheit raschen und beständigen Wechsel der mit dieser Plackerei bela-

with this drudgery.

¹⁸⁴ An example: The various mechanical apparatus introduced since the Act of 1844 into woollen mills, for replacing the labor of children. So soon as it shall happen that the children of the manufacturers themselves have to go through a course of schooling as helpers in the mill, this almost unexplored territory of mechanics will soon make remarkable progress. "Of machinery, perhaps self-acting mules are as dangerous as any other kind. Most of the accidents from them happen to little children, from their creeping under the mules to sweep the floor whilst the mules are in motion. Several 'minders' have been fined for this offence, but without much general benefit. If machine makers would only invent a self-sweeper, by whose use the necessity for these little children to creep under the machinery might be prevented, it would be a happy addition to our protective measures." ("Reports of Insp. of Fact. for 31st Oct., 1866," p. 63.)

steten Personen.

¹⁸⁴ Beispiel: Die verschiedenen mechanischen Apparate, die zum Ersatz von Kinderarbeit seit dem Gesetz von 1844 in der Wollfabrik eingeführt wurden. Sobald die Kinder der Herren Fabrikanten selbst „ihre Schule“ als Handlanger der Fabrik durchzumachen haben, wird dies fast noch unangebaute Gebiet der Mechanik bald einen merkwürdigen Aufschwung nehmen. „Die self-acting mules sind vielleicht eine so gefährliche Maschinerie als irgendeine andere. Die meisten Unglücksfälle begegnen kleinen Kindern, und zwar infolge ihres Kriechens unter die Mules, um den Boden zu fegen, während die Mules in Bewegung sind. Verschiedne ‚mindere‘“ (Arbeiter an der Mule) „wurden“ (von den Fabrikinspektoren) „gerichtlich verfolgt und zu Geldstrafen verurteilt wegen dieses Vergehens, aber ohne irgendwelchen allgemeinen Vorteil. Wenn Maschinenmacher nur einen Selbstfeger erfinden wollten, durch dessen Gebrauch die Notwendigkeit für diese kleinen Kinder, unter die Maschinerie zu kriechen, wegfiel, so wäre das ein glücklicher Beitrag zu unsren Protektionsmaßregeln.“ „Reports of Insp. of Factories for 31st October 1866“, p. 63.)

↓ In a way a synthesis of the two above, how the division of labor is actually handled in the factory.

↓ Nevertheless in capitalism still the same kind of division of labor as in manufacture. This is a misuse, since not required because of specialization of labor. For the worker in the manufactories, it was a life-long specialty to perform one difficult function; in the factory it is the lifelong specialty to perform one and the same easy task which can be learned in a few days! This reduces value of labor-power not because of an increase in the products entering this value, but by taking away schooling from the workers. Like the separation of the unskilled from the skilled workers, this only serves to deprive a part of the working class of their education. More exploitation through relative surplus-value, but not through technical progress! The connections are not explicitly given, but from the division of labor we go now to the disintegration of the labor process dominated by machines into its components (nerves but no muscle, physical but no mental) and then the kind of organisation of the laborers going with that. Elaborate!

Note how a habit becomes a deliberate exploitation strategy.

425:1a Although then, technically speaking, the old system of division of labor is thrown overboard by machinery, it hangs on in the factory, as a traditional habit handed down from Manufacture, and is afterwards systematically re-moulded and established in a more hideous form by capital, as a means of exploiting labor-power. The life-

444:1/o Obgleich nun die Maschinerie das alte System der Teilung der Arbeit technisch über den Haufen wirft, schleppt es sich zunächst als Tradition der Manufaktur gewohnheitsmäßig in der Fabrik fort, um dann systematisch vom Kapital als Exploitationsmittel der Arbeitskraft in noch ekelhafter Form reproduziert und befestigt zu

15. Machinery and Modern Industry

long speciality of handling one and the same tool, now becomes the life-long speciality of serving one and the same machine. Machinery is put to a wrong use, with the object of transforming the workman, from his very childhood, into a part of a detail-machine.¹⁸⁵ In this way, not only are the expenses of his reproduction considerably lessened, but at the same time his helpless dependence upon the factory as a whole, and therefore upon the capitalist, is rendered complete. Here as everywhere else, we must distinguish between the increased productiveness due to the development of the social process of production, and that due to the capitalist exploitation of that process.

¹⁸⁵ So much then for Proudhon's wonderful idea: he "construes" machinery not as a synthesis of instruments of labor, but as a synthesis of detail operations for the benefit of the laborer himself.

werden. Aus der lebenslangen Spezialität, ein Teilwerkzeug zu führen, wird die lebenslange Spezialität, einer Teilmaschine zu dienen. Die Maschinerie wird mißbraucht, um den Arbeiter selbst von Kindesbeinen in den Teil einer Teilmaschine zu verwandeln.¹⁸⁵ Nicht nur werden so die zu seiner eignen Reproduktion nötigen Kosten bedeutend vermindert, sondern zugleich seine hilflose Abhängigkeit vom Fabrikganzen, also vom Kapitalisten, vollendet. Hier wie überall muß man unterscheiden zwischen der größten Produktivität, die der Entwicklung des gesellschaftlichen Produktionsprozesses, und der größten Produktivität, die seiner kapitalistischen Ausbeutung geschuldet ist.

¹⁸⁵ Man würdige daher den fabelhaften Einfall Proudhons, der die Maschinerie nicht als Synthese von Arbeitsmitteln, sondern als Synthese von Teilarbeiten für die Arbeiter selbst—„konstruiert“.

Question 1017 *Explain how the machine system does away with the technical necessity (that was present in the manufactories) to chain the workers to a special task for their whole lives. Why is this practice nevertheless continued under capitalism?*

15.4.c. [Reversal and Disintegration of the Labor Process]

Now the labor process itself, its disintegration into its very elements. Machinery reverses the relation between worker and instrument of labor:

425:1b–425:2 In handicrafts and manufacture, the workman makes use of a tool, in the factory, the machine makes use of him. There the movements of the instrument of labor proceed from him, here it is the movements of the machine that he must follow.

⇓ Parallel inversion on a systemic level:

In manufacture the workmen are parts of a living mechanism. In the factory we have a lifeless mechanism independent of the workman, who becomes its mere living appendage.

⇓ Work under these conditions becomes torture.

“The miserable routine of endless drudgery and toil in which the same mechanical process is gone through over and over again, is like the labor of Sisyphus. The burden of la-

445:1–2 In Manufaktur und Handwerk bedient sich der Arbeiter des Werkzeugs, in der Fabrik dient er der Maschine. Dort geht von ihm die Bewegung des Arbeitsmittels aus, dessen Bewegung er hier zu folgen hat.

In der Manufaktur bilden die Arbeiter Glieder eines lebendigen Mechanismus. In der Fabrik existiert ein toter Mechanismus unabhängig von ihnen, und sie werden ihm als lebendige Anhängsel einverleibt.

„Der trübselige Schlendrian einer endlosen Arbeitsqual, worin derselbe mechanische Prozeß immer wieder durchgemacht wird, gleicht der Arbeit des Sisyphus; die Last der Arbeit,

bor, like the rock, keeps ever falling back on the worn-out laborer.”¹⁸⁶

¹⁸⁶ F. Engels, *I.c.*, p. 217. Even an ordinary and optimist Free-trader, like Mr. Molinari, goes so far as to say, “Un homme s’use plus vite en surveillant, quinze heures par jour, l’évolution uniforme d’un mécanisme, qu’en exerçant, dans le même espace de temps, sa force physique. Ce travail de surveillance qui servirait peut-être d’utile gymnastique à l’intelligence, s’il n’était pas trop prolongé, détruit à la longue, par son excès, et l’intelligence, et le corps même.” (G. de Molinari: “Études Économiques.” Paris, 1846.)

425:3–426:1 At the same time that factory work exhausts the nervous system to the uttermost, it does away with the many-sided play of the muscles, and confiscates every atom of freedom, both in bodily and intellectual activity.¹⁸⁷ The lightening of the labor, even, becomes a sort of torture, since the machine does not free the laborer from work, but deprives the work of all interest.

¹⁸⁷ F. Engels, *I.c.*, p. 216.

↓ What is already true in the valorization process becomes now also true in the labor process.

Every kind of capitalist production, in so far as it is not only a labor-process, but also a process of creating surplus-value, has this in common, that it is not the workman that employs the instruments of labor, but the instruments of labor that employ the workman. But it is only in the factory system that this inversion for the first time acquires technical and palpable reality. By means of its conversion into an automaton, the instrument of labor confronts the laborer, during the labor-process, in the shape of capital, of dead labor, that dominates, and pumps dry, living labor-power.

↓ First mention of the disintegration of the production process.

The separation of the intellectual powers of production from the manual labor, and the conversion of those powers into the might of capital over labor, is, as we have already shown, finally completed by modern industry erected on the foundation of machinery.

gleich dem Felsen, fällt immer wieder auf den abgematteten Arbeiter zurück.“¹⁸⁶

¹⁸⁶ F. Engels, „Lage etc.“, p. 217. Selbst ein ganz ordinärer, optimistischer Freihändler, Herr Molinar, bemerkt: „Ein Mann verbraucht sich schneller, wenn er täglich fünfzehn Stunden die gleichförmige Bewegung eines Mechanismus überwacht, als wenn er in derselben Zeitspanne seine physische Kraft gebraucht. Diese Arbeit der Überwachung, die vielleicht als eine nützliche Gymnastik für den Geist dienen könnte, wenn sie nicht zu lange ausgedehnt würde, zerstört auf die Dauer, durch ihr Übermaß, Geist und Körper zugleich.“ (G. de Molinari, „Études Économiques“, Paris 1846, [p. 49].)

445:3–446:1 Während die Maschinenarbeit das Nervensystem aufs äußerste angreift, unterdrückt sie das vielseitige Spiel der Muskeln und konfisziert alle freie körperliche und geistige Tätigkeit.¹⁸⁷ Selbst die Erleichterung der Arbeit wird zum Mittel der Tortur, indem die Maschine nicht den Arbeiter von der Arbeit befreit, sondern seine Arbeit vom Inhalt.

¹⁸⁷ F. Engels, *I.c.*, p. 216.

↓ What is already true in the valorization process becomes now also true in the labor process.

Aller kapitalistischen Produktion, soweit sie nicht nur Arbeitsprozeß, sondern zugleich Verwertungsprozeß des Kapitals, ist es gemeinsam, daß nicht der Arbeiter die Arbeitsbedingung, sondern umgekehrt die Arbeitsbedingung den Arbeiter anwendet, aber erst mit der Maschinerie erhält diese Verkehrung technisch handgreifliche Wirklichkeit. Durch seine Verwandlung in einen Automaten tritt das Arbeitsmittel während des Arbeitsprozesses selbst dem Arbeiter als Kapital gegenüber, als tote Arbeit, welche die lebendige Arbeitskraft beherrscht und aussaugt.

↓ First mention of the disintegration of the production process.

Die Scheidung der geistigen Potenzen des Produktionsprozesses von der Handarbeit und die Verwandlung derselben in Mächte des Kapitals über die Arbeit vollendet sich, wie bereits früher angedeutet, in der auf Grundlage der Maschinerie aufgebauten

15. Machinery and Modern Industry

The special skill of each individual insignificant factory operative vanishes as an infinitesimal quantity before the science, the gigantic physical forces, and the mass of labor that are embodied in the factory mechanism and, together with that mechanism, constitute the power of the “master.” This “master,” therefore, in whose brain the machinery and his monopoly of it are inseparably united, whenever he falls out with his “hands,” contemptuously tells them:

“The factory operatives should keep in wholesome remembrance the fact that theirs is really a low species of skilled labor; and that there is none which is more easily acquired, or of its quality more amply remunerated, or which by a short training of the least expert can be more quickly, as well as abundantly, acquired ... The master’s machinery really plays a far more important part in the business of production than the labor and the skill of the operative, which six months’ education can teach, and a common laborer can learn.”¹⁸⁸

¹⁸⁸ “The Master Spinners’ and Manufacturers’ Defence Fund. Report of the Committee.” Manchester, 1854, p. 17. We shall see hereafter, that the “master” can sing quite another song, when he is threatened with the loss of his “living” automaton.

Military discipline *created* by factory work.

The technical subordination of the workman to the uniform motion of the instruments of labor, and the peculiar composition of the body of workpeople, consisting as it does of individuals of both sexes and of all ages, give rise to a barrack discipline, which is elaborated into a complete sys-

großen Industrie. Das Detailgeschick des individuellen, entleerten Maschinenarbeiters verschwindet als ein winzig Nebending vor der Wissenschaft, den ungeheuren Naturkräften und der gesellschaftlichen Massenarbeit, die im Maschinensystem verkörpert sind und mit ihm die Macht des „Meisters“ (master) bilden. Dieser Meister, in dessen Hirn die Maschinerie und sein Monopol an derselben unzertrennlich verwachsen sind, ruft daher in Kollisionsfällen den „Händen“ verächtlich zu:

„Die Fabrikarbeiter sollten in heilsamer Erinnerung halten, daß ihre Arbeit in der Tat eine sehr niedrige Sorte geschickter Arbeit ist; daß keine leichter aneignbar und in Anbetracht ihrer Qualität besser belohnt ist, daß keine durch kurze Unterweisung des mindest Erfahrenen in so kurzer Zeit und in solchem Überfluß zugeführt werden kann. Des Meisters Maschinerie spielt in der Tat eine viel wichtigere Rolle in dem Geschäfte der Produktion als die Arbeit und das Geschick des Arbeiters, die eine Erziehung von 6 Monaten lehren und jeder Bauernknecht lernen kann.“¹⁸⁸

¹⁸⁸ „The factory operatives should keep in wholesome remembrance the fact that theirs is really a low species of skilled labour; and that there is none which is more easily acquired or of its quality more amply remunerated, or which, by a short training of the least expert can be more quickly as well as abundantly acquired ... The master’s machinery really plays a far more important part in the business of production than the labour and the skill of the operative, which six months’ education can teach, and a common labourer can learn.“ (The Master Spinners’ and Manufacturers’ Defence Fund. Report of the Committee“, Manchester 1854, p. 17.) Man wird später sehen, daß der „Master“ aus einem andern Loch pfeift, sobald er mit Verlust seiner „lebendigen“ Automaten bedroht ist.

446:2–447:1 Die technische Unterordnung des Arbeiters unter den gleichförmigen Gang des Arbeitsmittels und die eigentümliche Zusammensetzung des Arbeitskörpers aus Individuen beider Geschlechter und verschiedenster Altersstufen schaffen eine kasernenmäßige Disziplin, die sich

tem in the factory, and which fully develops the before mentioned labor of overlooking, thereby dividing the workpeople into operatives and overlookers, into private soldiers and sergeants of an industrial army.

“The main difficulty [in the automatic factory] ... lay ... above all in training human beings to renounce their desultory habits of work, and to identify themselves with the unvarying regularity of the complex automaton. To devise and administer a successful code of factory discipline, suited to the necessities of factory diligence, was the Herculean enterprise, the noble achievement of Arkwright! Even at the present day, when the system is perfectly organised and its labor lightened to the utmost, it is found nearly impossible to convert persons past the age of puberty, into useful factory hands.”¹⁸⁹

¹⁸⁹ Ure, l.c., p. 15. Whoever knows the life history of Arkwright, will never dub this barber-genius “noble.” Of all the great inventors of the 18th century, he was incontestably the greatest thief of other people’s inventions and the meanest fellow.

zum vollständigen Fabrikregime ausbildet und die schon früher erwähnte Arbeit der Obergewalt, also zugleich die Teilung der Arbeiter in Handarbeiter und Arbeitsaufseher, in gemeine Industriesoldaten und Industrieunteroffiziere, völlig entwickelt.

„Die Hauptschwierigkeit in der automatischen Fabrik bestand in der notwendigen Disziplin, um die Menschen auf ihre unregelmäßigen Gewohnheiten in der Arbeit verzichten zu machen und sie zu identifizieren mit der unveränderlichen Regelmäßigkeit des großen Automaten. Aber einen den Bedürfnissen und der Geschwindigkeit des automatischen Systems entsprechenden Disziplinarkodex zu erfinden und mit Erfolg auszuführen war ein Unternehmen, des Herkules würdig, das ist das edle Werk Arkwrights! Selbst heutzutage, wo das System in seiner ganzen Vollen- dung organisiert ist, ist es fast unmöglich, unter den Arbeitern, die das Alter der Mannbarkeit zurückgelegt haben, nützliche Gehilfen für das automatische System zu finden.“¹⁸⁹

¹⁸⁹ Ure, l.c. p. 15. Wer Arkwrights Lebensgeschichte kennt, wird das Wort „edel“ diesem genialen Barbier nie an den Kopf werfen. Von allen großen Erfindern des 18. Jahrhunderts war er un- streitig der größte Dieb fremder Erfindungen und der gemeinste Kerl.

[Factory Codes: Private Autocratic Legislation]

Social regulation of the labor process takes an undemocratic form:

The factory code in which capital formulates, like a private legislator, and at his own good will, his autocracy over his workpeople, unaccompanied by that separation of powers, otherwise so much approved of by the bourgeoisie, and unaccompanied by the even more approved representative system, this code is but the capitalistic caricature of that social regulation of the labor-process which becomes requisite in co-operation on a great scale, and in the employment in common, of instruments of labor and especially of machinery.

The form of punishment is especially revealing:

The place of the slave-driver’s lash is taken by the overlooker’s book of penalties. All

447:2 Der Fabrikkodex, worin das Kapital seine Autokratie über seine Arbeiter, ohne die sonst vom Bürgertum so beliebte Teilung der Gewalten und das noch beliebtere Repräsentativsystem, privatgesetzlich und eigenherrlich formuliert, ist nur die kapitalistische Karikatur der gesellschaftlichen Regelung des Arbeitsprozesses, welche nötig wird mit der Kooperation auf großer Stufenleiter und der Anwendung gemeinsamer Arbeitsmittel, namentlich der Maschinerie.

An die Stelle der Peitsche des Sklaventreibers tritt das Strafbuch des Aufsehers. Alle

15. Machinery and Modern Industry

punishments resolve themselves of course into fines and deductions from wages, and the law-giving talent of the factory Lycurgus so arranges matters, that a violation of his laws is, if possible, more profitable to him than the keeping of them.¹⁹⁰

Footnote begins with a long quote from Engels:

¹⁹⁰ "The slavery in which the bourgeoisie has bound the proletariat, comes nowhere more plainly into daylight than in the factory system. In it all freedom comes to an end both at law and in fact. The workman must be in the factory at half past five. If he come a few minutes late, he is punished; if he come 10 minutes late, he is not allowed to enter until after breakfast, and thus loses a quarter of a day's wage. He must eat, drink and sleep at word of command . . . The despotic bell calls him from his bed, calls him from breakfast and dinner. And how does he fare in the mill? There the master is the absolute law-giver. He makes what regulations he pleases; he alters and makes additions to his code at pleasure; and if he insert the veriest nonsense, the courts say to the workman: Since you have entered into this contract voluntarily, you must now carry it out . . . These workmen are condemned to live, from their ninth year till their death, under this mental and bodily torture." (F. Engels, l.c., p. 217, sq.)

Strafen lösen sich natürlich auf in Geldstrafen und Lohnabzüge, und der gesetzgeberische Scharfsinn der Fabrik-Lykurge macht ihnen die Verletzung ihrer Gesetze womöglich noch einbringlicher als deren Befolgung.¹⁹⁰

¹⁹⁰ „Die Sklaverei, in der die Bourgeoisie das Proletariat gefesselt hält, kommt nirgends deutlicher ans Tageslicht als im Fabrikssystem. Hier hört alle Freiheit rechtlich und faktisch auf. Der Arbeiter muß morgens um halb 6 in der Fabrik sein; kommt er ein paar Minuten zu spät, so wird er gestraft, kommt er 10 Minuten zu spät, so wird er gar nicht hereingelassen, bis das Frühstück vorüber ist, und verliert einen Vierteltag am Lohn. Er muß auf Kommando essen, trinken und schlafen . . . Die despoticische Glocke ruft ihn vom Bette, ruft ihn vom Frühstück und Mittagstisch. Und wie geht es nun gar erst in der Fabrik? Hier ist der Fabrikant absoluter Gesetzgeber. Er erläßt Fabrikregulationen, wie er Lust hat; er ändert und macht Zusätze zu seinem Kodex, wie es ihm beliebt; und wenn er das tollste Zeug hineinsetzt, so sagen doch die Gerichte zum Arbeiter: Da ihr unter diesen Kontrakt euch freiwillig begeben habt, jetzt müßt ihr ihn auch befolgen . . . Diese Arbeiter sind dazu verdammt, vom neunten Jahr bis zu ihrem Tode unter der geistigen und körperlichen Fuchtel zu leben.“ (F. Engels, l.c. p. 217 sqq.)

↓ Private despotism by the capitalists supported by the court system:

What "the courts say," I will illustrate by two examples. One occurs at Sheffield at the end of 1866. In that town a workman had engaged himself for 2 years in a steel-works. In consequence of a quarrel with his employer he left the works, and declared that under no circumstances would he work for that master any more. He was prosecuted for breach of contract, and condemned to two months' imprisonment. (If the master break the contract, he can be proceeded against only in a civil action, and risks nothing but money damages.) After the workman has served his two months, the master invites him to return to the works, pursuant to the contract. Workman says: No, he has already been punished for the breach.

Was „die Gerichte sagen“, will ich an zwei Beispielen erläutern. Der eine Fall spielt in Sheffield, Ende 1866. Dort hatte sich ein Arbeiter für 2 Jahre in eine Metallfabrik verdingt. Infolge eines Zwistes mit dem Fabrikanten verließ er die Fabrik und erklärte, unter keinen Umständen mehr für ihn arbeiten zu wollen. Wurde wegen Kontraktbruchs verklagt, zu zwei Monaten Gefängnis verurteilt. (Bricht der Fabrikant den Kontrakt, so kann er nur civiliter verklagt werden und riskiert nur eine Geldbuße.) Nach Absitzen der zwei Monate stellt derselbe Fabrikant ihm Ladung zu, dem alten Kontrakt gemäß in die Fabrik zurückzukehren. Arbeiter erklärt: Nein. Den Kontraktsbruch habe er bereits abgebußt. Fabrikant verklagt

The master prosecutes again, the court condemns again, although one of the judges, Mr. Shee, publicly denounces this as a legal monstrosity, by which a man can periodically, as long as he lives, be punished over and over again for the same offence or crime. This judgment was given not by the "Great Unpaid," the provincial Dogberries, but by one of the highest courts of justice in London.—{Added in the 4th German edition.—This has now been done away with. With few exceptions, e.g., when public gas-works are involved, the worker in England is now put on an equal footing with the employer in case of breach of contract and can be sued only civilly.—F. E.} The second case occurs in Wiltshire at the end of November 1863. About 30 power-loom weavers, in the employment of one Harrup, a cloth manufacturer at Leower's Mill, Westbury Leigh, struck work because master Harrup indulged in the agreeable habit of making deductions from their wages for being late in the morning; 6d. for 2 minutes; 1s. for 3 minutes, and 1s. 6d. for ten minutes. This is at the rate of 9s. per hour, and £4 10s. 0d. per diem; while the wages of the weavers on the average of a year, never exceeded 10s. to 12s. weekly. Harrup also appointed a boy to announce the starting time by a whistle, which he often did before six o'clock in the morning: and if the hands were not all there at the moment the whistle ceased, the doors were closed, and those hands who were outside were fined: and as there was no clock on the premises, the unfortunate hands were at the mercy of the young Harrup-inspired time-keeper. The hands on strike, mothers of families as well as girls, offered to resume work if the time-keeper were replaced by a clock, and a more reasonable scale of fines were introduced. Harrup summoned 19 women and girls before the magistrates for breach of contract. To the utter indignation of all present, they were each mulcted in a fine of 6d. and 2s. 6d. for costs. Harrup was followed from the court by a crowd of people who hissed

von neuem, Gericht verurteilt von neuem, obgleich einer der Richter, Mr. Shee, dies öffentlich als juristische Ungeheuerlichkeit denunziert, wonach ein Mann sein ganzes Leben durch periodisch für dasselbe identische Vergehn, resp. Verbrechen, wieder und wieder bestraft werden könne. Dieses Urteil wurde gefällt nicht von den „Great Unpaid“, provinziellen Dogberries, sondern zu London, von einem der höchsten Gerichtshöfe. {Zur 4. Aufl.—Dies ist jetzt abgeschafft. Einige wenige Fälle ausgenommen—z.B. bei öffentlichen Gaswerken—, ist jetzt in England der Arbeiter beim Kontraktbruch dem Beschäftigten gleichgestellt und kann nur zivilrechtlich belangt werden.—F.E.}—Der zweite Fall spielt in Wiltshire, Ende November 1863. Ungefähr 30 Dampfstuhlweberrinnen, in der Beschäftigung eines gewissen Harrupp, Tuchfabrikant von Leower's Mill, Westbury Leigh, machten einen strike, weil dieser selbe Harrupp die angenehme Gewohnheit hatte, ihnen für Verspätung am Morgen Lohnabzug zu machen, und zwar 6 d. für 2 Minuten, 1 sh. für 3 Minuten und 1 sh. 6 d. für 10 Minuten. Dies macht bei 9 sh. per Stunde 4 Pfd.St. 10 sh. per Tag, während ihr Durchschnittslohn im Jahr nie über 10 bis 12 sh. wöchentlich steigt. Harrupp hat ebenfalls einen Jungen bestellt, um die Fabrikstunde zu blasen, was er selber manchmal vor 6 Uhr morgens tut, und wenn die Hände nicht grade da sind, sobald er aufhört, werden die Tore geschlossen und die draußen in Geldbuße genommen; und da keine Uhr im Gebäude, sind die unglücklichen Hände in der Gewalt des von Harrupp inspirierten jugendlichen Zeitwächters. Die im „strike“ begriffnen Hände, Familienmütter und Mädchen, erklärten, sie wollten wieder ans Werk gehn, wenn der Zeitwächter durch eine Uhr ersetzt und ein rationeller Straftarif eingeführt würde. Harrupp zitierte 19 Weiber und Mädchen vor die Magistrate wegen Kontraktsbruch. Sie wurden verurteilt zu je 6 d. Strafe und 2 sh. 6 d. Kosten, unter lauter Entrüstung des Auditoriums. Harrupp

15. Machinery and Modern Industry

him. A favourite operation with manufacturers is to punish the workpeople by deductions made from their wages on account of faults in the material worked on. This method gave rise in 1866 to a general strike in the English pottery districts. The reports of the Ch. Empl. Comm. (1863–1866), give cases where the worker not only receives no wages, but becomes, by means of his labor, and of the penal regulations, the debtor to boot, of his worthy master. The late cotton crisis also furnished edifying examples of the sagacity shown by the factory autocrats in making deductions from wages. Mr. R. Baker, the Inspector of Factories, says, “I have myself had lately to direct prosecutions against one cotton mill occupier for having in these pinching and painful times deducted 10d. a piece from some of the young workers employed by him, for the surgeon’s certificate (for which he himself had only paid 6d.), when only allowed by the law to deduct 3d., and by custom nothing at all . . . And I have been informed of another, who, in order to keep without the law, but to attain the same object, charges the poor children who work for him a shilling each, as a fee for learning them the art and mystery of cotton spinning, so soon as they are declared by the surgeon fit and proper persons for that occupation. There may therefore be undercurrent causes for such extraordinary exhibitions as strikes, not only wherever they arise, but particularly at such times as the present, which without explanation, render them inexplicable to the public understanding.” He alludes here to a strike of powerloom weavers at Darwen, June, 1863. (“Reports of Insp. of Fact. for 30 April, 1863,” pp. 50–51.) The reports always go beyond their official dates.

wurde vom Gericht weg von einer zischen- den Volksmasse begleitet.—Eine Liebling- soperation der Fabrikanten ist, die Arbeiter durch Lohnabzüge für die Fehler des ihnen gelieferten Materials zu züchtigen. Diese Methode rief 1866 allgemeinen stri- ke in den englischen Töpferdistrikten her- vor. Die Berichte der „Ch. Empl. Com- miss.“ (1863–1866) geben Fälle, wo der Ar- beiter, statt Lohn zu erhalten, durch seine Arbeit, und vermittelt des Strafrelements, noch obendrein Schuldner seines erlauch- ten „Master“ wird. Erbauliche Züge über den Lohnabzugs-Scharfsinn der Fabrikauto- kraten lieferte auch die jüngste Baumwoll- krise. „Ich hatte selbst“, sagt Fabrikinspek- tor R. Baker, „vor kurzem gerichtliche Ver- folgung wider einen Baumwollfabrikanten einzuleiten, weil er in diesen schweren und qualvollen Zeitläuften 10 d. von einigen der von ihm beschäftigten ‚jungen‘“ (mehr als dreizehnjährigen) „Arbeiter abzog für das ärztliche Alterszertifikat, das ihm nur 6 d. kostet und wofür das Gesetz nur einen Ab- zug von 3 d., das Herkommen gar keinen erlaubt . . . Ein anderer Fabrikant, um densel- ben Zweck ohne Konflikt mit dem Gesetz zu erreichen, belastet jedes der armen Kin- der, die für ihn arbeiten, mit einem Shilling als Sportel für Erlernung der Kunst und des Mysteriums, zu spinnen, sobald das ärztli- che Zeugnis sie reif für diese Beschäftigung erklärt. Es existieren also Unterströmungen, die man kennen muß, um solche außeror- dentliche Phänomene, wie strikes zu Zeiten wie die gegenwärtige“ (es handelt sich um einen strike in der Fabrik zu Darwen, Ju- ni 1863, unter den Maschinenwebern) „zu begreifen.“ „Reports of Insp. of Fact. for 30th April 1863“, p. 50, 51.) (Die Fabrikbe- richte gehn immer weiter als ihr offizielles Datum.)

[Health, Safety, Comfort at Work Place]

Work places unsafe and unhealthy:

428/00 We shall here merely allude to the material conditions under which factory labor is carried on. Every organ of sense is injured in an equal degree by artificial elevation of the temperature, by the dust-laden atmosphere, by the deafening noise, not to mention danger to life and limb among the thickly crowded machinery, which, with the regularity of the seasons, issues its list of the killed and wounded in the industrial battle.^{190a}

^{190a} The protection afforded by the Factory Acts against dangerous machinery has had a beneficial effect. "But . . . there are other sources of accident which did not exist twenty years since; one especially, viz., the increased speed of the machinery. Wheels, rollers, spindles and shuttles are now propelled at increased and increasing rates; fingers must be quicker and defter in their movements to take up the broken thread, for, if placed with hesitation or carelessness, they are sacrificed. . . A large number of accidents are caused by the eagerness of the workpeople to get through their work expeditiously. It must be remembered that it is of the highest importance to manufacturers that their machinery should be in motion, i.e., producing yams and goods. Every minute's stoppage is not only a loss of power, but of production, and the workpeople are urged by the overlookers, who are interested in the quantity of work turned off, to keep the machinery in motion, and it is no less important to those of the operatives who are paid by the weight or piece, that the machines should be kept in motion. Consequently, although it is strictly forbidden in many, nay in most factories, that machinery should be cleaned while in motion, it is nevertheless the constant practice in most, if not in all, that the workpeople do, unproved, pick out waste, wipe rollers and wheels, etc., while their frames are in motion. Thus from this cause only, 906 accidents have occurred during the six months. . . Although a great deal of cleaning is constantly going on day by day, yet Saturday is generally the day set apart for the thorough cleaning of the machinery, and a great deal of this is done while the machinery is in motion." Since cleaning is not paid for, the workpeople seek to get done with it as speedily as possible. Hence "the number of accidents which occur on Fridays, and especially on Saturdays, is much larger

448/00 Wir deuten nur hin auf die materiellen Bedingungen, unter denen die Fabrikarbeit verrichtet wird. Alle Sinnesorgane werden gleichmäßig verletzt durch die künstlich gesteigerte Temperatur, die mit Abfällen des Rohmaterials geschwängerte Atmosphäre, den betäubenden Lärm usw., abgesehen von der Lebensgefahr unter dicht gehäufte Maschinerie, die mit der Regelmäßigkeit der Jahreszeiten ihre industriellen Schlachtbulletins produziert.^{190a}

^{190a} Die Gesetze zum Schutz gegen gefährliche Maschinerie haben wohlthätig gewirkt. „Aber . . . es existieren jetzt neue Quellen von Unglücksfällen, die vor 20 Jahren nicht existiert haben, namentlich die vermehrte Geschwindigkeit der Maschinerie. Räder, Walzen, Spindeln und Webstühle werden jetzt mit vermehrter und stets noch wachsender Gewalt getrieben; die Finger müssen rascher und sichrer den gebrochenen Faden anpacken, denn wenn mit Zaudern oder Unvorsicht angelegt, sind sie geopfert . . . Eine große Anzahl Unglücksfälle wird verursacht durch den Eifer der Arbeiter, ihr Werk rasch auszuführen. Man muß sich erinnern, daß es für die Fabrikanten von der höchsten Wichtigkeit ist, ihre Maschinerie ununterbrochen in Bewegung zu halten, d.h. Garn und Geweb zu produzieren. Jeder Stillstand von einer Minute ist nicht nur ein Verlust an Triebkraft, sondern an Produktion. Die Arbeiter werden daher durch Arbeitsaufseher, interessiert in der Quantität des Machwerks, dazu gehetzt, die Maschinerie in Bewegung zu halten; und es ist dies nicht minder wichtig für Arbeiter, die nach Gewicht oder Stück gezahlt werden. Obgleich es daher in den meisten Fabriken formell verboten ist, Maschinerie während ihrer Bewegung zu reinigen, ist diese Praxis allgemein. Diese Ursache allein hat während der letzten 6 Monate 906 Unglücksfälle produziert . . . Obgleich das Reinigungsgeschäft tagaus, tagein vorgeht, ist der Sonnabend jedoch meist für gründliches Reinigen der Maschinerie festgesetzt, und das geschieht größtenteils während der Bewegung der Maschinerie . . . Es ist eine unbezahlte Operation, und die Arbeiter suchen daher so rasch als möglich damit fertig zu werden. Daher ist die Anzahl der Unglücksfälle freitags und ganz besonders samstags viel größer als an den übrigen Wochentagen. Freitags beträgt der Überschuß über die Durchschnittszahl der ersten 4 Wochen-

15. Machinery and Modern Industry

than on any other day. On the former day the excess is nearly 12 per cent. over the average number of the four first days of the week, and on the latter day the excess is 25 per cent. over the average of the preceding five days; or, if the number of working-hours on Saturday being taken into account—7 1/2 hours on Saturday as compared with 10 1/2 on other days—there is an excess of 65 per cent. on Saturdays over the average of the other five days.” (“Rep. of Insp. of Fact., 31st Oct., 1866,” pp. 9, 15, 16, 17.)

Economy of means of production, which was introduced in . . .

Economy of the social means of production, matured and forced as in a hothouse by the factory system, is turned, in the hands of capital, into systematic robbery of what is necessary for the life of the workman while he is at work, robbery of space, light, air, and of protection to his person against the dangerous and unwholesome accompaniments of the productive process, not to mention the robbery of appliances for the comfort of the workman.¹⁹¹ Is Fourier wrong when he calls factories “tempered bagnos”?¹⁹²

Announcement of *Capital III*, where?

¹⁹¹ In Part I. of Book III. I shall give an account of a recent campaign by the English manufacturers against the Clauses in the Factory Acts that protect the “hands” against dangerous machinery. For the present, let this one quotation from the official report of Leonard Horner suffice: “I have heard some mill-owners speak with inexcusable levity of some of the accidents; such, for instance, as the loss of a finger being a trifling matter. A working-man’s living and prospects depend so much upon his fingers, that any loss of them is a very serious matter to him. When I have heard such inconsiderate remarks made, I have usually put this question: Suppose you were in want of an additional workman, and two were to apply, both equally well qualified in other respects, but one had lost a thumb or a forefinger, which would you engage? There never was a hesitation as to the answer. . . .” The manufacturers have “mistaken prejudices against what they have heard represented as a pseudo-philanthropic legislation.” (“Rep. of Insp. of Fact., 31st Oct., 1855.”) These manufacturers are clever folk, and not without reason were they enthusiastic for the

tage ungefähr 12%, sonntags der Überschuß von Unglücksfällen über den Durchschnitt der vorhergehenden 5 Tage 25%; zieht man aber in Rechnung, daß der Fabriktag samstags nur 7 1/2 Stunden, an den übrigen Wochentagen 10 1/2 Stunden zählt—so steigt der Überschuß um mehr als 65%.“ „Reports of Insp. of Factories for etc. 31st October 1866“, London 1867, p. 9, 15, 16, 17.)

Die Ökonomisierung der gesellschaftlichen Produktionsmittel, erst im Fabrikssystem treibhausmäßig gereift, wird in der Hand des Kapitals zugleich zum systematischen Raub an den Lebensbedingungen des Arbeiters während der Arbeit, an Raum, Luft, Licht, und an persönlichen Schutzmitteln wider lebensgefährliche oder gesundheitswidrige Umstände des Produktionsprozesses, von Vorrichtungen zur Bequemlichkeit des Arbeiters gar nicht zu sprechen.¹⁹¹ Nennt Fourier mit Unrecht die Fabriken „gemilderte Bagnos“?¹⁹²

¹⁹¹ Im ersten Abschnitt des Dritten Buchs werde ich berichten über einen jüngster Zeit angehörigen Feldzug der englischen Fabrikanten gegen die Klauseln des Fabrikakts zum Schutz der Gliedmaßen der „Hände“ vor lebensgefährlicher Maschinerie. Hier genüge ein Zitat aus einem offiziellen Bericht des Fabrikinspektors Leonard Horner: „Ich habe Fabrikanten mit unentschuldbarer Frivolität von einigen der Unglücksfälle sprechen hören, z.B. der Verlust eines Fingers sei eine Kleinigkeit. Das Leben und die Aussichten eines Arbeiters hängen so sehr von seinen Fingern ab, daß ein solcher Verlust ein äußerst ernstes Ereignis für ihn ist. Wenn ich solch gedankenlos Geschwätz höre, stelle ich die Frage: Unterstellt, Sie brauchen einen zusätzlichen Arbeiter, und ihrer zwei meldeten sich, beide in jeder andren Hinsicht gleich tüchtig, aber der eine ohne Daumen oder Vorfinger, welchen würden Sie wählen? Sie zögerten nie einen Augenblick, für den Vollfingrigen zu entscheiden . . . Diese Herrn Fabrikanten haben falsche Vorurteile gegen das, was sie pseudo-philanthropische Gesetzgebung nennen.“ „Reports of Insp. of

slave-holders' rebellion.

¹⁹² In those factories that have been longest subject to the Factory Acts, with their compulsory limitation of the hours of labor, and other regulations, many of the older abuses have vanished. The very improvement of the machinery demands to a certain extent "improved construction of the buildings," and this is an advantage to the workpeople. (See "Rep. of Insp. of Fact. for 31st Oct., 1863," p. 109.)

Fact. for 31st Oct. 1855", [p. 6/7].) Diese Herrn sind „gescheite Leut“ und schwärmen nicht umsonst für die Sklavenhalter-Rebellion!

¹⁹² In den Fabriken, die am längsten dem Fabrikakt mit seiner Zwangsbeschränkung der Arbeitszeit und seinen sonstigen Regulationen unterworfen, sind manche frühere Mißstände verschwunden. Die Verbesserung der Maschinerie selbst erheischt auf einem gewissen Punkt eine „verbesserte Konstruktion der Fabrikgebäude“, die den Arbeitern zugut kommt. (cf. „Reports etc. for 31st Oct. 1863“, p. 109.)

15.5. Strife between Worker and Machine

The conditions described in (4) elicit resistance. Marx investigates the development of the forms of this resistance with the same historical depth as he has investigated the development of the forms of machinery itself. The main issue to be explained here is the Luddite movement and other spontaneous conflicts where workers destroyed the machines. Marx places this resistance in the context of the general class struggle between capitalist and worker and asks specifically why class struggle is taking this form at this time.

430:1 The contest between the capitalist and the wage-laborer dates back to the very origin of capital. It raged on throughout the whole period of manufactories.¹⁹³

¹⁹³ See amongst others, John Houghton: "Husbandry and Trade Improved." London, 1727. "The Advantages of the East India Trade, 1720." John Bellers, l.c. "The masters and their workmen are, unhappily, in a perpetual war with each other. The invariable object of the former is to get their work done as cheaply as possible; and they do not fail to employ every artifice to this purpose, whilst the latter are equally attentive to every occasion of distressing their masters into a compliance with higher demands." ("An Enquiry into the Causes of the Present High Price of Provisions," pp. 61–62. Author: the Rev. Nathaniel Forster, completely on the side of the workers.)

451:1 Der Kampf zwischen Kapitalist und Lohnarbeiter beginnt mit dem Kapitalverhältnis selbst. Er tobt fort während der ganzen Manufakturperiode.¹⁹³

¹⁹³ Sieh u.a. John Houghton, „Husbandry and Trade improved“, Lond. 1727. „The Advantages of the East India Trade“, 1720. John Bellers, l.c. „Die Meister und die Arbeiter befinden sich unglücklicherweise in ewigem Kriegszustand miteinander. Jene haben das unveränderliche Ziel, ihre Arbeit so billig wie möglich getan zu erhalten; und sie zögern nicht, zu diesem Zweck jede List anzuwenden, während diese ebenso darauf bedacht sind, bei jeder Gelegenheit ihre Meister zur Erfüllung ihrer höheren Forderungen zu zwingen.“ „An Inquiry into the causes of the Present High Prices of Provisions“, 1767, p. 61, 62. (Verf. Rev. Nathaniel Forster, ganz auf Seite der Arbeiter.)

In particular Marx compares the "strife between worker and machine" with the strife between workers and capitalists in the period of the manufactories.

Regarding machinery he starts with the most striking form of this strife, the destruction of machines, which he sees from the beginning as an indirect fight against capital:

But only since the introduction of machinery has the workman fought against the instrument of labor itself, the material embodiment of capital. He revolts against this particular form of the means of production,

Aber erst seit der Einführung der Maschinerie bekämpft der Arbeiter das Arbeitsmittel selbst, die materielle Existenzweise des Kapitals. Er revoltiert gegen diese bestimmte Form des Produktionsmittels als die materi-

15. Machinery and Modern Industry

as being the material basis of the capitalist mode of production.

elle Grundlage der kapitalistischen Produktionsweise.

Question 1018 *Why did workers revolt against the introduction of the early machines, although they had not resisted the introduction of the manufactories?*

First a brief historical sketch: precursors of Luddites in the 17th century was the suppression of the ribbon loom.

430:2–432:0 In the 17th century nearly all Europe experienced revolts of the workpeople against the ribbon-loom, a machine for weaving ribbons and trimmings, called in Germany Bandmühle, Schnurmühle, and Mühlenstuhl.

451:2/o Ziemlich ganz Europa erlebte während des 17. Jahrhunderts Arbeiterrevolten gegen die sog. Bandmühle (auch Schnurmühle oder Mühlenstuhl genannt), eine Maschine zum Weben von Bändern und Borten.¹⁹⁴

Footnote 194 gives more detail about the ribbon loom. Not only the workers revolted; local governments tried to prohibit and regulate them. In the Moore-Aveling translation this footnote is part of the main text:

¹⁹⁴ These machines were invented in Germany. Abbé Lancellotti, in a work that appeared in Venice in 1636, but which was written in 1579, says as follows: “Anthony Müller of Danzig saw about 50 years ago in that town, a very ingenious machine, which weaves 4 to 6 pieces at once. But the Mayor being apprehensive that this invention might throw a large number of workmen on the streets, caused the inventor to be secretly strangled or drowned.” In Leyden, this machine was not used till 1629; there the riots of the ribbon-weavers at length compelled the Town Council to prohibit it. “In hac urbe,” says Boxhorn (Inst. Pol., 1663), referring to the introduction of this machine into Leyden, “ante hos viginti circiter annos instrumentum quidam invenerunt textorium, quo solus plus panni et facilius conficere poterat, quan plures aequali tempore. Hinc turbæ ortæ et querulæ textorum, tandemque usus hujus instrumenti a magistratu prohibitus est.” After making various decrees more or less prohibitive against this loom in 1632, 1639, etc., the States General of Holland at length permitted it to be used, under certain conditions, by the decree of the 15th December, 1661. It was also prohibited in Cologne in 1676, at the same time that its introduction into England was causing disturbances among the workpeople. By an imperial Edict of 19th Feb., 1685, its use was forbidden throughout all Germany. In Hamburg it was burnt in public by order of the Senate. The Emperor Charles VI., on 9th Feb., 1719, renewed the edict of 1685, and not till 1765 was its use openly allowed in the Electorate of Saxony.

¹⁹⁴ Die Bandmühle ward in Deutschland erfunden. Der italienische Abbé Lancellotti in einer Schrift, die 1636 zu Venedig erschien, erzählt: „Anton Müller aus Danzig habe vor ungefähr 50 Jahren“ (L. schrieb 1629) „eine sehr künstliche Maschine in Danzig gesehn, die 4–6 Gewebe auf einmal verfertigte; weil der Stadtrat aber besorgt habe, diese Erfindung möchte eine Masse Arbeiter zu Bettlern machen, so habe er die Erfindung unterdrückt und den Erfinder heimlich ersticken oder ersäufen lassen.“ In Leyden wurde dieselbe Maschine zuerst 1629 angewandt. Die Emeuten der Bortenwirker zwangen den Magistrat erst zu ihrem Verbot; durch verschiedene Verordnungen von 1623, 1639 usw. von seiten der Generalstaaten sollte ihr Gebrauch beschränkt werden; endlich erlaubt, unter gewissen Bedingungen, durch Verordnung vom 15. Dezember 1661. „In dieser Stadt“, sagt Boxhorn („Inst. Pol.“, 1663) von der Einführung der Bandmühle in Leyden, „erfanden vor ungefähr zwanzig Jahren irgendwelche Leute ein Instrument zum Weben, mit dem ein einzelner mehr und leichter Gewebe herstellen konnte, als sonst mehrere in der gleichen Zeit. Dadurch kam es zu Unruhen und zu Klagen der Weber, bis der Gebrauch dieses Instruments vom Magistrat verboten wurde.“ Dieselbe Maschine ward 1676 in Köln verboten, während ihre Einführung in England gleichzeitige Arbeiterunruhen hervorrief. Durch kaiserliches Edikt vom 19. Februar 1685 wurde ihr Gebrauch in ganz Deutschland untersagt. In Hamburg wurde sie öffentlich auf Befehl des Magistrats verbrannt. Karl VI. er-

15.5. Strife between Worker and Machine

neuerte 9. Februar 1719 das Edikt von 1685, und Kursachsen erlaubte ihren öffentlichen Gebrauch erst 1765.

Marx ends his discussion of the ribbon loom with a brief description of its technology:

^{194 ctd} This machine, which shook Europe to its foundations, was in fact the precursor of the mule and the power-loom, and of the industrial revolution of the 18th century. It enabled a totally inexperienced boy, to set the whole loom with all its shuttles in motion, by simply moving a rod backwards and forwards, and in its improved form produced from 40 to 50 pieces at once.

^{194 ctd} Diese Maschine, die so viel Lärm in der Welt gemacht hat, war in der Tat Vorläufer der Spinn- und Webmaschinen, also der industriellen Revolution des 18. Jahrhunderts. Sie befähigte einen in der Weberei ganz unerfahrenen Jungen, durch bloßes Ab- und Zustoßen einer Treibstange den ganzen Stuhl mit allen seinen Schützen in Bewegung zu setzen, und lieferte, in ihrer verbesserten Form, 40–50 Stück auf einmal.

The main text gives other examples, besides the ribbon loom:

About 1630, a wind-sawmill, erected near London by a Dutchman, succumbed to the excesses of the populace. Even as late as the beginning of the 18th century, sawmills driven by water overcame the opposition of the people, supported as it was by Parliament, only with great difficulty. No sooner had Everet in 1758 erected the first wool-shearing machine that was driven by water-power, than it was set on fire by 100,000 people who had been thrown out of work. Fifty thousand workpeople, who had previously lived by carding wool, petitioned Parliament against Arkwright's scribbling mills and carding engines. The enormous destruction of machinery that occurred in the English manufacturing districts during the first 15 years of this century, chiefly caused by the employment of the power-loom, and known as the Luddite movement, gave the anti-Jacobin governments of a Sidmouth, a Castlereagh, and the like, a pretext for the most reactionary and forcible measures.

Ende des ersten Dritteiles des 17. Jahrhunderts erlag eine Windsägemühle, von einem Holländer in der Nähe Londons angelegt, vor Pöbelexzessen. Noch Anfang des 18. Jahrhunderts überwandene durch Wasser getriebene Sägemaschinen in England nur mühsam den parlamentarisch unterstützten Volkswiderstand. Als Everet 1758 die erste vom Wasser getriebene Maschine zum Wollscheren erbaut hatte, wurde sie von 100 000 außer Arbeit gesetzten Menschen in Brand gesteckt. Gegen die scribbling mills und Kardiermaschinen Arkwrights petitionierten 50 000 Arbeiter, die bisher vom Wollkratzen gelebt, beim Parlament. Die massenhafte Zerstörung von Maschinen in den englischen Manufakturdistrikten während der ersten 15 Jahre des 19. Jahrhunderts, namentlich infolge der Ausbeutung des Dampfwebstuhls, bot, unter dem Namen der Ludditenbewegung, der Antijakobiner-Regierung eines Sidmouth, Castlereagh usw. den Vorwand zu reaktionärsten Gewaltschritten.

↓ The last sentence in the paragraph gives an interpretation: it takes time until the workers learn to distinguish between machinery and its employment by capital.

It took both time and experience before the workpeople learnt to distinguish between machinery and its employment by capital, and to direct their attacks, not against the material instruments of production, but against the mode in which they are used.¹⁹⁵

Es bedarf Zeit und Erfahrung, bevor der Arbeiter die Maschinerie von ihrer kapitalistischen Anwendung unterscheiden und daher seine Angriffe vom materiellen Produktionsmittel selbst auf dessen gesellschaftliche Exploitationsform übertragen lernt.¹⁹⁵

Footnote 195 shows that occasionally, the workers' upset against the means of production continue till the time *Capital* was written:

15. Machinery and Modern Industry

¹⁹⁵ In old-fashioned manufactures the revolts of the workpeople against machinery, even to this day, occasionally assume a savage character, as in the case of the Sheffield file cutters in 1865.

Next Marx contrasts the workers' fight against the machine with the class struggles during the manufacturing period. During this earlier time, workers did not fight against the manufacturing system itself but accepted the system and fought for higher wages (see footnote 193). If there was a fight against the system, it was done by the remnants of the medieval system.

432:1/o The contests about wages in the Manufactories, pre-suppose the manufactories, and are in no sense directed against their existence. The opposition against the establishment of new manufactories proceeds from the guilds and privileged towns, not from the workpeople.

⇓ The theoreticians / ideologists spoke of virtual replacement of workers rather than their actual displacement:

Hence the writers of the period of manufactories treat the division of labor chiefly as a means of virtually supplying a deficiency of laborers, and not as a means of actually displacing those in work.

Now Marx explains this difference, and note that he does not use examples from the manufactories but from machinery:

This distinction is self-evident. If it be said that 100 millions of people would be required in England to spin with the old spinning-wheel the cotton that is now spun with mules by 500,000 people, this does not mean that the mules took the place of those millions who never existed. It means only this, that many millions of workpeople would be required to replace the spinning machinery. If, on the other hand, we say, that in England the power-loom threw 800,000 weavers on the streets, we do not refer to existing machinery, that would have to be replaced by a definite number of workpeople, but to a number of weavers in existence who were actually replaced or displaced by the looms.

¹⁹⁵ In altmodischen Manufakturen wiederholt sich noch heute zuweilen die rohe Form der Arbeiterempörungen gegen die Maschinerie. So z.B. im Feilenschleifen zu Sheffield 1865.

452:1/oo Die Kämpfe um den Arbeitslohn innerhalb der Manufaktur setzen die Manufaktur voraus und sind keineswegs gegen ihre Existenz gerichtet. Soweit die Bildung der Manufakturen bekämpft wird, geschieht es von den Zunftmeistern und privilegierten Städten, nicht von den Lohnarbeitern.

Bei Schriftstellern der Manufakturperiode wird die Teilung der Arbeit daher vorherrschend als Mittel aufgefaßt, virtuell Arbeiter zu ersetzen aber nicht, wirklich Arbeiter zu verdrängen.

Dieser Unterschied ist selbstverständlich. Sagt man z.B., es würden 100 Millionen Menschen in England erheischt sein, um mit dem alten Spinnrad die Baumwolle zu verspinnen, die jetzt von 500 000 mit der Maschine versponnen wird, so heißt das natürlich nicht, daß die Maschine den Platz dieser Millionen, die nie existiert haben, einnahm. Es heißt nur, daß viele Millionen Arbeiter erheischt wären, um die Spinnmaschinerie zu ersetzen. Sagt man dagegen, daß der Dampfwebstuhl in England 80 000 Weber auf das Pflaster warf, so spricht man nicht von existierender Maschinerie, die durch eine bestimmte Arbeiterzahl ersetzt werden müßte, sondern von einer existierenden Arbeiterzahl, die faktisch durch Maschinerie ersetzt oder verdrängt worden ist.

Question 1019 *What is the difference between virtual replacement and actual displacement of workers?*

Why had the workers not fought against the introduction of manufactories? Because in

manufacturing, the one side of increased productivity is dominant, the increase in products, (manufactures arose from the pull of colonial markets), while the introduction of machinery had the replacement of workers (the push from more profits, cost-cutting) as purpose.

During the period of the manufactories, handicraft labor, altered though it was by division of labor, was yet the basis. The demands of the new colonial markets could not be satisfied owing to the relatively small number of town operatives handed down from the middle ages, and the manufactories proper opened out new fields of production to the rural population, driven from the land by the dissolution of the feudal system. At that time, therefore, division of labor and co-operation in the workshops, were viewed more from the positive aspect, that they made the workpeople more productive.¹⁹⁶ Long before the period of Modern Industry, co-operation and the concentration of the instruments of labor in the hands of a few, gave rise, in numerous countries where these methods were applied in agriculture, to great, sudden and forcible revolutions in the modes of production, and consequentially, in the conditions of existence, and the means of employment of the rural populations. But this contest at first takes place more between the large and the small landed proprietors, than between capital and wage-labor; on the other hand, when the laborers are displaced by the instruments of labor, by sheep, horses, etc., in this case force is directly resorted to in the first instance as the prelude to the industrial revolution. The laborers are first driven from the land, and then come the sheep. Land grabbing on a great scale, such as was perpetrated in England, is the first step in creating a field for the establishment of agriculture on a great scale.^{196a} Hence this subversion of agriculture puts on, at first, more the appearance of a political revolution.

¹⁹⁶ Sir James Steuart also understands machinery quite in this sense. "Je considère donc les machines comme des moyens d'augmenter (virtuellement) le nombre des gens industriels qu'on n'est pas obligé de nourrir... En quoi l'effet d'une machine diffère-t-il de celui de nou-

Während der Manufakturperiode blieb der handwerksmäßige Betrieb, wenn auch zerlegt, die Grundlage. Die neuen Kolonialmärkte konnten durch die relativ schwache Anzahl der vom Mittelalter überlieferten städtischen Arbeiter nicht befriedigt werden, und die eigentlichen Manufakturen öffneten zugleich dem mit Auflösung der Feudalität von Grund und Boden verjagten Landvolke neue Produktionsgebiete. Damals trat also an der Teilung der Arbeit und der Kooperation in den Werkstätten mehr die positive Seite hervor, daß sie beschäftigte Arbeiter produktiver machen.¹⁹⁶ Kooperation und Kombination der Arbeitsmittel in den Händen weniger rufen, auf die Agrikultur angewandt, zwar große, plötzliche und gewaltsame Revolutionen der Produktionsweise und daher der Lebensbedingungen und Beschäftigungsmittel der Landbevölkerung hervor, in vielen Ländern lang vor der Periode der großen Industrie. Aber dieser Kampf spielt ursprünglich mehr zwischen großen und kleinen Landeigentümern als zwischen Kapital und Lohnarbeit: andererseits, soweit Arbeiter durch Arbeitsmittel, Schafe, Pferde usw. verdrängt werden, bilden unmittelbare Gewaltakte hier in erster Instanz die Voraussetzung der industriellen Revolution. Erst werden die Arbeiter vom Grund und Boden verjagt, und dann kommen die Schafe. Der Landdiebstahl auf großer Stufenleiter, wie in England, schafft der großen Agrikultur erst ihr Anwendungsfeld.^{196a} In ihren Anfängen hat diese Umwälzung der Agrikultur daher mehr den Schein einer politischen Revolution.

¹⁹⁶ Sir James Steuart faßt auch die Wirkung der Maschinerie noch ganz in diesem Sinn. „Ich sehe also die Maschinen als Mittel an, um (ihrer Wirkungsfähigkeit nach) die Zahl der tätigen Menschen zu erhöhen, ohne daß man deren mehr zu ernähren braucht ... Wodurch unterscheidet

15. Machinery and Modern Industry

veaux habitants?" (French trans. t. I., l. I., ch. XIX.)

This is really another way of saying that the purpose of machinery is relative surplus-value. Marx must have agreed, because he calls the next quote more naïve:

More naïve is Petty, who says, it replaces "Polygamy." The above point of view is, at the most, appropriate only for some parts of the United States.

sich die Wirkung einer Maschine von derjenigen neuer Einwohner? (Fzs. Übers., t. I, l. I., ch. XIX.)

Viel naiver Petty, der sagt, daß sie die „Polygamie“ ersetze. Dieser Gesichtspunkt paßt höchstens für einige Teile der Ver. Staaten.

Why this reference to the United States? Perhaps: In Europe, polygamy is not necessary because capital creates the relative surplus population. But in the United States, the frontier drains off the relative surplus population? The next quote takes a position "against" the above because it says towards the end that machinery is not used for a lack of workers:

On the other hand, "machinery can seldom be used with success to abridge the labor of an individual; more time would be lost in its construction than could be saved by its application. It is only really useful when it acts on great masses, when a single machine can assist the work of thousands. It is accordingly in the most populous countries, where there are most idle men, that it is most abundant ... It is not called into use by a scarcity of men, but by the facility with which they can be brought to work in masses." (Piercy Ravenstone: "Thoughts on the Funding System and its Effects." London, 1824, p. 45.)

Dagegen: „Maschinerie kann selten mit Erfolg dazu gebracht werden, die Arbeit eines einzelnen zu vermindern: bei ihrer Konstruktion würde man mehr Zeit verlieren, als durch ihre Anwendung ersparen. Sie ist nur wirklich nützlich, wenn sie auf große Massen wirkt, wenn eine einzige Maschine die Arbeit von Tausenden unterstützen kann. Maschinerie wird daher stets am meisten in den dichtest bevölkerten Ländern angewandt, wo es die meisten Arbeitslosen gibt ... Sie wird in Gebrauch genommen nicht wegen Mangel an Arbeitern, sondern der Leichtigkeit wegen, mit der diese zur Arbeit in Massen gebracht werden können.“ (Peircy Ravenstone, „Thoughts on the Funding System and its Effects“, Lond. 1824, p. 45.)

^{196a} {Note in the 4th German edition.—This applies to Germany too. Where in our country agriculture on a large scale exists, hence particularly in the East, it has become possible only in consequence of the clearing of the estates ("Bauernlegen"), a practice which became widespread in the 16th century and was particularly so since 1648.—F. E.}

^{196a} {Zur 4. Aufl.—Dies gilt auch für Deutschland. Wo bei uns große Agrikultur besteht, also namentlich im Osten, ist sie erst möglich geworden durch das, seit dem 16. Jahrhundert, namentlich aber seit 1648, eingerissene „Bauernlegen“.—F.E.}

There is a natural competition between machines and workers because machines are introduced to replace workers. The next paragraph is very interesting:

433:1–435:2 The instrument of labor, when it takes the form of a machine, immediately becomes a competitor of the workman himself.¹⁹⁷ The self-expansion of capital by means of machinery is thenceforward directly proportional to the number of the workpeople, whose means of livelihood have been destroyed by that machinery.

454:1–455:2 Als Maschine wird das Arbeitsmittel sofort zum Konkurrenten des Arbeiters selbst.¹⁹⁷ Die Selbstverwertung des Kapitals durch die Maschine steht im direkten Verhältnis zur Arbeiterzahl, deren Existenzbedingungen sie vernichtet.

¹⁹⁷ "Machinery and labor are in constant competition." Ricardo, l.c., p. 479.

¹⁹⁷ „Maschinerie und Arbeit sind in ständiger Konkurrenz.“ (Ricardo, l.c. p. 479.)

This must be a reference to extra surplus-value.

In order to describe this in more detail, Marx harks back to his thought in and develops it

further: Labor-power not only loses its use-value but also its exchange-value, because it has become simplified so much that it can be replaced by machines.

The whole system of capitalist production is based on the fact that the workman sells his labor-power as a commodity. Division of labor specializes this labor-power, by reducing it to skill in handling a particular tool. So soon as the handling of this tool becomes the work of a machine, then, with the use-value, the exchange-value too, of the workman's labor-power vanishes; the workman becomes unsaleable, like paper money thrown out of currency by legal enactment.

Das ganze System der kapitalistische Produktion beruht darauf, daß der Arbeiter seine Arbeitskraft als Ware verkauft. Die Teilung der Arbeit vereinseitigt diese Arbeitskraft zum ganz partikularisierten Geschick, ein Teilwerkzeug zu führen. Sobald die Führung des Werkzeugs der Maschine anheimfällt, erlischt mit dem Gebrauchswert der Tauschwert der Arbeiterkraft. Der Arbeiter wird unverkäuflich, wie außer Kurs gesetztes Papiergeld.

Marx uses the example of paper-money to explain this point: Manufacture dequalifies the labor, i.e., replaces labor with something "worthless" (no use-value), like gold with paper-money. With the introduction of big industry, the labor can be replaced by the operation of machinery, just as the paper-money can be devalued. Now what happens to the displaced worker?

That portion of the working-class, thus by machinery rendered superfluous, i.e., no longer immediately necessary for the self-expansion of capital, either goes to the wall in the unequal contest of the old handicrafts and manufactures with machinery, or else floods all the more easily accessible branches of industry, swamps the labor-market, and sinks the price of labor-power below its value.

Der Teil der Arbeiterklasse, den die Maschinerie so in überflüssige, d.h. nicht länger zur Selbstverwertung des Kapitals unmittelbar notwendige Bevölkerung verwandelt, geht einerseits unter in dem ungleichen Kampf des alten handwerksmäßigen und manufakturmäßigen Betriebs wider den maschinenmäßigen, überflutet andererseits alle leichter zugänglichen Industriezweige, überfüllt den Arbeitsmarkt und senkt daher den Preis der Arbeitskraft unter ihren Wert.

Now two kinds of "consolation" of the workers for their fate, and Marx's critique of this consolation:

It is impressed upon the workpeople, as a great consolation, first, that their sufferings are only temporary ("a temporary inconvenience"), secondly, that machinery acquires the mastery over the whole of a given field of production, only by degrees, so that the extent and intensity of its destructive effect is diminished. The first consolation neutralises the second. When machinery seizes on an industry by degrees, it produces chronic misery among the operatives who compete with it. Where the transition is rapid, the effect is acute and felt by great masses.

Ein großer Trost für die pauperisierten Arbeiter soll sein, daß ihre Leiden teils nur „zeitlich“ („a temporary inconvenience“), teils daß die Maschinerie sich nur allmählich eines ganzen Produktionsfelds bemächtigt, wodurch Umfang und Intensität ihrer vernichtenden Wirkung gebrochen werde. Der eine Trost schlägt den andren. Wo die Maschine allmählich ein Produktionsfeld ergreift, produziert sie chronisches Elend in der mit ihr konkurrierenden Arbeiterschichte. Wo der Übergang rasch, wirkt sie massenhaft und akut.

Then examples how deadly the competition of the machine can be for the worker:

History discloses no tragedy more horri-

Die Weltgeschichte bietet kein entsetzliche-

15. Machinery and Modern Industry

ble than the gradual extinction of the English hand-loom weavers, an extinction that was spread over several decades, and finally sealed in 1838. Many of them died of starvation, many with families vegetated for a long time on 2 1/2 d. a day.¹⁹⁸ On the other hand, the English cotton machinery produced an acute effect in India. The Governor General reported 1834–35:

“The misery hardly finds a parallel in the history of commerce. The bones of the cotton-weavers are bleaching the plains of India.”

¹⁹⁸ The competition between hand-weaving and power-weaving in England, before the passing of the Poor Law of 1833, was prolonged by supplementing the wages, which had fallen considerably below the minimum, with parish relief. “The Rev. Mr. Turner was, in 1827, rector of Wilmslow in Cheshire, a manufacturing district. The questions of the Committee of Emigration, and Mr. Turner’s answers, show how the competition of human labor is maintained against machinery. ‘Question: Has not the use of the power-loom superseded the use of the hand-loom? Answer: Undoubtedly; it would have superseded them much more than it has done, if the hand-loom weavers were not enabled to submit to a reduction of wages.’ ‘Question: But in submitting he has accepted wages which are insufficient to support him, and looks to parochial contribution as the remainder of his support? Answer: Yes, and in fact the competition between the hand-loom and the power-loom is maintained out of the poor-rates.’ Thus degrading pauperism or expatriation, is the benefit which the industrious receive from the introduction of machinery, to be reduced from the respectable and in some degree independent mechanic, to the cringing wretch who lives on the debasing bread of charity. This they call a temporary inconvenience.” (“A Prize Essay on the Comparative Merits of Competition and Co-operation.” Lond., 1834, p. 29.)

No doubt, in turning them out of this “temporal” world, the machinery caused them

res Schauspiel als den allmählichen, über Dezennien verschleppten, endlich 1838 besiegelten Untergang der englischen Handbaumwollweber. Viele von ihnen starben am Hungertod, viele vegetierten lange mit ihren Familien auf 2 1/2 d. täglich.¹⁹⁸ Akut dagegen wirkte die englische Baumwollmaschinerie auf Ostindien, dessen Generalgouverneur 1834/35 konstatierte:

„Das Elend findet kaum seine Parallele in der Geschichte des Handels. Die Knochen der Baumwollweber bleichen die Ebenen von Indien.“

¹⁹⁸ Die Konkurrenz zwischen Handgeweb und Maschinengeweb wurde in England vor der Einführung des Armengesetzes von 1834 dadurch verlängert, daß man die tief unter das Minimum gefallen Löhne durch Pfarreiunterstützung ergänzte. „Reverend Mr. Turner war 1827 Pfarrer in Wilmslow in Cheshire, einem industriellen Distrikt. Die Fragen des Komitees für Auswanderung und Mr. Turners Antworten zeigen, wie der Wettbewerb der Handarbeit mit der Maschinerie aufrechterhalten wird. Frage: „Hat nicht die Anwendung des Kraftwebstuhls die des Handwebstuhls verdrängt?“ Antwort: „Zweifelloso; sie würde ihn noch mehr, als bereits geschehn, verdrängt haben, wären die Handwerker nicht in den Stand gesetzt worden, sich einer Lohnherabsetzung zu unterwerfen.“ Frage: „Aber der Handwerker hat doch durch diese Unterwerfung sich mit einem Lohn zufriedengegeben, der für seine Lebensunterhalt unzureichend ist, und verlangt nach Pfarreizuschuß für den Rest seines Lebensunterhalts?“ Antwort: „Ja, und in der Tat wird der Wettbewerb zwischen dem Handwebstuhl und dem Kraftwebstuhl durch die Armenunterstützung aufrechterhalten.“ So ist also erniedrigender Pauperismus oder Auswanderung der Vorteil, den die Einführung der Maschinerie den Werkträgern gebracht hat, sie sind aus geachteten und in gewissem Grade unabhängigen Handwerkern zu kriecherischen Elenden herabgedrückt worden, die das entwürdigende Brot der Mildtätigkeit essen. Das nennt man einen zeitlichen Mißstand.“ („A Prize Essay on the comparative merits of Competition and Co-operation“, Lond. 1834, p. 29.)

Allerdings, sofern diese Weber das Zeitliche segneten, bereitete ihnen die Maschi-

no more than “a temporary inconvenience.” For the rest, since machinery is continually seizing upon new fields of production, its temporary effect is really permanent. Hence, the character of independence and estrangement which the capitalist mode of production as a whole gives to the instruments of labor and to the product, as against the workman, is developed by means of machinery into a thorough antagonism.¹⁹⁹ Therefore, it is with the advent of machinery, that the workman for the first time brutally revolts against the instruments of labor.

↑ This is the only place in the machinery chapter where Marx talks about estrangement or alienation. Machinery is beyond alienated from the worker, it is the mortal enemy of the worker. This is the reason for brutal revolts of the workers against the machines.

¹⁹⁹ “The same cause which may increase the revenue of the country” (i.e., as Ricardo explains in the same passage, the revenues of landlords and capitalists, whose wealth, from the economic point of view, forms the Wealth of the Nation), “may at the same time render the population redundant and deteriorate the condition of the laborer.” (Ricardo, *I.c.*, p. 469.) “The constant aim and the tendency of every improvement in machinery is, in fact, to do away entirely with the labor of man, or to lessen its price by substituting the labor of women and children for that of grown-up men, or of unskilled for that of skilled workmen.” (Ure, *I.c.*, t. I., p. 35.)

Replacement of workers not only at the beginning of machinery, but always thereafter.

435:3 The instrument of labor strikes down the laborer. This direct antagonism between the two comes out most strongly, whenever newly introduced machinery competes with handicrafts or manufactories, handed down from former times. But even in Modern Industry the continual improvement of machinery, and the development of the automatic system, has an analogous effect.

“The object of improved machinery is to diminish manual labor, to provide for the performance of a process or the completion of a link in a manufacture by the aid of an iron instead of the human apparatus.”²⁰⁰

²⁰⁰ “Rep. Insp. Fact. for 31st October, 1858,” p. 43.

ne nur „zeitliche Mißstände“. Übrigens ist die „zeitliche“ Wirkung der Maschinerie permanent, indem sie beständig neue Produktionsgebiete ergreift. Die verselbständigte und entfremdete Gestalt, welche die kapitalistische Produktionsweise überhaupt den Arbeitsbedingungen und dem Arbeitsprodukt gegenüber dem Arbeiter gibt, entwickelt sich also mit der Maschinerie zum vollständigen Gegensatz.¹⁹⁹ Daher mit ihr zum erstenmal die brutale Revolte des Arbeiters gegen das Arbeitsmittel.

¹⁹⁹ „Die gleiche Ursache, die die Nettoeinnahme des Landes anwachsen läßt“ (d.h. , wie Ricardo an derselben Stelle erläutert, the revenues of landlords and capitalists, deren Wealth, ökonomisch betrachtet, überhaupt = Wealth of the Nation), „kann gleichzeitig einen Überfluß an Bevölkerung erzeugen und die Lage des Arbeiters verschlechtern.“ (Ricardo, *I.c.* p. 469.) „Der beständige Zweck und die Tendenz jeder Vervollkommenung des Mechanismus ist in der Tat, sich der Arbeit des Menschen ganz zu entschlagen oder ihren Preis zu vermindern durch Substitution von Weiber- und Kinderarbeit für die der erwachsenen männlichen Arbeiter oder roher Arbeiter für geschickte.“ (Ure, [*I.c.* p. 23].)

455:3 Das Arbeitsmittel erschlägt den Arbeiter. Dieser direkte Gegensatz erscheint allerdings am handgreiflichsten, sooft neu eingeführte Maschinerie konkurriert mit überlieferten Handwerks- oder Manufakturbetrieb. Aber innerhalb der großen Industrie selbst wirkt fortwährende Verbeßrung der Maschinerie und Entwicklung des automatischen Systems analog.

456:1 „Der beständige Zweck verbesserter Maschinerie ist, die Handarbeit zu vermindern oder einen Ring in der Produktionskette der Fabrik durch Substitution eiserner für menschliche Apparate zu vollenden.“²⁰⁰

²⁰⁰ „Reports of Insp. of Fact. 31st Oct. 1858“, p. 43.

15. Machinery and Modern Industry

⇓ Reference to energy:

“The adaptation of power to machinery heretofore moved by hand, is almost of daily occurrence ... the minor improvements in machinery having for their object economy of power, the production of better work, the turning off more work in the same time, or in supplying the place of a child, a female, or a man, are constant, and although sometimes apparently of no great moment, have somewhat important results.”²⁰¹

²⁰¹ “Rep. Insp. Fact. for 31st October, 1856,” p. 15.

⇓ Operations needing skills replaced by machinery.

“Whenever a process requires peculiar dexterity and steadiness of hand, it is withdrawn, as soon as possible, from the cunning workman, who is prone to irregularities of many kinds, and it is placed in charge of a peculiar mechanism, so self-regulating that a child can superintend it.”²⁰² “On the automatic plan skilled labor gets progressively superseded.”²⁰³ “The effect of improvements in machinery, not merely in superseding the necessity for the employment of the same quantity of adult labor as before, in order to produce a given result, but in substituting one description of human labor for another, the less skilled for the more skilled, juvenile for adult, female for male, causes a fresh disturbance in the rate of wages.”²⁰⁴ “The effect of substituting the self-acting mule for the common mule, is to discharge the greater part of the men spinners, and to retain adolescents and children.”²⁰⁵

²⁰² Ure, l.c., p. 19. “The great advantage of the machinery employed in brick-making consists in this, that the employer is made entirely independent of skilled laborers.” (“Ch. Empl. Comm. V. Report,” Lond., 1866, p. 130, n. 46.)

Mr. A. Sturrock, superintendent of the machine department of the Great Northern Railway, says, with regard to the building of locomotives, etc.:

„Die Anwendung von Dampf- und Wasserkraft auf Maschinerie, die bisher mit der Hand bewegt wurde, ist das Ereignis jedes Tages ... Die kleineren Verbeßungen in der Maschinerie, welche Ökonomie der Bewegungskraft, Verbeßung des Machwerks, vermehrte Produktion in derselben Zeit oder Verdrängung eines Kindes, eines Frauenzimmers oder eines Mannes bezwecken, sind konstant, und obgleich scheinbar nicht von großem Gewicht, haben sie dennoch wichtige Resultate.“²⁰¹

²⁰¹ „Reports etc. 31st Oct. 1856“, p. 15.

„Überall, wo eine Operation viel Geschick und eine sichere Hand verlangt, entzieht man sie so schnell als möglich den Armen des zu geschickten und oft zu Unregelmäßigkeiten aller Art geneigten Arbeiters, um einen besondern Mechanismus damit zu betrauen, der so gut geregelt ist, daß ein Kind ihn überwachen kann.“²⁰² „Im automatischen System wird das Talent des Arbeiters progressiv verdrängt.“²⁰³ „Die Verbeßung der Maschinerie erfordert nicht nur Verminderung in der Anzahl der beschäftigten erwachsenen Arbeiter zur Erzielung eines bestimmten Resultats, sondern sie substituiert eine Klasse von Individuen einer andren Klasse, eine minder geschickte einer geschickteren, Kinder den Erwachsenen, Frauen den Männern. Alle diese Wechsel verursachen beständige Fluktuationen in der Rate des Arbeitslohns.“²⁰⁴ „Die Maschinerie wirft unaufhörlich Erwachsene aus der Fabrik heraus.“²⁰⁵

²⁰² „Ure, l.c. p. 19. „Der große Vorteil der im Ziegelbacken angewandten Maschinerie besteht darin, den Anwender ganz und gar von geschickten Arbeitern unabhängig zu machen.“ „Ch. Empl. Comm., V. Report“, Lond. 1866, p. 130, n. 46.)

Zusatz z. 2. A. Herr Sturrock, Superintendent des Maschinendepartements der Great Northern Railway, sagt aus mit Bezug auf Maschinenbau

“Expensive English workmen are being less used every day. The production of the workshops of England is being increased by the use of improved tools and these tools are again served by a low class of labor... Formerly their skilled labor necessarily produced all the parts of engines. Now the parts of engines are produced by labor with less skill, but with good tools. By tools, I mean engineer’s machinery, lathes, planing machines, drills, and so on.” (“Royal Comm. on Railways,” Lond., 1867, Minutes of Evidence, n. 17, 862 and 17, 863.)

²⁰³ Ure, l.c., p. 20.

²⁰⁴ Ure, l.c., p. 321.

²⁰⁵ Ure, l.c., p. 23.

(Lokomotiven usw.): „Kostspielige (expensive) englische Arbeiter werden jeden Tag weniger gebraucht. Die Produktion wird vermehrt durch die Anwendung verbesserter Instrumente, und diese Instrumente werden bedient von einer niedrigen Sorte Arbeit (a low class of labour) ... Früher produzierte geschickte Arbeit notwendigerweise alle Teils der Dampfmaschine. Dieselben Teile werden jetzt produziert durch Arbeit mit weniger Geschick, aber guten Instrumenten ... Unter Instrumenten verstehe ich die beim Maschinenbau angewandten Maschinen.“ „Royal Commission on Railways. Minutes of Evidence“, n. 17 862 und 17 863, London 1867.)

²⁰⁵ l.c. p. 23.

Rapid advances of machinery after shortening of the work day during Civil-War-induced cotton crisis:

The extraordinary power of expansion of the factory system owing to accumulated practical experience, to the mechanical means at hand, and to constant technical progress, was proved to us by the giant strides of that system under the pressure of a shortened working-day. But who, in 1860, the Zenith year of the English cotton industry, would have dreamt of the galloping improvements in machinery, and the corresponding displacement of working people, called into being during the following 3 years, under the stimulus of the American Civil War? A couple of examples from the Reports of the Inspectors of Factories will suffice on this point. A Manchester manufacturer states:

“We formerly had 75 carding engines, now we have 12, doing the same quantity of work ... We are doing with fewer hands by 14, at a saving in wages of £10 a-week. Our estimated saving in waste is about 10% in the quantity of cotton consumed.”

“In another fine-spinning mill in Manchester, I was informed that through increased speed and the adoption of some self-acting processes, a reduction had been made, in number, of a fourth in one department, and of above half in another, and that the introduc-

456:2–457:1 Die außerordentliche Elastizität des Maschinenwesens infolge gehäuf-ter praktischer Erfahrung, des schon vor-handnen Umfangs mechanischer Mittel und des beständigen Fortschritts der Technik zeigte uns sein Sturmmarsch unter dem Druck eines verkürzten Arbeitstags. Aber wer hätte 1860, im Zenitjahr der engli-schen Baumwollindustrie, die galoppieren-den Verbesserungen der Maschinerie und die entsprechende Deplacierung von Hand-arbeit geahnt, welche die drei folgenden Jahre unter dem Stachel des Amerikani-schen Bürgerkriegs hervorriefen? Von den offiziellen Anführungen der englischen Fa-brikinspektoren über diesen Punkt genügen hier ein paar Beispiele. Ein Manchester Fa-brikant erklärt:

„Statt 75 Kardiermaschinen brauchen wir jetzt nur 12, welche dieselbe Quantität von eben-so guter, wenn nicht beßrer Qualität liefern ... Die Ersparung an Arbeitslohn beträgt 10 Pfd. St. wöchentlich, die an Baumwollabfall 10%.“

457:2–3 In einer Manchester Feinspinne-rei wurde „vermittelt beschleunigter Bewe-gung und Einführung verschiedner self-acting Prozesse in einem Departement 1/4, in ei-nem über 1/2 des Arbeiterpersonals beseitigt, während die Kämmaschine an der Stelle der

15. Machinery and Modern Industry

tion of the combing machine in place of the second carding, had considerably reduced, the number of hands formerly employed in the carding-room.”

Another spinning-mill is estimated to effect a saving of labor of 10%. The Messrs. Gilmour, spinners at Manchester, state:

“In our blowing-room department we consider our expense with new machinery is fully one-third less in wages and hands ... in the jack-frame and drawing-frame room, about one-third less in expense, and likewise one-third less in hands; in the spinningroom about one-third less in expenses. But this is not all; when our yarn goes to the manufacturers, it is so much better by the application of our new machinery, that they will produce a greater quantity of cloth, and cheaper than from the yarn produced by old machinery.”²⁰⁶

²⁰⁶ “Rep. Insp. Fact., 31st Oct., 1863,” pp. 108,109.

437:0b–437:1 Mr. Redgrave further remarks in the same Report:

“The reduction of hands against increased production is, in fact, constantly taking place, in woollen mills the reduction commenced some time since, and is continuing; a few days since, the master of a school in the neighbourhood of Rochdale said to me, that the great falling off in the girls’ school is not only caused by the distress, but by the changes of machinery in the woollen mills, in consequence of which a reduction of 70 short-timers had taken place.”²⁰⁷

²⁰⁷ I.c., p. 109. The rapid improvement of machinery, during the crisis, allowed the English manufacturers, immediately after the termination of the American Civil War, and almost in no time, to glut the markets of the world again. Cloth, during the last six months of 1866, was almost unsaleable. Thereupon began the consignment of goods to India and China, thus naturally making the glut more intense. At the beginning of 1867 the manufacturers resorted to their usual way out of the difficulty, viz., reducing wages 5 per cent. The workpeople resisted, and said that the only remedy was to work short time, 4 days a-week; and their theory was the correct one. After holding out for some time, the self-elected captains

zweiten Kardiermaschine die Zahl der früher im Kardierraum beschäftigten Hände sehr vermindert hat“.

457:4–5 Eine andre Spinnfabrik schätzt ihre allgemeine Ersparung von „Händen“ auf 10%. Die Herren Golmore, Spinner zu Manchester, erklären:

„In unsrem blowing departement schätzten wir die infolge neuer Maschinerie gemachte Ersparung an Händen und Arbeitslohn auf ein volles Drittel ... in dem jack frame und drawing frame room ungefähr 1/3 weniger in Auslage und Händen; im Spinnraum ungefähr 1/3 weniger in Auslage. Aber das ist nicht alles; wenn unser Garn jetzt zum Weber geht, ist es so sehr verbessert durch die Anwendung der neuen Maschinerie, daß sie mehr und besseres Gewebe als mit dem alten Maschinen-garn produzieren.“²⁰⁶

²⁰⁶ „Reports of Insp. of Fact., 31st Oct. 1863“, p. 108 sqq.

457:6–7 Fabrikinspektor A. Redgrave bemerkt hierzu:

„Die Verminderung der Arbeiter bei gesteigerter Produktion schreitet rasch vorwärts; in den Wollfabriken begann kürzlich eine neue Reduktion der Hände, und sie dauert fort; vor wenigen Tagen sagte mir ein Schulmeister, der bei Rochdale wohnt, die große Abnahme in den Mädchenschulen sei nicht nur dem Druck der Krise geschuldet, sondern auch den Änderungen in der Maschinerie der Wollfabrik, infolge deren eine Durchschnittsreduktion von 70 Halbzeitlern stattgefunden.“²⁰⁷

²⁰⁷ I.c. p. 109. Die rasche Verbesserung der Maschinerie während der Baumwollkrise erlaubte den englischen Fabrikanten gleich nach Beendigung des Amerikanischen Bürgerkriegs, im Umsehen den Weltmarkt wieder zu überfüllen. Die Gewebe wurden schon während der letzten 6 Monate von 1866 fast unverkäuflich. Damit fing die Konsignation der Waren nach China und Indien an, was den „glut“ natürlich noch intensiver machte. Anfang 1867 nahmen die Fabrikanten zu ihrem gewöhnlichen Ausfluchtsmittel Zuflucht, Herabsetzung des Arbeitslohns um 5%. Die Arbeiter widersetzten sich und erklärten, theoretisch ganz richtig, das einzige Heilmittel sei, kurze Zeit, 4 Tage per Woche, zu arbeiten. Nach

15.5. Strife between Worker and Machine

of industry had to make up their minds to short time, with reduced wages in some places, and in others without.

437:2–438:2 The following table shows the total result of the mechanical improvements in the English cotton industry due to the American Civil War. NUMBER OF FACTORIES

	1857	1861	1868
--	------	------	------

England and Wales	2,046	2,715	2,405
Scotland	152	163	131
Ireland	12	9	13

438:3 Hence, between 1861 and 1868, 338 cotton factories disappeared, in other words more productive machinery on a larger scale was concentrated in the hands of a smaller number of capitalists. The number of power-loom decreased by 20,663; but since their product increased in the same period, an improved loom must have yielded more than an old one. Lastly the number of spindles increased by 1,612,541, while the number of operatives decreased by 50,505. The “temporary” misery inflicted on the workpeople by the cotton-crisis, was heightened, and from being temporary made permanent, by the rapid and persistent progress of machinery.

⇓ Machinery expressly introduced to break the resistance of workers, or to deliver the capitalists from the burden of their contract with the workers. Note that labor-cost are not really costs; and this is no longer cost-cutting but increasing the capitalists’ share at the expense of the workman’s share. Contradictions of machinery blurted out naively by Ure. (This is a new paragraph in French, and also in German—where the many quotes made many paragraphs anyway—, but not in English)

438:4/o But machinery not only acts as a competitor who gets the better of the workman, and is constantly on the point of making him superfluous. It is also a power inimical to him, and as such capital proclaims it from the roof tops and as such makes use of it. It is the most powerful weapon for repressing strikes, those periodical revolts of the working-class against the autocracy of capital.²⁰⁸ According to Gaskell, the steam-engine was from the very first an antago-

458:3/o Von 1861 bis 1868 verschwanden also 338 Baumwollfabriken; d.h., produktivere und großartigere Maschinerie konzentrierte sich in den Händen einer geringeren Zahl von Kapitalisten. Die Zahl der Dampfwebstühle nahm ab um 20 663; aber ihr Produkt hatte sich gleichzeitig vermehrt, so daß ein verbesserter Webstuhl jetzt mehr leistete als ein alter. Endlich die Spindelzahl wuchs um 1 612 541, während die Zahl der beschäftigten Arbeiter um 50 505 abnahm. Das „zeitweilige“ Elend, womit die Baumwollkrise die Arbeiter erdrückte, wurde also gesteigert und befestigt durch raschen und anhaltenden Fortschritt der Maschinerie.

459:1 Die Maschinerie wirkt jedoch nicht nur als übermächtiger Konkurrent, stets auf dem Sprung, den Lohnarbeiter „überflüssig“ zu machen. Als ihm feindliche Potenz wird sie laut und tendenziell vom Kapital proklamiert und gehandhabt. Sie wird das machtvollste Kriegsmittel zur Niederschlagung der periodischen Arbeiteraufstände, strikes usw. wider die Autokratie des Kapitals.²⁰⁸ Nach Gaskell war gleich die Dampfmaschine ein Antagonist der „Menschenkraft“, der

nist of human power, an antagonist that enabled the capitalist to tread under foot the growing claims of the workmen, who threatened the newly born factory system with a crisis.²⁰⁹ It would be possible to write quite a history of the inventions, made since 1830, for the sole purpose of supplying capital with weapons against the revolts of the working-class. At the head of these in importance, stands the self-acting mule, because it opened up a new epoch in the automatic system.²¹⁰

²⁰⁸ "The relation of master and man in the blown-flint bottle trades amounts to a chronic strike." Hence the impetus given to the manufacture of pressed glass, in which the chief operations are done by machinery. One firm in Newcastle, who formerly produced 350,000 lbs. of blown-flint glass, now produces in its place 3,000,500 lbs. of pressed glass. ("Ch. Empl. Comm., Fourth Rep.," 1865, pp. 262–263.)

²⁰⁹ Gaskell. "The Manufacturing Population of England," London, 1833, pp. 3, 4.

²¹⁰ W. Fairbairn discovered several very important applications of machinery to the construction of machines, in consequence of strikes in his own workshops.

439:1–2 Nasmyth, the inventor of the steam-hammer, gives the following evidence before the Trades' Union Commission, with regard to the improvements made by him in machinery and introduced in consequence of the wide-spread and long strikes of the engineers in 1851.

"The characteristic feature of our modern mechanical improvements, is the introduction of self-acting tool machinery. What every mechanical workman has now to do, and what every boy can do, is not to work himself but to superintend the beautiful labor of the machine. The whole class of workmen that depend exclusively on their skill, is now done away with. Formerly, I employed four boys to every mechanic. Thanks to these new mechanical combinations, I have reduced the number of grown-up men from 1,500 to 750. The result was a considerable increase in my profits."

den Kapitalisten befähigte, die steigenden Ansprüche der Arbeiter niederzuschmettern, die das beginnende Fabrikssystem zur Krise zu treiben drohten.²⁰⁹ Man könnte eine ganze Geschichte der Erfindungen seit 1830 schreiben, die bloß als Kriegsmittel des Kapitals wider Arbeiteremeuten ins Leben traten. Wir erinnern vor allem an die selfacting mule, weil sie eine neue Epoche des automatischen Systems eröffnet.²¹⁰

²⁰⁸ „Das Verhältnis zwischen Meistern und Händen in den Flint- und Flaschenglas-Bläsereien ist ein chronischer strike.“ Daher der Aufschwung der Manufaktur des gepreßten Glases, wo die Hauptoperationen durch Maschinerie ausgeführt werden. Eine Firma bei Newcastle, die früher jährlich 350 000 Pfund geblasenes Flintglas produzierte, produziert jetzt statt dessen 3 000 500 Pfund gepreßtes Glas. („Ch. Empl. Comm. IV. Rep.“, 1865, p. 272, 263.)

²⁰⁹ Gaskell, „The Manufacturing Population of England“, Lond. 1833, p. 11, 12.

²¹⁰ Einige sehr bedeutende Anwendungen von Maschinen zum Maschinenbau erfand Herr Fairbairn infolge von strikes in seiner eignen Maschinenfabrik.

459:2–3 In seiner Aussage vor der Trades Unions Commission berichtet Nasmyth, der Erfinder des Dampfhammers, wie folgt über die Verbeßrungen der Maschinerie, die er einführte infolge des großen und langen strikes der Maschinenarbeiter 1851:

„Der bezeichnende Zug unsrer modernen mechanischen Verbeßrungen ist die Einführung selbsttätiger Werkzeugmaschinen. Was jetzt ein mechanischer Arbeiter zu tun hat, und was jeder Junge tun kann, ist nicht, selbst zu arbeiten, sondern die schöne Arbeit der Maschine zu überwachen. Die ganze von ihrer Geschicklichkeit ausschließlich abhängende Klasse von Arbeitern ist jetzt beseitigt. Früher beschäftigte ich vier Jungen auf einen Mechaniker. Dank diesen neuen mechanischen Kombinationen habe ich die Zahl der erwachsenen Männer von 1500 auf 750 reduziert. Die Folge war eine bedeutende Vermehrung meines

15. Machinery and Modern Industry

439:3–8 Ure says of a machine used in calico printing:

“At length capitalists sought deliverance from this intolerable bondage” [namely the, in their eyes, burdensome terms of their contracts with the workmen] “in the resources of science, and were speedily re-instated in their legitimate rule, that of the head over the inferior members.”

Speaking of an invention for dressing warps, whose immediate impetus was a strike:

“Then the combined malcontents, who fancied themselves impregnably entrenched behind the old lines of division of labor, found their flanks turned and their defences rendered useless by the new mechanical tactics, and were obliged to surrender at discretion.”

With regard to the invention of the self-acting mule, he says:

“A creation destined to restore order among the industrious classes ... This invention confirms the great doctrine already propounded, that when capital enlists science into her service, the refractory hand of labor will always be taught docility.”²¹¹

²¹¹ Ure, *l.c.*, pp. 368–370

Profits.”

460:1–6 Ure sagt von einer Maschine zum Farbendruck in den Kattundruckereien:

„Endlich suchten sich die Kapitalisten von dieser unerträglichen Sklaverei“ (nämlich den ihnen lästigen Kontraktsbedingungen der Arbeiter) „zu befreien, indem sie die Hilfsquellen der Wissenschaft anriefen, und bald waren sie reintegriert in ihre legitimen Rechte, die des Kopfes über die andern Körperteile.“

Er sagt von einer Erfindung zum Kettenschlichten, deren unmittelbarer Anlaß ein strike:

„Die Horde der Unzufriedenen, die sich hinter den alten Linien der Teilung der Arbeit unsiegbar verschanzt wähnte, sah sich so in die Flanke genommen und ihre Verteidigungsmittel vernichtet durch die moderne mechanische Taktik. Sie mußten sich auf Gnade und Ungnade ergeben.“

Er sagt von der Erfindung der selfacting mule:

„Sie war berufen, die Ordnung unter den industriellen Klassen wiederherzustellen ... Diese Erfindung bestätigt die von uns bereits entwickelte Doktrin, daß das Kapital, indem es die Wissenschaft in seinen Dienst preßt, stets die rebellische Hand der Arbeit zur Gelehrigkeit zwingt.“²¹¹

²¹¹ Ure, *l.c.* p. 367–370.

Question 1020 How was machinery in turn used to break the resistance of the workers?

At the end of the section Marx exposes the cynicism of the apologists of capital and the logical contradictions they commit:

Although Ure’s work appeared 30 years ago, at a time when the factory system was comparatively but little developed, it still perfectly expresses the spirit of the factory, not only by its undisguised cynicism, but also by the *naïveté* with which it blurts out the stupid contradictions of the capitalist brain. For instance, after propounding the “doctrine” stated above, that capital, with the aid of science taken into its pay,

“always reduces the refractory hand of labor to docility,” he grows indignant because

460:7–8 Obgleich Ures Schrift 1835 erschien, also zur Zeit eines relativ noch schwach entwickelten Fabriksystems, bleibt sie der klassische Ausdruck des Fabrikgeists, nicht nur wegen ihres offenerhitzigen Zynismus, sondern auch wegen der *Naïvetät*, womit er die gedankenlosen Widersprüche des Kapitalhirns ausplaudert. Nachdem er z.B. die „Doktrin“ entwickelt, daß das Kapital mit Hilfe der von ihm in Sold genommenen Wissenschaft

„stets die rebellische Hand der Arbeit zur Gelehrigkeit zwingt“, entrüstet er sich darüber,

15.5. Strife between Worker and Machine

“it (physico-mechanical science) has been accused of lending itself to the rich capitalist as an instrument for harassing the poor.”

After preaching a long sermon to show how advantageous the rapid development of machinery is to the working-classes, he warns them, that by their obstinacy and their strikes they hasten that development.

“Violent revulsions of this nature,” he says, “display short-sighted man in the contemptible character of a self-tormentor.”

A few pages before he states the contrary.

“Had it not been for the violent collisions and interruptions resulting from erroneous views among the factory operatives, the factory system would have been developed still more rapidly and beneficially for all concerned.”

Then he exclaims again:

“Fortunately for the state of society in the cotton districts of Great Britain, the improvements in machinery are gradual.” “It” (improvement in machinery) “is said to lower the rate of earnings of adults by displacing a portion of them, and thus rendering their number superabundant as compared with the demand for their labor. It certainly augments the demand for the labor of children and increases the rate of *their* wages.”

On the other hand, this same dispenser of consolation defends the lowness of the children’s wages on the ground that it prevents parents from sending their children at too early an age into the factory. The whole of his book is a vindication of a working-day of unrestricted length; that Parliament should forbid children of 13 years to be exhausted by working 12 hours a day, reminds his liberal soul of the darkest days of the middle ages. This does not prevent him from calling upon the factory operatives to thank Providence, who by means of machinery has given them the leisure to think of their “immortal interests.”²¹²

²¹² Ure, l.c., pp. 368, 7, 370, 280, 281, 321,

„daß man von gewisser Seite die mechanisch-physische Wissenschaft anklagt, sich dem Despotismus reicher Kapitalisten zu leihen und zum Unterdrückungsmittel der armen Klassen herzugeben“.

460:9–461:2 Nachdem er weit und breit gepredigt, wie vorteilhaft rasche Entwicklung der Maschinerie den Arbeitern, warnt er sie, daß sie durch ihre Widersetzlichkeit, strikes usw., die Entwicklung der Maschinerie beschleunigen.

„Derartige gewaltsame Revolten“, sagt er, „zeigen die menschliche Kurzsichtigkeit in ihrem verächtlichsten Charakter, dem Charakter eines Menschen, der sich zu seinem eignen Henker macht.“

Wenige Seiten vorher heißt es umgekehrt:

„Ohne die heftigen Kollisionen und Unterbrechungen, verursacht durch die irrigen Ansichten der Arbeiter, hätte sich das Fabrikssystem noch viel rascher entwickelt und viel nützlicher für alle interessierten Parteien.“

Dann ruft er wieder aus:

„Zum Glück für die Bevölkerung der Fabrikbezirke Großbritanniens finden die Verbesserungen in der Mechanik nur allmählich statt.“ „Mit Unrecht“, sagt er, „klagt man die Maschinen an, daß sie den Arbeitslohn der Erwachsenen vermindern, indem sie einen Teil derselben verdrängen, wodurch ihre Anzahl das Bedürfnis nach Arbeit übersteigt. Aber sie vermehren die Nachfrage nach Kinderarbeit und erhöhen damit *deren* Lohnrate.“

461:3 Derselbe Trostspender verteidigt andererseits die Niedrigkeit der Kinderlöhne damit, daß „sie die Eltern abhalten, ihre Kinder zu früh in die Fabriken zu schicken“. Sein ganzes Buch ist eine Apologie des unbeschränkten Arbeitstags, und es erinnert seine liberale Seele an die dunkelsten Zeiten des Mittelalters, wenn die Gesetzgebung verbietet, Kinder von 13 Jahren mehr als 12 Stunden per Tag abzurackern. Dies hält ihn nicht ab, die Fabrikarbeiter zu einem Dankgebet an die Vorsehung aufzufordern, die ihnen durch die Maschinerie „die Muße verschafft habe, über ihre unsterblichen Interessen nachzudenken“.²¹²

Term Paper Topic 1021 *Term Paper about chapter Fifteen, section 5: How did the character of the class struggle (both on the part of the capitalists and the workers) change with the introduction of machinery?*

15.6. The Theory of Compensation as Regards the Workpeople Displaced by Machinery

Questions about Section 6:

Question 1022 *Does the introduction of machinery automatically set free the capital to reemploy the workers displaced by this machinery (theory of compensation)?*

Question 1023 *How can machinery set the stage for the creation of new jobs (in a way which has nothing to do with the theory of compensation)?*

15.6.a. [Direct Compensation Impossible]

Only the first half of this section (until 445:1) discusses the theory of compensation. Whether the theory of compensation is correct or not depends on how it is defined. Marx insists on a narrow definition under which the theory of compensation is wrong.

- the first half of this section shows that *direct* compensation is impossible.
- In the second half, Marx discusses conditions under which compensation due to rebound is possible. This second part asks the general question where the workers displaced by machinery can be employed.

The first paragraph formulates the theory:

440:7/o James Mill, MacCulloch, Torrens, Senior, John Stuart Mill, and many other bourgeois political economists, insist that all machinery that displaces workmen, simultaneously and necessarily sets free an amount of capital adequate to employ the same identical workmen.²¹³

²¹³ Originally, Ricardo shared this opinion, but afterwards he expressly disclaimed it with the scientific impartiality and love of truth characteristic of him. See l.c., ch. xxxi. "On Machinery."

461:4 Eine ganze Reihe bürgerlicher Ökonomen, wie James Mill, MacCulloch, Torrens, Senior, J. St. Mill usw. behauptet, daß alle Maschinerie, die Arbeiter verdrängt, stets gleichzeitig und notwendig ein adäquates Kapital zur Beschäftigung derselben identischen Arbeiter freisetzt.²¹³

²¹³ Ricardo teilte ursprünglich diese Ansicht, widerrief sie aber später ausdrücklich mit seiner charakteristischen wissenschaftlichen Unbefangenheit und Wahrheitsliebe. Sieh l.c., ch. XX-XI „On Machinery“.

To check this theory, Marx goes through a series of examples of introduction of machines. He begins with a very simple static example, in which there is clearly no displacement of workers. Then he relaxes the assumptions, in order to see if these relaxations lead to the displacement of workers.

441:1 Suppose a capitalist to employ 100 workmen, at £30 a year each, in a wallpaper factory. The variable capital annually laid

461:5/o Man unterstelle, ein Kapitalist wende 100 Arbeiter an, z.B. in einer Tapetenmanufaktur, den Mann zu 30 Pfd.St.

out amounts, therefore, to £3,000. Suppose, also, that he discharges 50 of his workmen, and employs the remaining 50 with machinery that costs him £1,500. To simplify matters, we take no account of buildings, coal, etc. Further suppose that the raw material annually consumed costs £3,000, both before and after the change.²¹⁴

²¹⁴ *Nota bene.* My illustration is entirely on the lines of those given by the above named economists.

↑ Marx begins with a simple case, which is also the worst case in which the introduction of machinery is possible: instead of machinery producing more products more cheaply, this example machinery produces as much as the workers and costs as much as the workers. I.e., instead of £1,500 in labor costs the capitalists now has £1,500 in costs for machines. Apparently, according to the footnote, similar examples were discussed by the economists whom Marx is trying to refute.

Note that Marx does mention coal as an important ingredient.

↓ Now Marx's conclusions from this example:

Is any capital set free by this metamorphosis? Before the change, the total sum of £6,000 consisted half of constant, and half of variable capital. After the change it consists of £4,500 constant (£3,000 raw material and £1,500 machinery), and £1,500 variable capital. The variable capital, instead of being one half, is only one quarter, of the total capital. Instead of being set free, a part of the capital is here locked up in such a way as to cease to be exchanged against labor-power: variable has been changed into constant capital. Other things remaining unchanged, the capital of £6,000, can, in future, employ no more than 50 men.

jährlich. Das von ihm jährlich ausgelegte variable Kapital beträgt also 3000 Pfd. St. Er entlasse 50 Arbeiter und beschäftige die übrigbleibenden 50 mit einer Maschinerie, die ihm 1500 Pfd.St. kostet. Der Vereinfachung halber wird von Baulichkeiten, Kohlen usw. abgesehn. Man nimmt ferner an, das jährlich verzehrte Rohmaterial koste nach wie vor 3000 Pfd.St.²¹⁴

²¹⁴ NB, ich gebe die Illustration ganz in der Weise der obengenannten Ökonomen.

Ist durch diese Metamorphose irgendein Kapital „freigesetzt“? In der alten Betriebsweise bestand die ausgelegte Gesamtsumme von 6000 Pfd.St. halb aus konstantem und halb aus variablem Kapital. Sie besteht jetzt aus 4500 Pfd.St. (3000 Pfd.St. für Rohmaterial und 1500 Pfd.St. für Maschinerie) konstantem und 1500 Pfd.St. variablem Kapital. Statt der Hälfte bildet der variable oder in lebendige Arbeitskraft umgesetzte Kapitalteil nur noch 1/4 des Gesamtkapitals. Statt der Freisetzung findet hier Bindung von Kapital in einer Form statt, worin es aufhört, sich gegen Arbeitskraft auszutauschen, d.h. Verwandlung von variablem in konstantes Kapital. Das Kapital von 6000 Pfd.St. kann, unter sonst gleichbleibenden Umständen, jetzt niemals mehr als 50 Arbeiter beschäftigen.

This is the clearest example where capital is not set free in order to employ more workers, but the same amount of capital is advanced by the capitalist introducing the machinery as before, and this capital is advanced in such a way that fewer laborers are employed than before. Marx uses the phrase that instead of being set free to employ more workers, this capital is “bound” in a form in which it cannot employ more workers.

In order to get the result that there is no difference for the capitalist introducing the machine, the assumption must be here also that the machines last exactly one year, and Marx disregards the difference in turnover time for now, i.e., he assumes that the laborers were

15. Machinery and Modern Industry

paid in advance for the year, like machines.

↓ This brief sentence generalizes this example.

With each improvement in the machinery, it will employ fewer.

Mit jeder Verbeßerung der Maschinerie beschäftigt es weniger.

↑ The problem here is that Marx looks at the issue statically instead of dynamically. He does not have room in his model for a shift to a higher growth rate.

↓ If we have similar simplifying assumptions but assume conditions more favorable for the introduction of machinery, then some capital is set free, and this capital may employ some workers, but far fewer than those made redundant.

If the newly introduced machinery had cost less than did the labor-power and implements displaced by it, if, for instance, instead of costing £1,500, it had cost only £1,000, a variable capital of £1,000 would have been converted into constant capital, and locked up; and a capital of £500 would have been set free. The latter sum, supposing wages unchanged, would form a fund sufficient to employ about 16 out of the 50 men discharged; nay, less than 16, for, in order to be employed as capital, a part of this £500 must now become constant capital, thus leaving only the remainder to be laid out in labor-power.

Kostete die neu eingeführte Maschinerie weniger als die Summe der von ihr verdrängten Arbeitskraft und Arbeitswerkzeuge, also z.B. statt 1500 nur 1000 Pfd.St., so würde ein variables Kapital von 1000 Pfd.St. in konstantes verwandelt oder gebunden, während ein Kapital von 500 Pfd.St. freigesetzt würde. Letzteres, denselben Jahreslohn unterstellt, bildet einen Beschäftigungsfonds für ungefähr 16 Arbeiter, während 50 entlassen sind, ja für viel weniger als 16 Arbeiter, da die 500 Pfd.St. zu ihrer Verwandlung in Kapital wieder zum Teil in konstantes Kapital verwandelt werden müssen, also auch nur zum Teil in Arbeitskraft umgesetzt werden können.

↑ The above is a limited field of vision. Marx has only shown that the capital set free by the same capitalist who replaces workers with machines, if any, is not enough to reemploy these workers. ↓ Now he is looking at a broader subset of the economy. Marx is about to show that also the number of jobs created in the production of that machinery must be lower than the number of jobs replaced by the machinery.

441:2/o But, suppose, besides, that the making of the new machinery affords employment to a greater number of mechanics, can that be called compensation to the carpet-makers, thrown on the streets? At the best, its construction employs fewer men than its employment displaces. The sum of £1,500 that formerly represented the wages of the discharged carpet-makers, now represents in the shape of machinery: (1) the value of the means of production used in the construction of that machinery, (2) the wages of the mechanics employed in its construction, and (3) the surplus-value failing to the share of their “master.”

462:1 Indes, gesetzt auch, die Anfertigung der neuen Maschinerie beschäftige eine größere Anzahl Mechaniker; soll das eine Kompensation sein für die aufs Pflaster geworfnen Tapetenmacher? Im besten Fall beschäftigt ihre Anfertigung weniger Arbeiter, als ihre Anwendung verdrängt. Die Summe von 1500 Pfd.St., die nur den Arbeitslohn der entlassenen Tapetenmacher darstellte, stellt jetzt, in der Gestalt von Maschinerie, dar: 1. den Wert der zu ihrer Herstellung erforderlichen Produktionsmittel, 2. den Arbeitslohn der sie anfertigenden Mechaniker, 3. den ihrem „Meister“ zufallenden Mehrwert.

↑ Here the fact enters that the value of the machinery contains surplus-value and is therefore not simply reducible to wages (the constant capital entering the machines is in turn

reducible to surplus-value and wages, a fact which Marx does not mention here). If there were no surplus-value, a much smoother migration of the workers from the production of the product to the production of the machinery might seem possible. But then there would not be accumulation!

↓ Then Marx brings another argument: the machinery does not need to be replaced until its death.

Further, the machinery need not be renewed till it is worn out. Hence, in order to keep the increased number of mechanics in constant employment, one carpet manufacturer after another must displace workmen by machines.

Ferner: einmal fertig, braucht die Maschine nicht erneuert zu werden bis nach ihrem Tod. Um also die zusätzliche Anzahl Mechaniker dauernd zu beschäftigen, muß ein Tapetenfabrikant nach dem andern Arbeiter durch Maschinen verdrängen.

↑ To me, this does not seem to be an additional factor: the life length of the machinery is already taken into consideration when the decision is made to replace workers by machines because this lowers costs. What really should be on this place is that machinery increases the capital outlays, which is an additional obstacle to introducing machinery, even if the cost per piece of output is the same or lower! Or: the introduction of machinery may at first employ all workers set free; only later, when all those machines have been produced, will the unemployment become visible in the machine-building industries! But this is the general theme of the second half of this section. As a whole it seems that this section would deserve some better thinking-through. What if the lower prices elicit more demand?

Marx implies that this is all that *has to* happen. Of course there are *possibilities* that machinery lowers the price, increases production, and therefore more workers are needed to produce raw materials etc.—but this does not *have to* happen. Actually, this will be discussed at length in the second half of the section, Marx says that it “has nothing in common with the so-called theory of compensation”

But if you look at where these £1500 are spent after the capitalist spends them, you get to an enlightening insight what these words “setting free” really mean: the workers can no longer buy the means of subsistence, therefore the capital producing these means of subsistence is set free.

442:1 As a matter of fact the apologists do not mean this sort of setting free. They have in their minds the means of subsistence of the liberated work-people. It cannot be denied, in the above instance, that the machinery not only liberates 50 men, thus placing them at others’ disposal, but, at the same time, it withdraws from their consumption, and sets free, means of subsistence to the value of £1,500. The simple fact, by no means a new one, that machinery cuts off the workmen from their means of subsistence is, therefore, in economic parlance tantamount to this, that machinery liberates means of subsistence for the workman, or converts those means into capital for his employment. The mode of expression, you see, is everything. Nominibus mollire

462:2/o In der Tat meinen jene Apologeten auch nicht diese Art Freisetzung von Kapital. Sie meinen die Lebensmittel der freigesetzten Arbeiter. Es kann nicht geleugnet werden, daß im obigen Fall z.B. die Maschinerie nicht nur 50 Arbeiter freisetzt und dadurch „disponibel“ macht, sondern zugleich ihren Zusammenhang mit Lebensmitteln zum Wert von 1500 Pfd.St. aufhebt und so diese Lebensmittel „freisetzt“. Die einfache und keineswegs neue Tatsache, daß die Maschinerie den Arbeiter von Lebensmitteln freisetzt, lautet also ökonomisch, daß die Maschinerie Lebensmittel für den Arbeiter freisetzt oder in Kapital zu seiner Anwendung verwandelt. Man sieht, es kommt alles auf die Ausdrucksweise an. Nominibus mollire licet mala.

15. Machinery and Modern Industry

licet mala.

↑ This seems to be an important argument but I don't get it.

↓ Marx is taking a general equilibrium approach but not a dynamic approach.

442:2 This theory implies that the £1,500 worth of means of subsistence was capital that was being expanded by the labor of the 50 men discharged. That, consequently, this capital falls out of employment so soon as they commence their forced holidays, and never rests till it has found a fresh investment, where it can again be productively consumed by these same 50 men. That sooner or later, therefore, the capital and the workmen must come together again, and that, then, the compensation is complete. That the sufferings of the workmen displaced by machinery are therefore as transient as are the riches of this world.

↑ This is a daring re-formulation of the hypothesis, ↓ followed by an equally daring refutation:

442:3/o In relation to the discharged workmen, the £1,500 worth of means of subsistence never was capital. What really confronted them as capital, was the sum of £1,500 afterwards laid out in machinery. On looking closer it will be seen that this sum represented part of the carpets produced in a year by the 50 discharged men, which part they received as wages from their employer in money instead of in kind. With the carpets in the form of money, they bought means of subsistence to the value of £1,500. These means, therefore, were to them, not capital, but commodities, and they, as regards these commodities, were not wage-laborers, but buyers. The circumstance that they were "freed" by the machinery, from the means of purchase, changed them from buyers into non-buyers. Hence a lessened demand for those commodities—that is all.

↓ Now an important place about price adjustment in the short run and quantity adjustment in the long run. Is this relevant for the theory of competition?

If this diminution be not compensated by an increase from some other quarter, the market price of the commodities falls. If this state of things lasts for some time, and ex-

463:1 Nach dieser Theorie waren die Lebensmittel zum Wert von 1500 Pfd.St. ein durch die Arbeit der fünfzig entlassenen Arbeiter verwertetes Kapital. Dies Kapital verliert folglich seine Beschäftigung, sobald die fünfzig Feiertag bekommen, und hat nicht Ruh noch Rast, bis es eine neue „Anlage“ gefunden, worin besagte fünfzig es wieder produktiv konsumieren können. Früher oder später müssen also Kapital und Arbeiter sich wieder zusammenfinden, und dann ist die Kompensation da. Die Leiden der durch die Maschinerie verdrängten Arbeiter sind also ebenso vergänglich wie die Reichtümer dieser Welt.

463:2/o Die Lebensmittel zum Betrag von 1500 Pfd.St. standen den entlassenen Arbeitern niemals als Kapital gegenüber. Was ihnen als Kapital gegenüberstand, waren die jetzt in Maschinerie verwandelten 1500 Pfd.St. Näher betrachtet, repräsentierten diese 1500 Pfd.St. nur einen Teil der vermittelst der entlassenen 50 Arbeiter jährlich produzierten Tapeten, die sie in Geldform statt in natura von ihrem Anwender zum Lohn erhielten. Mit den in 1500 Pfd.St. verwandelten Tapeten kauften sie Lebensmittel zu demselben Betrag. Diese existierten für sie daher nicht als Kapital, sondern als Waren, und sie selbst existierten für diese Waren nicht als Lohnarbeiter, sondern als Käufer. Der Umstand, daß die Maschinerie sie von Kaufmitteln „freigesetzt“ hat, verwandelt sie aus Käufern in Nicht-Käufer. Daher verminderte Nachfrage für jene Waren. Voilà tout.

Wird diese verminderte Nachfrage nicht durch vermehrte Nachfrage von anderer Seite kompensiert, so sinkt der Marktpreis der Waren. Dauert dies länger und in größerem

tends, there follows a discharge of workmen employed in the production of these commodities. Some of the capital that was previously devoted to production of necessary means of subsistence, has to become reproduced in another form. While prices fall, and capital is being displaced, the laborers employed in the production of necessary means of subsistence are in their turn “freed” from a part of their wages.

⇓ Does Marx get his next result because he assumes profit but not growth?

Instead, therefore, of proving that, when machinery frees the workman from his means of subsistence, it simultaneously converts those means into capital for his further employment, our apologists, with their cut-and-dried law of supply and demand, prove, on the contrary, that machinery throws workmen on the streets, not only in that branch of production in which it is introduced, but also in those branches in which it is not introduced.

The next paragraph is not the start of something new, as the beginning sentence may suggest, but only the continuation of the discussion: In the preceding paragraph, it was discussed what happened to the means of subsistence, and now it is discussed what happens to the laborers. With the result that they do not have to find each other again. Is this argument similar to his refutation of Say’s law?

443:1/o The real facts, which are travestied by economic optimism, are as follows: The laborers, when driven out of the workshop by the machinery, are thrown upon the labor-market, and there add to the number of workmen at the disposal of the capitalists.

Economic optimism is the (unfounded) assumption that in a general equilibrium things will be righted. Accumulation chapter will tell what really happens to these workers:

In Part VII. of this book it will be seen that this effect of machinery, which, as we have seen, is represented to be a compensation to the working-class, is on the contrary a most frightful scourge. For the present I will only say this: The laborers that are thrown out of work in any branch of industry, can no doubt seek for employment in some other branch. If they find it, and thus renew the bond between them and the means of subsistence,

Umfange, so erfolgt ein Displacement der in der Produktion jener Waren beschäftigten Arbeiter. Ein Teil des Kapitals, das früher notwendige Lebensmittel produzierte, wird in anderer Form reproduziert. Während des Falls der Marktpreise und des Displacements von Kapital werden auch die in der Produktion der notwendigen Lebensmittel beschäftigten Arbeiter von einem Teil ihres Lohns „freigesetzt“.

Statt also zu beweisen, daß die Maschinerie durch die Freisetzung der Arbeiter von Lebensmitteln letztere gleichzeitig in Kapital zur Anwendung der ersten verwandelt, beweist der Herr Apologet mit dem probaten Gesetz von Nachfrage und Zufuhr umgekehrt, daß die Maschinerie nicht nur in dem Produktionszweig, worin sie eingeführt, sondern auch in den Produktionszweigen, worin sie nicht eingeführt wird, Arbeiter aufs Pflaster wirft.

464:1 Die wirklichen, vom ökonomischen Optimismus travestierten Tatsachen sind diese: Die von der Maschinerie verdrängten Arbeiter werden aus der Werkstatt hinaus auf den Arbeitsmarkt geworfen und vermehren dort die Zahl der schon für kapitalistische Ausbeutung disponiblen Arbeitskräfte.

Im siebenten Abschnitt wird sich zeigen, daß diese Wirkung der Maschinerie, die uns hier als eine Kompensation für die Arbeiterklasse dargestellt wird, den Arbeiter im Gegenteil als furchtbarste Geißel trifft. Hier nur dies: Die aus einem Industriezweig hinausgeworfenen Arbeiter können allerdings in irgendeinem andern Beschäftigung suchen. Finden sie solche, und knüpft sich damit das Band zwischen ihnen und den

15. Machinery and Modern Industry

this takes place only by the intermediary of a new and additional capital that is seeking investment; not at all by the intermediary of the capital that formerly employed them and was afterwards converted into machinery.

Now a dynamic point of view would be that the additional machinery produces ... Rpf can say something here.

And even should they find employment, what a poor look-out is theirs! Crippled as they are by division of labor, these poor devils are worth so little outside their old trade, that they cannot find admission into any industries, except a few of inferior kind, that are over-supplied with underpaid workmen.²¹⁵

²¹⁵ A disciple of Ricardo, in answer to the insipidities of J. B. Say, remarks on this point: "Where division of labor is well developed, the skill of the laborer is available only in that particular branch in which it has been acquired; he himself is a sort of machine. It does not therefore help matters one jot, to repeat in parrot fashion, that things have a tendency to find their level. On looking around us we cannot but see, that they are unable to find their level for a long time; and that when they do find it, the level is always lower than at the commencement of the process." ("An Inquiry into those Principles Respecting the Nature of Demand," etc., Lond. 1821, p. 72.)

↓ Now Marx talks explicitly about growth.

Further, every branch of industry attracts each year a new stream of men, who furnish a contingent from which to fill up vacancies, and to draw a supply for expansion. So soon as machinery sets free a part of the workmen employed in a given branch of industry, the reserve men are also diverted into new channels of employment, and become absorbed in other branches; meanwhile the original victims, during the period of transition, for the most part starve and perish.

Is this dual to the short term price long term quantity movement Marx mentioned in ...?

(FIXME: is this the right place for this comment?) ↑ In the preceding subdivision it was shown that the "apologists" obtain their result by making a correct observation: that laborers are set free of the means of subsistence. Then the "apologists" turn it around to say that the means of subsistence will re-establish the connection. ↓ As a conclusion, another more fundamental instance of such turning around is discussed: The apologists see correctly that

mit ihnen freigesetzten Lebensmitteln wieder, so geschieht dies vermittelt eines neuen, zuschüssigen Kapitals, das nach Anlage drängt, keineswegs aber vermittelt des schon früher funktionierenden und jetzt in Maschinerie verwandelten Kapitals.

Und selbst dann, wie geringe Aussicht haben sie! Verkrüppelt durch die Teilung der Arbeit, sind diese armen Teufel außerhalb ihres alten Arbeitskreises so wenig wert, daß sie nur in wenigen niedrigen und daher beständig überfüllten und unterbezahlten Arbeitszweigen Zugang finden.²¹⁵

²¹⁵ Ein Ricardianer bemerkt hierüber gegen die Fadaisen J. B. Says: „Bei entwickelter Teilung der Arbeit ist das Geschick der Arbeiter nur in dem besondern Zweig anwendbar, worin sie angelernt wurden; sie selbst sind eine Art von Maschinen. Es hilft daher absolut nichts, papageimäßig zu plappern, daß die Dinge eine Tendenz haben, ihr Niveau zu finden. Wir müssen um uns schauen und sehn, daß sie für lange Zeit ihr Niveau nicht finden können; daß, wenn sie es finden, das Niveau niedriger steht als beim Anfang des Prozesses.“ („An Inquiry into those Principles respecting the Nature of Demand etc.“, Lond. 1821, p. 72.)

Ferner attrahiert jeder Industriezweig jährlich einen neuen Menschenstrom, der ihm sein Kontingent zum regelmäßigen Ersatz und Wachstum liefert. Sobald die Maschinerie einen Teil der bisher in einem bestimmten Industriezweig beschäftigten Arbeiter freisetzt, wird auch die Ersatzmannschaft neu verteilt und in andern Arbeitszweigen absorbiert, während die ursprünglichen Opfer in der Übergangszeit größtenteils verkommen und verkümmern.

machinery in itself (“an sich” translated with “as such”) is not responsible for “setting free” the workman—but its capitalistic application is. Obviously again the in itself consideration of machinery leads us to see how machinery can be applied if we take away capitalism!

444:1/o It is an undoubted fact that machinery, as such, is not responsible for “setting free” the workman from the means of subsistence. It cheapens and increases production in that branch which it seizes on, and at first makes no change in the mass of the means of subsistence produced in other branches. Hence, after its introduction, the society possesses as much, if not more, of the necessities of life than before, for the laborers thrown out of work; and that quite apart from the enormous share of the annual produce wasted by the non-workers.

↓ Now a very general conclusion. I think *Pointe* is not point relied on, but this is their trick how they get the results they like:

And this is the point relied on by our apologetists! They pretend the contradictions and antagonisms inseparable from the capitalist employment of machinery do not exist, because they do not arise out of machinery, as such, but out of its capitalist employment!

↓ Very good essay how the capitalist application of machinery turns everything around what machines are in themselves:

Since therefore machinery, considered alone, shortens the hours of labor, but, when in the service of capital, lengthens them; since in itself it lightens labor, but when employed by capital, heightens the intensity of labor; since in itself it is a victory of man over the forces of Nature, but in the hands of capital, makes man the slave of those forces; since in itself it increases the wealth of the producers, but in the hands of capital, makes them paupers—for all these reasons and others besides, says the bourgeois economist without more ado, it is clear as noon-day that all these contradictions are a mere semblance of the reality, and that, as a matter of fact, they have neither an actual nor a theoretical existence.

↑ This is reminiscent of Kant’s Critique of Pure reason!

↓ Now Marx’s critique of parsimonious or succinct explanations (Occam’s razor): The most wuccinct explanation cannot do because we are dealing with *two* things, machinery

464:2/o Es ist eine unzweifelhafte Tatsache, daß die Maschinerie an sich nicht verantwortlich ist für die „Freisetzung“ der Arbeiter von Lebensmitteln. Sie verwohlfeilert und vermehrt das Produkt in dem Zweig, den sie ergreift, und läßt die in andren Industriezweigen produzierte Lebensmittelmasse zunächst unverändert. Nach wie vor ihrer Einführung besitzt die Gesellschaft also gleich viel oder mehr Lebensmittel für die deplacierten Arbeiter, ganz abgesehen von dem enormen Teil des jährlichen Produkts, der von Nichtarbeitern vergeudet wird.

Und dies ist die *Pointe* der ökonomischen Apologetik! Die von der kapitalistischen Anwendung der Maschinerie untrennbaren Widersprüche und Antagonismen existieren nicht, weil sie nicht aus der Maschinerie selbst erwachsen, sondern aus ihrer kapitalistischen Anwendung!

Da also die Maschinerie an sich betrachtet die Arbeitszeit verkürzt, während sie kapitalistisch angewandt den Arbeitstag verlängert, an sich die Arbeit erleichtert, kapitalistisch angewandt ihre Intensität steigert, an sich ein Sieg des Menschen über die Naturkraft ist, kapitalistisch angewandt den Menschen durch die Naturkraft unterjocht, an sich den Reichtum des Produzenten vermehrt, kapitalistisch angewandt ihn verpaupert usw., erklärt der bürliche Ökonom einfach, das Ansichbetrachten der Maschinerie beweise haarscharf, daß alle jene handgreiflichen Widersprüche bloßer Schein der gemeinen Wirklichkeit, aber an sich, also auch in der Theorie gar nicht vorhanden sind.

15. Machinery and Modern Industry

and capitalism.

Thus he saves himself from all further puzzling of the brain, and what is more, implicitly declares his opponent to be stupid enough to contend against, not the capitalistic employment of machinery, but machinery itself.

↓ They admit disadvantages of machinery. This does not make them critical because everything good also has its bad aspects. They do not connect the downsides of the capitalist application of machinery with capitalism.

445:1 No doubt he is far from denying that temporary inconvenience may result from the capitalist use of machinery. But where is the medal without its reverse! Any employment of machinery, except by capital, is to him an impossibility. Exploitation of the workman by the machine is therefore, with him, identical with exploitation of the machine by the workman. Whoever, therefore, exposes the real state of things in the capitalistic employment of machinery, is against its employment in any way, and is an enemy of social progress!²¹⁶

²¹⁶ MacCulloch, amongst others, is a past master in this pretentious cretinism. "If," he says, with the affected naïveté of a child of 8 years, "if it be advantageous, to develop the skill of the workman more and more, so that he is capable of producing, with the same or with a less quantity of labour, a constantly increasing quantity of commodities, it must also be advantageous, that he should avail himself of the help of such machinery as will assist him most effectively in the attainment of this result." (MacCulloch: "Princ. of Pol. Econ.," Lond. 1830, p. 166.)

↑ 8-year-old children may be naive, but Marx would probably not call the naïveté of an 8-year-old child "affected." But when MacCulloch mimics the naïveté of an 8-year-old, Marx calls this unauthentic naïveté "affected." It is not due to a lack of experience (as in an 8-year-old), but it betrays MacCulloch's decision not to learn from his knowledge and experience. This is one of many places where Marx is critical of denial without calling it such.

Exactly the reasoning of the celebrated Bill Sykes.

"Gentlemen of the jury, no doubt the throat of this commercial traveller has been cut. But that is not my fault, it is the fault of the knife. Must we, for such a temporary inconvenience,

Er spart sich so alles weitre Kopfzerbrechen undbürdet seinem Gegner obendrein die Dummheit auf, nicht die kapitalistische Anwendung der Maschinerie zu bekämpfen, sondern die Maschinerie selbst.

465:1–466:0 Keineswegs leugnet der bürgerliche Ökonom, daß dabei auch zeitweilige Unannehmlichkeiten herauskommen; aber wo gäbe es eine Medaille ohne Kehrseite! Eine andre als die kapitalistische Ausnutzung der Maschinerie ist für ihn unmöglich. Ausbeutung des Arbeiters durch die Maschine ist ihm also identisch mit Ausbeutung der Maschine durch den Arbeiter. Wer also enthüllt, wie es um die kapitalistische Anwendung der Maschinerie in Wirklichkeit bestellt ist, der will ihre Anwendung überhaupt nicht, der ist ein Gegner des sozialen Fortschritts!²¹⁶

²¹⁶ Ein Virtuose in diesem anmaßlichen Kretinismus ist u.a. MacCulloch. „Wenn es vorteilhaft ist“, sagt er z.B. mit der affektierten Naivität eines Kindes von 8 Jahren, „das Geschick des Arbeiters mehr und mehr zu entwickeln, so daß er fähig wird, ein stets wachsendes Warenquantum mit demselben oder geringerem Arbeitsquantum zu produzieren, so muß es auch vorteilhaft sein, daß er sich solcher Maschinerie zu seinem Beistande bediene, wie sie ihn am wirksamsten in der Erreichung dieses Resultats unterstützt.“ (MacCulloch, „Princ. of Pol. Econ.“, Lond. 1830, p. 182.)

Ganz das Raisonement des berühmten Gurgelschneiders Bill Sykes:

„Meine Herren Geschwornen, diesen Handlungsreisenden ist allerdings die Gurgel abgeschnitten worden. Diese Tatsache aber ist nicht meine Schuld, sie ist die Schuld des

abolish the use of the knife? Only consider! where would agriculture and trade be without the knife? Is it not as salutary in surgery, as it is knowing in anatomy? And in addition a willing help at the festive board? If you abolish the knife—you hurl us back into the depths of barbarism.”^{216a}

^{216a} “The inventor of the spinning machine has ruined India, a fact, however, that touches us but little.” A. Thiers: *De la propriété*.—M. Thiers here confounds the spinning machine with the power-loom, “a fact, however, that touches us but little.”

Messers. Sollen wir wegen solcher zeitweiligen Unannehmlichkeiten den Gebrauch des Messers abschaffen? Bedenken Sie ja! Wo wäre Ackerbau und Handwerk ohne Messer? Ist es nicht ebenso heilbringend in der Chirurgie wie gelehrt in der Anatomie? Dazu williger Gehilfe bei fröhlichem Mahl? Schaffen Sie das Messer ab—Sie schleudern uns zurück in die tiefste Barbarei.“^{216a}

^{216a} „Der Erfinder der Spinnmaschine hat Indien ruiniert, was uns indes wenig rührt.“ (A. Thiers, „*De la Propriété*“, [p. 275].) Herr Thiers verwechselt hier die Spinnmaschine mit dem mechanischen Webstuhl, „was uns indes wenig rührt“.

15.6.b. [Compensation through Growth is Possible]

The second half of the section goes over from static equilibrium theory to growth theory. Marx is arguing the following:

(1) If there is no technical progress, then growth is possible without producing things that cannot be sold as long as it is growth everywhere. This is Marx’s intuition of the von Neumann growth model, which indeed says the only kind of growth which is compatible with market clearing is exponential growth in all industries with the same growth rate. This is not developed here but in Marx’s famous musings about crises where he says that disproportionality in every industry is not disproportionality. Although this is not developed here, the reader should be aware of this in order to understand the things which are developed here.

(2) The next step is, and this is indeed developed here: even if there is technical progress, growth is possible. Now everything is produced with less labor, therefore labor is set free, but technical progress leads to new use-values and new spheres of production which can absorb this labor. Marx stresses that this is a different process than the compensation theory, i.e., this process is not proof that the compensation theory is correct.

(3) What about the raw materials? True to his belief that capitalism creates all the conditions for its functioning, Marx believes that capitalism can also create enough raw materials. For instance, the cotton needed for the textile-industry driven phase of the industrial revolution comes from slave labor in the US, and capitalism is responsible for the very fast growth of the number of slaves. The international trade relations created by capitalism also bring more raw materials to the UK.

Here is where Marx trips up. Production cannot create energy out of nothing, and it cannot create copper or iron etc out of nothing. There are many physical constraints which are possible barriers of growth, and Wrigley says that lack of energy has been an actual barrier to growth in the past. The industrial revolution was not choked off by a lack of energy only because of fossil fuels, and the cheap fossil energy also allowed the importation of raw materials from all over the world without this becoming too costly and therefore unprofitable. Marx comes tantalizingly close to discovering and discussing this crucial role of fossil fuels, but in the end he overlooks it.

Now let’s look at this argument paragraph by paragraph.

445:2/o Although machinery necessar- | 466:1 Obwohl die Maschinerie notwen-

15. Machinery and Modern Industry

ily throws men out of work in those industries into which it is introduced, yet it may, notwithstanding this, bring about an increase of employment in other industries.

↑ I.e., increasing mechanization of production is compatible with economic growth. ↓ Marx hastens to add that what he is about to discuss here (in the second half of the section) is not a refutation of the compensation theory. For this he re-formulates the compensation theory:

This effect, however, has nothing in common with the so-called theory of compensation.

dig Arbeiter verdrängt in den Arbeitszweigen, wo sie eingeführt wird, so kann sie dennoch eine Zunahme von Beschäftigung in andern Arbeitszweigen hervorrufen.

Diese Wirkung hat aber nichts gemein mit der sogenannten Kompensationstheorie.

Technical progress cannot lead to more jobs if output stays the same. Why not? Because more jobs mean more labor input, which would mean productivity has decreased instead of increased, prices have risen, therefore the innovation is not competitive. Marx tacitly bases his argument on the stylized fact that machine products are cheaper than hand-made products.

Since every article produced by a machine is cheaper than a similar article produced by hand, we deduce the following infallible law: If the total quantity of the article produced by machinery, be equal to the total quantity of the article previously produced by a handicraft or by manufacture, and now made by machinery, then the total labor expended is diminished. The new labor spent on the instruments of labor, on the machinery, on the coal, and so on, must necessarily be less than the labor displaced by the use of the machinery; otherwise the product of the machine would be as dear, or dearer, than the product of the manual labor.

Da jedes Maschinenprodukt, z.B. eine Elle Maschinengewebe, wohlfeiler ist als das von ihm verdrängte gleichartige Handprodukt, folgt als absolutes Gesetz: Bleibt das Gesamtquantum des maschinenmäßig produzierten Artikels gleich dem Gesamtquantum des von ihm ersetzten handwerks- oder manufakturmäßig produzierten Artikels, so vermindert sich die Gesamtsumme der angewandten Arbeit. Die etwa zur Produktion der Arbeitsmittel selbst, der Maschinerie, Kohle usw., erheischte Arbeitszunahme muß kleiner sein als die durch Anwendung der Maschinerie bewirkte Arbeitsabnahme. Das Maschinenprodukt wäre sonst ebenso teuer oder teurer als das Handprodukt.

↑ This principle holds, Marx calls this law “infallible” or in the German original “absolute.” The translation “infallible” is wrong because it transposes ontology into epistemology. Marx calls the law “absolute” because it is not relative to market conditions, it must hold as long as output remains the same. It would be interesting to see whether Marx’s intuition of an absolute law here can be backed up by a mathematical theorem. ↓ But in real life, output does *not* remain the same.

But, as a matter of fact, the total quantity of the articles produced by machinery with a diminished number of workmen, instead of remaining equal to, by far exceeds the total quantity of the hand-made articles that have been displaced. Suppose that 400,000 yards of cloth have been produced on power-looms by fewer weavers than could weave 100,000 yards by hand. In the quadrupled

Statt aber gleichzubleiben, wächst tatsächlich die Gesamtmasse des von einer verminderten Arbeiteranzahl produzierten Maschinenartikels weit über die Gesamtmasse des verdrängten Handwerksartikels. Gesetzt, 400 000 Ellen Maschinengewebe würden von weniger Arbeitern produziert als 100 000 Ellen Handgewebe. In dem vervierfachen Produkt steckt viermal mehr Rohmaterial.

product there lies four times as much raw material. Hence the production of raw material must be quadrupled. But as regards the instruments of labor, such as buildings, coal, machinery, and so on, it is different; the limit up to which the additional labor required for their production can increase, varies with the difference between the quantity of the machine-made article, and the quantity of the same article that the same number of workmen could make by hand.

↑ Marx says here that more output requires more raw materials. He does not share the modern illusion of de-materialization of production.

↓ Now Marx traces the effects which expansion of production in one sphere has on the other spheres.

446:1/o Hence, as the use of machinery extends in a given industry, the immediate effect is to increase production in the other industries that furnish the first with means of production. How far employment is thereby found for an increased number of men, depends, given the length of the working-day and the intensity of labor, on the composition of the capital employed, i.e., on the ratio of its constant to its variable component. This ratio, in its turn, varies considerably with the extent to which machinery has already seized on, or is then seizing on, those trades.

Note that Marx is talking about coal and metal mining. Both activities cannot be expanded at will, i.e., they are ultimately unsustainable, but Marx ignores this fact.

The number of the men condemned to work in coal and metal mines increased enormously owing to the progress of the English factory system; but during the last few decades this increase of number has been less rapid, owing to the use of new machinery in mining.²¹⁷ A new type of workman springs into life along with the machine, namely, its maker. We have already learnt that machinery has possessed itself even of this branch of production on a scale that grows greater every day.²¹⁸

²¹⁷ According to the census of 1861 (Vol. II., Lond., 1863), the number of people employed in coal mines in England and Wales, amounted to 246,613 of which 73,545 were under, and 173,067 were over 20 years. Of those under 20,

Die Produktion des Rohmaterials muß also vervierfacht werden. Was aber die verzehrten Arbeitsmittel, wie Baulichkeiten, Kohlen, Maschinen usw. betrifft, so ändert sich die Grenze, innerhalb deren die zu ihrer Produktion erheischte zusätzliche Arbeit wachsen kann, mit der Differenz zwischen der Masse des Maschinenprodukts und der Masse des von derselben Arbeitszahl herstellbaren Handprodukts.

446:2/o Mit der Ausdehnung des Maschinenbetriebs in einem Industriezweig steigert sich also zunächst die Produktion in den andren Zweigen, die ihm seine Produktionsmittel liefern. Wieweit dadurch die beschäftigte Arbeitermasse wächst, hängt, Länge des Arbeitstags und Intensität der Arbeit gegeben, von der Zusammensetzung der verwandten Kapitale ab, d.h. vom Verhältnis ihrer konstanten und variablen Bestandteile. Dies Verhältnis seinerseits variiert sehr mit dem Umfang, worin die Maschinerie jene Gewerbe selbst schon ergriffen hat oder ergreift.

Die Anzahl zu Kohlen- und Metallbergwerken verurteilter Menschen schwoll ungeheuer mit dem Fortschritt des englischen Maschinenwesens, obgleich ihr Anwachs in den letzten Dezennien durch Gebrauch neuer Maschinerie für den Bergbau verlangsamt wird.²¹⁷ Eine neue Arbeiterart springt mit der Maschine ins Leben, ihr Produzent. Wir wissen bereits, daß der Maschinenbetrieb sich dieses Produktionszweigs selbst auf stes massenhafterer Stufenleiter bemächtigt.²¹⁸

²¹⁷ Nach dem Zensus von 1861 (Vol. II, Lond. 1863) betrug die Zahl der in den Kohlenbergwerken von England und Wales beschäftigten Arbeiter 246 613, wovon 73 546 unter und 173 067 über 20 Jahre. Zur ersten Rubrik gehören 835

15. Machinery and Modern Industry

835 were between 5 and 10 years, 30,701 between 10 and 15 years, 42,010 between 15 and 19 years. The number employed in iron, copper, lead, tin, and other mines of every description, was 319,222.

²¹⁸ In England and Wales, in 1861, there were employed in making machinery, 60,807 persons, including the masters and their clerks, etc., also all agents and business people connected with this industry, but excluding the makers of small machines, such as sewing-machines, etc., as also the makers of the operative parts of machines, such as spindles. The total number of civil engineers amounted to 3,329.

Link cotton—slavery and wool—depopulation of Ireland.

As to raw material,²¹⁹ there is not the least doubt that the rapid strides of cotton spinning, not only pushed on with tropical luxuriance the growth of cotton in the United States, and with it the African slave trade, but also made the breeding of slaves the chief business of the border slave-states. When, in 1790, the first census of slaves was taken in the United States, their number was 697,000; in 1861 it had nearly reached four millions.

↑ Clearly, without capitalism, slavery would not have increased so much. But Hans thinks that the ability of slavery to increase so quickly also enabled capitalist growth.

On the other hand, it is no less certain that the rise of the English woollen factories, together with the gradual conversion of arable land into sheep pasture, brought about the superfluity of agricultural laborers that led to their being driven in masses into the towns. Ireland, having during the last twenty years reduced its population by nearly one half, is at this moment undergoing the process of still further reducing the number of its inhabitants, so as exactly to suit the requirements of its landlords and of the English woollen manufacturers.

²¹⁹ Since iron is one of the most important raw materials; let me here state that, in 1861, there were in England and Wales 125,771 operative iron founders, of whom 123,430 were main 2,341 females. Of the former 30,810 were under, and 92,620 over 20 years.

↓ Coal?

fünf- bis zehnjährige, 30 701 zehn- bis fünfzehn-jährige, 42 010 fünfzehn- bis neunzehnjährige. Die Zahl der in Eisen-, Kupfer-, Blei-, Zinn- und allen andren Metallminen Beschäftigten: 319 222.

²¹⁸ In England und Wales 1861 in der Produktion von Maschinerie beschäftigt: 60 807 Personen, eingezählt die Fabrikanten samt ihren Kommiss usw., ditto alle Agenten und Handelsleute in diesem Fach. Ausgeschlossen dagegen die Produzenten kleinerer Maschinen, wie Nähmaschinen usw., ebenso die Produzenten der Werkzeuge für die Arbeitsmaschinen, wie Spindeln usw. Zahl sämtlicher Zivilingenieure betrug 3329.

Was ferner das Rohmaterial betrifft,²¹⁹ so unterliegt es z.B. keinem Zweifel, daß der Sturmarsch der Baumwollspinnerei den Baumwollbau der Vereinigten Staaten und mit ihm nicht nur den afrikanischen Sklavenhandel treibhausmäßig förderte, sondern zugleich die Negerzucht zum Hauptgeschäft der sogenannten Grenz-Sklavenstaaten machte. Als 1790 der erste Sklavenzensus in den Vereinigten Staaten aufgenommen ward, betrug ihre Zahl 697 000, dagegen 1861 ungefähr vier Millionen.

Andrerseits ist es nicht minder gewiß, daß das Aufblühen der mechanischen Wollfabrik mit der progressiven Verwandlung von Ackerland in Schafweide die massenhafte Verjagung und „Überzähligmachung“ der Landarbeiter hervorrief. Irland macht noch in diesem Augenblick den Prozeß durch, seine seit 1845 beinahe um die Hälfte verminderte Bevölkerung noch weiter auf das dem Bedürfnis seiner Landlords und der englischen Herrn Wollfabrikanten exakt entsprechende Maß herabzudrücken.

²¹⁹ Da Eisen einer der wichtigsten Rohstoffe, so sei hier bemerkt, daß 1861 in England und Wales 125 771 Eisengießer, wovon 123 430 männlich, 2341 weiblich. Von den erstern 30 810 unter und 92 620 über 20 Jahre.

447:1 When machinery is applied to any of the preliminary or intermediate stages through which the object of labor has to pass on its way to completion, there is an increased yield of material in those stages, and simultaneously an increased demand for labor in the handicrafts or manufactures supplied by the produce of the machines. Spinning by machinery, for example, supplied yarn so cheaply and so abundantly that the hand-loom weavers were, at first, able to work full time without increased outlay. Their earnings accordingly rose.²²⁰ Hence a flow of people into the cotton-weaving trade, till at length the 800,000 weavers, called into existence by the Jenny, the throstle and the mule, were overwhelmed by the power-loom. So also, owing to the abundance of clothing materials produced by machinery, the number of tailors, seamstresses and needlewomen, went on increasing until the appearance of the sewing-machine.

²²⁰ "A family of four grown-up persons, with two children as winders, earned at the end of the last, and the beginning of the present century, by ten hours' daily labour, £4 a week. If the work was very pressing, they could earn more . . . Before that, they had always suffered from a deficient supply of yarn." (Gaskell, l.c., pp. 25–27.)

447:2/o In proportion as machinery, with the aid of a relatively small number of workpeople, increases the mass of raw materials, intermediate products, instruments of labor, etc., the working-up of these raw materials and intermediate products becomes split up into numberless branches; social production increases in diversity. The factory system carries the social division of labor immeasurably further than does manufacture, for it increases the productiveness of the industries it seizes upon, in a far higher degree.

Those consequences of machinery coming from the increase in the rate of surplus-value. Here the difference between productive and unproductive labor enters! Final effect of machinery is increase in unproductive class, as stated in first sentence of the chapter. However Marx lets himself be sidetracked here. He says that capitalist productivity increases do not benefit the workers. The other question which would be logical to ask, how continued in-

467:1/o Ergreift die Maschinerie Vor- und Zwischenstufen, welche ein Arbeitsgegenstand bis zu seiner letzten Form zu durchlaufen hat, so vermehrt sich mit dem Arbeitsmaterial die Arbeitsnachfrage in den noch handwerks- oder manufakturmäßig betriebenen Gewerken, worin das Maschinenfabrikat eingeht. Die Maschinenspinnerei z.B. lieferte das Garn so wohlfeil und so reichlich, daß die Handweber zunächst, ohne vermehrte Auslage, volle Zeit arbeiten konnten. So steig ihr Einkommen.²²⁰ Daher Menschenzufluß in die Baumwollweberei, bis schließlich die von Jenny, Throstle und Mule in England z.B. ins Leben gerufenen 800 000 Baumwollweber wieder vom Dampfwebstuhl erschlagen wurden. So wächst mit dem Überfluß der maschinenmäßig produzierten Kleidungsstoffe die Zahl der Schneider, Kleidermacherinnen, Näherinnen usw., bis die Nähmaschine erscheint.

²²⁰ „Eine Familie von 4 erwachsenen Personen (Baumwollwebern) mit zwei Kindern als winders gewann Ende des letzten und Anfang des gegenwärtigen Jahrhunderts 4 Pfd.St. per Woche bei 10stündiger Tagesarbeit; war die Arbeit sehr dringend, so konnten sie mehr verdienen . . . Früher hatten sie immer gelitten von mangelnder Garnzufuhr.“ (Gaskell, l.c. p. 34, 35.)

468:1 Entsprechend der steigenden Masse von Rohstoffen, Halbfabrikaten, Arbeitsinstrumenten usw., die der Maschinenbetrieb mit relativ geringer Arbeitszahl liefert, sondert sich die Bearbeitung dieser Rohstoffe und Halbfabrikate in zahllose Unterarten, wächst also die Mannigfaltigkeit der gesellschaftlichen Produktionszweige. Der Maschinenbetrieb treibt die gesellschaftliche Teilung der Arbeit ungleich weiter als die Manufaktur, weil er die Produktivkraft der von ihm ergriffnen Gewerbe in ungleich höherem Grad vermehrt.

15. Machinery and Modern Industry

creases in productivity are possible in the face of a static supply of raw materials in the earth, will be answered after this:

FIXME: connections of this with what Marx says in section 2 and section 7!

448:1 The immediate result of machinery is to augment surplus-value and the mass of products in which surplus-value is embodied. And, as the substances consumed by the capitalists and their dependents become more plentiful, so too do these orders of society. Their growing wealth, and the relatively diminished number of workmen required to produce the necessities of life beget, simultaneously with the rise of new and luxurious wants, the means of satisfying those wants. A larger portion of the produce of society is changed into surplus-produce, and a larger part of the surplus-produce is supplied for consumption in a multiplicity of refined shapes. In other words, the production of luxuries increases.²²¹

²²¹ F. Engels, in "Lage, etc.," points out the miserable condition of a large number of those who work on these very articles of luxury. See also numerous instances in the "Reports of the Children's Employment Commission."

↓ But now very interesting: some of this extra luxury product comes from overseas, and from there Marx makes the transition that luxury products are not the only thing imported; also raw materials come from overseas. This is for Marx another example how capitalism creates the conditions of its own existence: capitalism creates international trade relations (a modern word would be globalization), and these trade relations bring luxury goods to be consumed by the capitalists as well as raw materials needed for the ever expanding production.

The refined and varied forms of the products are also due to new relations with the markets of the world, relations that are created by Modern Industry. Not only are greater quantities of foreign articles of luxury exchanged for home products, but a greater mass of foreign raw materials, ingredients, and intermediate products, are used as means of production in the home industries. Owing to these relations with the markets of the world, the demand for labor increases in the carrying trades, which split up into numerous varieties.²²²

²²² In 1861, in England and Wales, there were

468:2/o Das nächste Resultat der Maschinerie ist, den Mehrwert und zugleich die Produktenmasse, worin er sich darstellt, also mit der Substanz, wovon die Kapitalistenklasse samt Anhang zehrt, diese Gesellschaftsschichten selbst zu vergrößern. Ihr wachsender Reichtum und die relativ beständig fallende Anzahl der zur Produktion der ersten Lebensmittel erheischten Arbeiter erzeugen mit neuem Luxusbedürfnis zugleich neue Mittel seiner Befriedigung. Ein größerer Teil des gesellschaftlichen Produkts verwandelt sich in Surplusprodukt und ein größerer Teil des Surplusprodukts wird in verfeinerten und vermännigfachen Formen reproduziert und verzehrt. In andren Worten: Die Luxusproduktion wächst.²²¹

²²¹ F. Engels in „Lage usw.“ weist den jämmerlichen Zustand eines großen Teils grade dieser Luxusarbeiter nach. Massenhafte neue Belege hierzu in den Berichten der „Child. Empl. Comm.“

Die Verfeinerung und Vermännigfachung der Produkte entspringt ebenso aus den neuen weltmarktlichen Beziehungen, welche die große Industrie schafft. Es werden nicht nur mehr ausländische Genußmittel gegen das heimische Produkt ausgetauscht, sondern es geht auch eine größere Masse fremder Rohstoffe, Ingredienzien, Halbfabrikate usw. als Produktionsmittel in die heimische Industrie ein. Mit diesen weltmarktlichen Beziehungen steigt die Arbeitsnachfrage in der Transportindustrie und spaltet sich letztere in zahlreiche neue Unterarten.²²²

²²² 1861 in England und Wales 94 665 in der

94,665 sailors in the merchant service.

Handelsmarine beschäftigte Seeleute.

But transportation is very dependent on energy. without fast and cheap transportation, all this specialization and trade would be impossible. See [Wri10].

New industries made possible by machinery. 3 of them in communication. Link between energy and communication/organization.

448:2/o The increase of the means of production and subsistence, accompanied by a relative diminution in the number of laborers, causes an increased demand for labor in making canals, docks, tunnels, bridges, and so on, works that can only bear fruit in the far future. Entirely new branches of production, creating new fields of labor, are also formed, as the direct result either of machinery or of the general industrial changes brought about by it.

469:1 Die Vermehrung von Produktions- und Lebensmitteln bei relativ abnehmender Arbeiterzahl treibt zur Ausdehnung der Arbeit in Industriezweigen, deren Produkte, wie Kanäle, Warendocks, Tunneln, Brücken usw., nur in fernrer Zukunft Früchte tragen. Es bilden sich, entweder direkt auf der Grundlage der Maschinerie, oder doch der ihr entsprechenden allgemeinen industriellen Umwälzung, ganz neue Produktionszweige und daher neue Arbeitsfelder.

Marx overlooks here too that modern industrial production not only makes these communications possible but also very much depends on cheap communication. ↓ They do not take much labor because they must be cheap, and they can only be cheap because of fossil fuels.

But the place occupied by these branches in the general production is, even in the most developed countries, far from important. The number of laborers that find employment in them is directly proportional to the demand, created by those industries, for the crudest form of manual labor. The chief industries of this kind are, at present, gas-works, telegraphs, photography, steam navigation, and railways. According to the census of 1861 for England and Wales, we find in the gas industry (gas-works, production of mechanical apparatus, servants of the gas companies, etc), 15,211 persons; in telegraphy, 2,399; in photography, 2,366; steam navigation, 3,570; and in railways, 70,599, of whom the unskilled “navvies,” more or less permanently employed, and the whole administrative and commercial staff, make up about 28,000. The total number of persons, therefore, employed in these five new industries amounts to 94,145.

Ihr Raumanteil an der Gesamtproduktion ist jedoch selbst in den meistentwickelten Ländern keineswegs bedeutend. Die Anzahl der von ihnen beschäftigten Arbeiter steigt im direkten Verhältnis, worin die Notwendigkeit rohster Handarbeit reproduziert wird. Als Hauptindustrien dieser Art kann man gegenwärtig Gaswerke, Telegraphie, Photographie, Dampfschiffahrt und Eisenbahnwesen betrachten. Der Zensus von 1861 (für England und Wales) ergibt in der Gasindustrie (Gaswerke, Produktion der mechanischen Apparate, Agenten der Gas-kompagnien usw.) 16 211 Personen, Telegraphie 2399, Photographie 2366, Dampfschiffdienst 3570 und Eisenbahnen 70 599, worunter ungefähr 28 000 mehr oder minder permanent beschäftigte „ungeschickte“ Erdarbeiter nebst dem ganzen administrativen und kommerziellen Personal. Also Gesamtzahl der Individuen in diesen fünf neuen Industrien 94 145.

↑ Also mainstream economists underestimate the importance of raw materials and energy for the economy because they are so cheap, they do not take up a large percentage of GNP.

449:1–450:1 Lastly, the extraordinary productiveness of modern industry, accompanied as it is by both a more extensive and a more intense exploitation of labor-power

469:2–470:2 Endlich erlaubt die außerordentlich erhöhte Produktivkraft in den Sphären der großen Industrie, begleitet, wie sie ist, von intensiv und extensiv gesteig-

in all other spheres of production, allows of the unproductive employment of a larger and larger part of the working-class, and the consequent reproduction, on a constantly extending scale, of the ancient domestic slaves under the name of a servant class, including men-servants, women-servants, lackeys, etc. According to the census of 1861, the population of England and Wales was 20,066,244; of these, 9,776,259 males, and 10,289,965 females. If we deduct from this population all who are too old or too young for work, all unproductive women, young persons and children, the “ideological” classes, such as government officials, priests, lawyers, soldiers, etc.; further, all who have no occupation but to consume the labor of others in the form of rent, interest, etc.; and, lastly, paupers, vagabonds, and criminals, there remain in round numbers eight millions of the two sexes of every age, including in that number every capitalist who is in any way engaged in industry, commerce, or finance. Among these 8 millions are:

- All the person described in 30698224 Personen

gter Ausbeutung der Arbeitskraft in allen übrigen Produktionssphären, einen stets größeren Teil der Arbeiterklasse unproduktiv zu verwenden und so namentlich die alten Haussklaven unter dem Namen der „dienenden Klasse“, wie Bediente, Mägde, Lakaien usw., stets massenhafter zu reproduzieren. Nach dem Zensus von 1861 zählte die Gesamtbevölkerung von England und Wales 20 066 224 Personen, wovon 9 776 259 männlich und 10 289 965 weiblich. Zieht man hiervon ab, was zu alt oder zu jung zur Arbeit, alle „unproduktiven“ Weiber, jungen Personen und Kinder, dann die „ideologischen“ Stände, wie Regierung, Pfaffen, Juristen, Militär usw., ferner alle, deren ausschließliches Geschäft der Verzehr fremder Arbeit in der Form von Grundrenten, Zins usw., endlich Paupers, Vagabunden, Verbrecher usw., so bleiben in rauher Zahl 8 Millionen beiderlei Geschlechts und der verschiedensten Altersstufen, mit Einschluß sämtlicher irgendwie in der Produktion, dem Handel, der Finanz usw. funktionierenden Kapitalisten. Von diesen 8 Mil-

²²³ Davon nur 177 596 männlichen Geschlechts über 13 Jahre.

968

15.7. Repulsion and Attraction of Laborers. Crises of the Cotton Industry

²²⁴ Of these, 30,501 are females.

²²⁵ Of these, 137,447 males. None are included in the 1,208,648 who do not serve in private houses.

^{225 ctd} Between 1861 and 1870 the number of male servants nearly doubled itself. It increased to 267,671. In the year 1847 there were 2,694 gamekeepers (for the landlords' preserves), in 1869 there were 4,921. The young servant girls in the houses of the London lower middle class are in common parlance called "slaveys."

²²⁴ Davon weiblichen Geschlechts 30 501.

²²⁵ Davon männlichen Geschlechts: 137 447. Ausgeschlossen von den 1 208 648 alles Personal, das nicht in Privathäusern dient.

^{225 ctd} Zusatz zur 2. Ausg. Von 1861 bis 1870 hat sich die Zahl männlicher Diener beinahe verdoppelt. Sie war angewachsen auf 267 671. Im Jahr 1847 gab es 2694 Wildhüter (für die aristokratischen Wildgehege), 1869 dagegen 4921.— Die jungen, beim Londoner kleinen Spießbürger dienenden Mädchen hießen in der Volkssprache „little slaveys“, kleine Sklaven.

Marx's point here is: the increase in productive labor in other industries is less than the increase in domestic servants. I.e., the compensation theory means that new jobs can indeed be found, namely, as a domestic slave for some rich fart. But Marx also showed that slavery in the colonies has increased, and here he should have included also the slave-labor or quasi slave-labor in colonial mines. What Marx overlooks is that transportation and communication are very energy-intensive, and that the globalization of production would not have been possible without cheap fossil fuels.

15.7. Repulsion and Attraction of Laborers with the Development of Machinery. Crises of the Cotton Industry

Questions about section 7

Question 1024 *Under what conditions will the introduction of machinery under capitalism ultimately lead to the employment of more workers than before?*

Question 1025 *What is the composition of capital?*

Question 1026 *Why does the growth of the workforce under capitalism not take place steadily but in the ebb and of the attraction and repulsion of workers by capital?*

Machinery "in itself" decreases labor and increases wealth. Capitalist machinery impoverishes the workers it displaces and increases labor overall. This increase is seen as the big advantage compensating for the misery of those displaced. Marx has only sarcasm for this.

450:2 Those political economists who have preserved their sanity admit that the introduction of new machinery has a baneful effect on the workmen in the old handicrafts and manufactures with which this machinery at first competes. Almost all of them bemoan the slavery of the factory operative. And what is the great trump-card that they play? That machinery, after the horrors of the period of introduction and development have subsided, instead of diminishing,

470:3/o Alle zurechnungsfähigen Repräsentanten der politischen Ökonomie geben zu, daß neue Einführung der Maschinerie pestartig wirkt auf die Arbeiter in den überlieferten Handwerken und Manufakturen, womit sie zunächst konkurriert. Fast alle beächnen die Sklaverei des Fabrikarbeiters. Und was ist der große Trumpf, den alle ausspielen? Daß die Maschinerie, nach den Schrecken ihrer Einführungs- und Entwicklungsperiode, die Arbeitssklaven in letzter

15. Machinery and Modern Industry

in the long run increases the number of the slaves of labor! Yes, Political Economy revels in the hideous theory, hideous to every “philanthropist” who believes in the eternal Nature-ordained necessity for capitalist production, that after a period of growth and transition, even its crowning success, the factory system based on machinery, grinds down more workpeople than on its first introduction it throws on the streets.²²⁶

²²⁶ Ganilh, on the contrary, considers the final result of the factory system to be an absolutely less number of operatives, at whose expense an increased number of “gens honnêtes” live and develop their well-known “perfectibilité perfectible.” Little as he understands the movement of production, at least he feels, that machinery must be a very fatal institution, if its introduction converts busy workmen into paupers, and its development calls more slaves of labor into existence than it has suppressed. It is not possible to bring out the cretinism of his standpoint, except by his own words: “Les classes condamnées à produire et à consommer diminuent, et les classes qui dirigent le travail, qui soulagent, consolent, et éclairent toute la population, se multiplient . . . et s’approprient tous les bienfaits qui résultent de la diminution des frais du travail, de l’abondance des productions, et du bon marché des consommations. Dans cette direction, l’espèce humaine s’élève aux plus hautes conceptions du génie, pénètre dans les profondeurs mystérieuses de la religion, établit les principes salutaires de la morale (which consists in ‘s’approprier tous les bienfaits,’ etc.), les lois tutélaires de la liberté (liberty of ‘les classes condamnées à produire?’) et du pouvoir, de l’obéissance et de la justice, du devoir et de la l’humanité.” For this twaddle, see “Des Systèmes d’Economie Politique, etc.,” Par M. Ch. Ganilh, 2ème ed., Paris, 1821, t. I, p. 224, and see p. 212.

↓ Statistics about steam engines:

451 It is true that in some cases, as we saw from instances of English worsted and silk factories, an extraordinary extension of the factory system may, at a cer-

Instanz vermehrt, statt sie schließlich zu vermindern! Ja, die politische Ökonomie jubelt sich aus in dem abscheulichen Theorem, abscheulich für jeden „Philanthropen“, der an die ewige Naturnotwendigkeit der kapitalistischen Produktionsweise glaubt, daß selbst die bereits auf Maschinenbetrieb begründete Fabrik, nach bestimmter Periode des Wachstums, nach kürzrer oder längerer „Übergangszeit“, mehr Arbeiter abplackt, als sie ursprünglich aufs Pflaster warf!²²⁶

²²⁶ Ganilh betrachtet dagegen als Schlußresultat des Maschinenbetriebs absolut verminderte Anzahl der Arbeitssklaven, auf deren Kosten dann eine vermehrte Anzahl der „gens honnêtes“ zehrt und ihre bekannte „perfectibilité perfectible“ entwickelt. So wenig er die Bewegung der Produktion versteht, fühlt er wenigstens, daß die Maschinerie eine sehr fatale Institution, wenn ihre Einführung beschäftigte Arbeiter in Paupers verwandelt, während ihre Entwicklung mehr Arbeitssklaven ins Leben ruft, als sie erschlagen hat. Den Kretinismus seines eignen Standpunkts kann man nur in seinen eignen Worten ausdrücken: „Die Klassen, die dazu verdammt sind, zu produzieren und zu konsumieren, vermindern sich, und die Klassen, die die Arbeit leiten, der ganzen Bevölkerung Linderung, Trost und Einsicht bringen, vermehren sich . . . und eignen sich alle Vorteile an, die sich aus den Verringerung der Arbeitskosten, dem Überfluß an Waren und dem niedrigen Preis der Konsumgüter ergeben. Unter dieser Leitung erhebt sich das Menschengeschlecht zu den höchsten Schöpfungen des Genies, durchdringt die geheimnisvollen Tiefen der Religion, stellt die heilsamen Grundsätze der Moral auf“ (die darin besteht „sich alle Vorteile anzueignen usw.“), „die Gesetze zum Schutze der Freiheit“ (der Freiheit für „die Klassen, die dazu verdammt sind, zu produzieren“?) „und der Macht, des Gehorsams und der Gerechtigkeit, der Pflicht und der Menschlichkeit.“ Dies Kauderwelsch in „Des Systèmes d’Économie Politique etc.“ Par M. Ch. Ganilh, 2ème éd., Paris 1821, t. I, p. 224, cf. ib p. 212.

471:1–472:1 Zwar zeigte sich schon an einigen Beispielen, z.B. den englischen Worsted- und Seidenfabriken, daß auf einem gewissen Entwicklungsgrad außer-

15.7. Repulsion and Attraction of Laborers. Crises of the Cotton Industry

tain stage of its development, be accompanied not only by a relative, but by an absolute decrease in the number of operatives employed. In the year 1860, when a special census of all the factories in the United Kingdom was taken by order of Parliament, the factories in those parts of Lancashire, Cheshire, and Yorkshire, included in the district of Mr. Baker, the factory inspector, numbered 652; 570 of these contained 85,622 power-loom, 6,819,146 spindles (exclusive of doubling spindles), employed 27,439 horse-power (steam), and 1,390 (water), and 94,119 persons. In the year 1865, the same factories contained, looms 95,163, spindles 7,025,031, had a steam-power of 28,925 horses, and a water-power of 1,445 horses, and employed 88,913 persons. Between 1860 and 1865, therefore, the increase in looms was 11%, in spindles 3%, and in engine-power 3%, while the number of persons employed decreased 5 1/2%.²²⁷ Between 1852 and 1862, considerable extension of the English woollen manufacture took place, while the number of hands employed in it remained almost stationary, showing

how greatly the introduction of new machines had superseded the labor of preceding periods.²²⁸

²²⁷ "Reports of Insp. of Fact., 31 Oct., 1865," p. 58, sq. At the same time, however, means of employment for an increased number of hands was ready in 110 new mills with 11,625 looms, 628,576 spindles and 2,695 total horse-power of steam and water (l.c.).

²²⁸ "Reports, etc., for 31 Oct., 1862," p. 79. At the end of 1871, Mr. A. Redgrave, the factory inspector, in a lecture given at Bradford, in the New Mechanics' Institution, said: "What has struck me for some time past is the altered appearance of the woollen factories. Formerly they were filled with women and children, now machinery seems to do all the work. At my asking for an explanation of this from a manufacturer, he gave me the following: 'Under the old system

ordentliche Ausdehnung von Fabrikzweigen mit nicht nur relativer, sondern absoluter Abnahme der angewandten Arbeiteranzahl verbunden sein kann. Im Jahr 1860, als ein Spezialzensus aller Fabriken des Vereinigten Königreichs auf Befehl des Parlaments aufgenommen ward, zählte die dem Fabrikinspektor *R. Baker* zugewiesene Abteilung der Fabrikdistrikte von Lancashire, Cheshire und Yorkshire 652 Fabriken; von diesen enthielten 570: Dampfwebstühle 85 622, Spindeln (mit Ausschluß der Dublierspindeln) 6 819 156, Pferdekraft in Dampfmaschinen 27 439, in Wasserrädern 1390, beschäftigte Personen 94 119. Im Jahr 1865 dagegen enthielten dieselben Fabriken: Webstühle 95 163, Spindeln 7 025 031, Pferdekraft in Dampfmaschinen 28 925, in Wasserrädern 1445, beschäftigte Personen 88 913. Von 1860 bis 1865 betrug also die Zunahme dieser Fabriken an Dampfwebstühlen 11%, an Spindeln 3%, an Dampfperdekraft 5%, während gleichzeitig die Zahl der beschäftigten Personen um 5,5% abnahm.²²⁷ Zwischen 1852 und 1862 fand beträchtliches Wachstum der englischen Wollfabrikation statt, während die Zahl der angewandten Arbeiter beinahe stationär blieb.

„Dies zeigt, in wie großem Maße neu eingeführte Maschinerie die Arbeit vorhergehender Perioden verdrängt hatte.“²²⁸

²²⁷ „Reports of Insp. of Fact., 31st Oct. 1865“, p. 58 sq. Gleichzeitig war aber auch schon die materielle Grundlage für Beschäftigung einer wachsenden Arbeiterzahl gegeben in 110 neuen Fabriken mit 11 625 Dampfwebstühlen, 628 576 Spindeln, 2695 Dampf- und Wasser-Pferdekraft. (l.c.)

²²⁸ „Reports etc. for 31st Oct. 1862“, p. 79. Zusatz zur 2. Ausg. Ende Dezember 1871 sagte Fabrikinspektor A. Redgrave in einem Vortrag, gehalten zu Bradford, in der „New Mechanics' Institution“: „Was mich seit einiger Zeit frappiert hat, war die veränderte Erscheinung der Wollfabriken. Früher waren sie mit Weibern und Kindern gefüllt, jetzt scheint die Maschinerie alles Werk zu tun. Auf Anfrage gab mir ein Fabrikant folgenden Aufschluß: Unter dem alten System

15. Machinery and Modern Industry

I employed 63 persons; after the introduction of improved machinery I reduced my hands to 33, and lately, in consequence of new and extensive alterations, I have been in a position to reduce those 33 to 13.”

In certain cases, the increase in the number of hands employed is only apparent; that is, it is not due to the extension of the factories already established, but to the gradual annexation of connected trades; for instance, the increase in power-looms, and in the hands employed by them between 1838 and 1856, was, in the cotton trade, simply owing to the extension of this branch of industry; but in the other trades to the application of steam-power to the carpet-loom, to the ribbon-loom, and to the linen-loom, which previously had been worked by the power of men.²²⁹ Hence the increase of the hands in these latter trades was merely a symptom of a diminution in the total number employed. Finally, we have considered this question entirely apart from the fact, that everywhere, except in the metal industries, young persons (under 18), and women and children form the preponderating element in the class of factory hands.

²²⁹ See “Reports, etc., 31 Oct., 1856,” p. 16.

452:2/o Nevertheless, in spite of the mass of hands actually displaced and virtually replaced by machinery, we can understand how the factory operatives, through the building of more mills and the extension of old ones in a given industry, may become more numerous than the manufacturing workmen and handicraftsman that have been displaced. Suppose, for example, that in the old mode of production, a capital of £500 is employed weekly, two-fifths being constant and three-fifths variable capital, *i.e.*, £200 being laid out in means of production, and £300, say £1 per man, in labor-power. On the introduction of machinery the composition of this capital becomes altered. We will suppose it to consist of four-fifths constant and one-fifth variable,

beschäftigte ich 63 Personen; nach Einführung verbesserter Maschinerie reduzierte ich meine Hände auf 33, und jüngst, infolge neuer großer Veränderungen war ich imstande, sie von 33 auf 13 zu reduzieren.“

472:1/o In empirisch gegebenen Fällen ist die Zunahme der beschäftigten Fabrikarbeiter oft nur scheinbar, d.h. nicht der Ausdehnung der bereits auf Maschinenbetrieb beruhenden Fabrik geschuldet, sondern der allmählichen Annexation von Nebenzweigen. Z.B. die Zunahme der mechanischen Webstühle und der durch sie beschäftigten Fabrikarbeiter von 1838–1858 war in der (britischen) Baumwollfabrik einfach der Ausdehnung dieses Geschäftszweigs geschuldet; in den andren Fabriken dagegen der Neuanwendung von Dampfkraft auf den Teppich-, Band-, Leinenwebstuhl usw., die vorher durch menschliche Muskelkraft getrieben wurden.²²⁹ Die Zunahme dieser Fabrikarbeiter war also nur der Ausdruck einer Abnahme in der Gesamtzahl der beschäftigten Arbeiter. Es wird hier endlich ganz davon abgesehen, daß überall, mit Ausnahme der Metallfabriken, jugendliche Arbeiter (unter 18 Jahren), Weiber und Kinder das weit vorwiegende Element des Fabrikpersonals bilden.

²²⁹ „Reports etc. for 31st Oct. 1856“, p. 16.

473:1/o Man begreift jedoch, trotz der vom Maschinenbetrieb faktisch verdrängten und virtuell ersetzten Arbeitermasse, wie mit seinem eignen Wachstum, ausgedrückt in vermehrter Anzahl von Fabriken derselben Art oder den erweiterten Dimensionen vorhandner Fabriken, die Fabrikarbeiter schließlich zahlreicher sein können als die von ihnen verdrängten Manufakturarbeiter oder Handwerker. Das wöhentlich angewandte Kapital von 500 Pfd.St. bestehe z.B. in der alten Betriebsweise aus 2/5 konstantem und 3/5 variablem Bestandteil, d.h. 200 Pfd.St. seien in Produktionsmitteln ausgelegt, 300 Pfd.St. in Arbeiterkraft, sage 1 Pfd.St. per Arbeiter. Mit dem Maschinenbetrieb verwandelt sich die Zusammensetzung des Gesamtkapitals. Es zerfällt jetzt

15.7. Repulsion and Attraction of Laborers. Crises of the Cotton Industry

which means that only £100 is now laid out in labor-power. Consequently, two-thirds of the workmen are discharged. If now the business extends, and the total capital employed grows to £1,500 under unchanged conditions, the number of operatives employed will increase to 300, just as many as before the introduction of the machinery. If the capital further grows to £2,000, 400 men will be employed, or one-third more than under the old system. Their numbers have, in point of fact, increased by 100, but relatively, i.e., in proportion to the total capital advanced, they have diminished by 800, for the £2,000 capital would, in the old state of things, have employed 1,200 instead of 400 men. Hence, a relative decrease in the number of hands is consistent with an actual increase. We assumed above that while the total capital increases, its composition remains the same, because the conditions of production remain constant. But we have already seen that, with every advance in the use of machinery, the constant component of capital, that part which consists of machinery, raw material, etc., increases, while the variable component, the part laid out in labor-power, decreases. We also know that in no, other system of production is improvement so continuous, and the composition of the capital employed so constantly changing as in the factory system. These changes are, however, continually interrupted by periods of rest, during which there is a mere quantitative extension of the factories on the existing technical basis. During such periods the operatives increase in number. Thus, in 1835, the total number of operatives in the cotton, woollen, worsted, flax, and silk factories of the United Kingdom was only 354,684; while in 1861 the number of the power-loom weavers alone (of both sexes and of all ages, from eight years upwards), amounted to 230,654. Certainly, this growth appears less important when we consider that in 1838 the hand-loom weavers with their families still numbered 800,000,²³⁰ not to mention

z.B. in $\frac{4}{5}$ konstanten und $\frac{1}{5}$ variablen Bestandteil, oder es werden nur noch 100 Pfd.St. in Arbeitskraft ausgelegt. Zwei Drittel der früher beschäftigten Arbeiter werden also entlassen. Dehnt sich dieser Fabrikbetrieb aus und wächst bei sonst gleichbleibenden Produktionsbedingungen das angewandte Gesamtkapital von 500 auf 1500, so werden jetzt 300 Arbeiter beschäftigt, so viele wie vor der industriellen Revolution. Wäst das angewandte Kapital weiter auf 2000, so werden 400 Arbeiter beschäftigt, also $\frac{1}{3}$ mehr als mit der alten Betriebsweise. Absolut ist die angewandte Arbeiterzahl um 100 gestiegen, relativ, d.h. im Verhältnis zum vorgeschossenen Gesamtkapital, ist sie um 800 gefallen, denn das Kapital von 2000 Pfd.St. hätte in der alten Betriebsweise 1200 statt 400 Arbeiter beschäftigt. Relative Abnahme der beschäftigten Arbeiterzahl verträgt sich also mit ihrer absoluten Zunahme. Es wurde oben angenommen, daß mit dem Wachstum des Gesamtkapitals seine Zusammensetzung konstant bleibt, weil die Produktionsbedingungen. Man weiß aber bereits, daß mit jedem Fortschritt des Maschinenwesens der konstante, aus Maschinerie, Rohmaterial usw. bestehende Kapitalteil wächst, während der variable, in Arbeitskraft ausgelegte fällt, und man weiß zugleich, daß in keiner andren Betriebsweise die Verbeßrung so konstant, daher die Zusammensetzung des Gesamtkapitals so variabel ist. Dieser beständige Wechsel ist aber ebenso beständig unterbrochen durch Ruhepunkte und bloß quantitative Ausdehnung auf gegebner technischer Grundlage. Damit wächst die Anzahl der beschäftigten Arbeiter. So betrug die Anzahl aller Arbeiter in den Baumwoll-, Woll-, Worsted-, Flachs- und Seidenfabriken des Vereinigten Königreichs 1835 nur 354 684, während 1861 allein die Zahl der Dampfweber (beiderlei Geschlechts und der verschiedensten Altersstufen vom 8. Jahr an) 230 654 betrug. Allerdings erscheint dies Wachstum minder groß, wenn man erwägt, daß die britischen Handbaumwollweber mit den von ih-

15. Machinery and Modern Industry

those thrown out of work in Asia, and on the Continent of Europe.

²³⁰ “The sufferings of the hand-loom weavers were the subject of an inquiry by a Royal Commission, but although their distress was acknowledged and lamented, the amelioration of their condition was left, and probably necessarily so, to the chances and changes of time, which it may now be hoped” [20 years later!] “have nearly obliterated those miseries, and not improbably by the present great extension of the power-loom.” (“Rep. Insp. of Fact., 31 Oct., 1856,” p. 15.)

453:1 In the few remarks I have still to make on this point, I shall touch, in part purely factually, on relations to which our theoretical investigation has not yet lead us.

453:2/o So long as, in a given branch of industry, the factory system extends itself at the expense of the old handicrafts or of manufacture, the result is as sure as is the result of an encounter between an army furnished with breach-loaders, and one armed with bows and arrows. This first period, during which machinery conquers its field of action, is of decisive importance owing to the extraordinary profits that it helps to produce. These profits not only form a source of accelerated accumulation, but also attract into the favoured sphere of production a large part of the additional social capital that is being constantly created, and is ever on the look-out for new investments. The special advantages of this first period of fast and furious activity are felt in every branch of production that machinery invades. So soon, however, as the factory system has gained a certain breadth of footing and a definite degree of maturity, and, especially, so soon as its technical basis, machinery, is itself produced by machinery; so soon as coal mining and iron mining, the metal industries, and the means of transport have been revolutionised; so soon, in short, as the gen-

nen selbst beschäftigten Familien 1838 noch 800 000 zählten,²³⁰ ganz abgesehen von den in Asien und auf dem europäischen Kontinent verdrängten.

²³⁰ „Die Leiden der Handweber“ (von Baumwolle und mit Baumwolle gemischten Stoffen) „waren Gegenstand der Untersuchung durch eine königl. Kommission, aber obgleich ihr Elend anerkannt und bejammert wurde, überließ man die Verbeßrung (!) ihrer Lage dem Zufall und dem Wechsel der Zeit, und man darf hoffen, daß diese Leiden jetzt“ (20 Jahre später!) „beinahe (nearly) erloschen sind, wozu die jetzige große Ausdehnung der Dampfwebstühle aller Wahrscheinlichkeit nach beigetragen hat.“ „Rep. Insp. Fact., 31st Oct. 1856“, p. 15.)

474:1 In den wenigen Bemerkungen, die über diesen Punkt noch zu machen, berühren wir zum Teil rein tatsächlich Verhältnisse, wozu unsre theoretische Darstellung selbst noch nicht geführt hat.

474:2/o Solange sich der Maschinenbetrieb in einem Industriezweig auf Kosten des überlieferten Handwerks oder der Manufaktur ausdehnt, sind seine Erfolge so sicher, wie etwa der Erfolg einer mit dem Zündnadelgewehr bewaffneten Armee gegen eine Armee von Bogenschützen wäre. Diese erste Periode, worin die Maschine erst ihren Wirkungskreis erobert, ist entscheidend wichtig wegen der außerordentlichen Profite, die sie produzieren hilft. Diese bilden nicht nur an und für sich eine Quelle beschleunigter Akkumulation, sondern ziehen großen Teil des bestäg neugebildeten und nach neuer Anlage drängenden gesellschaftlichen Zusatzkapitals in die begünstigte Produktionssphäre. Die besondern Vorteil der ersten Sturm- und Drangperiode wiederholen sich beständig den Produktionszweigen, worin die Maschinerie neu eingeführt wird. Sobald aber das Fabrikwesen eine gewisse Breite des Daseins und bestimmten Reifegrad gewonnen hat, sobald namentlich seine eigne technische Grundlage, die Maschinerie, selbst wieder durch Maschinen produziert wird, sobald Kohlen- und Eisengewinnung wie die Verarbeitung der Metalle und

15.7. Repulsion and Attraction of Laborers. Crises of the Cotton Industry

eral conditions requisite for production by the modern industrial system have been established, this mode of production acquires an elasticity, a capacity for sudden extension by leaps and bounds that finds no hindrance except in the supply of raw material and in the disposal of the produce. On the one hand, the immediate effect of machinery is to increase the supply of raw material in the same way, for example, as the cotton gin augmented the production of cotton.²³¹ On the other hand, the cheapness of the articles produced by machinery, and the improved means of transport and communication furnish the weapons for conquering foreign markets. By ruining handicraft production in other countries, machinery forcibly converts them into fields for the supply of its raw material. In this way East India was compelled to produce cotton, wool, hemp, jute, and indigo for Great Britain.²³² By constantly making a part of the hands "superfluous," modern industry, in all countries where it has taken root, gives a spur to emigration and to the colonization of foreign lands, which are thereby converted into settlements for growing the raw material of the mother country; just as Australia, for example, was converted into a colony for growing wool.²³³ A new and international division of labor, a division suited to the requirements of the chief centres of modern industry springs up, and converts one part of the globe into a chiefly agricultural field of production, for supplying the other part which remains a chiefly industrial field. This revolution hangs together with radical changes in agriculture which we need not here further inquire into.²³⁴

²³¹ Other ways in which machinery affects the production of raw material will be mentioned in the third book.

²³⁴ The economic development of the United States is itself a product of European, more especially of English modern industry. In their present form (1866) the States must still be considered a European colony. [*Added in the 4th*

das Transportwesen revolutioniert, überhaupt die der großen Industrie entsprechenden allgemeinen Produktionsbedingungen hergestellt sind, erwirbt diese Betriebsweise eine Elastizität, eine plötzliche sprungweise Ausdehnungsfähigkeit, die nur an dem Rohmaterial und dem Absatzmarkt Schranken findet. Die Maschinerie bewirkt einerseits direkte Vermehrung des Rohmaterials, wie z.B. der cotton gin die Baumwollproduktion vermehrte.²³¹ Andererseits sind Wohlfeilheit des Maschinenprodukts und das umgewälzte Transport- und Kommunikationswesen Waffen zur Erobrung fremder Märkte. Durch den Ruin ihres handwerksmäßigen Produkts verwandelt der Maschinenbetrieb sie zwangsweise in Produktionsfelder seines Rohmaterials. So wurde Ostindien zur Produktion von Baumwolle, Wolle, Hanf, Jute, Indigo usw. für Großbritannien gezwungen.²³² Die beständige „Überzähligmachung“ der Arbeiter in den Ländern der großen Industrie befördert treibhausmäßige Auswanderung und Kolonisation fremder Länder, die sich in Pflanzstätten für das Rohmaterial des Mutterlands verwandeln, wie Australien z.B. in eine Pflanzstätte von Wolle.²³³ Es wird eine neue, den Hauptsitzen des Maschinenbetriebs entsprechende internationale Teilung der Arbeit geschaffen, die einen Teil des Erdballs in vorzugsweis agrikoles Produktionsfeld für den andern als vorzugsweis industrielles Produktionsfeld umwandelt. Diese Revolution hängt zusammen mit Umwälzungen in der Agrikultur, die hier noch nicht weiter zu erörtern sind.²³⁴

²³¹ Andre Methoden, wodurch die Maschinerie auf die Produktion des Rohmaterials einwirkt, werden im Dritten Buch erwähnt.

²³⁴ Die ökonomische Entwicklung der Vereinigten Staaten ist selbst ein Produkt der europäischen, näher englischen großen Industrie. In ihrer jetzigen Gestalt (1866) müssen sie stets noch als Kolonialland von Europa betrachtet

455:2/o The enormous power, inherent in the factory system, of expanding by jumps, and the dependence of that system on the markets of the world, necessarily beget feverish production, followed by over-filling of the markets, whereupon contraction of the markets brings on crippling of production. The life of modern industry becomes a series of periods of moderate activity, prosperity, over-production, crisis and stagnation. The uncertainty and instability to which machinery subjects the employment, and consequently the conditions of existence, of the operatives become normal, owing to these periodic changes of the industrial cycle. Except in the periods of prosperity, there rages between the capitalists the most furious combat for the share of each in the markets. This share is directly proportional to the cheapness of the product. Besides the rivalry that this struggle begets in the application of improved machinery for replacing labor-power, and of new methods of production, there also comes a time in every industrial cycle, when a forcible reduction of wages beneath the value of labor-power, is attempted for the purpose of cheapening commodities.²³⁵

²³⁵ In an appeal made in July, 1866, to the Trade Societies of England, by the shoemakers of Leicester, who had been thrown on the streets

476:2 Die ungeheure, stoßweise Ausdehnbarkeit des Fabrikwesens und seine Abhängigkeit vom Weltmarkt erzeugen notwendig fieberhafte Produktion und darauf folgende Überfüllung der Märkte, mit deren Kontraktion Lähmung eintritt. Das Leben der Industrie verwandelt sich in eine Reihenfolge von Perioden mittlerer Lebendigkeit, Prosperität, Überproduktion, Krise und Stagnation. Die Unsicherheit und Unstetigkeit, denen der Maschinenbetrieb die Beschäftigung und damit die Lebenslage des Arbeiters unterwirft, werden normal mit diesem Periodenwechsel des industriellen Zyklus. Die Zeiten der Prosperität abgerechnet, rast zwischen den Kapitalisten heftigster Kampf um ihren individuellen Raumanteil am Markt. Dieser Anteil steht in direktem Verhältnis zur Wohlfeilheit des Produkts. Außer der hierdurch erzeugten Rivalität im Gebrauch verbesserter, Arbeitskraft ersetzender Maschinerie und neuer Produktionsmethoden tritt jedesmal ein Punkt ein, wo Verwohlfeilerung der Ware durch gewaltsamen Druck des Arbeitslohnes unter den Wert der Arbeitskraft erstrebt wird.²³⁵

²³⁵ In einem Aufruf der von den Schuhfabrikanten zu Leicester durch einen „lock out“ auf Pflaster geworfenen Arbeiter an die „Trade Socie-

15. Machinery and Modern Industry

by a lock-out, it is stated: "Twenty years ago the Leicester shoe trade was revolutionised by the introduction of riveting in the place of stitching. At that time good wages could be earned. Great competition was shown between the different firms as to which could turn out the neatest article. Shortly afterwards, however a worse kind of competition sprang up, namely, that of underselling one another in the market. The injurious consequences soon manifested themselves in reductions of wages, and so sweepingly quick was the fall in the price of labor, that many firms now pay only one half of the original wages. And yet, though wages sink lower and lower, profits appear, with each alteration in the scale of wages, to increase." Even bad times are utilised by the manufacturers, for making exceptional profits by excessive lowering of wages, i.e., by a direct robbery of the laborer's means of subsistence. One example (it has reference to the crisis in the Coventry silk weaving): "From information I have received from manufacturers as well as workmen, there seems to be no doubt that wages have been reduced to a greater extent than either the competition of the foreign producers, or other circumstances have rendered necessary ... the majority of weavers are working at a reduction of 30 to 40 per cent. in their wages. A piece of ribbon for making which the weaver got 6s. or 7s. five years back, now only brings them 3s. 3d. or 3s. 6d.; other work is now priced at 2s. and 2s. 3d. which was formerly priced at 4s. and 4s. 3d. The reduction in wage seems to have been carried to a greater extent than is necessary for increasing demand. Indeed, the reduction in the cost of weaving, in the case of many descriptions of ribbons, has not been accompanied by any corresponding reduction in the selling price of the manufactured article." (Mr. F. D. Longe's Report, "Ch. Empl. Comm., V. Rep., 1866," p. 114, 1.)

457:1 A necessary condition, therefore, to the growth of the number of factory hands, is a proportionally much more rapid growth of the amount of capital invested in mills. This growth, however, is conditioned by the ebb and flow of the industrial cycle. It is, besides, constantly interrupted by the technical progress that at one time virtually supplies the place of new workmen, at another,

ties of England", Juli 1866, heißt es u.a.: „Seit etwa 20 Jahren wurde die Schuhmacherei in Leicester umgewälzt durch Einführung des Nietens statt des Nähens. Gute Löhne konnten damals verdient werden. Bald dehnte sich dies neue Geschäft sehr aus. Große Konkurrenz zeigte sich unter den verschiedenen Firmen, welche den geschmackvollsten Artikel liefern könne. Kurz nachher jedoch entsprang eine schlechte Art Konkurrenz, nämlich die, einander im Markt zu unterverkaufen (undersell). Die schädlichen Folgen offenbarten sich bald in Lohnherabsetzung, und so reißend schnell war der Fall im Preise der Arbeit, daß viele Firmen jetzt nur noch die Hälfte des ursprünglichen Lohns zahlen. Und dennoch, obgleich die Löhne tiefer und tiefer sinken, scheinen die Profite mit jeder Änderung des Arbeitstarifs zu wachsen.“—Selbst ungünstige Perioden der Industrie werden von den Fabrikanten benutzt, um durch übertriebene Lohnherabsetzung, d.h. direkten Diebstahl an den notwendigsten Lebensmitteln des Arbeiters, außerordentliche Profite zu machen. Ein Beispiel. Es handelt sich um die Krise in der Seidenweberei zu Coventry: „Aus Nachweisen, die ich sowohl von Fabrikanten als Arbeitern erhielt, folgt zweifelsohne, daß die Löhne in einem größeren Umfang verkürzt wurden, als die Konkurrenz ausländischer Produzenten oder andre Umstände ernötigten. Die Majorität der Weber arbeitet zu einer Lohnherabsetzung von 30 bis 40%. Ein Stück Band, wofür der Weber fünf Jahre früher 6 oder 7 sh. erhielt, bringt ihm jetzt nur 3 sh. 3 d. oder 3 sh. 6 d. ein; andre Arbeit, früher zu 4 sh. und 4 sh. 3 d. bezahlt, erhält jetzt nur 2 sh. oder 2 sh. 3 d. Die Lohnherabsetzung ist größer, als zum Stachel der Nachfrage erheischt ist. In der Tat, bei vielen Arten von Band war die Lohnherabsetzung nicht einmal begleitet von irgendeiner Herabsetzung im Preise des Artikels.“ (Bericht des Kommissärs F. D. Longe in „Ch. Emp. Comm., V. Rep. 1866“, p. 114, n. 1.)

477:1 Wachstum in der Anzahl der Fabrikarbeiter ist also bedingt durch proportionell viel rasches Wachstum des in den Fabriken angelegten Gesamtkapitals. Dieser Prozeß vollzieht sich aber nur innerhalb der Ebb- und Flutperioden des industriellen Zyklus. Er wird zudem stets unterbrochen durch den technischen Fortschritt, der Arbeiter bald virtuell ersetzt, bald faktisch ver-

15.7. *Repulsion and Attraction of Laborers. Crises of the Cotton Industry*

actually displaces old ones. This qualitative change in mechanical industry continually discharges hands from the factory, or shuts its doors against the fresh stream of recruits, while the purely quantitative extension of the factories absorbs not only the men thrown out of work, but also fresh contingents. The workpeople are thus continually both repelled and attracted, hustled from pillar to post, while, at the same time, constant changes take place in the sex, age, and skill of the levies.

457:2 The lot of the factory operatives will be best depicted by taking a rapid survey of the course of the English cotton industry.

458:1 From 1770 to 1815 this trade was depressed or stagnant for 5 years only. During this period of 45 years the English manufacturers had a monopoly of machinery and of the markets of the world. From 1815 to 1821 depression; 1822 and 1823 prosperity; 1824 abolition of the laws against Trades' Unions, great extension of factories everywhere; 1825 crisis; 1826 great misery and riots among the factory operatives; 1827 slight improvement; 1828 great increase in power-looms, and in exports; 1829 exports, especially to India, surpass all former years; 1830 glutted markets, great distress; 1831 to 1833 continued depression, the monopoly of the trade with India and China withdrawn from the, East India Company; 1834 great increase of factories and machinery, shortness of hands. The new poor law furthers the migration of agricultural laborers into the factory districts. The country districts swept of children. White slave trade; 1835 great prosperity, contemporaneous starvation of the hand-loom weavers; 1836 great prosperity; 1837 and 1838 depression and crisis; 1839 revival; 1840 great depression, riots, calling out of the military; 1841 and 1842 frightful suffering among the factory operatives; 1842 the manufacturers lock the hands out of the factories in order to enforce the repeal of the Corn Laws. The opera-

drängt. Dieser qualitative im Maschinenbetrieb entfernt beständig Arbeiter aus der Fabrik oder verschließt ihr Tor dem neuen Rekrutenstrom, während die bloß quantitative Ausdehnung der Fabriken neben den Herausgeworfnen frische Kontingente verschlingt. Die Arbeiter werden so fortwährend repelliert und attrahiert, hin- und hergeschleudert, und dies bei beständigem Wechsel in Geschlecht, Alter und Geschick der Angeworbnen.

477:2 Die Schicksale des Fabrikarbeiters werden am besten veranschaulicht durch raschen Überblick der Schicksale der englischen Baumwollindustrie.

477:3/o Von 1770 bis 1815 Baumwollindustrie gedrückt oder stagnant 5 Jahre. Während dieser ersten 45jährigen Periode besaßen die englischen Fabrikanten das Monopol der Maschinerie und des Weltmarkts. 1815 bis 1821 gedrückt, 1822 und 1823 prosperierend, 1824 Aufhebung der Kolalitions-gesetze, allgemeine große Ausdehnung der Fabriken, 1825 Krise; 1826 großes Elend und Aufstände unter den Baumwollarbeitern; 1827 leise Beßrung, 1828 großer Anwachs von Dampfwebstühlen und Ausfuhr; 1829 übergipfelt die Ausfuhr, besonders nach Indien, alle frühen Jahre; 1830 überfüllte Märkte, großer Notstand, 1831 bis 1833 fortdauernder Druck; der Handel nach Ostasien (Indien und China) wird dem Monopol der Ostindischen Kompanie entzogen. 1834 großes Wachstum von Fabriken und Maschinerie, Mangel an Händen. Das neue Armengesetz befördert die Wandrung der Landarbeiter in die Fabrikdistrikte. Fegung der ländlichen Graf-schaften von Kindern. Weißer Sklavenhandel. 1835 große Prosperität. Gleichzeitige Tothungrung der Baumwollhand-weber, 1836 große Prosperität. 1837 und 1838 gedrückter Zustand und Krise. 1839 Wiederaufleben. 1840 große Depression, Aufstände, Einschreiten des Militärs. 1841 und 1842 furchtbares Leiden der Fabrikar-

15. Machinery and Modern Industry

tives stream in thousands into the towns of Lancashire and Yorkshire, are driven back by the military, and their leaders brought to trial at Lancaster; 1843 great misery; 1844 revival; 1845 great prosperity; 1846 continued improvement at first, then reaction. Repeal of the Corn Laws; 1847 crisis, general reduction of wages by 10 and more per cent. in honour of the "big loaf"; 1848 continued depression; Manchester under military protection; 1849 revival; 1850 prosperity; 1851 falling prices, low wages, frequent strikes; 1852 improvement begins, strikes continue, the manufacturers threaten to import foreign hands; 1853 increasing exports. Strike for 8 months, and great misery at Preston; 1854 prosperity, glutted markets; 1855 news of failures stream in from the United States, Canada, and the Eastern markets; 1856 great prosperity; 1857 crisis; 1858 improvement; 1859 great prosperity, increase in factories; 1860 Zenith of the English cotton trade, the Indian, Australian, and other markets so glutted with goods that even in 1863 they had not absorbed the whole lot; the French Treaty of Commerce, enormous growth of factories and machinery; 1861 prosperity continues for a time, reaction, the American Civil War, cotton famine: 1862 to 1863 complete collapse.

beiter. 1842 schließen die Fabrikanten die Hände von den Fabriken aus, um den Widerruf der Korngesetze zu erzwingen. Die Arbeiter strömen zu vielen Tausenden nach Yorkshire, vom Militär zurückgetrieben, ihre Führer vor Gericht zu Lancaster gestellt. 1843 großes Elend. 1844 Wiederaufleben. 1845 große Prosperität. 1846 erst fortdauernder Aufschwung, dann Symptome der Reaktion. Widerruf der Korngesetze. 1847 Krise. Allgemeine Herabsetzung der Löhne um 10 und mehr Prozent zur Feier des „big loaf“. 1848 fortdauernder Druck. Manchester unter militärischem Schutz. 1849 Wiederaufleben. 1850 Prosperität. 1851 fallende Warenpreise, niedrige Löhne, häufige strikes. 1852 beginnende Verbeßrung. Fortdauer der strikes, Fabrikanten drohn mit Import fremder Arbeiter. 1853 steigende Ausfuhr. Achtmonatlicher strike und großes Elend zu Preston. 1854 Prosperität, Überfüllung der Märkte. 1855 Berichte von Bankerotten strömen ein aus den Vereinigten Staaten, Kanada, ostasiatischen Märkten. 1856 große Prosperität. 1857 Krise. 1858 Verbeßrung. 1859 große Prosperität, Zunahme der Fabriken. 1860 Zenit der englischen Baumwollindustrie. Indische, australische und andre Märkte so überführt, daß sie noch 1863 kaum den ganzen Quark absorbiert haben. Französischer Handelsvertrag. Enormes Wachstum von Fabriken und Maschinerie. 1861 Aufschwung dauert Zeitlang fort, Reaktion, Amerikanischer Bürgerkrieg, Baumwollnot. 1862 bis 1863 vollständiger Zusammenbruch.

Page 456 is the big table.

458:1–460:1 The history of the cotton famine is too characteristic to dispense with dwelling upon it for a moment. From the indications as to the condition of the markets of the world in 1860 and 1861, we see that the cotton famine came in the nick of time for the manufacturers, and was to some extent advantageous to them, a fact that was acknowledged in the reports of the Manchester Chamber of Commerce, proclaimed in

478:1–481:1 Die Geschichte der Baumwollnot ist zu charakteristisch, um nicht einen Augenblick dabei zu verweilen. Aus den Andeutungen der Zustände des Weltmarkts 1860 bis 1861 ersieht man, daß die Baumwollnot den Fabrikanten gelegen kam und zum Teil vorteilhaft war, eine Tatsache, anerkannt in Berichten der Manchester Handelskammer, im Parlament proklamiert von Palmerston und Derby, durch die Ereignisse

Parliament by Palmerston and Derby, and confirmed by events.²³⁶ No doubt, among the 2,887 cotton mills in the United Kingdom in 1861, there were many of small size. According to the report of Mr. A. Redgrave, out of the 2,109 mills included in his district, 392, or 19% employed less than ten horse-power each; 345, or 16% employed 10 H. P., and less than 20 H. P.; while 1,372 employed upwards of 20 H. P.²³⁷ The majority of the small mills were weaving sheds, built during the period of prosperity after 1858, for the most part by speculators, of whom one supplied the yam, another the machinery, a third the buildings, and were worked by men who had been overlookers, or by other persons of small means. These small manufacturers mostly went to the wall. The same fate would have overtaken them in the commercial crisis that was staved off only by the cotton famine. Although they formed one-third of the total number of manufacturers, yet their mills absorbed a much smaller part of the capital invested in the cotton trade. As to the ex-

bestätigt.²³⁶ Allerdings gab es 1861 unter den 2887 Baumwollfabriken des Vereinigten Köreichs viel kleine. Nach dem Bericht des Fabrikinspektors A. Redgrave, dessen Verwaltungsbezirk von jenen 2887 Fabriken 2109 einschließt, wendeten von letzteren 392 oder 19% nur unter 10 Dampf-Pferdekraft an, 345 oder 16% 10 und unter 20, 1372 dagegen 20 und mehr Pferdekraft.²³⁷ Die Mehrzahl der kleinen Fabriken waren Webereien, während der Prosperitätsperiode seit 1858 errichtet, meist durch Spekulant,en, wovon der eine das Garn, der andere die Maschinerie, der dritte die Baulichkeit lieferte, unter dem Betrieb ehemaliger overlookers oder anderer unbemittelter Leute. Diese kleinen Fabrikanten gingen meist unter. Dasselbe Schicksal hätte ihnen die durch das Baumwollpech verhinderte Handelskrise bereitet. Obgleich sie 1/3 der Fabrikantenzahl bildeten, absorbierten ihre Fabriken einen ungleich geringeren Teil des in der Baumwollindustrie angelegten Kapitals. Was den Umfang der Lähmung betrifft, so standen nach den authentischen Schätzun-

15. Machinery and Modern Industry

tent of the stoppage, it appears from authentic estimates, that in October 1862, 60.3% of the spindles, and 58% of the looms were standing. This refers to the cotton trade as a whole, and, of course, requires considerable modification for individual districts. Only very few mills worked full time (60 hours a week), the remainder worked at intervals. Even in those few cases where full time was worked, and at the customary rate of piece-wage, the weekly wages of the operatives necessarily shrank, owing to good cotton being replaced by bad, Sea Island by Egyptian (in fine spinning mills), American and Egyptian by Surat, and pure cotton by mixings of waste and Surat. The shorter fibre of the Surat cotton and its dirty condition, the greater fragility of the thread, the substitution of all sorts of heavy ingredients for flour in sizing the warps, all these lessened the speed of the machinery, or the number of the looms that could be superintended by one weaver, increased the labor caused by defects in the machinery, and reduced the piece-wage by reducing the mass of the product turned off. Where Surat cotton was used, the loss to the operatives when on full time, amounted to 20, 30, and more per cent. But besides this, the majority of the manufacturers reduced the rate of piece-wage by 5, 7 1/2, and 10 per cent. We can therefore conceive the situation of those hands who were employed for only 3, 3 1/2 or 4 days a week, or for only 6 hours a day. Even in 1863, after a comparative improvement had set in, the weekly wages of spinners and of weavers were 3s. 4d., 3s. 10d., 4s. 6d. and 5s. 1d.²³⁸ Even in this miserable state of things, however, the inventive spirit of the master never stood still, but was exercised in making deductions from wages. These were to some extent inflicted as a penalty for defects in the finished article that were really due to his bad cotton and to his unsuitable machinery. Moreover, where the manufacturer owned the cottages of the workpeople, he paid himself his rents by deducting the amount from these miserable Wages. Mr.

gen im Oktober 1862 60,3% der Spindeln und 58% der Webstühle still. Dies bezieht sich auf den ganzen Industriezweig und war natürlich sehr modifiziert in den einzelnen Distrikten. Nur sehr wenige Fabriken arbeiteten volle Zeit (60 Stunden per Woche), die übrigen mit Unterbrechungen. Selbst für die wenigen Arbeiter, die volle Zeit und zu dem gewohnten Stücklohn beschäftigt, schmälerte sich notwendig der Wochenlohn infolge der Ersetzung besser Baumwolle durch schlechte, der Sea Island durch ägyptische (in Feinspinnereien), amerikanischer und ägyptischer durch Surat (ostindisch) und reiner Baumwolle durch Mischungen von Baumwollabfall mit Surat. Die kürzere Fiber der Suratbaumwolle, ihre schmutzige Beschaffenheit, die größere Brüchigkeit der Fäden, der Ersatz des Mehls durch alle Art schwerer Ingredienzien beim Schlichten des Kettengarns usw. verminderten die Geschwindigkeit der Maschinerie oder die Zahl der Webstühle, die ein Weber überwachen konnte, vermehrten die Arbeit mit den Irrtümern der Maschine und beschränkten mit der Produktenmasse den Stücklohn. Beim Gebrauch von Surat und mit voller Beschäftigung belief sich der Verlust des Arbeiters auf 20, 30 und mehr Prozent. Die Mehrzahl der Fabrikanten setzte aber auch die Rate des Stücklohns um 5, 7 1/2 und 10 Prozent herab. Man begreift daher die Lage der nur 3, 3 1/2, 4 Tage wöchentlich oder nur 6 Stunden per Tag Beschäftigten. Nachdem schon eine relative Verbeßrung eingetreten war, 1863, für Weber, Spinner usw. Wochenlöhne von 3 sh. 4 d., 3 sh. 10 d., 4 sh. 6 d., 5 sh. 1 d. usw.²³⁸ Selbst unter diesen qualvollen Zuständen stand der Erfindungsgeist des Fabrikanten in Lohnabzügen nicht still. Diese wurden zum Teil verhängt als Strafe für einer schlechten Baumwolle, unpassenden Maschinerie usw. geschuldeten Fehler des Machwerks. Wo der Fabrikant aber Eigentümer der cottages der Arbeiter, vergütete er sich selbst für Hausrente durch Abzüge vom nominellen Arbeitslohn. Fabrikinspektor Redgrave erzählt von selfac-

15.7. Repulsion and Attraction of Laborers. Crises of the Cotton Industry

Redgrave tells us of self-acting minders (operatives who manage a pair of self-acting mules)

“earning at the end of a fortnight’s full work 8s. 11d., and that from this sum was deducted the rent of the house, the manufacturer, however, returning half the rent as a gift. The minders took away the sum of 6s. 11d. In many places the self-acting minders ranged from 5s. to 9s. per week, and the weavers from 2s. to 6s. per week, during the latter part of 1862.”²³⁹

²³⁶ Conf “Reports of Insp. of Fact., 31st October, 1862,” p. 30.

²³⁷ l.c., p. 19.

²³⁸ “Rep. Insp. of Fact., 31st October, 1863,” pp. 41–45.

²³⁹ l.c., pp. 41–42

Even when working short time the rent was frequently deducted from the wages of the operatives.²⁴⁰ No wonder that in some parts of Lancashire a kind of famine fever broke out. But more characteristic than all this, was, the revolution that took place in the process of production at the expense of the workpeople. Experimenta in corpore vili, like those of anatomists on frogs, were formally made.

“Although,” says Mr. Redgrave, “I have given the actual earnings of the operatives in the several mills, it does not follow that they earn the same amount week by week. The operatives are subject to great fluctuation from the constant experimentalising of the manufacturers ... the earnings of the operatives rise and fall with the quality of the cotton mixings; sometimes they have been within 15 per cent. of former earnings, and then, in a week or two, they have fallen off from 50 to 60 per cent.”²⁴¹

²⁴⁰ l.c., p. 57.

²⁴¹ l.c., pp. 50–51.

These experiments were not made solely at the expense of the workman’s means of subsistence. His five senses also had to pay the penalty.

“The people who are employed in making up Surat cotton complain very much. They inform me, on opening the bales of cotton there

ting minders (sie überwachen ein Paar self-acting mules), die

„am Ende vierzehntägiger voller Arbeit 8 sh. 11 d. verdienten, und von dieser Summe wurde die Hausrente abgezogen, wovon der Fabrikant jedoch die Hälfte als Geschenk zurückgab, so daß die minders volle 6 sh. 11 d. nach Hause trugen. Der Wochenlohn der Weber rangierte von 2 sh. 6 d. aufwärts während der Schlußzeit von 1862.“²³⁹

²³⁶ Vgl. „Reports of Insp. of Fact. for 31st Oct. 1862“, p. 30.

²³⁸ „Reports of Fact. for 31st. Oct. 1863“, p. 41–45, 51.

²³⁹ „Reports etc. 31st Oct. 1863“, p. 41, 42.

481:2–3 Selbst dann wurde die Hausmiete von den Löhnen häufig abgezogen, wenn die Hände nur kurze Zeit arbeiteten.²⁴⁰ Kein Wunder, daß in einigen Teilen Lancashires eine Art Hungerpest ausbrach! Charakteristischer als alles dies aber war es, wie die Revolutionierung des Produktionsprozesses auf Kosten des Arbeiters vor sich ging. Es waren förmliche experimenta in corpore vili, wie die der Anatomen an Fröschen.

„Obgleich ich“, sagt Fabrikinspektor Redgrave, „die wirklichen Einnahmen der Arbeiter in vielen Fabriken gegeben habe, muß man nicht schließen, daß sie denselben Betrag Woche für Woche beziehn. Die Arbeiter erliegen den größten Schwankungen wegen des beständigen Experimentierens (experimentalizing) der Fabrikanten ... ihre Einkünfte steigen und fallen mit der Qualität des Baumwollgemischs; bald nähern sie sich um 15% ihren früheren Einnahmen, und die nächste oder zweitfolgende Woche fallen sie um 50 bis 60%.“²⁴¹

²⁴⁰ l.c. p. 57.

²⁴¹ l.c. p. 50, 51.

481:4–5 Diese Experimente wurden nicht nur auf Kosten der Lebensmittel der Arbeiter gemacht. Mit allen ihren fünf Sinnen hatten sie zu büßen.

„Die im Öffnen der Baumwolle Beschäftigten unterrichten mich, daß der unerträgliche Gestank sie übel macht ... Den in den Misch-

15. Machinery and Modern Industry

is an intolerable smell, which causes sickness ... In the mixing, scribbling and carding rooms, the dust and dirt which are disengaged, irritate the air passages, and give rise to cough and difficulty of breathing. A disease of the skin, no doubt from the irritation of the dirt contained in the Surat cotton, also prevails ... The fibre being so short, a great amount of size, both animal and vegetable, is used ... Bronchitis is more prevalent owing to the dust. Inflammatory sore throat is common, from the same cause. Sickness and dyspepsia are produced by the frequent breaking of the weft, when the weaver sucks the weft through the eye of the shuttle.”

On the other hand, the substitutes for flour were a Fortunatus’ purse to the manufacturers, by increasing the weight of the yarn. They caused “15 lbs. of raw material to weigh 26 lbs. after it was woven.”²⁴² In the Report of Inspectors of Factories for 30th April, 1864, we read as follows:

“The trade is availing itself of this resource at present to an extent which is even discreditable. I have heard on good authority of a cloth weighing 8 lbs. which was made of 5 1/4 lbs. cotton and 2 3/4 lbs. size; and of another cloth weighing 5 1/4 lbs., of which 2 lbs. was size. These were ordinary export shirtings. In cloths of other descriptions, as much as 50 per cent. size is sometimes added; so that a manufacturer may, and does truly boast, that he is getting rich by selling cloth for less money per pound than he paid for the mere yarn of which they are composed.”²⁴³

²⁴² l.c., pp. 62–63.

²⁴³ “Rep. etc., 30th April, 1864,” p. 27.

But the workpeople had to suffer, not only from the experiments of the manufacturers inside the mills, and of the municipalities outside, not only from reduced wages and absence of work, from want and from charity, and from the eulogistic speeches of lords and commons.

“Unfortunate females who, in consequence of the cotton famine, were at its commencement thrown out of employment, and have thereby become outcasts of society; and now, though

Scribbling- und Kardierräumen Angewandten irritiert der freigesetzte Staub und Schmutz alle Kopfoffnungen, erregt Husten und Schwierigkeit des Atmens ... Wegen der Kürze der Fiber wird dem Garn beim Schlichten eine große Menge Stoff zugesetzt, und zwar allerlei Substitute statt des früher gebrauchten Mehls. Daher Übelkeit und Dyspepsie der Weber. Bronchitis herrscht vor wegen des Staubs, ebenso Halsentzündung, ferner eine Hautkrankheit infolge der Irritation der Haut durch den im Surat enthaltenen Schmutz.“

482:1–2 Andererseits waren die Substitute des Mehls ein Fortunatussäckel für die Herrn Fabrikanten durch Vermehrung des Garngewichts. Sie machten „15 Pfund Rohmaterial, wenn verwebt, 20 Pfund wiegen“.²⁴² In dem Bericht der Fabrikinspektoren vom 30. April 1864 liest man:

„Die Industrie verwertet diese Hilfsquelle jetzt in wahrhaft unanständigem Maß. Ich weiß von guter Autorität, daß achtpfüßiges Geweb von 5 1/4 Pfund Baumwolle und 2 3/4 Pfund Schlichte gemacht wird. Ein andres 5 1/4 pfündiges Geweb enthielt zwei Pfund Schlichte. Dies waren ordinäre Shirtings für den Export. In andren Arten wurden manchmal 50% Schlichte zugesetzt, so daß Fabrikanten sich rühmen können und sich auch wirklich rühmen, daß sie reich werden durch den Verkauf von Geweben für weniger Geld, als das nominell in ihnen enthaltne Garn kostet.“²⁴³

²⁴² l.c. p. 62, 63.

²⁴³ „Reports etc. 30th April 1864“, p. 27.

482:3–4 Die Arbeiter aber hatten nicht nur unter den Experimenten der Fabrikanten in den Fabriken, und der Munizipalitäten außerhalb der Fabriken, nicht nur von Lohnherabsetzung und Arbeitslosigkeit, von Mangel und Almosen, von den Lobreden der Lords und Unterhändler zu leiden.

„Unglückliche Frauenzimmer, beschäftigungslos infolge der Baumwollnot, wurden Auswürflinge der Gesellschaft und blieben es ... Die Zahl junger Prostituierten hat mehr zugenom-

15.7. Repulsion and Attraction of Laborers. Crises of the Cotton Industry

trade has revived, and work is plentiful, continue members of that unfortunate class, and are likely to continue so. There are also in the borough more youthful prostitutes than I have known for the last 25 years.”²⁴⁴

²⁴⁴ From a letter of Mr. Harris, Chief Constable of Bolton, in “Rep. of Insp. of Fact., 31st October, 1865,” pp. 61–62.

461:6/o We find then, in the first 45 years of the English cotton trade, from 1770 to 1815, only 5 years of crisis and stagnation; but this was the period of monopoly. The second period from 1815 to 1863 counts, during its 48 years, only 20 years of revival and prosperity against 28 of depression and stagnation. Between 1815 and 1830 the competition with the continent of Europe and with the United States sets in. After 1833, the extension of the Asiatic markets is enforced by “destruction of the human race” (the wholesale extinction of Indian hand-loom weavers). After the repeal of the Corn Laws, from 1846 to 1863, there are 8 years of moderate activity and prosperity against 9 years of depression and stagnation. The condition of the adult male operatives, even during the years of prosperity, may be judged from the note subjoined.²⁴⁵

²⁴⁵ In an appeal, dated 1863, of the factory operatives of Lancashire, etc., for the purpose of forming a society for organised emigration, we find the following: “That a large emigration of factory workers is now absolutely essential to raise them from their present prostrate condition, few will deny; but to show that a continuous stream of emigration is at all times demanded, and, without which it is impossible for them to maintain their position in ordinary times, we beg to call attention to the subjoined facts:—In 1814 the official value of cotton goods exported was £17,665,378, whilst the real marketable value was £20,070,824. In 1858 the official value of cotton goods exported, was £182,221,681; but the real or marketable value was only £43,001,322, being a ten-fold quantity sold for little more than double the former price. To produce results so disadvantageous to the country generally, and to the factory workers in particular, several causes have co-operated,

men als seit den letzten 25 Jahren.“²⁴⁴

²⁴⁴ Aus Brief des Chief Constable Harris von Bolton in „Reports of Insp. of Fact., 31st Oct. 1865“, p. 61, 62.

482:5 Man findet also in den ersten 45 Jahren der britischen Baumwollindustrie, von 1770–1815, nur 5 Jahre der Krise und Stagnation, aber dies war die Periode ihres Weltmonopols. Die zweite, 48jährige Periode von 1815 bis 1863 zählt nur 20 Jahre des Wiederauflebens und der Prosperität auf 28 Jahre des Drucks und der Stagnation. Von 1815–1830 beginnt die Konkurrenz mit dem kontinentalen Europa und den Vereinigten Staaten. Seit 1833 wird Ausdehnung der asiatischen Märkte erzwungen durch „Zerstörung der Menschenrace“. Seit Widerruf der Korngesetze, von 1846 bis 1863, auf acht Jahre mittlerer Lebendigkeit und Prosperität 9 Jahre Druck und Stagnation. Die Lage der erwachsenen männlichen Baumwollarbeiter, selbst während der Prosperitätszeit, zu beurteilen aus der beigefügten Note.²⁴⁵

²⁴⁵ In einem Aufruf der Baumwollarbeiter, Frühling 1863, zur Bildung einer Emigrationsgesellschaft heißt es u.a.: „Daß eine große Emigration von Fabrikarbeitern jetzt absolut notwendig ist, werden nur wenige leugnen. Daß aber ein beständiger Emigrationsstrom zu allen Zeiten erheischt und es ohne denselben unmöglich ist, unsre Stellung unter gewöhnlichen Umständen, zeigen folgende Tatsachen: Im Jahr 1814 betrug der offizielle Wert (der nur Index der Quantität) der exportierten Baumwollgüter 17 665 378 Pfd. St., ihr wirklicher Marktwert 20 070 824 Pfd. St. Im Jahr 1858 betrug der offizielle Wert der exportierten Baumwollgüter 182 221 681 Pfd. St., ihr wirklicher Marktwert nur 43 001 322 Pfd. St., so daß Verzehnfachung der Quantität mehr als Verdopplung des Äquivalents bewirkte. Dies für das Land überhaupt und die Fabrikarbeiter im besondern so unheilvolle Resultat ward durch verschiedene zusammenwirkende Ursachen hervorgerufen. Eine der hervorstechendsten ist der

15. Machinery and Modern Industry

which, had circumstances permitted, we should have brought more prominently under your notice; suffice it for the present to say that the most obvious one is the constant redundancy of labor, without which a trade so ruinous in its effects never could have been carried on, and which requires a constantly extending market to save it from annihilation. Our cotton mills may be brought to a stand by the periodical stagnations of trade, which, under present arrangements, are as inevitable as death itself; but the human mind is constantly at work, and although we believe we are under the mark in stating that six millions of persons have left these shores during the last 25 years, yet, from the natural increase of population, and the displacement of labor to cheapen production, a large percentage of the male adults in the most prosperous times find it impossible to obtain work in factories on any conditions whatever." ("Reports of Insp. of Fact., 30th April 1863," pp. 51–52.) We shall, in a later chapter, see how our friends, the manufacturers, endeavoured, during the catastrophe in the cotton trade, to prevent by every means, including State interference, the emigration of the operatives.

beständige Überfluß von Arbeit, unentbehrlich für diesen Geschäftszweig, der, unter Strafe der Vernichtung, beständiger Expansion des Markts bedarf. Unsre Baumwollfabriken können stillgesetzt werden durch die periodische Stagnation des Handels, welche, unter gegenwärtiger Einrichtung, so unvermeidlich ist, wie der Tod selbst. Aber deswegen steht der menschliche Erfindungsgeist nicht still. Obgleich, niedrig angeschlagen, 6 Millionen dies Land während der letzten 25 Jahre verlassen haben, befindet sich dennoch infolge fortwährender Verdrängung der Arbeit, um das Produkt zu verwohlfeilern, ein großer Prozentsatz der erwachsenen Männer selbst in den Zeiten höchster Prosperität außerstand, Beschäftigung irgendeiner Art auf irgendwelche Bedingungen in den Fabriken zu finden." („Reports of Insp. of Fact., 30th April 1863“, p. 51, 52.) Man wird in einem spätern Kapitel sehn, wie die Herrn Fabrikanten während der Baumwollkatastrophe die Emigration der Fabrikarbeiter auf alle Art, selbst von Staats wegen, zu verhindern suchten.

15.8.

The Revolutionary Impact of Large-Scale Industry on Manufacture, Handicrafts and Domestic Industry

15.8.a. Supersession of Co-operation Based on Handicraft and Division of Labor

462:1/oo We have seen how machinery does away with co-operation based on handicrafts, and with manufacture based on the division of handicraft labor. An example of the first sort is the mowing-machine; it replaces co-operation between mowers. A striking example of the second kind, is the needle-making machine. According to Adam Smith, 10 men, in his day, made in co-operation, over 48,000 needles a-day. On the other hand, a single needle-machine makes 145,000 in a working-day of 11 hours. One woman or one girl superintends four such machines, and so produces near upon 600,000 needles in a day, and upwards

483:1/oo Man hat gesehen, wie die Maschinerie die auf dem Handwerk beruhende Kooperation und die auf Teilung der handwerksmäßigen Arbeit beruhende Manufaktur aufhebt. Ein Beispiel der ersten Art ist die Mähmaschine, sie ersetzt die Kooperation von Mähern. Ein schlagendes Beispiel der zweiten Art ist die Maschine zur Fabrikation von Nähnadeln. Nach Adam Smith verfertigten zu seiner Zeit 10 Männer durch Teilung der Arbeit täglich über 48 000 Nähnadeln. Eine einzige Maschine liefert dagegen 145 000 in einem Arbeitstag von 11 Stunden. Eine Frau oder ein Mädchen überwacht im Durchschnitt 4 solche Ma-

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

of 3,000,000 in a week.²⁴⁶

²⁴⁶ “Ch. Empl. Comm. III. Report, 1864,” p. 108, n. 447.

schinen und produziert daher mit der Maschinerie täglich an 600 000, in der Woche über 3 000 000 Nähadeln.²⁴⁶

²⁴⁶ „Ch. Empl. Comm., III. Report“, 1864, p. 108, n. 447.

↑ Machinery does away with (aufhebt) “co-operation based on handicrafts, and with manufacture based on the division of handicraft labor.” ↓ What does it put in its place? Marx is going to show that ultimately they will be replaced by the *factory system*. (“Factory system” and “machinery” as not synonyma! One is relations (mode) of production, the other productive forces.) Why the factory system? Marx does not lay it out explicitly on this point, but will make mention of it again one page later at the beginning of subsection 2: Machinery causes an objective analysis of the production process which does not stop at the limit of an individual laborer.

↓ First step in this development: sometimes, industry of a handicraft character can develop around a single machine. But this can only be a transitional stage to the modern factory system. Usually, factory production sets in at the moment when the machinery calls for steam engines.

A single machine, when it takes the place of co-operation or of manufacture, may itself serve as the basis of an industry of a handicraft character. Still, such a return to handicrafts is but a transition to the factory system, which, as a rule, makes its appearance so soon as the human muscles are replaced, for the purpose of driving the machines, by a mechanical motive power, such as steam or water.

Sofern eine einzelne Arbeitsmaschine an die Stelle der Kooperation oder der Manufaktur tritt, kann sie selbst wieder zur Grundlage handwerksmäßigen Betriebs werden. Indes bildet diese auf Maschinerie beruhende Reproduktion des Handwerkbetriebs nur den Übergang zum Fabrikbetrieb, der in der Regel jedesmal eintritt, sobald mechanische Triebkraft, Dampf oder Wasser, die menschlichen Muskeln in der Bewegung der Maschine ersetzt.

Sometimes the onset of the factory system can be delayed, but over time it is inevitable. The failure of the “experiment” of “Cottage factories” (which were not really factories!) shows the inevitability of the factory system.

Here and there, but in any case only for a time, an industry may be carried on, on a small scale, by means of mechanical power. This is effected by hiring steam-power, as is done in some of the Birmingham trades, or by the use of small caloric-engines, as in some branches of weaving.²⁴⁷ In the Coventry silk weaving industry the experiment of “cottage factories” was tried. In the centre of a square surrounded by rows of cottages, an engine-house was built and the engine connected by shafts with the looms in the cottages. In all cases the power was hired at so much per loom. The rent was payable weekly, whether the looms worked or not. Each cottage held from 2 to 6 looms; some

Sporadisch und ebenfalls nur vorübergehend kann kleiner Betrieb sich verbinden mit mechanischer Triebkraft durch Miete des Dampfs, wie in einigen Manufakturen Birminghams, durch Gebrauch kleiner kalorischer Maschinen, wie in gewissen Zweigen der Weberei usw.²⁴⁷ In der Seidenweberei zu Coventry entwickelte sich naturwüchsig das Experiment der „Cottage-Fabriken“. In der Mitte von Cottage-Reihen, quadratmäßig gebaut, wurde ein sog. Engine House errichtet für die Dampfmaschine und dies durch Schäfte mit den Webstühlen in den cottages verbunden. In allen Fällen war der Dampf gemietet, z.B. zu 2 1/2 sh. per Webstuhl. Diese Dampfren-

15. Machinery and Modern Industry

belonged to the weaver, some were bought on credit, some were hired. The struggle between these cottage factories and the factory proper, lasted over 12 years. It ended with the complete ruin of the 300 cottage factories.²⁴⁸

²⁴⁷ In the United States the restoration, in this way, of handicrafts based on machinery is frequent; and therefore, when the inevitable transition to the factory system shall take place, the ensuing concentration will, compared with Europe and even with England, stride on in seven-league boots.

²⁴⁸ See "Rep. of Insp. of Fact., 31st Oct., 1865," p. 64.

In situations where the factory system is not necessary from the beginning because of the scale of the process, handicrafts and manufacturing with division of labor are only transitional stages.

Wherever the nature of the process did not involve production on a large scale, the new industries that have sprung up in the last few decades, such as envelope making, steel-pen making, etc., have, as a general rule, first passed through the handicraft stage, and then the manufacturing stage, as short phases of transition to the factory stage.

Even in situations where such a transition seems very difficult, the transition nevertheless happens.

The transition is very difficult in those cases where the production of the article by manufacture consists, not of a series of graduated processes, but of a great number of disconnected ones. This circumstance formed a great hindrance to the establishment of steel-pen factories. Nevertheless, about 15 years ago, a machine was invented that automatically performed 6 separate operations at once. The first steel-pens were supplied by the handicraft system, in the year 1820, at £7 4s. the gross; in 1830 they were supplied by manufacture at 8s., and today the factory system supplies them to the trade at from 2s. to 6d. the gross.²⁴⁹

²⁴⁹ Mr. Gillott erected in Birmingham the first steel-pen factory on a large scale. It produced, so early as 1851, over 180,000,000 of pens yearly,

te war wöchentlich zahlbar, die Webstühle mochten laufen oder nicht. Jede cottage enthielt 2–6 Webstühle, den Arbeitern gehörig, oder auf Kredit gekauft, oder gemietet. Der Kampf zwischen der Cottage-Fabrik und der eigentlichen Fabrik währte über 12 Jahre. Er hat geendet mit dem gänzlichen Ruin der 300 cottage factories.²⁴⁸

²⁴⁷ In den Vereinigten Staaten ist derartige Reproduktion des Handwerks auf Grundlage der Maschinerie häufig. Die Konzentration, bei dem unvermeidlichen Übergang in den Fabrikbetrieb, wird eben deswegen, im Vergleich zu Europa und selbst zu England, dort mit Siebenmeilenstiefeln marschieren.

²⁴⁸ Vgl. „Reports of Insp. of Fact., 31st Oct. 1865“, p. 64.

Wo die Natur des Prozesses nicht von vornherein Produktion auf großer Stufenleiter bedang, durchliefen in der Regel die in den letzten Dezennien neu aufkommenden Industrien, wie z.B. Briefkuvert-, Stahlfedermachen usw., erst den Handwerksbetrieb und dann den Manufakturbetrieb als kurzlebige Übergangsphasen zum Fabrikbetrieb.

Diese Metamorphose bleibt dort am schwierigsten, wo die manufakturmäßige Produktion des Machwerks keine Stufenfolge von Entwicklungsprozessen, sondern eine Vielheit disparater Prozesse einschließt. Dies bildete z.B. ein großes Hindernis der Stahlfederfabrik. Jedoch wurde schon vor ungefähr anderthalb Dezennien ein Automat erfunden, der 6 disparate Prozesse auf einen Schlag verrichtet. Das Handwerk lieferte die ersten 12 Dutzend Stahlfedern 1820 zu 7 Pfd.St. 4 sh., die Manufaktur lieferte sie 1830 zu 8 sh., und die Fabrik liefert sie heute dem Großhandel zu 2 bis 6 d.²⁴⁹

²⁴⁹ Herr Gillott errichtete zu Birmingham die erste Stahlfedermanufaktur auf großer Stufenleiter. Sie lieferte schon 1851 über 180 Millionen

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

and consumed 120 tons of steel. Birmingham has the monopoly of this industry in the United Kingdom, and at present produces thousands of millions of steel-pens. According to the Census of 1861, the number of persons employed was 1,428, of whom 1,268 females from 5 years of age upwards.

Federn und verzehrte jährlich 120 Tonnen Stahlblech. Birmingham, das diese Industrie im Vereinigten Königreich monopolisiert, produziert jetzt jährlich Milliarden von Stahlfedern. Die Zahl der beschäftigten Personen betrug nach dem Zensus von 1861: 1428, darunter 1268 Arbeiterinnen, vom 5. Jahr an einrolliert.

15.8.b. Reaction of the Factory System on Manufacture and Domestic Industries

We have seen that the introduction of the factory system necessarily follows the invention of machinery. Next, Marx looks at the effects of this the factory system on those industries which still work without machinery (manufactures and domestic industries).

464:1/o Along with the development of the factory system and of the revolution in agriculture that accompanies it, production in all the other branches of industry not only extends, but alters its character.

485:1/o Mit der Entwicklung des Fabrikwesens und der sie begleitenden Umwälzung der Agrikultur dehnt sich nicht nur die Produktionsleiter in allen andren Industriezweigen aus, sondern verändert sich auch ihr Charakter.

↑ First of all, production is expanded; ↓ but also the following qualitative changes: the *principle* of mechanized production, namely, a scientific analysis of the production process, takes hold even in areas where machinery itself is not applied,

The principle, carried out in the factory system, of analyzing the process of production into its constituent phases, and of solving the problems thus proposed by the application of mechanics, of chemistry, and of the whole range of the natural sciences, becomes the determining principle everywhere.

Das Prinzip des Maschinenbetriebs, den Produktionsprozeß in seine konstituierenden Phasen zu analysieren und die so gegebenen Probleme durch Anwendung der Mechanik, Chemie usw., kurz der Naturwissenschaften zu lösen, wird überall bestimmend.

↓ This dissolves the rigid division of labor of the manufactures which had centered around the subjective factor.

Hence, machinery squeezes itself into the manufacturing industries first for one detail process, then for another. Thus the solid crystal of their organisation, based on the old division of labor, becomes dissolved, and makes way for constant changes.

Maschinerie drängt sich daher bald für diesen, bald für jenen Teilprozeß in die Manufakturen. Die feste Kristallisation ihrer Gliederung, der alten Teilung der Arbeit entstammend, löst sich damit auf und macht fortwährendem Wechsel Platz.

↓ Independently of this, the factory system affects manufactures, handicraft, and even domestic industry by the creation of a cheap unskilled labor force, i.e., by throwing women and children on the labor market:

Independently of this, a radical change takes place in the composition of the collective laborer, a change of the persons working in combination. In contrast with the manufacturing period, the division of labor is thenceforth based, wherever possible, on the em-

Abgesehn hiervon wird die Zusammensetzung des Gesamtarbeiters oder des kombinierten Arbeitspersonals von Grund aus umgewälzt. Im Gegensatz zur Manufakturperiode gründet sich der Plan der Arbeitsteilung jetzt auf Anwendung der Weiberarbeit,

15. Machinery and Modern Industry

ployment of women, of children of all ages, and of unskilled laborers, in one word, on cheap labor, as it is characteristically called in England. This is the case not only with all production on a large scale, whether employing machinery or not, but also with the so-called domestic industry, whether carried on in the houses of the workpeople or in small workshops. This modern so-called domestic industry has nothing, except the name, in common with the old-fashioned domestic industry, the existence of which pre-supposes independent urban handicrafts, independent peasant farming, and above all, a dwelling-house for the laborer and his family. That old-fashioned industry has now been converted into an outside department of the factory, the manufactory, or the warehouse. Besides the factory operatives, the manufacturing workmen and the handicraftsman, whom it concentrates in large masses at one spot, and directly commands, capital also sets in motion, by means, of invisible threads, another army; that of the workers in the domestic industries, who dwell in the large towns and -are also scattered over the face of the country. An example: The shirt factory of Messrs. Tillie at Londonderry, which employs 1,000 operatives in the factory itself, and 9,000 people spread up and down the country and working in their own houses.²⁵⁰

²⁵⁰ "Ch. Empl. Comm. II. Rep. 1864," p. LXVIII., n. 415.

The next paragraph 465:1/o seems to stress more the value-aspect than the mode of production:

1) Exploitation of women and children more shameless in manufactures than in the factory, since there are no machines to make the work easier. Is the exposure to poisonous or injurious substances limited to manufacture? Maybe in the sense that this exposure is diminished if the machine goes between the laborer and the object of labor. This often how hazardous situations are eliminated today. And workers do not fight against them because they know the answer will be that they are replaced by machines?

2) Exploitation in domestic industries even worse than in manufactures. Marx gives a number of reasons, but I still have to find the common denominator of them all.

3) Economy of means of production (which never economy but always squandering of labor-power) is the more antagonistic and murderous the less the machinery is developed.

465:1/o The exploitation of cheap and im-

der Arbeit von Kindern aller Altersstufen, ungeschickter Arbeiter, wo es immer tugar, kurz der „cheap labour“, wohlfeilen Arbeit, wie der Engländer sie charakteristisch nennt. Dies gilt nicht nur für alle auf großer Stufenleiter kombinierte Produktion, ob sie Maschinerie anwende oder nicht, sondern auch für die sog. Hausindustrie, ob ausgeübt in den Privatwohnungen der Arbeiter oder in kleinen Werkstätten. Diese sog. moderne Hausindustrie hat mit der altmodischen, die unabhängiges städtisches Handwerk, selbständige Bauernwirtschaft und vor allem ein Haus der Arbeiterfamilie voraussetzt, nichts gemein als den Namen. Sie ist jetzt verwandelt in das auswärtige Departement der Fabrik, der Manufaktur oder des Warenmagazins. Neben den Fabrikarbeitern, Manufakturarbeitern und Handwerkern, die es in großen Massen räumlich konzentriert und direkt kommandiert, bewegt das Kapital durch unsichtbare Fäden eine andre Armee in den großen Städten und über das flache Land zerstreuter Hausarbeiter. Beispiel: die Hemdenfabrik der Herren Tillie zu Londonderry, Irland, die 1000 Fabrikarbeiter und 9000 auf dem Land zerstreute Hausarbeiter beschäftigt.²⁵⁰

²⁵⁰ „Ch. Empl. Comm., II. Rep.“, 1864, p. LXVIII., n. 415.

486:1 Die Exploitation wohlfeiler und

15.8. *Impact of Large-Scale Industry on Manufacture, Handicrafts etc.*

mature labor-power is carried out in a more shameless manner in modern Manufacture than in the factory proper. This is because the technical foundation of the factory system, namely, the substitution of machines for muscular power, and the light character of the labor, is almost entirely absent in Manufacture, and at the same time women and over-young children are subjected, in a most unconscionable way, to the influence of poisonous or injurious substances. This exploitation is more shameless in the so-called domestic industry than in manufactures, and that because the power of resistance in the laborers decreases with their dissemination; because a whole series of plundering parasites insinuate themselves between the employer and the workman; because a domestic industry has always to compete either with the factory system, or with manufacturing in the same branch of production; because poverty robs the workman of the conditions most essential to his labor, of space, light and ventilation; because employment becomes more and more irregular; and, finally, because in these the last resorts of the masses made “redundant” by Modern Industry and Agriculture, competition for work attains its maximum. Economy in the means of production, first systematically carried out in the factory system, and there, from the very beginning, coincident with the most reckless squandering of labor-power, and robbery of the conditions normally requisite for labor—this economy now shows its antagonistic and murderous side more and more in a given branch of industry, the less the social productive power of labor and the technical basis for a combination of processes are developed in that branch.

unreifer Arbeitskräfte wird in der modernen Manufaktur schamloser als in der eigentlichen Fabrik, weil die hier existierende technische Grundlage, Ersatz der Muskelkraft durch Maschinen und Leichtigkeit der Arbeit, dort größtenteils wegfällt, zugleich der weibliche oder noch unreife Körper den Einflüssen giftiger Substanzen usw. aufs gewissenloseste preisgegeben wird. Sie wird in der sog. Hausarbeit schamloser als in der Manufaktur, weil die Widerstandsfähigkeit der Arbeiter mit ihrer Zersplitterung abnimmt, eine ganze Reihe räuberischer Parasiten sich zwischen den eigentlichen Arbeitgeber und den Arbeiter drängt, die Hausarbeit überall mit Maschinen- oder wenigstens Manufakturbetrieb in demselben Produktionszweig kämpft, die Armut dem Arbeiter die nötigsten Arbeitsbedingungen, Raum, Licht, Ventilation usw. raubt, die Unregelmäßigkeit Beschäftigung wächst und endlich in diesen letzten Zufluchtsstätten der durch die große Industrie und Agrikultur „überzählig“ Gemachten die Arbeiterkonkurrenz notwendig ihr Maximum erreicht. Die durch den Maschinenbetrieb erst systematisch ausgebildete Ökonomisierung der Produktionsmittel, von vornherein zugleich rücksichtsloseste Verschwendung der Arbeitskraft und Raub an den normalen Voraussetzungen der Arbeitsfunktion, kehrt jetzt diese ihre antagonistische und menschenmörderische Seite um so mehr heraus, je weniger in einem Industriezweig die gesellschaftliche Produktivkraft der Arbeit und die technische Grundlage kombinierter Arbeitsprozesse entwickelt sind.

Let me try to put together what is behind all this: The exploitation is increased in those branches it is also increased where machinery is introduced (instance of the equalisation of the rate of exploitation). But this increase in exploitation is more murderous for the workers because it is not accompanied by an increase in technology: it must therefore be absolute, not relative surplus-value. Compare also 473:1.

Subsections c) and d) are examples. I should go through these examples and see which of the above principles they illustrate.

15.8.c. Modern Manufacture

466:1–467:1 I now proceed, by a few examples, to illustrate the principles laid down above. As a matter of fact, the reader is already familiar with numerous instances given in the chapter on the working-day.

First: use of women and children in unhealthy manufacturing jobs:

In the hardware manufactures of Birmingham and the neighbourhood, there are employed, mostly in very heavy work, 30,000 children and young persons, besides 10,000 women. There they are to be seen in the unwholesome brass-foundries, button factories, enamelling, galvanising, and lacker- ing works.²⁵¹ Owing to the excessive labor of their workpeople, both adult and non- adult, certain London houses where news- papers and books are printed, have got the ill-omened name of “slaughterhouses.”^{251a} Similar excesses are practised in book- binding, where the victims are chiefly women, girls, and children; young persons have to do heavy work in rope-walks and night- work in salt mines, candle manufactories, and chemical works; young people are worked to death at turning the looms in silk weaving, when it is not carried on by machinery.²⁵² One of the most shameful, the most dirty, and the worst paid kinds of labor, and one on which women and young girls are by preference employed, is the sort- ing of rags. It is well known that Great Britain, apart from its own immense store of rags, is the emporium for the rag trade of the whole world. They flow in from Japan, from the most remote States of South Amer- ica, and from the Canary Islands. But the chief sources of their supply are Germany, France, Russia, Italy, Egypt, Turkey, Bel- gium, and Holland. They are used for ma- nure, for making bedflocks, for shoddy, and they serve as the raw material of paper. The rag-sorters are the medium for the spread of small-pox and other infectious diseases, and they themselves are the first victims.²⁵³

486:2–488:1 Ich will nun an einigen Beispielen die oben aufgestellten Sätze erläutern. Der Leser kennt in der Tat schon massenhafte Belege aus dem Abschnitt über den Arbeitstag.

Die Metallmanufakturen in Birmingham und Umgegend wenden größtenteils für sehr schwere Arbeit 30 000 Kinder und junge Personen nebst 10 000 Weibern an. Man findet sie hier in den gesundheitswidrigen Gelbgießereien, Knopffabriken, Glasur-, Galvanisierungs- und Lackierarbeiten.²⁵¹

Die Arbeitsexzesse für Erwachsene und Un- erwachsne haben verschiedenen Londoner Zeitungs- und Buchdruckereien den rühmli- chen Namen: „Das Schlachthaus“ gesichert.^{251a} Dieselben Exzesse, deren Schlachtopfer hier namentlich Weiber, Mädchen und Kin- der, in der Buchbinderei. Schwere Arbeit für Unerwachsne in den Seilereien, Nachtar- beit in Salzwerken, Lichter- und andren che- mischen Manufakturen; mörderischer Ver- brauch von Jungen in Seidenwebereien, die nicht mechanisch betrieben werden, zum Drehen der Webstühle.²⁵² Eine der infam- sten, schmutzigsten und schlecht bezahl- testen Arbeiten, wozu mit Vorliebe junge Mädchen und Weiber verwandt werden, ist das Sortieren der Lumpen. Man weiß, daß Großbritannien, abgesehn von seinen eigen- un zähligen Lumpen, das Emporium für den Lumpenhandel der ganzen Welt bildet. Sie strömen dahin von Japan, den entfern- sten Staaten Südamerikas und den kanari- schen Inseln. Ihre Hauptzufuhrquellen aber sind Deutschland, Frankreich, Rußland, Ita- lien, Ägypten, Türkei, Belgien und Holland. Sie dienen zur Düngung, Fabrikation von Flocken (für Bettzeug), Shoddy (Kunstwol- le) und als Rohmaterial des Papiers. Die weiblichen Lumpensortierer dienen als Me- dien, um Pocken und andere ansteckende Seuchen, deren erste Opfer sie selbst sind, zu kolportieren.²⁵³

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

²⁵¹ And now forsooth children are employed at file-cutting in Sheffield.

^{251a} „Ch. Empl. Comm., V. Rep. 1866,” p. 3, n. 24; p. 6, n. 55, 56; p. 7, n. 59, 60.

²⁵² I.c., pp. 114, 115, n. 6, 7. The commissioner justly remarks that though as a rule machines take the place of men, here literally young persons replace machines.

²⁵³ See the Report on the rag trade, and numerous details in “Public Health, VIII. Rep.” Lond. 1866, app., pp. 196, 208.

Over-work:

A classical example of over-work, of hard and inappropriate labor, and of its brutalising effects on the workman from his childhood upwards, is afforded not only by coal-mining and miners generally, but also by tile and brick making, in which industry the recently invented machinery is, in England, used only here and there. Between May and September the work lasts from 5 in the morning till 8 in the evening, and where the drying is done in the open air, it often lasts from 4 in the morning till 9 in the evening. Work from 5 in the morning till 7 in the evening is considered “reduced” and “moderate.” Both boys and girls of 6 and even of 4 years of age are employed. They work for the same number of hours, often longer, than the adults. The work is hard and the summer heat increases the exhaustion. In a certain tile-field at Mosley, e.g., a young woman, 24 years of age, was in the habit of making 2,000 tiles a day, with the assistance of 2 little girls, who carried the clay for her, and stacked the tiles. These girls carried daily 10 tons up the slippery sides of the clay pits, from a depth of 30 feet, and then for a distance of 210 feet.

467:1 “It is impossible for a child to pass through the purgatory of a tile-field without great moral degradation ... the low language, which they are accustomed to hear from their tenderest years, the filthy, indecent, and shameless habits, amidst which, unknowing, and half wild, they grow up, make them in after-life lawless, abandoned, dissolute ... A frightful source of demoralisation is the mode

²⁵¹ Und nun gar Kinder im Feilenschleifen zu Sheffield!

^{251a} „Ch. Empl. Comm., V. Rep.“, 1866, p. 3, n. 24; p. 6, n. 55, 56; p. 7, n. 59, 60.

²⁵² I.c. p. 114, 115, n. 6–7. Der Kommissär bemerkt richtig, daß, wenn sonst die Maschine den Menschen, hier der Junge verbatim die Maschine ersetzt.

²⁵³ Sieh Bericht über den Lumpenhandel und zahlreiche Belege: „Public Health, VIII. Report“, Lond. 1866. Appendix, p. 196–208.

Als klassisches Beispiel für Überarbeit, schwere und unpassende Arbeit, und daher folgende Brutalisierung der von Kindesbeinen an konsumierten Arbeiter kann, neben der Minen- und Kohlenproduktion, die Ziegel- oder Backsteinmacherei gelten, wozu in England die neuerfundene Maschine nur noch sporadisch angewandt wird (1866). Zwischen Mai und September dauert die Arbeit von 5 Uhr morgens bis 8 Uhr abends, und, wo Trocknung in freier Luft stattfindet, oft von 4 Uhr morgens bis 9 Uhr abends. Der Arbeitstag von 5 Uhr morgens bis 7 Uhr abends gilt für „reduziert“, „mäßig“. Kinder beiderlei Geschlechts werden vom 6. und selbst vom 4. Jahr an verwandt. Sie arbeiten dieselbe Stundenzahl, oft mehr als die Erwachsenen. Die Arbeit ist hart, und die Sommerhitze steigert noch die Erschöpfung. In einer Ziegelei zu Mosley z.B. machte ein 24 jähriges Mädchen 2000 Ziegel täglich, unterstutzt von zwei unerwachsenen Mädchen als Gehilfen, welche den Lehm trugen und die Ziegelsteine aufhäften. Diese Mädchen schleppten täglich 10 Tonnen die schlüpfrigen Seiten der Ziegelgrube von einer Tiefe von 30 Fuß herauf und über eine Entfernung von 210 Fuß.

488:1 „Es ist unmöglich für ein Kind, durch das Fegfeuer einer Ziegelei zu passieren ohne große moralische Degradation ... Die nichtswürdige Sprache, die sie vom zartesten Alter an zu hören bekommen, die unflätigen, unanständigen und schamlosen Gewohnheiten, unter denen sie unwissend und verwildert aufwachsen, machen sie für die spätere Lebenszeit gesetzlos, verworfen, liederlich ...

15. Machinery and Modern Industry

of living. Each moulder, who is always a skilled laborer, and the chief of a group, supplies his 7 subordinates with board and lodging in his cottages. Whether members of his family or not, the men, boys, and girls all sleep in the cottage, which contains generally two, exceptionally 3 rooms, all on the ground floor, and badly ventilated. These people are so exhausted after the day's hard work, that neither the rules of health, of cleanliness, nor of decency are in the least observed. Many of these cottages are models of untidiness, dirt, and dust ... The greatest evil of the system that employs young girls on this sort of work, consists in this, that, as a rule, it chains them fast from childhood for the whole of their after-life to the most abandoned rabble. They become rough, foul-mouthed boys, before Nature has taught them that they are women. Clothed in a few dirty rags, the legs naked far above the knees, hair and face besmeared with dirt, they learn to treat all feelings of decency and of shame with contempt. During meal-times they lie at full length in the fields, or watch the boys bathing in a neighbouring canal. Their heavy day's work at length completed, they put on better clothes, and accompany the men to the public houses."

That excessive insobriety is prevalent from childhood upwards among the whole of this class, is only natural.

467:3 "The worst is that the brickmakers despair of themselves. You might as well, said one of the better kind to a chaplain of Southallfield, try to raise and improve the devil as a brickie, sir!"²⁵⁴

²⁵⁴ "Ch. Empl. Comm. V. Rep., 1866," pp. xvi-xviii, n. 86-97, and pp. 130-133, n. 39-71. See also III. Rep., 1864, pp. 48, 56.

Economy of constant capital is squandering of labor:

As to the manner, in which capital effects an economy in the requisites of labor, in

Eine furchtbare Quelle der Demoralisation ist die Art der Wohnlichkeit. Jeder moulder (Former), (der eigentlich geschickte Arbeiter und Chef einer Arbeitergruppe) „liefert seiner Bande von 7 Personen Logis und Tisch in seiner Hütte oder cottage. Ob zu seiner Familie gehörige oder nicht, Männer, Jungen, Mädchen schlafen in der Hütte. Diese besteht gewöhnlich aus 2, nur ausnahmsweis aus 3 Zimmern, alle auf dem Erdgeschoß, mit wenig Ventilation. Die Körper sind so erschöpft durch die große Transpiration während des Tags, daß weder Gesundheitsregeln, Reinlichkeit noch Anstand irgendwie beobachtet werden. Viele dieser Hütten sind wahre Modelle von Unordnung, Schmutz und Staub ... Das größte Übel des Systems, welches junge Mädchen zu dieser Art Arbeit verwendet, besteht darin, daß sie in der Regel von Kindheit an für ihr ganzes spätes Leben an das verworfenste Gesindel festkettet. Sie werden rohe, bösmäulige Buben (rough, foulmouthed boys), bevor die Natur sie gelehrt hat, daß sie Weiber sind. Gekleidet in wenige schmutzige Lumpen, die Beine weit über das Knie entblößt, Haar und Gesicht mit Dreck beschmiert, lernen sie alle Gefühle der Sittsamkeit und der Scham mit Verachtung behandeln. Während der Essenszeit liegen sie auf den Feldern ausgestreckt oder gucken den Jungen zu, die in einem benachbarten Kanal baden. Ist ihr schweres Tagewerk endlich vollbracht, so zieht sie beßre Kleider an und begleiten die Männer in Bierkneipen."

488:2 Daß die größte Versoffenheit von Kindesbeinen an in dieser ganzen Klasse herrscht, ist nur naturgemäß.

488:3 „Das Schlimmste ist, daß die Ziegelmacher an sich selbst verzweifeln. Sie könnten, sagte einer der Bessern zum Kaplan von Southallfield, ebenso wohl versuchen, den Teufel zu erheben und zu bessern als einen Ziegler, mein Herr! („You might as well try to raise and improve the devil as a brickie, Sir!")²⁵⁴

²⁵⁴ „Child. Empl. Comm., V. Report“, 1866, p. XVI-XVIII, n. 86-97 und p. 130 bis 133, n. 39-71. Vgl. auch ib., III. Report, 1864, p. 48, 56.

488:4-489:1 Über die kapitalistische Ökonomisierung der Arbeitsbedingungen in der

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

modern Manufacture (in which I include all workshops of larger size, except factories proper), official and most ample material bearing on it is to be found in the Public Health Reports IV. (1863) and VI. (1864). The description of the Workshops, more especially those of the London printers and tailors, surpasses the most loathsome phantasies of our romance writers. The effect on the health of the workpeople is self-evident. Dr. Simon, the chief medical officer of the Privy Council and the official editor of the "Public Health Reports," says:

"In my fourth Report (1861) [published 1862] I showed, how it is practically impossible for the workpeople to insist upon that which is their first sanitary right, viz., the right that, no matter what the work for which their employer brings them together, the labor, so far as it depends upon him, should be freed from all avoidably unwholesome conditions. I pointed out, that while the workpeople are practically incapable of doing themselves this sanitary justice, they are unable to obtain any effective support from the paid administrations of the sanitary police ... The life of myriads of workmen and workwomen is now uselessly tortured and shortened by the never-ending physical suffering that their mere occupation begets."²⁵⁵

²⁵⁵ "Public Health. Sixth Rep.," Lond. 1864, pp. 29, 31.

In illustration of the way in which the workrooms influence the state of health Dr. Simon gives the following table of mortality.²⁵⁶ Number of persons of all ages employed in the respective industries. Industries compared as regards health. Death-rate per 100,000 men in the respective industries between the stated ages Age 25–35. Age 35–45. Age 45–55. 958,265 Agriculture in England & Wales 743 805 1,145 22,301 men 12,379 women London tailors 958 1,262 2,093 13,803 London printers 894 1,747 2,367

modernen Manufaktur (worunter hier alle Werkstätten auf großer Stufenleiter, außer eigentlichen Fabriken, zu verstehn) findet man offizielles und reichlichstes Material in dem IV. (1861) und VI. (1864) „Public Health Report“. Die Beschreibung der workshops (Arbeitslokale), namentlich der Londoner Drucker und Schneider, überbietet die ekelhaftesten Phantasien unsrer Romanschreiber. Die Wirkung auf den Gesundheitszustand der Arbeiter ist selbstverständlich. Dr. Simon, der oberste ärztliche Beamte des Privy Council und offizielle Herausgeber der „Public Health Reports“, sagt u.a.:

„In meinem vierten Bericht, (1861) „zeigte ich, wie es für die Arbeiter praktisch unmöglich ist, darauf zu bestehen, was ihr erstes Gesundheitsrecht ist, das Recht, daß, zu welchem Werk immer ihr Anwender sie versammelt, die Arbeit, soweit es von ihm abhängt, von allen vermeidbaren gesundheitswidrigen Umständen befreit sein soll. Ich wies nach, daß, während die Arbeiter praktisch unfähig sind, sich selbst diese Gesundheitsjustiz zu verschaffen, sie keinen wirksamen Beistand von den bestellten Administratoren der Gesundheitspolizei erlangen können ... Das Leben von Myriaden von Arbeitern und Arbeiterinnen wird jetzt nutzlos gefoltert und verkürzt durch das endlose physische Leiden, welches ihre bloße Beschäftigung erzeugt.“²⁵⁵

²⁵⁵ „Public Health, VI. Rep.“, Lond. 1864, p. 29, 31.

489:2–3 Zur Illustration des Einflusses der Arbeitslokale auf den Gesundheitszustand gibt Dr. Simon folgende Sterblichkeitsliste:

15. Machinery and Modern Industry

Personenzahl aller Altersstufen in den resp. Industrien	resp. Industriestufen angewandt	Industrien verglichen in bezug auf Gesundheit	Sterblichkeitsrate auf 100 000 Männer in den resp. Industrien zu den angegebenen Altersstufen		
			25. bis 35. J.	35. bis 45. J.	45. bis 55. J.
958 265		Agrikult. in England	743	805	1145
			und Wales		
22 301	Männer				
u. 12 377	Weiber	Lond. Schneider	958	1262	2093
13 803		Lond. Drucker	894	1747	2367 ²⁵⁶

²⁵⁶ I.c., p. 30. Dr. Simon remarks that the mortality among the London tailors and printers between the ages of 25 and 35 is in fact much greater, because the employers in London obtain from the country a great number of young people up to 30 years of age, as "apprentices" and "improvers," who come for the purpose of being perfected in their trade. These figure in the census as Londoners, they swell out the number of heads on which the London death-rate is calculated, without adding proportionally to the number of deaths in that place. The greater part of them in fact return to the country, and especially in cases of severe illness. (I.c.)

²⁵⁶ I.c. p. 30. Dr. Simon bemerkt, daß die Sterblichkeit der Londoner Schneider und Drucker vom 25.–35. Jahr in der Tat viel größer ist, weil ihre Londoner Anwender eine große Zahl junger Leute zum 30. Jahr hinauf vom Land als „Lehrlinge“ und „improvers“ (die sich in ihrem Handwerk aufbilden wollen) erhalten. Diese figurieren im Zensus als Londoner, sie schwellen die Kopfzahl, worauf die Londoner Sterblichkeitsrate berechnet wird, ohne verhältnismäßig zur Zahl der Londoner Todesfälle beizutragen. Großer Teil von ihnen kehrt nämlich und ganz besonders in schweren Krankheitsfällen, zum Land zurück. (I.c.)

15.8.d. Modern Domestic Industry

The influence of machinery did not even spare the workers's own homes, by poisoning the conditions under which the home workers had to work.

468:5/o I now come to the so-called domestic industry. In order to get an idea of the horrors of this sphere, in which capital conducts its exploitation in the background of modern mechanical industry, one must go to the apparently quite idyllic trade of nail-making,²⁵⁷ carried on in a few remote villages of England. In this place, however, it will be enough to give a few examples from those branches of the lace-making and straw-plaiting industries that are not yet carried on by the aid of machinery, and that as yet do not compete with branches carried on in factories or in manufactories.

²⁵⁷ I allude here to hammered nails, as distinguished from nails cut out and made by machinery. See "Child. Empl. Comm., Third Rep.," pp. xi., xix., n. 125–130, p. 52, n. 11, p. 114, n. 487, p. 137, n. 674.

489:4/o Ich wende mich jetzt zur sog. Hausarbeit. Um sich eine Vorstellung von dieser auf dem Hintergrund der großen Industrie aufgebauten Exploitationssphäre des Kapitals und ihren Ungeheuerlichkeiten zu machen, betrachte man z.B. die scheinbar ganz idyllische, in einigen abgelegnen Dörfern Englands betriebne Nägelmacherei.²⁵⁷ Hier genügen einige Beispiele aus den noch gar nicht maschinenmäßig betriebnen oder mit Maschinen- und Manufakturbetrieb konkurrierenden Zweigen der Spitzenfabrik und Strohflechtereie.

²⁵⁷ Es handelt sich hier um gehämmerte Nägel im Unterschied von den maschinenmäßig fabrizierten geschnittenen Nägeln. Siehe „Child. Empl. Comm., III. Report“, p. XI, p. XIX, n. 125–130; p. 52, n. 11; p. 113–114, n. 487; p. 137, n. 674.

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

469:1–2 Of the 150,000 persons employed in England in the production of lace, about 10,000 fall under the authority of the Factory Act, 1861. Almost the whole of the remaining 140,000 are women, young persons, and children of both sexes, the male sex, however, being weakly represented. The state of health of this cheap material for exploitation will be seen from the following table, computed by Dr. Trueman, physician to the Nottingham General Dispensary. Out of 686 female patients who were lace-makers, most of them between the ages of 17 and 24, the number of consumptive ones were: 1852.—1 in 45. 1857.—1

in 13. 1853.—1 in 28. 1858.—1 in 15.

1854.—1 in 17. 1859.—1 in 9. 1855.—1 in 18. 1860.—1 in 8. 1856.—1 in 15. 1861.—1 in 8.²⁵⁸

²⁵⁸ “Ch. Empl. Comm., II. Rep.,” p. xxii, n. 166.

469:3 This progress in the rate of consumption ought to suffice for the most optimist of progressists, and for the biggest hawker of lies among the Free-trade bagmen of Germany.

469:4 The Factory Act of 1861 regulates the actual making of the lace, so far as it is done by machinery, and this is the rule in England. The branches that we are now about to examine, solely with regard to those of the workpeople who work at home, and not those who work in manufactories or warehouses, fall into two divisions, viz. (1), finishing; (2), mending. The former gives the finishing touches to the machine-made lace, and includes numerous sub-divisions.

490:1–2 Von den 150 000 Personen, die in der englischen Spitzenproduktion beschäftigt, fallen ungefähr 10 000 unter die Botmäßigkeit des Fabrikakts von 1861. Die ungeheure Mehrzahl der übrigbleibenden 140 000 sind Weiber, junge Personen und Kinder beiderlei Geschlechts, obgleich das männliche Geschlecht nur schwach vertreten ist. Der Gesundheitszustand dieses „wohlfeilen“ Exploitationsmaterials ergibt sich aus folgender Aufstellung des Dr. Trueman, Arzt beim General Dispensary von Nottingham. Von je 686 Patienten, Spitzenmacherinnen, meist zwischen dem 17. und 24. Jahr, waren schwindsüchtig:

1852	1 auf	45,
1853	1 auf	28,
1854	1 auf	17,
1855	1 auf	18,
1856	1 auf	15,
1857	1 auf	13,
1858	1 auf	15,
1859	1 auf	9,
1860	1 auf	8,
1861	1 auf	8. ²⁵⁸

²⁵⁸ „Child. Empl. Comm., II. Report“, p. XXII, n. 166.

490:3 Dieser Fortschritt in der Rate der Schwindsucht muß dem optimistischsten Fortschrittler und lügenfauchendsten deutsche Freihandelshausierburschen genügen.

490:4 Der Fabrikakt von 1861 regelt das eigentliche Machen der Spitzen, soweit es durch Maschinerie geschieht, und dies ist die Regel in England. Die Zweige, die wir hier kurz berücksichtigen, und zwar nicht, soweit die Arbeiter in Manufakturen, Warenhäusern usw. konzentriert, sondern nur sofern sie sog. Hausarbeiter sind, zerfallen 1. in das finishing (letztes Zurechtmachen der maschinenmäßig fabrizierten Spitzen, eine Kategorie, die wieder zahlreiche Unterabteilungen einschließt), 2. Spitzenklöppeln.

15. Machinery and Modern Industry

470:1–2 The lace finishing is done either in what are called “mistresses’ houses,” or by women in their own houses, with or without the help of their children. The women who keep the “mistresses’ houses” are themselves poor. The workroom is in a private house. The mistresses take orders from manufacturers, or from warehousemen, and employ as many women, girls, and young children as the size of their rooms and the fluctuating demand of the business will allow. The number of the workwomen employed in these workrooms varies from 20 to 40 in some, and from 10 to 20 in others. The average age at which the children commence work is six years, but in many cases it is below five. The usual working-hours are from 8 in the morning till eight in the evening, with 1 1/2 hours for meals, which are taken at irregular intervals, and often in the foul workrooms. When business is brisk, the labor frequently lasts from 8 or even 6 o’clock in the morning till 10, 11, or 12 o’clock at night. In English barracks the regulation space allotted to each soldier is 500–600 cubic feet, and in the military hospitals 1,200 cubic feet. But in those finishing sties there are but 67 to 100 cubic feet to each person. At the same time the oxygen of the air is consumed by gas-lights. In order to keep the lace clean, and although the floor is tiled or flagged, the children are often compelled, even in winter, to pull off their shoes.

“It is not at all uncommon in Nottingham to find 14 to 20 children huddled together in a small room, of, perhaps, not more than 12 feet square, and employed for 15 hours out of the 24, at work that of itself is exhausting, from its weariness and monotony, and is besides carried on under every possible unwholesome condition . . . Even the very youngest children work with a strained attention and a rapidity that is astonishing, hardly ever giving their fingers rest or glowering their motion. If a question be asked them, they never raise their eyes from their work from fear of losing a single moment.”

490:5–491:1 Das Lace finishing wird als Hausarbeit betrieben entweder in sog. „Mistresses Houses“ oder von Weibern, einzeln oder mit ihren Kindern, in ihren Privatwohnungen. Die Weiber, welche die „Mistresses Houses“ halten, sind selbst arm. Das Arbeitslokal bildet Teil ihrer Privatwohnung. Sie erhalten Aufträge von Fabrikanten, Besitzern von Warenmagazinen usw. und wenden Weiber, Mädchen und junge Kinder an, je nach dem Umfang ihrer Zimmer und der fluktuierenden Nachfrage des Geschäfts. Die Zahl der beschäftigten Arbeiterinnen wechselt von 20 zu 40 in einigen, von 10 zu 20 in andren dieser Lokale. Das durchschnittliche Minimalalter, worin Kinder beginnen, ist 6 Jahre, manche jedoch unter 5 Jahren. Die gewöhnliche Arbeitszeit währt von 8 Uhr morgens bis 8 Uhr abends, mit 1 1/2 Stunden für Mahlzeiten, die unregelmäßig und oft in den stinkigen Arbeitslöchern selbst genommen werden. Bei gutem Geschäft währt die Arbeit oft von 8 Uhr (manchmal 6 Uhr) morgens bis 10, 11 oder 12 Uhr nachts. In englischen Kasernen beträgt der vorschriftsmäßige Raum für jeden Soldaten 500–600 Kubikfuß, in den Militärlazaretten 1200. In jenen Arbeitslöchern kommen 67–100 Kubikfuß auf jede Person. Gleichzeitig verzehrt Gaslicht den Sauerstoff der Luft. Um die Spitzen rein zu halten, müssen die Kinder oft die Schuhe ausziehen, auch im Winter, obgleich das Estrich aus Pflaster oder Ziegeln besteht.

„Es ist nichts Ungewöhnliches in Nottingham, 15 bis 20 Kinder in einem kleinen Zimmer von vielleicht nicht mehr als 12 Fuß im Quadrat zusammengepöckelt zu finden, während 15 Stunden aus 24 beschäftigt an einer Arbeit, an sich selbst erschöpfend durch Überdruß und Monotonie, zudem unter allen nur möglichen gesundheitszerstörenden Umständen ausgeübt . . . Selbst die jüngsten Kinder arbeiten mit einer gespannten Aufmerksamkeit und Geschwindigkeit, die erstaunlich sind, fast niemals ihren Fingern Ruhe oder langsamre Bewegung gönnend. Richtet man Fragen an sie, so erheben sie das Auge nicht von der Arbeit, aus Furcht, einen Moment zu

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

The "long stick" is used by the mistresses as a stimulant more and more as the workinghours are prolonged.

"The children gradually tire and become as restless as birds towards the end of their long detention at an occupation that is monotonous, eye-straining, and exhausting from the uniformity in the posture of the body. Their work is like slavery."²⁵⁹

²⁵⁹ "Ch. Empl. Comm., II. Rep., 1864," pp. xix., xx., xxi.

When women and their children work at home, which now-a-days means in a hired room, often in a garret, the state of things is, if possible, still worse. This sort of work is given out within a circle of 80 miles radius from Nottingham. On leaving the warehouses at 9 or 10 o'clock at night, the children are often given a bundle of lace to take home with them and finish. The Pharisee of a capitalist represented by one of his servants, accompanies this action, of course, with the unctuous phrase: "That's for mother," yet he knows well enough that the poor children must sit up and help.²⁶⁰

²⁶⁰ l.c., pp. xxi, xxii.

471:1–2a Pillow lace-making is chiefly carried on in England in two agricultural districts; one, the Honiton lace district, extending from 20 to 30 miles along the south coast of Devonshire, and including a few places in North Devon; the other comprising a great part of the counties of Buckingham, Bedford, and Northampton, and also the adjoining portions of Oxfordshire and Huntingdonshire. The cottages of the agricultural laborers are the places where the work is usually carried on. Many manufacturers employ upwards of 3,000 of these lace-makers, who are chiefly children and young persons of the female sex exclusively. The state of things described as incidental to lace finishing is here repeated, save that

verlieren."

491:2–3 Der „lange Stock“ dient den „mistresses“ als Anregungsmittel im Verhältnis, worin die Arbeitszeit verlängert wird.

„Die Kinder ermüden allmählich und werden so rastlos wie Vögel gegen das Ende ihrer langen Gebundenheit an eine Geschäftigung, eintönig, für die Augen angreifend, erschöpfend durch die Einförmigkeit der Körperhaltung. Es ist wahres Sklavenwerk.“ („Their work is like slavery.“)²⁵⁹

²⁵⁹ „Child. Empl. Comm., II. Report“, 1864, p. XIX, XX, XXI.

491:4/o Wo Frauen mit ihren eignen Kindern zu Hause, d.h. im modernen Sinn, in einem gemieteten Zimmer, häufig in einer Dachstube arbeiten, sind die Zustände womöglich noch schlimmer. Diese Art Arbeit wird 80 Meilen im Umkreis von Nottingham ausgegeben. Wenn das in den Warenhäusern beschäftigte Kind sie 9 oder 10 Uhr abends verläßt, gibt man ihm oft noch ein Bündel mit auf den Weg, um es zu Hause fertigzumachen. Der kapitalistische Pharisee, vertreten durch einen seiner Lohnknechte, tut das natürlich mit der salbungsvollen Phrase: „das sei für Mutter“, weiß aber sehr wohl, daß das arme Kind aufsitzen und helfen muß.²⁶⁰

²⁶⁰ l.c. p. XXI, XXII.

492:1–2 Die Industrie des Spitzenklöppelns wird hauptsächlich in zwei englischen Agrikulturdistrikten betrieben, dem Honiton Spitzendistrikt, 20 bis 30 Meilen längs der Südküste von Devonshire, mit Einschluß weniger Plätze von Nord-Devon, und einem andren Distrikt, der großen Teil der Grafschaften von Buckingham, Bedford, Northampton und die benachbarten Teile von Oxfordshire und Huntingdonshire umfaßt. Die cottages der Ackerbautagelöhner bilden durchschnittlich die Arbeitslokale. Manche Manufakturherrn wenden über 3000 dieser Hausarbeiter an, hauptsächlich Kinder und junge Personen, ausschließlich weiblichen Geschlechts. Die beim Lace finishing beschriebenen Zustände wiederholen sich. Nur

15. Machinery and Modern Industry

instead of the “mistresses’ houses,” we find what are called “lace-schools,” kept by poor women in their cottages. From their fifth year and often earlier, until their twelfth or fifteenth year, the children work in these schools; during the first year the very young ones work from four to eight hours, and later on, from six in the morning till eight and ten o’clock at night.

“The rooms are generally the ordinary living rooms of small cottages, the chimney stopped up to keep out draughts, the inmates kept warm by their own animal heat alone, and this frequently in winter. In other cases, these so-called school-rooms are like small store-rooms without fire-places ... The overcrowding in these dens and the consequent vitiation of the air are often extreme. Added to this is the injurious effect of drains, privies, decomposing substances, and other filth usual in the purlieu of the smaller cottages.”

With regard to space:

“In one lace-school 18 girls and a mistress, 35 cubic feet to each person; in another, where the smell was unbearable, 18 persons and 24 1/2 cubic feet per head. In this industry are to be found employed children of 2 and 2 1/2 years.”²⁶¹

²⁶¹ l.c., pp. xxix., xxx.

Straw-plaiting:

471:3–472:1 Where lace-making ends in the counties of Buckingham and Bedford, straw-plaiting begins, and extends over a large part of Hertfordshire and the westerly and northerly parts of Essex. In 1861, there were 40,043 persons employed in straw-plaiting and straw-hat making; of these 3,815 were males of all ages, the rest females, of whom 14,913, including about 7,000 children, were under 20 years of age. In the place of the lace-schools we find here the “straw-plait schools.” The children commence their instruction in straw-plaiting generally in their 4th, often between their 3rd and 4th year. Education, of course, they get none. The children themselves call the elementary schools, “natural schools,” to

treten an die Stelle der „mistresses houses“ die sog. „lace schools“ (Spitzenschulen), gehalten von armen Weibern in ihren Hütten. Vom 5. Jahr an, manchmal jünger, bis zum 12. oder 15. arbeiten die Kinder in diesen Schulen, während des ersten Jahres die jüngsten von 4 bis 8 Stunden, später von 6 Uhr morgens bis 8 und 10 Uhr abends.

„Die Zimmer sind im allgemeinen gewöhnliche Wohnstuben kleiner cottages, der Kamin zugestopft zur Abwehr von Luftzug, die Insassen manchmal auch im Winter nur von ihrer eignen animalischen Wärme geheizt. In andren Fällen sind diese sog. Schulzimmer kleinen Vorratskammern ähnliche Räume, ohne Feuerplatz ... Die Überfüllung dieser Löcher und die dadurch bewirkte Luftverpestung sind oft extrem. Dazu kommt die schädliche Wirkung von Gerinnen, Abtritten, verwesenden Stoffen und andrem Unrat, gewöhnlich in den Zugängen zu kleineren cottages.“

492:3–4 Mit Bezug auf den Raum:

„In einer Spitzenschule 18 Mädchen und Meisterin, 33 Kubikfuß für jede Person; in einer andren, wo unerträglicher Gestank, 18 Personen, per Kopf 24 1/2 Kubikfuß. Man findet in dieser Industrie Kinder von 2 und 2 1/2 Jahren verwandt.“²⁶¹

²⁶¹ l.c. p. XXIX, XXX.

492:5–493:1 Wo das Spitzenklöppeln in den ländlichen Grafschaften von Buckingham und Bedford aufhört, beginnt die Strohflechterei. Sie erstreckt sich über großen Teil von Hertfordshire und die westlichen und nördlichen Teile von Essex. Es waren 1861 beschäftigt im Strohflechten und Strohhutmachen 48 043 Personen, 3815 davon männlichen Geschlechts aller Altersstufen, die andren weiblichen Geschlechts, und zwar 14 913 unter 20 Jahren, davon an 7000 Kinder. An die Stelle der Spitzenschulen treten hier die „straw plait schools“ (Strohflechterschulen). Die Kinder beginnen hier den Unterricht im Strohflechten gewöhnlich vom 4., manchmal zwischen dem 3. und 4. Jahr. Erziehung erhalten sie natürlich

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

distinguish them from these blood-sucking institutions, in which they are kept at work simply to get through the task, generally 30 yards daily, prescribed by their half-starved mothers. These same mothers often make them work at home, after school is over, till 10, 11, and 12 o'clock at night. The straw cuts their mouths, with which they constantly moisten it, and their fingers. Dr. Ballard gives it as the general opinion of the whole body of medical officers in London, that 300 cubic feet is the minimum space proper for each person in a bedroom or workroom. But in the straw-plait schools space is more sparingly allotted than in the lace-schools, "12 2/3, 17, 18 1/2 and below 22 cubic feet for each person."

The smaller of these numbers, says one of the commissioners, Mr. White, represents less space than the half of what a child would occupy if packed in a box measuring 3 feet in each direction.

Thus do the children enjoy life till the age of 12 or 14. The wretched half-starved parents think of nothing but getting as much as possible out of their children. The latter, as soon as they are grown up, do not care a farthing, and naturally so, for their parents, and leave them.

"It is no wonder that ignorance and vice abound in a population so brought up . . . Their morality is at the lowest ebb, . . . a great number of the women have illegitimate children, and that at such an immature age that even those most conversant with criminal statistics are astounded."²⁶²

²⁶² I.c., pp. xi., xii.

And the native land of these model families is the pattern Christian country for Europe; so says at least Count Montalembert, certainly a competent authority on Christianity!

472:5 Wages in the above industries, miserable as they are (the maximum wages of a child in the straw-plait schools rising in rare cases to 3 shillings), are reduced far below

keine. Die Kinder selbst nennen die Elementarschulen „natural schools“ (natürliche Schulen) im Unterschied zu diesen Blutaus-saugungsanstalten, worin sie einfach an der Arbeit gehalten werden, um das von ihren halbverhungerten Müttern vorgeschriebne Machwerk, meist 30 Yards per Tag, zu verfertigen. Diese Mütter lassen sie dann oft noch zu Haus bis 10, 11, 12 Uhr nachts arbeiten. Das Stroh schneidet ihnen Finger und Mund, durch den sie es beständig anfeuchten. Nach der von Dr. Ballard resümierten Gesamtansicht der medizinischen Beamten Londons bilden 300 Kubikfuß den Minimalraum für jede Person in einem Schlaf- oder Arbeitszimmer. In den Strohflechtschulen ist der Raum aber noch spärlicher zugemessen als in den Spitzenschulen, 12 2/3, 17, 18 1/2 und unter 22 Kubikfuß für jede Person.

„Die kleinre dieser Zahlen“, sagt Kommissär White, „repräsentieren weniger Raum als die Hälfte von dem, den ein Kind einnehmen würde, wenn verpackt in eine Schachtel von 3 Fuß nach allen Dimensionen.“

493:2–3 Dies der Lebensgenuß der Kinder bis zum 12. oder 14. Jahr. Die elenden, verkommenen Eltern sinnen nur darauf, aus den Kindern soviel als möglich herauszuschlagen. Aufgewachsen fragen die Kinder natürlich keinen Deut nach den Eltern und verlassen sie.

„Es ist kein Wunder, daß Unwissenheit und Laster überströmen in einer so aufgezüchteten Bevölkerung . . . Ihre Moral steht auf der niedrigsten Stufe . . . Eine große Anzahl der Weiber hat illegitime Kinder und manche in so unreifem Alter, daß selbst die Vertrauten der Kriminalstatistik darüber erstarren.“²⁶²

²⁶² I.c. p. XL, XLI.

493:4 Und das Heimatsland dieser Musterfamilien ist, so sagt der sicher im Christentum kompetente Graf Montalembert, Europas christliches Musterland!

493:5 Der Arbeitslohn, in den eben behandelten Industriezweigen überhaupt jämmerlich (der ausnahmsweise Maximallohn der Kinder in den Strohflechtschulen 3 sh.),

15. Machinery and Modern Industry

their nominal amount by the prevalence of the truck system everywhere, but especially in the lace districts.²⁶³

²⁶³ "Child. Empl. Comm., I. Rep. 1863," p. 185.

wird noch tief unter seinen Nominalbetrag herabgedrückt durch das namentlich in den Spitzendistrikten allgemein vorherrschende Trucksystem.²⁶³

²⁶³ „Child. Empl. Comm., I. Rep.“, 1863, p. 185.

15.8.e. Passage of Modern Manufacture and Domestic Industry into Modern Mechanical Industry. The Hastening of This Revolution by the Application of the Factory Acts to those Industries

First portion of subsection e) is still an example: Transition of the wearing apparel industry to the factory system with the help of the sewing machine. After exploitation can no longer be increased by the reckless wearing down of labor-power, introduction of machinery. We see that exploitation comes first, not the development of productive forces.

473:1 The cheapening of labor-power, by sheer abuse of the labor of women and children, by sheer robbery of every normal condition requisite for working and living, and by the sheer brutality of overwork and night-work, meets at last with natural obstacles that cannot be overstepped. So also, when based on these methods, do the cheapening of commodities and capitalist exploitation in general. So soon as this point is at last reached—and it takes many years—the hour has struck for the introduction of machinery, and for the thenceforth rapid conversion of the scattered domestic industries and also of manufactures into factory industries.

473:2 An example, on the most colossal scale, of this movement is afforded by the production of wearing apparel. This industry, according to the classification of the Children's Employment Commission, comprises straw-hat makers, ladies'-hat makers, cap-makers, tailors, milliners and dress-makers, shirt-makers, corset-makers, glove-makers, shoemakers, besides many minor branches, such as the making of neck-ties, collars, etc. In 1861, the number of females employed in these industries, in England and Wales, amounted to 586,299, of these 115,242 at the least were under 20, and 16,650 under 15 years of age. The num-

494:1 Die Verwohlfeilerung der Arbeitskraft durch bloßen Mißbrauch weiblicher und unreifer Arbeitskräfte, bloßen Raub aller normalen Arbeits- und Lebensbedingungen und bloße Brutalität der Über- und Nacharbeit, stößt zuletzt auf gewisse nicht weiter überschreitbare Naturschranken, und mit ihr auch die auf diesen Grundlagen beruhende Verwohlfeilerung der Waren und kapitalistische Exploitation überhaupt. Sobald dieser Punkt endlich erreicht ist, und es dauert lange, schlägt die Stunde für Einführung der Maschinerie und die nun rasche Verwandlung der zersplitterten Hausarbeit (oder auch Manufaktur) in Fabrikbetrieb.

494:2 Das kolossalste Beispiel dieser Bewegung liefert die Produktion von „Wearing Apparel“ (zum Anzug gehörige Artikel). Nach der Klassifikation der „Child. Empl. Comm.“ umfaßt diese Industrie Strohhut- und Damenhutmacher, Kappenmacher, Schneider, milliners und dressmakers,²⁶⁴ Hemdenmacher und Näherinnen, Korsetten-, Handschuh-, Schuhmacher, nebst vielen kleineren Zweigen, wie Fabrikation von Halsbinden, Halskragen usw. Das in England und Wales in diesen Industrien beschäftigte weibliche Personal betrug 1861: 586 298, wovon mindestens 115 242 unter 20, 16 560 unter 15 Jahren. Zahl dieser Arbeite-

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

ber of these workwomen in the United Kingdom in 1861, was 750,334. The number of males employed in England and Wales, in hat-making, shoemaking, glove-making and tailoring was 437,969; of these 14,964 under 15 years, 89,285 between 15 and 20, and 333,117 over 20 years. Many of the smaller branches are not included in these figures. But take the figures as they stand; we then have for England and Wales alone, according to the census of 1861, a total of 1,024,277 persons, about as many as are absorbed by agriculture and cattle breeding. We begin to understand what becomes of the immense quantities of goods conjured up by the magic of machinery, and of the enormous masses of workpeople, which that machinery sets free.

²⁶⁴ English?

The production of wearing apparel is carried on partly in manufactories in whose workrooms there is but a reproduction of that division of labor, the *membra disjecta* of which were found ready to hand; partly by small master-handicraftsmen; these, however, do not, as formerly, work for individual consumers, but for manufactories and warehouses, and to such an extent that often whole towns and stretches of country carry on certain branches, such as shoemaking, as a speciality; finally, on a very great scale by the so-called domestic workers, who form an external department of the manufactories, warehouses, and even of the workshops of the smaller masters.²⁶⁵ The raw material, etc., is supplied by mechanical industry, the mass of cheap human material (*taillable à merci et miséricorde*) is composed of the individuals “liberated” by mechanical industry and improved agriculture. The manufactures of this class owed their origin chiefly to the capitalist’s need of having at hand an army ready equipped to meet any increase of demand.²⁶⁶ These manufactures, neverthe-

rinnen im Vereinigten Königreich (1861): 750 334. Die Zahl der gleichzeitig in Hut-, Schuh-, Handschuhmacherei und Schneiderei beschäftigten männlichen Arbeiter in England und Wales: 437 969, wovon 14 964 unter 15 Jahren, 89 285 fünfzehn- bis zwanzigjährig, 333 117 über 20 Jahren. Es fehlen in dieser Angabe viele hierher gehörige kleinere Zweige. Nehmen wir aber die Zahlen, wie sie stehn, so ergibt sich für England und Wales allein, nach dem Zensus von 1861, eine Summe von 1 024 267 Personen, also ungefähr so viel, wie Ackerbau und Viehzucht absorbieren. Man fängt an zu verstehen, wozu die Maschinerie so ungeheure Produktenmassen hervorzaubern und so ungeheure Arbeitermassen „freisetzen“ hilft.

²⁶⁴ Millinery bezieht sich eigentlich nur auf den Kopfputz, doch auch Damenmäntel und Mantillen, während Dressmakers mit unsren Putzmacherinnen identisch sind.

494:3/o Die Produktion des „Wearing Apparel“ wird betrieben durch Manufakturen, welche in ihrem Innern nur die Teilung der Arbeit reproduzierten, deren *membra disjecta* sie fertig vorfanden; durch kleinere Handwerksmeister, die aber nicht wie früher für individuelle Konsumenten, sondern für Manufakturen und Warenmagazine arbeiten, so daß oft ganze Städte und Landstriche solche Zweige, wie Schusterei usw., als Spezialität ausüben; endlich im größten Umfang durch sog. Hausarbeiter, welche das auswärtige Departement der Manufakturen, Warenmagazine und selbst der kleineren Meister bilden.²⁶⁵ Die Massen des Arbeitsstoffs, Rohstoffs, Halbfabrikate usw. liefert die große Industrie, die Masse des wohlfeilen Menschenmaterials (*taillable à merci et miséricorde*) besteht aus den durch die große Industrie und Agrikultur „Freigesetzten“. Die Manufakturen dieser Sphäre verdanken ihren Ursprung hauptsächlich dem Bedürfnis des Kapitalisten, eine jeder Bewegung der Nachfrage entsprechende schlagfertige Armee unter der

15. Machinery and Modern Industry

less, allowed the scattered handicrafts and domestic industries to continue to exist as a broad foundation. The great production of surplus-value in these branches of labor, and the progressive cheapening of their articles, were and are chiefly due to the minimum wages paid, no more than requisite for a miserable vegetation, and to the extension of working-time up to the maximum endurable by the human organism. It was in fact by the cheapness of the human sweat and the human blood, which were converted into commodities, that the markets were constantly being extended, and continue daily to be extended; more especially was this the case with England's colonial markets, where, besides, English tastes and habits prevail. At last the critical point was reached. The basis of the old method, sheer brutality in the exploitation of the workpeople, accompanied more or less by a systematic division of labor, no longer sufficed for the extending markets and for the still more rapidly extending competition of the capitalists. The hour struck for the advent of machinery. The decisively revolutionary machine, the machine which attacks in an equal degree the whole of the numberless branches of this sphere of production, dressmaking, tailoring, shoemaking, sewing, hat-making, and many others, is the sewing-machine.

²⁶⁵ In England millinery and dressmaking are for the most part carried on, on the premises of the employer, partly by workwomen who live there, partly by women who live off the premises.

²⁶⁶ Mr. White, a commissioner, visited a military clothing manufactory that employed 1,000 to 1,200 persons, almost all females, and a shoe manufactory with 1,300 persons; of these nearly one half were children and young persons.

475:1–2 Its immediate effect on the workpeople is like that of all machinery, which, since the rise of modern industry, has seized upon new branches of trade. Children of too tender an age are sent adrift. The wage

Hand zu haben.²⁶⁶ Diese Manufakturen ließen jedoch neben sich den zerstreuten handwerksmäßigen und Hausbetrieb als breite Grundlage fortbestehn. Die große Produktion von Mehrwert in diesen Arbeitszweigen, zugleich mit der progressiven Verwohlfeilerung ihrer Artikel, war und ist hauptsächlich geschuldet dem Minimum des zu kümmerlicher Vegetation nötigen Arbeitslohns, verbunden mit dem Maximum menschenmöglicher Arbeitszeit. Es war eben die Wohlfeilheit des in Ware verwandelten Menschenschweißes und Menschenbluts, welche den Absatzmarkt beständig erweiterte und täglich erweitert, für England namentlich auch den Kolonialmarkt, wo überdem englische Gewohnheit und Geschmack vorherrschen. Endlich trat ein Knotenpunkt ein. Die Grundlage der alten Methode, bloß brutale Ausbeutung des Arbeitermaterials, mehr oder minder begleitet von systematisch entwickelter Arbeitsteilung, genügte dem wachsenden Markt und der noch rascher wachsenden Konkurrenz der Kapitalisten nicht länger. Die Stunde der Maschinerie schlug. Die entscheidend revolutionäre Maschine, welche die sämtlichen zahllosen Zweige dieser Produktionssphäre, wie Putzmacherei, Schneiderei, Schusterei, Näherei, Hutmacherei usw. gleichmäßig ergreift, ist—die Nähmaschine.

²⁶⁵ Die englische millinery und das dressmaking werden meist in den Baulichkeiten der Anwender, teils durch dort wohnhafte und engagierte Arbeiterinnen, teils durch auswärts wohnende Tagelöhnerinnen betrieben.

²⁶⁶ Kommissär White besuchte eine Manufaktur für Militärkleider, die 1000 bis 1200 Personen, fast alle weiblichen Geschlechts, beschäftigte, eine Schuhmanufaktur mit 1300 Personen, wovon beinahe die Hälfte Kinder und junge Personen usw. „Child. Empl. Comm., II. Rep.“, p. XLVII, n. 319.)

496:1–2 Ihre unmittelbare Wirkung auf die Arbeiter ist ungefähr die aller Maschinerie, welche in der Periode der großen Industrie neue Geschäftszweige erobert. Kinder im unreifsten Alter werden entfernt. Der

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

of the machine hands rises compared with that of the house-workers, many of whom belong to the poorest of the poor. That of the better situated handicraftsman, with whom the machine competes, sinks. The new machine hands are exclusively girls and young women. With the help of mechanical force, they destroy the monopoly that male labor had of the heavier work, and they drive off from the lighter work numbers of old women and very young children. The overpowering competition crushes the weakest of the manual laborers. The fearful increase in death from starvation during the last 10 years in London runs parallel with the extension of machine sewing.²⁶⁷ The new workwomen turn the machines by hand and foot, or by hand alone, sometimes sitting, sometimes standing, according to the weight, size, and special make of the machine, and expend a great deal of labor-power. Their occupation is unwholesome, owing to the long hours, although in most cases they are not so long as under the old system. Wherever the sewing-machine locates itself in narrow and already over-crowded workrooms, it adds to the unwholesome influences.

Lohn der Maschinenarbeiter steigt verhältnismäßig zu dem der Hausarbeiter, wovon viele zu „den Ärmsten der Armen“ („the poorest of the poor“) gehören. Der Lohn der besser gestellten Handwerker, mit denen die Maschine konkurriert, sinkt. Die neuen Maschinenarbeiter sind ausschließlich Mädchen und junge Frauen. Mit Hilfe der mechanischen Kraft vernichten sie das Monopol der männlichen Arbeit in schwererem Werk und verjagen aus leichterem Massen alter Weiber und unreifer Kinder. Die übermächtige Konkurrenz erschlägt die schwächsten Handarbeiter. Das greuliche Wachstum des Hungertods (death from starvation) in London während des letzten Dezenniums läuft parallel mit der Ausdehnung der Maschinennäherei.²⁶⁷ Die neuen Arbeiterinnen der Nähmaschine, welche von ihnen mit Hand und Fuß oder mit der Hand allein, sitzend und stehend, je nach Schwere, Größe und Spezialität der Maschine, bewegt wird, verausgaben große Arbeitskraft. Ihre Beschäftigung wird gesundheitswidrig durch die Dauer des Prozesses, obgleich er meist kürzer als im alten System. Überall, wo die Nähmaschine, wie beim Schuh-, Korsett-, Hutmachen usw., ohnehin enge und überfüllte Werkstätten heimsucht, vermehrt sie die gesundheitswidrigen Einflüsse.

“The effect,” says Mr. Lord, “on entering low-ceiled workrooms in which 30 to 40 machine hands are working is unbearable . . . The heat, partly due to the gas stoves used for warming the irons, is horrible . . . Even when moderate hours of work, i.e., from 8 in the morning till 6 in the evening, prevail in such places, yet 3 or 4 persons fall into a swoon regularly every day.”²⁶⁸

„Die Wirkung“, sagt Kommissär Lord, „beim Eintritt in niedrig gestochne Arbeitslokale, wo 30 bis 40 Maschinenarbeiter zusammenwirken, ist unerträglich . . . Die Hitze, teilweise den Gasöfen zur Wärmung der Bügeleisen geschuldet, ist schrecklich . . . Wenn selbst in solchen Lokalen sog. mäßige Arbeitsstunden, d.h. von 8 Uhr morgens bis 6 Uhr abends, vorherrschen, fallen dennoch jeden Tag 3 oder 4 Personen regelmäßig in Ohnmacht.“²⁶⁸

²⁶⁷ An instance. The weekly report of deaths by the Registrar-General dated 26th Feb., 1864, contains 5 cases of death from starvation. On the same day *The Times* reports another case. Six victims of starvation in one week!

²⁶⁷ Ein Beispiel. Am 26. Februar 1864 enthält der wöchentliche Sterblichkeitsbericht des Registrar General 5 Fälle von Hungertod. Am selben Tag berichtet die „Times“ einen neuen Fall von Hungertod. Sechs Opfer des Hungertods in einer Woche!

15. Machinery and Modern Industry

²⁶⁸ „Child. Empl. Comm., Second Rep., 1864,” p. lxxvii., n. 406–9, p. 84, n. 124, p. lxxiii, n. 441, p. 68, n. 6, p. 84, n. 126, p. 78, n. 85, p. 76, n. 69, p. lxxii, n. 483.

475:3/oo The revolution in the industrial methods which is the necessary result of the revolution in the instruments of production, is effected by a medley of transition forms. These forms vary according to the extent to which the sewing-machine has become prevalent in one branch, of industry or the other, to the time during which it has been in operation, to the previous condition of the workpeople, to the preponderance of manufacture, of handicrafts or of domestic industry, to the rent of the workrooms,²⁶⁹ etc. In dressmaking, for instance, where the labor for the most part was already organised, chiefly by simple co-operation, the sewing-machine at first formed merely a new factor in that manufacturing industry. In tailoring, shirtmaking, shoemaking, etc., all the forms are intermingled. Here the factory system proper. There middlemen receive the raw material from the capitalist *en chef*, and group around their sewing-machines, in “chambers” and “garrets,” from 10 to 50 or more workwomen. Finally, as is always the case with machinery when not organised into a system, and when it can also be used in dwarfish proportions, handicraftsman and domestic workers, along with their families, or with a little extra labor from without, make use of their own sewing-machines.²⁷⁰ The system actually prevalent in England is, that the capitalist concentrates a large number of machines on his premises, and then distributes the produce of those machines for further manipulation amongst the domestic workers.²⁷¹ The variety of the transition forms, however, does not conceal the tendency to conversion into the factory system proper. This tendency is nurtured by the very nature of the sewing-machine, the manifold uses of which push on the concentration, under one roof, and one management, of previously separated branches of a trade.

²⁶⁸ „Child. Empl. Comm., II. Rep.“, 1864, p. LXVII, n. 406–409; p. 84, n. 124; p. LXXIII, n. 441; p. 68, n. 6; p. 84, n. 126; p. 78, n. 85; p. 76, n. 69; p. LXXII, n. 438.

496:3/oo Die Umwälzung der gesellschaftlichen Betriebsweise, dies notwendige Produkt der Umwandlung des Produktionsmittels, vollzieht sich in einem bunten Wirrwarr von Übergangsformen. Sie wechseln mit dem Umfang, worin, und der Zeitlänge, während welcher die Nähmaschine den einen oder andren Industriezweig bereits ergriffen hat; mit der vorgefundenen Lage der Arbeiter, dem Übergewicht des Manufaktur-, Handwerks- oder Hausbetriebs, dem Mietpreis der Arbeitslokale²⁶⁹ usw. In der Putzmacherei z.B., wo die Arbeit meist schon organisiert war, hauptsächlich durch einfache Kooperation, bildet die Nähmaschine zunächst nur einen neuen Faktor des Manufakturbetriebs. In der Schneiderei, Hemdenmacherei, Schusterei usw. durchkreuzen sich alle Formen. Hier eigentlicher Fabrikbetrieb. Dort erhalten Zwischenanwender das Rohmaterial vom Kapitalisten *en chef* und gruppieren in „Kammern“ oder „Dachstuben“ 10 bis 50 und noch mehr Lohnarbeiter um Nähmaschinen. Endlich wie bei aller Maschinerie, die kein gegliedertes System bildet, und im Zwergformat anwendbar ist, benutzen Handwerker oder Hausarbeiter, mit eigener Familie oder Zuziehung weniger fremder Arbeiter, auch ihnen selbst gehörige Nähmaschinen.²⁷⁰ Tatsächlich überwiegt jetzt in England das System, daß der Kapitalist eine größere Maschinenanzahl in seinen Baulichkeiten konzentriert und dann das Maschinenprodukt zur weiteren Verarbeitung unter die Armee der Hausarbeiter verteilt.²⁷¹ Die Buntheit der Übergangsformen versteckt jedoch nicht die Tendenz zur Verwandlung in eingetlichen Fabrikbetrieb. Diese Tendenz wird genährt durch den Charakter der Nähmaschine selbst, deren mannigfaltige Anwendbarkeit zur Vereinigung früher getrennter Geschäftszweige in

15.8. *Impact of Large-Scale Industry on Manufacture, Handicrafts etc.*

It is also favoured by the circumstance that preparatory needlework, and certain other operations, are most conveniently done on the premises where the machine is at work; as well as by the inevitable expropriation of the hand sewers, and of the domestic workers who work with their own machines. This fate has already in part overtaken them. The constantly increasing amount of capital invested in sewing-machines,²⁷² gives the spur to the production of, and gluts the markets with, machine-made articles, thereby giving the signal to the domestic workers for the sale of their machines. The overproduction of sewing-machines themselves, causes their producers, in bad want of a sale, to let them out for so much a week, thus crushing by their deadly competition the small owners of machines.²⁷³ Constant changes in the construction of the machines, and their ever-increasing cheapness, depreciate day by day the older makes, and allow of their being sold in great numbers, at absurd prices, to large capitalists, who alone can thus employ them at a profit. Finally, the substitution of the steam-engine for man gives in this, as in all similar revolutions, the finishing blow. At first, the use of steam power meets with mere technical difficulties, such as unsteadiness in the machines, difficulty in controlling their speed, rapid wear and tear of the lighter machines, etc., all of which are soon overcome by experience.²⁷⁴ If, on the one hand, the concentration of many machines in large manufactories leads to the use of steam power, on the other hand, the competition of steam with human muscles hastens on the concentration of workpeople and machines in large factories. Thus England is at present experiencing, not only in the colossal industry of making wearing apparel, but in most of the other trades mentioned above, the conversion of manufacture, of handicrafts, and of domestic work into the factory system, after each of those forms of production, totally changed and disorganised under the influence of modern industry, has long

derselben Baulichkeit und unter dem Kommando desselben Kapitals drängt; durch den Umstand, daß vorläufiges Nadelwerk und einige andre Operationen am geeignetsten am Sitz der Maschine verrichtet werden; endlich durch die unvermeidliche Expropriation der Handwerker und Hausarbeiter, die mit eignen Maschinen produzieren. Dies Fatum hat sie zum Teil schon jetzt erreicht. Die stets wachsende Masse des in Nähmaschinen angelegten Kapitals²⁷² spornt die Produktion und erzeugt Marktstockungen, welche das Signal zum Verkauf der Nähmaschinen durch die Hausarbeiter läuten. Die Überproduktion von solchen Maschinen selbst zwingt ihre absatzbedürftigen Produzenten, sie auf wöchentliche Miete zu verleihen, und schafft damit eine für die kleinen Maschineneigner tödliche Konkurrenz.²⁷³ Stets noch fortdauernde Konstruktionswechsel und Verwohlfeilerung der Maschinen deprezieren ebenso beständig ihre alten Exemplare und lassen sie nur noch massenhaft, zu Spottpreisen gekauft, in der Hand großer Kapitalisten, profitlich anwenden. Endlich gibt die Substitution der Dampfmaschine für den Menschen, hier wie in allen ähnlichen Umwälzungsprozessen, den Ausschlag. Die Anwendung der Dampfkraft stößt im Anfang auf rein technische Hindernisse, wie Schütteln der Maschinen, Schwierigkeit in der Beherrschung ihrer Geschwindigkeit, raschen Verderb der leichtern Maschinen usw., lauter Hindernisse, welche die Erfahrung bald überwinden lehrt.²⁷⁴ Wenn einerseits die Konzentration vieler Arbeitsmaschinen in größeren Manufakturen zur Anwendung der Dampfkraft treibt, beschleunigt andererseits die Konkurrenz des Dampfes mit Menschenmuskeln Konzentration von Arbeitern und Arbeitsmaschinen in großen Fabriken. So erlebt England gegenwärtig in der kolossalen Produktionssphäre des „Wearing Apparel“, wie in den meisten übrigen Gewerken, die Umwälzung der Manufaktur, des Handwerks und der Hausarbeit in Fabrikbetrieb,

15. Machinery and Modern Industry

ago reproduced, and even overdone, all the horrors of the factory system, without participating in any of the elements of social progress it contains.²⁷⁵

²⁶⁹ "The rental of premises required for work-rooms seems the element which ultimately determines the point; and consequently it is in the metropolis, that the old system of giving work out to small employers and families has been longest retained, and earliest returned to." (l.c., p. 83, n. 123.) The concluding statement in this quotation refers exclusively to shoemaking.

²⁷⁰ In glove-making and other industries where the condition of the work-people is hardly distinguishable from that of paupers, this does not occur.

²⁷¹ l.c., p. 83, n. 122.

²⁷² In the wholesale boot and shoe trade of Leicester alone, there were in 1864, 800 sewing-machines already in use.

²⁷³ l.c., p. 84, n. 124.

²⁷⁴ Instances: The Army Clothing Depot at Pimlico, London, the Shirt factory of Tillie and Henderson at Londonderry, and the clothes factory of Messrs. Tait at Limerick which employs about 1,200 hands.

²⁷⁵ "Tendency to Factory System" (l.c., p. lxxvii). "The whole employment is at this time in a state of transition, and is undergoing the same Change as that effected in the lace trade, weaving, etc." (l.c., n. 405.) "A complete revolution" (l.c., p. xlvi., n. 318). At the date of the Child. Empl. Comm. of 1840 stocking making was still done by manual labor. Since 1846 various sorts of machines have been introduced, which are now driven by steam. The total number of persons of both sexes and of all ages from 3 years upwards, employed in stocking making in England, was in 1862 about 129,000. Of these only 4,063 were, according to the Parliamentary Return of the 11th February, 1862, working under the Factory Acts.

End of subsection e) (which is at the same time end of section 8): Extension of factory acts to industries where machinery is not yet introduced.

477:1/o This industrial revolution which takes place spontaneously, is artificially

nachdem alle jene Formen, unter dem Einfluß der großen Industrie gänzlich verändert, zersetzt, entstellt, bereits längst alle Ungeheuerlichkeiten des Fabriksystems ohne seine positiven Entwicklungsmomente reproduziert und selbst übertrieben hatten.²⁷⁵

²⁶⁹ „Der Mietpreis der Arbeitslokale scheint der Faktor zu sein, der schließlich den Ausschlag gibt, und folglich hat sich in der Hauptstadt das alte System, Arbeit an kleine Unternehmer und Familien auszugeben, am längsten erhalten und ist am ehesten wieder aufgenommen worden.“ (l.c. p. 83, n. 123.) Der Schlußsatz bezieht sich ausschließlich auf Schusterei.

²⁷⁰ In der Handschuhmacherei usw., wo die Lage der Arbeiter von der der Paupers kaum unterscheidbar, kommt dies nicht vor.

²⁷¹ l.c. p. 83, n. 122.

²⁷² In der für den Großverkauf produzierenden Stiefel- und Schuhmacherei von Leicester allein waren 1864 bereits 800 Nähmaschinen im Gebrauch.

²⁷³ l.c. p. 84, n. 124.

²⁷⁴ So im Armee-Kleidungsdepot zu Pimlico, London, in der Hemdenfabrik von Tillie und Henderson zu Londonderry, in der Kleiderfabrik der Firma Tait zu Limerick, die an 1200 „Hände“ vernutzt.

²⁷⁵ „Die Tendenz zum Fabrikssystem.“ (l.c. p. LXVII.) „Das ganze Gewerbe befindet sich jetzt in einem Übergangsstadium und macht die gleichen Veränderungen durch, die auch die Spitzenindustrie, die Weberei usw., durchgemacht haben.“ (l.c., n. 405.) „Eine völlige Revolution.“ (l.c. p. XLVI, n. 318.) Zur Zeit der „Child. Empl. Comm.“ von 1840 war die Strumpfwirkerei noch Handarbeit. Seit 1846 wurde verschiedenartige Maschinerie eingeführt, jetzt durch Dampf getrieben. Die Gesamtzahl der in der englischen Strumpfwirkerei beschäftigten Personen beiderlei Geschlechts und aller Altersstufen vom 3. Jahr an betrug 1862 ungefähr 120 000 Personen. Davon, nach Parliamentary Return vom 11. Februar, 1862 doch nur 4063 unter der Botmäßigkeit des Fabrikakts.

498:1/o Diese naturwüchsig vorgehende industrielle Revolution wird künstlich be-

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

helped on by the extension of the Factory Acts to all industries in which women, young persons and children are employed. The compulsory regulation of the working-day as regards its length, pauses, beginning and end, the system of relays of children, the exclusion of all children under a certain age, etc., necessitate on the one hand more machinery²⁷⁶ and the substitution of steam as a motive power in the place of muscles.²⁷⁷ On the other hand, in order to make up for the loss of time, an expansion occurs of the means of production used in common, of the furnaces, buildings, etc., in one word, greater concentration of the means of production and a correspondingly greater concourse of workpeople. The chief objection, repeatedly and passionately urged on behalf of each manufacture threatened with the Factory Act, is in fact this, that in order to continue the business on the old scale a greater outlay of capital will be necessary. But as regards labor in the so-called domestic industries and the intermediate forms between them and Manufacture, so soon as limits are put to the working-day and to the employment of children, those industries go to the wall. Unlimited exploitation of cheap labor-power is the sole foundation of their power to compete.

²⁷⁶ Thus, e.g., in the earthenware trade, Messrs. Cochrane, of the Britain Pottery, Glasgow, report: "To keep up our quantity we have gone extensively into machines wrought by unskilled labor, and every day convinces us that we can produce a greater quantity than by the old method." ("Rep. of Insp. of Fact., 31st Oct., 1865," p. 13.) "The effect of the Fact. Acts is to force on the further introduction of machinery" (l.c., pp. 13–14).

²⁷⁷ Thus, after the extension of the Factory Act to the potteries, great increase of powerjiggers in place of hand-moved jiggers.

478:1–479:1 One of the essential conditions for the existence of the factory system, especially when the length of the working-day is fixed, is certainty in the result, i.e., the

schleunigt durch die Ausdehnung der Fabrikgesetze auf alle Industriezweige, worin Weiber, junge Personen und Kinder arbeiten. Die zwangsmäßige Regulation des Arbeitstags nach Länge, Pausen, Anfangs- und Endpunkt, das System der Ablösung für Kinder, der Ausschluß aller Kinder unter einem gewissen Alter usw. erfordern einerseits vermehrte Maschinerie²⁷⁶ und Ersatz von Muskeln durch Dampf als Triebkraft.²⁷⁷ Andererseits, um im Raum zu gewinnen, was in der Zeit verlorengelassen, findet Streckung der gemeinschaftlich vernutzten Produktionsmittel statt, der Öfen, Baulichkeiten usw., also in einem Wort größere Konzentration der Produktionsmittel und entsprechende größere Konglomeration von Arbeitern. Der leidenschaftlich wiederholte Haupteinwand jeder mit dem Fabrikgesetz bedrohten Manufaktur ist in der Tat die Notwendigkeit größerer Kapitalauslage, um das Geschäft in seinem alten Umfang fortzuführen. Was aber die Zwischenformen zwischen Manufaktur und Hausarbeit und letztere selbst betrifft, so versinkt ihr Boden mit der Schranke des Arbeitstags und der Kinderarbeit. Schrankenlose Ausbeutung wohlfeiler Arbeitskräfte bildet die einzige Grundlage ihrer Konkurrenzfähigkeit.

²⁷⁶ So z.B. in der Töpferei berichtet die Firma Cochran von der „Britannia Pottery, Glasgow“: „Um unsere Produktionshöhe aufrechtzuerhalten, verwenden wir jetzt in weitem Umfang Maschinen, die von ungelernten Arbeitern bedient werden, und jeder Tag überzeugt uns, daß wir eine größere Menge herstellen können als nach dem alten Verfahren.“ „Reports of Insp. of Fact., 31st Oct. 1865“, p. 13.) „Die Wirkung des Fabrikakts ist, zu weiterer Einführung von Maschinerie zu treiben.“ (l.c. p. 13, 14.)

²⁷⁷ So nach Einführung des Fabrikakts in die Töpferei große Zunahme der power jiggers statt der handmoved jiggers.

499:1–500:1 Wesentliche Bedingung des Fabrikbetriebs, namentlich sobald er der Regulation des Arbeitstags unterliegt, ist normale Sicherheit des Resultats, d.h. Pro-

15. Machinery and Modern Industry

production in a given time of a given quantity of commodities, or of a given useful effect. The statutory pauses in the working-day, moreover, imply the assumption that periodical and sudden cessation of the work does no harm to the article undergoing the process of production. This certainty in the result, and this possibility of interrupting the work are, of course, easier to be attained in the purely mechanical industries than in those in which chemical and physical processes play a part; as, for instance, in the earthenware trade, in bleaching, dyeing, baking, and in most of the metal industries. Wherever there is a workingday without restriction as to length, wherever there is night-work and unrestricted waste of human life, there the slightest obstacle presented by the nature of the work to a change for the better is soon looked upon as an everlasting barrier erected by Nature. No poison kills vermin with more certainty than the Factory Act removes such everlasting barriers. No one made a greater outcry over "impossibilities" than our friends the earthenware manufacturers. In 1864, however, they were brought under the Act, and within sixteen months every "impossibility" had vanished.

"The improved method," called forth by the Act, "of making slip by pressure instead of by evaporation, the newly-constructed stoves for drying the ware in its green state, etc., are each events of great importance in the pottery art, and mark an advance which the preceding century could not rival ... It has even considerably reduced the temperature of the stoves themselves with a considerable saving of fuel, and with a readier effect on the ware."²⁷⁸

²⁷⁸ "Report of Insp. of Fact., 31st Oct., 1865," pp. 96 and 127.

In spite of every prophecy, the cost-price of earthenware did not rise, but the quantity produced did, and to such an extent that the export for the twelve months, ending December, 1865, exceeded in value by £138,628 the average of the preceding three years. In the manufacture of matches it

produktion eines bestimmten Quantums Ware oder eines bezweckten Nutzeffekts in gegebenem Zeitraum. Die gesetzlichen Pausen des regulierten Arbeitstags unterstellen ferner plötzlichen und periodischen Stillstand der Arbeit ohne Schaden für das im Produktionsprozeß befindliche Machwerk. Diese Sicherheit des Resultats und Unterbrechungsfähigkeit der Arbeit sind natürlich in rein mechanischen Gewerken leichter erzielbar als dort, wo chemische und physikalische Prozesse eine Rolle spielen, wie z.B. in Töpferei, Bleicherei, Färberei, Bäckerei, den meisten Metallmanufakturen. Mit dem Schlendrian des unbeschränkten Arbeitstags, der Nachtarbeit und freier Menschenverwüstung gilt jedes naturwüchsige Hindernis bald für eine ewige „Naturschranke“ der Produktion. Kein Gift vertilgt Ungeziefer sicherer als das Fabrikgesetz solche „Naturschranken“. Niemand schrie lauter über „Unmöglichkeiten“ als die Herren von der Töpferei. 1864 wurde ihnen das Fabrikgesetz oktroyiert, und alle Unmöglichkeiten waren schon 16 Monate später verschwunden. Die durch das Fabrikgesetz hervorgerufene

„verbesserte Methode, Töpferbrei (slip) durch Druck statt durch Verdunstung zu machen, die neue Konstruktion der Öfen zum Trocknen der ungebrannten Ware usw. sind Ereignisse von großer Wichtigkeit in der Kunst der Töpferei und bezeichnen einen Fortschritt derselben, wie ihn das letzte Jahrhundert nicht aufweisen kann ... Die Temperatur der Öfen ist beträchtlich vermindert, bei beträchtlicher Abnahme im Kohlenkonsum und rascher Wirkung auf die Ware.“²⁷⁸

²⁷⁸ „Rep. Insp. Fact., 31st Oct. 1865“, p. 96 und 127.

500:2–3 Trotz aller Prophezeiung stieg nicht der Kostenpreis des Erdenguts, wohl aber die Produktenmasse, so daß die Ausfuhr der 12 Monate von Dezember 1864 bis Dezember 1865 einen Wertüberschuß von 138 628 Pfd.St. über den Durchschnitt der drei vorigen Jahre ergab. In der Fa-

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

was thought to be an indispensable requirement, that boys, even while bolting their dinner, should go on dipping the matches in melted phosphorus, the poisonous vapour from which rose into their faces. The Factory Act (1864) made the saving of time a necessity, and so forced into existence a dipping machine, the vapour from which could not come in contact with the workers.²⁷⁹ So, at the present time, in those branches of the lace manufacture not yet subject to the Factory Act, it is maintained that the meal-times cannot be regular owing to the different periods required by the various kinds of lace for drying, which periods vary from three minutes up to an hour and more. To this the Children's Employment Commissioners answer:

“The circumstances of this case are precisely analogous to that of the paper-stainers, dealt with in our first report. Some of the principal manufacturers in the trade urged that in consequence of the nature of the materials used, and their various processes, they would be unable, without serious loss, to stop for meal-times at any given moment. But it was seen from the evidence that, by due care and previous arrangement, the apprehended difficulty would be got over; and accordingly, by clause 6 of section 6 of the Factory Acts Extension Act, passed during this Session of Parliament, an interval of eighteen months is given to them from the passing of the Act before they are required to conform to the meal hours, specified by the Factory Acts.”²⁸⁰

²⁷⁹ The introduction of this and other machinery into match-making caused in one department alone 230 young persons to be replaced by 32 boys and girls of 14 to 17 years of age. This saving in labor was carried still further in 1865, by the employment of steam power.

²⁸⁰ “Ch. Empl. Comm., 11. Rep., 1864,” p. ix., n. 50.

Hardly had the Act been passed when our friends the manufacturers found out:

“The inconveniences we expected to arise

brikation von Zündhölzern galt es als Naturgesetz, daß Jungen, selbst während der Herunterwürgung ihres Mittagmahls, die Hölzer in eine warme Phosphorkomposition tunkten, deren giftiger Dampf ihnen in das Gesicht stieg. Mit der Notwendigkeit, Zeit zu ökonomisieren, erzwang der Fabrikakt (1864) eine „dipping machine“ (Eintauchungsmaschine), deren Dämpfe den Arbeiter nicht erreichen können.²⁷⁹ So wird jetzt in den noch nicht dem Fabrikgesetz unterworfenen Zweigen der Spitzenmanufaktur behauptet, die Mahlzeiten können nicht regelmäßig sein, wegen der verschiedenen Zeitlängen, die verschiedene Spitzenmaterialien zur Trocknung brauchen, und die von 3 Minuten auf eine Stunde und mehr variieren. Hierauf antworten die Kommissäre der „Children's Employment Comm.“:

„Die Umstände sind dieselben wie in der Tapetendruckerei. Einige der Hauptfabrikanten in diesem Zweig machten lebhaft geltend, die Natur der verwandten Materialien und die Verschiedenartigkeit der Prozesse, die sie durchlaufen, erlaubten ohne großen Verlust keine plötzliche Stillsetzung der Arbeit für Mahlzeiten ... Durch die 6. Klausel der 6. Sektion des Factory Acts Extension Act“ (1864) „ward ihnen eine achtzehnmonatliche Frist vom Erlassungsdatum des Akts an eingeräumt, nach deren Ablauf sie sich den durch den Fabrikakt spezifizierten Erfrischungspausen fügen mußten.“²⁸⁰

²⁷⁹ Die Einführung dieser und anderer Maschinerie in die Zündholzfabrik hat in einem Departement derselben 230 junge Personen durch 32 Jungen und Mädchen von 14 bis 17 Jahren ersetzt. Diese Ersparung von Arbeitern wurde 1865 weitergeführt durch Anwendung der Dampfkraft.

²⁸⁰ „Child. Empl. Comm., II. Rep.“, 1864, p. IX, n. 50.

501:1–2 Kaum hatte das Gesetz parlamentarische Sanktion erhalten, als die Herrn Fabrikanten auch entdeckten:

„Die Mißstände, die wir von der Einführung

15. Machinery and Modern Industry

from the introduction of the Factory Acts into our branch of manufacture, I am happy to say, have not arisen. We do not find the production at all interfered with; in short, we produce more in the same time.”²⁸¹

²⁸¹ “Rep. of Insp. of Fact., 31st Oct., 1865,” p. 22.

It is evident that the English legislature, which certainly no one will venture to reproach with being overdosed with genius, has been led by experience to the conclusion that a simple compulsory law is sufficient to enact away all the so-called impediments, opposed by the nature of the process, to the restriction and regulation of the working-day. Hence, on the introduction of the Factory Act into a given industry, a period varying from six to eighteen months is fixed within which it is incumbent on the manufacturers to remove all technical impediments to the working of the Act. Mirabeau’s “Impossible! ne me dites jamais ce bête de mot!” is particularly applicable to modern technology. But though the Factory Acts thus artificially ripen the material elements necessary for the conversion of the manufacturing system into the factory system, yet at the same time, owing to the necessity they impose for greater outlay of capital, they hasten on the decline of the small masters, and the concentration of capital.²⁸²

²⁸² “But it must be borne in mind that those improvements, though carried out fully in some establishments, are by no means general, and are not capable of being brought into use in many of the old manufactories without an expenditure of capital beyond the means of many of the present occupiers.” “I cannot but rejoice,” writes Sub-Insp. May, “that notwithstanding the temporary disorganisation which inevitably follows the introduction of such a measure (as the Factory Act Extension Act), and is, indeed, directly indicative of the evils which it was intended to remedy, etc.” (Rep. of Insp. of Fact., 31st Oct., 1865.)

480:2–481:1 Besides the purely technical impediments that are removable by technical means, the irregular habits of the

des Fabrikgesetzes erwarteten, sind nicht eingetreten. Wir finden nicht, daß die Produktion irgendwie gelähmt ist. In der Tat, wir produzieren mehr in derselben Zeit.“²⁸¹

²⁸¹ „Reports of Insp. of Fact., 31st Oct. 1865“, p. 22.

501:3 Man sieht, das englische Parlament, dem sicher niemand Genialität vorwerfen wird, ist durch Erfahrung zur Einsicht gelangt, daß ein Zwangsgesetz alle sog. Naturhindernisse der Produktion gegen Beschränkung und Regelung des Arbeitstags einfach wegdiktieren kann. Bei Einführung des Fabrikakts in einem Industriezweig wird daher ein Termin von 6 bis 18 Monaten gestellt, innerhalb dessen es Sache des Fabrikanten ist, die technischen Hindernisse wegzuräumen. Mirabeaus „Impossible? Ne me dites jamais ce bête de mot!“ gilt namentlich für die moderne Technologie. Wenn aber das Fabrikgesetz so die zur Verwandlung des Manufakturbetriebs in Fabrikbetrieb notwendigen materiellen Elemente treibhausmäßig reift, beschleunigt es zugleich durch die Notwendigkeit vergrößerter Kapitalauslage den Untergang der kleineren Meister und die Konzentration des Kapitals.²⁸²

²⁸² „Die nötigen Verbesserungen ... können in vielen alten Manufakturen nicht eingeführt werden, ohne Kapitalauslage über die Mittel vieler gegenwärtiger Besitzer ... Eine vorübergehende Desorganisation begleitet notwendig die Einführung der Fabrikakte. Der Umfang dieser Desorganisation steht in direktem Verhältnis zur Größe der zu heilenden Mißstände.“ (l.c. p. 96, 97.)

501:4–502:1 Abgesehen von den rein technischen und technisch beseitbaren Hindernissen stößt die Regulation des Arbeitstags

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

workpeople themselves obstruct the regulation of the hours of labor. This is especially the case where piece-wage predominates, and where loss of time in one part of the day or week can be made good by subsequent over-time, or by night-work, a process which brutalises the adult workman, and ruins his wife and children.²⁸³ Although this absence of regularity in the expenditure of labor-power is a natural and rude reaction against the tedium of monotonous drudgery, it originates, also, to a much greater degree from anarchy in production, anarchy that in its turn pre-supposes unbridled exploitation of labor-power by the capitalist. Besides the general periodic changes of the industrial cycle, and the special fluctuations in the markets to which each industry is subject, we may also reckon what is called "the season," dependent either on the periodicity of favourable seasons of the year for navigation; or on fashion, and the sudden placing of large orders that have to be executed in the shortest possible time. The habit of giving such orders becomes more frequent with the extension of railways and telegraphs.

"The extension of the railway system throughout the country has tended very much to encourage giving short notice. Purchasers now come up from Glasgow, Manchester, and Edinburgh once every fortnight or so to the wholesale city warehouses which we supply, and give small orders requiring immediate execution, instead of buying from stock as they used to do. Years ago we were always able to work in the slack times, so as to meet demand of the next season, but now no one can say beforehand what will be the demand then."²⁸⁴

²⁸³ With blast furnaces, for instance, "work towards the end of the week being generally much increased in duration in consequence of the habit of the men of idling on Monday and occasionally during a part or the whole of Tuesday also." ("Child. Empl. Comm., III. Rep.," p. vi.) "The little masters generally have very irregular hours. They lose two or three days, and then work all night to make it up... They always employ their

auf unregelmäßige Gewohnheiten der Arbeiter selbst, namentlich wo Stücklohn vorherrscht und Verbummlung der Zeit in einem Tages- oder Wochenabschnitt durch nachträgliche Überarbeit oder Nacharbeit gutgemacht werden kann, eine Methode, die den erwachsenen Arbeiter brutalisiert, seine unreifen und weiblichen Genossen ruiniert.²⁸³ Obgleich diese Regellosigkeit in Verausgabung der Arbeitskraft eine naturwüchsige rohe Reaktion gegen die Langweile monotoner Arbeitsplackerei ist, entspringt sie jedoch in ungleich höherem Grad aus der Anarchie der Produktion selbst, die ihrerseits wieder ungezügelter Exploitation der Arbeitskraft durch das Kapital voraussetzt. Neben die allgemeinen periodischen Wechselfälle des industriellen Zyklus und die besondern Marktschwankungen in jedem Produktionszweig treten namentlich die sog. Saison, beruhe sie nun auf Periodizität der Schifffahrt günstiger Jahreszeiten oder auf der Mode, und die Plötzlichkeit großer und in kürzester Frist auszuführender Ordres. Die Gewohnheit der letztern dehnt sich mit Eisenbahnen und Telegraphie aus.

„Die Audehnung des Eisenbahnsystems“, sagt z.B. ein Londoner Fabrikant „durch das ganze Land hat die Gewohnheit kurzer Ordres sehr gefördert. Käufer kommen jetzt von Glasgow, Manchester und Edinburgh einmal in 14 Tagen oder für den Engroskauf zu den City-Warenhäusern, denen wir die Waren liefern. Sie geben Ordres, die unmittelbar ausgeführt werden müssen, statt vom Lager zu kaufen, wie es Gewohnheit war. In früheren Jahren waren wir stets fähig, während der schlaffen Zeit für die Nachfrage der nächsten Saison vorzuarbeiten, aber jetzt kann niemand vorhersagen, was dann in Nachfrage sein wird.“²⁸⁴

²⁸³ In den Hochöfen z.B. „wird die Arbeitszeit gegen Ende der Woche im allgemeinen stark ausgedehnt, infolge der Gewohnheit der Arbeiter, am Montag und gelegentlich, teilweise oder ganz, auch am Dienstag zu feiern“. („Child. Empl. Comm., III. Rep.“, p. VI.) „Die kleinen Meister haben im allgemeinen eine sehr unregelmäßige Arbeitszeit. Sie verlieren 2 oder 3 Tage, und dann arbeiten sie die ganze Nacht, um

15. Machinery and Modern Industry

own children, if they have any.” (l.c., p. vii.) “The want of regularity in coming to work, encouraged by the possibility and practice of making up for this by working longer hours.” (l.c., p. xviii.) “In Birmingham ... an enormous amount of time is lost ... idling part of the time, slaving the rest.” (l.c., p. xi.)

²⁸⁴ “Child. Empl. Comm., IV., Rep.,” p. xxxii., “The extension of the railway system is said to have contributed greatly to this custom of giving sudden orders, and the consequent hurry, neglect of meal-times, and late hours of the workpeople.” (l.c., p. xxxi.)

481:2–482:0 In those factories and manufactories that are not yet subject to the Factory Acts, the most fearful over-work prevails periodically during what is called the season, in consequence of sudden orders. In the outside department of the factory, of the manufactory, and of the warehouse, the so-called domestic workers, whose employment is at the best irregular, are entirely dependent for their raw material and their orders on the caprice of the capitalist, who, in this industry, is not hampered by any regard for depreciation of his buildings and machinery, and risks nothing by a stoppage of work, but the skin of the worker himself. Here then he sets himself systematically to work to form an industrial reserve force that shall be ready at a moment’s notice; during one part of the year he decimates this force by the most inhuman toil, during the other part, he lets it starve for want of work.

“The employers avail themselves of the habitual irregularity in the homework, when any extra work is wanted at a push, so that the work goes on till 11, and 12 p.m. or 2 a.m., or as the usual phrase is, “all hours,” and that in localities where “the stench is enough to knock you down, you go to the door, perhaps, and open it, but shudder to go further.”²⁸⁵ “They are curious men,” said one of the witnesses, a shoemaker, speaking of the masters, “they think it does a boy no harm to work too hard for half the year, if he is nearly idle for

den Verlust aufzuholen ... Sie beschäftigen immer ihre eignen Kinder, wenn sie welche haben.“ (l.c. p. VII.) „Der Mangel an Regelmäßigkeit beim Arbeitsanfang, der durch die Möglichkeit und die Übung, durch Überarbeit den Verlust einzuholen, gefördert wird.“ (l.c. p. XVIII.) „Ungeheurer Zeitverlust in Birmingham ... indem sie einen Teil der Zeit bummeln und in der restlichen Zeit sich abschulten.“ (l.c. p. XI.)

²⁸⁴ „Child. Empl. Comm., IV. Rep.“, p. XX-XII. „Die Ausdehnung des Eisenbahnsystems soll diese Gewohnheit, plötzliche Ordres zu erteilen, sehr gefördert haben; für die Arbeiter ergeben sich daraus Hetztempo, Vernachlässigung der Essenszeiten und Überstunden.“ (l.c. p. XX-XI.)

502:3–503:0 In den noch nicht dem Fabrikgesetz unterworfenen Fabriken und Manufakturen herrscht periodisch die furchtbarste Überarbeit während der sog. Saison, stoßweis infolge plötzlicher Ordres. Im auswärtigen Departement der Fabrik, der Manufaktur und des Warenmagazins, in der Sphäre der Hausarbeit, ohnehin durchaus unregelmäßig, für ihr Rohmaterial und ihre Ordres ganz abhängig von den Launen des Kapitalisten, den hier keine Rücksicht auf Verwertung von Baulichkeiten, Maschinen usw. bindet und der hier nichts riskiert als die Haut der Arbeiter selbst, wird so systematisch eine stets disponible, industrielle Reservearmee großgezüchtet, dezimiert während eines Teils des Jahrs durch unmenschlichsten Arbeitszwang, während des andren Teils verlumpt durch Arbeitsmangel.

„Die Anwender“, sagt die „Child. Empl. Comm.“, „exploitieren die gewohnheitsmäßige Unregelmäßigkeit der Hausarbeit, um sie in Zeiten, wo Extrawerk nötig, bis 11, 12, 2 Uhr nachts, in der Tat, wie die stehende Phrase lautet, auf alle Stunden hinaufzupforcieren“, und dies in Lokalen, „wo der Gestank hinreicht, euch niederzuschmettern (the stench is enough to knock you down). Ihr geht vielleicht bis an die Tür und öffnet sie, aber schaudert zurück von weitem Vorgehn.“²⁸⁵ „Es sind komische Käuze, unsre Anwender“, sagt einer der

15.8. Impact of Large-Scale Industry on Manufacture, Handicrafts etc.

the other half.”²⁸⁶

²⁸⁵ “Ch. Empl. Comm. IV. Rep.,” pp. xxxv., n. 235, 237.

²⁸⁶ “Ch. Empl. Comm. IV. Rep.,” p. 127, n. 56.

482:1/o In the same way as technical impediments, so, too, those “usages which have grown with the growth of trade” were and still are proclaimed by interested capitalists as obstacles due to the nature of the work. This was a favourite cry of the cotton lords at the time they were first threatened with the Factory Acts. Although their industry more than any other depends on navigation, yet experience has given them the lie. Since then, every pretended obstruction to business has been treated by the Factory inspectors as a mere sham.²⁸⁷ The thoroughly conscientious investigations of the Children’s Employment Commission prove that the effect of the regulation of the hours of work, in some industries, was to spread the mass of labor previously employed more evenly over the whole year²⁸⁸ that this regulation was the first rational bridle on the murderous, meaningless caprices of fashion,²⁸⁹ caprices that consort so badly with the system of modern industry; that the development of ocean navigation and of the means of communication generally, has swept away the technical basis on which season-work was really supported,²⁹⁰ and that all other so-called unconquerable difficulties vanish before larger buildings, additional machinery, increase in the number of workpeople employed,²⁹¹ and the alterations caused by all these in the mode of conducting the wholesale trade.²⁹² But for all that, capital never becomes reconciled to such changes—and this is admitted over and over again by its own representatives—except “under the pressure of a General Act of Parliament”²⁹³ for the compulsory regu-

verhörten Zeugen, ein Schuster, „sie glauben, es tue einem Jungen keinen Harm, wenn er während eines halben Jahrs totgerackert und während der andren Hälfte fast gezwungen wird, herumzuludern.“²⁸⁶

²⁸⁵ „Child. Empl. Comm., IV. Rep.“, p. XXXV, n. 235 und 237.

²⁸⁶ I.c. p. 127, n. 56.

503:1/o Wie die technischen Hindernisse, so wurden und werden diese sog. „Geschäftsgewohnheiten“ („usages which have grown with the growth of trade“) von interessierten Kapitalisten als „Naturschranken“ der Produktion behauptet, ein Lieblingsschrei der Baumwoll-Lords zur Zeit, als das Fabrikgesetz sie zuerst bedrohte. Obgleich ihre Industrie mehr als jede andere auf dem Weltmarkt und daher der Schifffahrt beruht, strafte die Erfahrung sie Lügen. Seitdem wird jedes angebliche „Geschäftshindernis“ von den englische Fabrikinspektoren als hohle Flause behandelt.²⁸⁷ Die gründlich gewissenhaften Untersuchungen der „Child. Empl. Comm.“ beweisen in der Tat, daß in einigen Industrien die bereits angewandte Arbeitsmasse nur gleichmäßiger über das ganze Jahr verteilt würde durch die Regulation des Arbeitstags,²⁸⁸ daß letztere der erste rationelle Zügel für die menschenmörderischen, inhaltlosen und an sich dem System der großen Industrie unangemeßnen Flatterlaunen der Mode,²⁸⁹ daß die Entwicklung der ozeanische Schifffahrt und der Kommunikationsmittel überhaupt den eigentlich technischen Grund der Saisonarbeit aufgehoben hat,²⁹⁰ daß alle andren angeblich unkontrollierbaren Umstände weggeräumt werden durch weitere Baulichkeiten, zusätzliche Maschinerie, vermehrte Anzahl der gleichzeitig beschäftigten Arbeiter²⁹¹ und von selbst folgenden Rückschlag auf das System des Großhandels.²⁹² Jedoch versteht sich das Kapital, wie es wiederholt durch den Mund seiner Repräsentanten erklärt, zu solcher Umwälzung „nur unter dem Druck eines allgemeinen Parla-

15. Machinery and Modern Industry

lation of the hours of labor.

²⁸⁷ With respect to the loss of trade by non-completion of shipping orders in time, I remember that this was the pet argument of the factory masters in 1832 and 1833. Nothing that can be advanced now on this subject, could have the force that it had then, before steam had halved all distances and established new regulations for transit. It quite failed at that time of proof when put to the test, and again it will certainly fail should it have to be tried." ("Reports of Insp. of Fact., 31 Oct., 1862," pp. 54, 55.)

²⁸⁸ "Ch. Empl. Comm. IV. Rep.," p. xviii, n. 118.

²⁸⁹ John Bellers remarked as far back as 1699: "The uncertainty of fashions does increase necessitous poor. It has two great mischiefs in it. 1st, The journeymen are miserable in winter for want of work, the mercers and master-weavers not daring to lay out their stocks to keep the journeymen employed before the spring comes, and they know what the fashion will then be; 2ndly, In the spring the journeymen are not sufficient, but the master-weavers must draw in many prentices, that they may supply the trade of the kingdom in a quarter or half a year, which robs the plough of hands, drains the country of laborers, and in a great part stocks the city with beggars, and starves some in winter that are ashamed to beg." ("Essays about the Poor, Manufactures, etc.," p. 9.)

²⁹⁰ "Ch. Empl. Comm. V. Rep.," p. 171, n. 34.

²⁹¹ The evidence of some Bradford export-houses is as follows: "Under these circumstances, it seems clear that no boys need be worked longer than from 8 a.m. to 7 or 7.30 p.m., in making up. It is merely a question of extra hands and extra outlay. If some masters were not so greedy, the boys would not work late; an extra machine costs only £16 or £18; much of such over-time as does occur is to be referred to an insufficiency of appliances, and a want of space." "Ch. Empl. Comm. V. Rep.," p. 171, n. 35, 36, 38.

mentsakts"²⁹³, der den Arbeitstag zwangsgesetzlich reguliert.

²⁸⁷ „Was den Verlust anbelangt, der dem Handel durch nicht rechtzeitiges Erfüllen der Ordres zur Verschiffung entsteht, so erinnere ich mich, daß dies das Lieblingsargument der Fabrikherren 1832 war. Nichts, was jetzt zu diesem Gegenstand angeführt werden kann, könnte soviel Gewicht haben wie damals, als der Dampf noch nicht alle Entfernungen halbiert und neue Regelungen des Verkehrs eingeführt hatte. Diese Behauptung erwies sich damals, als wirklich die Probe aufs Exempel gemacht wurde, als nicht stichhaltig und würde gewiß auch jetzt einer Nachprüfung nicht standhalten.“ „Reports of Insp. of Fact., 31st Oct. 1862“, p. 54, 44.)

²⁸⁸ „Child. Empl. Comm., III. Rep.“, p. XVIII, n. 118.

²⁸⁹ John Bellers bemerkt schon 1699: „Die Ungewißheit der Mode vergrößert die Zahl der notleidenden Armen. Sie birgt zwei große Mißstände in sich: 1. die Gesellen leiden im Winter Not aus Mangel an Arbeit, da die Schnittwarenhändler und Webermeister nicht wagen, ihre Kapitalien zur Beschäftigung von Gesellen zu verauslagen, bevor der Frühling kommt und sie wissen, was dann Mode sein wird; 2. im Frühling sind nicht genug Gesellen da, so daß die Webermeister viele Lehrlinge heranziehen müssen, um den Handel des Königreichs in einem viertel oder halben Jahr versorgen zu können, wodurch der Ackersmann vom Pflug gerissen, das flache Land von Arbeitern entblößt, die Städte sich zu einem großen Teil mit Bettlern füllen und manche, die sich zu betteln schämen, im Winter dem Hungertode ausgeliefert werden.“ („Essays about the Poor, Manufactures etc.“, p. 9.)

²⁹⁰ „Child. Empl. Comm., V. Rep.“, p. 171, n. 34.

²⁹¹ So heißt es z.B. in den Zeugenaussagen von Bradforder Exporthändlern: „Unter diesen Umständen ist es klar, daß Jungen nicht länger als vom 8 Uhr morgens bis 7 oder 7 1/2 Uhr abends in den Warenhäusern beschäftigt zu werden brauchen. Es ist nur eine Frage von Extra-Auslage und Extra- Händen. Die Jungen brauchen nicht so spät in die Nacht hinein zu arbeiten, wären einige Anwender nicht so profitthungrig; eine Extramaschine kostet nur 16 oder 18 Pfd. St. ... Alle Schwierigkeiten entspringen aus ungenügenden Vorrichtungen und Raummangel.“

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

²⁹² l.c. A London manufacturer, who in other respects looks upon the compulsory regulation of the hours of labor as a protection for the workpeople against the manufacturers, and for the manufacturers themselves against the wholesale trade, states: "The pressure in our business is caused by the shippers, who want, e.g., to send the goods by sailing vessel so as to reach their destination at a given season, and at the same time want to pocket the difference in freight between a sailing vessel and a steamship, or who select the earlier of two steamships in order to be in the foreign market before their competitors."

²⁹³ "This could be obviated," says a manufacturer, "at the expense of an enlargement of the works under the pressure of a General Act of Parliament." l.c., p. x., n. 38.

(l.c. p. 171, n. 35, 36 u. 38.)

²⁹² l.c. [p. 81, n. 32.] Ein Londoner Fabrikant, der übrigens die zwangsweise Regulation des Arbeitstags als Schutzmittel der Arbeiter gegen die Fabrikanten und der Fabrikanten selbst gegen den Großhandel betrachtet, sagt aus: „Der Druck in unsrem Geschäft ist verursacht durch die Vershiffer, die z.B. Ware mit einem Segelschiff verschicken wollen, um für eine bestimmte Saison an Ort und Stelle zu sein und zugleich die Frachtdifferenz zwischen Segelschiff und Dampfschiff einzustecken, oder von zwei Dampfschiffen das frühere wählen, um vor ihren Konkurrenten auf dem auswärtigen Markt zu erscheinen.“

²⁹³ „Dem könnte abgeholfen werden“, sagt ein Fabrikant, „auf Kosten einer Erweiterung der Werke unter dem Druck eines allgemeinen Parlamentsakts.“ (l.c. p. X, n. 38.)

15.9. The Factory Acts. Sanitary and Educational Clauses of the Same. Their General Extension in England

Summary and introduction: The factory acts, the first conscious and methodical reaction of society against the spontaneous form which its production process had assumed, are a necessary product of big industry. Now their *generalization* is discussed in two ways: 1) Clauses not relating to the hours of work (until 490:0;G514:1) 2) Extension to other branches of industry (rest of section).

483:1 Factory legislation, that first conscious and methodical reaction of society against the spontaneously developed form of the process of production, is, as we have seen, just as much the necessary product of modern industry as cotton yarn, self-actors, and the electric telegraph. Before passing to the consideration of the extension of that legislation in England, we shall shortly notice certain clauses contained in the Factory Acts, and not relating to the hours of work.

504:1/o Die Fabrikgesetzgebung, diese erste bewußte und planmäßige Rückwirkung der Gesellschaft auf die naturwüchsige Gestalt ihres Produktionsprozesses, ist, wie man gesehn, ebensosehr ein notwendiges Produkt der großen Industrie als Baumwollgarn, Selfactors und der elektrische Telegraph. Bevor wir zu ihrer Verallgemeinerung in England übergehn, sind noch einige nicht auf die Stundenzahl des Arbeitstags bezügliche Klauseln des englischen Fabrikakts kurz zu erwähnen.

Question 1027 Explain how the factory legislation is "just as much the necessary product of modern industry as cotton-yarn, self-actors, and the electric telegraph" (p. 610:1).

Those clauses in the factory acts not relating to work.

::23505:1–506:2:610:2–612:480:2–482:0: Health clauses. Their necessity desproves the Freetrade dogma that "in a society with antagonistic interests each individual promotes the common weal by pursuing his own advantage (Eigennutzes)" It characterizes the capitalist

15. Machinery and Modern Industry

mode of production that the most basic health and safety requirements have to be forced on it by legislation of the state. Beyond a certain point, rational improvements of the production process are impossible in capitalism (e.g., 500 cubic feet of air per person)

483:2–484:1 Apart from their wording, which makes it easy for the capitalist to evade them, the sanitary clauses are extremely meagre, and, in fact, limited to provisions for whitewashing the walls, for insuring cleanliness in some other matters, for ventilation, and for protection against dangerous machinery. In the third book we shall return again to the fanatical opposition of the masters to those clauses which imposed upon them a slight expenditure on appliances for protecting the limbs of their workpeople, an opposition that throws a fresh and glaring light on the Free-trade dogma, according to which, in a society with conflicting interests, each individual necessarily furthers the common weal by seeking nothing but his own personal advantage! One example is enough. The reader knows that during the last 20 years, the flax industry has very much extended, and that, with that extension, the number of scutching mills in Ireland has increased. In 1864 there were in that country 1,800 of these mills. Regularly in autumn and winter women and “young persons,” the wives, sons, and daughters of the neighbouring small farmers, a class of people totally unaccustomed to machinery, are taken from field labor to feed the rollers of the scotching mills with flax. The accidents, both as regards number and kind, are wholly unexampled in the history of machinery. In one scotching mill, at Kildinan, near Cork, there occurred between 1852 and 1856, six fatal accidents and sixty mutilations; every one of which might have been prevented by the simplest appliances, at the cost of a few shillings. Dr. W. White, the certifying surgeon for factories at Downpatrick, states in his official report, dated the 15th December, 1865:

“The serious accidents at the scutching mills are of the most fearful nature. In many cases a quarter of the body is torn from the trunk, and either involves death, or a future of wretched

505:2–3 Abgesehn von ihrer Redaktion, welche dem kapitalisten ihre Umgehung erleichtert, sind die Gesundheitsklauseln äußerst mager, in der Tat beschränkt auf Vorschriften für Weißen der Wände und eine sonstige Reinlichkeitsmaßregeln, Ventilation und Schutz gegen gefährliche Maschinerie. Wir kommen im Dritten Buch auf den fanatischen Kampf der Fabrikanten gegen die Klausel zurück, die ihnen eine geringe Ausgabe zum Schutz der Gliedmaßen ihrer „Hände“ aufoktroiert. Hier bewährt sich wieder glänzend das Freihandelsdogma, daß in einer Gesellschaft antagonistischer Interessen jeder das Gemeinwohl durch Verfolgung seines Eigennutzes fördert. Ein Beispiel genügt. Man weiß, daß sich während der letztverfloßnen zwanzigjährigen Periode die Flachsindustrie und mit ihr die scutching mills (Fabriken zum Schlagen und Brechen des Flachses) in Irland sehr vermehrt haben. Es gab dort 1864 an 1800 dieser mills. Periodisch im Herbst und Winter werden hauptsächlich junge Personen und Weiber, die Söhne, Töchter und Frauen der benachbarten kleinen Pächter, lauter mit Maschinerie ganz unbekannte Leute, von der Feldarbeit weggeholt, um die Walzwerke der scutching mills mit Flachs zu füttern. Die Unfälle sind nach Umfang und Intensität gänzlich beispiellos in der Geschichte der Maschinerie. Eine einzige scutching mill zu Kildinan (bei Cork) zählte von 1852 bis 1856 sechs Todesfälle und 60 schwere Verstümmelungen, welchen allen durch die einfachsten Anstalten, zum Preis von wenigen Schillingen, vorgebeugt werden konnte. Dr. W. White, der certifying surgeon der Fabriken zu Downpatrick, erklärt in einem offiziellen Bericht von 16. Dezember 1865:

„Die Unfälle in scutching mills sind furchtbarer Art. In vielen Fällen wird ein Viertel des Körpers vom Rumpfe gerissen. Tod oder eine Zukunft elenden Unvermögens und Leidens

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

incapacity and suffering. The increase of mills in the country will, of course, extend these dreadful results, and it will be a great boon if they are brought under the legislature. I am convinced that by proper supervision of scutching mills a vast sacrifice of life and limb would be averted.”²⁹⁴

²⁹⁴ I.c., p. xv., n. 72 sqq.

484:2–3 What could possibly show better the character of the capitalist mode of production, than the necessity that exists for forcing upon it, by Acts of Parliament, the simplest appliances for maintaining cleanliness and health? In the potteries the Factory Act of 1864

“has whitewashed and cleansed upwards of 200 workshops, after a period of abstinence from any such cleaning, in many cases of 20 years, and in some, entirely,” (this is the “abstinence” of the capitalist!) “in which were employed 27,800 artisans, hitherto breathing through protracted days and often nights of labor, a mephitic atmosphere, and which rendered an otherwise comparatively innocuous occupation, pregnant with disease and death. The Act has improved the ventilation very much.”²⁹⁵

²⁹⁵ “Rep. Insp. Fact., 31st October, 1865,” p. 127.

At the same time, this portion of the Act strikingly shows that the capitalist mode of production, owing to its very nature, excludes all rational improvement beyond a certain point. It has been stated over and over again that the English doctors are unanimous in declaring that where the work is continuous, 500 cubic feet is the very least space that should be allowed for each person. Now, if the Factory Acts, owing to their compulsory provisions, indirectly hasten on the conversion of small workshops into factories, thus indirectly attacking the proprietary rights of the smaller capitalists, and assuring a monopoly to the great ones, so, if it were made obligatory to provide the proper space for each workman in every workshop, thousands of small employers would, at one full swoop, be expropriated directly! The very root of the capitalist

sind gewöhnliche Folgen der Wunden. Die Zunahme der Fabriken in diesem Lande wird natürlich diese schauerhaften Resultate ausdehnen. Ich bin überzeugt, daß durch geeignete Staatsüberwachung der scutching mills große Opfer von Leib und Leben zu vermeiden sind.“²⁹⁴

²⁹⁴ I.c. p. XV, n. 72 sqq.

505:4–506:1 Was könnte die kapitalistische Produktionsweise besser charakterisieren als die Notwendigkeit, ihr durch Zwangsgesetz von Staats wegen die einfachsten Reinlichkeits- und Gesundheitsvorrichtungen aufzuherrschen?

„Der Fabrikakt von 1864 hat in den Töpfereien über 200 Werkstätten geweißt und gereinigt, nach zwanzigjähriger oder gänzlicher Enthaltung von jeder solchen Operation“ (dies ist die „Abstinenz“ des Kapitals!), „in Plätzen, wo 27 878 Arbeiter beschäftigt sind und bisher, während übermäßiger Tages-, oft Nachtarbeit, eine mephitische Atmosphäre einatmeten, welche eine sonst vergleichungsweise harmlose Beschäftigung mit Krankheit und Tod schwängerte. Der Akt hat die Ventilationsmittel sehr vermehrt.“²⁹⁵

²⁹⁵ „Reports of Insp. of Fact., 31st Oct. 1865“, p. 127.

506:2 Zugleich zeigt dieser Zweig des Fabrikakts schlagend, wie die kapitalistische Produktionsweise ihrem Wesen nach über einen gewissen Punkt hinaus jede rationelle Verbeßrung anuschließt. Es ward wiederholt bemerkt, daß die englischen Ärzte aus einem Munde 500 Kubikfuß Luftraum per Person für kaum genügendes Minimum bei fortgesetzter Arbeit erklären. Nun wohl! Wenn der Fabrikakt indirekt durch alle seine Zwangsmaßregeln die Verwandlung kleinerer Werkstätten in Fabriken beschleunigt, daher indirekt in das Eigentumsrecht der kleineren Kapitalisten eingreift und den großen das Monopol sichert, so würde die gesetzliche Aufherrschaft des nötigen Luftraums für jeden Arbeiter in der Werkstätte Tausende von kleinen Kapitalisten mit einem Schlag direkt expropriieren! Sie würde die Wurzel der kapitalisti-

15. Machinery and Modern Industry

mode of production, i.e., the self-expansion of all capital, large or small, by means of the “free” purchase and consumption of labor-power, would be attacked. Factory legislation is therefore brought to a deadlock before these 500 cubic feet of breathing space. The sanitary officers, the industrial inquiry commissioners, the factory inspectors, all harp, over and over again, upon the necessity for those 500 cubic feet, and upon the impossibility of wringing them out of capital. They thus, in fact, declare that consumption and other lung diseases among the workpeople are necessary conditions to the existence of capital.²⁹⁶

²⁹⁶ It has been found out by experiment, that with each respiration of average intensity made by a healthy average individual, about 25 cubic inches of air are consumed, and that about 20 respirations are made in each minute. Hence the air inhaled in 24 hours by each individual is about 720,000 cubic inches, or 416 cubic feet. It is clear, however, that air which has been once breathed, can no longer serve for the same process until it has been purified in the great workshop of Nature. According to the experiments of Valentin and Brunner, it appears that a healthy man gives off about 1,300 cubic inches of carbonic acid per hour; this would give about 8 ounces of solid carbon thrown off from the lungs in 24 hours.” Every man should have at least 800 cubic feet.” (Huxley.)

::23506:3–513:0:613:1–618:1:482:1–488:1: Education clauses

::23506:3–508:0:613:1–614:0:482:1–484:0: Their success shows that it is possible to combine instruction and gymnastics with handwork, hence also the combination of handwork with instruction and gymnastics must be successful, which is the education of the future.

485:1–486:1 Paltry as the education clauses of the Act appear on the whole, yet they proclaim elementary education to be an indispensable condition to the employment of children.²⁹⁷ The success of those clauses proved for the first time the possibility of combining education and gymnastics²⁹⁸ with manual labor, and, consequently, of combining manual labor with education and gymnastics. The factory inspectors soon found out by questioning the schoolmasters,

schen Produktionsweise angreifen, d.h. die Selbstverwertung des Kapitals, ob groß oder klein, durch „freien“ Ankauf und Konsum der Arbeitskraft. Vor diesen 500 Kubikfuß Luft geht daher der Fabrikgesetzgebung der Atem aus. Die Gesundheitsbehörden, die industriellen Untersuchungskommissionen, die Fabrikinspektoren wiederholen wieder und wieder die Notwendigkeit der 500 Kubikfuß und die Unmöglichkeit, sie dem Kapital aufzuoktroieren. Sie erklären so in der Tat Schwindsucht und andre Lungenkrankheiten der Arbeit für eine Lebensbedingung des Kapitals.²⁹⁶

²⁹⁶ Man hat erfahrungsmäßig gefunden, daß ungefähr 25 Kubikzoll Luft bei jeder Atmung mittlerer Intensität von einem gesunden Durchschnittsindividuum konsumiert werden, und ungefähr 20 Atmungen per Minute vorgehen. Der Luftkonsum eines Individuums in 24 Stunden ergäbe danach ungefähr 720 000 Kubikzoll oder 416 Kubikfuß. Man weiß aber, daß einmal eingeatmete Luft nicht mehr zu demselben Prozeß dienen kann, bevor sie in der großen Werkstätte der Natur gereinigt wird. Nach den Experimenten von Valentin und Brunner scheint ein gesunder Mann ungefähr 1300 Kubikzoll Kohlensäure per Stunde auszuatmen; dies ergäbe ungefähr 8 Unzen solider Kohle, von der Lunge in 24 Stunden abgeworfen. „Jeder Mann sollte wenigstens 800 Kubikfuß haben.“ (Huxley.)

506:3–507:1 Armselig, wie die Erziehungsklauseln des Fabrikakts im ganzen erscheinen, proklamieren sie den Elementarunterricht als Zwangsbedingung der Arbeit.²⁹⁷ Ihr Erfolg bewies zuerst die Möglichkeit der Verbindung von Unterricht und Gymnastik²⁹⁸ mit Handarbeit, also auch von Handarbeit mit Unterricht und Gymnastik. Die Fabrikinspektoren entdeckten bald aus den Zeugenverhören der Schulmeister, daß die Fabrikinder, obgleich sie nur halb soviel Un-

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

that the factory children, although receiving only one half the education of the regular day scholars, yet learnt quite as much and often more.

“This can be accounted for by the simple fact that, with only being at school for one half of the day, they are always fresh, and nearly always ready and willing to receive instruction. The system on which they work, half manual labor, and half school, renders each employment a rest and a relief to the other; consequently, both are far more congenial to the child, than would be the case were he kept constantly at one. It is quite clear that a boy who has been at school all the morning, cannot (in hot weather particularly) cope with one who comes fresh and bright from his work.”²⁹⁷

²⁹⁷ According to the English Factory Act, parents cannot send their children under 14 years of age into Factories under the control of the Act, unless at the same time they allow them to receive elementary education. The manufacturer is responsible for compliance with the Act. “Factory education is compulsory, and it is a condition of labor.” (“Rep. Insp. Fact., 31st Oct., 1865,” p. 111.)

²⁹⁸ On the very advantageous results of combining gymnastics (and drilling in the case of boys) with compulsory education for factory children and pauper scholars, see the speech of N. W. Senior at the seventh annual congress of “The National Association for the Promotion of Social Science,” in “Report of Proceedings, etc.,” Lond. 1863, pp. 63, 64, also the “Rep. Insp. Fact., 31st Oct., 1865,” pp. 118, 119, 120, 126, sqq.

²⁹⁹ “Rep. Insp. Fact., 31st Oct., 1865,” p. 118. A silk manufacturer naively states to the Children’s Employment Commissioners: “I am quite sure that the true secret of producing efficient workpeople is to be found in uniting education and labor from a period of childhood. Of course the occupation must not be too severe, nor irksome, or unhealthy. But of the advantage of the union I have no doubt. I wish my own children could have some work as well as play to give variety to their schooling.” (“Ch. Empl. Comm. V. Rep.,” p. 82, n. 36.)

Further information on this point will be found in Senior’s speech at the Social Sci-

terricht genießen als die regelmäßigen Tagesschüler, ebensoviel und oft mehr lernen.

„Die Sache ist einfach. Diejenigen, die sich nur einen halben Tag in der Schule aufhalten, sind stets frisch und fast immer fähig und willig, Unterricht zu empfangen. Das System halber Arbeit und halber Schule macht jede der beiden Beschäftigungen zur Ausruhung und Erholung von der andren und folglich viel angemeßner für das Kind als die ununterbrochene Fortdauer einer von beiden. Ein Junge, der von morgens früh in der Schule sitzt, und nun gar bei heißem Wetter, kann unmöglich mit einem andren wetteifern, der munter und aufgeweckt von seiner Arbeit kommt.“²⁹⁹

²⁹⁷ Nach dem englischen Fabrikakt können die Eltern Kinder unter 14 Jahren nicht in die „kontrollierten“ Fabriken schicken, ohne ihnen zugleich Elementarunterricht erteilen zu lassen. Der Fabrikant ist verantwortlich für die Befolgung des Gesetzes. „Fabrikunterricht ist obligatorisch, und er gehört zu den Arbeitsbedingungen.“ („Reports of Insp. of Fact., 31st Oct. 1865“, p. 111.)

²⁹⁸ Über die vorteilhaftesten Erfolge der Verbindung von Gymnastik (für Jungen auch militärischer Exerzitien) mit Zwangsunterricht der Fabrikkinder und Armenschüler siehe die Rede von N. W. Senior im 7. jährlichen Kongreß der „National Association for the Promotion of Social Science“ in „Report of Proceedings etc.“, Lond. 1863, p. 63, 64, ebenso den Bericht der Fabrikinspektoren für 31. Okt. 1865, p. 118, 119, 120, 126 sqq.

²⁹⁹ „Reports of Insp. of Fact.“, l.c. p. 118, 119. Ein naiver Seidenfabrikant erklärt den Untersuchungskommissären der „Child. Empl. Comm.“: „Ich durchaus überzeugt, daß das wahre Geheimnis der Produktion tüchtiger Arbeiter gefunden ist in der Vereinigung der Arbeit mit Unterricht von der Periode der Kindheit an. Natürlich muß die Arbeit weder zu anstrengend noch widerlich und ungesund sein. Ich wünschte, meine eignen Kinder hätten Arbeit und Spiel zur Abwechslung de Schule.“ „Child. Empl. Comm., V. Rep.“, p. 82, n. 36.)

507:2/o Weitere Belege findet man in Seniors Rede auf dem soziologischen Kon-

15. Machinery and Modern Industry

ence Congress at Edinburgh in 1863. He there shows, amongst other things, how the monotonous and uselessly long school hours of the children of the upper and middle classes, uselessly add to the labor of the teacher, "while he not only fruitlessly but absolutely injuriously, wastes the time, health, and energy of the children."³⁰⁰ From the Factory system budded, as Robert Owen has shown us in detail, the germ of the education of the future, an education that will, in the case of every child over a given age, combine productive labor with instruction and gymnastics, not only as one of the methods of adding to the efficiency of production, but as the only method of producing fully developed human beings.

³⁰⁰ Senior, I.c., p. 66. How Modern Industry, when it has attained to a certain pitch, is capable, by the revolution it effects in the mode of production and in the social conditions of production, of also revolutionising people's minds, is strikingly shown by a comparison of Senior's speech in 1863, with his philippic against the Factory Act of 1833; or by a comparison, of the views of the congress above referred to, with the fact that in certain country districts of England poor parents are forbidden, on pain of death by starvation, to educate their children. Thus, e.g., Mr. Snell reports it to be a common occurrence in Somersetshire that, when a poor person claims parish relief, he is compelled to take his children from school. Mr. Wollarton, the clergyman at Feltham, also tells of cases where all relief was denied to certain families "because they were sending their children to school!"

groß zu Edinburgh 1863. Er zeigt hier auch u.a. noch, wie der einseitige unproduktive und verlängerte Schultag der Kinder der höhern und mittlern Klassen die Arbeit der Lehrer nutzlos vermehrt, „während er Zeit, Gesundheit und Energie der Kinder nicht nur fruchtlos, sondern absolut schädlich verwüftet“³⁰⁰. Aus dem Fabrikssystem, wie man im Detail bei Robert Owen verfolgen kann, entsproß der Keim der Erziehung der Zukunft, welcher für alle Kinder über einem gewissen Alter produktive Arbeit mit Unterricht und Gymnastik verbinden wird, nicht nur als eine Methode zur Steigerung der gesellschaftlichen Produktion, sondern als die einzige Methode zur Produktion vollseitig entwickelter Menschen.

³⁰⁰ Senior, I.c. p. 66. Wie die große Industrie auf einem gewissen Höhegrad durch die Umwälzung der materiellen Produktionsweise und der gesellschaftlichen Produktionsverhältnisse auch die Köpfe umwälzt, zeigt schlagend ein Vergleich zwischen der Rede des N. W. Senior von 1863 und seiner Philippika gegen das Fabrikgesetz von 1833 oder ein Vergleich der Ansichten des erwähnten Kongresses mit der Tatsache, daß es in gewissen ländlichen Teilen Englands armen Eltern immer noch bei Strafe des Hungertods verboten ist, ihre Kinder zu erziehen. So z.B. berichtet Herr Snell als gewöhnliche Praxis in Somersetshire, daß, wenn eine arme Person Pfarreihilfe anspricht, sie gezwungen wird, ihre Kinder aus der Schule zu nehmen. So erzählt Herr Wollaston, Pfarrer zu Feltham, von Fällen, wo alle Unterstützung gewissen Familien versagt wurde, „weil sie ihre Jungen zur Schule schickten“!

::23508:1:614:1:484:1:, first sentence: there is a contradiction. 1) That modern industry technically overcomes (aufhebt) the manufactural division of labor which chains one laborer to one particular operation all the time. 2) but the capitalistic form of modern industry reproduces this division of labor on an even more monstrous stage.

486:2–488:1 Modern Industry, as we have seen, sweeps away by technical means the manufacturing division of labor, under which each man is bound hand and foot for life to a single detail-operation. At the same time, the capitalistic form of that industry reproduces this same division of labor in a still more monstrous shape; in the

508:1–509:1 Man hat gesehn, daß die große Industrie die manufakturmäßige Teilung der Arbeit mit ihrer lebenslänglichen Annexion eines ganzen Menschen an eine Detailoperation technisch aufhebt, während zugleich die kapitalistische Form der großen Industrie jene Arbeitsteilung noch monströser reproduziert, in der eigentlichen

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

factory proper, by converting the workman into a living appendage of the machine; and everywhere outside the factory, partly by the sporadic use of machinery and machine workers,³⁰¹ partly by re-establishing the division of labor on a fresh basis by the general introduction of the labor of women and children, and of cheap unskilled labor.

³⁰¹ Wherever handicraft-machines, driven by men, compete directly or indirectly with more developed machines driven by mechanical power, a great change takes place with regard to the laborer who drives the machine. At first the steam-engine replaces this laborer, afterwards he must replace the steam-engine. Consequently the tension and the amount of labor-power expended become monstrous, and especially so in the case of the children who are condemned to this torture. Thus Mr. Longe; one of the commissioners, found in Coventry and the neighbourhood boys of from 10 to 15 years employed in driving the ribbon-loom, not to mention younger children who had to drive smaller machines. "It is extraordinarily fatiguing work. The boy is a mere substitute for steam power." ("Ch. Empl. Comm. V. Rep. 1866;" p. 114, n. 6.) As to the fatal consequences of "this system of slavery," as the official report styles it, see l.c., p. 114 sqq.

This contradiction makes itself forcibly felt (macht sich gewaltsam geltend), i.e., leads to a contradiction on the empirical level as well: The children employed in modern factories, "riveted to the most simple manipulations" (in manufacture the artisans had been riveted to *difficult* manipulations!), do not learn the skills to be employed in the same factories when they are older.

The antagonism between the manufacturing division of labor and the methods of Modern Industry makes itself forcibly felt. It manifests itself, amongst other ways, in the frightful fact that a great part of the children employed in modern factories and manufactures, are from their earliest years riveted to the most simple manipulations, and exploited for years, without being taught a single sort of work that would afterwards make them of use, even in the same manufactory or factory. In the English letter-press printing trade, for example, there existed formerly a system, corresponding to that in the old manufactures and handicrafts, of ad-

Fabrik durch Verwandlung des Arbeiters in den selbstbewußten Zubehör einer Teilmaschine, überall sonst teils durch sporadischen Gebrauch der Maschinen und der Maschinenarbeit,³⁰¹ teils durch Einführung von Weiber-, Kinder- und ungeschickter Arbeit als neuer Grundlage der Arbeitsteilung.

³⁰¹ Wo handwerksmäßige Maschinen, durch Menschenkraft getrieben, direkt oder indirekt mit entwickelter und daher mechanische Triebkraft voraussetzender Maschinerie konkurrieren, geht eine große Umwandlung vor mit Bezug auf den Arbeiter, der die Maschine treibt. Ursprünglich ersetzte die Dampfmaschine diesen Arbeiter, jetzt soll er die Dampfmaschine ersetzen. Die Spannung und Verausgabung seiner Arbeitskraft wird daher monströs, und nun gar für Un Erwachsene, die zu dieser Tortur verurteilt sind! So fand der Kommissär Longe in Coventry und Umgebung Jungen von 10 bis 15 Jahren zum Drehn der Bandstühle verwandt, abgesehen von jüngeren Kindern, die Stühle von kleinerer Dimension zu drehn hatten. „Es ist außerordentlich mühsame Arbeit. Der Junge ist ein bloßer Ersatz für Dampfkraft.“ „Child. Empl. Comm., V. Rep. 1866“, p. 114, n. 6.) Über die mörderischen Folgen „dieser Systems der Sklaverei“, wie der offizielle Bericht es nennt, l.c. sq.

Der Widerspruch zwischen der manufakturmäßigen Teilung der Arbeit und dem Wesen der großen Industrie macht sich gewaltsam geltend. Er erscheint u.a. in der furchtbaren Tatsache, daß ein großer Teil der in den modernen Fabriken und Manufakturen beschäftigten Kinder, vom zartesten Alter festgeschmiedet an die einfachsten Manipulationen, jahrelang exploitiert wird, ohne Erlernung irgendeiner Arbeit, die sie später auch nur in derselben Manufaktur oder Fabrik brauchbar machte. In den englischen Buchdruckereien z.B. fand früher ein dem System der alten Manufaktur und des Handwerks entsprechender Übergang der Lehr-

15. Machinery and Modern Industry

vancing the apprentices from easy to more and more difficult work. They went through a course of teaching till they were finished printers. To be able to read and write was for every one of them a requirement of their trade. All this was changed by the printing machine. It employs two sorts of laborers, one grown up, renters, the other, boys mostly from 11 to 17 years of age whose sole business is either to spread the sheets of paper under the machine, or to take from it the printed sheets. They perform this weary task, in London especially, for 14, 15, and 16 hours at a stretch, during several days in the week, and frequently for 36 hours, with only 2 hours' rest for meals and sleep.³⁰² A great part of them cannot read, and they are, as a rule, utter savages and very extraordinary creatures.

“To qualify them for the work which they have to do, they require no intellectual training; there is little room in it for skill, and less for judgment; their wages, though rather high for boys, do not increase proportionately as they grow up, and the majority of them cannot look for advancement to the better paid and more responsible post of machine minder, because while each machine has but one minder, it has at least two, and often four boys attached to it.”³⁰³

³⁰² I.c., p. 3, n. 24.

³⁰³ I.c., P. 7, n. 60.

As soon as they get too old for such child's work, that is about 17 at the latest, they are discharged from the printing establishments. They become recruits of crime. Several attempts to procure them employment elsewhere, were rendered of no avail by their ignorance and brutality, and by their mental and bodily degradation.

::23509:3–513:0:615:1–618:1:485:1–488:1: This same contradiction on the level of the whole society: Modern industry dissolves the diverse ossified shapes of the production process (until ::23511:0, Mitte::487:0, first whole sentence:. On the other hand, in its capitalistic form it reproduces the ancient division of labor with its ossified particularities (because it still has the form of private property? Marx did not explain very well what this means!) E.g., not only the functions of the laborer are replaced, but the laborer himself is replaced! (In socialism, the laborer can change his activity if his former activity is replaced by ma-

linge von leichtren zu inhaltsvollren Arbeiten statt. Sie machten einen Lerngang durch, bis sie fertige Drucker waren. Lesen und schreiben zu können war für alle ein Handwerkserfordernis. Alles das änderte sich mit der Druckmaschine. Sie verwendet zwei Sorten von Arbeitern, einen erwachsenen Arbeiter, den Maschinenaufseher, und Maschinenjungen, meist von 11–17 Jahren, deren Geschäft ausschließlich darin besteht, einen Bogen Papier der Maschine zu unterbreiten oder ihr den gedruckten Bogen zu entziehen. Sie verrichten, in London namentlich, diese Plackerei 14, 15, 16 Stunden ununterbrochen während einiger Tage in der Woche und oft 36 Stunden nacheinander mit nur zwei Stunden Rast für Mahlzeit und Schlaf!³⁰² Ein großer Teil von ihnen kann nicht lesen, und sie sind in der Regel ganz verwilderte, abnorme Geschöpfe.

„Um sie zu ihrem Werk zu befähigen, ist keine intellektuelle Ziehung irgendeiner Art nötig; sie haben wenig Gelegenheit für Geschick und noch weniger für Urteil; ihr Lohn, obgleich gewissermaßen hoch für Jungen, wächst nicht verhältnismäßig, wie sie selbst heranwachsen, und die große Mehrzahl hat keine Aussicht auf den einträglicheren und verantwortlichen Posten des Maschinenaufsehers, weil auf jede Maschine nur ein Aufseher und oft 4 Jungen kommen.“³⁰³

³⁰² I.c. p. 3, n. 24.

³⁰³ I.c. p. 7, n. 60.

509:2 Sobald sie zu alt für ihre kindische Arbeit werden, also wenigstens im 17. Jahr, entläßt man sie aus der Druckerei. Sie werden Rekruten des Verbrechens. Einige Versuche, ihnen anderswo Beschäftigung zu verschaffen, scheiterten an ihrer Unwissenheit, Roheit, körperlichen und geistigen Verkommenheit.

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

chinery; he will even be the one who develops this machinery! in capitalism, he is thrown on the street, unemployed, and only by this mechanism of lower wages and many available laborers he will be gobbled up again by a different capitalist).

Then: necessity to develop the fitness of the laborer for varied work, technical and agricultural schools.

488:3–491:1 As with the division of labor in the interior of the manufacturing workshops, so it is with the division of labor in the interior of society. So long as handicraft and manufacture form the general groundwork of social production, the subjection of the producer to one branch exclusively, the breaking up of the multifariousness of his employment,³⁰⁴ is a necessary step in the development. On that groundwork each separate branch of production acquires empirically the form that is technically suited to it, slowly perfects it, and, so soon as a given degree of maturity has been reached, rapidly crystallises that form. The only thing, that here and there causes a change, besides new raw material supplied by commerce, is the gradual alteration of the instruments of labor. But their form, too, once definitely settled by experience, petrifies, as is proved by their being in many cases handed down in the same form by one generation to another during thousands of years. A characteristic feature is, that, even down into the eighteenth century, the different trades were called “mysteries” (mystères);³⁰⁵ into their secrets none but those duly initiated could penetrate. Modern Industry rent the veil that concealed from men their own social process of production, and that turned the various, spontaneously divided branches of production into so many riddles, not only to outsiders, but even to the initiated. The principle which it pursued, of resolving each process into its constituent movements, without any regard to their possible execution by the hand of man, created the new modern science of technology. The varied, apparently unconnected, and petrified forms of the industrial processes now resolved themselves into so many conscious and systematic applications

509:3/oooo Was von der manufakturmäßigen Teilung der Arbeit im Innern der Werkstatt, gilt von der Teilung der Arbeit im Innern der Gesellschaft. Solange Handwerk und Manufaktur die allgemeine Grundlage der gesellschaftlichen Produktion bilden, ist die Subsumtion des Produzenten unter einen ausschließlichen Produktionszweig, die Zerreißung der ursprünglichen Mannigfaltigkeit seiner Beschäftigungen,³⁰⁴ ein notwendiges Entwicklungsmoment. Auf jener Grundlage findet jeder besondere Produktionszweig empirisch die ihm entsprechende technische Gestalt, vervollkommenet sie langsam und kristallisiert sie rasch, sobald ein gewisser Reifegrad erlangt ist. Was hier und da Wechsel hervorruft, ist außer neuem Arbeitsstoff, den der Handel liefert, die allmähliche Änderung des Arbeitsinstruments. Die erfahrungsmäßig entsprechende Form einmal gewonnen, verknöchert auch es, wie sein oft jahrtausendlanger Übergang aus der Hand einer Generation in die der andren beweist. Es ist charakteristisch, daß bis ins 18. Jahrhundert hinein die besondern Gewerke mysteries (mystères)³⁰⁵ hießen, in deren Dunkel nur der empirisch und professionell Eingeweihte eindringen konnte. Die große Industrie zerriß den Schleier, der den Menschen ihren eignen gesellschaftlichen Produktionsprozeß versteckte und die verschiedenen naturwüchsig besondern Produktionszweige gegeneinander und sogar dem in jedem Zweig Eingeweihten zu Rätseln machte. Ihr Prinzip, jeden Produktionsprozeß, an und für sich und zunächst ohne alle Rücksicht auf die menschliche Hand, in seine konstituierenden Elemente aufzulösen, schuf die ganz moderne Wissenschaft der Technologie. Die buntscheckigen, scheinbar zusammenhangslosen und verknöcherten Gestal-

15. Machinery and Modern Industry

of natural science to the attainment of given useful effects. Technology also discovered the few main fundamental forms of motion, which, despite the diversity of the instruments used, are necessarily taken by every productive action of the human body; just as the science of mechanics sees in the most complicated machinery nothing but the continual repetition of the simple mechanical powers. Modern Industry never looks upon and treats the existing form of a process as final. The technical basis of that industry is therefore revolutionary, while all earlier modes of production were essentially conservative.³⁰⁶ By means of machinery, chemical processes and other methods, it is continually causing changes not only in the technical basis of production, but also in the functions of the laborer, and in the social combinations of the labor-process. At the same time, it thereby also revolutionises the division of labor within the society, and incessantly launches masses of capital and of workpeople from one branch of production to another. But if Modern Industry, by its very nature, therefore necessitates variation of labor, fluency of function, universal mobility of the laborer, on the other hand, in its capitalistic form, it reproduces the old division of labor with its ossified particularisations. We have seen how this absolute contradiction between the technical necessities of Modern Industry, and the social character inherent in its capitalistic form, dispels all fixity and security in the situation of the laborer; how it constantly threatens, by taking away the instruments of labor, to snatch from his hands his means of subsistence,^{/fn226} and, by suppressing his detail-function, to make him superfluous. We have seen, too, how this antagonism vents its rage in the creation of that monstrosity, an industrial reserve army, kept in misery in order to be always at the disposal of capital; in the incessant human sacrifices from among the working-class, in the most reckless squandering of labor-power and in

ten des gesellschaftlichen Produktionsprozesses lösten sich auf in bewußt planmäßige und je nach dem bezweckten Nutzeffekt systematisch besonderte Anwendungen der Naturwissenschaft. Die Technologie entdeckte ebenso die wenigen großen Grundformen der Bewegung, worin alles produktive Tun des menschlichen Körpers, trotz aller Mannigfaltigkeit der angewandten Instrumente, notwendig vorgeht, ganz so wie die Mechanik durch die größte Komplikation der Maschinerie sich über die beständige Wiederholung der einfachen mechanischen Potenzen nicht täuschen läßt. Die moderne Industrie betrachtet und behandelt die vorhandne Form eines Produktionsprozesses nie als definitiv. Ihre technische Basis ist daher revolutionär, während die aller früheren Produktionsweisen wesentlich konservativ war.³⁰⁶ Durch Maschinerie, chemische Prozesse und andre Methoden wälzt sie beständig mit der technischen Grundlage der Produktion die Funktionen der Arbeiter und die gesellschaftlichen Kombinationen des Arbeitsprozesses um. Sie revolutioniert damit ebenso beständig die Teilung der Arbeit im Innern der Gesellschaft und schleudert unaufhörlich Kapitalmassen und Arbeitermassen aus einem Produktionszweig in den andern. Die Natur der großen Industrie bedingt daher Wechsel der Arbeit, Fluß der Funktion, allseitige Beweglichkeit des Arbeiters. Andererseits reproduziert sie in ihrer kapitalistischen Form die alte Teilung der Arbeit mit ihren knöchernen Partikularitäten. Man hat gesehn, wie dieser absolute Widerspruch alle Ruhe, Festigkeit, Sicherheit der Lebenslage des Arbeiters aufhebt, ihm mit dem Arbeitsmittel beständig das Lebesmittel aus der Hand zu schlagen³⁰⁷ und mit seiner Teilfunktion ihn selbst überflüssig zu machen droht; wie dieser Widerspruch im ununterbrochenen Opferfest der Arbeiterklasse, maßloser Vergeudung der Arbeitskräfte und den Verheerungen gesellschaftlicher Anarchie sich austobt. Dies ist die negative Seite.

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

the devastation caused by a social anarchy which turns every economic progress into a social calamity. This is the negative side. But if, on the one hand, variation of work at present imposes itself after the manner of an overpowering natural law, and with the blindly destructive action of a natural law that meets with resistance³⁰⁸ at all points, Modern Industry, on the other hand, through its catastrophes imposes the necessity of recognising, as a fundamental law of production, variation of work, consequently fitness of the laborer for varied work, consequently the greatest possible development of his varied aptitudes. It becomes a question of life and death for society to adapt the mode of production to the normal functioning of this law. Modern Industry, indeed, compels society, under penalty of death, to replace the detail-worker of to-day, grappled by life-long repetition of one and the same trivial operation, and thus reduced to the mere fragment of a man, by the fully developed individual, fit for a variety of labors, ready to face any change of production, and to whom the different social functions he performs, are but so many modes of giving free scope to his own natural and acquired powers. One step already spontaneously taken towards effecting this revolution is the establishment of technical and agricultural schools, and of “*écoles d’enseignement professionnel*,” in which the children of the working-men receive some little instruction in technology and in the practical handling of the various implements of labor. Though the Factory Act, that first and meagre concession wrung from capital, is limited to combining elementary education with work in the factory, there can be no doubt that when the working-class comes into power, as inevitably it must, technical instruction, both theoretical and practical, will take its proper place in the working-class schools. There is also no doubt that such revolutionary regents, the final result of which is the abolition of the old division of labor, are di-

Wenn aber der Wechsel der Arbeit sich jetzt nur als überwältigendes Naturgesetz und mit der blind zerstörenden Wirkung eines Naturgesetzes durchsetzt, das überall auf Hindernisse stößt,³⁰⁸ macht die große Industrie durch ihre Katastrophen selbst es zur Frage von Leben oder Tod, den Wechsel der Arbeiten und daher möglichste Vielseitigkeit der Arbeiter als allgemeines gesellschaftliches Produktionsgesetz anzuerkennen und seiner normalen Verwirklichung die Verhältnisse anzupassen. Sie macht es zu einer Frage von Leben oder Tod, die Ungeheuerlichkeit einer elenden, für das wechselnde Exploitationsbedürfnis des Kapitals in Reserve gehaltenen, disponiblen Arbeiterbevölkerung zu ersetzen durch die absolute Disponibilität des Menschen für wechselnde Arbeitserfordernisse; das Teilindividuum, den bloßen Träger einer gesellschaftlichen Detailfunktion, durch das total entwickelte Individuum, für welches verschiedene gesellschaftliche Funktionen einander ablösende Betätigungsweisen sind. Ein auf Grundlage der großen Industrie naturwüchsig entwickeltes Moment dieses Umwälzungsprozesses sind polytechnische und agronomische Schulen, ein andres sind die „*écoles d’enseignement professionnel*“, worin die Kinder der Arbeiter einigen Unterricht in der Technologie und praktischen Handhabung der verschiedenen Produktionsinstrumente erhalten. Wenn die Fabrikgesetzgebung als erste, dem Kapital notdürftig abgerungene Konzession nur Elementarunterricht mit fabrikmäßiger Arbeit verbindet, unterliegt es keinem Zweifel, daß die unvermeidliche Eroberung der politischen Gewalt durch die Arbeiterklasse auch dem technologischen Unterricht, theoretisch und praktisch, seinen Platz in den Arbeiterschulen erobern wird. Es unterliegt ebensowenig einem Zweifel, daß die kapitalistische Form der Produktion und die ihr entsprechenden ökonomischen Arbeiterverhältnisse im diametralsten Widerspruch stehn mit solchen Umwälzungsfermenten und ihrem Ziel, der Aufhebung

15. Machinery and Modern Industry

ametrically opposed to the capitalistic form of production, and to the economic status of the laborer corresponding to that form. But the historical development of the antagonisms, immanent in a given form of production, is the only way in which that form of production can be dissolved and a new form established. “Ne sutor ultra crepidam”—this nec plus ultra of handicraft wisdom became sheer nonsense, from the moment the watchmaker Watt invented the steam-engine, the barber Arkwright, the throstle, and the working-jeweller, Fulton, the steamship.³⁰⁹

Schuster bleib bei deinen Leisten, Marx stresses here how the elements of big industry were invented by people not working in the field.

³⁰⁴ “in some parts of the Highlands of Scotland, not many years ago, every peasant, according to the Statistical Account, made his own shoes of leather tanned by himself. Many a shepherd and cottar too, with his wife and children, appeared at Church in clothes which had been touched by no hands but their own, since they were shorn from the sheep and sown in the flax-field. In the preparation of these, it is added, scarcely a single article had been purchased, except the awl, needle, thimble, and a very few parts of the iron-work employed in the weaving. The dyes, too, were chiefly extracted by the women from trees, shrubs and herbs.” (Dugald Stewart’s “Works,” Hamilton’s Ed., Vol. viii., pp. 327–328.)

³⁰⁵ In the celebrated “*Livre des métiers*” of Etienne Boileau, we find it prescribed that a journeyman on being admitted among the masters had to swear “to love his brethren with brotherly love, to support them in their respective trades, not wilfully to betray the secrets of the trade, and besides, in the interests of all, not to recommend his own-wares by calling the attention of the buyer to defects in the articles made by others.”

³⁰⁶ “The bourgeoisie cannot exist without continually revolutionising the instruments of production, and thereby the relations of production and all the social relations. Conservation, in an unaltered form, of the old modes of production was on the contrary the first condition of existence for all earlier industrial classes. Constant revolution in production, uninterrupted dis-

der alten Teilung der Arbeit. Die Entwicklung der Widersprüche einer geschichtlichen Produktionsform ist jedoch der einzig geschichtliche Weg ihrer Auflösung und Neugestaltung. „Ne sutor ultra crepidam“!, die nec plus ultra handwerksmäßiger Weisheit, wurde zur furchtbaren Narrheit von dem Moment, wo der Uhrmacher Watt die Dampfmaschine, der Barbier Arkwright den Kettenstuhl, der Juwelierarbeiter Fulton das Dampfschiff erfunden hatte.³⁰⁹

³⁰⁴ „In einigen Teilen von Hochschottland ... erschienen viele Schafhirten und cottars mit Frau und Kind, nach dem Statistical Account, in Schuhen, die sie selbst gemacht aus Leder, das sie selbst gegerbt, in Kleidern, die keine Hand außer ihrer eignen angetastet, deren Material sie selbst von den Schafen geschoren oder wofür sie den Flachs selbst gebaut hatten. In die Zubereitung der Kleider ging kaum irgendein gekaufter Artikel ein, mit Ausnahme von Pfieme, Hadel, Fingerhut und sehr wenigen Teilen des im Weben angewandten Eisenwerks. Die Farben wurden von den Weibern selbst von Bäumen, Gesträuchen und Kräutern gewonnen usw.“ (Dugald Stewart, „Works“, ed. Hamilton, vol. VIII, p. 327–328.)

³⁰⁵ In dem berühmten „*Livre des métiers*“ des Etienne Boileau wird unter andrem vorgeschrieben, daß ein Geselle bei seiner Aufnahme unter die Meister einen Eid leiste, „seine Brüder brüderlich zu lieben, sie zu stützen, jeder in seinem métier, nicht freiwillig die Gewerksgeheimnisse zu verraten und sogar im Interesse der Gesamtheit nicht zur Empfehlung seiner eignen Ware den Käufer auf die Fehler des Machwerks von andren aufmerksam zu machen“.

³⁰⁶ „Die Bourgeoisie kann nicht existieren, ohne die Produktionsinstrumente, also die Produktionsverhältnisse, also sämtliche gesellschaftlichen Verhältnisse fortwährend zu revolutionieren. Unveränderte Beibehaltung der alten Produktionsweise war dagegen die erste Existenzbedingung aller früheren industriellen Klassen. Die fortwährend Umwälzung der Produktion, die un-

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

turbance of all social conditions, everlasting uncertainty and agitation, distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses his real conditions of life, and his relations with his kind.” (F. Engels und Karl Marx: „Manifest der Kommunistischen Partei.” Lond. 1848, p. 5.)

³⁰⁷ “You take my life
When you do take the means whereby I live.”
Shakespeare.

³⁰⁸ A French workman, on his return from San-Francisco, writes as follows: “I never could have believed, that I was capable of working at the various occupations I was employed on in California. I was firmly convinced that I was fit for nothing but letter-press printing... Once in the midst of this world of adventurers, who change their occupation as often as they do their shirt, egad, I did as the others. As mining did not turn out remunerative enough, I left it for the town, where in succession I became typographer, slater, plumber, etc. In consequence of thus finding out that I am fit to any sort of work, I feel less of a mollusk and more of a man.” (A. Corbon, “De l’enseignement professionnel,” 2ème ed., p. 50.)

³⁰⁹ John Bellers, a very phenomenon in the history of Political Economy, saw most clearly at the end of the 17th century, the necessity for abolishing the present system of education and division of labor, which beget hypertrophy and atrophy at the two opposite extremities of society. Amongst other things he says this: “An idle learning being little better than the learning of idleness... Bodily labor, it’s a primitive institution of God... Labor being as proper for the bodies’ health as eating is for its living; for what pains a man saves by ease, he will find in disease... Labor adds oil to the lamp of life, when thinking inflames it... A childish silly employ” (a warning this, by presentiment, against the Base-dows and their modern imitators) “leaves the children’s minds silly.” (“Proposals for Raising

unterbrochene Erschütterung aller gesellschaftlichen Zustände, die ewige Unsicherheit und Bewegung zeichnen die Bourgeoisepoche vor allen früheren aus. Alle festen, eingerosteten Verhältnisse mit ihrem Gefolge von altehrwürdigen Vorstellungen und Anschauungen werden aufgelöst, alle neugebildeten veralten, ehe sie verknöchern können. Alles Ständische und Stehende verdampft, alles Heilige wird entweiht, und die Menschen sind endlich gezwungen, ihre Lebensstellungen, ihre gegenseitigen Beziehungen mit nüchternen Augen anzusehn.“ (F. Engels und Karl Marx, „Manifest der Kommunistischen Partei“, Lond. 1848, p. 5)

³⁰⁷ „Ihr nehmt mein Leben,
Wenn ihr die Mittel nehmt, wodurch ich lebe.“
(Shakespeare)

³⁰⁸ Ein französischer Arbeiter schreibt bei seiner Rückkehr von San Franzisko: „Ich hätte nie geglaubt, daß ich fähig wäre, alle die Gewerbe auszuüben, die ich in Kalifornien betrieben habe. Ich war fest überzeugt, daß ich außer zur Buchdruckerei zu nichts gut sei... Einmal in der Mitte dieser Welt von Abenteurern, welche ihr Handwerk leichter wechseln als ihr Hemde, meiner Treu! ich tat wie die andren. Da das Geschäft der Minenarbeit sich nicht einträglich genug auswies, verließ ich es und zog in die Stadt, wo ich der Reihe nach Typograph, Dachdecker, Bleigießer usw. wurde. Infolge dieser Erfahrung, zu allen Arbeiten tauglich zu sein, fühle ich mich weniger als Molluske und mehr als Mensch.“ (A. Corbon, „Der l’enseignement professionnel“, 2ème éd. p. 50.)

³⁰⁹ John Bellers, ein wahres Phänomen in der Geschichte der politischen Ökonomie, begriff schon Ende des 17. Jahrhunderts mit vollster Klarheit die notwendige Aufhebung der jetzigen Erziehung und Arbeitseinteilung, welche Hypertrophie und Atrophie auf beiden Extremen der Gesellschaft, wenn auch in entgegengesetzter Richtung, erzeugen. Er sagt u.a. schön: „Müßig Lernen ist wenig besser als das Lernen von Müßiggang... Körperliche Arbeit hat Gott selbst ursprünglich eingerichtet... Arbeit ist so notwendig für die Gesundheit des Körpers, wie Essen für sein Leben; denn die Schmerzen, welche man sich durch Müßiggang erspart, wird man durch Krankheit bekommen... Arbeit tut Öl auf die Lampe des Lebens, Denken aber entzündet sie... Eine kindisch dumme Beschäftigung“

15. Machinery and Modern Industry

a Colledge of Industry of all Useful Trades and Husbandry." Lond., 1696, pp. 12, 14, 18.)

(dies ahnungsvoll gegen die Basedows und ihre modernen Nachstümper) „läßt den Geist der Kinder dumm.“ „Proposals for raising a Colledge of Industry of all useful Trades and Husbandry“, Lond. 1696, p. 12, 14, 16, 18.)

::23513:1–514:1:619–621:1:489–490:0: Laws concerning housework. Under capitalism, the traditional form of the family becomes the basis for misuse and must be transformed.

491:2–492:1 So long as Factory legislation is confined to regulating the labor in factories, manufactories, etc., it is regarded as a mere interference with the exploiting rights of capital. But when it comes to regulating the so-called “home-labor,”³¹⁰ it is immediately viewed as a direct attack on the patria potestas, on parental authority. The tender-hearted English Parliament long affected to shrink from taking this step. The force of facts, however, compelled it at last to acknowledge that modern industry, in overturning the economic foundation on which was based the traditional family, and the family labor corresponding to it, had also unloosened all traditional family ties. The rights of the children had to be proclaimed. The final report of the Ch. Empl. Comm. of 1866, states:

513:1–514:0 Soweit die Fabrikgesetzgebung die Arbeit in Fabriken, Manufakturen usw. reguliert, erscheint dies zunächst nur als Einmischung in die Exploitationsrechte des Kapitals. Jede Regulation der sog. Hausarbeit³¹⁰ stellt sich dagegen sofort als direkter Eingriff in die patria potestas dar, d.h. modern interpretiert, in die elterliche Autorität, ein Schritt, wovor das zartfühlende englische Parlament lang zurückzubecken affektierte. Die Gewalt der Tatsachen zwang jedoch, endlich anzuerkennen, daß die große Industrie mit der ökonomischen Grundlage des alten Familienwesens und der ihr entsprechenden Familienarbeit auch die alten Familienverhältnisse selbst auflöst. Das Recht der Kinder mußte proklamiert werden.

“It is unhappily, to a painful degree, apparent throughout the whole of the evidence, that against no persons do the children of both sexes so much require protection as against their parents.” The system of unlimited exploitation of children’s labor in general and the so-called home-labor in particular is “maintained only because the parents are able, without check or control, to exercise this arbitrary and mischievous power over their young and tender offspring ... Parents must not possess the absolute power of making their children mere ‘machines to earn so much weekly wage ...’ The children and young persons, therefore, in all such cases may justifiably claim from the legislature, as a natural right, that an exemption should be secured to them, from what destroys prematurely their physical strength, and lowers them in the scale of intellectual and moral beings.”³¹¹

„Unglücklicherweise“, heißt es im Schlußbericht der „Child. Empl. Comm.“ von 1866, „leuchtet aus der Gesamtheit der Zeugenaussagen hervor, daß die Kinder beiderlei Geschlechts gegen niemand so sehr des Schutzes bedürfen als gegen ihre Eltern.“ Das System der maßlosen Exploitation der Kinderarbeit überhaupt und der Hausarbeit im besonderen wird dadurch „erhalten, daß die Eltern über ihre jungen und zarten Sprößlinge eine willkürliche und heillose Gewalt ohne Zügel oder Kontrolle ausüben ... Eltern dürfen nicht die absolute Macht besitzen, ihre Kinder zu reinen Maschinen zu machen, um soundso viel wöchentlichen Lohn herauszuschlagen... Kinder und junge Personen haben ein Recht auf den Schutz der Legislatur wider den Mißbrauch der elterlichen Gewalt, der ihre physische Kraft vorzeitig bricht und sie degradiert auf der Staffel moralischer und intellektueller Wesen.“³¹¹

³¹⁰ This sort of labor goes on mostly in small workshops, as we have seen in the lacemaking

³¹⁰ Diese geht übrigens größtenteils auch in kleineren Werkstätten vor, wie wir gesehen bei

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

and straw-plaiting trades, and as could be shown more in detail from the metal trades of Sheffield, Birmingham, etc.

³¹¹ “Ch. Empl. Comm., V. Rep.,” p. xxv., n. 162, and II. Rep., p. xxxviii., n. 285, 289, p. xxv., xxvi., n. 191.

It was not, however, the misuse of parental authority that created the capitalistic exploitation, whether direct or indirect, of children’s labor; but, on the contrary, it was the capitalistic mode of exploitation which, by sweeping away the economic basis of parental authority, made its exercise degenerate into a mischievous misuse of power. However terrible and disgusting the dissolution, under the capitalist system, of the old family ties may appear, nevertheless, modern industry, by assigning as it does an important part in the process of production, outside the domestic sphere, to women, to young persons, and to children of both sexes, creates a new economic foundation for a higher form of the family and of the relations between the sexes. It is, of course, just as absurd to hold the Teutonic-Christian form of the family to be absolute and final as it would be to apply that character to the ancient Roman, the ancient Greek, or the Eastern forms which, moreover, taken together form a series in historical development. Moreover, it is obvious that the fact of the collective working group being composed of individuals of both sexes and all ages, must necessarily, under suitable conditions, become a source of humane development; although in its spontaneously developed, brutal, capitalistic form, where the laborer exists for the process of production, and not the process of production for the laborer, that fact is a pestiferous source of corruption and slavery.³¹²

³¹² “Factory labor may be as pure and as excellent as domestic labor, and perhaps more so” (“Rep. Insp. of Fact., 31st October, 1865,” p. 129.)

der Spitzenmanufaktur und Strohflechtereie, und wie namentlich auch an den Metallmanufakturen in Sheffield, Birmingham usw. ausführlicher gezeigt werden könnte.

³¹¹ „Child. Empl. Comm., V. Rep.“, p. XXV, n. 162 und II. Rep., p. XXXVIII, n. 285, 289, p. XXV, XXVI, n. 191.

514:1 Es ist jedoch nicht der Mißbrauch der elterlichen Gewalt, der die direkt oder indirekte Exploitation unreifer Arbeitskräfte durch das Kapital schuf, sondern es ist umgekehrt die kapitalistische Exploitationsweise, welche die elterliche Gewalt, durch Aufhebung der ihr entsprechenden ökonomischen Grundlage, zu einem Mißbrauch gemacht hat. So furchtbar und ekelhaft nun die Auflösung des alten Familienwesens innerhalb des kapitalistischen Systems erscheint, so schafft nichtsdestoweniger die große Industrie mit der entscheidenden Rolle, die sie den Weibern, jungen Personen und Kindern beiderlei Geschlechts in gesellschaftlich organisierten Produktionsprozessen jenseits der Sphäre des Hauswesens zuweist, die neue ökonomische Grundlage für eine höhere Form der Familie und des Verhältnisses beider Geschlechter. Es ist natürlich ebenso albern, die christlich germanische Form der Familie für absolut zu halten als die altrömische Form, oder die altgriechische, oder die orientalische, die übrigens untereinander eine geschichtliche Entwicklungsreihe bilden. Ebenso leuchtet ein, daß die Zusammensetzung des kombinierten Arbeitspersonals aus Individuen beiderlei Geschlechts und der verschiedensten Altersstufen, obgleich in ihrer naturwüchsig brutalen, kapitalistischen Form, wo der Arbeiter für den Produktionsprozeß, nicht der Produktionsprozeß für den Arbeiter da ist, Pestquelle des Verderbs und der Sklaverei, unter entsprechenden Verhältnissen umgekehrt zur Quelle humaner Entwicklung umschlagen muß.³¹²

³¹² „Fabrikarbeit kann genauso rein und vortrefflich sein wie Hausarbeit, ja vielleicht noch mehr.“ „Reports of Insp. of Fact., 31st Oct. 1865“, p. 129.)

15. Machinery and Modern Industry

::23:621:1–635:1:490:1–503:3: Extension of the factory acts to other branches of industry.

::23514:2–515:621:1–622:0:490:1–491:0: The *general reason* for this generalization: Since the big industry also transforms manufacture and small handicraft production, often creating there the most miserable conditions, also the factory acts must be generalized. Then two *circumstances which trigger off* the extension legislation:

1) Capital, under control in single points, compensates itself so much more recklessly on others. (We thought: perhaps the controlled industries did not get enough credit any more, since the uncontrolled industries are ore profitable).

2) The capitalists themselves ask for equality of their competitive conditions.

493:1–2 The necessity for a generalisation of the Factory Acts, for transforming them from an exceptional law relating to mechanical spinning and weaving—those first creations of machinery—into a law affecting social production as a whole, arose, as we have seen, from the mode in which Modern Industry was historically developed. In the rear of that industry, the traditional form of manufacture, of handicraft, and of domestic industry, is entirely revolutionised; manufactures are constantly passing into the factory system, and handicrafts into manufactures; and lastly, the spheres of handicraft and of the domestic industries become, in a, comparatively speaking, wonderfully short time, dens of misery in which capitalistic exploitation obtains free play for the wildest excesses. There are two circumstances that finally turn the scale: first, the constantly recurring experience that capital, so soon as it finds itself subject to legal control at one point, compensates itself all the more recklessly at other points;³¹³ secondly, the cry of the capitalists for equality in the conditions of competition, i.e., for equal restraint on all exploitation of labor.³¹⁴ On this point let us listen to two heart-broken cries. Messrs. Cooksley of Bristol, nail and chain, etc., manufacturers, spontaneously introduced the regulations of the Factory Act into their business.

“As the old irregular system prevails in neighbouring works, the Messrs. Cooksley are subject to the disadvantage of having their boys enticed to continue their labor elsewhere after 6 p.m. ‘This’, they naturally say, ‘is an injustice and loss to us, as it exhausts a portion of the boy’s strength, of which we ought to have

514:2–515:1 Die Notwendigkeit, das Fabrikgesetz aus einem Ausnahmegesetz für Spinnereien und Webereien, diese ersten Gebilde des Maschinenbetriebs, in ein Gesetz aller gesellschaftlichen Produktion zu verallgemeinern, entspringt, wie man sah, aus dem geschichtlichen Entwicklungsgang der großen Industrie, auf deren Hintergrund die überlieferte Gestalt von Manufaktur, Handwerk und Hausarbeit gänzlich umgewälzt wird, die Manufaktur beständig in die Fabrik, das Handwerk beständig in die Manufaktur umschlägt und endlich die Sphären des Handwerks und der Hausarbeit sich in relativ wunderbar kurzer Zeit zu Jammerhöhlen gestalten, wo die tollsten Ungeheuerlichkeiten der kapitalistischen Exploitation ihr freies Spiel treiben. Es sind zwei Umstände, welche zuletzt den Ausschlag geben, erstens die stets neu wiederholte Erfahrung, daß das Kapital, sobald es der Staatskontrolle nur auf einzelnen Punkten der gesellschaftlichen Peripherie anheimfällt, sich um so maßloser auf den andern Punkten entschädigt,³¹³ zweitens der Schrei der Kapitalisten selbst nach Gleichheit der Konkurrenzbedingungen, d.h. gleichen Schranken der Arbeitsexploitation.³¹⁴ Hören wir hierüber zwei Herzensstöße. Die Herrn W. Cooksley (Nagel-, Ketten- usw. Fabrikanten zu Bristol) führten die Fabrikregulation freiwillig in ihrem Geschäft ein.

„Da das alte, unregelmäßige System in den benachbarten Werken fort dauert, sind sie der Unbill ausgesetzt, ihre Arbeitsjungen zur Fortsetzung der Arbeit anderswo nach 6 Uhr abends verlockt (enticed) zu sein. „Dies“, sagen sie natürlich, „ist eine Ungerechtigkeit gegen uns und ein Verlust, das es einen Teil der

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

the full benefit.”³¹⁵

³¹³ “Rep. Insp. of Fact., 31st October, 1865,” pp. 27–32.

³¹⁴ Numerous instances will be found in “Rep. of Insp. of Fact.”

³¹⁵ “Ch. Empl. Comm., V. Rep.,” p. x., n. 35.

Mr. J. Simpson (paper box and bagmaker, London) states before the commissioners of the Ch. Empl. Comm.:

“He would sign any petition for it” (legislative interference) . . . “As it was, he always felt restless at night, when he had closed his place, lest others should be working later than him and getting away his orders.”³¹⁶ Summarising, the Ch. Empl. Comm. says: “It would be unjust to the larger employers that their factories should be placed under regulation, while the hours of labor in the smaller places in their own branch of business were under no legislative restriction. And to the injustice arising from the unfair conditions of competition, in regard to hours, that would be created if the smaller places of work were exempt, would be added the disadvantage to the larger manufacturers, of finding their supply of juvenile and female labor drawn off to the places of work exempt from legislation. Further, a stimulus would be given to the multiplication of the smaller places of work, which are almost invariably the least favourable to the health, comfort, education, and general improvement of the people.”³¹⁷

³¹⁶ Ch. Empl. Comm., V. Rep.,” p. ix., n. 28.

³¹⁷ I.c., p. xxv., n. 165–167. As to the advantages of large scale, compared with small scale, industries, see “Ch. Empl. Comm., III. Rep.,” p. 13, n. 144, p. 25, n. 121, p. 26, n. 125, p. 27, n. 140, etc.

::23516–517:2:622:1–624:2:491:1–493:2: The history of the signing of the two acts:

494 In its final report the Commission proposes to subject to the Factory Act more than 1,400,000 children, young persons, and women, of which number about one half are exploited in small industries and by the so-called home-work.³¹⁸ It says,

Kraft der Jungen erschöpft, deren voller Vorteil uns gebührt.“³¹⁵

³¹³ I.c. p. 27, 32.

³¹⁴ Massenhafte Belege dazu in den „Rep. of Insp. of Fact.“.

³¹⁵ „Child. Empl. Comm., V. Rep.“, p. X, n. 35.

515:2–3 Herr J. Simpson (Paper-Box Bag maker, London) erklärt den Kommissären der „Children Empl. Comm.“:

„Er wolle jede Petition für Einführung der Fabrikakte unterzeichnen. Wie es sei, fühle er sich stets rastlos des Nachts (he always felt restless at night), nach Schluß seiner Werkstatt, bei dem Gedanken, daß andre länger arbeiten ließen und ihm Aufträge vor der Nase wegschnappten.“³¹⁶ „Es wäre ein Unrecht“, sagt die „Child. Empl. Comm.“ zusammenfassend, „gegen die größten Arbeitsanwender, ihre Fabriken der Regulation zu unterwerfen, während in ihrem eignen Geschäftszweig der Kleinbetrieb keiner gesetzlichen Beschränkung der Arbeitszeit unterliegt. Zur Ungerechtigkeit ungleicher Konkurrenzbedingungen in bezug auf die Arbeitsstunden bei Ausnahme kleinerer Werkstätten käme noch der andre Nachteil für die größten Fabrikanten hinzu, daß ihre Zufuhr von jugendlicher und weiblicher Arbeit abgelenkt würde nach den vom Gesetz verschonten Werkstätten. Endlich gäbe dies Anstoß zur Vermehrung der kleineren Werkstätten, die fast ausnahmslos die mindest günstigen für Gesundheit, Komfort, Erziehung und allgemeine Verbesserung des Volks sind.“³¹⁷

³¹⁶ I.c. p. IX, n. 28.

³¹⁷ I.c. p. XXV, n. 165–167. Vgl. über die Vorzüge des Großbetriebes verglichen mit dem Zwergebetrieb „Child. Empl. Comm., III. Rep.“, p. 13, n. 144; p. 25, n. 121; p. 26, n. 125; p. 27, n. 140 usw.

516:1–2 In ihrem Schlußbericht schlägt die „Children’s Employment Commission“ vor, über 1 400 000 Kinder, junge Personen und Weiber, wovon ungefähr die Hälfte vom Kleinbetrieb und der Hausarbeit exploitiert wird, dem Fabrikakt zu unterwerfen.³¹⁸

15. *Machinery and Modern Industry*

“But if it should seem fit to Parliament to place the whole of that large number of children, young persons and females under the protective legislation above adverted to . . . it cannot be doubted that such legislation would have a most beneficent effect, not only upon the young and the feeble, who are its more immediate objects, but upon the still larger body of adult workers, who would in all these employments, both directly and indirectly, come immediately under its influence. It would enforce upon them regular and moderate hours; it would lead to their places of work being kept in a healthy and cleanly state; it would therefore husband and improve that store of physical strength on which their own well-being and that of the country so much depends; it would save the rising generation from that overexertion at an early age which undermines their constitutions and leads to premature decay; finally, it would ensure them—at least up to the age of 13—the opportunity of receiving the elements of education, and would put an end to that utter ignorance . . . go faithfully exhibited in the Reports of our Assistant Commissioners, and which cannot be regarded without the deepest pain, and a profound sense of national degradation.”³¹⁹

³¹⁸ The trades proposed to be brought under the Act were the following: Lace-making, stocking-weaving, straw-plaiting, the manufacture of wearing apparel with its numerous subdivisions, artificial flower-making, shoemaking, hat-making, glove-making, tailoring, all metal works, from blast furnaces down to needleworks, etc., paper-mills, glassworks, tobacco factories, India-rubber works, braid-making (for weaving), hand-carpetmaking, umbrella and parasol making, the manufacture of spindles and spools, letterpress printing, book-binding, manufacture of stationery (including paper bags, cards, coloured paper, etc.), rope-making, manufacture of jet ornaments, brick-making, silk manufacture by hand, Coventry weaving, salt works, tallow chandiers, cement works, sugar refineries, biscuit-making, various industries connected with timber, and other mixed trades.

³¹⁹ I.c., p. xxv., n. 169.

495:1–2 The Tory Cabinet/fn239 announced in the Speech from the Throne,

„Sollte“, sagt sie, „das Parlament unsren Vorschlag in seinem ganzen Umfang annehmen, so ist es zweifellos, daß solche Gesetzgebung den wohlthätigsten Einfluß ausüben werde, nicht nur auf die Jungen und Schwachen, mit denen sie sich zunächst beschäftigt, sondern auf die noch größere Masse von erwachsenen Arbeitern, die direkt“ (Weiber) „und indirekt“ (Männer) „unter ihren Wirkungskreis fallen. Sie würde ihnen regelmäßige und ermäßigte Arbeitsstunden aufzwingen; sie würde den Vorrat physischer Kraft, wovon ihr eignes Wohlergehen und das des Landes so sehr abhängt, erhalten und häufen; sie würde die aufsprössende Generation vor der Überanstrengung in frühem Alter schützen, welche ihre Konstitution untergräbt und zu vorzeitigem Verfall führt; sie würde schließlich, wenigstens bis zum 13. Jahr, die Gelegenheit des Elementarunterrichts bieten und damit der unglaubliche Unwissenheit ein Ende machen, die so treu in den Kommissionaberichten geschildert ist und nur mit qualvollster Empfindung und dem tiefen Gefühl nationaler Erniedrigung betrachtet werden kann.“³¹⁹

³¹⁸ Die zu maßregelnden Industriezweige sind: Spitzenmanufaktur, Strumpfwirkerei, Strohflechten, Manufaktur von Wearing Apparel mit ihren zahlreichen Arten, künstliche Blumenmacherei, Schuh-, Hut- und Handschuhmacherei, Schneiderei, alle Metallfabriken, von den Hochöfen bis zu den Nadelfabriken usw., Papierfabrik, Glasmanufaktur, Tabaksmanufaktur, India-Rubber Werke, Litzenfabrikation (für die Weberei), Handteppich-Weberei, Regenschirm- und Parasolmanufaktur, Fabrikation von Spindeln und Spulen, Buchdruckerei, Buchbindeerei, Schreibmaterialienhandel (Stationery, dazu gehörig Verfertigung von Pappierschachteln, Karten, Papierfärben usw.), Seilerei, Manufaktur von Gagatschmuck, Ziegeleien, Hand-Seidenmanufaktur, Coventry-Weberei, Salz-, Talglicht- und Zementierwerke, Zuckerraffinerie, Zwiebackmachen, verschiedene Holz- und andre vermischte Arbeiten.

³¹⁹ I.c. p. XXV, n. 169.

516:3–517:1 Das Toryministerium kündigte in der Thronrede vom 5. Februar 1867

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

on February 5, 1867, that it had framed the proposals of the Industrial Commission of Inquiry^{319a} into Bills. To get that far, another twenty years of *experimentum in corpore vili* had been required. Already in 1840 a Parliamentary Commission of Inquiry on the labor of children had been appointed. Its Report, in 1842, unfolded, in the words of Nassau W. Senior,

“the most frightful picture of avarice, selfishness and cruelty on the part of masters and of parents, and of juvenile and infantile misery, degradation and destruction ever presented . . . It may be supposed that it describes the horrors of a past age. But there is unhappily evidence that those horrors continue as intense as they were. A pamphlet published by Hardwicke about 2 years ago states that the abuses complained of in 1842, are in full bloom at the present day. It is a strange proof of the general neglect of the morals and health of the children of the working-class, that this report lay unnoticed for 20 years, during which the children, ‘bred up without the remotest sign of comprehension as to what is meant by the term morals, who had neither knowledge, nor religion, nor natural affection,’ were allowed to become the parents of the present generation.”³²⁰

/fno239 Here (from “The Tory Cabinet . . . to “Nassau W. Senior”) the English text has been altered in conformity with the 4th German edition.—Ed.

^{319a} The Factory Acts Extension Act was passed on August 12, 1867. It regulates all foundries, smithies, and metal manufactories, including machine shops; furthermore glass-works, paper mills, gutta-percha and India-rubber works, tobacco manufactories, letterpress printing and book-binding works, and, lastly, all workshops in which more than 50 persons are employed. The Hours of Labor Regulation Act, passed on August 17, 1867, regulates the smaller workshops and the so-called domestic industries. I shall revert to these Acts and to the new Mining Act of 1872 in Volume II.

³²⁰ Senior, “Social Science Congress,” pp. 55–58.

495:3 The social conditions having undergone a change, Parliament could not venture to shelve the demands of the Commission of 1862, as it had done those of the

an, daß es die Vorschläge^{319a} der industriellen Untersuchungskommission in „Bills“ formuliert habe. Dazu hatte es eines neuen zwanzigjährigen Experimentum in corpore vili bedurft. Bereits im Jahre 1840 war eine parlamentarische Kommission zur Untersuchung über Kinderarbeit ernannt worden. Ihr Bericht von 1842 entrollte nach den Worten N. W. Seniors

„das furchtbarste Gemälde von Habsucht, Selbstsucht und Grausamkeit der Kapitalisten und Eltern, von Elend, Degradation und Zerstörung der Kinder und jungen Personen, das jemals das Auge der Welt schlug . . . Man wähnt vielleicht, der Bericht beschreibe die Greuel eines vergangenen Zeitalters. Leider aber liegen Berichte vor, daß diese Greuel fort dauern, so intensiv wie je. Eine vor zwei Jahren von Hardwicke veröffentlichte Broschüre erklärt, die 1842 gerügten Mißbräuche stehen heutzutage“ (1863) „in voller Blüte . . . Dieser Bericht“ (von 1842) „lag unbeachtet zwanzig Jahre lang, während deren man jenen Kindern, herangewachsen ohne die geringste Ahnung weder von dem, was wir Moral nennen, noch von Schulbildung, Religion oder natürlicher Familienliebe—diesen Kindern erlaubte man, die Eltern der jetzigen Generation zu werden.“³²⁰

^{319a} Der Factory Acts Extension Act ging durch 12. August 1867. Er reguliert alle Metall-Gießereien, -Schmieden und -Manufakturen, mit Einschluß der Maschinenfabriken, ferner Glas-, Papier-, Guttapercha-, Kautschuk-, Tabakmanufakturen, Buchdruckereien, Buchbindereien, endlich sämtliche Werkstätten, worin mehr als 50 Personen beschäftigt sind.—Der Hours of Labour Regulation Act, passiert 17. August 1867, reguliert die kleinern Werkstätten und die sog. Hausarbeit.—Ich komme auf diese Gesetze, auf den neuen Mining Act von 1872 etc. im II. Band zurück.

³²⁰ Senior, „Social Science Congress“, p. 55–58.

517:2 Inzwischen hatte die gesellschaftliche Lage sich geändert. Das Parlament wagte nicht, die Forderungen der Kommission von 1863 ebenso zurückzuweisen

15. Machinery and Modern Industry

Commission of 1840. Hence in 1864, when the Commission had not yet published more than a part of its reports, the earthenware industries (including the potteries), makers of paperhangings, matches, cartridges, and caps, and fustian cutters were made subject to the Acts in force in the textile industries. In the Speech from the Throne, on 5th February, 1867, the Tory Cabinet of the day announced the introduction of Bills, founded on the final recommendations of the Commission, which had completed its labors in 1866.

::23517:3–518:7:624:3–625:6:493:3–494:4:

495:4/o On the 15th August, 1867, the Factory Acts Extension Act, and on the 21st August, the Workshops' Regulation Act received the Royal Assent; the former Act having reference to large industries, the latter to small.

496:1 The former applies to blast-furnaces, iron' and copper mills, foundries, machine shops, metal manufactories, gutta-percha works, paper mills, glass-works, tobacco manufactories, letter-press printing (including newspapers), book-binding, in short to all industrial establishments of the above kind, in which 50 individuals or more are occupied simultaneously, and for not less than 100 days during the year.

496:2–6 To give an idea of the extent of the sphere embraced by the Workshops' Regulation Act in its application, we cite from its interpretation clause, the following passages:

“*Handicraft* shall mean any manual labor exercised by way of trade, or for purposes of gain in, or incidental to, the making any article or part of an article, or in, or incidental to, the altering, repairing, ornamenting, finishing, or otherwise adapting for sale any article.”

“*Workshop* shall mean any room or place whatever in the open air or undercover, in which any handicraft is carried on by any child, young person, or woman, and to which and over which the person by whom such child, young person, or woman is employed,

wie seinerzeit die von 1842. Daher wurden schon 1864, als die Kommission erst einen Teil ihrer Berichte veröffentlicht hatte, die Erdenwaren-Industrie (einschließlich der Töpferei), die Fabrikation von Tapeten, Zündhölzern, Patronen und Zündhütchen sowie das Samtscheren unter die für Textilindustrie gültigen Gesetze gestellt. In der Thronrede von 5. Februar 1867 kündigte das damalige Torykabinett weitere Bills an, gegründet auf die Schlußvorschläge der Kommission, die inzwischen 1866 ihr Werk vollendet hatte.

Factory Acts Extension Act (Big factories)

517:3 Am 15. August 1867 erhielt der Factory Acts Extension Act und am 21. August der Workshops' Regulation Act die königliche Bestätigung; der erstre Akt regelt die großen, der letztre die kleinen Geschäftszeige.

517:4 Der Factory Acts Extension Act reguliert die Hochöfen, Eisen- und Kupferwerke, Gießereien, Maschinenfabriken, Metallwerkstätten, Fabriken für Guttapercha, Papier, Glas, Tabak, ferner Druckereien und Buchbindereien und überhaupt alle industriellen Werkstätten dieser Art, worin 50 oder mehr Personen gleichzeitig während mindestens 100 Tagen im Jahr beschäftigt werden.

518:1–5 Um eine Vorstellung zu geben von der Ausdehnung des von diesem Gesetz umfaßten Gebiets, folgen hier einige der darin festgestellten Definitionen:

„*Handwerk* soll“ (in diesem Gesetz) „bedeuten: irgendwelche Handarbeit, geschäftsmäßig oder zum Erwerb betrieben bei, oder gelegentlich, der Verfertigung, Veränderung, Verzierung, Reparatur oder Fertigstellung zum Verkauf irgendeines Artikels oder eines Teils davon.“

„*Werkstatt* soll bedeuten: irgendwelche Stube oder Örtlichkeit, eingedeckt oder unter freiem Himmel, worin ein „Handwerk“ betrieben wird von irgendeinem Kind, jugendlichen Arbeiter oder Frauenzimmer und worüber derjenige, der solches Kind, jugendlichen Arbeiter

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

has the right of access and control.”

“*Employed* shall mean occupied in any handicraft, whether for wages or not, under a master or under a parent as herein defined.”

“*Parent* shall mean parent, guardian, or person, having the custody of, or control over, any ... child or young person.”

496:7–8 Clause 7, which imposes a penalty for employment of children, young persons, and women, contrary to the provisions of the Act, subjects to fines, not only the occupier of the workshop, whether parent or not, but even

“the parent of, or the person deriving any direct benefit from the labor of, or having the control over, the child, young person or woman.”

Workshops regulation Act (Small workshops)

496:9 The Factory Acts Extension Act, which affects the large establishments, derogates from the Factory Act by a crowd of vicious exceptions and cowardly compromises with the masters.

496:10/o The Workshops’ Regulation Act, wretched in all its details, remained a dead letter in the hands of the municipal and local authorities who were charged with its execution. When, in 1871, Parliament withdrew from them this power, in order to confer it on the Factory Inspectors, to whose province it thus added by a single stroke more than one hundred thousand workshops, and three hundred brickworks, care was taken at the same time not to add more than eight assistants to their already undermanned staff.³²¹

³²¹ The “personnel” of this staff consisted of 2 inspectors, 2 assistant inspectors and 41 sub-inspectors. Eight additional sub-inspectors were appointed in 1871. The total cost of administering the Acts in England, Scotland, and Ireland amounted for the year 1871–72 to no more than £25,347, inclusive of the law expenses incurred by prosecutions of offending masters.

oder Frauenzimmer beschäftigt, das Recht des Zutritts und der Kontrolle hat.“

„*Beschäftigt* soll bedeuten: tätig in einem „Handwerk“, ob gegen Lohn oder nicht, unter einem Meister oder einem der Eltern, wie unten näher bestimmt.“

„*Eltern* soll bedeuten: Vater, Mutter, Vormund oder andre Person, die die Vormundschaft oder Kontrolle über irgendein ... Kind oder einen jugendlichen Arbeiter hat.“

518:6–7 Klausel 7, die Strafklausel für Beschäftigung von Kindern, jugendlichen Arbeitern und Frauenzimmern entgegen den Bestimmungen dieses Gesetzes, setzt Geldstrafen fest, nicht nur für den Inhaber der Werkstatt, ob einer Eltern oder nicht, sondern auch für

„die Eltern oder andre Personen, die das Kind, den jugendlichen Arbeiter oder das Frauenzimmer unter Obhut haben oder direkten Vorteil aus dessen Arbeit ziehen“.

518:8 Der Factory Acts Extension Act, der die großen Etablissements trifft, steht zurück gegen den Fabrikakt durch eine Menge elender Ausnahmsbestimmungen und feiger Kompromisse mit den Kapitalisten.

518:9 Der Workshops’ Regulation Act, erbärmlich in allen seinen Einzelheiten, blieb ein toter Buchstabe in der Hand der mit seiner Ausführung beauftragten städtischen und Lokalbehörden. Als das Parlament ihnen 1871 diese Vollmacht entzog, um sie den Fabrikinspektoren zu übertragen, deren Aufsichtsbezirk es so mit einem Schlage um mehr als 100 000 Werkstätten und allein 300 Ziegeleien vergrößerte, wurde ihr Personal sorgsamlichst um nur acht Assistenten vermehrt, wo es doch schon bisher viel zu schwach besetzt war.³²¹

³²¹ Das Personal der Fabrikinspektion bestand aus 2 Inspektoren, 2 Hilfsinspektoren und 41 Subinspektoren. Acht fernere Subinspektoren wurden 1871 ernannt. Die Gesamtkosten der Vollstreckung der Fabrikgesetze in England, Schottland und Irland beliefen sich 1871/72 auf nur 25 347 Pfd.St., einschließlich der Gerichtskosten bei Prozessen gegen Übertretungen.

15. Machinery and Modern Industry

↓ Contradiction between the necessity to impose the acts by parliament and the hesitancy to carry them out (Is this the contradiction between the class interests and the individual interests of the capitalists?) No! Parliament was forced by the working class to pass these acts!

497:1 What strikes us, then, in the English legislation of 1867, is, on the one hand, the necessity imposed on the parliament of the ruling classes, of adopting in principle measures so extraordinary, and on so great a scale, against the excesses of capitalistic exploitation; and on the other hand, the hesitation, the repugnance, and the bad faith, with which it lent itself to the task of carrying those measures into practice.

↓ Mining acts. They were very weak because in this case capitalists and landowners had the same interests.

497:2 The Inquiry Commission of 1862 also proposed a new regulation of the mining industry, an industry distinguished from others by the exceptional characteristic that the interests of landlord and capitalist there join hands. The antagonism of these two interests had been favorable to Factory legislation, while on the other hand the absence of that antagonism is sufficient to explain the delays and chicanery of the legislation on mines.

↑ More about this antagonism between the ruling classes in .
Now long Illustrations.

497:3 The Inquiry Commission of 1840 had made revelations so terrible, so shocking, and creating such a scandal all over Europe, that to salve its conscience Parliament passed the Mining Act of 1842, in which it limited itself to forbidding the employment underground in mines of children under 10 years of age and females.

497:4 Then another Act, The Mines' Inspecting Act of 1860, provides that mines shall be inspected by public officers nominated specially for that purpose, and that boys between the ages of 10 and 12 years shall not be employed, unless they have a school certificate, or go to school for a certain number of hours. This Act was a com-

519:1 Was also in dieser englischen Gesetzgebung von 1867 auffällt, ist einerseits die dem Parlament der herrschenden Klassen aufgezwungne Notwendigkeit, so außerordentliche und ausgedehnte Maßregeln gegen die Übergriffe der kapitalistischen Exploitation im Prinzip anzunehmen; andererseits die Halbheit, der Widerwille und die mala fides, womit es diese Maßregeln dann wirklich ins Leben rief.

519:2 Die Untersuchungskommission von 1862 schlug ebenfalls eine neue Regulierung der Bergwerksindustrie vor, einer Industrie, die sich von allen andern dadurch unterscheidet, daß bei ihr die Interessen von Grundbesitzern und industriellen Kapitalisten Hand in Hand gehn. Der Gegensatz dieser beiden Interessen hatte die Fabrikgesetzgebung begünstigt, die Abwesenheit dieses Gegensatzes reicht hin, die Verschleppung und Schikanen bei der Bergwerksgesetzgebung zu erklären.

519:3 Die Untersuchungskommission von 1840 hatte so schauderhafte und empörende Enthüllungen gemacht und einen solchen Skandal vor ganz Europa hervorgerufen, daß das Parlament sein Gewissen salviairen mußte durch den Mining Act von 1842, worin es sich darauf beschränkte, die Arbeit unter Tag von Weibern und von Kindern unter 10 Jahren zu verbieten.

519:4 Dann kam 1860 der Mines' Inspection Act, wonach Bergwerke von speziell dazu ernannten öffentlichen Beamten inspiziert werden, und Knaben zwischen 10 und 12 Jahren nicht beschäftigt werden sollen, außer wenn sie im Besitz eines Schulzeugnisses sind oder eine gewisse Anzahl Stunden die Schule besuchen. Dieser Akt

plete dead letter owing to the ridiculously small number of inspectors, the meagreness of their powers, and other causes that will become apparent as we proceed.

497:5/o One of the most recent Blue books on mines is the “Report from the Select Committee on Mines, together with etc. Evidence, 23rd July, 1866.” This Report is the work of a Parliamentary Committee selected from members of the House of Commons, and authorised to summon and examine witnesses. It is a thick folio volume in which the Report itself occupies only five lines to this effect; that the committee has nothing to say, and that more witnesses must be examined!

498:1 The mode of examining the witnesses reminds one of the cross-examination of witnesses in English courts of justice, where the advocate tries, by means of impudent, unexpected, equivocal and involved questions, put without connexion, to intimidate, surprise, and confound the witness, and to give a forced meaning to the answers extorted from him. In this inquiry the members of the committee themselves are the cross-examiners, and among them are to be found both mine-owners and mine exploiters; the witnesses are mostly working coal miners. The whole farce is too characteristic of the spirit of capital, not to call for a few extracts from this Report. For the sake of conciseness I have classified them. I may also add that every question and its answer are numbered in the English Blue books.

498:2–499:0 1. Employment in mines of boys of 10 years and upwards.—In the mines the work, inclusive of going and returning, usually lasts 14 or 15 hours, sometimes even from 3, 4 and 5 o’clock a.m., till 5 and 6 o’clock p.m. (n. 6, 452, 83). The adults work in two shifts, of eight hours each; but there is no alternation with the boys, on account of the expense (n. 80, 203, 204). The younger boys are chiefly

blieb durchaus ein toter Buchstabe infolge der lächerlich geringen Anzahl der ernannten Inspektoren, der Winzigkeit ihrer Befugnisse und anderer Ursachen, die sich im Verlauf näher ergeben werden.

519:5 Eins der neusten Blaubücher über Bergwerke ist der „Report from the Select Committee on Mines, together with . . . Evidence, 23 July 1866“. Er ist das Werk eines Ausschusses von Unterhausmitgliedern, bevollmächtigt, Zeugen vorzuladen und zu verhören; ein dicker Folioband, worin der „Report“ selbst nur fünf Zeilen umfaßt, des Inhalts: daß der Ausschuß nichts zu sagen weiß und daß noch mehr Zeugen verhört werden müssen!

519:6/o Die Art der Zeugenexamination erinnert an die cross examinations vor den englischen Gerichten, wo der Advokat durch unverschämte, sinnverwirrende Kreuz- und Querfragen den Zeugen aus der Fassung zu bringen und ihm die Worte im Mund zu verdrehn sucht. Die Advokaten hier sind die parlamentarischen Examinatoren selbst, darunter Minen-Eigner und Exploiteurs; die Zeugen Minenarbeiter, meist in Kohlenbergwerken. Die ganze Farce ist zu charakteristisch für den Geist des Kapitals, um hier nicht einige Auszüge zu geben. Zur leichteren Übersicht gebe ich die Resultate der Untersuchung usw. in Rubriken. Ich erinnere, daß Frage und obligate Antwort in den englischen Blue Books numeriert sind und daß die Zeugen, deren Aussagen hier zitiert werden, Arbeiter in Kohlenbergwerken.

520:1–2 1. Beschäftigung der Jungen vom 10. Jahr an in den Minen. Die Arbeit nebst obligatem Gang von und zu den Bergwerken dauert in der Regel 14 bis 15 Stunden, ausnahmsweise länger, von 3, 4, 5 Uhr morgens bis 4 und 5 Uhr abends. (n. 6, 452, 83.) Die erwachsenen Arbeiter arbeiten in zwei Gängen oder 8 Stunden, aber kein solcher Wechsel für die Jungen, um die Kosten zu sparen. (n. 80, 203, 204.) Die

15. Machinery and Modern Industry

employed in opening and shutting the ventilating doors in the various parts of the mine; the older ones are employed on heavier work. in carrying coal, etc. (n. 122, 739, 1747). They work these long hours underground until their 18th or 22nd year, when they are put to miner's work proper (n. 161). Children and young persons are at present worse treated, and harder worked than at any previous period (n. 1663–1667). The miners demand almost unanimously an act of Parliament prohibiting the employment in mines of children under 14. And now Hussey Vivian (himself an exploiter of mines) asks:

“Would not the opinion of the workman depend upon the poverty of the workman's family?” Mr. Bruce: “Do you not think it would be a very hard case, where a parent had been injured, or where he was sickly, or where a father was dead, and there was only a mother, to prevent a child between 12 and 14 earning 1s. 7d. a day for the good of the family? ... You must lay down a general rule? ... Are you prepared to recommend legislation which would prevent the employment of children under 12 and 14, whatever the state of their parents might be?” “Yes.” (ns. 107–110). Vivian: “Supposing that an enactment were passed preventing the employment of children under the age of 14, would it not be probable that ... the parents of children would seek employment for their children in other directions, for instance, in manufacture?” “Not generally I think” (n. 174). Kinnaid: “Some of the boys are keepers of doors?” “Yes.” “Is there not generally a very great draught every time you open a door or close it?” “Yes, generally there is.” “It sounds a very easy thing, but it is in fact rather a painful one?” “He is imprisoned there just the same as if he was in a cell of a gaol.” Bourgeois Vivian: “Whenever a boy is furnished with a lamp cannot he read?” “Yes, he can read, if he finds himself in candles ... I suppose he would be found fault with if he were discovered reading; he is there to mind his business, he has a duty to perform, and he has to attend to it in the first place, and I do not think it would be allowed down the pit.” (ns. 139, 141, 143, 158, 160).

jungen Kinder hauptsächlich verwandt zum Öffnen und Schließen der Zugtüren in den verschiedenen Abteilungen des Bergwerks, die ältern zu schwerer Arbeit, Kohlentransport usw. (n. 122, 739, 740.) Die langen Arbeitsstunden unter der Erde dauern bis zum 18. oder 22. Jahr, wann der Übergang zur eigentlichen Minenarbeit stattfindet. (n. 161.) Die Kinder und jungen Personen werden heutzutage härter abgeplackt als zu irgendeiner früheren Periode. (n. 1663–1667.) Die Minenarbeiter verlangen fast einstimmig einen Parlamentsakt zum Verbot der Minenarbeit bis zum 14. Jahr. Und nun fragt Hussey Vivian (selbst minenexploiteur):

„Hängt dies Verlangen nicht von der größeren oder geringeren Armut der Eltern ab?“—Und Mr. Bruce: „Wäre es nicht hart, wo der Vater tot oder verstümmelt usw., der Familie diese Ressource zu entziehen? Und es muß doch eine allgemeine Regel herrschen. Wollt Ihr in allen Fällen die Beschäftigung der Kinder bis zum 14. Jahr unter der Erde verbieten?“ Antwort: „In allen Fällen.“ (n. 107–110.) Vivian: „Wenn die Arbeit vor 14 Jahren in den Minen verboten, würden die Eltern die Kinder nicht in Fabriken usw. schicken?“—In der Regel, nein.“ (n. 174.) Arbeiter: „Das Auf- und Zuschließen der Türen sieht leicht aus. Es ist ein sehr qualvolles Geschäft. Vom beständigen Zug abgesehn, ist der Junge gefangengesetzt, ganz so gut wie in einer dunklen Kerkerzelle.“ Bourgeois Vivian: „Kann der Junge nicht lesen während der Türwacht, wenn er ein Licht hat?“—Erstens müßte er sich die Kerzen kaufen. Aber außerdem würde es ihm nicht erlaubt werden. Er ist da, um auf sein Geschäft aufzupassen, er hat eine Pflicht zu erfüllen. Ich habe nie einen Jungen in der Grube lesen sehn.“ (n. 139, 141–160.)

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

499:1–500:0 II. Education.—The working miners want a law for the compulsory education of their children, as in factories. They declare the clauses of the Act of 1860, which require a school certificate to be obtained before employing boys of 10 and 12 years of age, to be quite illusory. The examination of the witnesses on this subject is truly droll.

“Is it (the Act) required more against the masters or against the parents?” “It is required against both I think.” “You cannot say whether it is required against one more than against the other?” “No; I can hardly answer that question.” (ns. 115, 116.) “Does there appear to be any desire on the part of the employers that the boys should have such hours as to enable them to go to school?” “No; the hours are never shortened for that purpose.” (n. 137.) Mr. Kinnaird: “Should you say that the colliers generally improve their education; have you any instances of men who have, since they began to work, greatly improved their education, or do they not rather go back, and lose any advantage that they may have gained?” “They generally become worse: they do not improve; they acquire bad habits; they get on to drinking and gambling and such like, and they go completely to wreck.” (n. 211.) “Do they make any attempt of the kind (for providing instruction) by having schools at night?” “There are few collieries where night schools are held, and perhaps at those collieries a few boys do go to those schools; but they are so physically exhausted that it is to no purpose that they go there.” (n. 454.) “You are then,” concludes the bourgeois, “against education?” “Most certainly not; but,” etc. (n. 443.) “But are they (the employers) not compelled to demand them (school certificates)?” “By law they are; but I am not aware that they are demanded by the employers.” “Then it is your opinion, that this provision of the Act as to requiring certificates, is not generally carried out in the collieries?” “It is not carried out.” (ns. 443, 444.) “Do the men take a great interest in this question (of education)?” “The majority of them do.” (n. 717.) “Are they very anxious to see the law enforced?” “The majority are.” (n. 718.) “Do you think that in this country any law that you pass ... can really

520:3–521 2. Erziehung. Die Minenarbeiter verlangen Gesetz für Zwangsunterricht der Kinder, wie in den Fabriken. Sie erklären die Klausel des Akts von 1860, wonach Erziehungszertifikat zur Verwendung der Jungen von 10–12 Jahren erfordert, für rein illusorisch. Das „peinliche“ Verhörverfahren der kapitalistischen Instruktionsrichter wird hier wahrhaft drollig.

(n. 115.) „Ist der Akt mehr nötig gegen Anwender oder Eltern?—Gegen beide.“ (n. 116.) „Mehr gegen den einen als den andern?—Wie soll ich das beantworten?“ (n. 137.) „Zeigen die Anwender irgendein Verlangen, die Arbeitsstunden dem Schulunterricht anzupassen?—Niemals.“ (n. 211.) „Verbessern die Minenarbeiter hinterher ihre Erziehung?—Sie verschlechtern sich im allgemeinen; sie nehmen böse Gewohnheiten an; sie verlegen sich auf Trunk und Spiel und dergleichen und werden ganz und gar schiffbrüchig.“ (n. 454.) „Warum nicht die Kinder in Abendschulen schicken?—In den meisten Kohlendistrikten existieren keine. Aber die Hauptsache ist, von der langen Überarbeit sind sie so erschöpft, daß ihnen die Augen vor Müdigkeit zufallen.“ „Also“, schließt der Bourgeois, „Ihr seid gegen Erziehung?—Beileibe nicht, aber usw.“ (n. 443.) „Sind die Minenbesitzer usw. nicht durch den Akt von 1860 gezwungen, Schulzertifikate zu verlangen, wenn sie Kinder zwischen 10 und 12 Jahren anwenden?—Durch das Gesetz, ja, aber die Anwender tun es nicht.“ (n. 444.) „Nach Eurer Ansicht ist diese Gesetzklausel nicht allgemein ausgeführt?—Sie wird gar nicht ausgeführt.“ (n. 717.) „Interessieren sich die Minenarbeiter sehr für die Erziehungsfrage?—Die große Mehrzahl.“ (n. 718.) „Sind sie ängstlich für Durchführung des Gesetzes?—Die große Mehrzahl.“ (n. 720.) „Warum denn erzwingen sie seine Durchführung nicht?—Mancher Arbeiter wünscht, Jungen ohne Schulzertifikat zu verweigern, aber er wird ein gezeichneter Mann (a marked man).“ (n. 721.) „Gezeichnet durch wen?—Durch seinen Anwender.“ (n. 722.) „Ihr glaubt doch nicht etwa, daß die Anwender einen Mann wegen Gehorsams gegen das Gesetz verfolgen würden?—Ich glaube, sie würden es tun.“ (n. 723.) „Warum verweigern die Arbeiter nicht, sol-

15. Machinery and Modern Industry

be effectual unless the population themselves assist in putting it into operation?" "Many a man might wish to object to employing a boy, but he would perhaps become marked by it." (n. 720.) "Marked by whom?" "By his employers." (n. 721.) "Do you think that the employers would find any fault with a man who obeyed the law ...?" "I believe they would." (n. 722.) "Have you ever heard of any workman objecting to employ a boy between 10 and 12, who could not write or read?" "It is not left to men's option." (n. 123.) "Would you call for the interference of Parliament?" "I think that if anything effectual is to be done in the education of the colliers' children, it will have to be made compulsory by Act of Parliament." (n. 1634.) "Would you lay that obligation upon the colliers only, or all the workpeople of Great Britain?" "I came to speak for the colliers." (n. 1636.) "Why should you distinguish them (colliery boys) from other boys?" "Because I think they are an exception to the rule." (n. 1638.) "In what respect?" "In a physical respect." (n. 1639.) "Why should education be more valuable to them than to other classes of lads?" "I do not know that it is more valuable; but through the over-exertion in mines there is less chance for the boys that are employed there to get education, either at Sunday schools, or at day schools." (n. 1640.) "It is impossible to look at a question of this sort absolutely by itself?" (n. 1644.) "Is there a sufficiency of schools?"—"No" ... (n. 1646.) "If the State were to require that every child should be sent to school, would there be schools for the children to go to?" "No; but I think if the circumstances were to spring up, the schools would be forthcoming." (n. 1647.) "Some of them (the boys) cannot read and write at all, I suppose?" "The majority cannot. The majority of the men themselves cannot." (ns. 705, 725.)

500:1–501:0 III. *Employment of women.*— Since 1842 women are no more employed underground, but are occupied on the surface in loading the coal, etc., in drawing the tubs to the canals and railway waggons, in sorting, etc. Their numbers have considerably increased during the last three or four years. (n. 1727.) They are mostly the wives, daughters, and widows of the working min-

che Jungen anzuwenden?—Es ist nicht ihrer Wahl überlassen." (n. 1634.) „Ihr verlangt Parlamentsintervention?—Wenn irgend etwas Wirksames für die Erziehung der Kinder der Grubenarbeiter geschehen soll, so muß sie durch Parlamentsakt zwangsmäßig gemacht werden.“ (n. 1636.) „Soll das für die Kinder aller Arbeiter von Großbritannien gelten oder nur für Grubenarbeiter?—Ich bin hier, um im Namen der Grubenarbeiter zu sprechen.“ (n. 1638.) „Warum Grubenkinder von andren unterscheiden?—Weil sie eine Ausnahme von der Regel bilden.“ (n. 1639.) „In welcher Hinsicht?—In physischer.“ (n. 1640.) „Warum sollte Erziehung für sie wertvoller sein als für Knaben von andern Klassen?—Ich sage nicht, daß sie wertvoller für sie ist, aber wegen ihrer Überarbeitung in den Minen haben sie weniger Chancen für Erziehung in Tags- und Sonntagsschulen.“ (n. 1644.) „Nicht wahr, es ist unmöglich, Fragen dieser Art absolut zu behandeln?“ (n. 1646.) „Sind genug Schulen in den Distrikten?—Nein.“ (n. 1647.) „Wenn der Staat verlangte, daß jedes Kind zur Schule geschickt, wo sollen denn die Schulen für alle die Kinder herkommen?—Ich glaube, sobald es die Umstände gebieten, werden die Schulen von selbst entspringen.“ „Die große Mehrzahl nicht nur der Kinder, sondern der erwachsenen Minenarbeiter kann weder schreiben noch lesen.“ (n. 705, 726.)

522:1–523:0 3. *Weiberarbeit.* Arbeiterinnen werden zwar seit 1842 nicht mehr unter, wohl aber über der Erde zum Aufladen der Kohlen usw., Schleppen der Kufen zu den Kanälen und Eisenbahnwagen, Sortieren der Kohlen usw. verbraucht. Ihre Anwendung hat sehr zugenommen in den letzten 3–4 Jahren. (n. 1727.) Es sind meist Weiber, Töchter und Witwen von Grubenar-

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

ers, and their ages range from 12 to 50 or 60 years. (ns. 645, 1779.)

“What is the feeling among the working miners as to the employment of women?” “I think they generally condemn it.” (n. 648.) “What objection do you see to it?” “I think it is degrading to the sex.” (n. 649.) “There is a peculiarity of dress?” “Yes ... it is rather a man’s dress, and I believe in some cases, it drowns all sense of decency.” “Do the women smoke?” “Some do.” “And I suppose it is very dirty work?” “Very dirty.” “They get black and grimy?” “As black as those who are down the mines ... I believe that a woman having children (and there are plenty on the banks that have) cannot do her duty to her children.” (ns. 650–654, 701.) “Do you think that those widows could get employment anywhere else, which would bring them in as much wages as that (from 8s. to 10s. a week)?” “I cannot speak to that.” (n. 709.) “You would still be prepared, would you,” (flint-hearted fellow!) “to prevent their obtaining a livelihood by these means?” “I would.” (n. 710.) “What is the general feeling in the district ... as to the employment of women?” “The feeling is that it is degrading; and we wish as miners to have more respect to the fair sex than to see them placed on the pit bank ... Some part of the work is very hard; some of these girls have raised as much as 10 tons of stuff a day.” (ns. 1715, 1717.) “Do you think that the women employed about the collieries are less moral than the women employed in the factories?” “... the percentage of bad ones may be a little more ... than with the girls in the factories.” (n. 1237.) “But you are not quite satisfied with the state of morality in the factories?” “No.” (n. 1733.) “Would you prohibit the employment of women in factories also?” “No, I would not.” (n. 1734.) “Why not?” “I think it a more honourable occupation for them in the mills.” (n. 1735.) “Still it is injurious to their morality, you think?” “Not so much as working on the pit bank; but it is more on the social position I take it; I do not take it on its moral ground alone. The degradation, in its social bearing on the girls, is deplorable in the extreme. When these 400 or 500 girls become colliers’ wives, the men suffer greatly from this degradation, and it causes them to leave their homes and drink.” (n. 1736.) “You

beatern, vom 12. bis zum 50. und 60. Jahre. (n. 647, 1779, 1781.)

(n. 648.) „Was denken die Minenarbeiter von Beschäftigung von Weibern bei Bergwerken?—Sie verdammen sie allgemein.“ (n. 649.) „Warum?—Sie betrachten es erniedrigend für das Geschlecht ... Sie tragen eine Art von Mannskleidern. In vielen Fällen wird alle Scham unterdrückt. Manche Weiber rauchen. Die Arbeit ist so schmutzig wie die in den Gruben selbst. Darunter sind viele verheiratete Frauen, die ihre häuslichen Pflichten nicht erfüllen können.“ (n. 651 sqq., 701.) (n. 709.) „Können die Witwen ein so einträgliches Geschäft (8–10 sh. wöchentlich) anderswo finden?—Ich kann darüber nichts sagen.“ (n. 710.) „Und dennoch“ (Herz von Stein!) „seid Ihr entschlossen, ihnen diesen Lebensunterhalt abzuschneiden?—Sicher.“ (n. 1715.) „Woher diese Stimmung?—Wir, Minenarbeiter, haben zu viel Respekt für das schöne Geschlecht, um es zur Kohlengrube verdammt zu sehn ... Diese Arbeit ist größtenteils sehr schwer. Viele dieser Mädchen heben 10 Tonnen per Tag.“ (n. 1732.) „Glaubt Ihr, daß die in den Bergwerken beschäftigten Arbeiterinnen unmoralischer sind als die in den Fabriken beschäftigten?—Der Prozentsatz der Schlechten ist größer als unter den Fabrikmädchen.“ (n. 1733.) „Aber Ihr seid auch mit dem Stand der Moralität in den Fabriken nicht zufrieden?—Nein.“ (n. 1734.) „Wollt Ihr denn auch die Weiberarbeit in den Fabriken verbieten?—Nein, ich will nicht.“ (n. 1735.) „Warum nicht?—Sie ist für das weibliche Geschlecht ehrenvoller und passender.“ (n. 1736.) „Dennoch ist sie schädlich für ihre Moralität, meint Ihr?—Nein, lange nicht so sehr als die Arbeit an der Grube. Ich spreche übrigens nicht nur aus moralischen, sondern auch aus physischen und sozialen Gründen. Die soziale Degradation der Mädchen ist jammervoll und extrem. Wenn diese Mädchen Frauen der Minenarbeiter werden, leiden die Männer tief unter dieser Degradation, und es treibt sie von Haus und zum Soff.“ (n. 1737.) „Aber gälte nicht dasselbe für die bei Eisenwerken beschäftigten Weiber?—Ich kann nicht für andre Geschäftszweige sprechen.“ (n. 1740.) „Aber welcher Unterschied ist denn zwischen den bei Eisenwerken und Bergwerken beschäftigten Weibern?—Ich habe mich

15. Machinery and Modern Industry

would be obliged to stop the employment of women in the ironworks as well, would you not, if you stopped it in the collieries?" "I cannot speak for any other trade." (n. 1737.) "Can you see any difference in the circumstances of women employed in ironworks, and the circumstances of women employed above ground in collieries?" "I have not ascertained anything as to that." (n. 1740.) "Can you see anything that makes a distinction between one class and the other?" "I have not ascertained that, but I know from house to house visitation, that it is a deplorable state of things in our district ..." (n. 1741.) "Would you interfere in every case with the employment of women where that employment was degrading?" "It would become injurious, I think, in this way: the best feelings of Englishmen have been gained from the instruction of a mother ..." (n. 1750.) "That equally applies to agricultural employments, does it not?" "Yes, but that is only for two seasons, and we have work all the four seasons." (n. 1751.) "They often work day and night, wet through to the skin, their constitution undermined and their health ruined." "You have not inquired into that subject perhaps?" "I have certainly taken note of it as I have gone along, and certainly I have seen nothing parallel to the effects of the employment of women on the pit bank ... It is the work of a man ... a strong man." (ns. 1753, 1793, 1794.) "Your feeling upon the whole subject is that the better class of colliers who desire to raise themselves and humanise themselves, instead of deriving help from the women, are pulled down by them?" "Yes." (n. 1808.)

501:1–2 After some further crooked questions from these bourgeois, the secret of their "sympathy" for widows, poor families, etc., comes out at last.

"The coal proprietor appoints certain gentlemen to take the oversight of the workings, and it is their policy, in order to receive approbation, to place things on the most economical basis they can, and these girls are employed at from 1s. up to 1s. 6d. a day, where a man at the rate of 2s. 6d. a day would have to be employed." (n. 1816.)

501:3–502:0 IV. *Coroner's inquests.*

nicht mit dieser Frage beschäftigt." (n. 1741.) „Könnt Ihr einen Unterschied zwischen der einen oder der andern Klasse entdecken?—Ich habe nichts darüber vergewissert, kenne aber durch Visite von Haus zu Haus den schmählichen Zustand der Dinge in unsrem Distrikt.“ (n. 1750.) „Hättet Ihr nicht große Lust, Weiberbeschäftigung überall abzuschaffen, wo sie degradierend ist?—Ja ... die besten Gefühle der Kinder müssen von mütterlicher Zucht herkommen.“ (n. 1751.) „Aber das paßt ja auch auf agrikole Beschäftigung der Weiber?—Die dauert nur zwei Saisons, bei uns arbeiten sie alle vier Saisons durch, manchmal Tag und Nacht, naß bis auf die Haut, ihre Konstitution geschwächt, ihre Gesundheit gebrochen.“ (n. 1753.) „Ihr habt die Frage“ (nämlich der Weiberbeschäftigung) „nicht allgemein studiert?—Ich habe um mich her geschaut und kann so viel sagen, daß ich nirgendwo etwas der weiblichen Beschäftigung an den Kohlengruben Paralleles gefunden habe. [n. 1793, 1794, 1808.] Es ist Mannsarbeit und Arbeit für starke Männer. Die beßre Klasse der Minenarbeiter, die sich zu heben und zu humanisieren sucht, statt irgend Stütze an ihren Weibern zu finden, wird durch sie heruntergezerrt.“

523:1–2 Nachdem die Bourgeois noch weiter in die Kreuz und Quere gefragt, kommt endlich das Geheimnis ihres „Mitleidens“ für Witwen, arme Familien usw. heraus:

„Der Kohleneigentümer ernennt gewisse Gentlemen zur Oberaufsicht und deren Politik ist es, um Beifall zu ernten, alles auf den möglichst ökonomischen Fuß zu setzen und die beschäftigten Mädchen erhalten 1 bis 1 sh. 6 d. täglich, wo ein Mann 2 sh. 6 d. erhalten müßte.“ (n. 1816.)

523:3–4 4. Totenschau-Juries.

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

“With regard to coroner’s inquests in your district, have the workmen confidence in the proceedings at those inquests when accidents occur?” “No; they have not.” (n. 360.) “Why not?” “Chiefly because the men who are generally chosen, are men who know nothing about mines and such like.” “Are not workmen summoned at all upon the juries?” “Never but as witnesses to my knowledge.” “Who are the people who are generally summoned upon these juries?” “Generally tradesmen in the neighbourhood ... from their circumstances they are sometimes liable to be influenced by their employers ... the owners of the works. They are generally men who have no knowledge, and can scarcely understand the witnesses who are called before them, and the terms which are used and such like.” “Would you have the jury composed of persons who had been employed in mining?” “Yes, partly ... they (the workmen) think that the verdict is not in accordance with the evidence given generally.” (ns. 361, 364, 366, 368, 371, 375.) “One great object in summoning a jury is to have an impartial one, is it not?” “Yes, I should think so.” “Do you think that the juries would be impartial if they were composed to a considerable extent of workmen?” “I cannot see any motive which the workmen would have to act partially ... they necessarily have a better knowledge of the operations in connexion with the mine.” “You do not think there would be a tendency on the part of the workmen to return unfairly severe verdicts?” “No, I think not.” (ns. 378, 379, 380.)

502:1–2 *V. False weights and measures.*—The workmen demand to be paid weekly instead of fortnightly, and by weight instead of by cubical contents of the tubs; they also demand protection against the use of false weights, etc. (n. 1071.)

“If the tubs were fraudulently increased, a man could discontinue working by giving 14 days’ notice?” “But if he goes to another place, there is the same thing going on there.” (n. 1071.) “But he can leave that place where the wrong has been committed?” “It is general; wherever he goes, he has to submit to it.” (n. 1072.) “Could a man leave by giving 14 days’ notice?” “Yes.” (n. 1073.)

(n. 360.) „Mit Bezug auf die coroner’s inquests in Euren Distrikten, sind die Arbeiter zufrieden mit dem Gerichtsverfahren, wenn Unfälle vorkommen?—Nein, sie sind es nicht.“ (n. 361–375.) „Warum nicht?—Namentlich weil man Leute zu Juries macht, die absolut nichts von Minen wissen. Arbeiter werden nie zugezogen, außer als Zeugen. Im ganzen nimmt man Krämer aus der Nachbarschaft, welche unter dem Einfluß der Minenbesitzer, ihrer Kunden, stehn und nicht einmal die technischen Ausdrücke der Zeugen verstehen. Wir verlangen, daß Minenarbeiter einen Teil der Jury bilden. Im Durchschnitt steht der Urteilsspruch im Widerspruch zu den Zeugenaussagen.“ (n. 378.) „Sollen Juries nicht unparteiisch sein?—Ja.“ (n. 379.) „Würden die Arbeiter es sein?—Ich sehe keine Motive, warum sie nicht unparteiisch sein sollten. Sie haben Sachkenntnis.“ (n. 380.) „Aber würden sie nicht die Tendenz haben, im Interesse der Arbeiter ungerecht harte Urteile zu fällen?—Nein, ich glaube nicht.“

523:5–7 5. Falsches Maß und Gewicht usw. Die Arbeiter verlangen wöchentliche statt vierzehntägiger Zahlung, Maß nach Gewicht statt nach Kubikraum der Kufen, Schutz gegen die Anwendung falschen Gewichts usw.

(n. 1071.) „Wenn die Kufen fraudulent vergrößert werden, so kann ein Mann ja die Mine verlassen nach 14tägiger Kündigung?—Aber, wenn er zu einem andern Platz geht, findet er dasselbe.“ (n. 1072.) „Aber er kann den Platz doch verlassen, wo das Unrecht verübt wird?—Es ist allgemein herrschend.“ (n. 1073.) „Aber der Mann kann seinen jetzmaligen Platz nach 14tägiger Kündigung verlassen?—Ja.“

15. Machinery and Modern Industry

And yet they are not satisfied!

502:3–503:2 VI. *Inspection of mines.*—Casualties from explosions are not the only things the workmen suffer from. (n. 234, sqq.)

“Our men complained very much of the bad ventilation of the collieries ... the ventilation is so bad in general that the men can scarcely breathe; they are quite unfit for employment of any kind after they have been for a length of time in connexion with their work; indeed, just at the part of the mine where I am working, men have been obliged to leave their employment and come home in consequence of that ... some of them have been out of work for weeks just in consequence of the bad state of the ventilation where there is not explosive gas ... there is plenty of air generally in the main courses, yet pains are not taken to get air into the workings where men are working.” “Why do you not apply to the inspector?” “To tell the truth there are many men who are timid on that point; there have been cases of men being sacrificed and losing their employment in consequence of applying to the inspector.” “Why is he a marked man for having complained?” “Yes ... And he finds it difficult to get employment in another mine?” “Yes.” “Do you think the mines in your neighbourhood are sufficiently inspected to insure a compliance with the provisions of the Act?” “No; they are not inspected at all ... the inspector has been down just once in the pit, and it has been going seven years ... In the district to which I belong there are not a sufficient number of inspectors. We have one old man more than 70 years of age to inspect more than 130 collieries.” “You wish to have a class of sub-inspectors?” “Yes.” (ns. 234, 241, 251, 254, 274, 275, 554, 276, 293.) “But do you think it would be possible for Government to maintain such an army, of inspectors as would be necessary to do all that you want them to do, without information from the men?” “No, I should think it would be next to impossible ...” “It would be desirable the inspectors should come oftener?” “Yes, and without being sent for.” (n. 280, 277.) “Do you not think that the effect of having these inspectors examining the collieries so frequently would be to shift the responsibility (!) of supplying proper venti-

Streusand drauf!

523:8–524:2 6. *Mineninspektion.* Die Arbeiter leiden nicht nur von den Zufällen durch explodierende Gase.

(n. 234sqq.) „Wir haben uns ebensosehr zu beklagen über die schlechte Ventilation der Kohlengruben, so daß die Leute kaum darin atmen können; sie werden dadurch zu jeder Art Beschäftigung unfähig. So hat z.B. gerade jetzt in dem Teil der Mine, wo ich arbeite, die Pestluft viele Leute für Wochen aufs Krankenbett geworfen. Die Hauptgänge sind meist luftig genug, aber nicht die Plätze, worin wir arbeiten. Sendet ein Mann Klage über Ventilation an den Inspektor, so wird er entlassen und ist ein „gezeichneter“ Mann, der auch sonstwo keine Beschäftigung findet. Der „Mining inspection Act“ von 1860 ist ein reiner Papierlappen. Der Inspektor, und ihre Zahl ist viel zu klein, macht vielleicht in 7 Jahren einmal eine formelle Visite. Unser Inspektor ist ein ganz unfähiger, siebzigjähriger Mann, der mehr als 130 Kohlenbergwerken vorsteht. Neben mehr Inspektoren brauchen wir Subinspektoren.“ (n. 280.) „Soll dann die Regierung solch eine Armee von Inspektoren halten, daß sie alles, was Ihr verlangt, ohne Information der Arbeiter selbst tun können?—Das ist unmöglich, aber sie sollen sich die Information in den Minen selbst holen kommen.“ (n. 285.) „Glaubt Ihr nicht, daß die Wirkung sein würde, die Verantwortlichkeit (!) für die Ventilation usw. von dem Minenbesitzer auf die Regierungsbeamten zu wälzen?—Keineswegs; es muß ihr Geschäft sein, die Befolgung der bereits bestehenden Gesetze zu erzwingen.“ (n. 294.) „Wenn Ihr von Subinspektoren spricht, meint Ihr Leute mit weniger Gehalt und von niedrigerem Charakter als die gegenwärtigen Inspektoren?—Ich wünsche sie keineswegs niedriger, wenn Ihr sie besser haben könnt.“ (n. 295.) „Wollt Ihr mehr Inspektoren oder eine niedrigere Klasse von Leuten als die Inspektoren?—Wir brauchen Leute, die sich in den Minen selbst umtummeln, Leute, die keine Angst für die eigne Haut haben.“ (n. 297.) „Wenn man Euren Wunsch nach Inspektoren von einer schlechten Sorte erfüllte, würde ihr Mangel an Geschick nicht Gefahren erzeugen usw.?—Nein; es ist Sache der Regie-

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

lation from the owners of the collieries to the Government officials?" "No, I do not think that, I think that they should make it their business to enforce the Acts which are already in existence." (n. 285.) "When you speak of sub-inspectors, do you mean men at a less salary, and of an inferior stamp to the present inspectors?" "I would not have them inferior, if you could get them otherwise." (n. 294.) "Do you merely want more inspectors, or do you want a lower class of men as an inspector?" "A man who would knock about, and see that things are kept right; a man who would not be afraid of himself." (n. 295.) "If you obtained your wish in getting an inferior class of inspectors appointed, do you think that there would be no danger from want of skill, etc?" "I think not, I think that the Government would see after that, and have proper men in that position." (n. 297.)

This kind of examination becomes at last too much even for the chairman of the committee, and he interrupts with the observation:

"You want a class of men who would look into all the details of the mine, and would go into all the holes and corners, and go into the real facts . . . they would report to the chief inspector, who would then bring his scientific knowledge to bear on the facts they have stated?" (ns. 298, 299.) "Would it not entail very great expense if all these old workings were kept ventilated?" "Yes, expense might be incurred, but life would be at the same time protected." (n. 531.)

503:3–4 A working miner objects to the 17th section of the Act of 1860; he says,

"At the present time, if the inspector of mines finds a part of the mine unfit to work in, he has to report it to the mine-owner and the Home Secretary. After doing that, there is given to the owner 20 days to look over the matter; at the end of 20 days he has the power to refuse making any alteration in the mine; but, when he refuses, the mine-owner writes to the Home Secretary, at the same time nominating five engineers, and from those five engineers named by the mine-owner himself, the Home Secretary appoints one, I think, as arbitrator, or appoints arbitrators from them; now we think in that case the mine-owner virtually appoints his

rung, passende Subjekte anzustellen."

Diese Art Examination wird endlich selbst dem Präsidenten des Untersuchungsausschusses zu toll.

„Ihr wollt“, fährt er dazwischen, „praktische Leute, die sich in den Minen selbst umsehen und an den Inspektor berichten, der dann seine höhere Wissenschaft verwenden kann.“ (n. 531.) „Würde die Ventilation aller dieser alten Werke nicht viel Kosten verursachen?—Ja, Unkosten möchten erwachsen, aber Menschenleben würden geschützt.“

524:4–5 (n. 581.) Ein Kohlenarbeiter protestiert gegen die 17. Sektion des Akts von 1860:

„Gegenwärtig, wenn der Mineninspektor irgendeinen Teil der Mine in nicht bearbeitungsfähigem Zustand findet, muß er es an den Minenbesitzer und den Minister des Innern berichten. Danach hat der Minenbesitzer 20 Tage Bedenkzeit; am Ende der 20 Tage kann er jede Veränderung verweigern. Tut er das aber, so hat er an den Minister des Innern zu schreiben und ihm 5 Bergwerksingenieure vorzuschlagen, worunter der Minister die Schiedsrichter erwählen muß. Wir behaupten, daß in diesem Fall der Minenbesitzer virtuell seine eignen Richter ernannt.“

15. Machinery and Modern Industry

own arbitrator.” (n. 581.)

503:5–8 Bourgeois examiner, himself a mine-owner:

“But ... is this a merely speculative objection?” (n. 586.) “Then you have a very poor opinion of the integrity of mining engineers?” “It is most certainly unjust and inequitable.” (n. 588.) “Do not mining engineers possess a sort of public character, and do not you think that they are above making such a partial decision as you apprehend?” “I do not wish to answer such a question as that with respect to the personal character of those men. I believe that in many cases they would act very partially indeed, and that it ought not to be in their hands to do so, where men’s lives are at stake.” (n. 589.)

This same bourgeois is not ashamed to put this question:

“Do you not think that the mine-owner also suffers loss from an explosion?”

Finally,

“Are not you workmen in Lancashire able to take care of your own interests without calling in the Government to help you?” “No.” (n. 1042.)

503:9/o In the year 1865 there were 3,217 coal mines in Great Britain, and 12 inspectors. A Yorkshire mine-owner himself calculates (*Times*, 26th January, 1867), that putting on one side their office work, which absorbs all their time, each mine can be visited but once in ten years by an inspector. No wonder that explosions have increased progressively, both in number and extent (sometimes with a loss of 200–300 men), during the last ten years. These are the beauties of “free” capitalist production! [*This sentence has been added to the English text in conformity with the 4th German edition.—Ed.*]

504:1 The very defective Act, passed in 1872, is the first that regulates the hours of labor of the children employed in mines, and makes exploiters and owners, to a certain extent, responsible for so-called accidents.

There were also attempts to establish legislation in agriculture, which however failed so far.

525:1–6 (n. 586.) Der Bourgeoisexaminator, selbst Minenbesitzer:

„Dies ist ein rein spekulativer Einwand.“ (n. 588.) „Ihr habt also sehr geringer Ansicht von der Redlichkeit der Bergwerksingenieure?—Ich sage, es ist sehr unbillig und ungerecht.“ (n. 589.) „Besitzen Bergwerksingenieure nicht eine Art von öffentlichem Charakter, der ihre Entscheidungen über die von Euch befürchtete Parteilichkeit erhebt?—Ich verweigere, Fragen über den persönlichen Charakter dieser Leute zu beantworten. Ich bin überzeugt, daß sie in vielen Fällen sehr partiisch handeln und daß diese Macht ihnen genommen werden sollte, wo Menschenleben auf dem Spiel stehn.“

Derselbe Bourgeois hat die Unverschämtheit, zu fragen:

„Glaubt Ihr nicht, daß auch die Minenbesitzer Verluste bei den Explosionen haben?“

Endlich (n. 1042.):

„Könnt Ihr Arbeiter Eure eignen Interessen nicht selbst wahrnehmen, ohne die Hilfe der Regierung anzurufen?—Nein.“

525:7 Im Jahre 1865 gab es 3217 Kohlenbergwerke in Großbritannien und—12 Inspektoren. Ein Minenbesitzer von Yorkshire („*Times*“, 26. Januar 1867) berechnet selbst, daß abgesehen von ihren rein bürokratischen Geschäften, die ihre ganze Zeit absorbieren, jede Mine nur einmal in 10 Jahren besichtigt werden könnte. Kein Wunder, daß die Katastrophen in den letzten Jahren (namentlich auch 1866 und 1867) progressiv in Anzahl und Umfang (manchmal mit einem Opfer von 200–300 Arbeitern) zugenommen haben. Dies sind die Schönheiten der „freien“ kapitalistischen Produktion!

525:8 Jedenfalls ist der Akt von 1872, so mangelhaft er ist, der erste, der die Arbeitsstunden der in Bergwerken beschäftigten Kinder regelt und die Exploiteure und Grubenbesitzer in gewissem Maß für sogenannte Unfälle verantwortlich macht.

15.9. Sanitary and Educational Clauses. Extension of Factory Acts in England

504:2 The Royal Commission appointed in 1867 to inquire into the employment in agriculture of children, young persons, and women, has published some very important reports. Several attempts to apply the principles of the Factory Acts, but in a modified form, to agriculture have been made, but have so far resulted in complete failure. All that I wish to draw attention to here is the existence of an irresistible tendency towards the general application of those principles.

525:9 Die königliche Kommission von 1867 zur Untersuchung der Beschäftigung von Kindern, jugendlichen Personen und Weibern in der Agrikultur hat einige sehr wichtige Berichte veröffentlicht. Es sind verschiedene Versuche gemacht worden, die Prinzipien der Fabrikgesetzgebung, in modifizierter Form, auf die Agrikultur anzuwenden, aber bis jetzt schlugen sie alle total fehl. Worauf ich hier aber aufmerksam zu machen habe, ist das Bestehn einer unwiderstehlichen Tendenz zur allgemeinen Anwendung dieser Prinzipien.

↓ General remarks about how the factory legislation *sharpens* the contradictions of capitalism:

504:3/o If the general extension of factory legislation to all trades for the purpose of protecting the working-class both in mind and body has become inevitable, on the other hand, as we have already pointed out, that extension hastens on the general conversion of numerous isolated small industries into a few combined industries carried on upon a large scale; it therefore accelerates the concentration of capital and the exclusive predominance of the factory system. It destroys both the ancient and the transitional forms, behind which the dominion of capital is still in part concealed, and replaces them by the direct and open sway of capital; but thereby it also generalises the direct opposition to this sway. While in each individual workshop it enforces uniformity, regularity, order, and economy, it increases by the immense spur which the limitation and regulation of the working-day give to technical improvement, the anarchy and the catastrophes of capitalist production as a whole, the intensity of labor, and the competition of machinery with the laborer. By the destruction of petty and domestic industries it destroys the last resort of the "redundant population," and with it the sole remaining safety-valve of the whole social mechanism. By maturing the material conditions, and the combination on a social scale of the processes of production, it matures the con-

525:10/o Wenn die Verallgemeinerung der Fabrikgesetzgebung als physisches und geistiges Schutzmittel der Arbeiterklasse unvermeidlich geworden ist, verallgemeinert und beschleunigt sie andererseits, wie bereits angedeutet, die Verwandlung zerstreuter Arbeitsprozesse auf Zwergmaßstab in kombinierte Arbeitsprozesse auf großer, gesellschaftlicher Stufenleiter, also die Konzentration des Kapitals und die Alleinherrschaft des Fabrikregimes. Sie zerstört alle altertümlichen und Übergangsformen, wohinter sich die Herrschaft des Kapitals noch teilweise versteckt, und ersetzt sie durch seine direkte, unverhüllte Herrschaft. Sie verallgemeinert damit auch den direkten Kampf gegen diese Herrschaft. Während sie in den individuellen Werkstätten Gleichförmigkeit, Regelmäßigkeit, Ordnung und Ökonomie erzwingt, vermehrt sie durch den ungeheuren Sporn, den Schranke und Regel des Arbeitstags der Technik aufdrücken, die Anarchie und Katastrophen der kapitalistischen Produktion im großen und ganzen, die Intensität der Arbeit und die Konkurrenz der Maschinerie mit dem Arbeiter. Mit den Sphären des Kleinbetriebs und der Hausarbeit vernichtet sie die letzten Zufluchtsstätten der „Überzähligen“ und damit das bisherige Sicherheitsventil des ganzen Gesellschaftsmechanismus. Mit den materiellen Bedingungen und der gesellschaftli-

15. Machinery and Modern Industry

traditions and antagonisms of the capitalist form of production, and thereby provides, along with the elements for the formation of a new society, the forces for exploding the old one.³²²

By increasing the discipline inside the factory, it increases the anarchy outside. It promotes the concentration of capital and therefore also concentrates the struggle against capital. With the small workshops disappear the safety valves of the social mechanism.

Question 1028 *Explain how and why the generalization of the factory laws to those industries where machinery had not yet been introduced “matures the contradictions and antagonisms of the capitalistic form of production” (p. 503).*

³²² Robert Owen, the father of Co-operative Factories and Stores, but who, as before remarked, in no way shared the illusions of his followers with regard to the bearing of these isolated elements of transformation, not only practically made the factory system the sole foundation of his experiments, but also declared that system to be theoretically the startingpoint of the social revolution. Herr Vissering, Professor of Political Economy in the University of Leyden, appears to have a suspicion of this when, in his “Handboek van Practische Staatshuishoudkunde, 1860–62,” which reproduces all the platitudes of vulgar economy, he strongly supports handicrafts against the factory system. [Added in the 4th German edition—The “hopelessly bewildering tangle of contradictory enactments” (S. 314) (present volume, p. 284) which English legislation called into life by means of the mutually conflicting Factory Acts, the Factory Acts Extension Act and the Workshops’ Act, finally became intolerable, and thus all legislative enactments on this subject were codified in the Factory and Workshop Act of 1878. Of course no detailed critique of this English industrial code now in effect can be presented here. The following remarks will have to suffice. The Act comprises: 1) *Textile Mills*. Here everything remains about as it was: children more than 10 years of age may work 5 1/2 hours a day; or 6 hours and Saturday off; young persons and women, 10 hours on 5 days, and at most 6 1/2 on Saturday. 2) *Non-Textile Factories*. Here the regulations are brought closer than before to those of No. 1, but there are still several exceptions which favour the capitalists and which in certain cases may be expanded by special permission of the Home

chen Kombination des Produktionsprozesses reift sie die Widersprüche und Antagonismen seiner kapitalistischen Form, daher gleichzeitig die Bildungselemente einer neuen und die Umwälzungsmomente der alten Gesellschaft.³²²

³²² Robert Owen, der Vater der Kooperativfabriken und -boutiquen, der jedoch, wie früher bemerkt, die Illusionen seiner Nachtreter über die Tragweite dieser isolierten Umwandlungselemente keineswegs teilte, ging nicht nur tatsächlich in seinen Versuchen vom Fabrikssystem aus, sondern erklärte es auch theoretisch für den Ausgangspunkt der sozialen Revolution. Herr Vissering, Professor der politischen Ökonomie an der Universität zu Leyde, scheint so etwas zu ahnen, wenn er in seinem „Handboek van Practische Staatshuishoudkunde“, 1860–1862, welches die Platteiten der Vulgärökonomie in entsprechender Form vorträgt, für Handwerksbetrieb gegen große Industrie eifert.—{Zur 4. Aufl.—Der „neue juristische Rattenkönig“ (S. 264), den die englische Gesetzgebung vermittelt der einander widersprechenden Factory Acts, Factory Acts Extension Act und Workshops’ Act ins Leben gerufen, wurde endlich unerträglich, und so kam im Factory and Workshop Act 1878 eine Kodifikation der ganzen betreffenden Gesetzgebung zustande. Eine ausführliche Kritik dieses jetzt gültigen Industriekodex Englands kann hier natürlich nicht gegeben werden. Daher mögen folgende Notizen genügen: Der Akt umfaßt 1. Textilfabriken. Hier bleibt so ziemlich alles beim alten: erlaubte Arbeitszeit für Kinder über 10 Jahren: 5 1/2 Stunden täglich, oder aber 6 Stunden, und dann den Samstag frei; junge Personen und Frauen: 10 Stunden an fünf Tagen, höchstens 6 1/2 am Samstag.—2. Nicht-Textilfabriken. Hier sind die Bestimmungen deren von Nr. 1 mehr angenähert als früher, aber noch immer bestehn manche, den Kapitalisten günstige Ausnahmen, die in manchen Fällen durch Spezialerlaubnis des Ministers des Innern

Secretary. 3) *Workshops*, defined approximately as in the former Act; as for the children, young workers and women employed there, the workshops are about on a par with the non-textile factories, but again conditions are easier in details. 4) *Workshops* in which no children or young workers are employed, but only persons of both sexes above the age of 18; this category enjoy still easier conditions. 5) *Domestic Workshops*, where only members of the family are employed, in the family dwelling: still more elastic regulations and simultaneously the restriction that the inspector may, without special permission of the ministry or a court, enter only rooms not used also for dwelling purposes; and lastly unrestricted freedom for straw-plaiting and lace and glove-making by members of the family. With all its defects this Act, together with the Swiss Federal Factory Law of March 23, 1877, is still by far the best piece of legislation in this field. A comparison of it with the said Swiss federal law is of particular interest because it clearly demonstrates the merits and demerits of the two legislative methods—the English, “historical” method, which intervenes when occasion requires, and the continental method, which is built up on the traditions of the French Revolution and generalises more. Unfortunately, due to insufficient inspection personnel, the English code is still largely a dead letter with regard to its application to workshops.—*F.E.*

noch ausdehnbar sind.—3. Workshops, definiert ungefähr wie im frühern Akt; soweit Kinder, jugendliche Arbeiter oder Frauen darin beschäftigt, sind Workshops den nicht-textilen Fabriken so ziemlich gleichgestellt, doch wieder mit Erleichterungen im einzelnen.—4. Workshops, in denen keine Kinder oder jugendliche Arbeiter, sondern nur Personen beiderlei Geschlechts über 18 Jahren beschäftigt werden; für diese Kategorie gelten noch weitre Erleichterungen.—5. Domestic Workshops, wo nur Familienglieder in der Familienwohnung beschäftigt werden; noch elastischere Bestimmungen und gleichzeitig die Beschränkung, daß der Inspektor ohne besondere ministerielle oder richterliche Erlaubnis nur solche Räume betreten darf, die nicht zugleich als Wohnräume benutzt werden, und endlich die unbedingte Freigebung von Strohflechtereien, Spitzenklöppelei und Handschuhmacherei innerhalb der Familie. Bei allen Mängeln ist der Akt immer noch, neben dem schweizerischen Bundesfabrikgesetz vom 23. März 1877, weitaus das beste Gesetz über den Gegenstand. Eine Vergleichung desselben mit dem erwähnten schweizerischen Bundesgesetz ist von besonderem Interesse, weil sie die Vorzüge wie die Nachteile der beiden gesetzgeberischen Methoden—der englischen, „historischen“, von Fall zu Fall eingreifenden, und der kontinentalen, auf den Traditionen der französischen Revolution aufgebauten, mehr generalisierenden Methode—sehr anschaulich macht. Leider ist der englische Kodex in seiner Anwendung auf Workshops größtenteils noch immer toter Buchstabe—wegen unzureichendem Inspektionspersonal.—*F. E.*}

“Hopelessly bewildering tangle” is in chapter Ten, 304:1/o.

15.10. Modern Industry and Agriculture

Questions about section 10

Question 1029 *Why are agricultural workers hit even harder by the introduction of machinery than industrial workers? (Two main factors mitigating the displacement of factory workers by machinery do not work for agricultural workers.)*

Question 1030 *Show that capitalism increases the separation between town and country and at the same time creates the conditions for a new synthesis!*

Question 1031 *(This question is not dealt with by Marx, but it might deserve further research.) How did the automobile modify the relation between town and country under capitalism?*

15. Machinery and Modern Industry

::23527:636/637:0:504/505:0: Only in the accumulation chapter can the process be represented which revolutionizes the social relations of the agrarian workers. Here only some *results* which are apparently based on the following two main points.

(1) The introduction of machinery results in a spacewise *dispersion* rather than concentration of the agricultural producers. Since the increase of the tilled land is limited, the thus expelled workers cannot be absorbed in other agricultural jobs. (“ohne Gegenstoß,” “sans contrecoup,” in English erroneously: “finds less resistance,” should be: “without rebound.”; the example of the USA backs this since there the increase was not yet limited).

(2) The production of agricultural machinery is not agricultural but industrial (is this what the last sentence of the paragraph is supposed to say? The French edition, p. 362:1, makes it a little clearer (translate the sentence here) *ruraux—industries*).

505:1/o The revolution called forth by modern industry in agriculture, and in the social relations of agricultural producers, will be investigated later on.

527/o Die Revolution, welche die große Industrie im Ackerbau und den sozialen Verhältnissen seiner Produktionsagenten hervorruft, kann erst später dargestellt werden.

“erst später:” see the Accumulation chapter, subsection starting on p. ::23701::673:, but there must be other places too.

In this place, we shall merely indicate a few results by way of anticipation. If the use of machinery in agriculture is for the most part free from the injurious physical effect it has on the factory operative,³²³ its action in superseding the laborers is more intense, and finds less resistance, as we shall see later in detail. In the counties of Cambridge and Suffolk, for example, the area of cultivated land has extended very much within the last 20 years (up to 1868), while in the same period the rural population has diminished, not only relatively, but absolutely. In the United States it is as yet only virtually that agricultural machines replace laborers; in other words, they allow of the cultivation by the farmer of a larger surface, but do not actually expel the laborers employed. In 1861 the number of persons occupied in England and Wales in the manufacture of agricultural machines was 1,034, whilst the number of agricultural laborers employed in the use of agricultural machines and steam-engines did not exceed 1,205.

Hier genügt kurze Andeutung einiger vorweggenommenen Resultate. Wenn der Gebrauch der Maschinerie im Ackerbau größtenteils frei ist von den physischen Nachteilen, die sie dem Fabrikarbeiter zufügt,³²³ wirkt sie hier noch intensiver und ohne Gegenstoß auf die „Überzähligmachung“ der Arbeiter, wie man später im Detail sehen wird. In den Grafschaften Cambridge und Suffolk z.B. hat sich das Areal des bebauten Landes seit den letzten zwanzig Jahren sehr ausgedehnt, während die Landbevölkerung in derselben Periode nicht nur relativ, sondern absolut abnahm. In den Vereinigten Staaten von Nordamerika ersetzen Agrikultur-Maschinen einstweilen nur virtuell Arbeiter, d.h., sie erlauben dem Produzenten Bebauung einer größeren Fläche, verjagen aber nicht wirklich beschäftigte Arbeiter. In England und Wales betrug 1861 die Zahl der in der Fabrikation von Ackerbau-Maschinen beteiligten Personen 1034, während die Zahl der an Dampf- und Arbeitsmaschinen beschäftigten Agrikulturarbeiter nur 1205 betrug.

³²³ An exhaustive description of the machinery employed in agriculture in England is to be found in a book by Dr. W. Hamm, *Die landwirthschaftliche Geräte und Maschinen Englands*, 2nd edn., 1856. In his sketch of the course

³²³ Ausführliche Darstellung der im englischen Ackerbau angewandten Maschinerie findet man in „Die landwirthschaftliche Geräte und Maschinen Englands“ von Dr. W. Hamm. 2. Aufl., 1856. In seiner Skizze über den Entwick-

of development of English agriculture, the author follows Léonce de Lavergne too uncritically. [Added by Engels to the fourth German edition:] The book is now out of date, of course.

lungsgang der englischen Agrikultur folgt Herr Hamm zu kritiklos dem Herrn Leonce de Lavergne. {Zur 4. Aufl.—Jetzt natürlich veraltet.—F.E.}

506:1/oo The development of the town-country opposition under capitalism.

506:1/oo In the sphere of agriculture, modern industry has a more revolutionary effect than elsewhere, for this reason, that it annihilates the peasant, that bulwark of the old society, and replaces him by the wage-laborer. Thus the desire for social changes, and the class antagonisms are brought to the same level in the country as in the towns. The irrational, old-fashioned methods of agriculture are replaced by scientific ones.

528:1/oo In der Sphäre der Agrikultur wirkt die große Industrie insofern am revolutionärsten, als sie das Bollwerk der alten Gesellschaft vernichtet, den „Bauer“, und ihm den Lohnarbeiter unterschiebt. Die sozialen Umwälzungsbedürfnisse und Gegensätze des Landes werden so mit denen der Stadt ausgeglichen. An die Stelle des gewohnheitsfaulsten und irrationellsten Betriebs tritt bewußte, technologische Anwendung der Wissenschaft.

Gewohnheitsfaul und irrationell: habit-driven, repetitive, and irrational?

Capitalist production completely tears asunder the old bond of union which held together agriculture and manufacture in their infancy. But at the same time it creates the material conditions for a higher synthesis in the future, viz., the union of agriculture and industry on the basis of the more perfected forms they have each acquired during their temporary separation.

Die Zerreißung des ursprünglichen Familienbandes von Agrikultur und Manufaktur, welches die kindlich unentwickelte Gestalt beider umschlang, wird durch die kapitalistische Produktionsweise vollendet. Sie schafft aber zugleich die materiellen Voraussetzungen einer neuen, höheren Synthese, des Vereins von Agrikultur und Industrie, auf Grundlage ihrer gegensätzlich ausgearbeiteten Gestalten.

Thesis: In an undeveloped stage, agriculture and industry have “original family ties,” presumably since they both evolved from domestic production.

Antithesis under capitalism (elements for a higher synthesis are underlined): *The needs for social changes are now the same in the country as in the towns.* The concentration of the population in the cities and their thinning in the country *increases the historical momentum the society* but it destroys the traditional ecological cycle *thus enforcing the systematic regulation of this cycle.* Destroys physical health of urban workers and spiritual life of agricultural worker.

Now is this a new beginning?

The dispersion of the agricultural workers breaks their resistance, while concentration increases the resistance of the urban workers

In both, the increased labor set in motion goes at the expense of laying waste and consuming the labor-power, but in agriculture also the land is robbed: *Capitalism develops the technology and combination of the social production process* only by undermining the very sources of wealth, *labor and the land* (underlined and set in a separate paragraph in French).

Capitalist production, by collecting the population in great centres, and causing an ever-increasing preponderance of town population, on the one hand concentrates the historical motive power of society; on the other hand, it disturbs the circulation of matter be-

Mit dem stets wachsenden Übergewicht der städtischen Bevölkerung, die sie in großen Zentren zusammenhäuft, häuft die kapitalistische Produktion einerseits die geschichtliche Bewegungskraft der Gesellschaft, stört sie andererseits den Stoffwechsel zwischen

15. Machinery and Modern Industry

tween man and the soil, i.e., prevents the return to the soil of its elements consumed by man in the form of food and clothing; it therefore violates the conditions necessary to lasting fertility of the soil. By this action it destroys at the same time the health of the town laborer and the intellectual life of the rural laborer.³²⁴ But while upsetting the naturally grown conditions for the maintenance of that circulation of matter, it imperiously calls for its restoration as a system, as a regulating law of social production, and under a form appropriate to the full development of the human race.

Now a concluding summary for the whole chapter: This is a new paragraph in French but not in German or English.

In agriculture as in manufacture, the transformation of production under the sway of capital, means, at the same time, the martyrdom of the producer; the instrument of labor becomes the means of enslaving, exploiting, and impoverishing the laborer; the social combination and organisation of labor-processes is turned into an organised mode of crushing out the workman's individual vitality, freedom, and independence. The dispersion of the rural laborers over larger areas breaks their power of resistance while concentration increases that of the town operatives. In modern agriculture, as in the urban industries, the increased productivity and quantity of the labor set in motion are bought at the cost of laying waste and consuming by disease labor-power itself. Moreover, all progress in capitalistic agriculture is a progress in the art, not only of robbing the laborer, but of robbing the soil; all progress in increasing the fertility of the soil for a given time, is a progress towards ruining the lasting sources of that fertility. The more a country starts its development on the foundation of modern industry, like the United States, for example, the more rapid is this process of destruction.³²⁵

Mensch und Erde, d.h. die Rückkehr der vom Menschen in der Form von Nahrungs- und Kleidungsmitteln vernutzten Bodenbestandteile zum Boden, also die ewige Naturbedingung dauernder Bodenfruchtbarkeit. Sie zerstört damit zugleich die physische Gesundheit der Stadtarbeiter und das geistige Leben der Landarbeiter.³²⁴ Aber sie zwingt zugleich durch die Zerstörung der bloß naturwüchsig entstandnen Umstände jenes Stoffwechsels, ihn systematisch als regelndes Gesetz der gesellschaftlichen Produktion und in einer der vollen menschlichen Entwicklung adäquaten Form herzustellen.

In der Agrikultur wie in der Manufaktur erscheint die kapitalistische Umwandlung des Produktionsprozesses zugleich als Martyrologie der Produzenten, das Arbeitsmittel als Unterjochungsmittel, Exploitationsmittel und Verarmungsmittel des Arbeiters, die gesellschaftliche Kombination der Arbeitsprozesse als organisierte Unterdrückung seiner individuellen Lebendigkeit, Freiheit und Selbständigkeit. Die Zerstreuung der Landarbeiter über größere Flächen bricht zugleich ihre Widerstandskraft, während Konzentration die der städtischen Arbeiter steigert. Wie in der städtischen Industrie wird in der modernen Agrikultur die gesteigerte Produktivkraft und größere Flüssigmachung der Arbeit erkaufte durch Verwüstung und Versiechung der Arbeitskraft selbst. Und jeder Fortschritt der kapitalistischen Agrikultur ist nicht nur ein Fortschritt in der Kunst, den Arbeiter, sondern zugleich in der Kunst, den Boden zu berauben, jeder Fortschritt in Steigerung seiner Fruchtbarkeit für eine gegebene Zeitfrist zugleich ein Fortschritt im Ruin der dauernden Quellen dieser Fruchtbarkeit. Je mehr ein Land, wie die Vereinigten Staaten von Nordamerika z.B., von der großen Industrie als dem Hintergrund seiner Entwicklung ausgeht, desto rascher dieser Zerstörungsprozeß.³²⁵

A famous pronouncement noted by Marxist ecologists:

Capitalist production, therefore, develops technology, and the combining together of various processes into a social whole, only by sapping the original sources of all wealth—the soil and the laborer.

Die kapitalistische Produktion entwickelt daher nur die Technik und Kombination des gesellschaftlichen Produktionsprozesses, indem sie zugleich die Springquellen alles Reichtums untergräbt: die Erde und den Arbeiter.

³²⁴ “You divide the people into two hostile camps of clownish boors and emasculated dwarfs. Good heavens! a nation divided into agricultural and commercial interests, calling itself sane; nay, styling itself enlightened and civilised, not only in spite of, but in consequence of this monstrous and unnatural division.” (David Urquhart, l.c., p. 119.) This passage shows, at one and the same time, the strength and the weakness of that kind of criticism which knows how to judge and condemn the present, but not how to comprehend it.

³²⁴ „Ihr teilt das Volk in zwei feindliche Lager, plumpe Bauern und verweichlichte Zwerge. Lieber Himmel! Eine Nation, zerspalten in landwirtschaftliche und Handelsinteressen, nennt sich gesund, ja hält sich für aufgeklärt und zivilisiert, nicht nur trotz, sondern gerade zufolge dieser ungeheuerlicher und unnatürlichen Trennung.“ (David Urquhart, l.c. p. 119.) Diese Stelle zeigt zugleich die Stärke und die Schwäche einer Art von Kritik, welche die Gegenwart zu be- und verurteilen, aber nicht zu begreifen weiß.

³²⁵ See Liebig: “Die Chemie in ihrer Anwendung auf Agricultur und Physiologie,” 7. Auflage, 1862, and especially the “Einleitung in die Naturgesetze des Feldbaus,” in the 1st Volume. To have developed from the point of view of natural science, the negative, i.e., destructive side of modern agriculture, is one of Liebig’s immortal merits. His summary, too, of the history of agriculture, although not free from gross errors, contains flashes of light. It is, however, to be regretted that he ventures on such haphazard assertions as the following: “By greater pulverising and more frequent ploughing, the circulation of air in the interior of porous soil is aided, and the surface exposed to the action of the atmosphere is increased and renewed; but it is easily seen that the increased yield of the land cannot be proportional to the labor spent on that land, but increases in a much smaller proportion. This law,” adds Liebig, “was first enunciated by John Stuart Mill in his ‘Principles of Pol. Econ.,’ Vol. 1, p. 17, as follows: ‘That the produce of land increases, *caeteris paribus*, in a diminishing ratio to the increase of the laborers employed’ (Mill here introduces in an erroneous form the law enunciated by Ricardo’s school, for since the ‘decrease of the laborers employed,’ kept even pace in England with the advance of agriculture, the law discovered in, and applied to, England, could have no application to that country, at all events), ‘is the universal law of agricultural industry.’ This is very remarkable,

³²⁵ Vgl. Liebig, „Die Chemie in ihrer Anwendung auf Agrikultur und Physiologie“, 7. Auflage, 1862, namentlich auch im Ersten Band die „Einleitung in die Naturgesetze des Feldbaus“. Die Entwicklung der negativen Seite der modernen Agrukultur, vom naturwissenschaftlichen Standpunkt, ist eins der unsterblichen Verdienste Liebig’s. Auch seine historischen Aperçus über die Geschichte der Agrikultur, obgleich nicht ohne grobe Irrtümer, enthalten Lichtblicke. Zu bedauern bleibt, daß er aufs Gratewohl Äußerungen wagt, wie folgende: „Durch eine weiter getriebne Pulverisierung und häufigeres Pflügen wird der Luftwechsel im Innern poröser Erdteile befördert, und die Oberfläche der Erdteile, auf welche die Luft einwirken soll, vergrößert und erneuert, aber es ist leicht verständlich, daß die Mehrbeträge des Feldes nicht proportionell der auf das Feld verwandten Arbeit sein können, sondern daß sie in einem weit kleineren Verhältnis steigen.“ „Dieses Gesetz“, fügt Liebig hinzu, „ist von J. St. Mill zuerst in seinen „Princ. of Pol. Econ.“, v. I, p. 17, in folgender Weise ausgesprochen: „Daß der Ertrag des Bodens *caeteris paribus* in einem abnehmenden Verhältnis wächst im Vergleich zum Anwachsen der Zahl der beschäftigten Arbeiter““ (Herr Mill wiederholt sogar das Ricardosche Schulgesetz in falscher Formel, denn da „the decrease of the labourers employed“, die Abnahme der angewandten Arbeiter, in England beständig Schritt hielt mit dem Fortschritt der Agrikultur, fände das für und in

15. Machinery and Modern Industry

since Mill was ignorant of the reason for this law." (Liebig, l.c., Bd. I., p. 143 and Note.) Apart from Liebig's wrong interpretation of the word "labor," by which word he understands something quite different from what Political Economy does, it is, in any case, "very remarkable" that he should make Mr. John Stuart Mill the first propounder of a theory which was first published by James Anderson in A. Smith's days, and was repeated in various works down to the beginning of the 19th century; a theory which Malthus, that master in plagiarism (the whole of his population theory is a shameless plagiarism), appropriated to himself in 1815; which West developed at the same time as, and independently of, Anderson; which in the year 1817 was connected by Ricardo with the general theory of value, then made the round of the world as Ricardo's theory, and in 1820 was vulgarised by James Mill, the father of John Stuart Mill; and which, finally, was reproduced by John Stuart Mill and others, as a dogma already quite commonplace, and known to every schoolboy. It cannot be denied that John Stuart Mill owes his, at all events, "remarkable" authority almost entirely to such *quid-pro-quos*.

England erfundene Gesetz wenigstens in England keine Anwendung), „Ist allgemeine Gesetz der Landwirtschaft“, merkwürdig genug, da ihm dessen Grund unbekannt war.“ (Liebig, l.c., Bd. I., p. 143 u. Note.) Abgesehen von irriger Deutung des Wortes „Arbeit“, worunter Liebig etwas anderes versteht als die politische Ökonomie, ist es jedenfalls „merkwürdig genug“, daß er Herrn J. St. Mill zum ersten Verkünder einer Theorie macht, die James Anderson zur Zeit A. Smiths zuerst veröffentlichte und in verschiedenen Schriften bis in den Anfang des 19. Jahrhunderts hinein wiederholte, die Malthus, überhaupt ein Meister des Plagiats (seine ganze Bevölkerungstheorie ist ein schamloses Plagiat), sich 1815 annexierte, die West zur selben Zeit und unabhängig von Anderson entwickelte, die Ricardo 1817 in Zusammenhang mit der allgemeinen Werttheorie brachte und die von da an unter dem Namen Ricardos die Runde der Welt gemacht hat, die 1820 von James Mill (dem Vater J. St. Mills) vulgarisiert und endlich u.a. auch von Herrn J. St. Mill als bereits Gemeinplatz gewordenes Schuldogma wiederholt wird. Es ist unleugbar, daß J. St. Mill seine jedenfalls „merkwürdige“ Autorität fast nur ähnlichen Quiproquo verdankt.

Question 1032 *In chapter VII we had a comparison between the characteristics of the labor process and of the process of creating surplus value. Show that it is the latter characteristics which have become reality in most modern machinery. In other words, show that the technology of most machinery under capitalism is determined by the purpose to exploit the worker, rather than to help him produce more efficiently. Infer from this in what direction machinery develops under socialism.*

Question 1033 *Is it true that machinery displaces laborers? If so, how can you measure the number of laborers displaced by a given machine? How do the capitalists try to compensate for the fact that machinery displaces their workers and thus diminishes the number of workers they exploit? (For the last part see 530:2/o)*

Part V.

The Production of Absolute and of Relative Surplus-Value

After discussing separately the two different kinds of surplus-value, absolute and relative, now their unity is discussed.

16. Absolute and Relative Surplus-Value

Chapter Sixteen is a continuation of chapter Seven, which discussed the labor process and the valorization process. Chapter Seven could only give a preliminary definition of valorization. It derived what valorization must be, namely, a labor process extended beyond the point where an equivalent of the workers' wages has been produced. When looking at it in more detail in the intervening chapters, Marx discovered that surplus-value comes in two varieties, absolute and relative. After this, he can give a fuller answer about the origin of surplus-value and the character of the labor producing surplus-value.

Chapter Seven had two parts, one discussing the labor process as a process between humans and nature, and one discussing it as a process forming value and surplus-value. Chapter Sixteen has two main parts as well. The first part continues the discussion of the process from its value side. It traces the evolution of the production process with the development of the specific capitalist mode of production. Triggered by the question about the natural conditions for exploitation, the second part briefly sketches the historical evolution of the productivity of labor.

The end of the chapter amplifies the relationship between absolute and relative surplus-value into the relationship between productivity and exploitation, and its beginning focuses on the concept of productive labor, which also combines production and exploitation.

16.1. [The Specifically Capitalist Mode of Production]

16.1.a. [Extension and Narrowing of the Notion of Productive Labor]

The chapter begins with an elaboration of the concept of productive labor first briefly introduced in chapter Seven, 191:1.

In considering the labor-process, we began (see chapter VII) by treating it in the abstract, apart from its historical forms, as a process between man and Nature. We there stated, "If we examine the whole labor-process, from the point of view of its result, it is plain that both the instruments and the subject of labor are means of production, and that the labor itself is productive labor." And in Note 2, same page, we further added: "This method of determining, from the standpoint of the labor-process alone, what is productive labor, is by no means di-

531:1 Der Arbeitsprozeß wurde (siehe fünftes Kapitel) zunächst abstrakt betrachtet, unabhängig von seinen geschichtlichen Formen, als Prozeß zwischen Mensch und Natur. Es hieß dort: „Betrachtet man den ganzen Arbeitsprozeß vom Standpunkt seines Resultats, so erscheinen beide, Arbeitsmittel und Arbeitsgegenstand, als Produktionsmittel und die Arbeit selbst als produktive Arbeit.“ Und in Note 7 wurde ergänzt: „Diese Bestimmung produktiver Arbeit, wie sie sich vom Standpunkt des einfachen Arbeitsprozesses ergibt, reicht keineswegs hin

16. Absolute and Relative Surplus-Value

rectly applicable to the case of the capitalist process of production.” We now proceed to the further development of this subject.

für den kapitalistischen Produktionsprozeß.“ Dies ist hier weiter zu entwickeln.

↑ This is a quote from 191:1. Marx seems to be asking here an epistemological question: how does the concept of productive labor change if we no longer speak of the labor process as a process between humans and nature, but of the capitalist production process? But Marx’s answer will show that he has an ontological question in mind. Since the production process is not guided by the laborer but by the capitalist, who is solely interested in the *product* (while the laborer also has a stake in the *process*), society indeed looks at the labor process from the point of view of its *product*. Chapter Fourteen about Manufactories made it clear that the re-structuring of the production process under the command of the capitalist often went *against* the laborer. Marx’s elaboration of the concept of productive labor is therefore, at the same time, a discussion of the changed character of the production process with the advent of capitalism.

[Broadening of the Concept of Productive Labor]

The first thing Marx says is that the concept of productive labor *broadens*. In capitalism, certain kinds of activities are productive labor which do not directly manipulate and shape the product. In order to make this point, he first reminds the reader that an individual laborer, producing a product by himself, performs many different functions which later become separated:

Whenever the labor-process is purely individual, one and the same laborer unites in himself or herself all the functions, that later on become separated.

531:2/o Soweit der Arbeitsprozeß ein rein individueller, vereinigt derselbe Arbeiter alle Funktionen, die sich später trennen.

↓ Marx begins with an important example of the separation of functions: intellectual and manual labor are separated from each other.

When an individual appropriates natural objects for his livelihood, no one controls him but himself. Afterwards he is controlled by others. A single man cannot operate upon Nature without calling his own muscles into play under the control of his own brain. As in the natural body head and hand wait upon each other, so the labor-process unites the labor of the hand with that of the head. Later on they part company and even become deadly foes.

In der individuellen Aneignung von Naturgegenständen zu seinen Lebenszwecken kontrolliert er sich selbst. Später wird er kontrolliert. Der einzelne Mensch kann nicht auf die Natur wirken ohne Betätigung seiner eignen Muskeln unter Kontrolle seines eignen Hirns. Wie im Natursystem Kopf und Hand zusammengehören, vereint der Arbeitsprozeß Kopfarbeit und Handarbeit. Später scheiden sie sich bis zum feindlichen Gegensatz.

This separation is only one example of the disintegration of the labor process into many partial processes co-operating with each other:

The product ceases to be the direct product of the individual, and becomes a social product, produced in common by a collective laborer, *i.e.*, by a combination of workmen, each of whom takes only a part, greater or less, in the manipulation of the object of their labor.

Das Produkt verwandelt sich überhaupt aus dem unmittelbaren Produkt des individuellen Produzenten in ein gesellschaftliches, in das gemeinsame Produkt eines Gesamtarbeiters, d.h. eines kombinierten Arbeitspersonals, dessen Glieder der Handhabung des Arbeitsgegenstandes näher oder ferner

stehn.

Along with this transition of the labor process into a collective process, the concept of productive labor widens:

As the co-operative character of the labor-process becomes more and more marked, so, as a necessary consequence, does our notion of productive labor and of its agent the productive laborer, become extended. In order to labor productively, it is no longer necessary for you to do manual work yourself; it suffices to be an organ of the collective laborer and somehow perform one of its subordinate functions.

Mit dem kooperativen Charakter des Arbeitsprozesses selbst erweitert sich daher notwendig der Begriff der produktiven Arbeit und ihres Trägers, des produktiven Arbeiters. Um produktiv zu arbeiten, ist es nun nicht mehr nötig, selbst Hand anzulegen; es genügt, Organ des Gesamtarbeiters zu sein, irgendeine seiner Unterfunktionen zu vollziehen.

This broader definition of productive labor does not invalidate the earlier definition but extends it:

The first definition given above of productive labor, a definition deduced from the very nature of the production of material objects, still remains correct for the collective laborer, considered as a whole. But it no longer holds good for each member taken individually.

Die obige ursprüngliche Bestimmung der produktiven Arbeit, aus der Natur der materiellen Produktion selbst abgeleitet, bleibt immer wahr für den Gesamtarbeiter, als Gesamtheit betrachtet. Aber sie gilt nicht mehr für jedes seiner Glieder, einzeln genommen.

Question 1034 *How does the development of co-operative labor-processes extend the concept of productive labor? Give examples.*

[Narrowing of the Concept of Productive Labor]

⇓ The notion of productive labor is also *narrowed*. Capitalism is more than the co-operative production of commodities, it is production of surplus-value:

On the other hand, however, our notion of productive labor becomes narrowed. Capitalist production is not merely the production of commodities, it is essentially the production of surplus-value. The laborer produces, not for himself, but for capital. It no longer suffices, therefore, that he should simply produce. He must produce surplus-value. That laborer alone is productive, who produces surplus-value for the capitalist, and thus works for the self-expansion of capital.

532:1 Andererseits aber verengt sich der Begriff der produktiven Arbeit. Die kapitalistische Produktion ist nicht nur Produktion von Ware, sie ist wesentlich Produktion von Mehrwert. Der Arbeiter produziert nicht für sich, sondern für das Kapital. Es genügt daher nicht länger, daß er überhaupt produziert. Er muß Mehrwert produzieren. Nur der Arbeiter ist produktiv, der Mehrwert für den Kapitalisten produziert oder zur Selbstverwertung des Kapitals dient.

↑ This is the definition of a productive laborer in capitalism. ⇓ Now a quick example:

If we may take an example from outside the sphere of production of material objects, a schoolmaster is a productive laborer when, in addition to belaboring the heads of his scholars, he works like a horse to enrich the

Steht es frei, ein Beispiel außerhalb der Sphäre der materiellen Produktion zu wählen, so ist ein Schulmeister produktiver Arbeiter, wenn er nicht nur Kinderköpfe bearbeitet, sondern sich selbst abarbeitet zur Bereiche-

16. Absolute and Relative Surplus-Value

school proprietor. That the latter has laid out his capital in a teaching factory, instead of a sausage factory, does not alter the relation.

rung des Unternehmers. Daß letzterer sein Kapital in einer Lehrfabrik angelegt hat, statt in einer Wurstfabrik, ändert nichts an dem Verhältnis.

Question 1035 *How, on the other hand, is the concept of productive labor narrowed under capitalism? Give examples of labors that are necessary for the capitalist class or for society as a whole, and are nevertheless “unproductive” for capital.*

↓ The above definition implies that the question whether someone is a productive laborer is decided outside the production process, in the larger social context:

Hence the notion of a productive laborer implies not merely a relation between work and useful effect, between laborer and product of labor, but also a specific, social relation of production, a relation that has sprung up historically and stamps the laborer as the direct means of creating surplus-value.

Der Begriff des produktiven Arbeiters schließt daher keineswegs bloß ein Verhältnis zwischen Tätigkeit und Nutzeffekt, zwischen Arbeiter und Arbeitsprodukt ein, sondern auch ein spezifisch gesellschaftliches, geschichtlich entstandenes Produktionsverhältnis, welches den Arbeiter zum unmittelbaren Verwertungsmittel des Kapitals stempelt.

This has serious implications for the laborer himself or herself. Marx underlines this with a memorable phrase which summarizes the development that follows:

To be a productive laborer is, therefore, not a piece of luck, but a misfortune.

Produktiver Arbeiter zu sein ist daher kein Glück, sondern ein Pech.

Question 1036 *Why is it a misfortune to be a productive laborer under capitalism?*

↓ Before diving into the development fleshing out this phrase, Marx brings a few references to the literature which show that the economists agree with his definition of productive labor in capitalism: they consider that labor productive which creates surplus-value.

In Book IV, which treats of the history of the theory, it will be more clearly seen, that the production of surplus-value has at all times been made, by classical political economists, the distinguishing characteristic of the productive laborer.

Im Vierten Buch dieser Schrift, welches die Geschichte der Theorie behandelt, wird man näher sehn, daß die klassische politische Ökonomie von jeher die Produktion von Mehrwert zum entscheidenden Charakter des produktiven Arbeiters machte.

↑ All economists define productive labor as labor producing surplus-value. This is where they agree. ↓ But they disagree in their understanding of the origin of surplus-value.

Hence their definition of a productive laborer changes with their comprehension of the nature of surplus-value. Thus the Physiocrats insist that only agricultural labor is productive, since that alone, they say, yields a surplus-value. And they say so because, with them, surplus-value has no existence except in the form of rent.

Mit ihrer Auffassung von der Natur des Mehrwerts wechselt daher ihre Definition des produktiven Arbeiters. So erklären die Physiokraten, nur die Ackerbauarbeit sei produktiv, weil sie allein einen Mehrwert liefere. Für die Physiokraten existiert Mehrwert aber ausschließlich in der Form der Grundrente.

Question 1037 *How can labor be unproductive?*

16.1.b. [The Dialectic of Absolute and Relative Surplus-Value]

Since productive labor under capitalism is defined as labor producing surplus-value, Marx looks now at the two specific ways to produce surplus-value, namely, absolute and relative surplus-value:

The prolongation of the working-day beyond the point at which the laborer would have produced just an equivalent for the value of his labor-power, and the appropriation of that surplus-labor by capital, this is production of absolute surplus-value. It constitutes the general base of the capitalist system, and the starting-point for the production of relative surplus-value.

532:2/o Die Verlängerung des Arbeitstags über den Punkt hinaus, wo der Arbeiter nur ein Äquivalent für den Wert seiner Arbeitskraft produziert hätte, und die Aneignung dieser Mehrarbeit durch das Kapital—das ist die Produktion des absoluten Mehrwerts. Sie bildet die allgemeine Grundlage des kapitalistischen Systems und den Ausgangspunkt der Produktion des relativen Mehrwerts.

Relative surplus-value can only develop on the basis of absolute surplus-value, ↓ but unlike absolute surplus-value, it revolutionizes the technology:

The latter pre-supposes that the working-day is already divided into two parts, necessary labor, and surplus-labor. In order to prolong the surplus-labor, the necessary labor is shortened by methods whereby the equivalent for the wages is produced in less time. The production of absolute surplus-value turns exclusively upon the length of the working-day; the production of relative surplus-value, by contrast, revolutionizes out and out the technical processes of labor, and the composition of society.

Bei dieser ist der Arbeitstag von vornherein in zwei Stücke geteilt: notwendige Arbeit und Mehrarbeit. Um die Mehrarbeit zu verlängern, wird die notwendige Arbeit verkürzt durch Methoden, vermittelt deren das Äquivalent des Arbeitslohns in weniger Zeit produziert wird. Die Produktion des absoluten Mehrwerts dreht sich nur um die Länge des Arbeitstags; die Produktion des relativen Mehrwerts revolutioniert durch und durch die technischen Prozesse der Arbeit und die gesellschaftlichen Gruppierungen.

↑ The production of relative surplus-value engenders an entirely new mode of production. ↓ Marx calls it the “specifically capitalist mode of production” or “real subsumption of labor under capital,” and in contrast to this, capitalism prior to the production of relative surplus-value is called “formal subsumption of labor under capital.”

It therefore pre-supposes a specific mode, the capitalist mode of production, a mode which, along with its methods, means, and conditions, arises and develops itself spontaneously on the foundation afforded by the formal subsumption of labor under capital. In the course of this development, the formal subsumption is replaced by the real subsumption of labor under capital.

533:1 Sie unterstellt also eine spezifisch kapitalistische Produktionsweise, die mit ihren Methoden, Mitteln und Bedingungen selbst erst auf Grundlage der formellen Subsumtion der Arbeit unter das Kapital naturwüchsig entsteht und ausgebildet wird. An die Stelle der formellen tritt die reelle Subsumtion der Arbeit unter das Kapital.

↓ Besides formal and real subsumption, there are also situations in which the labor process is not (yet) subsumed under capital at all:

It will suffice merely to refer to certain intermediate forms, in which surplus-labor is not extorted by direct compulsion from

533:2 Es genügt bloßer Hinweis auf Zwitterformen, worin die Mehrarbeit weder durch direkten Zwang dem Produzenten

16. Absolute and Relative Surplus-Value

the producer, nor the producer himself yet formally subjected to capital. In such forms, capital has not yet acquired the direct control of the labor-process. By the side of independent producers who carry on their handicrafts and agriculture in the traditional old-fashioned way, there stands the usurer or the merchant, with his usurer's capital or merchant's capital, feeding on them like a parasite. The predominance, in a society, of this form of exploitation excludes the capitalist mode of production; to which mode, however, this form may serve as a transition, as it did towards the close of the Middle Ages. Finally, as is shown by modern "domestic industry," some intermediate forms are here and there reproduced in the background of Modern Industry, though their physiognomy is totally changed.

↑ The "domestic industry" modern at Marx's time was the putting-out system. It is a kind of wage-labor, i.e., the underlying social form is not the same as the parasitic exploitation of medieval domestic labor by usury capital. Therefore also the "physiognomy" of the domestic labor process is quite different. This concludes Marx's brief discussion of formal and real subsumption.

↓ Despite the importance of relative surplus-value for the revolutionizing of the mode of production, relative surplus-value is not the dominant pole in the dialectic between absolute and relative surplus-value.

If, on the one hand, the mere formal subsumption of labor under capital suffices for the production of absolute surplus-value, if, e.g., it is sufficient that handicraftsman who previously worked on their own account, or as apprentices of a master, should become wage laborers under the direct control of a capitalist; so, on the other hand, we have seen, how the methods of producing relative surplus-value, are, at the same time, methods of producing absolute surplus-value. Nay, more, the excessive prolongation of the working-day turned out to be the peculiar product of Modern Industry. Generally speaking, the specifically capitalist mode of production ceases to be a mere means of producing relative surplus-value, so soon as that mode has conquered an entire branch of production; and still more so, so soon as it has conquered all the important branches.

ausgepumpt wird, noch auch dessen formelle Unterordnung unter das Kapital eingetreten ist. Das Kapital hat sich hier noch nicht unmittelbar des Arbeitsprozesses bemächtigt. Neben die selbständigen Produzenten, die in überlieferter, urväterlicher Betriebsweise handwerkern oder ackerbauen, tritt der Wucherer oder Kaufmann, das Wucherkapital oder das Handelskapital, das sie parasitenmäßig aussaugt. Vorherrschaft dieser Exploitationsform in einer Gesellschaft schließt die kapitalistische Produktionsweise aus, zu der sie andererseits, wie im späten Mittelalter, den Übergang bilden kann. Endlich, wie das Beispiel der modernen Hausarbeit zeigt, werden gewisse Zwitterformen auf dem Hintergrund der großen Industrie stellenweis reproduziert, wenn auch mit gänzlich veränderter Physiognomie.

533:3 Wenn zur Produktion des absoluten Mehrwerts die bloß formelle Subsumtion der Arbeit unter das Kapital genügt, z.B. daß Handwerker, die früher für sich selbst oder auch als Gesellen eines Zunftmeisters arbeiteten, nun als Lohnarbeiter unter die direkte Kontrolle des Kapitalisten treten, zeigt sich andererseits, wie die Methoden zur Produktion des relativen Mehrwerts zugleich Methoden zur Produktion des absoluten Mehrwerts sind. Ja, die maßlose Verlängerung des Arbeitstags stellte sich als eigenstes Produkt der großen Industrie dar. Überhaupt hört die spezifisch kapitalistische Produktionsweise auf, bloßes Mittel zur Produktion des relativen Mehrwerts zu sein, sobald sie sich eines ganzen Produktionszweigs, und noch mehr, sobald sie sich aller entscheidenden Produktionszweige bemächtigt hat. Sie wird jetzt allgemeine, gesellschaftlich

16.1. [The Specifically Capitalist Mode of Production]

It then becomes the general, socially predominant form of production. As a special method of producing relative surplus-value, it remains effective only, first, in so far as it seizes upon industries that previously were only formally subject to capital, that is, so far as it propagates; secondly, in so far as the industries that have been taken over by it, continue to be revolutionized by changes in the methods of production.

↓ The unity between absolute and relative surplus-value:

From one standpoint, any distinction between absolute and relative surplus-value appears illusory. Relative surplus-value is absolute, since it compels the absolute prolongation of the working-day beyond the labor-time necessary to the existence of the laborer himself. Absolute surplus-value is relative, since it makes necessary such a development of the productiveness of labor, as will allow of the necessary labor-time being confined to a portion of the working-day.

↓ But their difference comes forward if surplus-value changes:

But if we investigate the movement of surplus-value, this appearance of identity vanishes. Once the capitalist mode of production is established and become general, the difference between absolute and relative surplus-value makes itself felt, whenever there is a question of raising the rate of surplus-value. Assuming that labor-power is paid for at its value, we are confronted by this alternative: given the productiveness of labor and its normal intensity, the rate of surplus-value can be raised only by the actual prolongation of the working-day; on the other hand, given the length of the working-day, that rise can be effected only by a change in the relative magnitudes of the components of the working-day, viz., necessary labor and surplus-labor; a change which, if the wages are not to fall below the value of labor-power, presupposes a change either in the productiveness or in the intensity of the labor.

herrschende Form des Produktionsprozesses. Als besondere Methode zur Produktion des relativen Mehrwerts wirkt sie nur noch, erstens soweit sie dem Kapital bisher nur formell untergeordnete Industrien ergreift, also in ihrer Propaganda. Zweitens, soweit ihr bereits anheimgefallene Industrien fortwährend revolutioniert werden durch Wechsel der Produktionsmethoden.

533:4/o Von gewissem Gesichtspunkt scheint der Unterschied zwischen absolutem und relativem Mehrwert überhaupt illusorisch. Der relative Mehrwert ist absolut, denn er bedingt absolute Verlängerung des Arbeitstags über die zur Existenz des Arbeiters selbst notwendige Arbeitszeit. Der absolute Mehrwert ist relativ, denn er bedingt eine Entwicklung der Arbeitsproduktivität, welche erlaubt, die notwendige Arbeitszeit auf einen Teil des Arbeitstags zu beschränken.

Faßt man aber die Bewegung des Mehrwerts ins Auge, so verschwindet dieser Schein der Einerleiheit. Sobald die kapitalistische Produktionsweise einmal hergestellt und allgemeine Produktionsweise geworden, macht sich der Unterschied zwischen absolutem und relativem Mehrwert fühlbar, sobald es gilt, die Rate des Mehrwerts überhaupt zu steigern. Vorausgesetzt, die Arbeitskraft werde zu ihrem Wert bezahlt, stehn wir dann vor dieser Alternative: Die Produktivkraft der Arbeit und ihren Normalgrad von Intensität gegeben, ist die Rate des Mehrwerts nur erhöhbar durch absolute Verlängerung des Arbeitstags; andererseits, bei gegebener Grenze des Arbeitstags, ist die Rate des Mehrwerts nur erhöhbar durch relativen Größenwechsel seiner Bestandteile, der notwendigen Arbeit und der Mehrarbeit, was seinerseits, soll der Lohn nicht unter den Wert der Arbeitskraft sinken, Wechsel in der Produktivität oder Intensität der Arbeit voraussetzt.

↑ This is a nutshell summary of Marx's argument in chapter Twelve.

16. Absolute and Relative Surplus-Value

Question 1038 *Someone argues: The absolute surplus-value is relative because productivity must be so high that the worker must work only a part of the day for his own subsistence. The relative surplus-value is absolute because even relative surplus-value requires prolongation of the working-day over the necessary labor. Right or wrong?*

Question 1039 *In what respects do absolute and relative surplus-value depend on each other, cause each other, and blend together? In which cases can they be clearly distinguished?*

16.2. [Natural basis of Necessary Labor]

As formulated in , Marx discusses here the qualitative dimension of the productivity of labor: what are the conditions for labor to be productive for capital? In capitalism, labor seems naturally productive for capital. Marx is investigating how this semblance arises and to what extent it is justified. His verdict will be: necessary labor has a natural basis, but surplus-labor does not.

16.2.a. [Labor of Sufficient Productivity Condition for Exploitation]

⇓ Exploitation possible only if productiveness of labor is high enough that not every laborer is busy all day to produce for himself or herself.

If the laborer requires all his time to produce the necessary means of subsistence for maintaining himself and his race, he has no time left in which to work gratis for others. Without a certain degree of productiveness in his labor, he has no such superfluous time at his disposal; without such superfluous time, no surplus-labor, and therefore no capitalists, no slave-owners, no feudal lords, in one word, no class of large proprietors.¹

¹ “The very existence of the master-capitalists, as a distinct class, is dependent on the productiveness of industry.” (Ramsay, l.c., p. 206.) “If each man’s labor were but enough to produce his own food, there could be no property.” (Ravenstone, l.c. p. 14, 15.)

534:1 Braucht der Arbeiter alle seine Zeit, um die zur Erhaltung seiner selbst und seiner Race nötigen Lebensmittel zu produzieren, so bleibt ihm keine Zeit, um unentgeltlich für dritte Personen zu arbeiten. Ohne einen gewissen Produktivitätsgrad der Arbeit keine solche disponible Zeit für den Arbeiter, ohne solche überschüssige Zeit keine Mehrarbeit und daher keine Kapitalisten, aber auch keine Sklavenhalter, keine Feudalbarone, in einem Wort keine Großbesitzerklasse.¹

¹ „Das bloße Vorhandensein der zu Kapitalisten gewordenen Meister als besondere Klasse hängt ab von der Produktivität der Arbeit.“ (Ramsay, l.c. p. 206.) „Wenn die Arbeit jedes Mannes nur genügen würde, seine eigne Nahrung zu produzieren, könnte es kein Eigentum geben.“ (Ravenstone, l.c. p. 14.)

16.2.b. [Only Necessary Labor has Natural Basis, Surplus Labor Does Not]

The above condition only explains the possibility, not the reality of exploitation (as Marx will say in). ⇓ If one calls this condition a “natural basis” of surplus-value one must therefore

be aware that the role of nature is very small. Marx uses a gruesome and funny example to drive home this point:

Thus we may say that surplus-value rests on a natural basis—but only in the very general sense that there is no natural obstacle absolutely preventing one man from disburdening himself of the labor requisite for his own existence, and burdening another with it. Neither is there, for instance, an unconquerable natural obstacle preventing one man from eating the flesh of another.^{1a}
